

SPECIAL TRIBUNAL FOR LEBANON

المحكمة الخاصة بلبنان

TRIBUNAL SPÉCIAL POUR LE LIBAN

THE TRIAL CHAMBER**SPECIAL TRIBUNAL FOR LEBANON**

Case No: STL-11-01/T/TC

Before: Judge David Re, Presiding
Judge Janet Nosworthy
Judge Micheline Braidy
Judge Walid Akoum, Alternate Judge
Judge Nicola Lettieri, Alternate Judge

Registrar: Mr David Tolbert, Acting Registrar

Date: 18 August 2020

Original language: English

Classification: Public

THE PROSECUTOR

v.

**SALIM JAMIL AYYASH
HASSAN HABIB MERHI
HUSSEIN HASSAN ONEISSI
ASSAD HASSAN SABRA**

JUDGMENT**Office of the Prosecutor:**

Mr Norman Farrell, Mr Alexander Hugh
Milne & Mr Nigel Povoas

Counsel for Mr Salim Jamil Ayyash:

Mr Emile Aoun, Mr Thomas Hannis &
Mr Chad Mair

**Legal Representatives of
Participating Victims:**

Mr Peter Haynes, Mr Mohammad F. Mattar
& Ms Nada Abdelsater-Abusamra

Counsel for Mr Hassan Habib Merhi:

Mr Mohamed Aouini & Mr Jad Youssef Khalil

Counsel for Mr Hussein Hassan Oneissi:

Mr Vincent Courcelle-Labrousse, Mr Yasser
Hassan & Ms Natalie von Wistinghausen

Counsel for Mr Assad Hassan Sabra:

Mr David Young, Mr Geoffrey Roberts &
Ms Sarah Bafadhel

Table of Contents

Volume I

I. Introduction.....	1
II. The Prosecution’s pleaded case	10
A. The amended consolidated indictment.....	10
B. Issues arising from the Prosecution’s pleadings	17
1. Introduction.....	17
2. Legal standard—notice	17
3. The dates of the alleged conspiracy	19
(a) The Prosecution’s case and pre-trial litigation.....	19
(b) Submissions	22
(c) Findings.....	22
4. Unidentified members of the alleged conspiracy.....	25
(a) The Prosecution’s case and pre-trial litigation.....	25
(b) Submissions	25
(c) Findings.....	26
5. Hezbollah and the political context.....	26
(a) The Prosecution’s case and pre-trial litigation and submissions.....	26
(b) Defence submissions.....	30
(c) Findings.....	32
6. The identity of ‘Mohammed’	36
(a) The Prosecution’s case.....	36
(b) Submissions	37
(c) Findings.....	37
7. Other alleged Prosecution failures to provide notice	38
(a) Submissions	38
(b) Findings.....	39
III. Assessment of evidence	42
A. Introduction.....	42
B. Principle of publicity of the proceedings and of the judgment	53
C. Principles applied by the Trial Chamber in the assessment of evidence	54

1. Presumption of innocence, standard of proof beyond reasonable doubt and the <i>in dubio pro reo</i> principle	54
2. The obligation to provide a reasoned opinion.....	61
3. Final assessment of the evidence—holistic assessment on the totality of the evidence—as distinct from assessment at the time of its admission	63
4. Circumstantial evidence	72
5. Prohibition on basing a conviction solely or decisively on evidence that the Defence had no opportunity to challenge	78
6. Hearsay evidence	79
7. Corroboration.....	81
D. Assessing different forms of evidence	82
1. Witness testimony	83
(a) Live testimony	83
(b) Witness credibility	84
i. Generally.....	84
ii. Witness independence and association with Parties	86
(c) Categories of witnesses.....	91
i. Fact witnesses	92
ii. Expert witnesses.....	93
iii. Witnesses providing non-expert opinion evidence and summary evidence.....	97
iv. Witnesses called on the request of the Legal Representatives of Victims	99
v. Written records of witness evidence without oral testimony	101
2. Documents	103
(a) Authenticity.....	103
(b) Relevance and indicia of reliability.....	104
(c) Business records.....	104
(d) Telecommunications evidence	107
i. Cell site evidence and analysis.....	107
ii. Call data records.....	108
iii. Call sequence tables	109
(e) Derivative evidence.....	110
(f) Exhibits admitted for limited purposes	111
3. Agreed facts or ‘agreements as to evidence’	114
4. Judicial notice	115

IV. Historical and political background to the attack.....	116
A. Introduction.....	116
B. Background, including the Lebanese Civil War	124
C. Mr Hariri’s initial term as prime minister—31 October 1992 to 4 December 1998—and following years.....	129
1. Mr Hariri’s business and media interests	129
2. Syrian involvement in Lebanese political affairs.....	131
3. Mr Hariri’s relationship with Hezbollah	135
4. Israeli withdrawal from Lebanon in 2000.....	139
5. 2000 Election	139
D. Mr Hariri’s final term as prime minister—26 October 2000 to 2004	143
1. Beginnings of an organised opposition to Syrian domination	146
2. International opinion	146
3. Mr Hariri’s shift towards the opposition.....	147
4. Mr Hariri’s relationship with Hezbollah from 2000	147
5. 2001 and 2002: Paris Conferences.....	148
6. April 2003: Cabinet reshuffle	149
7. 17 April 2003: Parliamentary statement on US Syria Accountability Act	151
8. June 2003: Attack on Future TV	152
9. Late December 2003: ‘Damascus Protocol’	153
10. Syrian intelligence role in Lebanese political affairs in 2004.....	157
E. President Lahoud’s mandate extension.....	157
1. Meeting between President Al-Assad and Mr Hariri in Damascus, 26 August 2004	159
2. 28 August 2004: Council of Ministers meeting	164
3. 1 September 2004: Council of Maronite Bishops statement.....	165
4. 2 September 2004: Security Council resolution 1559.....	166
5. 3 September 2004: Parliament vote	169
F. Background to the Bristol Group meetings.....	173
G. First Bristol Group Meeting: 22 September 2004 and aftermath.....	177
H. Security arrangements and concerns in late 2004	179
I. Attack on Marwan Hamade	183
J. Mr Hariri’s resignation as prime minister	189
K. Electoral Law	191

L.	Second Bristol Group meeting: 13 December 2004 and aftermath	193
M.	Political events between the second Bristol Group meeting and the third Bristol Group meeting.....	195
N.	Third Bristol Group meeting: 2 February 2005	205
O.	Political events between the third Bristol Group meeting and the attack	207
P.	The ‘olive oil crisis’	213
Q.	Monthly payments to Mr Ghazaleh from Mr Hariri	214
R.	Warnings to Mr Hariri about his personal security immediately before the attack	217
S.	The Accused’s and Mustafa Amine Badreddine’s alleged associations with Hezbollah.....	221
1.	Evidence on Accused’s and Mr Badreddine’s alleged associations with Hezbollah	221
(a)	General evidence.....	221
(b)	Mustafa Amine Badreddine	223
(c)	Salim Jamil Ayyash	229
(d)	Hassan Habib Merhi.....	231
(e)	Hussein Hassan Oneissi	232
(f)	Assad Hassan Sabra	232
(g)	Conclusion	232
2.	Submissions	233
(a)	Prosecution.....	233
(b)	Defence	235
(c)	Legal Representatives of Victims	237
T.	Summary	238
V.	Participation of victims.....	242
A.	Victims’ role and participation in trials before international, hybrid or internationalised tribunals	242
B.	Who are the Participating Victims?	243
C.	Modes of victims’ participation in the trial.....	247
D.	The principles and criteria the Trial Chamber applied in deciding on the participating victims’ application to present or call evidence and on the appropriate stage of the proceedings for such presentation	251
E.	The victims’ case	256
1.	<i>Viva voce</i> (live) witnesses—six participating victims	259
2.	Professor Dr Rianne Letschert’s evidence	261
3.	Witness statements.....	264

4. A single exhibit containing 175 documents and the 172 facts that the Prosecution, Ayyash and Sabra Defence agreed are uncontested	266
F. The probative value of the evidence presented by and for the participating victims	267
1. The Legal Representatives of Victims' submissions	267
2. Prosecution submissions	272
3. Ayyash Defence submissions.....	273
4. Merhi Defence submissions	273
5. Sabra Defence submissions.....	274
6. Findings.....	274
(a) Scope of the evidence	274
(b) Identifying the victims and recording their harm.....	277
(c) Gravity of the crimes.....	281
(d) Broadening the narrative—the scope of the Trial Chamber's findings	287
G. Participating Victims' expectations—establishing the truth.....	289
1. Legal Representatives of Victims' submissions	289
2. Findings.....	290
H. Repairing the harm—sought recommendations for appropriate forms of reparations.....	294
1. Introduction.....	294
2. Submissions	296
3. Findings.....	299
I. Length of the trial.....	302
J. Participating victims' views and concerns on protective measures and psychological support ...	305
VI. Explosion on 14 February 2005	309
A. Introduction.....	309
B. Before the explosion on Monday 14 February 2005.....	309
C. The explosion and immediate aftermath	318
D. Searching for relatives in the hospitals	324
E. Search and rescue efforts of the Lebanese authorities at the explosion site	327
F. Forensic evidence.....	328
1. Crime scene investigation and recovery of evidence.....	331
(a) Initial surveillance and investigation at the crime scene.....	331
(b) Collection of evidence	344
i. Collection of vehicle parts	344

ii.	Collection of videotaped claim of responsibility by Lebanese authorities	348
(c)	Management of the crime scene and investigation	349
i.	Lebanese officials' investigation of the crime scene	349
ii.	Swiss forensic team investigation of crime scene—March 2005	358
iii.	Dutch forensic team investigation of crime scene—August 2005	359
iv.	Spanish forensic team investigation of crime scene—May to June 2006	362
v.	Submissions	363
vi.	Findings on the management of the crime scene and investigation	364
2.	Forensic analysis of the explosion	367
(a)	High explosives	369
i.	High explosives in general	369
ii.	Were high explosives used in the attack?	370
iii.	Submissions	373
iv.	Findings	373
(b)	Type of high explosives	373
i.	Identifying the type of explosives and RDX generally	373
ii.	Which high explosives were used in the attack?	376
iii.	Submissions	379
iv.	Findings	380
(c)	Quantity, height and shape of the explosives	381
i.	Quantity of explosives	381
a.	Calculating the quantity of explosives generally	382
b.	Calculating the quantity of explosives used in the attack	382
ii.	Height of the explosives	398
a.	Above and below ground explosions generally	398
b.	Was the attack an underground explosion?	399
c.	Was the attack a ground level explosion?	401
d.	Was the attack an above ground explosion?	403
iii.	Shape of the explosives	404
a.	Shapes of explosives generally	404
b.	Shape of explosives used in the attack	405
iv.	Location of the detonation point	406
v.	Findings on the quantity, height and shape of the explosives	407

(d)	Use of Mitsubishi Canter light truck.....	410
i.	Was a Mitsubishi Canter seen near the explosion site before the attack?	411
a.	CCTV systems near the explosion site.....	411
b.	CCTV footage of a white truck.....	413
c.	Identification of the truck in the CCTV footage	417
d.	Evidence from convoy survivors	420
e.	Submissions	420
f.	Findings.....	421
ii.	Recovery of Mitsubishi Canter parts at the crime scene after the attack	423
a.	Finding and identifying Mitsubishi Canter parts	423
b.	Forensic examination of Mitsubishi Canter parts	427
c.	Submissions	427
d.	Findings.....	428
(e)	Triggering system for the explosives	429
i.	Triggering systems in general	429
ii.	Jamming devices	430
a.	Jamming devices in general	431
b.	Jamming devices in the convoy	432
c.	Penetrating a jamming device	436
d.	Were the convoy's jamming devices turned on?	438
e.	Submissions	443
f.	Findings.....	444
(f)	Triggering system used in the attack.....	445
i.	Evidence.....	445
ii.	Submissions	447
iii.	Findings.....	448
3.	Human remains recovery and forensic analysis.....	449
(a)	Recovery of human remains	449
(b)	Forensic analysis of victims' remains	456
i.	DNA analysis of human remains: timeline	458
ii.	Results of DNA analysis: identification of victims.....	459
a.	Remains of Mr Nasser and Mr Al-Arab.....	459
b.	Analysis of other human remains.....	461

iii. Submissions	462
iv. Findings.....	462
(c) Forensic examination of the DNA of the unidentified male and of Mr Abu Adass.....	464
i. DNA analysis of the unidentified male	464
ii. DNA analysis related to Mr Ahmad Abu Adass	469
iii. Submissions	471
iv. Findings.....	473
4. Conclusion	474
G. Victim harm	475
1. Introduction.....	475
2. Direct victims	476
(a) Deceased victims.....	476
(b) Participating victims	477
i. Liliane Khallouf	477
ii. Maria Al-Kasti	478
iii. Victim 16	479
iv. Sanaa El-Sheikh	480
v. Nabih Mhanna.....	481
vi. Wissam Naji.....	481
vii. Rabih Nohra	482
viii. Victim 35	482
ix. Raymond Abou-Chaaya	483
x. Victim 73	484
xi. Victim 30	485
xii. Mahmoud Wazzan	485
xiii. Mohammed Dia.....	486
xiv. Rachid Hammoud	486
xv. Mehi Eldin Meneimneh	488
xvi. Victim 12	488
xvii. Victim 13	488
xviii. Victim 33	489
3. Indirect participating victims	489
(a) Robert Aoun.....	491

(b)	Abdul Hamid Ghalayini's family.....	491
(c)	Saada Hachem Abu Rjeily and Nazih Abu Rjeily	492
(d)	Victim 36	493
(e)	Victim 37	494
(f)	Victim 38	495
(g)	Victims 20, 21 and 22	495
(h)	Victim 27	496
(i)	Victim 26	496
(j)	Victim 78	497
(k)	Haitham Osman's family	497
(l)	Saadeddine Hariri.....	499
(m)	Yasma Fuleihan.....	499
(n)	Talal Nasser's family	499
(o)	Hana Diab Al-Arab	501
(p)	Mohammed Darwiche's family	502
(q)	Victim 58	503
(r)	Ziad Tarraf's family	504
(s)	Mohammed Riad Ghalayini's family.....	505
(t)	Victim 42	506
(u)	Victims 5, 7, 47, 51, 60, 61, 83, and Mr Omar Tarraf	506
4.	Witnesses who are not participating victims.....	506
(a)	Amer Chehadeh.....	506
(b)	Bilal Omar Yamout.....	507
(c)	Witness PRH009	508
(d)	Alia Al-Arab and family	508
(e)	Tarek Soubra	509
5.	Tertiary harm	510
VII.	Reliability of telecommunications evidence	512
A.	Introductory concepts.....	513
1.	Introduction and overview	513
2.	GSM system.....	515
3.	Configuration of individual markets	519
4.	Sending SMS	520

5. Theft or loss of handset or SIM	521
6. Call data used for cell site analysis	522
(a) Call data records.....	523
(b) Format and use of call data records.....	527
(c) Cell site data.....	528
(d) Call sequence tables	531
B. Cellular networks, signal coverage and cell allocation	536
1. Cellular networks and cellular signal coverage	536
(a) Best serving cell and types of cells	536
(b) Coverage prediction	540
(c) Best server coverage prediction	542
(d) Best server coverage measurements and limitations.....	547
2. Cell allocation	549
(a) Exceptional circumstances in cell allocation	553
(b) Anomalies in cell allocation.....	557
C. Alfa network and generation of call data records and cell site data.....	558
1. Introduction.....	558
2. Alfa's network architecture.....	560
3. Call data records and related issues	562
4. Cell site related issues	567
5. Witness 707's clarifications	572
D. Touch network and generation of call data records and cell site data.....	573
1. Introduction.....	573
2. Touch network architecture	574
3. Call data records and related issues	577
4. Cell site related issues	582
5. Clarification of discrepancies.....	586
E. General submissions in relation to Witnesses 705 and 707 and their evidence	586
1. Prosecution.....	586
2. Defence	588
(a) Common Defence submissions	588
(b) Ayyash Defence	591
(c) Merhi Defence.....	593

(d)	Oneissi Defence	594
(e)	Sabra Defence	596
F.	Findings on Witnesses 705 and 707 and their evidence	596
1.	Witnesses 707 and 705 as corporate witnesses and business records	596
2.	Witnesses 707's and 705's substantive evidence.....	602
G.	Call data records and cell site data received from Alfa and Touch.....	605
1.	Summary of evidence.....	605
(a)	CD containing the data for Touch's 2004 coverage maps	606
(b)	CD containing data from Touch between 2005 and 2010.....	607
(c)	Excel spreadsheet with cell tower information for Touch for 2005 and 2007	608
(d)	List of data on 737 Alfa cell sectors (Annexes 14 (2) and 15).....	609
(e)	938 Alfa shape files (Annex 16 (a) (1))	611
(f)	List of cell tower information for Alfa cell sectors based on information from 2007	612
(g)	Two coverage maps of Beirut and Lebanon showing Alfa cell sites in February 2005....	615
(h)	Excel spreadsheet titled 'Security Main' containing basic cell information for Alfa	618
(i)	DVD containing Alfa cell tower information for 2005, 2007 and 2010	620
(j)	Excel spreadsheet 'On Air-Off Air' with information on Alfa cell sites in 2013	622
(k)	Cell ID codes for Alfa.....	623
(l)	CD with Alfa call data records and cell site data	624
(m)	CD containing shape files for three Alfa cell sectors in Tripoli.....	624
(n)	Two spreadsheets with Alfa cell site information.....	625
(o)	Spreadsheet 'CellID' containing details of Alfa cell sectors	626
2.	Submissions on the Alfa and Touch cell site evidence generally	627
(a)	Defence	628
i.	Common submissions	628
ii.	Ayyash Defence	629
iii.	Merhi Defence.....	631
iv.	Oneissi Defence	632
v.	Sabra Defence	636
(b)	Prosecution.....	637
3.	Findings on Alfa's and Touch's call data records and cell site data	639
(a)	Alfa's and Touch's call data records and cell site data as business records	639
(b)	Alfa's call data records and cell site data.....	641

(c)	Accuracy of maps.....	643
(d)	Touch call data records and cell site data.....	644
H.	Electronic presentation of evidence (EPE)	646
1.	Summary of evidence.....	646
2.	Submissions	652
(a)	Prosecution.....	652
(b)	Defence	652
i.	Common submissions	652
ii.	Ayyash Defence	653
iii.	Merhi Defence.....	654
iv.	Oneissi Defence	655
v.	Sabra Defence	657
3.	Findings on the electronic presentation of evidence	658
I.	Elements of cell site analysis	660
1.	Impact of time on cell configuration in Lebanon.....	663
(a)	Summary of evidence.....	663
(b)	Submissions	665
2.	Best server coverage characteristics	666
3.	Impact of propagation anomalies, exceptional circumstances in cell allocation and other factors on cell site analysis	667
(a)	Summary of evidence.....	667
(b)	Submissions	671
4.	Mobiles' locations and movements.....	673
(a)	Summary of evidence.....	673
(b)	Submissions	674
5.	Mr Philips's access to information.....	674
(a)	Summary of evidence.....	674
(b)	Submissions	675
6.	Findings on cell site analysis	678

Volume II

VIII.	Nature and purpose of colour-coded mobile networks and Purple group of mobiles	684
A.	Introduction.....	684

B. Mobile networks in general.....	686
1. Characteristics of a mobile network.....	686
2. Organisational factors	687
(a) Setting up the network	687
(b) Equipment	688
(c) Usage.....	688
(d) Closure of the network.....	689
3. Coverttness factors	690
4. Weighing the factors	692
5. Submissions	692
6. Findings.....	693
C. Green network.....	695
1. Setting up the network	696
2. Equipment	698
3. Usage.....	698
4. Closure of the network.....	705
5. Anonymity	706
6. Submissions	707
7. Findings.....	709
D. Red network	712
1. Setting up the network	713
2. Equipment	715
3. Usage.....	716
4. Closure of the network.....	723
5. Anonymity	725
6. Submissions	727
7. Findings.....	729
E. Blue network.....	730
1. Setting up the network	731
2. Equipment	734
3. Usage.....	735
4. Closure of the network.....	741
5. Anonymity	744

6. Submissions	745
7. Findings.....	746
F. Yellow network.....	748
1. Setting up the network	749
2. Equipment	750
3. Usage.....	751
4. Closure of the network.....	757
5. Anonymity	758
6. Submissions	759
7. Findings.....	761
G. The networks' common mission	763
1. Common characteristics among the networks.....	763
2. The roles of the various networks	772
3. The common mission	775
4. Submissions	777
5. Findings.....	779
H. Purple group of mobiles.....	781
1. Introduction.....	781
2. Evidence.....	783
(a) Purple 231—attributed to Hassan Habib Merhi.....	783
(b) Purple 018—attributed to Assad Hassan Sabra	785
(c) Purple 095—attributed to Hussein Hassan Oneissi	786
(d) Characteristics of the group of Purple mobiles	787
(e) Discovery of Purple mobiles.....	789
3. Submissions	789
4. Findings.....	791
IX. Attribution of mobile telephones to the Accused and Mustafa Amine Badreddine.....	797
A. Single user analysis.....	797
1. Introduction.....	797
2. Mr J. E. Philips's evidence.....	800
(a) Single user analysis.....	800
(b) General cell site techniques for attribution and co-location analysis.....	801
(c) Mr Philips's methodology.....	803

(d)	Mr Philips’s conclusions	808
3.	Mr Andrew Donaldson’s evidence and methodology	812
(a)	Definitions, terminology and step-by-step process	816
(b)	‘Positive indicators’, ‘negative indicators’ and overall assessment	818
(c)	Mr Donaldson’s reporting of results	821
(d)	Weaknesses in the methodology	821
4.	Submissions	822
(a)	Prosecution’s general submissions.....	822
(b)	Defence submissions.....	825
i.	Ayyash Defence	825
ii.	Merhi Defence.....	828
iii.	Oneissi Defence	830
iv.	Sabra Defence	831
5.	The Trial Chamber’s approach to single user analysis	833
(a)	General observations.....	833
(b)	Methodology and Trial Chamber’s approach to evaluating this evidence	835
(c)	Methodology—calculating possible travel times between cells	838
(d)	Mr Philips’s lack of familiarity with Lebanon.....	840
(e)	Mr Philips’s ‘isolation’ from the Prosecution and Mr Donaldson’s credibility	841
(f)	Conclusion—eliminating coincidence	841
B.	Salim Jamil Ayyash	842
1.	Personal mobiles and landlines	845
(a)	Mr Ayyash’s work for the Lebanese Civil Defence.....	845
(b)	Landline 696—Ayyash family residence in Hadath, Beirut	848
i.	Land Registry, telephone and electricity subscription records	848
ii.	Landline 696 as a contact for Mr Ayyash and his family	850
iii.	Contacts of landline 696	851
iv.	Submissions	855
v.	Findings.....	856
(c)	Landline 851—Ayyash family residence in Harouf, Nabatiyeh	857
i.	Land Registry, telephone and electricity subscription records	857
ii.	Landline 851 as a contact for Mr Ayyash and his family	859
iii.	Contacts of landline 851	860

iv. Submissions	862
v. Findings.....	862
(d) Personal mobile 165.....	863
i. Evidence.....	864
a. Bank documents	864
b. Landline application.....	864
c. Passport application	865
d. Hajj participation entry	865
e. Service providers and appointments	865
f. Handset use	866
g. Contact profile.....	867
h. Geographic profile	871
ii. Submissions	875
iii. Findings.....	876
(e) Personal mobile 170.....	879
i. Evidence.....	879
a. Handset—Yellow 669.....	880
b. Toyota Camry accident	880
c. Contact profile.....	880
d. Mr Ayyash’s daughter’s visit to Iran	881
e. Mr Ayyash’s wife’s appointments at a service provider.....	881
f. Geographic profile	882
ii. Submissions	882
iii. Findings.....	883

(c)	Findings.....	1675
i.	The shift in the Prosecution's case.....	1675
ii.	International case law on identification evidence	1676
iii.	The purported identification of 'Mohammed'	1677
3.	Activity of Mr Merhi's Purple 231, Mr Oneissi's Purple 095 and Mr Sabra's attributed Purple 018, between December 2004 and Friday 7 January 2005	1685
(a)	Evidence.....	1687
i.	Cells relevant to the 'COLA phase'	1687
ii.	Evidence of Prosecution expert Mr Gary Platt	1698
iii.	Before Wednesday 22 December 2004—Alfa records were incomplete before 1 October 2004.....	1709
iv.	Wednesday 22 to Wednesday 29 December 2004	1712
v.	The so-called 'COLA phase'—Wednesday 29 December 2004 to Friday 7 January 2005	1716
(b)	Submissions	1731
(c)	Findings.....	1740
i.	Whether the Prosecution has proved that Mr Oneissi was 'Mohammed'	1740
ii.	Telecommunications evidence linking the Purple mobiles to Ahmad Abu Adass	1745
a.	Mr Oneissi's and Mr Sabra's presence 'near' the mosque around prayer times.....	1747
b.	Whether the communications between the three Purple mobiles were 'exceptional'	1755
E.	Mr Abu Adass's disappearance and surrounding events	1760
1.	Introduction—the Prosecutor's pleaded case against the three Accused	1760
2.	Mr Abu Adass's disappearance on Sunday 16 January 2005	1764
(a)	Introduction.....	1764
(b)	Evidence of mobile activity	1765
i.	Purple mobile activity on Monday 10 January 2005.....	1765

ii. Intensified Green mobile calls and ‘hierarchical’ Green-Purple call flows between Wednesday 12 January and Saturday 15 January 2005	1766
iii. Telephone calls to the Abu Adass landline on Saturday 15 January 2005	1772
iv. Mr Abu Adass’s departure on Sunday 16 January 2005	1774
v. Cessation of Purple mobile activity and increased Green mobile activity on Sunday 16 January 2005	1776
vi. Telephone calls to the Abu Adass home on Monday 17 January 2005	1778
vii. Purple mobile activity on Monday 17 January 2005.....	1780
viii. Reporting Mr Abu Adass missing, Wednesday 19 January 2005	1783
ix. Mr Khaled Taha’s travel on Saturday 15 and Sunday 16 January 2005	1784
(c) Submissions	1786
(d) Findings.....	1793
i. Ahmad Abu Adass’s disappearance on Sunday 16 January 2005	1793
ii. Alternative inferences—Khaled Taha and Bilal Zaaroura.....	1795
iii. Whether Mr Abu Adass was abducted.....	1797
iv. Cell site evidence relating to Mr Merhi’s, Mr Oneissi’s and Mr Sabra’s alleged involvement in Mr Abu Adass’s disappearance.....	1799
F. Preparing the claim of responsibility—Tuesday 18 January 2005 to Sunday 13 February 2005	1806
1. Introduction.....	1806
2. Preparatory events.....	1806
(a) Evidence.....	1806
i. Making the video claiming responsibility.....	1806
ii. Purchase of the telecard number 6162569 on Wednesday 9 or Thursday 10 February 2005	1806
(b) Submissions	1807
(c) Findings.....	1807
3. Mobile activity from Tuesday 18 January to Sunday 13 February 2005	1808
(a) Evidence.....	1808
i. Alleged decline in Purple mobile activity.....	1808
ii. Patterns of Green mobile activity and inactivity.....	1811
iii. Contact between Mr Merhi’s Purple 231 and Mr Ayyash’s personal mobile 091	1812
(b) Submissions	1814
(c) Findings.....	1817

4. Activity of Mr Merhi's Purple 231, Mr Oneissi's Purple 095 and Mr Sabra's attributed Purple 018 on the afternoon of Monday 14 February 2005	1820
(a) Introduction.....	1820
(b) Stability of the networks on Monday 14 February 2005 after the explosion	1821
(c) Evidence.....	1830
i. The morning of Monday 14 February 2005.....	1830
ii. Call to Reuters at 14:11—payphone 1, COLA1 cell.....	1830
iii. First call to Al-Jazeera, at 14:19—payphone 2, TAHAN1 cell	1832
iv. Second call to Al-Jazeera at 15:27—payphone 3, BACHOU2.....	1835
v. Collection of the video and letter	1840
vi. Third call to Al-Jazeera at 17:04—payphone 4, CELTEC1 cell.....	1844
vii. Final Purple mobile activity.....	1850
(d) Submissions	1851
(e) Findings.....	1858
G. Whether the claim of responsibility was false	1871
1. Evidence.....	1873
(a) The claim of responsibility	1873
(b) Evidence about the contents of the claim of responsibility.....	1875
(c) Mr Abu Adass's background and associates.....	1878
2. Submissions	1883
3. Findings.....	1886
H. The non-covert nature of the use of the Purple mobiles	1893
1. Evidence.....	1894
2. Submissions	1897
3. Findings.....	1900
I. Possible involvement of <i>al-Ahbash</i> in Mr Hariri's assassination	1904

Volume IV

XIII. Applicable law	1917
-----------------------------------	-------------

A. General legal framework.....	1917
1. Introduction.....	1917
2. The charges against the four Accused.....	1920
3. The Articles of the Lebanese Criminal Code relevant to the charges against the Accused	1921
4. Articles 6 and 7 of the Lebanese law of 1958.....	1925
5. Articles 2 and 3 of the Statute.....	1927
6. The Appeals Chamber’s interlocutory decisions on the applicable law	1940
(a) Background to the decisions	1940
(b) Are these decisions binding on the Trial Chamber?	1941
(c) The Appeals Chamber’s reasoning in interpreting the Special Tribunal’s applicable law	1951
i. Interpretative principles	1951
ii. The Trial Chamber’s observations	1956
iii. Submissions on the interpretation of Articles 2 and 3	1958
7. Conclusion: the Trial Chamber’s approach to interpreting the modes of liability and crimes charged	1962
B. Modes of liability.....	1966
1. Committing an offence – Articles 212 and 213	1967
2. Accomplice liability.....	1973
(a) Lebanese law on accomplice liability—Article 219	1973
i. Introduction: the Lebanese case law	1973
ii. Article 219 generally.....	1974
a. <i>Actus reus</i> and complicity in attempts	1974
b. Agreement with perpetrator and <i>mens rea</i> generally	1976
c. The degree of knowledge of the crime required of an aider and abettor.....	1980
iii. Article 219 (4) specifically	1989
iv. Article 219 (5) specifically	2002
(b) International criminal law principles on aiding and abetting	2005
(c) Conclusion: the law applicable to accomplice liability.....	2013
C. Substantive crimes	2015
1. Terrorist act.....	2015
(a) <i>Actus reus</i>	2015
(b) <i>Mens rea</i>	2022
(c) Conclusion: the elements of a terrorist act.....	2030

2.	Conspiracy aimed at committing a terrorist act	2030
(a)	The Appeals Chamber's interpretation of Article 270	2031
(b)	Sources of principles on conspiracy.....	2034
(c)	Elements 1 to 3 and 5: participants, agreement, aim and intent.....	2039
(d)	Element 4: agreement to commit a terrorist act 'by specific means'	2045
(e)	Conclusion: the elements of conspiracy aimed at committing a terrorist act.....	2054
3.	Intentional homicide	2054
(a)	<i>Actus reus</i>	2056
(b)	<i>Mens rea</i>	2061
(c)	Conclusion: the elements of intentional homicide	2066
4.	Attempted intentional homicide.....	2067
XIV.	Legal findings on elements of the crimes and Individual criminal responsibility	2074
A.	Legal findings on charged crimes (Counts 2-9).....	2074
1.	Committing a terrorist act by means of an explosive device	2074
(a)	The crime	2074
(b)	Aggravating circumstances: deaths and destruction of buildings	2076
2.	Intentional homicide and attempted intentional homicide	2076
(a)	Intentional homicide	2076
(b)	Attempted intentional homicide.....	2077
(c)	Aggravating circumstance: use of explosive materials	2079
B.	Conspiracy to commit a terrorist act (Count 1).....	2079
1.	The crime of conspiring to commit a terrorist act.....	2080
(a)	Findings on the elements of the crime of conspiracy: a brief summary.....	2082
(b)	Charges	2083
(c)	Findings of fact	2085
i.	Political background	2085
ii.	Role of coloured network mobiles	2085
iii.	Attribution of Green network mobiles to Mr Badreddine, Mr Ayyash and Mr Merhi.....	2086
iv.	Surveillance of Mr Hariri.....	2086
v.	'Hierarchical' call flows.....	2089

4. Facts of common knowledge the subject of judicial notice	2634
F. ANNEX F: Analysis regarding Yellow 669	2638

I. INTRODUCTION

1. Just before 13:00 on Monday 14 February 2005, the former prime minister of Lebanon, Mr Rafik Hariri, was travelling in his convoy in Beirut between the Lebanese Parliament and his home, Quraitem Palace. As it approached the St Georges Hotel, near the coast, a massive explosion was detonated. Mr Hariri was killed in the blast. Twenty-one others, including eight members of Mr Hariri's convoy, and innocent bystanders also died. Three of the victims died after the explosion, two on the following day, and the third, the Lebanese MP, Mr Bassel Fuleihan, succumbed after lying in a coma for two months.

2. At least another 226 people were injured, some very seriously. People passing in the street and working in nearby buildings sustained terrible injuries. Many buildings were badly damaged.

3. The explosion was triggered by a suicide bomber in a Mitsubishi Canter—a light tarpaulin covered truck, loaded with more than two tonnes of RDX high-grade explosives—that detonated as Mr Hariri's heavily protected six vehicle convoy passed the St Georges Hotel. The explosives had the equivalent of 2,500 to 3,000 kilograms of TNT. The explosion left a crater in the road that, based on the cone shape, had a diameter of around 11.4 metres with a depth of around 1.9 metres, within a margin of error of several per cent.

4. Mr Hariri and his convoy had been under surveillance for some months before his assassination. Those engaged in the surveillance were communicating in the field using three sets of mobile telephone networks. To distinguish the three networks, the Prosecution labelled them as the Yellow, Blue and Red networks.

5. The Red network was the assassination team. The users of the Blue and Red network mobiles communicated only with each other. Another network, labelled as the Green network, of three mobiles, was alleged to have coordinated and monitored all aspects of the operation targeting Mr Hariri which eventually resulted in his death.

6. In the months before the attack, network mobiles had followed Mr Hariri as he travelled around Lebanon. This included his trips to Beirut Airport, to his villa in Faqra north of Beirut, to his villa at Naameh, south of Beirut, when he visited mosques and churches, when he met

Hezbollah's Secretary-General in south Beirut, when he went to the Parliament and when he had lunch and dinner engagements. The network mobiles were also engaged in static surveillance near Quraitem Palace and along some of the routes he travelled.

7. The aim of this surveillance was to obtain information about Mr Hariri's movements, his security detail, his level of protection and eventually to determine a suitable method to murder him, including finding an appropriate location for the intended attack. Mr Hariri's convoy was equipped with electronic jammers that would have blocked the remote detonation of any explosive. Thus, a vehicular improvised explosive device—in the form of a suicide bomber driving a light truck loaded with explosives that he could safely self-detonate—was chosen for the attack.

8. Shortly after the explosion on the afternoon of Monday 14 February, the Al-Jazeera news network in Beirut received calls claiming responsibility for the attack, and saying that a video with a letter attached was in a nearby tree. Three calls were made, with one menacing call exhorting the immediate broadcast of the video. The callers had also first contacted Reuters. Two of the Accused, Hussein Hassan Oneissi and Assad Hassan Sabra, were alleged to have made these calls and to have observed the collection of the video from the tree.

9. In the video, which Al-Jazeera broadcast later that afternoon, a young Palestinian man, Mr Ahmad Abu Adass, claimed to represent a fundamentalist group called 'Victory and Jihad in Greater Syria' and to have executed a 'resounding martyrdom operation' against Mr Hariri as an agent of the 'infidel Saudi regime'. The attached letter claimed that the suicide operation was carried out by 'the Mujahid, Ahmad Abu-Adass'. The Prosecution termed this as a 'false claim of responsibility' for the attack on Mr Hariri. And indeed it was. The group is fictional and Mr Abu Adass did not kill himself in the explosion; he was not the suicide bomber.

10. Mr Abu Adass, a religious 22 year old, disappeared from his home in Beirut on the morning of Sunday 16 January 2005 and his family has not seen him since. Presumably he is no longer alive. Mr Oneissi and Mr Sabra were alleged to have arranged this by recruiting him at a mosque in Beirut.

11. The successful attack on Mr Hariri was carefully planned and implemented. The six core Red network mobile users were responsible for Mr Hariri's murder on 14 February 2005. The Yellow, Blue and Red network mobile users observed Mr Hariri and his convoy's movements in

the weeks and months before the attack. Some members of the Red network also used Blue and or Yellow network mobiles. On the day of the attack, the Red mobile users observed Mr Hariri's movements at the Parliament and were present there and near the crime scene shortly before the explosion. They also coordinated the Canter's movement towards the convoy. The Red network users made their final calls in the minutes before the attack and these anonymous mobiles were never used again.

12. The false claim of responsibility video was aimed at diverting attention away from the true perpetrators, namely, Salim Jamil Ayyash and his co-conspirators.

13. The four Accused are Salim Jamil Ayyash, who was born on 10 November 1963 in Harouf, Lebanon, Hassan Habib Merhi, born on 12 December 1965 in Beirut, Hussein Hassan Oneissi, who was born in Beirut on 11 February 1974, and Assad Hassan Sabra, also born in Beirut and whose date of birth is 15 October 1976. A fifth and former Accused, Mustafa Amine Badreddine, who was also known as 'Sami Issa'—and is alleged to have been a co-conspirator—was born in Beirut on 6 April 1961. All five, the Prosecutor alleged, are supporters of Hezbollah, a Lebanese political and military organisation.

14. The amended consolidated indictment contains nine counts, alleging crimes committed contrary to the Lebanese Criminal Code. The crimes are of conspiracy to commit a terrorist act by means of an explosive device, committing a terrorist act by means of an explosive device, the intentional homicide of Mr Hariri and of the 21 others, the attempted intentional homicide of the 226 people injured in the blast and of being accomplices to these crimes.

15. The Prosecutor alleged that each of the four Accused and Mr Badreddine participated in the conspiracy. They had the following roles in the attack:

- i. Mustafa Amine Badreddine monitored, and together with Salim Jamil Ayyash, coordinated the surveillance of Mr Hariri in preparation of the attack, including the purchase of the Canter. He also monitored the physical perpetration of the attack, and monitored with Hassan Habib Merhi the coordination of the preparation of the false claim of responsibility;

- ii. Salim Jamil Ayyash, with Mustafa Amine Badreddine, coordinated the surveillance of Mr Hariri in preparation of the attack, including the purchase of the Canter. He communicated with Hassan Habib Merhi in relation to preparations for the attack, including the false claim of responsibility. He coordinated the physical perpetration of the attack and participated in carrying out the surveillance and assassination;
 - iii. Hussein Hassan Oneissi and Assad Hassan Sabra, under Hassan Habib Merhi's coordination, participated in identifying a suitable person to use in a video-taped false claim of responsibility for the attack, namely, Mr Abu Adass. Immediately after the attack, they disseminated statements falsely attributing responsibility for the attack, ensured the delivery of the video and attached letter to Al-Jazeera, and ensured its broadcast. This too was under Mr Merhi's coordination. Mr Oneissi, additionally and again under Mr Merhi's coordination, participated in Mr Abu Adass's disappearance for the purpose of creating a false claim of responsibility; and
 - iv. Hassan Habib Merhi, with Mustafa Amine Badreddine, coordinated the false claim of responsibility and at times was in communication with Assad Hassan Sabra for this purpose. He coordinated Mr Oneissi's and Mr Sabra's activities in identifying and effecting the disappearance of a suitable person, Mr Abu Adass, who would be used in the video. Immediately after the attack, he coordinated their activities in disseminating statements falsely attributing responsibility for the attack, ensuring the delivery of the video and attached letter to Al-Jazeera and ensuring its broadcast.
16. Mr Oneissi and Mr Sabra, according to the Prosecutor, used their personal mobiles to communicate with each other and Mr Merhi in relation to the false claim of responsibility. These three mobiles were termed the 'Purple group' of mobiles. Mr Badreddine, Mr Ayyash and Mr Merhi were alleged to have communicated in a closed three-mobile Green network, in which Mr Ayyash and Mr Merhi used their Green mobiles only to communicate with Mr Badreddine.
17. The Prosecution attempted to prove that they were using their network mobiles based upon the co-location of the network mobiles with their own personal mobiles. In other words, that the personal and network mobiles made calls and travelled in a manner suggesting that they had a single user.

18. The Prosecution presented a vast quantity of documents and telecommunications evidence, including the call data records of the calls made, and cell site evidence of the cell towers activated, in attempting to prove first, that the Accused and Mr Badreddine were using the personal mobiles alleged. Second, that these were co-locating with the network mobiles and, third, that the network mobiles were engaged in Mr Hariri's surveillance and assassination.

19. The Prosecution proved some but not all of these allegations and mobile telephone attributions to the Accused and Mr Badreddine.

20. The evidence has established that Mr Ayyash conspired with unidentified people to commit a terrorist act by means of an explosive device in order to murder Mr Hariri. Mr Ayyash led the assassination team on Monday 14 February 2005. The Prosecution proved that he was using Yellow, Blue, Red and Green network mobiles and that the first three were engaged in surveillance of Mr Hariri between October 2004 and 14 February 2005. It also proved that he was actively involved in the assassination on the day of the attack.

21. There was insufficient evidence to find what role if any Mr Badreddine had in the conspiracy.¹ The evidence consisted solely of the records of activations of his Green network mobile in calls to the other two Green network mobiles. One was used by Mr Ayyash. The other the Prosecution attributed to Mr Merhi.

22. The evidence established that much of the surveillance was directed at targeting Mr Hariri for his possible assassination. However, how much was difficult to discern, given that Mr Hariri was under surveillance by more than one group, including the Lebanese Internal Security Forces. The Trial Chamber has found that the final decision to proceed with the plan and hence to murder Mr Hariri was made only sometime in early February 2005 in the weeks before the attack. The surveillance in the weeks preceding the decision was preliminary to a possible attack.

23. Regarding Mr Merhi's, Mr Oneissi's and Mr Sabra's role in the conspiracy and the false claim of responsibility, the Prosecution did not prove its case beyond reasonable doubt.

¹ Judge Braidy dissented on assessing and making legal findings on the role of Mr Badreddine. *See* chapter XIX 'Dissenting opinion of Judge Micheline Braidy'.

24. The Prosecution alleged that Mr Oneissi, posing as someone called ‘Mohammed’, approached Mr Abu Adass in a mosque for the purpose of finding someone to use in the false claim video. Mr Oneissi and Mr Sabra were also alleged to have been present around the mosque in Beirut over ten days, in late December 2004 and early January 2005, for this purpose. In court, the Prosecution claimed that Mr Oneissi and Mr Sabra participated in abducting Mr Abu Adass from his home on Sunday 16 January 2005. The Prosecution case on each of these allegations, based almost solely on the cell activations of two personal mobiles around the mosque, failed.

25. The evidence that Mr Oneissi was ‘Mohammed’ was unreliable. It was not probative. There was also, ultimately, no reliable evidence connecting the activations of the two personal Purple mobiles around the mosque with Mr Abu Adass or anything that he did.

26. Similarly, there was no evidence connecting either Accused person with Mr Abu Adass’s disappearance and there was no reliable evidence that he was even abducted. Further, the Prosecution did not prove beyond reasonable doubt that Mr Sabra was using his attributed personal Purple mobile. The mobile was jointly used by Mr Sabra and his wife, and there was no reliable evidence establishing that Mr Sabra was the person using it at all relevant pleaded times.

27. In relation to the calls to Reuters and Al-Jazeera on the afternoon of Monday 14 February 2005, the evidence was too weak to connect either Mr Oneissi or Mr Sabra to the calls or the collection of the video from the tree. The cell site evidence was insufficiently reliable in the aftermath of the attack to prove that their attributed mobiles were where they were alleged to be when the calls were made. The Trial Chamber was satisfied beyond reasonable doubt that Mr Oneissi was using his personal Purple mobile, but as noted, could not make the same finding regarding Mr Sabra.

28. Additionally, the evidence did not prove that either Accused joined the conspiracy before the explosion. Nor that even had they made the telephone calls to Reuters and Al-Jazeera as alleged, they knew of the explosion in advance, and that their alleged actions were connected to the attack. Proving their knowledge of this was legally required under the Lebanese Criminal Code.

29. Regarding Mr Merhi, the Prosecution also failed to prove beyond reasonable doubt that he was using his attributed Green mobile, and hence communicating with Mr Badreddine on the false

claim of responsibility. There was also no evidence of his communicating with Mr Ayyash in relation to the false claim of responsibility.

30. Mr Merhi was charged with coordinating the activities of Mr Oneissi and Mr Sabra in preparing the false claim of responsibility. However, as the case against them has failed, the case against Mr Merhi also failed, including his participation in the conspiracy. The Trial Chamber was not satisfied beyond reasonable doubt of their guilt.

31. The evidence against all four Accused was circumstantial. The only direct piece of evidence—and one that the Trial Chamber found too unreliable to use against Mr Oneissi—was evidence that the Prosecutor pleaded identified him as the ‘Mohammed’ who met Mr Abu Adass in the mosque, in attempting to find someone to use in the false claim video.

32. The remainder of the evidence against the four Accused, and of Mr Badreddine’s pleaded role, came from the cell activations of their attributed personal and network mobiles. The Prosecution led evidence connecting these to Mr Hariri’s provable movements and, additionally, in the case of Mr Oneissi and Mr Sabra, to Mr Abu Adass. Ultimately, however, the evidence relating to Mr Abu Adass was insufficiently reliable to use against the Accused.

33. There was no evidence of any of the four Accused or Mr Badreddine meeting, or of the content of any of their mobile telephone conversations. There were no telephone intercepts, relevant text messages or voice mails. There was no reliable evidence of Mr Oneissi or Mr Sabra meeting Mr Abu Adass.

34. To find Mr Ayyash guilty, the Trial Chamber had to connect the activations of his personal and network mobiles with Mr Hariri’s movements and other relevant incidents. It did this by analysing the use of a Red mobile, number 741, on the day of the attack and then working backwards to find that he was using it on that and other relevant days when surveillance occurred. Red 741 co-located with Mr Ayyash’s personal and other network mobiles in such a manner that the only conclusion reasonably available on the totality of the evidence was that he was its user and its user was heavily involved in the attack.

35. The Trial Chamber, as it must in a case based on circumstantial evidence, has exercised any evidentiary doubt in favour of an Accused person. For these reasons, it has acquitted Mr Merhi,

Mr Oneissi and Mr Sabra of all counts charged on the amended consolidated indictment. In Mr Ayyash's case, it has been satisfied that the only inference reasonably available on the evidence is of his guilt beyond reasonable doubt on all counts charged.

36. Seventy-six victims of the attack in total participated at some point in the proceedings, and some testified for the Prosecution and or in a short case presented by their Legal Representatives. This was to give effect to their views and concerns.

37. This judgment has twenty chapters. Some summarise and analyse the different evidentiary themes in the case. These include the forensic evidence relating to the explosion and identification of the victims and the political and historical background to the attack.

38. Separate chapters address the vast telecommunications evidence, the network mobiles and their common mission, the evidence attributing various personal and network mobiles to the Accused and Mr Badreddine and the forensic techniques used to do this. The case of the participating victims and the effect the explosion had on them and their families is the subject of individual chapters. How the Trial Chamber has assessed the evidence, and the applicable law, namely the Lebanese Criminal Code, are also separately addressed.

39. The individual criminal responsibility in respect of each Accused is addressed separately, while a larger chapter analyses the role of each, and Mr Badreddine, in the conspiracy alleged. A detailed chapter also analyses the false claim of responsibility and the alleged roles of Mr Merhi, Mr Oneissi and Mr Sabra. This chapter assesses the evidence and concludes that none bore individual criminal responsibility for either the attack or the false claim of responsibility.

40. Six annexes are appended to the judgment. These include a glossary of commonly used terms, and a table of legal authorities. This table includes judicial decisions and judgments of the Special Tribunal, other international criminal courts and tribunals, and national courts such as Lebanon's, international legal instruments such as human rights law treaties, and publications referenced in the judgment.

41. The agreements as to evidence between the Parties—sometimes known as 'agreed facts'—and facts of which the Trial Chamber has taken judicial notice are also annexed. A list of the names

of those injured in the explosion has its own annex. Dissenting and separate opinions are also appended.

42. Throughout the judgment, the exhibits tendered by the Parties and participating victims are identified by a letter and a unique number. The Prosecution exhibits are identified by ‘exhibit P’ plus a number, for example ‘exhibit P1234’. The exhibits tendered by the Defence are similarly identified: for example, ‘exhibit 1D1234’ (Ayyash), exhibit 2D (Badreddine), exhibit 3D (Merhi), exhibit 4D (Oneissi) and exhibit 5D (Sabra). The participating victims’ exhibits run from ‘exhibit 1V1’ to 1V45.

43. Witnesses are referred to either by their name or by their witness pseudonym number. The use of a pseudonym is the consequence of an order protecting their identity from publication made under Rule 133 (A) of the Special Tribunal’s Rules of Procedure and Evidence. Most protected witnesses are referred to by their Prosecution witness number, for example, ‘Witness PRH123’: ‘PRH’ denotes ‘Prosecution Rafik Hariri’.*

* The Trial Chamber thanks the legal officers who worked with the three Trial Chamber judges on this judgment. They are the five Trial Chamber lawyers, led by its senior legal officer, Ms Judit Tatrai, and legal officers Mr Victor Baiesu, Ms Beatrice Pacini, Ms Kirsten Calhoun and Ms Emma Pountney and former legal officer, Mr Houston Goddard, and its administrative assistant, Ms Deirdre Claassen. It also thanks the lawyers working on temporary contracts for differing periods who assisted, including Ms Tatiana Bachvarova, Ms Jane McCosker, Mr Todd Schneider, Mr Nico Baarlink and Ms Alexandra Popova, and its interns, and Ms Pauline Thomas, and those who did not want their names mentioned here. The Trial Chamber also acknowledges the six-year contribution of its initial senior legal officer, Ms Tonia Gillett.

II. THE PROSECUTION'S PLEADED CASE

A. The amended consolidated indictment

44. The Prosecutor pleads in the amended consolidated indictment that the four Accused, Salim Jamil Ayyash, Hassan Habib Merhi, Hussein Hassan Oneissi and Assad Hassan Sabra, participated in a conspiracy with others including Mustafa Amine Badreddine to commit a terrorist act to assassinate Mr Hariri.

45. Mr Ayyash, Mr Merhi, Mr Badreddine and unidentified others are alleged to have conspired between Thursday 11 November 2004 and the morning of Monday 14 February 2005 to commit a terrorist act by means of an explosive device in order to assassinate Mr Hariri. Mr Oneissi and Mr Sabra are alleged to have entered the conspiracy between Wednesday 22 December 2004 and the morning of Monday 14 February 2005.²

46. The coordination, preparation and execution of the assassination of Mr Hariri was operated and managed through the use of mobile telephone networks and mobiles whose users were allegedly Mr Badreddine, Mr Ayyash, Mr Merhi, Mr Oneissi, Mr Sabra and unknown others.³ The amended consolidated indictment alleges the existence of five interconnected mobile telephone groups, four of which operated as networks—the Red network, the Green network, the Blue network and the Yellow network—and a group of Purple mobiles.⁴

47. The Green network is alleged to have been used exclusively by Mr Badreddine, Mr Ayyash and Mr Merhi, to exchange information regarding all aspects of the conspiracy and to coordinate the acts in furtherance of it.⁵ It is alleged to have been at the apex of the conspiracy, with Mr Badreddine using a mobile in that closed network to call Mr Ayyash and Mr Merhi, and *vice-versa*. The amended consolidated indictment contains a visual graphic of this:⁶

⁵ Amended consolidated indictment, para. 19 (a).

⁶ Amended consolidated indictment, para. 19.

48. The Blue, Red and Yellow networks are alleged to have been used under Mr Ayyash's coordination for the preparation and in the perpetration of the attack.⁷ The Purple group of mobiles

⁷ Amended consolidated indictment, para. 19 (b).

was used for communication between Mr Merhi, Mr Oneissi and Mr Sabra to prepare and then to carry out the false claim of responsibility following the attack.⁸

49. Mr Ayyash, using his personal mobile, was in contact with the purple mobile attributed to Mr Merhi in relation to the preparations for the attack, including making the false claim of responsibility.⁹

50. In the preparatory phase of the attack, Mr Ayyash and others on the Blue, Red and Yellow networks observed and conducted surveillance of Mr Hariri in order to learn the routes and movements of his convoy, including his vehicle's position in the convoy.¹⁰ Surveillance was conducted between 11 November 2004 and 14 February 2005, on at least 15 days. Operating on the Blue, Red and Yellow networks simultaneously, Mr Ayyash and the assassination team determined the most suitable day, location and method for the attack which they then executed on 14 February 2005.¹¹ Between Saturday 1 January 2005 and Monday 14 February 2005, often during the assassination team's activity, Mr Badreddine was in contact with Mr Ayyash on the Green network.¹²

51. As part of the assassination preparations, between Wednesday 22 December 2004 and Monday 17 January 2005, and using the Purple mobiles, Mr Oneissi and Mr Sabra—under Mr Merhi's coordination—were responsible for finding a suitable individual who could be used to make the false claim of responsibility video for the attack against Mr Hariri.¹³ This was conducted with Mr Oneissi falsely presenting himself as 'Mohammed' to Mr Abu Adass, a 22-year-old Palestinian man they found at the Arab University Mosque of Beirut.¹⁴ On Sunday 16 January 2005, Mr Abu Adass left his home to meet Mr Oneissi at about 07:00 and has been missing since.¹⁵

¹³ Amended consolidated indictment, paras 23, 48 (c) (i).

¹⁴ Amended consolidated indictment, para. 23.

¹⁵ Amended consolidated indictment, para. 28.

52. On around Monday 17 January 2005,¹⁶ the family of Mr Abu Adass received a call on their landline telephone from the person believed to be ‘Mohammed’ claiming that he and Mr Abu Adass had broken down in a vehicle in Tripoli. Later that same day another call was received where the family was informed that Mr Abu Adass had decided to go on ‘Jihad’ to Iraq and would not be returning home.¹⁷

53. On Tuesday 25 January 2005, two unidentified people giving false names, one of them being the user of a Blue network mobile, purchased a Mitsubishi Canter light truck from a vehicle ‘showroom’ in the *Al-Beddaoui* area of Tripoli.¹⁸ During the purchase negotiations, the user of the Blue network mobile was in contact with Mr Ayyash on the Blue network.¹⁹ This vehicle was later used in the attack on 14 February 2005.²⁰

54. On Monday 14 February 2005, Mr Ayyash and other members of the assassination team frequently communicated with each other on their Blue and later Red network mobiles. They positioned themselves in locations where they were able to track and observe Mr Hariri’s convoy from his residence at Quraitem Palace in Beirut to the Parliament, and thereafter travelling back to his residence, into the area of the St Georges Hotel in Beirut.²¹

55. Between 12:50 and 12:53, several calls were made on the Red network.²² Around that time, the Mitsubishi Canter began moving towards the St Georges Hotel.²³ At 12:55, a large quantity of high explosives concealed in the Mitsubishi Canter was detonated as Mr Hariri’s convoy passed the hotel.²⁴

56. From about 75 minutes after the attack—and coordinated by Mr Merhi—Mr Oneissi or Mr Sabra made four calls to the offices of the Reuters and Al-Jazeera news networks in Beirut. In the first two, to Reuters and Al-Jazeera, either Mr Oneissi or Mr Sabra, claimed that a fictional fundamentalist group called ‘Victory and Jihad in Greater Syria’ had executed the attack. In a third

¹⁶ The Prosecution specified that this occurred on around the *morning* of 17 January 2005; Prosecution’s updated pre-trial brief (Ayyash, Badreddine, Oneissi and Sabra case), para. 126.

²² Amended consolidated indictment, para. 39 (b)-(c).

²³ Amended consolidated indictment, paras 39 (b), 40.

²⁴ Amended consolidated indictment, para. 41.

call, to Al-Jazeera, Mr Sabra gave information to Al-Jazeera on where to find a video tape that had been placed in a tree near Al-Jazeera. In the fourth call, to Al-Jazeera, either Mr Oneissi or Mr Sabra demanded with menace that it broadcast the video, which was done shortly after.²⁵ Before, during and after these calls, Mr Merhi was in contact with Mr Sabra seven times.²⁶

57. Under count 1 of the amended consolidated indictment, the Prosecutor charges Mr Ayyash, Mr Merhi, Mr Oneissi and Mr Sabra with having committed the crime of conspiracy, contrary to the Lebanese Criminal Code, the Lebanese Law of 1958 and Article 3 (1) (a) of the Statute, aimed at committing a terrorist act.²⁷ The Accused concluded or joined an agreement, aimed at committing a terrorist act intended to cause a state of terror by using predetermined means liable to create public danger.²⁸

58. Mr Ayyash is also charged under count 2 with having committed, as a co-perpetrator, a terrorist act by means of an explosive device, also contrary to the Lebanese Criminal Code, the Lebanese Law of 1958 and Article 3 (1) (a) of the Statute.²⁹ He is also charged under count 3 with having committed, as a co-perpetrator, the crime of intentional homicide of Mr Hariri with premeditation by using explosive materials, equivalent to approximately 2,500 kilograms of TNT.³⁰

59. The remaining seven counts are all charged as being contrary to the Lebanese Criminal Code and Article 3 (1) (a) of the Statute.

60. Under counts 4 and 5, Mr Ayyash is charged as a co-perpetrator, with the intentional homicide of 21 other people with premeditation by using explosive materials and with the attempted intentional homicide of 226 people with premeditation by using explosive materials,

²⁵ Amended consolidated indictment, para. 44.

²⁶ Amended consolidated indictment, paras 44-45.

²⁷ Amended consolidated indictment, paras 53-54. The amended consolidated indictment refers to Article 3 (1) (a) of the Statute, Articles 188, 212-213, 270 and 314 of the Lebanese Criminal Code and Articles 6-7 of the Lebanese Law of 1958.

²⁸ Amended consolidated indictment, para. 54 (c).

²⁹ Amended consolidated indictment, paras 55-56. The amended consolidated indictment refers to Article 3 (1) (a) of the Statute, Articles 188, 212-213 and 314 of the Lebanese Criminal Code and Article 6 of the Lebanese Law of 1958.

³⁰ Amended consolidated indictment, paras 57-58. The amended consolidated indictment refers to Article 3 (1) (a) of the Statute and Articles 188, 212-213, 547 and 549 (1) and (7) of the Lebanese Criminal Code.

respectively.³¹ Mr Ayyash either intended to kill the 21 others and injured 226 or foresaw and accepted the risk that death would occur as a result of the detonation.³²

61. Finally, the Prosecutor also charges Mr Merhi, Mr Oneissi and Mr Sabra under count 6 with being accomplices to the commission of the crime of a terrorist act by means of an explosive device.³³ The amended consolidated indictment alleges that they performed acts preparatory to the offence as well as acts aimed at shielding the perpetrators and themselves from justice, by falsely blaming others.³⁴

62. Under count 7, Mr Merhi, Mr Oneissi and Mr Sabra are accused of being accomplices to the commission of the crime of intentional homicide of Mr Hariri with premeditation by using explosive materials.³⁵

63. Mr Merhi, Mr Oneissi and Mr Sabra, under counts 8 and 9, are charged, respectively, as accomplices to the commission of the crime of intentional homicide of the 21 other people with premeditation by using explosive materials and as accomplices to the commission of the crime of attempted intentional homicide of 226 people with premeditation by using explosive materials.³⁶

64. The Prosecution also alleges that the four Accused are supporters of Hezbollah, a Lebanese political and military organisation.³⁷ The Special Tribunal was established to prosecute individuals for the crimes within its jurisdiction.³⁸ While the political context of the alleged crimes is undoubtedly important, the focus of this judgment rests firmly on the individual criminal responsibility of the Accused.

³¹ Amended consolidated indictment, paras 59-62. The amended consolidated indictment refers to Article 3 (1) (a) of the Statute and Articles 188-189, 200-201, 212-213, 547 and 549 (1) and (7) of the Lebanese Criminal Code.

³² Amended consolidated indictment, paras 60 (f)-(g), 62 (e)-(j).

³³ Amended consolidated indictment, paras 63-64. The amended consolidated indictment refers to Article 3 (1) (a) of the Statute, Articles 188, 219 (4) and (5) and 314 of the Lebanese Criminal Code and Article 6 of the Lebanese Law of 1958.

³⁴ Amended consolidated indictment, para. 64 (f).

³⁵ Amended consolidated indictment, paras 65-66. The amended consolidated indictment refers to Article 3 (1) (a) of the Statute and Articles 188, 219 (4) and (5), 547 and 549 (1) and (7) of the Lebanese Criminal Code.

³⁶ Amended consolidated indictment, paras 67-70. The amended consolidated indictment refers to Article 3 (1) (a) of the Statute and Articles 188-189, 200-201, 219 (4) and (5), 547 and 549 (1) and (7) of the Lebanese Criminal Code.

³⁷ Amended consolidated indictment, para. 49.

³⁸ Security Council Resolution 1664; Security Council Resolution 1757; Articles 1 and 3 of the Statute.

65. In conclusion, the charges in this case—as taken from the amended consolidated indictment—are:

SALIM JAMIL AYYASH, HUSSEIN HASSAN ONEISSI, ASSAD HASSAN SABRA, and HASSAN HABIB MERHI *each and together, with:*

Count 1 - **Conspiracy aimed at committing a Terrorist Act;** and

SALIM JAMIL AYYASH *with:*

Count 2 - **Committing a Terrorist Act by means of an explosive device;**

Count 3 - **Intentional Homicide** (of Rafik HARIRI) **with premeditation by using explosive materials;**

Count 4 - **Intentional Homicide** (of 21 persons in addition to the Intentional Homicide of Rafik HARIRI) **with premeditation by using explosive materials;**

Count 5 - **Attempted Intentional Homicide** (of 226 persons in addition to the Intentional Homicide of Rafik HARIRI) **with premeditation by using explosive materials;** and

HUSSEIN HASSAN ONEISSI, ASSAD HASSAN SABRA, and HASSAN HABIB MERHI *each and together, with:*

Count 6 - **Being an Accomplice to the felony of Committing a Terrorist Act by means of an explosive device;**

Count 7 - **Being an Accomplice to the felony of Intentional Homicide** (of Rafik HARIRI) **with premeditation by using explosive materials;**

Count 8 - **Being an Accomplice to the felony of Intentional Homicide** (of 21 persons in addition to the Intentional Homicide of Rafik HARIRI) **with premeditation by using explosive materials;** and

Count 9 - **Being an Accomplice to the felony of Attempted Intentional Homicide** (of 226 persons in addition to the Intentional Homicide of Rafik HARIRI) **with premeditation by using explosive materials.**³⁹

³⁹ Amended consolidated indictment, para. 1.

B. Issues arising from the Prosecution's pleadings

1. Introduction

66. In their final trial briefs and closing submissions, Defence counsel challenge how the Prosecution pleaded its case, arguing serious deficiencies in the notice provided to them. Objections are made to: the pleaded dates of the conspiracy; the non-identification of unnamed members of the conspiracy; the role of Hezbollah; the identity of 'Mohammed'; and various supposedly new allegations about the false claim of responsibility and what is termed the 'East of Airport' activity.

67. In six interlocutory decisions in the pre-trial phase, the Trial Chamber dismissed all Defence challenges to the form of the indictment.⁴⁰ Further, in view of the ultimate result, namely the acquittal of three Accused, Mr Merhi, Mr Oneissi and Mr Sabra—based on the absence of evidence regarding their role in the claim of responsibility—and the Prosecution's abandonment of allegations relating to the so-called 'East of Airport' activity, nothing turns on the Prosecution's alleged notice disclosure violations.

68. However, and although it is not obliged to reconsider its previous decisions,⁴¹ having now heard the evidence supporting the pleaded material facts—namely, those underlying the charges and those facts that are indispensable to a conviction—and as a matter of fairness to the Accused, the Trial Chamber will revisit certain matters.

2. Legal standard—notice

69. Article 16 of the Statute outlines the rights of an accused to a fair trial. Mirroring international human rights instruments,⁴² under Article 16 (4) (a) of the Statute, an accused has the

⁴⁰ First decision on the form of the amended indictment; Second decision on the form of the amended indictment; Decision dismissing certification to appeal the second decision on the form of the amended indictment; Decision on the form of the indictment against Mr Merhi; Decision dismissing a motion alleging defects in the form of the consolidated indictment; Reconsideration decision on defects in the form of the consolidated indictment; Decision dismissing certification to appeal reconsideration decision on defects in the form of the consolidated indictment. *See also* Interim decision on the form of the indictment; Decision on the appeal of the first decision on the form of the amended indictment.

⁴¹ *Renzaho* Trial Judgment, para. 29. A previously litigated alleged deficiency in the indictment was treated as a covert argument for reconsideration. The Trial Chamber 'declined to assess issues that were either adjudicated or should properly have been raised during the pre-trial phase of the proceedings.'

⁴² *See for example*, Article 6 (3) (a) of the European Convention on Human Rights, and Article 14 (3) (a) of the ICCPR (defining the right to a fair trial as the right 'to be informed promptly, and in detail in a language which he understands

right to be ‘informed promptly and in detail in a language which he or she understands of the nature and cause of the charge against him or her.’ Rule 68 (D) elaborates, providing that an indictment must contain ‘the name and particulars of the suspect and a concise statement of the facts of the case and of the crime with which the suspect is charged.’ These rights also appear in the Statutes and Rules of the other international criminal courts and tribunals.⁴³

70. Rule 3 (A), as noted below, specifies that a chamber must apply among other sources ‘international standards on human rights’ and ‘the general principles of international criminal law and procedure’ in interpreting the Rules, in a hierarchical manner.⁴⁴ The case law of the *ad hoc* tribunals assists in interpreting the Statute’s international human rights standards, and the Trial Chamber has previously adopted these principles.⁴⁵

71. To recap, the Prosecution must plead what are often described as the ‘material facts’ underpinning the charges with sufficient detail to inform an accused person clearly of the nature and cause of the charges to allow the preparation of a defence.⁴⁶ When the Prosecution has specific information pertaining to the material facts of its case, it should expressly provide these facts in

of the nature and cause of the accusation against him’). See also Article 8 (2) (b) of the American Convention on Human Rights (defining the right to a fair trial as the right to ‘prior notification in detail to the accused of the charges against him’). The case law of the ECtHR holds that a fair trial requires that indictments include the charges and form of liability alleged. See for example, *Penev* Judgment, para. 44; *Varela* Judgment, para. 42.

⁴³ These provisions are also reflected in identical form in Articles 21 (4), 20 (4) and 17 (4) (a) (respectively) of the Statutes of the ICTY, ICTR and SCSL. Rule 47 (C) of the Rules of Procedure and Evidence of both the ICTY and ICTR is also identical to the Special Tribunal’s Rule 68 (D). The SCSL’s Rule 47 (C) is in substance the same, providing that ‘[t]he indictment shall contain, and be sufficient if it contains, the name and particulars of the suspect, a statement of each specific offence of which the named suspect is charged and a short description of the particulars of the offence. It shall be accompanied by a Prosecutor’s case summary briefly setting out the allegations he proposes to prove in making his case’. Article 58 (2) of the Rome Statute contains a similar formulation, requiring that the application of the Prosecution for the issuance of a warrant of arrest includes ‘a concise statement of the facts which are alleged to constitute those crimes’.

⁴⁴ See also para. 5929. Rule 3 (A) refers ‘in order of precedence’, to the codified principles of interpretation set out in articles 31-33 of the 1969 Vienna Convention on the Law of Treaties, ‘international standards on human rights’, ‘the general principles of international criminal law and procedure’ and ‘as appropriate’ the Lebanese Code of Criminal Procedure.

⁴⁵ First decision on the form of the amended indictment, para. 14; Second decision on the form of the amended indictment, para. 17; Decision on the form of the indictment against Mr Merhi, paras 11-12.

⁴⁶ *Furundžija* Appeal Judgment, paras 61, 147; *Kupreškić and others* Appeal Judgment, para. 88; *Blaškić* Appeal Judgment, para. 209; *Stakić* Appeal Judgment, para. 116; *Simić* Appeal Judgment, para. 20; *Nahimana and others* Appeal Judgment, para. 322.

the indictment.⁴⁷ The materiality of a particular fact cannot be decided in the abstract, but depends on the nature of the Prosecution's case.⁴⁸

72. The Trial Chamber—in applying the principles of international criminal law procedural law—has ruled that the case against an accused person is contained in the combination of the indictment, the pre-trial brief, opening statements, disclosed evidence and any other relevant document providing notice of the case.⁴⁹

73. The Prosecution is not obliged to plead the evidence to be tendered in proof of the pleaded material facts.⁵⁰ 'Facts'—as the factual allegations supporting each legal element of the crime—are distinct from evidence and 'background and other information' that 'does not support the legal elements of the crime charged'.⁵¹ Significantly, the Prosecution cannot omit material aspects of its main allegations in an indictment, aiming—depending on how the evidence unfolds—to mould the case against the accused during the trial.⁵² Failing to include either material facts or sufficient detail of them in an indictment constitutes a material defect in the principal accusatory instrument.⁵³

74. In relatively uncomplicated cases, these defects might be cured, by the Prosecution giving the Defence 'timely, clear and consistent information concerning the factual basis of the charge'.⁵⁴

3. The dates of the alleged conspiracy

(a) The Prosecution's case and pre-trial litigation

75. In the initial indictment, dated 10 June 2011, the Prosecutor pleaded that the conspiracy was formed sometime between 'at least 11 November 2004 and 16 January 2005'.⁵⁵

⁴⁷ *Karemera and Ngirumpatse* Appeal Judgment, para. 370.

⁵³ *Muhimana* Trial Judgment, para. 452; *Nahimana and others* Appeal Judgment, paras 322-324.

⁵⁴ *Muhimana* Trial Judgment, para. 452.

⁵⁵ Indictment of 10 June 2011, paras 58 (a), 68 (a). On 11 November 2004, two unidentified conspirators, using the Blue mobiles, allegedly carried out the first detected surveillance of Mr Hariri.

Mr Badreddine, Mr Ayyash and other members of the assassination team were ‘early members’ of the conspiracy,⁵⁶ while Mr Oneissi and Mr Sabra joined the conspiracy ‘at the latest’ by between 22 December 2004 and 16 January 2005.⁵⁷

76. The Badreddine, Oneissi and Sabra Defence contested these pleadings in their initial challenge to the form of the indictment.⁵⁸ The Trial Chamber dismissed the challenge, concluding that ‘pleading that an act relating to a conspiracy occurred over a three-month period—in the totality of the circumstances alleged here—is not disproportionate or overly broad’.⁵⁹ It held further that ‘circumstances in which the ... Accused are alleged to have come to participate in the alleged conspiracy are a matter for evidence at trial and need not be pleaded as material facts in an indictment (but should be notified to the Defence in a timely manner before trial).’⁶⁰

77. In their second such challenge to the form of the indictment, Defence counsel used the same arguments in relation to the dates of the conspiracy.⁶¹ The Trial Chamber dismissed the arguments on essentially identical grounds.⁶²

78. In confirming the indictment against Mr Merhi, the Special Tribunal’s Pre-Trial Judge had considered the question of the conspiracy’s timeline.⁶³ He concluded that a *prima facie* case existed because of contact between the Accused ‘for a significant period of time prior to the attack of 14 February 2005’. Additionally, how the Accused acted and interacted suggested that ‘they acted within the framework of a prior agreement aimed at committing the terrorist act of 14 February 2005.’⁶⁴

⁵⁶ Indictment of 10 June 2011, para. 58 (b).

⁵⁷ Indictment of 10 June 2011, para. 58 (c).

⁵⁸ First decision on the form of the amended indictment, paras 32-34.

⁵⁹ First decision on the form of the amended indictment, para. 38.

⁶⁰ First decision on the form of the amended indictment, para. 38.

⁶¹ Second decision on the form of the amended indictment, paras 35-36.

⁶² Second decision on the form of the amended indictment, paras 38-39.

⁶³ The Pre-Trial Judge also considered the Prosecutor’s shift in date choices. He thought that ‘although the materials filed in support of the Indictment of 5 June 2013 can be used to justify *prima facie* the date of the conspiracy aimed at committing a terrorist act decided by the Prosecutor, namely 11 November 2004, they would likewise permit an earlier date to be chosen.’ However, he concluded that ‘as the responsibility for prosecutions lies with the Prosecutor, the Pre-Trial Judge considers that it is not for him to oblige the Prosecutor to reclassify the facts by changing the date he has chosen to an earlier one, insofar as the position adopted by the Prosecutor is not likely to cause prejudice to the suspect,’ Pre-Trial Judge decision on the indictment of 5 June 2013, para. 76.

⁶⁴ Pre-Trial Judge decision on the indictment of 5 June 2013, para. 74 (i), (iii).

79. The Merhi Defence then challenged this indictment, asking the Trial Chamber to specify the date at which he joined the alleged conspiracy.⁶⁵ The Trial Chamber dismissed these arguments on the same basis as the other Defence challenges.⁶⁶

80. On 11 February 2014, and upon the Prosecutor's unopposed application, the Trial Chamber joined Mr Merhi's case to the indictment against the other four Accused.⁶⁷ The consolidated indictment alleged that Mr Ayyash, 'as the assassination team coordinator', Mr Merhi, 'as the coordinator of the false claim of responsibility' and Mr Badreddine, as monitor/coordinator, were 'early members' of the conspiracy.⁶⁸ Mr Oneissi and Mr Sabra joined the conspiracy between Wednesday 22 December 2004 and the morning of Monday 14 February 2005, before the attack.⁶⁹

81. The Merhi Defence then further contested the form of the consolidated indictment, including arguing that 'more specifics are required as to the date and circumstances of the participation in the alleged conspiracy'.⁷⁰ The Trial Chamber dismissed these challenges, as the consolidated indictment was virtually identical to the initial indictment against Mr Merhi.⁷¹

82. The Prosecution's updated pre-trial brief repeated the dates as set out in the consolidated indictment⁷² and clarified that the 'exact dates on which the Accused agreed to or joined the conspiracy are not certain'.⁷³

83. In the amended consolidated indictment, under the heading, 'The Conspiracy', the Prosecutor alleges that Mr Ayyash and Mr Merhi, with Mr Badreddine, agreed to commit a terrorist act between 11 November 2004 and the morning of 14 February 2005.⁷⁴ Mr Oneissi and Mr Sabra, it is alleged, joined the conspiracy between 22 December 2004 and the morning of 14 February 2005.⁷⁵

⁷⁴ Amended consolidated indictment, para. 48 (a).

⁷⁵ Amended consolidated indictment, para. 48 (c).

84. The Prosecution's final trial brief provides no explicit dates for the conspiracy. It contains a 'chronology', which sets out a number of 'Phases', beginning in August 2004.⁷⁶

(b) Submissions

85. The Merhi Defence argues that while the amended consolidated indictment contends that the conspiracy came into place between Thursday 11 November 2004 and Monday 14 February 2005, in its final trial brief, the Prosecution 'arbitrarily chose a number of dates' and did not clearly state its position as to when the conspirators' wills merged.⁷⁷ The Prosecution's final trial brief suggests that the conspiracy began on 25 August 2004 and no longer mentions the date of 11 November 2004.⁷⁸

86. The Sabra Defence also submits that the Prosecution failed to adequately identify the date when the conspiracy started, or when the Accused joined.⁷⁹

(c) Findings

87. The Prosecution has consistently alleged that the conspiracy came into existence over a particular time period, but has never specified a precise date when it crystallised. Nor does it specify an exact date when each Accused joined the conspiracy. Indeed, in its pre-trial brief, the Prosecution stated that it cannot do so.

88. Two questions arise. The first is whether the Prosecution, in pleading that the alleged conspiracy was formed within a specified period of time, adequately complied with its *legal* pleading obligations. The second is whether—if it is permissible to plead a date range—the dates were clearly and adequately pleaded as a matter of *fact*.

⁷⁶ Prosecution final trial brief, pp 198-334.

⁷⁷ Merhi Defence final trial brief, para. 405. In closing submissions, the Merhi Defence argued that the 'date of the agreement is the date of the commission of the crime, and the Prosecution must prove when the crime took place because it is an important material fact'. The Presiding Judge asked whether the case law went as far as establishing 'a positive obligation to specify with precision the date when an -- that is, a very small date range, or maybe a day, when a conspiracy crystallized as opposed to a date range?' The Merhi Defence agreed that this was its submission, Merhi Defence closing submissions, T. 18 September 2018, p. 95, T. 19 September 2018, pp 16-18, referring to *Nyiramasuhuko and others* Appeal Judgment, para. 473.

⁷⁸ Merhi Defence final trial brief, paras 405-406, 409.

⁷⁹ Sabra Defence final trial brief, paras 437-439.

89. The Trial Chamber has previously accepted and applied international criminal law case law on the legal issue. The information pleaded as material facts must, so far as is possible, include the identity of the victim, the places and the approximate date of those acts and the means by which the offence was committed.⁸⁰ The date of a material incident is considered to be a material fact when it is necessary to inform an accused clearly of the charges, such as to allow them to prepare a defence.⁸¹

90. The precision needed in pleading material dates varies from case to case.⁸² Where the material element of the crime is or should be identifiable to a single day, as with murder for example, that date should generally be pleaded. One ICTR Trial Chamber held that the ‘Prosecution’s obligation to provide particulars in the indictment is at its highest when it seeks to prove that the accused killed or harmed a specific individual.’⁸³

91. The ICTY and ICTR have held that where it is not possible to specify a specific date, a date range may be pleaded,⁸⁴ and ‘a broad date range, in and of itself, does not invalidate a paragraph of an indictment.’⁸⁵ However, circumstances in which a broad pleading is permitted in respect of single-incident crimes are restricted to those where ‘the sheer scale of the alleged crimes makes it impracticable to require a high degree of specificity in such matters as ... the dates for the commission of the crimes.’⁸⁶ Situations include ‘the killing of hundreds of men’,⁸⁷ ‘frequent attacks in the same area’⁸⁸ and recurring abductions.⁸⁹ Further, where pleading a date range is permitted, the variation has been confined to no more than a few days, or weeks, rather than months.⁹⁰

⁸⁰ *Ndindabahizi* Appeal Judgment, para. 16.

⁸¹ *Ndindabahizi* Appeal Judgment, para. 19.

⁸⁷ *Kupreškić and others* Appeal Judgment, para. 90.

⁸⁸ *Ntakirutimana and Ntakirutimana* Trial Judgment, para. 57.

⁸⁹ *Rukundo* Appeal Judgment, paras 162-163.

⁹⁰ *Ndindabahizi* Trial Judgment, para. 34 (a date range of several days was not unreasonable); *Muvunyi* Appeal Judgment, paras 29-30 (no significant variation, when the indictment specified that an event had occurred in early May 1994, and the Prosecutor later argued that the meeting in question had in fact occurred in mid to late May 1994); *Šainović and others* Appeal Judgment, para. 225 (reference to an act beginning on or about 25 March 1999 included acts which occurred around 20 or 21 March 1999); *Krnojelac* decision on form of indictment, para. 42 (a period of April 1992 to August 1993 would *not* be a reasonable period).

92. The pleading obligations for the formation of a conspiracy are, however, not analogous to those relating to crimes occurring on a single day. They are more analogous to the formation of criminal agreements, like joint criminal enterprises. The material element of a conspiracy is not its outcome—here, Mr Hariri’s assassination—but rather the formation of the agreement itself.⁹¹

93. International criminal law case law illustrates that agreements to commit crimes are frequently, indeed most commonly, formed over time. By analogy to a conspiracy, in pleading a joint criminal enterprise, the Prosecutor must specify ‘the time at which *or the period over which* the enterprise is said to have existed’ (emphasis added).⁹² For a conspiracy to commit genocide, “‘a concerted agreement to commit genocide may be inferred from the conduct of the conspirators’” and can be based on circumstantial evidence.’⁹³ The dates during which this agreement came into existence must, however, be clearly identified. Similarly, it is not necessary to identify specific dates—as opposed to date ranges—in which each Accused joined a conspiracy. The ICTY Appeals Chamber held that it is ‘not necessary to establish that joint criminal enterprise members acted in unison in order to reach a conclusion on the existence of the common purpose.’⁹⁴ As the Trial Chamber held previously, the circumstances during which the Accused came to participate in the conspiracy were to be a matter for evidence at trial.⁹⁵

94. The Trial Chamber—consistent with these established international legal principles—finds that it is legally permissible to plead the formation of the conspiracy within a specified date range.

95. As to whether the Prosecution pleaded this *particular* date range with adequate clarity, the amended consolidated indictment clearly states—as did the Prosecution’s pre-trial brief—that the conspiracy began no earlier than 11 November 2004 and no later than 14 February 2005. The Prosecution’s final trial brief, by contrast, does not explicitly set out the dates of the conspiracy. The section entitled ‘The Evolution of the Conspiracy in Context’ contains a chronology of

⁹¹ *Nyiramasuhuko and others* Appeal Judgment, para. 473.

⁹² *Krnojelac* decision on form of second indictment, para. 41; *Simić* Appeal Judgment, para. 22.

⁹³ *Popović and others* Appeal Judgment, para. 544. *See also Nahimana and others* Appeal Judgment, para. 896 (‘the *actus reus* of the crime of conspiracy to commit genocide is a concerted agreement to act for the purpose of committing genocide. While such *actus reus* can be proved by evidence of meetings to plan genocide, it can also be inferred from other evidence. In particular, a concerted agreement to commit genocide may be inferred from the conduct of the conspirators’). *Compare Mpambara* Trial Judgment, para. 13 (distinguishing joint criminal enterprise because ‘unlike conspiracy, no specific agreement to commit the crime need be shown: the common purpose may arise spontaneously and informally’).

⁹⁴ *Dorđević* Appeal Judgment, para. 138.

⁹⁵ Decision on the form of the indictment against Mr Merhi, para. 28.

‘phases’ of the conspiracy, which begins on 25 August 2004. The date of 11 November also appears, as the Defence submissions suggest, to have lost material significance.⁹⁶

96. In the event of any inconsistency or contradiction between the indictment and or the pre-trial brief and the final trial brief, the indictment—as the primary accusatory instrument⁹⁷—prevails. The amended consolidated indictment pleaded the dates during which the conspiracy formed, namely, between 11 November 2004 and 14 February 2005. The Defence of each Accused therefore had the notice required to allow them to prepare a defence at trial against the charges in the amended consolidated indictment. Whether the Prosecution proved its case is a different matter, considered below.

4. Unidentified members of the alleged conspiracy

(a) The Prosecution’s case and pre-trial litigation

97. In each successive indictment, the Prosecutor alleged that a conspiracy came into existence ‘with others as yet unidentified’.⁹⁸ In August 2013, the Sabra Defence claimed that the indictment was defective in not explicitly naming other alleged co-conspirators.⁹⁹ The Trial Chamber dismissed these arguments.¹⁰⁰

98. In its closing submissions, the Prosecution clarified that the conspiracy alleged in the indictment comprises the four Accused, Mr Badreddine and the remaining members of the ‘assassination unit’, namely ‘Subjects’ 5 to 9 or ‘S’ 5 to 9.¹⁰¹

(b) Submissions

99. In its final trial brief, the Sabra Defence argues that the Prosecution was obliged to name, even if not to indict, all known co-conspirators.¹⁰² The Prosecution failed in this regard by naming

only five co-conspirators, when there were at least 16 mobile users in the network, as alleged in paragraph 18 of the amended consolidated indictment.¹⁰³

(c) Findings

100. The Prosecutor in the amended consolidated indictment, identified the known members of the conspiracy as the four Accused, Mr Badreddine ‘and others as yet unidentified’, including Subjects 5 to 9.¹⁰⁴ As a general principle of pleading in international criminal law, a prosecutor is required to plead the identity of known co-conspirators.¹⁰⁵ However, a prosecutor has ‘no requirement concerning the identification of all individuals’.¹⁰⁶ Nor is an international prosecutor obliged to indict all known co-conspirators.¹⁰⁷ The Trial Chamber therefore, in line with its earlier decisions, still considers that the Prosecution met its pleading obligations and that no notice issue has arisen.

5. Hezbollah and the political context

(a) The Prosecution’s case and pre-trial litigation and submissions

101. The initial confirmed indictment, dated 10 June 2011, pleaded under ‘The Conspiracy’ that the ‘four Accused are supporters of Hezbollah, which is a political and military organisation in Lebanon’.¹⁰⁸ It alleged that Hezbollah’s military wing had the capability to train people to carry out a terrorist attack;¹⁰⁹ Mr Ayyash and Mr Badreddine were related to a senior deceased Hezbollah military commander by marriage;¹¹⁰ and, based on their experience, training and affiliation with Hezbollah, Mr Ayyash and Mr Badreddine had the capability to carry out the attack.¹¹¹

¹⁰³ Sabra Defence final trial brief, para. 432. Its further submissions about specific co-conspirators are set out at para. 6432.

¹⁰⁴ Amended consolidated indictment, paras 15, 48.

¹⁰⁹ Indictment of 10 June 2011, para. 59 (a).

¹¹⁰ Indictment of 10 June 2011, para. 59 (a)-(b). A separate diagram in the indictment (p. 14) alleged that Mr Badreddine had control of the Green Network of mobiles.

¹¹¹ Indictment of 10 June 2011, para. 59 (c).

102. The Prosecutor's amended indictment, filed on 6 February 2013, retained only the bare pleading that the four Accused were 'supporters of' Hezbollah.¹¹²

103. In May 2013, the Oneissi and Sabra Defence challenged the amended indictment, seeking clarity regarding this revised pleading.¹¹³ The Trial Chamber held that the matter 'should be properly explored between the Parties before the Trial Chamber's involvement is sought.'¹¹⁴

104. The Prosecution's pre-trial brief then still contained the description of each Accused as 'supporters' of Hezbollah¹¹⁵ and argued that mobiles associated with Mr Badreddine had contacts with members of Hezbollah.¹¹⁶

105. In early November 2014, the Prosecution informed the Trial Chamber that it intended to call Mr Marwan Hamade, a Lebanese politician, cabinet minister and close associate of Mr Hariri, as a witness, and that all Defence counsel were objecting to at least portions of the expected testimony.¹¹⁷ The Defence argued that the evidence was not relevant to an allegation pleaded in the indictment.¹¹⁸

106. On 14 November 2014, the Trial Chamber allowed the Prosecution to call Mr Hamade.¹¹⁹ In a decision delivered in court on 17 November 2014, the Trial Chamber held that Mr Hamade's

¹¹⁹ Decision on Mr Hamade's testimony, p. 50; Decision denying request to exclude evidence of Witness PRH038. The themes of evidence as summarised by the Prosecution were: (a) Mr Hariri's deteriorating relationship with Syria, as a consequence of his goal to strengthen the Lebanese autonomy; (b) Syria's corresponding increasing resolve to exert control beyond mere influence over Lebanese internal affairs; (c) growing concerns voiced by the international community regarding external pressures bearing upon the political affairs of Lebanon; (d) the evolution of an effective opposition movement in September 2004, and thereafter, in Lebanon of which Mr Hariri was first a silent and then a more public participant; and (e) Mr Hariri's status as an influential statesman in the Gulf region and beyond. This is detailed below in chapter IV 'Historical and political background to the attack'.

evidence went to support material facts pleaded in the indictment—the surveillance of Mr Hariri—as well as political context.¹²⁰ The Trial Chamber denied certification for appeal.¹²¹

107. Following Mr Badreddine’s reported death in 2016, and on the Trial Chamber’s order, the Prosecutor filed the operative and amended consolidated indictment. The Merhi, Oneissi and Sabra Defence jointly objected to the pleadings and evidence related to Mr Badreddine and again sought amendments relating to Hezbollah.¹²² The Defence requested that the Prosecution ‘state in clear terms its case concerning the motive and capability of Hezbollah in relation to the allegations in the amended consolidated indictment.’¹²³ Defence counsel also argued that the Prosecution impermissibly sought to keep Mr Badreddine’s name in the new indictment so as to associate the Accused with Hezbollah.¹²⁴

108. In approving the now operative indictment—the amended consolidated indictment—the Trial Chamber found that had the Prosecution wished to plead new material facts relating to the role of Hezbollah, it would have sought an amendment to the indictment. Nonetheless, it ordered the Prosecution to file a summary statement of the evidence it wished to lead in relation to the remaining allegation that the Accused were supporters of Hezbollah. The Trial Chamber, at the time, described this allegation as a ‘pleaded material fact’. The order to file a summary statement was not a concession that there was a defect in the Prosecution’s submission. The indictment was not defective. However, in order to further assist the Defence in understanding the Prosecution’s case on that specific issue, the Trial Chamber enjoined the Prosecution to make these clarifications on the record.¹²⁵

109. The Prosecution filed a statement outlining ‘the main categories of evidence’ that relate ‘to the allegation that the Accused are supporters of Hezbollah’.¹²⁶ These were that, first the Green

¹²⁰ Decision denying request to exclude evidence of Witness PRH038, pp 10-11.

¹²¹ Decision on scope of Mr Hamade’s evidence. In denying certification for appeal, the Trial Chamber held, at para. 19, that the question of whether Mr Hamade’s evidence went to a material fact was not a question that could be certified for interlocutory appeal.

Network was a Hezbollah network;¹²⁷ second, the Accused were connected through Hezbollah;¹²⁸ third, Mr Badreddine was a senior Hezbollah commander;¹²⁹ and fourth, telephone numbers of Hezbollah officials were connected with mobiles associated with the Accused.¹³⁰

110. In its final trial brief and closing submissions, the Prosecution argues that the associations with Hezbollah established a ‘common bond’ between the Accused and Mr Badreddine, and in Mr Badreddine’s case, he had ‘extensive experience as a military operative at the highest levels in Hezbollah’. Further, the conspiracy ‘had a political purpose’,¹³¹ and the preparation and implementation of the conspiracy was responsive to Lebanese-Syrian tensions.¹³² Additionally, Hezbollah controlled the Green mobile network, which had Mr Badreddine at its apex;¹³³ and, finally, Mr Rustom Ghazaleh, then head of Syrian military intelligence in Lebanon, and Mr Wafik Safa, the head of the central unit for liaison and coordination in Hezbollah, either met or communicated by telephone after key meetings with Mr Hariri.¹³⁴

111. It also submits that surveillance of Mr Hariri when he met Hezbollah’s Secretary-General, Mr Hassan Nasrallah, at a covert Hezbollah location in Haret Hreik, Beirut, on the night of 21 December 2004 ‘indicates’ that Mr Ayyash and Mr Badreddine were ‘tipped-off by Hezbollah Inner Circles’.¹³⁵ In a written question from the Trial Chamber, the Prosecution was asked whether it was asserting that the Syrian President, Mr Bashar Al-Assad, Mr Ghazaleh and Mr Safa were co-conspirators.¹³⁶

¹³⁶ Questions for closing submissions, para. 11 (‘Is the Prosecution now alleging, as stated at paragraph 434 of the Sabra brief, that the Syrian President Mr Bashar Al-Assad, the then Syrian Military Intelligence Chief in Lebanon, Mr Rustom Ghazaleh, and “the head of the central unit for liaison and coordination in Hezbollah”, Mr Wafik Safa, were co-conspirators in the plot to murder Mr Hariri?’ (footnote omitted)).

112. In responding to that and three other Trial Chamber questions together, the Prosecution submitted:

There are a small number of other figures, organizations, or states that feature in the Prosecution narrative, and some of the Defence teams seek to characterize as co-conspirators complicit in the crimes on the Prosecution case. I can make it clear that whilst a number of findings are available to the Trial Chamber at its discretion, the Prosecution does not seek, nor does it need to seek, findings against individuals who do not feature in the indictment. It does not seek findings against states or organizations, nor does the Trial Chamber need to do so to determine guilt.¹³⁷

113. In its final trial brief the Prosecution submitted that although it was ‘not necessary for a conviction, Prosecution evidence demonstrates the links between the Accused and Hezbollah and explains the political context in which the Attack occurred.’¹³⁸ The Prosecution also argues that while it is ‘certainly not a legal requirement to prove motive and it’s not essential to the proof of the crimes, it is this context that provides a compelling explanation for the evolution of the conspiracy’.¹³⁹

(b) Defence submissions

114. The Ayyash Defence submits that the Prosecution changed its case in its final trial brief.¹⁴⁰ In its final trial brief, the Prosecution newly alleges that: Hezbollah gave the Accused resources for the attack;¹⁴¹ the Green network was a Hezbollah network;¹⁴² Mr Ayyash knew about the confidential meeting on 21 December 2004;¹⁴³ and Hezbollah had a ‘non-personal’ motive for killing Mr Hariri.¹⁴⁴ The Prosecution also impermissibly used the evidence of a Prosecution

investigator, Mr Gary Platt, to show links between the Accused and newly-alleged co-conspirators Mr Safa and Mr Ghazaleh.¹⁴⁵

115. The Merhi Defence argues that while the Prosecution stated that Hezbollah and Syria had no role in the conspiracy, it added new material facts in its final trial brief.¹⁴⁶ The Prosecution newly alleged that the involvement of Syria and Hezbollah explained the motive for the crime and the means used to commit it. The Merhi Defence points to the Prosecution's submissions as to Mr Badreddine's background in Hezbollah, the responsiveness of mobile activity to political events and Mr Ghazaleh's and Mr Safa's involvement.¹⁴⁷

116. The Prosecution also alleged that Syria and Hezbollah ordered the attack and attempted to avoid responsibility for its commission. This, in the Merhi Defence's submission, is a material fact going to the requirement that an accused assented in advance to the means used to carry out the alleged crime.¹⁴⁸ These defects in notice could not be cured, because the Prosecution's opening statement, evidence and submissions were not sufficient,¹⁴⁹ and nor was this information disclosed in a clear, consistent or timely fashion.¹⁵⁰ The Merhi Defence submits that, although it does not have the burden of proving prejudice, it did suffer prejudice and requests the Trial Chamber to render a not guilty verdict. It argues that it was unable to challenge the submissions regarding the calls between the Purple mobiles, or the motivations and resources of Syria and Hezbollah.¹⁵¹

117. The Oneissi Defence argues that Mr Oneissi's alleged links to Hezbollah are irrelevant, and even if proven, do not establish the political context in which the attack occurred, nor demonstrate that the assassination was political, nor prove his individual criminal responsibility.¹⁵²

118. The Sabra Defence argues that while the Prosecution appeared to drop its Hezbollah allegations, it did not do so.¹⁵³ Despite the Trial Chamber's finding that motive was not legally

¹⁵² Oneissi Defence final trial brief, paras 621-622.

¹⁵³ Sabra Defence final trial brief, paras 445-450.

required,¹⁵⁴ the Prosecution made motive a key factual element of its case—arguing that Hezbollah was directly involved in, and provided operational support to, the attack. The Sabra Defence submits:

We suggest the Chamber needs to know and be able to rely upon the motive to be convinced beyond reasonable doubt of the guilt of Mr. Sabra and the other accused because it needs to assess whether his guilt is the only reasonable inference on the evidence. If the Chamber needs to rely upon this motive, then the Prosecution was obliged to have pleaded it.¹⁵⁵

119. The Sabra Defence also argues that the Prosecution deliberately failed to specify the precise role played by Hezbollah and relied on links between the Accused and Hezbollah to bolster its ‘weak and circumstantial case’.¹⁵⁶

120. Further, the Prosecution makes ‘clear insinuations’ as to the role of unpleaded co-conspirators in the assassination, namely the Syrian President Mr Al-Assad, Mr Ghazaleh and Mr Safa.¹⁵⁷ In failing to properly plead these material allegations, the Prosecution prevented the Defence from being able to address them.¹⁵⁸

(c) Findings

121. The amended consolidated indictment contains, at paragraph 49 under ‘The Conspiracy’, only one allegation concerning Hezbollah, namely that the Accused and Mr Badreddine were Hezbollah supporters. It does not mention Syria, Mr Safa or Mr Ghazaleh. The Prosecution’s final trial brief, by contrast, contains numerous references to Hezbollah and the Syrian regime. These submissions go to the Accused’s Hezbollah connections, Mr Badreddine’s leadership in it, the

¹⁵⁴ The Sabra Defence also argues that motive should be considered to be a legal requirement, Sabra Defence final trial brief, paras 427-429. These arguments are addressed below in paragraphs 6187-6191. The Sabra Defence also argues that the Prosecution’s case on what the motive actually was varies and is unclear, Sabra Defence final trial brief, paras 425-426, 430.

¹⁵⁵ Sabra Defence closing submissions, T. 21 September 2018, pp 13-14 (there counsel further submitted that, ‘The Prosecution needed to implicate Hezbollah, and others such as Ghazaleh, to prove the motive and the capacity of the conspiracy. Both of these were material facts which, again, should have been pleaded in the indictment. Which brings me on to motive. Proof of motive for the assassination of Hariri by the four accused, we submit, is a material fact that needed, clearly, to be pleaded in the indictment. The accused needed to be informed in a clear and timely manner why he was alleged to have conspired to assassinate Mr. Hariri ... And in the light of the nature of this case and the Prosecution’s reliance upon the motive of the assassination to implicate Mr. Sabra, the motive was clearly a material fact which should have been pleaded’).

¹⁵⁶ Sabra Defence final trial brief, paras 450-451.

Green network of mobiles and Mr Safa's and Mr Ghazaleh's alleged role in the surveillance of Mr Hariri.

122. After having received and thoroughly reviewed the entirety of the evidence, the Trial Chamber is now of the view that paragraph 49 is not a material fact underlying the elements of any of the offences charged.¹⁵⁹ Accordingly, the Prosecution does not need to prove this factual allegation beyond reasonable doubt; as it is not one that is indispensable to a conviction.¹⁶⁰ The Prosecution, in its final trial brief, also noted that proving a link between the Accused and Hezbollah was not necessary for a conviction, but only explains the context in which the attack on Mr Hariri occurred.¹⁶¹

123. As pleaded in the amended consolidated indictment, therefore, the Prosecution's case does not rely upon Hezbollah's or Syria's involvement. The issue is whether the Prosecution's further submissions on political matters were also *non-material* arguments, which need not be pleaded—or amounted to new *material* facts or allegations—which must be properly pleaded.

124. The Trial Chamber finds that the submissions going to the Accused's associations with Hezbollah, their relationships by virtue of this association and the training that they and Mr Badreddine allegedly received through Hezbollah, fall under the umbrella of non-material allegations that the Accused supported Hezbollah. These submissions are largely identical to the non-material pleadings explaining 'support' for Hezbollah which appeared in the first, but not subsequent versions of the indictment.

125. The Trial Chamber is of the view that the Prosecution should have articulated this aspect of its case theory in better detail in the pre-trial phase before the Pre-Trial Judge so as to give the Defence adequate notice of this aspect of its case. Notwithstanding this, the Defence had notice of the Prosecution's case theory in relation to these submissions, at the very least since receiving the

¹⁵⁹ In its Decision amending the consolidated indictment, para. 58, the Trial Chamber wrote, 'The Prosecution is therefore ordered to file a summary statement of any evidence it wishes to lead in relation to *this pleaded material fact*. This is of course separate from the requirement to plead, in an indictment, any material facts that must be proved' (emphasis added). In its Decision on admission of Mr Al-Hassan's interview, at paras 30, 81, 87, the Trial Chamber also described the pleading as a 'material fact'. However, having now reviewed the totality of the evidence, the Trial Chamber is not of the view that this pleaded fact is one that is indispensable for a conviction. The Trial Chamber may convict an Accused of a count charged without having to be satisfied beyond reasonable doubt of this pleaded fact.

¹⁶⁰ See para. 205.

¹⁶¹ Prosecution final trial brief, para. 21.

Prosecution's statement on Hezbollah in September 2016. In this respect, at least there is nothing new in the Prosecution's final trial brief. But ultimately, given the Trial Chamber's finding on the alleged connection between the four Accused, and Mr Badreddine, with Hezbollah, the Defence has suffered no material procedural prejudice by the Prosecution's late articulation of its case theory on this point.

126. The Trial Chamber also finds that submissions about the broader political context surrounding the attack are not material facts requiring pleading. As motive is not an element of a conspiracy,¹⁶² the Trial Chamber is not required to make findings on any alleged political purpose, although the attack on Mr Hariri was self-evidently political. Appropriate findings on the contextual and background evidence are set out below.¹⁶³ Moreover, on a practical level of determining whether any prejudice has occurred, the Defence has had notice of this aspect of the case since at least November 2014. Defence counsel had the evidence supporting this notice much earlier and hence the ability to mount a defence to it.

127. The argument that Hezbollah controlled the Green mobile network derives from elements of a public statement by Mr Nasrallah and hearsay in a Prosecution interview with Mr Hariri's former Chief of Security, Mr Wissam Al-Hassan, in 2012. The argument was introduced as a 'category of evidence' in the Prosecution's summary statement of evidence in relation to paragraph 49 of the amended consolidated indictment. Again, it is not a material fact that required pleading. Accordingly, there was no deficiency in providing notice to the Accused. It was also contained in the long-disclosed evidence. Moreover, the Trial Chamber, elsewhere in this judgment, has found that the evidence is unreliable hearsay and that it will not use it.¹⁶⁴ In this respect, even if there had been a procedural breach in providing notice of how the evidence was intended to be used, the Defence has suffered no actual prejudice.

128. The Trial Chamber received uncontested evidence of Mr Badreddine's role as a senior Hezbollah commander—at least between 2011 and 2016—and its significance to the case is considered in more detail below.¹⁶⁵ Some of this evidence came to light only after Mr Badreddine's

¹⁶² See paras 6187, 6204.

¹⁶³ See chapter IV 'Historical and political background to the attack'.

¹⁶⁴ See para. 2243.

¹⁶⁵ See paras 6557-6576.

presumed death in May 2016 and the Trial Chamber admitted it into evidence first in relation to determining whether Mr Badreddine was dead, and then in support of the Prosecution's pleading that he was a senior military commander. In that respect, it was admitted as new evidence that had emerged during the trial.

129. Moreover, this evidence does not go to prove a fact underlying a charge that must be pleaded. There is therefore no deficiency in not pleading this fact in the amended consolidated indictment. But even if it required pleading, the Prosecution's summary statement of September 2016, in combination with paragraph 49 of the amended consolidated indictment—in the circumstances of it being admitted as new evidence—would have provided the necessary notice to the Defence of the facts. Additionally, the Oneissi Defence called its own witness, Mr Jamil El-Sayyed, who testified concerning some matters relating to Hezbollah.

130. Regarding the alleged roles of Mr Safa and Mr Ghazaleh, the Prosecution was legally required to plead the identity of any known co-conspirators. The Trial Chamber finds the Prosecution's case on this point to be ambiguous; at least on one reading of the Prosecution's final trial brief, they could be considered to be advanced as co-conspirators.¹⁶⁶ There, the Prosecution argues that Mr Safa was the only common contact between Mr Ghazaleh and Mr Badreddine, and this was 'the channel that would explain the intimate link between key political events opposed to Syrian interests, subsequent contact and meetings between Syrian and Hezbollah officials and the reaction of the covert networks led by Badreddine.' However, the evidence on their possible involvement appears not to have changed during the trial—meaning that the Prosecution always had it—and the Prosecution neither amended any indictment nor updated its pre-trial briefs to include any such allegation.

131. The Prosecution also clarified this in its closing submissions—and in response to questions from the Trial Chamber—and rejected Defence submissions that Mr Ghazaleh and Mr Safa were being characterised as co-conspirators.¹⁶⁷ Trial Chamber had posed the question:

Is the Prosecution now alleging, as stated at paragraph 434 of the Sabra brief, that the Syrian President Mr Bashar Al-Assad, the then Syrian Military Intelligence Chief in

¹⁶⁶ Prosecution final trial brief, para. 746.

¹⁶⁷ Prosecution closing submissions, T. 11 September 2018, pp 26-27.

Lebanon, Mr Rhustom Ghazaleh, and “the head of the central unit for liaison and coordination in Hezbollah”, Mr Wafik Safa, were co-conspirators in the plot to murder Mr Hariri?¹⁶⁸

132. Further, the Prosecution does not seek, nor does the Trial Chamber need to make, any findings on anyone not mentioned in the amended consolidated indictment.¹⁶⁹ The Trial Chamber has therefore not treated them as alleged co-conspirators and will not make any finding on whether they participated in the conspiracy.

6. The identity of ‘Mohammed’

(a) The Prosecution’s case

133. The Prosecution alleges that Mr Abu Adass—the young man who falsely claimed responsibility for the attack—was approached and then lured from his home by a person posing as ‘Mohammed’. The amended consolidated indictment pleads that Mr Oneissi falsely called himself ‘Mohammed’ and was this person.

134. The Prosecution’s final trial brief, however, states that while the Prosecution presented evidence supporting that ‘Mohammed’ was Mr Oneissi, this is ‘in no way dispositive’ of his involvement in the “‘Mohammed” deceit’, the identification of a suitable scapegoat and the preparation of the false claim plot as a whole.¹⁷⁰ In closing submissions, Prosecution counsel argued that there is some evidence that Mr Oneissi was ‘Mohammed’, but the Trial Chamber need not make a finding on this fact:

But this is the important thing ... It’s a fact relating to the acts and conduct of the accused, but it’s not essential to conviction. It’s not something you need to find beyond reasonable doubt. It’s not even something you need to find. What you need to find is the responsibility of Mr Oneissi and Mr Sabra for the overall false claim plot. An important part of that is the Mohammed deceit, and by that I mean the subplot in which someone would appear, pretend to be a Muslim orphan wanting to learn how to pray, and that that would be used to lure

¹⁶⁸ Questions for closing submissions, para. 11 (footnote omitted).

¹⁶⁹ Prosecution closing submissions, T. 11 September 2018, pp 26-27.

¹⁷⁰ Prosecution final trial brief, para. 518. It argues further that Mr Oneissi ‘was intimately involved in multiple aspects of the overall plot, regardless of whether he was the person who interacted personally with Mr Abu Adass.’

somebody ... What you need to consider is the involvement of Mr Sabra and Mr Oneissi in that subplot. And you don't need to find who played which role.¹⁷¹

(b) Submissions

135. The Merhi Defence contends that given the allegations made in the amended consolidated indictment, the Prosecution cannot assert that it is not important to establish that Mr Oneissi was 'Mohammed'.¹⁷² Further, there are no allegations that Mr Merhi coordinated anyone other than Mr Sabra and Mr Oneissi, and Mr Merhi cannot therefore be convicted of complicity.¹⁷³

(c) Findings

136. The Merhi Defence argues that the Prosecution's pleading obligations are not met because it discarded a material element pleaded in the amended consolidated indictment.

137. The Trial Chamber agrees that—for the reasons set out in the 'Claim of responsibility for the attack on Rafik Hariri' chapter¹⁷⁴—Mr Oneissi's identification as 'Mohammed' is a pleaded fact supporting the elements of the offences charged. It is a material fact underpinning Mr Oneissi's criminal responsibility—and also Mr Sabra's and Mr Merhi's—by virtue of their pleaded involvement in making the false claim of responsibility.¹⁷⁵

138. However, the Prosecution has not failed to comply with its pleading obligations. Its final trial brief states, and permissibly as set out below,¹⁷⁶ that it produced evidence demonstrating that Mr Oneissi is 'Mohammed', but that in its view this finding is unnecessary for a conviction. While all material elements of a Prosecution case must be properly pleaded, their proof at trial is a matter of evidence. It was pleaded but not proved; no issue of lack of notice therefore arises.

139. Most importantly, and substantively, however, the Trial Chamber has been unable to find that Mr Oneissi was 'Mohammed'.¹⁷⁷

¹⁷⁷ *See* paras 5060-5088.

7. Other alleged Prosecution failures to provide notice

(a) Submissions

140. The Ayyash Defence argues that the Prosecution failed to provide notice of allegations about the following: activity by the Blue network mobile, Blue 742, in the Anjar area on 19 January 2005;¹⁷⁸ Subject 6's role in the purchase of the Mitsubishi Canter;¹⁷⁹ and Subject 816's contact with Mr Ayyash's personal mobile number 170 on Sunday 13 and Monday 14 February 2005.¹⁸⁰

141. The Merhi Defence also complains of other supposedly new Prosecution allegations. The first is that the video tape making the false claim of responsibility had already been created by Tuesday 18 January 2005.¹⁸¹ The second is that the pleaded 'Associate Purple' mobiles, numbers 744 and 375, were involved in Mr Abu Adass's abduction, and travelled with Mr Merhi to Anjar, in the Bekaa valley area on Friday 14 January 2005. Specifically, the Trial Chamber impermissibly allowed the Prosecution to expand its case by allowing the Prosecution investigator Mr Platt to give an expert opinion on the Purple mobiles in his testimony.¹⁸²

142. Third, Mr Abu Adass was murdered, as opposed to simply disappearing,¹⁸³ and fourth, there was a period of preparatory activity which took place in the 'East of Airport' area in Beirut, which included the purchase of the Mitsubishi Canter and explosives.¹⁸⁴

143. The Sabra Defence argues that the Prosecution makes submissions for the first time in its final trial brief regarding the alleged murder of Mr Abu Adass, as well as the role of the 'Associate Purple' mobiles in the false claim of responsibility.¹⁸⁵

144. In oral closing submissions, the Prosecution responded that it does not allege that the false claim video tape was made on Tuesday 18 January 2005.¹⁸⁶ Further, while the 'East of Airport'

¹⁸³ Merhi Defence final trial brief, annex D, p. 2.

¹⁸⁴ Merhi Defence final trial brief, para. 441; Merhi Defence closing submissions, T. 18 September 2018, p. 70.

¹⁸⁵ Sabra Defence final trial brief, paras 52-53; Sabra Defence closing submissions, T. 21 September 2018, pp 8-9. The Sabra Defence argues that it repeatedly made requests for notice and clarification, Sabra Defence final trial brief, para. 52.

¹⁸⁶ Prosecution closing submissions, T. 14 September 2018, pp 23-24.

activity is evidence of Blue mobile network covert behaviour, the Prosecution does not seek positive findings on these non-material facts.¹⁸⁷

(b) Findings

145. The Defence points to allegedly new allegations going to the false claim plot and to activity in the ‘East of Airport’ area in Beirut before the attack on Mr Hariri. The Prosecution raised these issues in its final trial brief;¹⁸⁸ they were not in the amended consolidated indictment.

146. The Trial Chamber finds that the date on which the video tape was made, featuring Mr Abu Adass claiming responsibility for Mr Hariri’s death, is evidence going to prove the material fact that the video tape was made as part of the pleaded false claim of responsibility, and is not itself a material fact. Further, the Prosecution does not make Mr Abu Adass’s possible murder after his disappearance part of its case; it simply refers to this as a logical inference, as he has not been sighted by his family since. No notice issue therefore arises on these points.

147. As for the Associate Purple mobiles, following the joinder of Mr Merhi’s case to the case of the other (then) four Accused,¹⁸⁹ the Prosecution, in its opening statement on 18 June 2014, detailed their role. Prosecution lead counsel outlined that seven pre-paid mobiles were ‘mutual contacts’ of the three principal Purple mobiles and of each other, particularly during the period of the luring and abduction of Mr Abu Adass in late December 2004 and mid-January 2005, and the delivery of the false claim of responsibility in the afternoon of 14 February 2005.¹⁹⁰ The Trial Chamber received into evidence call sequence tables of five of these mobiles,¹⁹¹ and heard evidence from Mr Platt of the call activities of two, namely Associate Purple 744—attributed to a relative of Mr Merhi¹⁹²—and Associate Purple 375.

148. In its final trial brief, the Prosecution describes the Associate Purple mobiles 375 and 744 as ‘associated with’ the Purple mobiles, ‘through their contact and call patterns, particularly during

¹⁸⁷ Prosecution closing submissions, T. 14 September 2018, pp 12-14.

¹⁸⁹ Decision on joinder; Trial management decision.

¹⁹⁰ Prosecutor’s opening statement regarding Hassan Habib Merhi, T. 18 June 2014, p. 39.

¹⁹¹ Exhibit P1342 (Call sequence table of Associate Purple 744); exhibit P1339 (Call sequence table of Associate Purple 375); exhibit P1361 (Call sequence table of Associate Purple 415); exhibit P1350 (Call sequence table of Associate Purple 251); exhibit P1327 (Call sequence table of Associate Purple 472).

¹⁹² See para. 3450.

the period of Abu Adass's abduction'.¹⁹³ It refers to the following Associate Purple mobile related evidence of: mobile activity as part of the allegedly hierarchical Green-Purple call flows before Mr Abu Adass's disappearance;¹⁹⁴ mobile inactivity during Mr Abu Adass's disappearance;¹⁹⁵ and final calls to Associate Purple mobiles, before the cessation of Purple mobile activity.¹⁹⁶

149. The Trial Chamber finds that the Prosecution's case about the relevance and role of the Associate Purple mobiles is unclear, and has made no findings on them.¹⁹⁷ However, had the Prosecution intended the mobile activity of these users to form a material or essential part of its case, it would have pleaded the necessary factual allegations in the amended consolidated indictment. The Trial Chamber finds that evidence about the Associate Purple mobiles is intended to assist in proving the material element of the Prosecution's case—namely, the involvement of the Purple mobile users in the conspiracy—not any new material fact centred on the Associate Purple mobiles themselves.¹⁹⁸

150. The Prosecution does not seek positive findings on the so-called 'East of Airport' activity, which substantiates that these submissions do not reflect new material facts. During the trial, Prosecution counsel had submitted that the calls related to obtaining or picking up the explosives used in the attack, or something else relating to procuring the materials for the attack.¹⁹⁹ However, no evidence was led to support this assertion. The Trial Chamber thus makes no finding on or in respect of this claim.

151. In relation to the purchase of the Mitsubishi Canter, in the amended consolidated indictment the Prosecutor alleges that Subject 6—who is described in the Prosecution's final trial brief as Mr Ayyash's 'deputy'²⁰⁰—with another unidentified person, was one of its buyers.²⁰¹ In

¹⁹³ Prosecution final trial brief, para. 504.

¹⁹⁸ See also Decision allowing the Prosecution to recall Mr John Edward Philips, where the Trial Chamber held that no notice issue arose in relation to the submissions about the Grey mobile, despite the fact that it was unattributed in the Amended consolidated indictment. See also Addendum to decision allowing the Prosecution to recall Mr John Edward Philips.

¹⁹⁹ Prosecution submissions, T. 5 September 2016, pp 52-53, T. 16 January 2017, pp 65-67, T. 17 January 2017, pp 50-52.

²⁰⁰ Prosecution final trial brief, paras 722, 846, 966, 975.

²⁰¹ Amended consolidated indictment, para. 32 (c). See also Prosecution closing submissions, T. 11 September 2018, p. 40, T. 14 September 2018, pp 39-41. During Prosecution expert Mr Gary Platt's testimony, Prosecution counsel

its final trial brief, the Prosecution submitted, however, that Subject 6 ‘supervised’ the purchase.²⁰² The Trial Chamber considers that further detail about Subject 6’s role in the alleged purchase is evidence of that person’s alleged involvement and does not reflect a new material fact. The pleaded fact providing notice to the Accused is of Subject 6’s alleged involvement in the purchase. Again, no notice issue arises.

152. As for the submissions relating to Subject 816’s contact with Mr Ayyash’s personal mobile 170 on Sunday 13 and Monday 14 February 2005,²⁰³ the Trial Chamber finds that communications with this non-network mobile are not material to the Prosecution’s case. Further, the Prosecution made no clear submissions on the significance of this mobile contact. The Trial Chamber therefore makes no findings concerning Subject 816’s alleged role in the conspiracy pleaded. There has thus been no breach of the Prosecution’s requirement to provide notice to the Defence here.

stated that the evidence ‘does not identify whether Subject 6 was actually in the showroom or not. It could be consistent either with him being there or actually being nearby and supervising men who were purchasing the vehicle’, T. 21 February 2017, p. 92.

III. ASSESSMENT OF EVIDENCE

A. Introduction

153. On 16 January 2014, with the trial's commencement, the Trial Chamber issued directions on the conduct of the proceedings, and, most particularly, to regulate how it would receive evidence.²⁰⁴ This proved to be a daunting task given the dual challenges of the sheer size of the Prosecution's intended witness and exhibit lists and hence evidence, and that the Trial Chamber had become seised of the case only on 25 October 2013. Additionally, on 2 August 2013, the Pre-Trial Judge had set a trial date for 13 January 2014.²⁰⁵

154. The Trial Chamber was also in the process of dealing with an application by the Prosecution—belatedly filed on 18 December 2013 before the Pre-Trial Judge, who referred it to the Trial Chamber two weeks later, on 2 January 2014—to join the indictment against Mr Merhi to that of the other four Accused.²⁰⁶ To state this more explicitly, the Trial Chamber received an application to join the case of a fifth Accused to the existing case against the initial four Accused, a mere two weeks before the scheduled commencement of their trial, which had been in its pre-trial phase for almost two years, since the assignment of Defence counsel on 2 February 2012.

155. One of the Prosecution's exhibit and witness lists against the original four Accused, Mr Ayyash, Mr Badreddine, Mr Oneissi and Mr Sabra, filed in May 2013, had contained some 14,737 exhibits and 587 witnesses.²⁰⁷ However, during the pre-trial phase of the proceedings, the Pre-Trial Judge issued five decisions on the witness and exhibit lists. Thus by the start of the trial the intended exhibit list had been reduced to 'only' 8,344 documents and the witness list to 'only' 540 witnesses, of whom 135 were expected to testify live.²⁰⁸

²⁰⁴ Directions on the conduct of the proceedings.

²⁰⁵ Pre-Trial Judge order setting tentative start date of trial proceedings. In a scheduling order on 10 December 2013, the Trial Chamber changed this to Thursday 16 January 2014; Trial Chamber's trial commencement scheduling order.

²⁰⁷ F0939, Prosecution Submission of Consolidated and Updated Rule 91 Exhibit and Witness Lists, 31 May 2013.

²⁰⁸ Presiding Judge's closing remarks, T. 21 September 2018, p. 101.

156. Despite this reduction, this was still an impossibly large number of documents and witnesses confronting the Trial Chamber when it was seised of the case in late October 2013, with the trial scheduled to commence in mid-January 2014.

157. To add to the complexity of the situation—owing to the Prosecutor’s submission of an indictment against Mr Merhi to the Pre-Trial Judge only on 5 June 2013—the *Merhi* indictment presented its own challenges.

158. On 8 January 2014, the Prosecution filed a 695-page exhibit list in its case against Mr Merhi. It contained 6,524 exhibits and 461 witnesses, on a 115-page witness list, of whom 112 were expected to testify live. Most of these witnesses and many exhibits were common to the case against the other four Accused which was to commence on 16 January, but these lists were filed before the Pre-trial Judge, who was then seised of the *Merhi* case. The Trial Chamber did not then have the jurisdiction to make any decisions in respect of the *Merhi* indictment.²⁰⁹

159. After a hearing on 11 February 2014 it joined the two cases that day; this was on the Prosecution’s direct application to the Trial Chamber, filed on 30 December 2013.²¹⁰

160. Given the size of the case and the impossibility of the Trial Chamber familiarising itself with over 100,000 pages of *potential* evidence, including witness statements and associated exhibits and expert reports, between receiving the case in late October 2013 and commencing the trial in mid-January 2014, it made the only practical and just decision it could have made under the Statute and Rules as to how to conduct the case.²¹¹ Namely, it decided to conduct the trial in accordance with Article 20 (2) of the Statute,²¹² and Rule 145 (B) which provides:

²⁰⁹ STL-13-04/I/PTJ, *Prosecutor v. Merhi*, F0052, Prosecution’s Submission Pursuant to the Pre-Trial Judge’s Order of 24 December 2013, 8 January 2014.

²¹⁰ Joint hearing, T. 11 February 2014, pp 91-96; Trial management decision; STL-11-01/PT/TC, *Prosecutor v. Merhi*, F1289, Prosecution Motion for Joinder, 30 December 2013.

²¹¹ Order on the mode of questioning witnesses; *see also* Directions on the conduct of the proceedings, paras 10-15. On 12 August 2013, the Pre-Trial Judge had submitted part of the case file to the Trial Chamber, namely, that containing the exhibits on the Prosecution’s exhibit list. However, there was little that the Trial Chamber could do with this other than start reading. It then had no jurisdiction to make evidentiary decisions and the list was not organised according to any theme. The only thing it could have done was to read over 100,000 pages of uncategorised documents and then afterwards discard or forget about the 70 per cent of them that were never tendered in the trial, meaning that only 30 per cent was potentially relevant; Order on partial transfer of case file to Trial Chamber.

²¹² Article 20 (2) ‘Commencement and conduct of trial proceedings’ provides, ‘Unless otherwise decided by the Trial Chamber in the interests of justice, examination of witnesses shall commence with questions posed by the presiding judge, followed by questions posed by other members of the Trial Chamber, the Prosecutor and the Defence’.

Where the Trial Chamber considers that the file submitted by the Pre-Trial Judge is not such as to enable it to adopt the mode of proceeding envisaged in Article 20 (2) of the Statute, after the opening statements of the Parties and of any victim participating in the proceedings, the witnesses called before the Trial Chamber shall first be examined by the Party that called them, then cross-examined by the other Party, if the other Party elects to exercise its right of cross examination. The witness may also subsequently be re-examined by the calling Party. The Presiding Judge and other members of the Trial Chamber may at any time ask questions.

As a further consideration, Rule 145 (C) provides that:

The Trial Chamber may decide to depart from the modes of proceeding provided for in paragraphs (A) and (B) wherever it considers that this is required by the interests of justice.

161. By this decision, the Trial Chamber permitted the Prosecution to call and question its own witnesses who were then cross-examined by the Defence, and questioned by the Trial Chamber Judges and also occasionally by the Legal Representatives of Victims. The Judges were free to intervene and question any witness during examination by counsel or the Legal Representatives of Victims, as the circumstances of the case demanded, and the Judges exercised this right, regularly during the proceedings.

162. The same applied during the case of the participating victims, and the Defence case brought by the Oneissi Defence. When the Trial Chamber called one witness itself in the trial,²¹³ the judges questioned him first, followed by the Parties. The difference was that the witness's evidence was relevant only to several discrete points and thus quite confined, and moreover he was testifying after the Prosecution's case had closed, meaning that the Trial Chamber by then had the overview of the case and evidence necessary to call and question a witness itself.

163. The Trial Chamber could not have attempted to conduct a trial of this size and complexity with its Presiding Judge first questioning a witness, followed by the judicial questioning of other judges, followed by questioning from the Parties. And, moreover, there was no 'file' or 'dossier' as such—as is the case in criminal law proceedings in some civil law jurisdictions—'submitted by the Pre-Trial Judge' which could have reasonably facilitated such a mode of conducting the

²¹³ Mr Michael Taylor, the Prosecution's former Chief of Investigations.

proceedings.²¹⁴ The case had been investigated not by a judicial officer, but by the Prosecution and assigned Defence counsel.

164. Under Rule 95 (A), the Pre-Trial Judge submits a file to the Trial Chamber, giving it jurisdiction to proceed to hear the case, effecting a transfer of jurisdiction between chambers. The Pre-Trial Judge's file includes: all filings, evidentiary material received, transcripts of status conferences and minutes of meetings held in the performance of his functions, his orders and decisions, correspondence with relevant entities and all other material relevant to the case.

165. The Pre-Trial Judge, under the same Rule, must also compile a detailed report setting out the arguments of the Parties and the participating victims on the facts and the applicable law, points of agreement and disagreement, the probative material produced by the Parties and the participating victims, a summary of his decisions and orders, suggestions as to the number and relevance of Prosecution witnesses and the witnesses that the victims intend to request the Trial Chamber to call on their behalf and issues of fact and law that, in his view, are contentious.²¹⁵

166. The Pre-Trial Judge filed a 68-page report on 25 October 2013 addressing in general terms some of the evidentiary issues identified at the pre-trial stage.²¹⁶ He explained the constraints he faced and therefore why he had thus confined his report:

However, although, pursuant to Rule 91 (I) of the Rules, the briefs must indicate: "(i) in general terms, the nature of the accused's defence; (ii) the matters which the accused disputes in the Prosecutor's pre-trial brief; and (iii) in the case of each matter set out pursuant to paragraph (ii), the reason why the accused disputes it", the Defence Briefs are, in essence, often succinct. In point of fact, the investigations conducted by Counsel for the Defence have generally not ended at the time of submitting their Briefs. Furthermore, those counsel are not required to disclose their overall strategy at that preliminary stage of the

²¹⁴ The absence of a 'file' as such also meant that there was no information about any systematic searches for exculpatory evidence or the parameters of the Defence case. At the time of the Trial Chamber's decision under Rule 145 (B), Defence investigations were ongoing.

²¹⁵ Rule 95 (A) (vii) refers to a detailed report setting out: (a) the arguments of the Parties and the victims participating in the proceedings on the facts and the applicable law; (b) the points of agreement and disagreement; (c) the probative material produced by each Party and by the victims participating in the proceedings; (d) a summary of his decisions and orders; (e) suggestions as to the number and relevance of both the witnesses to be called by the Prosecutor and the witnesses that the victims participating in the proceedings intend to request the Trial Chamber to call; and (f) the issues of fact and law that, in his view, are in contention.

²¹⁶ It did not address the listed issues in (a) to (f) of Rule 95 (A) (vii) above. It was 70 pages in the French original.

proceedings. These factors are therefore some of the limits and constraints confronting the Pre-Trial Judge in his task of assessing the number of witnesses to appear, the relevance of their testimony, the contentious issues of law and fact and, more generally, in the preparation of his Report.

It follows from the above that the Report is an analysis of the case of Ayyash *et al.* conducted by the Pre-Trial Judge and based primarily on the Prosecution's Brief, the Defence Briefs, the LRV Brief, and the evidence presented in support of those briefs as submitted to him. The degree of specificity of that analysis, which is intended to facilitate the holding of a fair and expeditious trial by the Trial Chamber, is therefore determined by those briefs and the evidence.²¹⁷

167. In the notably novel and complex circumstances of this case, and notwithstanding this comprehensive report, the interests of justice weighed heavily against the Trial Chamber employing Article 20 (2) as its chosen method of questioning witnesses for hearings and the conduct of trial proceedings. Further, in considering which questioning procedure under Rules 145 (A) or 145 (B) should be employed, the Trial Chamber was cognizant that it could use Rule 145 (C) if required.

168. To properly question witnesses in court, the judges would have had to have spent a considerable period out of court—at least many months—preparing their questioning. Additionally, before questioning witnesses, as an essential part of pre-court preparation for witness testimony or the presentation of evidence, it is critical to link the witness's statements and all associated exhibits—as part of the proposed evidence—with all other relevant evidence and information. This includes the statements of other witnesses and potentially related documents and exhibits.

169. This is very time consuming and requires an in-depth understanding of at least the part of the case to which the witness is relevant, and preferably a good overview of the entire case. Doing this would have been particularly difficult with expert witnesses and Prosecution in-house witnesses who provided analytical summary evidence of thousands of underlying facts. These were contained in witness statements, interview transcripts, expert reports and miscellaneous documents. In the circumstances described above, and indeed in lengthy and complex international

²¹⁷ Pre-Trial Judge Rule 95 (A) transfer of case file to Trial Chamber, para. 35.

criminal trials, the judges could not have done this. As noted above, the Trial Chamber did this with only one witness, who it called to testify itself after the close of the Prosecution's case.

170. During the Prosecution's case, the Trial Chamber heard evidence from 269 witnesses, 119 of whom gave live testimony in the courtroom or through video-conference link, and it received the evidence of 150 witnesses through their written statements. During the trial, the Trial Chamber also made over 70 decisions relating to the Prosecution's exhibit and witness lists, both of which were eventually significantly reduced from their pre-trial highs.

171. The pre-trial witness list current when the Trial Chamber was seised of the case in October 2013 contained 540 names; yet the Trial Chamber eventually received the evidence of less than half of this number, namely, of 'only' 269.

172. During the Prosecution's case, the Trial Chamber received 3,000 exhibits into evidence, of which the Prosecution tendered 2,487 and the Defence 513.²¹⁸ The 2,487 Prosecution exhibits represent a figure of just under 30 per cent of the more than 8,000 exhibits on the final pre-trial exhibit list.²¹⁹

173. On the Legal Representatives of Victims' application, the Trial Chamber also heard evidence from six victims and a 'victimologist', and received into evidence the statements and associated exhibits of 24 other witnesses.²²⁰ It received 45 exhibits tendered by the Legal Representatives of Victims, totalling 3,033 pages in length.²²¹

174. The Oneissi Defence alone elected to call a Defence case. Its case comprised two live witnesses, written statements from four witnesses and 52 exhibits. Finally, the Trial Chamber called one chamber witness to testify.²²² The total number of exhibits received into evidence at trial was 3,135 with a total of more than 171,000 pages.²²³ At the end of the trial, the transcript—

²¹⁸ When citing, the Trial Chamber generally referred to the page numbers of the English PDF exhibits and where this was not possible—because of multiple documents having been assigned the same exhibit number—to the ERNs.

²¹⁹ The Prosecution's exhibit list also featured numerous additions and substitutions during trial.

²²⁰ Decision on the Legal Representatives' application to call evidence, paras 93-97, disposition.

²²¹ 152 items admitted into evidence, in exhibits 1V1 to 1V45.

²²² The Prosecution's former Chief of Investigations, Mr Michael Taylor; Reconsideration decision regarding Rule 165, disposition; Decision under Rule 165, disposition.

²²³ The total number of pages was 107,558 in English; 43,546 in Arabic; 711 in French; 350 in Spanish; 1,353 in other languages; and 6,751 in multiple languages. For 10,742 pages no language classification was entered in the Special Tribunal's Legal Workflow system.

with all three official languages combined—amounted to more than 93,900 pages.²²⁴ The Trial Chamber received the evidence of 297 witnesses in total.

175. Article 21 (2) of the Statute and Rule 149 (C) and (D) allow a Chamber to admit any relevant evidence which it deems to have probative value, unless its probative value is substantially outweighed by the need to ensure a fair trial.

176. Evidence is relevant if it relates to the facts pleaded in an indictment. As an example, the Trial Chamber—over Defence objections—held that evidence on the political background in Lebanon before Mr Hariri’s death was relevant to give context to other evidence. The Trial Chamber was persuaded at that point in the trial that it could potentially help to explain the wider circumstances leading to Mr Hariri’s assassination, or elucidate any non-private motives for committing the offences charged.²²⁵ This evidence has assisted the Trial Chamber to evaluate some aspects of the charges by providing context to the proven facts.

177. Evidence concerning a matter that is not relevant to the proceedings cannot be admissible, and for evidence to have probative value, that is, to prove a fact, it must have some reliability.²²⁶

178. When admitting evidence, and consistent with the long-standing principles of international criminal law procedural law, the Trial Chamber required the tendering Party to demonstrate that the evidence was relevant and—for the purpose of later assessing its probative value—that it was *prima facie* reliable.²²⁷

179. The tendering Party bears the evidentiary onus. In this respect, the Trial Chamber explicitly held that the Rules do not distinguish between the Prosecution and Defence for the purposes of establishing the relevance and *prima facie* reliability of evidence proposed for admission and that:

no principle of international human rights law or international criminal law distinguishes between the Prosecution and the Defence with respect to the evidentiary onus of

²²⁴ Around 37,000 in English and French each and 19,000 in Arabic.

²²⁵ Order to Defence to provide a summary of facts, paras 9-10; Decision on request to stay proceedings, para. 36; Decision on admission of documents (movements and events), para. 30; Decision on admission of statements (movements and events), para. 13.

²²⁶ See for example, Decision on admissibility of Wikileaks documents, para. 11.

²²⁷ See for example, Decision on admission of documents (Abu Adass), para. 17; Decision on clarification of Oneissi call sequence table decision, para. 3; Sabra Defence fourth bar table decision (Abu Adass recruitment), paras 28-29.

establishing the relevance and probative value of any document they seek to tender into evidence.²²⁸

180. Further, Rule 149 (E) plainly authorises a chamber to ‘request verification of the authenticity of evidence obtained out of court’. In a decision on the admission of evidence, the Trial Chamber explained that this is to ensure that no Party is disadvantaged by having a higher evidentiary onus in introducing evidence than another, and is thus ‘put at a disadvantage when presenting its case’.²²⁹

181. Evidence cannot be probative without having indicia of reliability. In admitting material into evidence, including witness statements, the Trial Chamber followed the inclusionary approach of the Special Tribunal’s Rules to receiving evidence. It emphasised that the concept of a piece of evidence having some probative value is distinct from the weight that it may ultimately give to the evidence.²³⁰ That is, evidence could appear to have some probative value at the stage of admission; however, upon later examination and in the light of other evidence—including challenges from an opposing Party—its weight may be diminished even to the point of having none whatsoever.

182. During the trial, the Defence moved the Trial Chamber to exclude some Prosecution evidence under Rule 149 (D), which is an exclusionary rule. It provides that a chamber may exclude evidence whose probative value is substantially outweighed by the need to ensure a fair trial. This means that a chamber may either not admit the material into evidence in such situations or may reconsider a previous admission decision. The Trial Chamber denied each application.²³¹

183. In its final trial brief and in closing submissions, the Oneissi Defence reiterated its submissions to exclude—that is to remove—evidence from the trial record.²³² Upon judicial questioning during closing submissions, however, counsel for Mr Oneissi conceded that their application to exclude evidence under Rule 149 (D) at that stage of the proceedings was effectively

²³² Oneissi Defence final trial brief, paras 43, 49, 53, 239, 265, 312; Oneissi Defence closing submissions, T. 19 September 2018, pp 102, 131-135.

asking the Trial Chamber not to rely on that evidence.²³³ The Trial Chamber accordingly considers it procedurally proper to consider these as submissions urging it not to rely on the evidence, either by giving it no weight or ignoring it, rather than excluding it from the evidentiary record, accompanied if necessary by an explanation as to why.

184. And in any event, it is not willing to ‘remove’, that is, in effect to expunge evidence from the trial record once it is already recorded. The Trial Chamber cannot have portions of the audio or video recording of a court session, and its transcription, wiped from the record as if the words were never uttered.

185. The Trial Chamber, as required by Rule 149 (G), also recorded the reason for each evidentiary ruling, either in written decisions, or when necessary in brief oral decisions delivered in court.²³⁴ Doing so orally in court for each decision on Parties’ applications to admit evidence would have been judicially inefficient by unnecessarily consuming court time. Moreover, many decisions required in-depth out-of-court legal research and thus proper referencing to legal authorities, and considered deliberation by the Trial Chamber.

186. These types of decisions cannot as a matter of practicality be delivered orally in court. And requiring the Parties to make their applications to tender all proposed evidence in court, as opposed to filing properly argued and legally supported written applications, would also have been impractical. Oral arguments on proposed evidence, especially in multi-accused trials, devour court time; this is time much better devoted to witness testimony.

187. The Trial Chamber also noted during the trial that the ‘organisation of the evidence in a long and complex case ... is very, very challenging’.²³⁵ The evidence has accordingly been divided into numerous but sometimes overlapping categories according to evidentiary themes, such as forensics, telecommunications, the political background, the claim of responsibility for the attack and that related to each Accused. Adding to the challenge is the interrelationship between many evidentiary threads such as the voluminous telecommunications evidence, the expert evidence on

²³³ Oneissi Defence closing submissions, T. 19 September 2018, pp 131-135, T. 20 September 2018, p. 121.

²³⁴ Numerous decisions receiving evidence proposed by Parties in court, such as during cross-examination in putting documents to witnesses, were understandably brief, especially where its reception into evidence was not challenged.

²³⁵ In-court summaries decision, para. 18.

closed criminal telecommunication networks, that of cell site analysis and of attribution of mobile telephone usage to the four Accused and Mr Badreddine.

188. When assessing the weight of the evidence in deliberating each charge in the amended consolidated indictment, the Trial Chamber has reassessed each piece of evidence and relied on relevant evidence to the extent that it found it to be credible, reliable and probative in light of the totality of the evidence. The Trial Chamber generally assessed each piece of evidence in the context of all related evidence. Some particular pieces of evidence, however, related to a topic or evidentiary theme so discrete that they could be assessed without requiring substantial comparison with other admitted evidence. An example of this is the evidence connected to the use of photo boards for identification purposes.

189. The evidence received at trial, the facts agreed between the Parties and the facts that the Trial Chamber has judicially noted provide the factual basis of this judgment.

190. The Trial Chamber firmly instructed the Parties not to rely on material that is not in evidence.²³⁶ Consistent with the principles of international human rights law, the Trial Chamber has not relied on material that it has not received into evidence.²³⁷ The Trial Chamber also explained that a cross-examining Party reading portions of a witness statement into the record does not of itself transform the statement into evidence, much less evidence that can be relied upon for its truth, rather than the fact that it was stated or recorded. The witness comments on the document—their admissions or adoptions of the document's content—are the evidence.²³⁸

191. The Trial Chamber also ensured that Parties tendering witness statements into evidence under Rules 155, 156 and 158 prepared and read onto the court record summaries of the content of the statements. The purpose of this exercise was to inform the public of the content of documents that were received into evidence and, by associating the content of a piece of evidence with the

²³⁶ Although it should not have had to; a basic principle of international human rights law is that a court may only decide a case on what is in evidence. Sabra Defence fourth bar table decision (Abu Adass recruitment), para. 42; Sabra Defence second bar table decision (Abu Adass selection), para. 53. The Defence of some Accused nonetheless sought to rely on such material. For example, the Oneissi Defence did so in some submissions concerning the alleged false claim of responsibility for the attack of 14 February 2005. The Trial Chamber has disregarded these submissions. In order to challenge the evidence and to do their own investigations, and to make arguments to a court about this evidence, the Parties must have notice of the material that the court will use in its judgment. *See also* paras 5741, 5762.

²³⁷ *See for example*, *Telfner* Judgment, para. 15; *Edwards* Judgment, para. 98; *Bernard* Judgment, para. 37.

²³⁸ Decision on admission of documents used with a witness by the Oneissi Defence, para. 27.

daily proceedings, to make the transcript easier to follow.²³⁹ These witness summaries are not evidence, and the Trial Chamber has not treated them as such.²⁴⁰

192. The Trial Chamber also permitted the Parties to make what it termed ‘mid-trial summaries’ of the evidence during the case. These were intended to allow the Parties to provide explanatory arguments on the evidentiary themes during the trial and while the evidence was fresh in the Trial Chamber’s mind.²⁴¹

193. The Trial Chamber found that they could aid it, the Parties, the participating victims and the public to understand ‘the voluminous evidence and how some pieces of evidence relate to other pieces and to the evidence as a whole. For this reason, they can promote the overall efficiency of the trial’. These summaries could also clarify how the admitted evidence related to the anticipated evidence and the larger context of the case, and hence to better contextualise the evidence. They were not intended to be submissions, but instead were explanatory rather than argumentative. ‘Mid-trial summaries, it is stressed, have no evidentiary value. No qualitative assessment is made of the evidence.’²⁴²

194. The Prosecution and the Sabra Defence accordingly presented mid-trial summaries several times during the trial.²⁴³ The Trial Chamber has treated them as described immediately above.

²³⁹ The Trial Chamber explained its practice, as ‘The Trial Chamber, since the commencement of the trial, has adopted a practice of first ruling on the admissibility of the documents and witness statements in a written decision. Thereafter, it formally admits them onto the court record in a public hearing, when the moving party reads a short summary of the statement or document—or, where there are many documents, a representative sample. It then allocates exhibit numbers. Relevant parts of the summaries of witness statements or documents are then publicly broadcast. The public policy purpose of this, as at the ICTY, is to allow those following the proceedings—such as the public and the media—to better understand the evidence. It also assists the Trial Chamber, the Parties and Legal Representative of Victims in contextualising the evidence, in summarised form, in the transcript.’ In-court summaries decision, para. 30.

²⁴² In-court summaries decision, paras 15-16.

²⁴³ The Sabra Defence made mid-trial summaries, T. 9 November 2016, pp 26-50, T. 10 November 2016, pp 1-97, and the Prosecution, T. 4 April 2016, pp 4-30. *See also* F3108, Annex A, Defence Thematic Summary of Information Relevant to the Chamber in Relation to the False Claim of Responsibility, 28 April 2017; Decision allowing Sabra Defence supplement; Decision on admission of documents (Abu Adass), para. 113.

B. Principle of publicity of the proceedings and of the judgment

195. Under Article 16 (2) of the Statute, the Accused have the right to a public hearing. However, this right is ‘subject to measures ordered by the Special Tribunal for the protection of victims and witnesses’.

196. Under Rule 136, all proceedings before a chamber, other than its deliberations, are to be held in public, unless otherwise decided by the chamber after hearing the Parties. The Trial Chamber must balance against this prevailing principle appropriate measures for the privacy and protection of witnesses, under Rule 133 (A), provided that the measures are consistent with the rights of the accused, including the right to a public hearing specified in Article 16 (2) of the Statute.²⁴⁴

197. The Trial Chamber ordered measures to protect the identity of many witnesses—including 46 witnesses who testified in court—due to concerns for their personal safety or that of their families. For these reasons, some witnesses are referred to in this judgment by a pseudonym rather than by their names. Details that might reveal their identities have been omitted.

198. To ensure the effectiveness of the protective measures ordered by the Trial Chamber, several portions of the hearings in court were exceptionally conducted in ‘private’ or ‘closed’ session, which the public could not follow.²⁴⁵ The Trial Chamber endeavoured to minimise these sessions. For the same reasons, the Trial Chamber authorised redactions of the public transcript and recording, either on the application of the Parties, the Legal Representatives of Victims or the Registry, or on its own initiative.

199. Article 23 of the Statute requires a judgment to be delivered in public. The Trial Chamber has included in this judgment as much information as it could without creating security risks to anyone who was granted protective measures.

²⁴⁴ Decision on mode of testimony for Ogero witnesses, para. 5.

²⁴⁵ In private session, those following the proceedings from the public gallery can see but not hear the proceedings. In closed session, they can neither see nor hear the proceedings.

C. Principles applied by the Trial Chamber in the assessment of evidence

200. The following principles of international criminal law procedure have guided the Trial Chamber's assessment of the evidence.

1. Presumption of innocence, standard of proof beyond reasonable doubt and the *in dubio pro reo* principle

201. Article 16 (3) of the Statute, which incorporates the recognised international human rights law principles of Article 14 (2) of the ICCPR, provides as follows:

- (a) The accused shall be presumed innocent until proved guilty according to the provisions of this Statute;
- (b) The onus is on the Prosecutor to prove the guilt of the accused;
- (c) In order to convict the accused, the relevant Chamber must be convinced of the guilt of the accused beyond reasonable doubt.

202. The presumption of innocence is a fundamental principle of international human rights law and international criminal law.²⁴⁶ It obliges the Trial Chamber to treat the Accused as innocent of the crimes charged until entering a verdict of guilty in a judgment. The Trial Chamber does *not*—as is sometimes erroneously said—determine whether the Accused are ‘guilty or innocent’,²⁴⁷ but rather, and consistent with the principles of international human rights law, is only required to determine guilt beyond reasonable doubt.

²⁴⁶ Universal Declaration of Human Rights, Article 11 (1); European Convention on Human Rights, Article 6 (2); American Convention on Human Rights, Article 8 (2); American Declaration of the Rights and Duties of Man, Article 26; *Telfner* Judgment, para. 15; *Murray* Judgment, para. 54; *Cabrera García* Judgment, paras 182-184; *Tibi* Judgment, paras 178, 180, concurring opinion of Judge Garcia-Ramirez, paras 32-33; *Delić* decision on the outcome of proceedings, para. 14; *Fofana* bail appeal decision, para. 37; *Mladić* Appeal decision regarding fair trial and presumption of innocence, para. 25; *Rutaganda* Appeal Judgment, para. 172; *Duch* Appeal Judgment, para. 33.

²⁴⁷ The ICC Appeals Chamber in the *Lubanga* Appeal Judgment, at para. 22, made this error in stating, ‘Similarly, in *Mrkšić and Šljivančanin*, the Appeals Chamber of the ICTY made clear that, in making a determination about the innocence or guilt of the accused, the Trial Chamber is called upon to determine “in respect of each of the counts charged [...] whether it was satisfied beyond reasonable doubt, on the basis of the *totality* of the evidence, that every element of the crime in question charged [...], including each form of liability, has been established”.’ However, *Mrkšić*, at para. 217, said nothing approaching this at all. Rather, at paras 220-221 it referred to the hypotheses consistent with innocence that the Prosecution must negative to prove a circumstantial case beyond reasonable doubt. Further, *Mrkšić* at para. 220 cited the *Tadić* Appeal Judgment, para. 174, as apparent earlier authority for its state, yet that paragraph in *Tadić* was summarising the Prosecution's submissions without explicitly adopting them.

203. As the Accused are presumed innocent, the Defence need not establish their innocence. The Trial Chamber cannot impose on the Accused a reversal of the burden of proof or an onus to rebut evidence called by the Prosecution. The Prosecution must rebut the presumption of innocence and prove the guilt of the Accused ‘beyond reasonable doubt’.²⁴⁸ The ICTY Appeals Chamber in *Mrkšić and Šljivančanin* explained the standard as:

The term “beyond reasonable doubt” connotes that the evidence establishes a particular point and it is beyond dispute that any reasonable alternative is possible. It does not mean that no doubt exists as to the guilt of the accused. The test for establishing proof beyond reasonable doubt is that “the proof must be such as to exclude not every hypothesis or possibility of innocence, but every fair or rational hypothesis which may be derived from the evidence, except that of guilt”. The standard of proof beyond reasonable doubt requires a finder of fact to be satisfied that there is no reasonable explanation of the evidence other than the guilt of the accused.²⁴⁹

204. In evidentiary terms, the principle of *in dubio pro reo* means that any reasonable doubt should be resolved in an Accused person’s favour. It is a corollary to the presumption of innocence and the standard of proof beyond reasonable doubt. It therefore applies to the same categories of factual findings as the standard of proof beyond reasonable doubt.²⁵⁰

205. The Trial Chamber must apply the standard of proof beyond reasonable doubt to factual findings on the elements of the crimes and to the modes of liability charged against the Accused, and to any other factual findings that are indispensable for entering a conviction.²⁵¹ The pleaded

For an example of the application of *in dubio pro reo* in Lebanese courts, see *Journalist Kamel Mroue* Judgment, pp 1-2.

²⁵¹ *Al Jadeed and Al Khayat* Appeal Judgment, paras 96, 126; *Ngudjolo* Appeal Judgment, para. 125; *Taylor* Appeal Judgment, para. 200; *Halilović* Appeal Judgment, paras 125, 129; *Ntagerura and others* Appeal Judgment, paras 174-175.

facts underlying or supporting the counts or charges listed in an indictment are sometimes referred to as ‘material facts’. Or putting it another way, the ‘count or charge is the legal characterisation of the material facts which support that count or charge’.²⁵²

206. As an issue of notice to the Accused, the Prosecution must plead the material facts underpinning the charges in the Prosecution’s case in sufficient detail to allow an accused person to prepare a defence to the charges.²⁵³ Those material facts that are necessary to provide an accused person with notice can be distinguished from the facts that must be proven beyond reasonable doubt before a conviction can be entered.²⁵⁴ Also, a Trial Chamber’s factual findings on which a conviction does not rely should be reasonable.²⁵⁵

207. The ICTR Appeals Chamber has held—and the Trial Chamber accepts its reasoning—that:

At the final stage, the Trial Chamber has to decide whether all of the constitutive elements of the crime and the form of responsibility alleged against the accused have been proven. Even if some of the material facts pleaded in the indictment are not established beyond reasonable doubt, a Chamber might enter a conviction provided that having applied the law to those material facts it accepted beyond reasonable doubt, all the elements of the crime charged and of the mode of responsibility are established by those facts.²⁵⁶

208. The relevance of this is illustrated in the following example. The amended consolidated indictment pleads that Mr Oneissi was the ‘Mohammed’ who allegedly met Mr Abu Adass in the Arab University Mosque in Beirut in January 2005 to find someone to make a false claim of responsibility. This particular pleading provides notice to the four Accused of the Prosecution’s case; it is also a material fact underpinning the charges as it specifies—at least in part—Mr Oneissi’s alleged conduct. On its face it therefore also appears to be a fact that is indispensable

²⁵² *Muvunyi* Appeal decision dismissing interlocutory appeal against denying leave to amend the indictment, para. 19.

²⁵³ *Blaškić* Appeal Judgment, para. 209, and the cases cited including *Kupreškić and others* Appeal Judgment, para. 88; *Krnjelac* Appeal Judgment, para. 131.

²⁵⁵ *Stakić* Appeal Judgment, para. 219, fn. 470, holding that, ‘With respect to a Trial Chamber’s findings of fact on which the conviction does not rely, the Appeals Chamber will defer to the findings of the Trial Judgement where such findings are reasonable’.

²⁵⁶ *Ntagerura and others* Appeal Judgment, para. 174 (footnote omitted).

for a conviction, and therefore requiring proof beyond reasonable doubt; the Oneissi Defence argues this.²⁵⁷

209. However, as other pleaded material facts might prove the counts charged, proof that Mr Oneissi was ‘Mohammed’ may not be necessary for a conviction. The Prosecution made submissions to this effect in response to the Trial Chamber’s questions during closing submissions.²⁵⁸

210. The Parties, however, disagree on which types of facts the Prosecution must prove beyond reasonable doubt. Relying on judgments including the ICC Appeals Chamber’s in *Lubanga*,²⁵⁹ the Prosecution submits that *only* the facts constituting the elements of the crimes and modes of responsibility charged must be proved beyond reasonable doubt.²⁶⁰ The Prosecution acknowledges that some cases have required proof beyond reasonable doubt of facts that are ‘indispensable for entering a conviction’; but it ‘has not identified any instance where this standard has been applied outside the context of an element of the crime or the mode of responsibility’.²⁶¹

211. The Sabra Defence submits that this standard must be applied to each fact underlying the elements of each crime and form of responsibility, and to facts indispensable for entering a conviction, but also to other facts that must be proven to this standard due to the manner in which the Prosecution pleaded its case in the amended consolidated indictment and at trial.²⁶² In support it cites ICC, ICTY and ICTR cases.²⁶³ Further, the alleged fact that the Accused knew that Mr Hariri was the target of the charged crimes was an example of a pleaded ‘other fact’ that the Prosecution must prove beyond reasonable doubt.²⁶⁴

²⁵⁷ Oneissi Defence closing submissions, T. 20 September 2018, pp 132-133.

²⁵⁸ Questions for closing submissions, para. 3; Prosecution closing submissions, T. 14 September 2018, pp 68-70.

²⁵⁹ *Lubanga* Appeal Judgment, para. 22.

²⁶¹ Prosecution final trial brief, para. 46, fn. 22, citing *Halilović* Appeal Judgment, para. 130; *Milutinović and others* Trial Judgment, para. 63.

²⁶² Sabra Defence final trial brief, para. 5; Sabra Defence closing submissions, T. 21 September 2018, pp 6-7, 68.

²⁶³ Sabra final trial brief, para. 5, fns 6, 8, citing *Ngudjolo* Appeal Judgment, para. 124; *Halilović* Appeal Judgment, para. 129; *Ntagerura and others* Appeal Judgment, para. 175; *Blagojević and Jokić* Appeal Judgment, para. 226.

²⁶⁴ Sabra Defence closing submissions, T. 21 September 2018, p. 7. Counsel for Mr Sabra expressed this submission as relating only to the charges in counts 7 to 9 of the amended consolidated indictment, namely complicity in intentional homicide and attempted intentional homicide. As discussed in paragraphs 6070 and 6076, the Merhi and Oneissi Defence also submitted that accomplices to the crimes charged legally must have known the identity of the target of the alleged operation, namely Mr Hariri.

212. The Ayyash, Merhi and Oneissi Defence accept that the standard of beyond reasonable doubt applies to proving the elements of the charged crimes and modes of criminal liability, and any other facts that are indispensable for entering a conviction.²⁶⁵

213. The Merhi Defence also emphasises that the mental elements of charged crimes—particularly the requisite intent and knowledge—must be proven beyond reasonable doubt,²⁶⁶ as must that person’s identity. Since in this case, the attribution of telephone numbers to the Accused essentially determines their identification, that attribution must be proved beyond reasonable doubt.²⁶⁷ The Oneissi Defence likewise notes that attribution is indispensable for a conviction in this case, therefore requiring proof to this standard.²⁶⁸

214. The Trial Chamber has carefully reviewed the international case law. The ICTY, ICTR, SCSL and ICC recognise that circumstances may exist where a factual finding is indispensable to convicting an accused person, even though it is not directly or strictly required to establish an element of a crime or a mode of liability. A trial chamber must find such facts proved beyond reasonable doubt; for example, the ICTY Appeals Chamber in *Halilović* held:

As the Prosecution itself acknowledges, a trier of fact is called upon to make findings beyond reasonable doubt based on all of the evidence on the trial record – direct or circumstantial – not only on facts which are essential to proving the elements of the crimes and the forms of responsibility. There might be other facts that need to be proven beyond reasonable doubt due to the way in which the case was pleaded in the indictment and presented during trial to the Defence and to the Trial Chamber. All facts underlying the elements of the crime or the form of responsibility alleged as well as all those, which are indispensable for entering a conviction, must be proven beyond reasonable doubt.²⁶⁹

215. The ICC’s first appellate conviction judgment, *Lubanga*, issued in 2014, applied the general principles of the ICTY and ICTR cases, including specifically the *Blagojević and Jokić*,

²⁶⁵ Ayyash Defence final trial brief, para. 10; Merhi Defence final trial brief, paras 67-68; Oneissi Defence closing submissions, T. 20 September 2018, pp 132-133.

²⁶⁶ Merhi Defence final trial brief, paras 78-81. The Trial Chamber considers that some submissions in these paragraphs concern the legal definitions of crimes and modes of criminal responsibility, rather than evidentiary principles. The Trial Chamber deals with those submissions in chapter XIII ‘Applicable law’.

²⁶⁷ Merhi Defence final trial brief, para. 76.

²⁶⁸ Oneissi Defence final trial brief, para. 13; Oneissi Defence closing submissions, T. 20 September 2018, p. 128.

²⁶⁹ *Halilović* Appeal Judgment, para. 129 (footnotes omitted), citing to *Ntagerura and others* Appeal Judgment, para. 174 and *Blagojević and Jokić* Appeal Judgment, para. 226. See also *Taylor* Appeal Judgment, para. 227.

Mrkšić and Šljivančanin, *Dragomir Milošević* and *Ntagerura and others* appeal judgments. Each of these cases explicitly held that a trial chamber may only convict if the Prosecution has proved beyond reasonable doubt any additional fact that is indispensable for a conviction.²⁷⁰ Although *Lubanga* did not refer to this principle it cited to the passage in *Ntagerura and others* that did.²⁷¹ The ICC Appeals Chamber in *Ngudjolo* in 2015 applied the standard,²⁷² as did the *Katanga* and *Ngudjolo* trial judgments.²⁷³ Appeals against trial judgments in the only other two ICC post-trial appellate judgments, *Bemba and others* and *Bemba*, did not mention it.

216. Concerning the Prosecution's submissions contesting the notion of additional facts indispensable for a conviction, no judgment to which it referred rejected this approach. A number of judgments simply have not mentioned it or expressly adopted it.

217. This review of the case law has also revealed that splitting the term 'material facts' into two categories—one for the pleading purpose of providing notice to an Accused, and the other for pleading and proving the facts underlying the elements of the offence charged—can create confusion. The phrase itself is also used inconsistently which can create confusion. It may be preferable to avoid using it.

218. The Trial Chamber is satisfied that the statement from *Halilović* extracted above, and as applied in various ICTY, ICTR, SCSL and ICC trial and appellate judgments, represents the general principles of international criminal law procedural law, and adopts it. Namely, that 'All facts underlying the elements of the crime or the form of responsibility alleged as well as all those, which are indispensable for entering a conviction, must be proven beyond reasonable doubt'. This formulation also circumvents the uncertainty of using the expression 'material facts'.

²⁷⁰ *Mrkšić and Šljivančanin* Appeal Judgment, para. 220; *Blagojević and Jokić* Appeal Judgment, para. 226; *Dragomir Milošević* Appeal Judgment, para. 21; *Ntagerura and others* Appeal Judgment, para. 174.

²⁷¹ Namely, the *Ntagerura and others* Appeal Judgment, which held at para. 174 that at the 'fact-finding stage, the standard of proof beyond a reasonable doubt is applied to establish the facts forming the elements of the crime or the form of responsibility alleged against the accused, as well as with respect to the facts which are indispensable for entering a conviction', *Lubanga* Appeal Judgment, para. 22.

²⁷² Holding, at para. 125, 'Accordingly, the Appeals Chamber considers that the Trial Chamber was correct in its further elaboration of the standard of proof, namely that the elements of the crime and the mode of liability alleged against the accused, as well as the facts which are "indispensable for entering a conviction" must be established beyond reasonable doubt.' *Ngudjolo* Appeal Judgment.

²⁷³ *Katanga* Trial Judgment, para. 69; *Ngudjolo* Trial Judgment, para. 35. The two Accused were tried by the same trial chamber.

219. This approach has the merit of avoiding overly narrow, artificial distinctions between different facts, all of which must exist for the alleged crime or form of participation in it to have occurred. And in any event, no judgment to which the Prosecution referred clearly rejects this approach.

220. The Trial Chamber has found that the Prosecution must prove beyond reasonable doubt that the alleged accomplices, namely, Mr Merhi, Mr Oneissi and Mr Sabra, knew that Mr Hariri was the target of the crimes charged.²⁷⁴ For reasons set out in analysing the applicable law,²⁷⁵ the Trial Chamber considers that this is best characterised as a fact necessary to prove an element of the *mens rea* of a crime charged, rather than an ‘other fact’ that requires proof beyond reasonable doubt, as argued by the Sabra Defence. However, on the proven facts of this case the Trial Chamber has also determined that it would not matter whether the stricter interpretation, urged by the Merhi, Oneissi and Sabra Defence, was required.

221. Apart from this issue, the Parties appear to accept the principles on the application of the standard of proof outlined in paragraphs 201-205 above.²⁷⁶ The Trial Chamber has applied these principles throughout the judgment, even if the precise phrasing set out above is not always used. It has also applied a holistic assessment of the evidence, having considered it in its totality; this is explained below in paragraphs 230-255.

222. The Trial Chamber has considered every crime and charge against each Accused individually, determining for each whether the evidence establishes beyond reasonable doubt all facts indispensable to a conviction. This is consistent with the Trial Chamber’s obligation under Rule 148 (B) to vote separately on each charge contained in an indictment and to make separate findings as to each Accused.

²⁷⁴ Due to a lack of clarity in Lebanese law on this issue, the Trial Chamber has also briefly considered the alternative scenario, namely that such knowledge is not essential. *See* chapter XIII ‘Applicable law’, (B) (2) ‘Accomplice liability’; chapter XIV ‘Legal findings on elements of the crimes and Individual criminal responsibility’.

²⁷⁵ *See* chapter XIII ‘Applicable law’, (B) (2) ‘Accomplice liability’.

²⁷⁶ Prosecution final trial brief, paras 29, 32, 44-47; Prosecution closing submissions, T. 11 September 2018, pp 39, 116-117, T. 14 September 2018, p. 42; Ayyash Defence final trial brief, paras 7, 9; Ayyash Defence closing submissions, T. 17 September 2018, pp 7-9; Merhi Defence final trial brief, paras 67-69, 82 (*see also* paras 70-71); Merhi Defence closing submissions, T. 18 September 2018, pp 13-14, 64; Oneissi Defence final trial brief, paras 9-10; Oneissi Defence closing submissions, T. 19 September 2018, p. 29; Sabra Defence final trial brief, paras 4-7 (*see also* paras 71-72).

2. The obligation to provide a reasoned opinion

223. Article 23 of the Statute provides:

The judgement shall be rendered by a majority of the judges of the Trial Chamber ... It shall be accompanied by a reasoned opinion in writing, to which any separate or dissenting opinions shall be appended.

224. This is a fundamental principle of international human rights law. A reasoned opinion ensures that the accused can exercise their right of appeal,²⁷⁷ and that the Appeals Chamber can carry out its statutory duties, under Article 26 of the Statute, to review an appeal.²⁷⁸ ‘However, the reasoned opinion requirement relates to the Trial Judgement as a whole rather than to each submission made at trial’.²⁷⁹

225. The Trial Chamber only needs to make findings on the facts that are essential to determining the Accused’s criminal responsibility on a particular count. It may rely on the evidence that it finds the most convincing and need not refer to the testimony of every witness or every piece of evidence on the trial record.²⁸⁰ Indeed, in this case, with a trial record containing 3,135 exhibits—totalling 171,011 pages—and the evidence of 297 witnesses with a transcript of more than 90,000 pages in the three official languages, it would be impracticable. Nor is the Trial

²⁷⁷ Article 14 (5) of the International Covenant on Civil and Political Rights guarantees that, ‘Everyone convicted of a crime shall have the right to his conviction and sentence being reviewed by a higher tribunal according to law.’ *See also* Article 2 (1) of the European Convention on Human Rights, ‘Right of appeal in criminal matters’, which provides that ‘Everyone convicted of a criminal offence by a tribunal shall have the right to have his conviction or sentence reviewed by a higher tribunal. The exercise of this right, including the grounds on which it may be exercised, shall be governed by law.’ *See also* Rule 176 (A) stating that ‘An appeal may be lodged on the following grounds: (i) An error on a question of law invalidating the decision; (ii) An error of fact that has occasioned a miscarriage of justice’.

²⁷⁸ Article 26 of the Statute, ‘Appellate proceedings’, provides that the Appeals Chamber shall hear appeals from persons convicted by the Trial Chamber or from the Prosecutor on the grounds of error on a question of law invalidating the decision and or an error of fact that has occasioned a miscarriage of justice. The Appeals Chamber may affirm, reverse or revise the decision taken by the Trial Chamber.

²⁷⁹ *Karera* Appeal Judgment, para. 20, referring to *Limaj and others* Appeal Judgment, para. 81, with further references.

²⁸⁰ *Bemba and others* Appeal Judgment, para. 1540; *Al Jadeed and Al Khayat* Appeal Judgment, paras 57, 76; *Dragomir Milošević* Appeal Judgment, para. 21; *Ntagerura and others* Appeal Judgment, para. 174; *Taylor* Appeal Judgment, paras 246-247; *Perišić* Appeal Judgment, para. 92; *Bizimungu* Appeal Judgment, para. 18; *Sesay and others* Appeal Judgment, para. 39; *Hadžihasanović and Kubura* Appeal Judgment, para. 13; *Kvočka and others* Appeal Judgment, para. 23.

Chamber required to specify every step of its reasoning and to analyse every legal submission. The Trial Chamber need only explain its position on the main issues raised by the Parties.²⁸¹

226. This strikes a balance between, on the one hand, the soundness and transparency of judicial findings and, on the other hand, judicial economy and ensuring that the judgment remains accessible to the public. This is essential in long and technically complex cases.

227. With this in mind, the Trial Chamber has attempted brevity and clarity and to limit its findings and references to those essential to determine whether the Accused are guilty beyond reasonable doubt as charged. In its deliberations, the Trial Chamber has considered all the evidence on the record but has only referred to that most relevant to its findings. As expressed by the ICTY, the Trial Chamber ‘also emphasises that, where an item of evidence is not mentioned in this Judgement, it does not mean that it has not been considered’.²⁸²

228. The final trial submissions of the Parties and Legal Representatives of Victims totalled 1,406 pages and 417,748 words and occupied nine days of court with 1,117 pages of English transcript.²⁸³ In these circumstances in this judgment, the Trial Chamber can only expressly summarise and analyse the necessary portions of these submissions.

229. According to the ICTY, ICTR and ICC Appeals Chambers, a trial chamber is ‘not required to set out in detail why it accepted or rejected a witness’s testimony, or justify its evaluation of testimony in cases where there are discrepancies in the evidence’.²⁸⁴ But it is required to consider this in evaluating the evidence.²⁸⁵ The Trial Chamber accepts and has followed these principles in assessing the evidence.

²⁸¹ *Bemba and others* Appeal Judgment, para. 105; *Nyiramasuhuko and others* Appeal Judgment, para. 105; *Kvočka and others* Appeal Judgment, para. 23; *Kayishema and Ruzindana* Appeal Judgment, para. 165.

3. Final assessment of the evidence—holistic assessment on the totality of the evidence—as distinct from assessment at the time of its admission

230. In its deliberations, for each relevant fact, a trial chamber must evaluate and weigh each piece of evidence against other relevant pieces of evidence. The quality of a piece of evidence may not be evident when it is viewed in isolation. Its quality may be augmented or undermined when considered with other relevant evidence, depending on whether it is corroborated or contradicted.²⁸⁶

231. This is distinguished from the Trial Chamber's findings on individual pieces of evidence when admitting them into evidence. These evidential admissibility rulings do not predetermine the final evaluation of the evidence.²⁸⁷ When admitting evidence, the Trial Chamber's assessment of relevance and *prima facie* reliability and probative value concerned only the tendered material's admissibility and not the weight that the Trial Chamber would ultimately attach to each piece of evidence²⁸⁸ when assessing it in light of the totality of the evidence.²⁸⁹

232. A chamber cannot evaluate evidence in a 'piecemeal' fashion.²⁹⁰ This is particularly important in Prosecution cases like the present one that rely heavily upon circumstantial evidence. Recognising this, international criminal courts and tribunals have frequently described a trial

²⁸⁶ *Al Jadeed and Al Khayat* Appeal Judgment, paras 56, 126; *Lubanga* Appeal Judgment, para. 22; *Taylor* Appeal Judgment, para. 235; *Halilović* Appeal Judgment, paras 125, 128; *Ntagerura and others* Appeal Judgment, para. 174; *Musema* Appeal Judgment, para. 134; *Vujin* Appeals Chamber first instance judgment, para. 92; *Kupreškić and others* Appeal Judgment, paras 31, 135, 202, 334. Final weight is attributed after having received submissions from the Parties. Decision in relation to Rule 125 witness, paras 14, 21.

²⁹⁰ *Halilović* Appeal Judgment, para. 128; *Mrkšić and Šljivančanin* Appeal Judgment, para. 217; *Taylor* Appeal Judgment, para. 235; *Nchamihigo* Appeal Judgment, para. 213; *Karadžić* Appeal Judgment, para. 128.

chamber's duty at the deliberations stage as making an assessment based on 'the totality of the evidence'²⁹¹ or assessing the evidence 'holistically'.²⁹² The terms 'totality' and 'holistic' in this sense are interchangeable.

233. The ICTY, ICTR, IRMCT, SCSL and ICC have adopted these long-standing features of international criminal law trials. ICTY and ICTR case law, for example, provides examples of where the true quality of individual pieces of evidence could only be determined once other relevant evidence was considered, and of its potential importance to a case's outcome. In its first contempt case, the ICTY Appeals Chamber, acting as a first instance trial court,²⁹³ held:

The first such matter of principle is that a tribunal of fact must never look at the evidence of each witness separately, as if it existed in a hermetically sealed compartment; it is the accumulation of *all* the evidence in the case which must be considered. The evidence of one witness, when considered by itself, may appear at first to be of poor quality, but it may gain strength from other evidence in the case. The converse is also true.²⁹⁴

234. In *Kupreškić and others*, the ICTY Appeals Chamber added to this by reiterating 'the importance of such a holistic approach to assessing credibility' and the need to assess 'the credibility of a witness in light of the trial record as a whole'.²⁹⁵ The ICTY consistently applied this standard, important as it is in evaluating evidence in circumstantial cases. As an example, the *Halilović* Appeal Judgment held that:

The task of a trier of fact is that of assessing all the relevant evidence presented with a holistic approach; this is all the more necessary in cases as complex as the ones before the International Tribunal. According to the Statute and the Rules, a trier of fact should render

²⁹¹ *Lubanga* Appeal Judgment, para. 22; *Mrkšić and Šljivančanin* Appeal Judgment, para. 217; *Stakić* Appeal Judgment, paras 55, 346; *Lukić and Lukić* Appeal Judgment, para. 260; *Martić* Appeal Judgment, paras 233-234; (on identification evidence specifically) *Limaj and others* Appeal Judgment, paras 24, 153-154, 275, citing *Limaj and others* Trial Judgment, para. 20; *Karemera and Ngirumpatse* Appeal Judgment, paras 52, 543; *Ngirabatware* Appeal Judgment, para. 86; *Taylor* Appeal Judgment, para. 250.

²⁹² *Lubanga* Appeal Judgment, para. 22; *Taylor* Appeal Judgment, para. 235; *Tolimir* Appeal Judgment, para. 247; *Halilović* Appeal Judgment, para. 128; *Bemba* Trial Judgment, paras 218, 225; (on credibility of witness evidence specifically) *Kupreškić and others* Appeal Judgment, para. 334.

²⁹³ In trying Milan Vujin, the former lead Defence counsel for Duško Tadić.

²⁹⁴ *Vujin* Appeals Chamber first instance judgment, para. 92 (internal footnote to common law authorities omitted). It was adopted by the ICTR in *Musema* Appeal Judgment, para. 134.

²⁹⁵ *Kupreškić and others* Appeal Judgment, para. 334. It specifically emphasised the need to address material inconsistencies between evidence, revealed by a holistic evaluation, before finally determining its credibility, paras 135, 202.

a reasoned opinion on the basis of the entire body of evidence and without applying the standard of proof “beyond reasonable doubt” with a piecemeal approach.²⁹⁶

235. The ICC has also used the ‘holistic’ standard, holding in its first post-conviction appeal judgment in *Lubanga*, in relation to applying the standard of beyond reasonable doubt, that:

In the view of the Appeals Chamber, when determining whether this standard has been met, the Trial Chamber is required to carry out a holistic evaluation and weighing of *all the evidence taken together* in relation to the fact at issue. Indeed, it would be incorrect for a finder of fact to do otherwise. These principles have guided the Appeals Chamber in its review of the Conviction Decision and, more specifically, of the way in which the Trial Chamber assessed the evidence to reach its findings under article 66 (3) of the Statute.²⁹⁷

236. In *Ngudjolo*, the Appeals Chamber by majority confirmed an acquittal at trial.²⁹⁸ The majority, in dismissing the Prosecution’s appeal grounds, including that the Trial Chamber had

²⁹⁶ *Halilović* Appeal Judgment, para. 128. The *Taylor* Appeal Judgment, at para. 235, specifically adopted this.

²⁹⁷ *Lubanga* Appeal Judgment, para. 22, citing to para. 174 of the *Ntagerura and others* Appeal Judgment, which held at paras 174-175:

‘- At the first stage, the Trial Chamber has to assess the credibility of the relevant evidence presented. This cannot be undertaken by a piecemeal approach. Individual items of the evidence, such as the testimony of different witnesses, or documents admitted into evidence, have to be analysed in the light of the entire body of evidence adduced. Thus, even if there are some doubts as to the reliability of the testimony of a certain witness, that testimony may be corroborated by other pieces of evidence leading the Trial Chamber to conclude that the witness is credible. Or, on the other hand, a seemingly convincing testimony may be called into question by other evidence which shows that evidence to lack credibility.

- Only after the analysis of all the relevant evidence, can the Trial Chamber determine whether the evidence upon which the Prosecution relies should be accepted as establishing the existence of the facts alleged, notwithstanding the evidence upon which the Defence relies. At this fact-finding stage, the standard of proof beyond a reasonable doubt is applied to establish the facts forming the elements of the crime or the form of responsibility alleged against the accused, as well as with respect to the facts which are indispensable for entering a conviction.

- At the final stage, the Trial Chamber has to decide whether all of the constitutive elements of the crime and the form of responsibility alleged against the accused have been proven. Even if some of the material facts pleaded in the indictment are not established beyond reasonable doubt, a Chamber might enter a conviction provided that having applied the law to those material facts it accepted beyond reasonable doubt, all the elements of the crime charged and of the mode of responsibility are established by those facts.’

‘The Appeals Chamber recalls that the presumption of innocence requires that each fact on which an accused’s conviction is based must be proved beyond a reasonable doubt. The Appeals Chamber agrees with the Prosecution’s argument that “if facts which are essential to a finding of guilt are still doubtful, notwithstanding the support of other facts, this will produce a doubt in the mind of the Trial Chamber that guilt has been proven beyond a reasonable doubt”. Thus, if one of the links is not proved beyond a reasonable doubt, the chain will not support a conviction.’ (internal footnotes omitted)

²⁹⁸ *Ngudjolo* Appeal Judgment, para. 296. The accused was acquitted at trial of committing war crimes and crimes against humanity in the Democratic Republic of the Congo.

failed to consider the evidence in its totality, did not refer to how a trial chamber was required to assess evidence.

237. Two judges jointly dissented and would have ordered a retrial,²⁹⁹ strongly endorsing the principle that a trial chamber must evaluate evidence holistically.³⁰⁰ Unlike the majority,³⁰¹ they considered that the trial chamber had evaluated the evidence in a fragmentary way, materially affecting its judgment,³⁰² and concluded that a trial chamber:

should adopt a holistic approach, whereby all relevant pieces of evidence are considered together as an entire body, *i.e.* as a system of evidence, and not merely on their own. Only when the trial chamber does not confine its assessment to each individual piece of evidence in isolation will the trier of fact be in a position to make an accurate determination on the merits of the case.³⁰³

238. The next post-conviction judgment, in the *Bemba and others* contempt case, also adopted the *Lubanga* definition.³⁰⁴

239. In *Bemba*, an ICC trial chamber convicted the accused on the basis of command responsibility for the criminal actions of his subordinates.³⁰⁵ He was acquitted on appeal in a three-to-two majority judgment.³⁰⁶ Two judges in the majority wrote a joint separate opinion

²⁹⁹ *Ngudjolo* dissenting opinion of Judges Trendafilova and Tarfusser, paras 1, 3, 70.

³⁰⁰ *Ngudjolo* dissenting opinion of Judges Trendafilova and Tarfusser, paras 33-35, 39, 41.

³⁰¹ *Ngudjolo* Appeal Judgment, paras 167-174.

³⁰² *Ngudjolo* dissenting opinion of Judges Trendafilova and Tarfusser, paras 31-51, 68-70. Judge Tarfusser, as an appellate judge in *Ngudjolo*, thus reached different conclusions on the consequences of a holistic assessment of evidence to his decision as a trial judge in *Gbagbo and Blé Goudé*.

³⁰³ *Ngudjolo* dissenting opinion of Judges Trendafilova and Tarfusser, para. 39.

³⁰⁴ *Bemba and others* Appeal Judgment, para. 1540. Judge Henderson dissented on the issue of whether evidential rulings were required when the evidence is submitted, writing, ‘First, my colleagues repeat the worn argument that Common Law systems approach evidence “atomistically”, whereas Romano-Germanic systems adopt a “holistic” approach. With the greatest of respect for my colleagues and the scholars upon whose views they seem to rely, this is a caricature which fundamentally misrepresents how the Common Law inspired adversarial system works in reality. Indeed, the fact that Common Law judges consider the authenticity, probative value and potential prejudice of each item of evidence individually does not mean that they consider these factors in isolation. Moreover, once the evidence is admitted, its evidentiary weight is assessed ever so “holistically” as in any other legal system’, Separate opinion of Judge Geoffrey Henderson, para. 41.

³⁰⁵ The accused was convicted, under Article 28 (a) of the Rome Statute, of committing war crimes and crimes against humanity committed in the Central African Republic, on the basis of command responsibility, in that he effectively acted as a military commander of the physical perpetrators of the incidents of murder, rape and pillage, *Bemba* Trial Judgment, para. 752.

³⁰⁶ The majority found that a number of the acts were outside the scope of the charges, discontinued those proceedings and acquitted him of the remaining charges, *Bemba* Appeal Judgment.

summarising evidentiary problems in the trial judgment, such as its undue reliance on hearsay³⁰⁷ and the misapplication of the principles concerning circumstantial evidence.³⁰⁸ In further explaining the *Lubanga* holistic approach to assessing evidence (as adopted by the *Bemba and others* appeal) they held:

It may be considered that the above criticisms are overly ‘atomistic’ and that we should have appreciated that the Trial Chamber evaluated the evidence ‘holistically’. If so, and with the greatest of respect, **holistic fact-finding should not be an excuse or a reason for making findings beyond a reasonable doubt on the basis of a collection of weak evidence.** When the Appeals Chamber says that the Trial Chamber must analyse the evidence holistically, all this means is that the evidentiary weight of individual items of evidence should not be determined in isolation, but rather in conjunction with other relevant evidence. It is also true that the credibility and evidentiary weight of specific items of evidence is not determinative. What matters is how strong and convincing the totality of the relevant evidence in relation to a particular fact is. That said, **analysing evidence holistically cannot cure the weakness of individual items of evidence and a number of weak arguments for a proposition do not and cannot ever combine into a strong reason for accepting it.**³⁰⁹

And further:

The Prosecutor’s appeal to the ‘holistic’ approach cannot counteract the absence of clear and convincing evidence.³¹⁰

240. In *Blé Goudé and Gbagbo*, the Trial Chamber by majority granted defence motions at the close of the Prosecution case to acquit the two accused.³¹¹ Writing separately, the three judges

³⁰⁷ Joint separate opinion of Judge Van den Wyngaert and Judge Morrison in *Bemba* Appeal Judgment, paras 8-10.

³⁰⁸ Joint separate opinion of Judge Van den Wyngaert and Judge Morrison in *Bemba* Appeal Judgment, paras 11-13. This issue is further discussed in chapter III ‘Assessment of evidence’, (C) (4) ‘Circumstantial evidence’, below.

³⁰⁹ Joint separate opinion of Judge Van den Wyngaert and Judge Morrison in *Bemba* Appeal Judgment, para. 15, footnotes omitted, emphasis added.

³¹⁰ Joint separate opinion of Judge Van den Wyngaert and Judge Morrison in *Bemba* Appeal Judgment, paras 60, 64, 67.

³¹¹ Of committing crimes against humanity in *Côte d’Ivoire*. Judge Tarfusser agreed with the result and with Judge Henderson’s lengthy and detailed legal and factual findings, although he differed from both Judge Henderson and the dissenting judge, Judge Herrera Carbuccion, on some other issues such as the nature of the decision. *Gbagbo and Blé Goudé* Judge Tarfusser opinion on acquittal decision, paras 1 and following. The acquittal decision is the subject of a Prosecution appeal, with its second ground arguing that the court erred by acquitting ‘without properly articulating and consistently applying a clearly defined standard of proof and/or approach to assessing the sufficiency of evidence’;

each endorsed the holistic approach, saying that they had applied it.³¹² One made a statement similar to the *Bemba* separate opinion on the holistic assessment of evidence, holding:

The Prosecutor has invited the Chamber to conduct a holistic evaluation of the evidence submitted where all the relevant items of evidence are to be considered together as an entire body of evidence and not merely on their own. While I agree that this is appropriate, such an approach is not incompatible with the need for careful scrutiny and rigorous analysis of the individual bits and pieces of evidence and the inferences that the Chamber has been invited to draw therefrom.³¹³

241. The Prosecution has repeatedly stressed, and the Defence of each Accused professes to accept the principle, that in its deliberations, the Trial Chamber must consider the evidence before it ‘holistically’, and not in isolation.³¹⁴ However, the Defence, in effect, submits that the Prosecution stresses this principle because of the weakness of its case and that applying it cannot overcome that weakness.³¹⁵

ICC, *Prosecutor v. Gbagbo and Blé Goudé*, ICC-02/11-01/15, Public redacted version of “Prosecution Document in Support of Appeal”, ICC02/11-01/15-1277-Conf, 15 October 2019, 17 October 2019, IV.

³¹² *Gbagbo and Blé Goudé* Judge Tarfusser opinion on acquittal decision, for example para. 73, ‘I have looked at the evidence in its entirety, taking it all ‘at its highest’ and ‘holistically’; however, I have done so in respect of the evidence tendered as a whole, irrespective of whether such evidence would or should fall under the heading and label of incriminating as opposed to exculpatory; accordingly, I have not excluded the exculpatory evidence and looked at it for what it is, refraining from engaging in twisting and turning it with a view to making it suit the Prosecutor’s theory, or preventing it from puncturing its very substance’. In her dissent, Judge Herrera Carbuccia stated, ‘In applying the relevant test at this stage of the proceedings, I will follow the approach adopted by other tribunals: “[T]he task of a trier of fact is that of assessing all the relevant evidence presented with a holistic approach; this is all the more necessary in cases as complex as the ones before the International Tribunal”.’ *Gbagbo and Blé Goudé* dissenting opinion of Judge Herrera Carbuccia on acquittal decision, para. 5, citing the ICTY *Halilović* Appeal Judgment, para. 128 and the SCSL *Taylor* Appeal Judgment, para. 235.

³¹³ *Gbagbo and Blé Goudé* Judge Henderson reasons for acquittal decision, para. 31, footnotes omitted, *see also*, for example paras 1905, 2038-2039, 2041.

³¹⁴ Prosecution final trial brief, paras 29, 31, 42-43; Prosecution closing submissions, T. 11 September 2018, pp 39-40, 42, 53-55, 87-89, T. 14 September 2018, pp 70-71, T. 21 September 2018, pp 81-89; Ayyash Defence final trial brief, paras 24-25; Ayyash Defence closing submissions, T. 17 September 2018, p. 95; Merhi Defence final trial brief, paras 69, 76; Oneissi Defence final trial brief, paras 3-4; Sabra Defence final trial brief, para. 8.

³¹⁵ Ayyash Defence final trial brief, para. 25; Ayyash Defence closing submissions, T. 17 September 2018, p. 95; Merhi Defence final trial brief, para. 69; *see also* Merhi Defence closing submissions, T. 18 September 2018, p. 86, stating that Prosecution counsel and experts ‘repeated relentlessly’ that we ‘should look at the wholistic picture and all the elements of the puzzle’; Oneissi Defence final trial brief, paras 3-4, 697-698; Oneissi Defence closing submissions, T. 19 September 2018, pp 31-32; *see also* pp 78, 82, 121-122, submitting that the evidence against Mr Oneissi is lacking and, at p. 82, that the Prosecution’s overall ‘method’ and ‘reasoning’ is unacceptable; T. 20 September 2018, pp 129-131; Sabra Defence final trial brief, para. 8; *see also* Sabra Defence closing submissions, T. 21 September 2018, pp 52-53, submitting generally that despite the Prosecution’s claims, the necessary evidence simply ‘does not exist’ and ‘is not there’.

242. The Ayyash, Oneissi and Sabra Defence also submit that the Trial Chamber must consider the quality of each piece of evidence individually. The Ayyash Defence argues that before the Trial Chamber considers the evidence holistically, it must carefully consider each piece of evidence individually to determine whether it is reliable.³¹⁶ It is only after this that the ‘problems’ with the evidence in this case become apparent.³¹⁷

243. In its final trial brief the Oneissi Defence submits that:

Holistic fact-finding should not be an excuse or a reason for making findings beyond a reasonable doubt on the basis of a collection of weak evidence. To analyse evidence holistically means that the evidentiary weight of individual items of evidence should not be determined in isolation, but rather in conjunction with other relevant evidence.

What matters is how strong and convincing the totality of the relevant evidence in relation to a particular fact is. Analysing evidence holistically cannot cure the weakness of individual items of evidence and a number of weak arguments for a proposition do not and cannot ever combine into a strong reason for accepting it.

Even if the Chamber were to adopt a ‘holistic’ approach to the evidence, it does not preclude it from carefully examining and assessing the weight to be afforded to each piece of evidence, in isolation. If the Chamber pulls at the threads, the case against Mr. Oneissi will quickly unravel.³¹⁸

The Oneissi Defence relies upon the *Bemba* joint separate opinion, and also argues that:

Each particular fact must be supported by evidence solid enough for the trier of fact to find it has been proved. The *individual assessment of the weight of each piece of evidence* is a crucial part of this exercise.³¹⁹

³¹⁶ Ayyash Defence closing submissions, T. 17 September 2018, pp 95, 114. *See also* Ayyash Defence final trial brief, para. 24, stating that the Trial Chamber must make an independent assessment of each piece of evidence to determine its weight. The Ayyash Defence did not refer to any authority in those oral closing submissions or that paragraph of its final trial brief, but the next paragraph of its brief consists of quotations from para. 15 of the Joint separate opinion of Judge Van den Wyngaert and Judge Morrison in *Bemba* Appeal Judgment, discussed in paragraphs 261-274.

³¹⁷ Ayyash Defence closing submissions, T. 17 September 2018, p. 95.

³¹⁸ Oneissi Defence final trial brief, paras 3-5, with para. 4 footnoted to Joint separate opinion of Judge Van den Wyngaert and Judge Morrison in *Bemba* Appeal Judgment, para. 15.

³¹⁹ Oneissi Defence final trial brief, para. 7, emphasis added. No legal authority is cited in support of this.

244. The Sabra Defence submits that the ‘holistic evaluation of evidence does not remove the need for an assessment of the quality of all facts, material or otherwise.’³²⁰ In support, it cites *Ntagerura*, which held that the ‘duty of the Trial Chamber to consider all the evidence does not relieve it from the duty to apply the required standard of proof to any particular fact’.³²¹ The Ayyash and Sabra Defence also cited to the same passage of the *Bemba* separate opinion on how the Trial Chamber should approach its final evaluation of the evidence.³²²

245. In examining the evidence supporting the material facts or those otherwise indispensable to a conviction, the Trial Chamber must determine the weight of each piece of evidence holistically, or in the totality of other pieces of evidence relevant to the fact in issue. The Trial Chamber’s duty to determine the weight of a piece of evidence in light of other relevant evidence, whatever the nature of the evidence in the case, is well-accepted in international criminal law.

246. In this respect, the Trial Chamber agrees with the highlighted portion of the *Bemba* separate opinion above at paragraph 239, and the Defence submissions to the extent that it should carefully consider each piece of evidence and that the evidence establishing a particular fact, taken as a whole, must meet the applicable standard to prove that fact.

247. However, the *Bemba* separate opinion appears to go further by suggesting that combining some seemingly weak pieces of circumstantial evidence can *never* collectively strengthen them to the point that together they could prove a material fact beyond reasonable doubt. But it does this without clearly defining what is meant by ‘a collection of weak evidence’ or ‘weak arguments’.³²³

³²⁰ Sabra Defence final trial brief, para. 65. It makes a similar submission in para. 8, footnoted to the *Ntagerura and others* Appeal Judgment, para. 172. See also Sabra Defence closing submissions, T. 21 September 2018, p. 32, where counsel for Mr Sabra similarly argued, ‘In a weak circumstantial case which relates to one single criminal event, no matter how serious, we do submit, Your Honours, that the Prosecution needs *all* of its evidence to be presented, to be subject to challenge, and to come through that challenge with credibility and reliability intact. There is no fact in the indictment where the Prosecution can prove only, say, 60 per cent of its allegations and still obtain a conviction.’ Regarding circumstantial evidence, see chapter III ‘Assessment of evidence’, (C) (4) ‘Circumstantial evidence’, below.

³²¹ *Ntagerura and others* Appeal Judgment, para. 172.

³²² Ayyash Defence final trial brief, para. 25; Sabra Defence final trial brief, para. 8. The Oneissi and Sabra Defence also relied on other parts of this opinion in their submissions on the assessment of circumstantial evidence, summarised in chapter III ‘Assessment of evidence’, (C) (4) ‘Circumstantial evidence’, below.

³²³ *Confer* Dissenting opinion of Judge Monageng and Judge Hofmański in *Bemba* Appeal Judgment, para. 47, stating—regarding one of the grounds of appeal as to whether Mr Bemba was liable as a superior and took all necessary and reasonable measures within his powers to prevent or repress the commission of crimes—that ‘The Majority appears to have considered that, given its modification of the standard of review, it was not required to review the evidentiary record comprehensively and should simply overturn the factual findings of the Trial Chamber in case of

248. It appears that the *Bemba* separate opinion was referring to evidence that the two judges believed was too ‘weak’ to admit into evidence. Such evidence must lack probative value and, at least at the Special Tribunal, would be ineligible for admission into evidence. The *Bemba* conclusion thus appears to have been directed at inadmissible (yet admitted) evidence rather than evaluating pieces of evidence that have varying degrees of probative value, some of which might be ‘weaker’ than others.

249. The Trial Chamber, under Rule 149 (C), can only receive ‘relevant evidence which it deems to have probative value’. This is assessed at the point of admission, and if the evidence has insufficient indicia of reliability it cannot be admitted, as it will lack probative value. The assessment of its weight comes in evaluating it when deliberating on whether the Prosecution has proved its case. Thus, at that stage the Trial Chamber may assess, in combination, a number of pieces of evidence that have varying degrees of probative value.

250. But even if the *Bemba* separate opinion was also referring to admissible evidence, namely, that found to have some probative value at the time of the decision to admit it, the type of evidence it mentions is indisputably at the lowest end of the spectrum when it comes to probative value. The separate opinion specifically lists anonymous hearsay but also mentions a lack of corroboration and an inability to test the evidence in court.³²⁴

251. A case relying on inadmissible evidence, and or evidence with extremely limited probative value, could not result in a conviction. This is because it would be unreasonable, in the face of such cumulative weaknesses, to find that the relevant standard of proof beyond reasonable doubt has been attained.

252. Such evidence is different to that having varying degrees of probative value. In that case, some pieces, individually, could legitimately be described as ‘weaker’ than others. The combination of *these* pieces of evidence, even if they are individually comparatively ‘weaker’ than others, *could potentially*—if examined in their totality—be used to prove a charge. For these reasons, the Trial Chamber understands the *Bemba* separate opinion to be expressing a view on inadmissible evidence that lacks probative value, or on evidence whose reliability is very low,

doubt ... The Majority does not engage in any meaningful way with the factual findings entered by the Trial Chamber, or demonstrate any awareness of the evidence on which these findings were based’.

³²⁴ Joint separate opinion of Judge Van den Wyngaert and Judge Morrison in *Bemba* Appeal Judgment, paras 8-10.

rather than on evaluating a combination of individual pieces of evidence that may have varying degrees of weight. This is explained further below in relation to assessing circumstantial evidence.

253. The Trial Chamber has assessed each piece of evidence in the context of all related evidence. Taking this approach is particularly important in evaluating the Prosecution's telecommunications evidence. The evidence against the four Accused is almost completely circumstantial. It is only from reviewing the relevant facts in their entirety that a chamber can see patterns that *could potentially* emerge from which conclusions could be drawn that they are so striking as to be beyond coincidence. And hence provide proof beyond reasonable doubt of facts indispensable to a conviction.

254. Some particular pieces of evidence in this case, however, are related to a topic or evidentiary theme so discrete that they may be assessed without requiring substantial comparison with other admitted evidence. In other words, there was little or no other relevant evidence to assess. An example of this is the evidence connected to the use of photo boards for identification purposes.³²⁵

255. The Trial Chamber has made findings on the weight of each piece of evidence, based on its determination of relevance, credibility,³²⁶ reliability and probative value. These findings are set out in this judgment, either implicitly or—in case of particularly important and or contested pieces of evidence—explicitly.

4. Circumstantial evidence

256. The Prosecution's case relies heavily on circumstantial evidence. Circumstantial evidence is that of circumstances surrounding an event or an offence from which a relevant fact in issue may be reasonably inferred. The ICTY Appeals Chamber first defined it as follows:

A circumstantial case consists of evidence of a number of different circumstances which, taken in combination, point to the guilt of the accused person because they would usually exist in combination only because the accused did what is alleged against him ... Such a

³²⁵ See chapter XII 'Claim of responsibility for the attack on Rafik Hariri', (D) (2) 'The 'identification' of Mr Oneissi as the 'Mohammed' who Mr Abu Adass encountered in the mosque'.

³²⁶ Credibility is only relevant at this stage of the assessment of the evidence. Decision on admission of documents used with a witness by the Oneissi Defence, paras 14, 62; Decision admitting evidence under Rule 158 (Witness PRH056), para. 47; Decision on admission of Mr Al-Hassan's interview, paras 68-69.

conclusion must be established beyond reasonable doubt. It is not sufficient that it is a reasonable conclusion available from that evidence. It must be the *only* reasonable conclusion available. If there is another conclusion which is also reasonably open from that evidence, and which is consistent with the innocence of the accused, he must be acquitted.³²⁷

257. In its entirety it may comprise a mixture of ‘direct’ evidence and evidence from which a chamber may draw inferences with regard to a particular proven fact. Circumstantial evidence does not have less value than direct evidence, and a chamber may convict solely on circumstantial evidence.³²⁸ However, when the Prosecution relies by inference upon circumstantial evidence to prove the facts constituting the elements of an offence, or those indispensable for a conviction, that inference must be the only reasonable conclusion available from the evidence. If a reasonable inference—other than that put forward by the Prosecution—is available, then those facts are not proven beyond a reasonable doubt. Under the principle of *in dubio pro reo* the Trial Chamber must acquit the Accused.³²⁹ All Parties acknowledge this.³³⁰

258. The Prosecution emphasises,³³¹ and the Ayyash, Merhi and Sabra Defence explicitly accept,³³² that the same standard of proof applies to both direct and circumstantial evidence. This is legally correct. The Prosecution also notes, correctly—as do the Merhi and Sabra Defence—

³²⁷ *Delalić and others (Čelebići)* Appeal Judgment, para. 458.

³²⁸ *Taylor* Appeal Judgment, para. 182; *Fofana and Kondewa* Appeal Judgment, paras 198, 200; *Kupreskić* Appeal Judgment, para. 303 (‘The Appeals Chamber first notes that there is nothing to prevent a conviction being based upon [circumstantial] evidence. Circumstantial evidence can often be sufficient to satisfy a fact finder beyond reasonable doubt.’); *Kordić and Čerkez* Appeal Judgment, para. 834 (rejecting challenge that finding on an element of the crime must have been based on direct evidence).

³²⁹ *Bemba and others* Appeal Judgment, paras 868, 1166, 1386; *Al Jadeed and Al Khayat* Appeal Judgment, fn. 286, paras 104, 167, 169; *Fofana and Kondewa* Appeal Judgment, para. 200; *Ntagerura and others* Appeal Judgment, paras 304, 306; *Delalić and others (Čelebići)* Appeal Judgment, para. 458; *Šešelj* Appeal Judgment, paras 63, 118.

³³⁰ Prosecution final trial brief, paras 29-30, 34-37; Prosecution closing submissions, T. 11 September 2018, p. 42; Ayyash Defence final trial brief, paras 9-12; Ayyash Defence closing submissions, T. 17 September 2018, pp 7-9; Merhi Defence final trial brief, paras 70-71, 73, 77-79; Oneissi Defence final trial brief, paras 8, 555; Oneissi Defence closing submissions, T. 19 September 2018, p. 130, T. 20 September 2018, p. 129; Sabra Defence final trial brief, paras 6, 64; *see also* Sabra Defence closing submissions, T. 21 September 2018, p. 32.

³³¹ Prosecution final trial brief, paras 29, 32.

³³² Ayyash Defence final trial brief, para. 10; Merhi Defence final trial brief, para. 70; Sabra Defence final trial brief, para. 5.

that circumstantial evidence can suffice to establish material facts, even if uncorroborated.³³³ Further, as the ICTY Appeals Chamber held in *Limaj*:

The burden of proof on the Prosecution to establish facts beyond reasonable doubt does not necessarily require the Prosecution to establish that each piece of evidence independently establishes the relevant fact to that standard.³³⁴

259. On the other hand, the Merhi, Oneissi and Sabra Defence point out that according to one ICTY trial chamber, an inference from *any* evidence ‘must be reasonable and narrowly construed’.³³⁵ Consequently, that chamber rejected ‘any inferences based on a series of inferences’.³³⁶ The Defence urges the Trial Chamber to do the same³³⁷ and or, generally, to exercise particular caution in light of the circumstantial nature of the case,³³⁸ when assessing the evidence of all alleged facts, whether they are indispensable to conviction or not.³³⁹

260. The Trial Chamber has carefully considered these submissions and the international principles and case law. Any adverse inference drawn from circumstantial evidence on a fact indispensable to conviction must be the only reasonable conclusion available from the admitted evidence. In assessing the evidence to draw a conclusion on a particular indispensable fact, the Trial Chamber has considered any alternative reasonable conclusion available from the admitted evidence. Consistent with the principles of international human rights law referred to above, it has exercised any doubt in the Accused’s favour.

261. The Sabra and Oneissi Defence also refer to the *Bemba* separate opinion, where it explained that the ICC trial chamber had ‘often failed to adhere to’ the principle that an inference from

³³³ Prosecution final trial brief, paras 30, 33; Prosecution closing submissions, T. 11 September 2018, pp 41-42. The Merhi and Sabra Defence also expressly acknowledged this in their final trial briefs, paras 74 and 69 respectively. Regarding corroboration, *see further* chapter III ‘Assessment of evidence’, (C) (7) ‘Corroboration’, below.

³³⁴ *Limaj and others* Appeal Judgment, para. 24. This was specifically in relation to identification evidence, but it also stands as a general principle.

³³⁵ *Hadžihasanović and Kubura* Trial Judgment, para. 311. Merhi Defence final trial brief, paras 72-73, 589; Oneissi Defence final trial brief, para. 8; Sabra Defence final trial brief, paras 8, 65.

³³⁶ *Hadžihasanović and Kubura* Trial Judgment, para. 311.

³³⁷ Merhi Defence final trial brief, paras 72-73, 589; Oneissi Defence final trial brief, para. 8; Sabra Defence final trial brief, paras 8, 65.

³³⁸ *See for example*, Sabra Defence final trial brief, para. 64; Merhi Defence closing submissions, T. 18 September 2018, p. 95; Oneissi Defence final trial brief, paras 6-8; Oneissi Defence closing submissions, T. 20 September 2018, pp 129-130; Ayyash Defence final trial brief, para. 11.

³³⁹ Oneissi Defence closing submissions, T. 20 September 2018, pp 129-130; Sabra Defence final trial brief, paras 8, 65.

circumstantial evidence must be the only reasonable one available.³⁴⁰ The separate opinion stated that although it is ‘legally correct’ that only material, not subsidiary, facts need be established beyond reasonable doubt:

it does not mean that the quality of the evidence for subsidiary facts is irrelevant from an evidentiary point of view. This is especially true in relation to circumstantial evidence. By definition, drawing inferences from circumstantial evidence only adds uncertainty. Therefore, if the factual basis of the circumstantial evidence is weak, the inferences drawn from it will be even weaker.³⁴¹

262. Relying on this, the Sabra Defence submits that the Trial Chamber must apply the required standard of proof to all necessary facts, and assess the quality of evidence of subsidiary facts, ‘particularly in relation to circumstantial evidence where the factual basis of the circumstantial evidence is weak’.³⁴² The Oneissi Defence also quoted from the paragraph above,³⁴³ and invited the Trial Chamber to ‘apply exactly this approach when assessing the evidence’.³⁴⁴

263. *Bemba* was in part a circumstantial case, and particularly in relation to Mr Bemba’s *mens rea* for the command responsibility allegations. The *Bemba* separate opinion expressed strong concern ‘about the fact that the Trial Chamber relied on a large amount of circumstantial evidence in relation to a number of key findings’.³⁴⁵

264. When considered in the abstract this passage is legally problematic; a court is not legally prohibited from relying on a ‘large amount’—or any amount—of circumstantial evidence for key findings. In cases where the evidence is solely circumstantial, which is of course legally permissible, all key findings will inevitably rest on the inferences flowing from it.

³⁴⁰ Joint separate opinion of Judge Van den Wyngaert and Judge Morrison in *Bemba* Appeal Judgment, para. 11. In one example, the *Bemba* Trial Chamber had listed eight circumstantial factors that it considered cumulatively proved the existence of a policy to attack a civilian population; at paras 12-13, the two Appeals Chamber judges disagreed that there was enough evidence to support this.

³⁴¹ Joint separate opinion of Judge Van den Wyngaert and Judge Morrison in *Bemba* Appeal Judgment, para. 12. The opinion uses the term ‘plausible’ instead of ‘reasonable’, at paras 11, 14-15. They mean the same thing.

³⁴² Sabra Defence final trial brief, para. 8.

³⁴³ Oneissi Defence final trial brief, para. 8; Oneissi Defence closing submissions, T. 20 September 2018, pp 129-130.

³⁴⁴ Oneissi Defence closing submissions, T. 20 September 2018, p. 130.

³⁴⁵ Joint separate opinion of Judge Van den Wyngaert and Judge Morrison in *Bemba* Appeal Judgment, para. 11. This was apart from the passage extracted above concerning the holistic assessment of evidence.

265. Regarding circumstantial reasoning, the separate opinion also stated:

The real question is whether it is logically possible to prove the existence of a forest beyond a reasonable doubt without proving the existence of a sufficient (depending on how one defines a forest) number of trees beyond a reasonable doubt. Whereas trees exist independently of the forest, forests do not exist independently of the trees that constitute it.

We also reject the Trial Chamber's apparent conclusion that weak testimonial evidence can somehow be corroborated by weak documentary evidence, especially if one or both are based on (anonymous) hearsay.³⁴⁶

266. On the last point, the Trial Chamber agrees that anonymous hearsay, which by its nature is inherently unreliable and thus objectively 'weak', can neither strengthen other pieces of 'weak' circumstantial evidence, nor in turn be reinforced by the other evidence.

267. The *Bemba* separate opinion, however, must of course be read in its context. And in this respect the two judges explicitly accepted the fundamental principles outlined above on drawing inferences from circumstantial evidence and the standard of proof applicable to all types of evidence.³⁴⁷ Further, the circumstantial evidence they were analysing, in their view, *was* conspicuously weak, and *did* permit competing reasonable inferences, such as not to prove Mr Bemba's guilt.³⁴⁸ Additionally, they were assessing the circumstantial evidence in a command responsibility case, where proof is often difficult, and an accused person's *mens rea* is often provable only by circumstantial inference. And as noted above, the Trial Chamber is of the view that the *Bemba* separate opinion was directed at inadmissible evidence that had nonetheless been received into evidence by a trial chamber, or evidence with extremely low probative value.

268. However, despite this, the Trial Chamber does not agree—as an absolute legal principle—with the statement from the *Bemba* separate opinion that, by definition 'drawing inferences from

³⁴⁶ Joint separate opinion of Judge Van den Wyngaert and Judge Morrison in *Bemba* Appeal Judgment, paras 60, 64.

³⁴⁷ Joint separate opinion of Judge Van den Wyngaert and Judge Morrison in *Bemba* Appeal Judgment, paras 11-12, 14. They also did so in the majority judgment in that case. *Bemba* Appeal Judgment, para. 42, endorsing *Bemba and others* Appeal Judgment, para. 868.

³⁴⁸ Criticising the trial judgment's 'opacity of the reasoning, the reliance on (anonymous) hearsay evidence and the findings beyond a reasonable doubt based on dubious circumstantial evidence', Joint separate opinion of Judge Van den Wyngaert and Judge Morrison in *Bemba* Appeal Judgment, para. 67.

circumstantial evidence only adds uncertainty. Therefore, if the factual basis of the circumstantial evidence is weak, the inferences drawn from it will be even weaker.’³⁴⁹

269. This may well apply, but whether it does will depend upon the quality of the evidence in the particular case. And that can be determined only after the individual pieces of evidence are viewed in their totality. That is the nature of a case relying upon circumstantial evidence. And as noted above, each piece of evidence received must have some probative value in its own right, to be eligible for admission into evidence.

270. As the ICTY Appeals Chamber in *Delalić*, its first circumstantial case on appeal, held it ‘consists of evidence of a number of different circumstances which, taken in combination, point to the guilt of the accused person because they would usually exist in combination only because the accused did what is alleged’.³⁵⁰ It is the combination of these different pieces of evidence that may prove guilt.

271. The practice of assessing circumstantial evidence in its entirety is more nuanced than simply finding that a chamber cannot convict based upon collating a number of individually ‘weak’ pieces of circumstantial evidence. The nature of circumstantial evidence is that it requires the combination of more than one piece of indirect evidence to reach the standard of proof beyond reasonable doubt of those facts indispensable to a conviction. Virtually inevitably, some pieces of evidence will have less strength than others. But, it is stressed, this is a comparative evaluation and each piece of evidence must be independently assessed as relevant and having some probative value before its admission into evidence.

272. On one hand, the Trial Chamber is acutely aware that evaluating numerous pieces of circumstantial evidence together—some of which are less probative than others—does not *of itself* transform those with less weight into proof beyond reasonable doubt of the fact(s) that they are collectively intended to prove. Putting them all together *will not necessarily* make less probative (or ‘weaker’) facts stronger and provide the necessary inferences to proof beyond reasonable doubt on the ultimate issue.

³⁴⁹ Joint separate opinion of Judge Van den Wyngaert and Judge Morrison in *Bemba* Appeal Judgment, para. 12.

³⁵⁰ *Delalić and others (Čelebići)* Appeal Judgment, para. 458.

273. However, on the other hand, when each circumstantial piece of evidence is viewed in the totality of all the other pieces of evidence, patterns *could* emerge that *could* collectively elevate individual pieces of evidence to a point that mere coincidence cannot explain, to equate to proof beyond reasonable doubt. This *could* occur even where each circumstantial piece of evidence appears insufficient on its face. The Trial Chamber cannot discard this as a possibility, and in this respect, it declines to follow the reasoning of the *Bemba* separate opinion, as outlined above, as an *absolute* principle in assessing circumstantial evidence.

274. The Trial Chamber has therefore assessed each piece of underlying circumstantial evidence both individually and in its totality with all other pieces of relevant evidence to determine whether the Prosecution has proved each material fact beyond reasonable doubt. Where they appear to lack strength the Trial Chamber has scrutinised them with extra caution, both individually and in their totality.

5. Prohibition on basing a conviction solely or decisively on evidence that the Defence had no opportunity to challenge

275. Article 16 (4) (f) of the Statute guarantees that an accused is entitled to examine all evidence to be used during the trial in accordance with the Special Tribunal's Rules.³⁵¹ Rules 155 and 158 allow a chamber to admit evidence without cross-examination. Other rules permit taking depositions at both the pre-trial and trial stages when a potential witness's evidence may otherwise become unavailable, even if the witness cannot appear before the Special Tribunal to give evidence.³⁵²

276. However, a conviction may not rest solely, or in a decisive manner, on evidence that the accused could not test either during the investigation or at trial. Entering a conviction based on this kind of evidence without sufficient corroboration is counter to the principle of fairness in Article 16 (4) (f).³⁵³ The ICTY and IRMCT Appeals Chambers have held that:

³⁵¹ In addition, Rule 69 reiterates this guarantee, by providing that an accused shall enjoy the rights enshrined in Article 16 of the Statute.

³⁵² Rules 123, 157.

³⁵³ *Al Jadeed and Al Khayat* Appeal Judgment, fn. 378, para. 131; *Popović and others* Appeal Judgment, paras 96, 1222, 1226. Decision denying certification to appeal (Rule 158 admission), para. 23; Decision denying certification to appeal of 1 February 2018, para. 20; Decision on admission of Mr Al-Hassan's interview, para. 67; Decision denying certification to appeal (Witness PRH024), para. 35; Corrected decision under Rule 158 (Witness PRH024), para. 42; Trial management decision, para. 93.

a conviction may not rest solely, or in a decisive manner, on the evidence of a witness whom the accused has had no opportunity to examine or to have examined either during the investigation or at trial. This principle applies “to any fact which is indispensable for a conviction”, meaning “the findings that a trier of fact has to reach beyond reasonable doubt”. It is considered to “run counter to the principles of fairness ... to allow a conviction based on evidence of this kind without sufficient corroboration”.³⁵⁴

277. The Defence of each Accused underlines these principles.³⁵⁵ These principles were especially important for the Trial Chamber’s findings concerning Mr Merhi, Mr Oneissi and Mr Sabra. These are set out in assessing their charged criminal responsibility based upon their pleaded involvement in making the alleged false claim of responsibility for Mr Hariri’s assassination.

6. Hearsay evidence

278. Hearsay is evidence of out-of-court statements or assertions of fact, tendered for their truth, given by a witness, maker or declarant, who has no direct knowledge of the facts asserted and who has not witnessed, heard or experienced them personally. That witness’s knowledge of the facts is based solely on what others have said or reported to them or otherwise originates from a third party source extraneous to them.³⁵⁶ There are numerous categories of hearsay evidence, some of which are deemed to have *prima facie* reliability by virtue of their nature, for example, official records such as birth certificates or land registry documents; although the authenticity or reliability of such documents may be challenged or rebutted. Business records prepared in the normal course of a business are another category, as explained below.

³⁵⁴ *Karadžić* Appeal Judgment, para. 449, citing *Popović and others* Appeal Judgment, para. 96 (internal references omitted); *Prlić and others* Appeal Judgment, para. 137; *Martić* Appeal Judgment, para. 192, fn. 486.

³⁵⁵ Ayyash Defence final trial brief, para. 32; Merhi Defence final trial brief, para. 74; Sabra Defence final trial brief, para. 74. The Oneissi Defence did not explicitly state these principles, but implicitly relied on them in submissions throughout its final trial brief and closing submissions, regarding particular untested and or uncorroborated evidence.

³⁵⁶ *Aleksovski* admissibility appeal decision, paras 14-15; *Krajišnik* Trial Judgment, para. 1190; *Al Jadeed and Al Khayat* Appeal Judgment, fn. 374, *see also* fns 394, 415; *Fofana and Kondewa* Appeal Judgment, para. 198; *Galić* appeal decision on admission of written statements, para. 27; *Rutaganda* Appeal Judgment, para. 35. *See also* Black’s Law Dictionary, ‘Hearsay’, defining it as ‘1. Traditionally, testimony that is given by a witness who relates not what he or she knows personally, but what others have said, and that is therefore dependent on the credibility of someone other than the witness. Such testimony is generally inadmissible under the rules of evidence. 2. In federal law, a statement (either a verbal assertion or nonverbal assertive conduct), other than one made by the declarant while testifying at the trial or hearing, offered in evidence to prove the truth of the matter asserted’.

279. The weight given to hearsay evidence will depend on the circumstances surrounding its making. The mere fact that evidence is hearsay does not *of itself* deprive it of credibility or reliability. A chamber may, but exercising caution, use hearsay evidence to convict an accused person. Relevant factors in assessing its weight or probative value include the source of the information, its precise character and whether it is corroborated by other evidence.³⁵⁷

280. The Trial Chamber admitted some hearsay evidence, for example, that contained in Mr Hassan Nasrallah's speech of 20 May 2016 commemorating the life of the former Accused Mr Badreddine,³⁵⁸ the statements to the Prosecution of the late Mr Wissam Al-Hassan³⁵⁹ and that in Witnesses PRH705's and PRH707's evidence.³⁶⁰

281. Some statements admitted into evidence under Rules 155, 156 and 158 also contained hearsay. The Trial Chamber has considered that evidence in light of the totality of all the other evidence relevant to that evidence,³⁶¹ taking into account that its hearsay nature affects its weight.³⁶² In some instances, the Trial Chamber has assessed the hearsay evidence as having little or no weight, especially where it was not independently corroborated. This is most critical in its assessment of the statements of unavailable witnesses whose statements were admitted under Rule 158, and whose evidence was disputed by the Defence and for which there is no corroboration, such as Mr Ziad Ramadan and Witness PRH056.

282. The Ayyash and Sabra Defence made detailed written submissions on hearsay evidence. They point to a number of specific principles in international criminal case law on this issue,

³⁵⁷ *Al Jadeed and Al Khayat* Appeal Judgment, fn. 374; *Ngudjolo* Appeal Judgment, para. 226; *Lukić and Lukić* Appeal Judgment, para. 577; *Karera* Appeal Judgment, para. 39; *Fofana and Kondewa* Appeal Judgment, para. 198. *See also Taylor* Appeal Judgment, paras 82-91.

³⁵⁸ Decision admitting documents on the death of Mr Badreddine, paras 8, 36; exhibit P1989 (Transcript of video recording for *Al-Manar* TV regarding Mustafa Badreddine's memorial ceremony).

³⁵⁹ Decision on admission of Mr Al-Hassan's interview, paras 65, 69; exhibit P2121 (Interview of Wissam Al-Hassan, 17 June 2012); exhibit P2122 (Interview of Wissam Al-Hassan, 16 June 2012).

³⁶⁰ Decision on call sequence tables of 31 October 2016, paras 77, 80, 83-84; Decision on admission of Witness PRH707's statements and annexes into evidence, paras 155-156; Decision on Prosecution motion to admit Witness PRH705's statements, paras 22-23; Decision on admission of Witness PRH705's statements and annexes into evidence, paras 99-100. *See for example*, exhibit P826 (Witness PRH705's statement of 16 November 2015); exhibit P826.2 (Network architecture and call set-up, annex 3 to Witness PRH705's statement of 16 November 2015); exhibit P818 (Clarification to correct geographical coordinates of 19 Touch cell sectors and correct azimuths for three Touch cell towers in 2004 and 2005, annex 22 (2) to Witness PRH705's statement of 16 November 2015); exhibit P1192 (Statement of Witness PRH707, 11 November 2015); exhibit P1192.11 (Alfa response to request for assistance).

³⁶¹ Decision on admission of Prosecution's cell site evidence, para. 65.

³⁶² Decision on admission of Mr Al-Hassan's interview, para. 65.

including that hearsay evidence must be treated with caution and second-and third-hand hearsay be given limited value or weight.³⁶³ The Trial Chamber has considered and taken into account these submissions in its deliberations, noting however that neither they nor any other Party appears fundamentally to disagree with these general principles.³⁶⁴

7. Corroboration

283. Two sources of evidence corroborate each other when one is compatible with the other regarding the same fact or sequence of linked facts. However, corroboration is neither a condition for nor a guarantee of the reliability of a piece of evidence; it is merely an element that a reasonable trier of fact may consider in assessing the evidence. A trial chamber has the discretion to decide, in light of the circumstances of each case, whether corroboration is necessary, and may rely on credible uncorroborated witness testimony.³⁶⁵ In this respect, the ICTY Appeals Chamber in *Limaj* held:

Corroboration is neither a condition nor a guarantee of reliability of a single piece of evidence. It is an element that a reasonable trier of fact may consider in assessing the evidence. However, the question of whether to consider corroboration or not forms part of its discretion.³⁶⁶

284. This requires an assessment of the reliability and credibility of the evidence. A chamber may accept the testimony of a single witness, even as proof of a fact indispensable to conviction. Thus, an Accused may be convicted on the basis of uncorroborated evidence from a single witness—as long as it could be tested—if that testimony is sufficient to convince a chamber

³⁶³ Ayyash Defence final trial brief, paras 35-36; Sabra Defence final trial brief, paras 102-103.

³⁶⁴ The Oneissi Defence challenged Witness 707's evidence and the pleaded involvement of Mr Oneissi in the 'Mohammed story', specifically, in part on the grounds that it is remote hearsay; Oneissi Defence final trial brief, paras 49-52, 312. This is dealt with in detail in chapter VII 'Reliability of telecommunications evidence', (E) 'General submissions in relation to Witnesses 705 and 707 and their evidence', and (F) 'Findings on Witnesses 705 and 707 and their evidence'; chapter XII 'Claim of responsibility for the attack on Rafik Hariri'.

³⁶⁵ *Al Jadeed and Al Khayat* Appeal Judgment, fn. 167; *Nahimana and others* Appeal Judgment, para. 428; *Limaj and others* Appeal Judgment, para. 203.

³⁶⁶ *Limaj and others* Appeal Judgment, para. 203 (footnotes omitted but referring to *Aleksovski* Appeal Judgment, paras 62-63; *Tadić* Appeal Judgment, para. 65; *Delalić and others (Čelebići)* Appeal Judgment, paras 492, 506; *Gacumbitsi* Appeal Judgment, para. 72; *Semanza* Appeal Judgment, para. 153; and *Kayishema and Ruzindana* Appeal Judgment, paras 154, 229); see also *Mrkšić and Šljivančanin* Appeal Judgment, para. 264; *Ngudjolo* Appeal Judgment, para. 148.

beyond reasonable doubt of the Accused's guilt. The Trial Chamber must, however, assess such evidence with appropriate caution.³⁶⁷

285. In assessing the evidence, the Trial Chamber determined on a case-by-case basis whether it required corroboration, taking into consideration the Parties' submissions on this issue.³⁶⁸ It exercised appropriate caution when relying on uncorroborated evidence. Due to the circumstantial nature of much of the evidence in this case, however, the Trial Chamber generally considered that corroboration was more desirable than in Prosecution cases based on more direct evidence.

286. It has been particularly careful in assessing whether witness statements containing hearsay, that were admitted into evidence under Rule 158 due to the unavailability of witnesses, either internally corroborate each other, or have been corroborated by evidence that the Defence could challenge in cross-examination.

287. Where the Defence has contested that evidence and or where it goes to proof of a fact that is necessary to establish guilt beyond reasonable doubt, and it has not been corroborated by evidence that the Defence could challenge in court, the Trial Chamber has not relied on it. As noted below, examples include much of Witness 56's and Mr Ramadan's evidence. But, conversely, some portions of their untested evidence are uncontroversial and unchallenged. Other parts of their evidence contain direct impressions rather than hearsay. Defence counsel have also relied on certain portions of their evidence.³⁶⁹

D. Assessing different forms of evidence

288. In assessing the evidence, the Trial Chamber has been conscious of the different forms of evidence it has received, namely, witness testimony, documentary evidence, agreed facts and facts which have been judicially noted.

³⁶⁷ *Bemba and others* Appeal Judgment, paras 1084, 1534; *Al Jadeed and Al Khayat* Appeal Judgment, fn. 377; *Sesay and others* Appeal Judgment, para. 221; *Karera* Appeal Judgment, para. 45; *Kordić and Čerkez* Appeal Judgment, paras 274-276.

³⁶⁸ See for example, Ayyash Defence final trial brief, paras 30-32; Merhi Defence final trial brief, para. 74, and more particularly the Parties' submissions on corroboration of particular types of evidence referred to elsewhere in this section.

³⁶⁹ See paras 4816-4818.

1. Witness testimony

289. The Trial Chamber received evidence from witnesses associated with a Party and witnesses called on the request of the Legal Representatives of the Victims. It also ordered, on the Sabra Defence's application, one witness to testify as a Trial Chamber witness under Rule 165.³⁷⁰ Furthermore, it received written records of witness evidence without requiring oral testimony to introduce or explain documents. In every instance, after deciding its relevance, the Trial Chamber has assessed the reliability and credibility of this evidence.

(a) Live testimony

290. During the trial, many witnesses testified live—or '*viva voce*'—before the Trial Chamber under Rule 150. Some testified under Rule 156, which replaces examination-in-chief, at least partially, with the admission into evidence of the witness's statement, after the witness has attested that the statement accurately reflects their declaration and what they would say if examined. The witness must also be available for cross-examination and questioning by the judges.

291. Rule 150 (J) sets out the obligations of cross-examining counsel when questioning a witness called by an opposing Party who can give evidence relevant to the case of the cross-examining counsel. Counsel must put to that witness the nature of the counsel's case that contradicts the witness's evidence. The cross-examining Party does not need to explain every detail of the contradictory evidence it intends to adduce, and is allowed a margin of flexibility, depending on the circumstances. If, however, the Party does not put the nature of its case to the witness, the Trial Chamber may give no probative value to the evidence that contradicts the witness.³⁷¹ During the trial, the Trial Chamber several times drew this rule to the attention of cross-examining Defence counsel.³⁷² This is most relevant to final trial submissions, and the Trial Chamber has ultimately decided, given the result of the case, that recourse to this measure was unnecessary.

³⁷⁰ Mr Michael Taylor, a former Prosecution Chief of Investigations.

³⁷¹ Decision on admission of documents used with a witness by the Oneissi Defence, paras 8, 10; Decision denying certification to appeal (photo boards), para. 26; Decision admitting two photo boards into evidence, paras 29-30, 38.

³⁷² See for example, Marwan Hamade, T. 9 December 2014, pp 65-67; Procedural matters, T. 11 December 2014, pp 4-5; Gary Platt, T. 21 March 2017, p. 64, T. 19 April 2017, pp 23-25; John Edward Philips, T. 20 April 2017, pp 32-33; Procedural matters, T. 25 September 2017, pp 2-3.

292. Fifty-three witnesses testified by video-conference link from outside the courtroom, mainly from the Special Tribunal's Beirut office. The Trial Chamber decided that video-conference technology is sufficiently advanced to allow it to view the witnesses in a manner which permits an adequate assessment of their credibility and reliability. The judges and counsel could follow a witness's testimony with high-definition image quality, and the witness could see the different speakers in the courtroom. Counsel and judges could effectively question the witness. Documents could be tendered and shown electronically to the witness, who could mark them in a manner that allowed them to be electronically captured and saved. The Trial Chamber has therefore not differentiated between testimony received by video-conference link and inside the courtroom when weighing the evidence.³⁷³

(b) Witness credibility

i. Generally

293. Under the general principles of international criminal law, a trial chamber has a broad discretion in assessing the credibility of witness testimony and deciding the appropriate weight to give it. The Trial Chamber as the trier of fact that has heard the evidence is best placed to make this assessment.³⁷⁴

294. The Trial Chamber must consider on a case-by-case basis factors including: the witness's in-court demeanour; their role in the events in question; the plausibility and clarity of the testimony; any contradictions or inconsistencies in successive statements or between the testimony and other evidence; prior examples of false testimony; any motivation to lie; and the witness's responses during cross-examination. Also relevant could be the existence or absence of corroborating evidence, the witness's relationship to an accused and the witness's criminal history.³⁷⁵

³⁷³ Reasons for decision denying reconsideration of video-link ruling, para. 12; Video-link decision, paras 11-12, 21-24, with further references.

³⁷⁴ *Popović and others* Appeal Judgment, paras 131-133, 136-137; *Šainović and others* Appeal Judgment, paras 437, 464; *Nahimana and others* Appeal Judgment, para. 949; *Rutaganda* Appeal Judgment, para. 188.

³⁷⁵ *Ngudjolo* Appeal Judgment, para. 170; *Popović and others* Appeal Judgment, para. 132; *Nchamihigo* Appeal Judgment, para. 47. Regarding inconsistencies, *Popović and others* Appeal Judgment, paras 136-137; *Brima and others* Appeal Judgment, para. 120.

295. The Trial Chamber of course understands and accepts that there is no fool-proof manner of determining whether a witness is being truthful, especially when a witness is testifying with the aid of interpretation. It is not a science. Numerous cultural and linguistic factors, combined with characteristics and circumstances individual to each witness—which are often unknown to a court—complicate the process of attempting to assess witness credibility.

296. Added to this is the time lapse between the events in question and the testimony—or even the taking of witness statements that may be tendered in court—which, unfortunately in international proceedings is often lengthy; memory does not improve over time. Witnesses may also have been interviewed multiple times over some years by different people from varying institutions, such as non-government organisations, fact-finding missions and prosecution, defence and legal representative of victims. Inevitably, versions of events change with the retelling. These factors may adversely affect the reliability and sometimes the credibility of the witness and their evidence.

297. Moreover, testifying in a courtroom for most people is an alien and stressful experience and a witness who is attempting to recollect facts truthfully could give the opposite impression; the converse also applies.

298. Numerous witnesses in international trials will also have experienced traumatic events and some may be suffering from PTSD while testifying. The stress of recalling events may cause anxiety and may impair attention and memory in the courtroom. This too can affect how they are perceived. Testifying in a ‘foreign’ or international setting, especially after international travel to the courtroom—as for some it may be their first international trip—could add to the stress and hence how a witness ‘performs’.

299. The Trial Chamber is acutely aware of the difficulties inherent in attempting to assess the reliability and credibility of witness testimony—especially in an international setting, through interpretation and many years after the attack on Mr Hariri—and has borne these factors in mind in evaluating the evidence of each witness.³⁷⁶

³⁷⁶ See for example, the discussions in *Rutaganda* Appeal Judgment, paras 222-224, 228, 230; *Karempera and Ngirumpatse* Trial Judgment, para. 101; *Akayesu* Trial Judgment, paras 155-156.

300. A chamber may accept parts of a witness's testimony and reject others,³⁷⁷ so long as the two are not inextricably linked.³⁷⁸ Where a trial chamber has some reservations regarding a witness's reliability, it may rely upon the testimony to the extent that it is corroborated by other reliable evidence.³⁷⁹ However, where a chamber has found a witness to be entirely devoid of credibility, it may not rely on any portion of that witness's testimony regardless of whether some portions may be corroborated by other evidence.³⁸⁰ The Trial Chamber did not find the testimony or statement of any witness as falling into this category.

301. The Ayyash and Sabra Defence specifically highlighted some of these principles in their final trial briefs,³⁸¹ and no Party appears fundamentally to contest any of them.

302. In this case, for the most part, there were few explicit challenges to the credibility of Prosecution witnesses; more challenges were made to the reliability of witness recollections and some conclusions or opinions. The Trial Chamber, however, carefully considered the credibility of each witness in determining the weight of their evidence.

ii. Witness independence and association with Parties

303. The Trial Chamber heard testimony from 32 witnesses 'associated' with a Party, namely the Prosecution, including most significantly, Mr Gary Platt, a Prosecution investigator who the Trial Chamber declared to be an expert under Rule 161, and Mr Andrew Donaldson, a Prosecution analyst who provided non-expert analytical evidence. It also received evidence from other Prosecution analysts and investigators, as is customary in international criminal law proceedings, and indeed domestic ones.³⁸²

³⁷⁷ *Kupreškić and others* Appeal Judgment, para. 333; *Ngudjolo* Appeal Judgment, para. 168; *Sesay and others* Appeal Judgment, para. 219.

³⁷⁸ *Ndahimana* Appeal Judgment, para. 183.

³⁷⁹ *Halilović* Appeal Judgment, para. 125; *Ntagerura and others* Appeal Judgment, para. 174; see also *Kupreškić and others* Appeal Judgment, para. 334.

³⁸⁰ *Al Jadeed and Al Khayat* Appeal Judgment, fn. 172; *Ngudjolo* Appeal Judgment, paras 168, 170.

³⁸¹ Ayyash Defence final trial brief, para. 27; Sabra Defence final trial brief, para. 98.

³⁸² The remaining 30 were Mr Matthew Barrington, Ms Nicole Blanch, Mr Christian Carnus, Mr Lachlan Christie, Mr Andrew Fahey, Ms Robyn Fraser, Ms Helen Green (Rule 155 only), Ms Helena Habraken, Mr Timothy Holford, Mr Joseph Jhugroo (Rule 155 only), Mr Timothy Jolly (Rule 155 only), Ms Kei Kamei, Mr Erich Karnberger, Mr Adrian Kirwan (Rule 155 only), Mr Bas van der Laaken, Mr Lorenzo Lanzi, Mr Xavier Laroche (Rule 155 only), Mr Jo van Lierde (Rule 155 only), Mr Alasdair Macleod, Mr Quentin Mugg, Mr Spartak Mkrtchyan, Mr Greg Purser (Rule 155 only), Mr Toby Smith, Mr Elvis Stana, Ms Nadine Stanford (Rule 155 only), Mr Leroy Stockton (Rule 155 only), Mr Michael Taylor, Mr Glen Williams, Ms Christine Youssef (Rule 155 only) and Witness PRH539.

304. In allowing Mr Platt to testify as an expert witness, the Trial Chamber noted that international criminal law procedural law permits a chamber to hear expert evidence from employees of a party to the proceedings.³⁸³ International criminal courts and tribunals have consistently found that the mere fact that a witness is employed or paid by a party—or by an agency related to a party, or otherwise involved in investigating or preparing a party's case—does not of itself disqualify their testimony as an expert witness.³⁸⁴ In general, concerns about an expert witness's independence and impartiality affect the weight of the evidence rather than its admissibility,³⁸⁵ unless for example they undermine its reliability to the point where the evidence loses its probative value.³⁸⁶

305. Consequently, the appropriate way of dealing with an allegation of bias is normally through cross-examining the witness.³⁸⁷ The challenging party may also call its own expert witnesses on

³⁸³ Decision on expertise (Mr Platt), paras 15-16. *See also* Oral decision on Mr Platt's expertise, stating that Mr Platt's employment with the Office of the Prosecutor does not of itself disqualify him from being classified as an expert.

the issue.³⁸⁸ The Trial Chamber reiterates its adoption of these well-established principles.³⁸⁹ Expert witnesses need not be impartial or independent in the sense of having no association with a party; to the contrary, most international criminal law decisions reviewed expressly accept that this is not required.³⁹⁰

306. In permitting Mr Platt to testify as an expert, the Trial Chamber noted that:

Expert witnesses are generally called by the Parties themselves to bolster their case and theory; they are called to support and assist the Parties and therefore ‘are often connected, to a varying degree, with the party ... seek[ing] to call them to testify’ ... impartiality and independence, while important considerations, are not prerequisites for a witness to be a qualified as an expert in international criminal law proceedings.³⁹¹

307. In international criminal law proceedings witnesses have rarely failed to qualify as an expert for an absence of impartiality or independence because of their affiliation to a party. However, a witness’s reliability could be undermined to the point of losing probative value.³⁹² In an extreme example, in *Akayesu*, the Accused unsuccessfully attempted to have a co-Accused, Ferdinand Nahimana, testify as an expert to rebut the scientific theories of a Prosecution expert witness. In rejecting the application, the ICTR Trial Chamber held that his impartiality ‘cannot be assured’.³⁹³

³⁸⁸ *Nahimana and others* Appeal Judgment, para. 199; *Šešelj* decision on expert status of Reynaud Theunens, para. 29; *Mladić* decision on Richard Butler, para. 9; Decision on expertise (Mr Platt), para. 16. See also *Bizimungu* decision on expert witness Dr Alison Des Forges, para. 26.

³⁸⁹ Decision on expertise (Mr Platt), paras 15-16.

³⁹⁰ Decision admitting statements related to Mr Ayyash and Mr Merhi, para. 27; Decision on expertise (Mr Platt), paras 15-16; Oral decision on Mr Platt’s expertise. See also *Šešelj* decision on Andraš Riedlmayer expert report, para. 12 referring to *Akayesu* decision on calling co-accused as an expert; *Nyiramasuhuko and others* Appeal Judgment, paras 424-425.

³⁹¹ Decision on expertise (Mr Platt), para. 16, footnotes omitted, quoting from *Boškoski and Tarčulovski* decision on expert evidence, para. 12, and further citing *Popović and others* decision on Mr Butler, para. 27 and *Popović and others* decision on evidence of General Rupert Smith, p. 4.

³⁹² *Šešelj* decision on Andraš Riedlmayer expert report, para. 12, footnotes omitted. The Trial Chamber discussed, and distinguished, other examples in its Decision on expertise (Mr Platt), paras 14-15. See further *Martić* decision on expert evidence of Reynaud Theunens, p. 4, noting the exclusion of parts of the expert report of a witness, Milisav Sukulić, due in part to his ‘obvious bias’.

³⁹³ *Akayesu* decision on calling co-accused as an expert, p. 2, and further noting that Nahimana had objected and ‘the Tribunal is of the view that there is a fundamental difference between, on the one hand, a witness called to testify about the crimes with which the accused is directly charged and, on the other hand, an expert witness, whose testimony is intended to enlighten the Judges on specific issues of a technical nature, requiring special knowledge in a specific field’. Further, compelling his testimony could violate his rights not to testify against himself, p. 3. On appeal,

308. As another example, ICTY trial chambers in connected cases declined to allow the same prosecution military analyst, although found to be well-qualified to be an expert, to testify as one because of his substantial involvement in the preparation of the Prosecution's case, including interviewing co-accused in the case. He was permitted to testify as a witness of fact.³⁹⁴

309. The Defence of each Accused³⁹⁵ opposed the Prosecution's motion for Mr Platt to testify as an expert, including because of his employment with the Prosecution. They relied on two ICTY decisions.³⁹⁶ In one, *Milutinović*, the trial chamber found that a prosecution investigator was too closely tied to the case to give expert evidence, but it was appropriate and helpful to the trial chamber to give evidence on factual matters, explaining that:

Justice has to not only be done but seen to be done in cases of this nature. And in this particular instance he -- the clear impression is of someone far closer to the case than would be appropriate for an expert who can express opinions on which the Chamber might rely.³⁹⁷

310. The Trial Chamber, however, distinguished both decisions, as the particular witness had been more actively involved than Mr Platt in formulating the Prosecution's case. The Trial Chamber permitted Mr Platt to provide expert opinion evidence, noting that the Defence could challenge his independence and impartiality in cross-examination, and that these issues ultimately went to the weight the Trial Chamber should give to his evidence.³⁹⁸

311. International criminal courts and tribunals may also receive non-expert opinion and summary evidence from witnesses affiliated with a party. This applies equally to non-expert Prosecution,³⁹⁹ and Defence witnesses.

Nahimana was eventually found guilty of incitement to genocide and committing crimes against humanity and sentenced to 30 years imprisonment; *Nahimana and others* Appeal Judgment.

³⁹⁴ See for example, *Milutinović and others* oral decision on evidence of Philip Coö, p. 840; *Milutinović and others* decision denying certification of appeal on Philip Coö, paras 10-11; *Dordević* decision on expert witnesses, paras 18-20. See also *Šešelj* decision on expert status of Reynaud Theunens, para. 31.

³⁹⁵ Including the Badreddine Defence.

³⁹⁶ *Dordević* decision on expert witnesses; *Milutinović and others* oral decision on evidence of Philip Coö.

³⁹⁷ *Milutinović and others* oral decision on evidence of Philip Coö, p. 840.

³⁹⁸ Decision on expertise (Mr Platt). For the area of Mr Platt's expertise as accepted by the Trial Chamber, see para. 331, below.

³⁹⁹ Such as Mr Donaldson, see Decision on opinion evidence (Mr Donaldson), para. 77. On his qualifications to provide non-expert opinion evidence and summary evidence, see paras 339-341, below.

312. In-house analysts and investigators may be permitted to provide summary evidence relating to facts in issue if the underlying evidence is admissible and they do not express views as to the ultimate issue, namely, whether an accused person is guilty.⁴⁰⁰ This long-standing practice promotes judicial economy in appropriate instances and can aid a chamber, and indeed the parties, in understanding the context of different evidentiary themes in long and complex trials.

313. In permitting Mr Donaldson to provide non-expert opinion evidence, the Trial Chamber, in applying international criminal law case law, noted that:

international criminal law procedural law permits a chamber to receive summary evidence from a Party's in-house analysts or investigators. But in what manner and the extent to which it will receive the opinion of a non-expert should be considered on a case by case basis. The case law is clear on the point that an expert cannot testify, or provide an opinion, as to the ultimate issue, namely, the guilt or acquittal of an accused person.⁴⁰¹

314. This applies even where a witness is so 'close' to the party or case that a trial chamber cannot accept them as an expert; they may be allowed to testify as a witness of fact.⁴⁰²

315. The Trial Chamber also emphasised in decisions concerning non-expert evidence that sometimes it would require evidence from Prosecution and Defence employees, for example, to understand and assess the reliability of a piece of derivative evidence that they had prepared. This applied to the methodology employed by Prosecution and Defence employees in producing call sequence tables for admission into evidence.⁴⁰³

⁴⁰⁰ Decision on opinion evidence (Mr Donaldson), paras 73-76, referring to *Slobodan Milošević* Appeal decision on admissibility of evidence; *Popović and others* decision regarding admissibility of Mr Ruez's testimony; *Taylor* decision on proposed expert witness; *Perišić* decision (Mr Randall); *Bemba and others* decision on scope of Witness P-433's testimony. The Trial Chamber has also previously noted, regarding non-expert evidence from investigators generally, that there is no rule in international criminal law procedural law which dictates that the Prosecution is unable to call its own investigators to provide evidence. Decision admitting statements related to Mr Ayyash and Mr Merhi, para. 27.

⁴⁰¹ Decision on opinion evidence (Mr Donaldson), para. 77, footnoted to *Dragomir Milošević* Decision on Defence experts, para. 10; *Stanišić and Simatović* decision on experts Tromp and Nielsen, para. 12.

⁴⁰² See for example, *Milutinović and others* oral decision on evidence of Philip Coe, p. 840; *Milutinović and others* decision denying certification of appeal on Philip Coe, paras 10-11; *Đorđević* decision on expert witnesses, paras 15-20. See also *Šešelj* decision on expert status of Reynaud Theunens, para. 31.

⁴⁰³ See for example, Decision denying admission of two call sequence tables, paras 21-26, 39-41.

316. In their final trial briefs, the Oneissi and Sabra Defence submit that Mr Platt's, Mr Donaldson's and Mr Andrew Fahey's⁴⁰⁴ lack of independence and impartiality taints and thus negatively affects the weight the Trial Chamber should give to their evidence.⁴⁰⁵ The Oneissi Defence argues that the Trial Chamber must 'exercise caution' in evaluating their evidence.⁴⁰⁶ The Sabra Defence submits that in considering the weight of an expert's evidence, the Trial Chamber must assess whether he is 'too close' to the calling party and his involvement in preparing the Prosecution's case. Further, as stated in *Milutinović* (above) the principle that 'justice must not only be done, but must be seen to be done' must guide the Trial Chamber in this.⁴⁰⁷

317. The Trial Chamber has been guided by the legal principles outlined above in its evaluation of the evidence of witnesses who had an 'association' with the Prosecution. A witness's association with a party, both actual and apparent, should be considered in finally evaluating their evidence; this is one of a number of potential considerations in that final holistic evaluation, and it is not necessarily determinative.

318. The Trial Chamber accordingly considered the witnesses' association with the Prosecution when attributing weight to their evidence when assessing it in light of all the other evidence.

(c) Categories of witnesses

319. The categories of witness testimony received by the Trial Chamber—either live or in statement form—may be conveniently divided into witnesses of fact, expert witnesses and witnesses providing non-expert opinion and summary evidence.⁴⁰⁸

⁴⁰⁴ Mr Fahey is a Prosecution analyst who provided non-expert evidence.

⁴⁰⁵ These submissions are addressed at various places in the judgment, namely chapter VII 'Reliability of telecommunications evidence', (H) 'Electronic presentation of evidence (EPE)'; chapter VIII 'Nature and purpose of colour-coded mobile networks and Purple group of mobiles', (B) 'Mobile networks in general'; chapter IX 'Attribution of mobile telephones to the Accused and Mustafa Amine Badreddine', (D) 'Hussein Hassan Oneissi—Purple 095' and (E) 'Assad Hassan Sabra—Purple 018'; and chapter XII 'Claim of responsibility for the attack on Rafik Hariri', (D) (3) (ii) 'Evidence of Prosecution expert Gary Platt'.

⁴⁰⁶ Oneissi Defence final trial brief, paras 19, 94, 161, citing *Tolimir* Trial Judgment, para. 38; *Tolimir* Appeal Judgment, para. 77.

⁴⁰⁷ Sabra Defence final trial brief, para. 88, relying on the ICTY *Milutinović and others*, *Stanišić and Simatović* and *Dorđević* cases.

⁴⁰⁸ Neither the Statute nor the Rules distinguish between these different categories of testimony. Interim decision on exclusion of Mr Donaldson's evidence, para. 15. *See also* Rule 161.

i. Fact witnesses

320. Fact witnesses testify to their knowledge of facts relevant to the case, that is, what they saw or heard or know.

321. A special category of fact witnesses featured prominently in the case. A person relevant to a case can be ‘identified’ either by ‘recognition’ or ‘identification’ witnesses. A witness with sufficient prior knowledge of someone to recognise them at the time of the relevant event is a ‘recognition’ witness, whereas a witness who had not previously seen or known the person is an ‘identification’ witness.

322. A witness’s previous knowledge of, or level of familiarity with, that person—who is normally an accused—is relevant in assessing the strength of the recognition evidence. A chamber should explain why it was satisfied that a witness had some prior knowledge of the person and was therefore able to recognise them.⁴⁰⁹

323. The Trial Chamber received evidence in both categories. For the reasons below,⁴¹⁰ it was not satisfied that there was any positive identification evidence of any Accused by any witness on any material fact. The Trial Chamber was not satisfied of the reliability of the identification process employed by the Prosecution in attempting to identify Mr Oneissi from photo boards and has accordingly disregarded that evidence, as positive identification evidence, in assessing whether Mr Oneissi is guilty of any of the charges.

324. In the other category, recognition evidence, the Trial Chamber received evidence from three witnesses who testified in December 2015 about someone they knew as Sami Issa, whom the Prosecution alleges was Mr Badreddine.⁴¹¹

325. In May 2016, after reports of his death while fighting in Syria, Hezbollah released photographs and videos of him. The Prosecution showed the witnesses some of these photographs and a video; each recognised Mr Issa as Mr Badreddine. Noting that they were recognition witnesses, the Trial Chamber found their statements admissible despite extensive media

⁴⁰⁹ *Popović and others* Appeal Judgment, para. 384; *Lukić and Lukić* Appeal Judgment, paras 118-119. Decision admitting two photo boards into evidence, para. 37.

⁴¹⁰ See chapter XII ‘Claim of responsibility for the attack on Rafik Hariri’, (D) (2) ‘The ‘identification’ of Mr Oneissi as the ‘Mohammed’ who Mr Abu Adass encountered in the mosque’.

⁴¹¹ Witnesses PRH264, PRH306 and PRH416.

dissemination of Mr Badreddine's image. The Trial Chamber for the reasons at paragraphs 4059-4098 below is satisfied beyond reasonable doubt that Mr Issa and Mr Badreddine are the same person.

326. Similarly, another witness recognised from a photograph of Mr Merhi a man the witness had known for many years under a different name. The Trial Chamber held that a photo board was not required for recognition witnesses—who were of course already familiar with the person in question.⁴¹²

ii. Expert witnesses

327. Expert witnesses are those who, by virtue of some specialised knowledge, skill or training, can assist the trier of fact to understand or determine an issue in dispute. An expert report will only be treated as expert evidence insofar as it is based on the expert's specialised knowledge, skills or training. Experts may work alone or with others. They apply their specific expertise to events about which they usually have no first-hand knowledge and consider relevant information before giving opinions and drawing conclusions. These conclusions must stay within the confines of the expert's area of expertise. Statements falling outside an expert's area of expertise should be treated as personal opinions and weighed accordingly. An expert should not offer an opinion on the criminal liability of an accused person.⁴¹³

328. International criminal case law provides that expert witnesses, or the views they reach, must be impartial, neutral, objective and or independent. ICTR chambers have held that expert witnesses 'must be impartial in the case'⁴¹⁴ and must testify 'with the utmost neutrality and with scientific objectivity'.⁴¹⁵ ICC and ICTY chambers have accepted this,⁴¹⁶ and held that experts must

⁴¹² Decision adding a witness and granting protective measures, paras 4, 14 (referring to *Tadić* Trial Judgment, paras 545-546); Decision under Rule 155 (Sami Issa identifications), para. 12; Decision under Rule 155 (Sami Issa), paras 1-2, 9-11.

⁴¹³ Decision on Professor Sporer's evidence, paras 3, 18-19, 21-22; Decision on opinion evidence (Mr Donaldson), fn. 15; Interim decision on exclusion of Mr Donaldson's evidence, paras 16-17; Decision on expertise (Witness PRH620), para. 10; Decision on simultaneous or concurrent testimony of expert witnesses of 23 March 2015, para. 29; Decision on expertise (Professor Ayoub and Dr Mansour), paras 5-6, with further references.

⁴¹⁴ *Akayesu* decision on calling co-accused as an expert, p. 2.

⁴¹⁵ *Gacumbitsi* decision on expert witnesses, para. 8; *Nahimana and others* Appeal Judgment, para. 199; *Nyiramasuhuko and others* Appeal Judgment, para. 424.

⁴¹⁶ *Popović and others* Appeal decision on Mr Butler, para. 20, implicitly accepting that the *Nahimana and others* Appeal Judgment, para. 199, is correct by stating 'the ICTR Appeals Chamber **established that**' before quoting that paragraph (emphasis added); *Šešelj* decision on Andraś Riedlmayer expert report, para. 12. See also *Šešelj* decision

draw their conclusions impartially and independently.⁴¹⁷ ECCC and ICC decisions on specific categories of experts, namely judicially or jointly-appointed experts, also hold that they should be impartial.⁴¹⁸

329. These principles appear to be uncontested,⁴¹⁹ although the Defence of each Accused extensively challenged some expert evidence before its admission and in final trial submissions.⁴²⁰

330. When the Trial Chamber became seised of the case on 25 October 2013 after a lengthy pre-trial phase, the Prosecution's intended witness list contained the names of 68 proposed expert witnesses under Rule 161. However, during the trial itself, the Prosecution moved to admit into evidence the reports of only 20 expert witnesses—less than a third of the original number. The Oneissi Defence also successfully moved to call the evidence of one expert.

331. In determining whether someone was an expert, the Trial Chamber considered their past and current professional experience and training, publications and other relevant information, for example, their *curriculum vitae* or other documents accompanying the report.⁴²¹ The Trial Chamber found that a number of witnesses qualified as experts and admitted into evidence their reports within their respective areas of expertise. These were:⁴²²

on expert status of Reynaud Theunens, para. 29; *Mladić* decision on Richard Butler, para. 9; *Ntaganda* decision on expert witnesses, para. 9.

⁴¹⁷ For example, *Dragomir Milošević* decision on expert evidence of Robert Donia, para. 9, *Stanišić and Simatović* decision on experts Tromp and Nielsen, para. 10, both stating 'An expert is expected to make statements and draw conclusions independently and impartially.' See also *Strugar* Appeal Judgment, para. 58, stating 'When assessing an expert report, a Trial Chamber generally evaluates whether it contains sufficient information as to the sources used in support of its conclusions **and whether those conclusions were drawn independently and impartially**' (emphasis added) and *Martić* decision on expert report of Smilja Avramov, para. 10, asserting regarding experts expressing their opinion on facts established in a case, 'This specific task also implies a certain amount of objectivity and impartiality on the part of an expert.'

⁴¹⁸ See for example, *Ieng Sary* decision on expert evidence, para. 19. The statements about experts' impartiality in those paragraphs concerned an expert that the co-investigating judges had appointed themselves and were evidently based on those judges' own obligation to conduct their investigation impartially; *Lubanga* decision on procedures for instructing expert witnesses, para. 14, expressing general support for parties to ICC proceedings jointly instructing 'a single, impartial and suitably qualified expert' and—applying that decision—*Bemba* decision on procedures for instructing expert witnesses, paras 10-12.

⁴¹⁹ The Sabra Defence, for instance, specifically acknowledged some of them. Sabra Defence final trial brief, para. 83.

⁴²⁰ Notably, that of Mr Philips and Mr Platt. See for example, chapter VII 'Reliability of telecommunications evidence', (I) (5) 'Mr Philips's access to information'; chapter VIII 'Nature and purpose of colour-coded mobile networks and Purple group of mobiles', (B) 'Mobile networks in general'; and chapter IX 'Attribution of mobile telephones to the Accused and Mustafa Amine Badreddine', (A) 'Single user analysis'.

⁴²¹ See for example, Decision on expertise (Professor Ayoub and Dr Mansour), para. 6, with further references.

⁴²² The Trial Chamber also admitted, under Rule 161, two medical reports which are attached to Rule 155 statements of witnesses Mr Nabil Mansour and Mr Haidar Haidar (in evidence as exhibits P275 and P276). Second Rule 155

- Professor Fouad Hussein Ayoub, an expert in forensic odontology, who provided DNA evidence;⁴²³
- Mr Gerhard Geyer, an expert in car mechanics for the limited purposes of identifying Mitsubishi Canter parts and distinguishing them from other vehicles;⁴²⁴
- Mr Bart Hoozeboom, an expert forensic image analyst, seeking to estimate the size of the crater of the 14 February 2005 attack;⁴²⁵
- Dr Issam Mansour, an expert in forensic science, who also provided DNA evidence;⁴²⁶
- Mr John Edward Philips, an expert in telecommunications and cell site analysis, which includes the co-location and dislocation of mobiles, and on the workings of the global system for mobile telecommunication generally as applied to cell site analysis;⁴²⁷
- Mr Gary Platt, an expert in the surveillance of criminal networks and the identification and organisation of covert communication networks. His expertise extends to providing expert opinion evidence on the group of ‘purple phones’. Specifically, his expertise lay in analysing many pieces of evidence, explaining their significance, and identifying covert telecommunication networks and their organisation. To give his expert opinion, Mr Platt had to review call data records and sometimes give a basic analysis of his observations, which did not amount to providing an expert opinion on these records;⁴²⁸

decision, para. 14. Despite referencing Rule 161, the Trial Chamber did not consider the authors of these medical reports as witnesses before the Tribunal.

⁴²³ Decision on expertise (Professor Ayoub and Dr Mansour), paras 7, 9, 11, 14, 17, 28, 31, 33, disposition; Decision on expert reports of 1 July 2014; exhibits P196, P199, P200, P201 and P204.

⁴²⁴ Decision on expertise (Mr Geyer); exhibit P213.

⁴²⁵ Decision on expertise (Mr Geyer and Mr Hoozeboom), paras 13-14, 20, disposition; exhibit P209.

⁴²⁶ Decision on expertise (Professor Ayoub and Dr Mansour), paras 34, 38-40, disposition; Decision on expertise (Dr Mansour). The Trial Chamber also found that Dr Mansour’s expert report’s co-authors—Dr Rosa Assadrian and Mr Amer Fouad Sakr—possessed specialised knowledge within the meaning of Rule 161, Decision on expertise (Professor Ayoub and Dr Mansour), paras 35, 38. Dr Mansour’s reports are exhibits P206 and P207.

⁴²⁷ Decision on opinion evidence (Mr Donaldson), paras 16, 19, 69, 96; Decision on request to strike portions of an expert report, para. 8; Decision on expertise (Mr Philips – GSM); Decision on expertise (Mr Philips – Telecommunications and cell site). *See also* Decision denying exclusion of Mr Philips’s evidence; exhibits P549, P1111-P1117, P1936-P1938, P2120.

⁴²⁸ Decision denying reconsideration of decision on Mr Platt’s area of expertise, paras 3-4; Reasons for decision denying certification to appeal (Mr Platt’s area of expertise), para. 15; Decision on call sequence tables of network mobiles, para. 18; Decision on expertise (Mr Platt), paras 10-11; Oral decision on Mr Platt’s expertise; Decision

- Witness PRH155, a forensic crime-scene investigator;⁴²⁹
- Mr Jan Kuitert, Ms Anick van de Craats and Mr Gerard Murray, forensic experts with a special focus on the investigation of explosives;⁴³⁰
- Mr Konrad Schlatter, a forensic expert with a special focus on examining explosives;⁴³¹
- Witnesses PRH185 and PRH186, experts on the identification of pieces of vehicle engine blocks;⁴³²
- Professor Bibiana Luccioni and Professor Daniel Ambrosini, experts in engineering to analyse the effects of an explosion;⁴³³
- Mr Christophe Champod, an expert in the forensic analysis of human remains;⁴³⁴
- Ms Reza Gerretsen, an expert in forensic anthropology;⁴³⁵
- Witness PRH507, an expert in the functioning and operation of jamming devices;⁴³⁶
- Professor Peter Sommer, an expert in computer and information systems and the storage and security of data including digital evidence;⁴³⁷
- Mr Iskander Sursock, an expert geophysicist;⁴³⁸ and
- Professor Siegfried Ludwig Sporer, an expert in eye-witness identification, called by the Oneissi Defence.⁴³⁹

clarifying Mr Platt's area of expertise. *See also* Decision denying reconsideration of decision on Mr Platt's area of expertise, paras 15, 18; exhibits P796, P796.1 and P1783.

⁴²⁹ Decision on expertise (Witness PRH155), paras 1, 3-4, disposition; exhibit P266.

⁴³⁰ Decision on twelve expert witnesses, paras 15, 18; exhibit P244.

⁴³¹ Decision on twelve expert witnesses, paras 9, 12; exhibit P242.

⁴³² Decision on twelve expert witnesses, paras 55, 58, 61; exhibits P342-P343.

⁴³³ Decision on twelve expert witnesses, paras 64, 67, 70; exhibit P377.

⁴³⁴ Decision on twelve expert witnesses, paras 48, 51; exhibit P318.

⁴³⁵ Decision on twelve expert witnesses, paras 33, 36, 39; exhibits P278-P279.

⁴³⁶ Decision on Witnesses PRH291 and PRH507, paras 10, 12-13, disposition; exhibits P289, P293-P294.

⁴³⁷ Decision on expertise (Mr Sommer); exhibit P591.

⁴³⁸ Decision on twelve expert witnesses, paras 41, 45; exhibit P317.

⁴³⁹ Decision on Professor Sporer's evidence, para. 4, disposition; Siegfried Sporer, T. 14 May 2018, pp 16-17; exhibit 4D450.

332. Of these, the report of one⁴⁴⁰ was admitted into evidence without any objection, and four⁴⁴¹ were not required to testify in court.

333. In assessing the expert reports and testimony, the Trial Chamber has drawn its own conclusions based on all the evidence received at trial, irrespective of an expert witness's personal opinions.⁴⁴² The Trial Chamber considered the professional competence of each in their field of expertise, the material at their disposal, the methodologies used, the sources used to base the expert opinion, challenges to the evidence and the extent to which the findings were consistent with other evidence.⁴⁴³

iii. Witnesses providing non-expert opinion evidence and summary evidence

334. Lay witnesses, who are not recognised as experts, may also provide opinion evidence. They draw conclusions from events they have personally witnessed or from facts with which they are familiar. This evidence's status as lay rather than expert opinion may affect its weight.

335. Lay witnesses may also provide summary evidence, meaning that they may combine numerous pieces of evidence to provide a succinct overview of material relevant to the case. This could include the summary and opinion evidence of an analyst or investigator working for a party. The fact that the evidence constitutes opinion may affect its weight. Whether the lay witnesses' opinions or conclusions are probative—assuming their relevance to the case—will depend on factors such as the witnesses' personal and professional experience and what they witnessed first-hand. Lay witnesses may not provide an opinion on the ultimate issue of whether the Accused are guilty of the crimes charged.⁴⁴⁴

336. As with the experts' evidence, there were extensive challenges to the opinion and summary evidence provided by some lay witnesses in this case. They included challenges to how the Trial

⁴⁴⁰ Exhibit P196 (Dr Ayoub's report on DNA results of samples from crime scene, 24 February 2005).

⁴⁴⁴ Decision denying reconsideration of decision on Mr Platt's area of expertise, paras 15, 18; Decision permitting Professor Letschert to provide opinion evidence, para. 17; Decision on opinion evidence (Mr Donaldson), paras 8, 73, 77-78; Interim decision on exclusion of Mr Donaldson's evidence, paras 17-23; Reasons for decision denying certification to appeal (Mr Platt's area of expertise), para. 14.

Chamber applied or should apply these principles.⁴⁴⁵ However, again, no Party seems to seriously contest these principles.

337. A number of non-expert witnesses provided opinion or summary evidence to the Trial Chamber, including Dr Ghazi Ali Youssef, Mr Andrew Donaldson and Professor Rianne Letschert.

338. Dr Youssef was a contemporary political ‘insider’ who was in Mr Hariri’s trusted inner circle of advisers. The Trial Chamber allowed him to provide his interpretation or opinion of the subject matter of a meeting between Mr Hariri, Mr Rustom Ghazaleh and Mr Charles Ayoub on 9 January 2005 at Quraitem Palace—a meeting he did not attend—to assist it in evaluating an audio recording and transcript of the meeting.⁴⁴⁶ The Trial Chamber was of the view that he was ideally placed to assist it in deciphering the meaning of unclear portions of the conversation. It was satisfied that his opinion came from his personal experience and activities.⁴⁴⁷

339. Prosecution analyst Mr Donaldson provided overview summary analytical evidence, including some opinion evidence. For reasons of judicial economy related to the size of some cases, international criminal courts and tribunals have permitted this form of evidence.⁴⁴⁸ Mr Donaldson reviewed the totality of the Prosecution’s case attributing mobile telephone usage to the four Accused and Mr Badreddine and wrote reports on each one, summarising this evidence. He also provided opinions, but the Trial Chamber in a decision permitting him to give this evidence held that he had to provide the basis of his methodology before he could do so.

340. His testimony and reports therefore had to be read with the evidence of Mr Philips, an expert in cell site evidence, who had not been briefed with the Prosecution’s case against the Accused; not even their names. Mr Donaldson reviewed the Prosecution’s evidence on mobile usage attributed to the four Accused and to Mr Badreddine. He thus had an overview of the evidence that Mr Philips did not have. He also had significant experience in analysing cell site

⁴⁴⁵ See for example, Oneissi Defence final trial brief, paras 17-18.

⁴⁴⁶ Exhibits P395 and P395.1.

⁴⁴⁷ Decision on opinion evidence (Mr Youssef).

⁴⁴⁸ *Slobodan Milošević* Appeal decision on admissibility of evidence, paras 17, 21; *Dragomir Milošević* decision on Defence experts, para. 10; *Perišić* decision (Mr Randall), paras 13, 15-16; *Popović and others* decision regarding admissibility of Mr Ruez’s testimony, pp 2-3; *Stanišić and Simatović* decision on experts Tromp and Nielsen, para. 12; *Bemba and others* decision on scope of Witness P-433’s testimony; *Taylor* decision on proposed expert witness, para. 27.

evidence, although without Mr Philips's technical expertise. He also did not have experience analysing the best cell server coverage. His attribution reports on each Accused and Mr Badreddine—containing the sources relied upon—assisted the Trial Chamber in better understanding how to piece together the evidence relating to the attribution of personal and network mobiles.

341. Based on his extensive professional experience, the Trial Chamber was satisfied that Mr Donaldson could provide an opinion on co-location and cell site analysis and hence attribution of mobile telephone usage to the Accused and Mr Badreddine. However, the fact that Mr Donaldson was not an expert in these areas limited the probative value of his opinions. His opinions, to the extent they were found to be probative, were subject to a careful balancing of their weight. In allowing Mr Donaldson to provide some opinion evidence, the Trial Chamber ruled that he was not entitled to categorically conclude that mobiles co-located and hence attribute their use to a single user. Such conclusions were for the Trial Chamber alone to draw.⁴⁴⁹

342. Professor Letschert, despite not being called as an expert under Rule 161,⁴⁵⁰ in reality is an expert in her field. She provided opinion evidence in the participating victims' case. In view of her extensive professional experience and qualifications, the Trial Chamber found that she was qualified to provide lay opinion evidence concerning the victimological profile of the participating victims, their needs, views and concerns, and how access to justice could fulfil those needs. Professor Letschert's report summarises their views and concerns.⁴⁵¹ It gave the Trial Chamber an effective, convenient and judicially economical manner to receive this evidence without affecting the rights of the Accused to a fair trial.⁴⁵²

iv. Witnesses called on the request of the Legal Representatives of Victims

343. Article 17 of the Statute provides:

⁴⁴⁹ Decision on postponement of Mr Donaldson's testimony, paras 20, 24; Decision on opinion evidence (Mr Donaldson), paras 15, 42, 59-62, 68-87, 90-97; Decision on disclosure re Andrew Donaldson's reports, paras 49, 71; Interim decision on exclusion of Mr Donaldson's evidence, paras 28-30.

⁴⁵⁰ Decision permitting Professor Letschert to provide opinion evidence, para. 18.

⁴⁵¹ Exhibit 1V42.

⁴⁵² Decision permitting Professor Letschert to provide opinion evidence, paras 20-23, 28-29, 33-34.

Where the personal interests of the victims are affected, the Special Tribunal shall permit their views and concerns to be presented and considered at stages of the proceedings determined to be appropriate by the Pre-Trial Judge or the Chamber and in a manner that is not prejudicial to or inconsistent with the rights of the accused and a fair and impartial trial.

344. Under Rule 87 (B), ‘a victim participating in the proceedings may request the Trial Chamber, after hearing the Parties, to call witnesses and to authorise him to tender other evidence’. Similarly, Rule 146 (A) provides: ‘Victims participating in the proceedings may, on notice to the Prosecutor and the Defence, request the Trial Chamber to call witnesses.’ Rule 150 (D) provides: ‘A victim participating in the proceedings may be permitted to give evidence if a Chamber decides that the interests of justice so require.’

345. On the application of the Legal Representatives of Victims, the Trial Chamber heard evidence from six victims and Professor Letschert, and received into evidence 24 witness statements and their associated exhibits, namely documents related to their statements, and other documents concerning the harm suffered by the participating victims; a total of 45 exhibits. This evidence mainly relates to injuries and deaths of victims relevant to the (attempted) homicide charges. To avoid the appearance of having two prosecutors in the proceedings, the Trial Chamber endeavoured to avoid any overlap between this evidence and that led by the Prosecution.⁴⁵³ The Trial Chamber invited submissions on the status of the Legal Representatives of Victims’ evidence, as in how it could be used and the weight that it could be given and carefully considered how it could be used in the judgment.⁴⁵⁴ Some aspects of their evidence, such as portions of victims’ statements concerning the reparations that the victims considered appropriate have no probative value, and the Trial Chamber has not relied on them.⁴⁵⁵

⁴⁵³ Decision on the Legal Representatives’ application to call evidence, paras 35, 72. *See also* chapter V ‘Participation of victims’, (C) ‘Modes of victims’ participation in the trial’ and (F) (6) (a) ‘Scope of the evidence’.

⁴⁵⁴ Order rescheduling final trial briefs and closing submissions, para. 17; Decision admitting documentary evidence on the Legal Representatives of Victims’ application, para. 33; Decision permitting Professor Letschert to provide opinion evidence, para. 33; Decision admitting into evidence statements of participating victims, para. 16; Decision on the Legal Representatives’ application to call evidence, paras 77, 83.

⁴⁵⁵ Decision admitting into evidence statements of participating victims, para. 19. *See also* chapter V ‘Participation of victims’, (H) ‘Repairing the harm—sought recommendations for appropriate forms of reparations’.

v. Written records of witness evidence without oral testimony

346. Rule 155 (A) provides that: ‘Subject to Rule 158, the Trial Chamber may admit in lieu of oral testimony the evidence of a witness in the form of a written statement, or a transcript of evidence which was given by a witness in proceedings before the Tribunal, which goes to proof of a matter other than the acts and conduct of the accused as charged in the indictment.’

347. Rule 158 (A) governs the evidence of unavailable witnesses, and provides:

Evidence in the form of a written statement, any other reliable record of what a person has said, written or otherwise expressed, or transcript of a statement by a person who has died, who can no longer with reasonable diligence be traced, or who is for good reason otherwise unavailable to testify orally may be admitted ... if the Trial Chamber:

- (i) is satisfied of the person’s unavailability; and
- (ii) finds that the statement, the record or the transcript is reliable, taking into account how it was made and maintained.

348. Under these two rules, the Trial Chamber admitted into evidence written records of witness evidence—typically in the form of witness statements—without oral testimony. There is no single definition of a witness statement in international criminal law proceedings.

349. A broad definition is ‘an account of a person’s knowledge of a crime, which is recorded through due procedure in the course of an investigation into the crime’. Whether a document is a witness statement is determined on a case-by-case basis, according to the type of testimony the witness will give, the character of the witness, and the content, use, function and source of the document or material itself.⁴⁵⁶

350. When admitting evidence in a witness statement without oral testimony, the Trial Chamber carefully considered the impression stemming from the statement as a whole.⁴⁵⁷ Further, it examined whether any formal indicia of reliability were missing from the statement.⁴⁵⁸

⁴⁵⁶ Sabra Defence seventh bar table decision (Abu Adass and Mohammed), para. 41; Reasons for admission of 22 Sabra Defence documents, para. 84; Sabra Defence sixth bar table decision (Abu Adass fax), para. 13; First Rule 155 decision, para. 15.

⁴⁵⁷ Decision on admission of Mr Al-Hassan’s interview, para. 56.

⁴⁵⁸ Rule 155 compliance decision, para. 28.

351. Specifically, it looked at the circumstances in which the evidence was obtained and recorded, including whether the statement was given under oath; whether it was signed by the witness with an acknowledgement of the truth of its contents; and whether it was given with the assistance of a Registry-approved interpreter. In addition, the Trial Chamber considered other factors, such as whether the evidence related to events about which there was other evidence and whether there were any inconsistencies in the evidence. It also considered the source of the evidence and the lack of testing through cross-examination.⁴⁵⁹ Generally, witness statements admitted into evidence under Rule 158 will be given less weight, especially where an opposing Party has challenged the receipt of the statement into evidence.⁴⁶⁰ The opposing Party has not been able to cross-examine the maker of the statement. In some circumstances, the evidence in a Rule 158 statement may be neither controversial nor contested, in part or in whole, while in other instances it may be contested in its entirety.

352. The Trial Chamber has carefully assessed all Rule 158 statements, which are untested evidence, for their internal consistency, their corroboration by other evidence, especially evidence challenged through cross-examination, and whether they go to the acts and conducts of an Accused. Where the only evidence relating to a contested fact derives solely from a Rule 158 statement, the Trial Chamber did not rely upon it as proof of a fact. This includes circumstances where that contested fact is ‘corroborated’ only by another Rule 158 witness statement. In these circumstances, the Trial Chamber did not use the non-cross-examined assertions of two (or more) contested witnesses to corroborate each other on that contested fact. However, where Rule 158 statements provide evidence of an uncontested fact, the Trial Chamber may use the statements as proof of that fact.

⁴⁵⁹ Decision denying certification to appeal (Rule 158 admission), paras 21, 23; Decision denying certification to appeal of 1 February 2018, paras 20, 25; Decision admitting evidence under Rule 158 (Witness PRH056), para. 51; Decision on admission of Mr Al-Hassan’s interview, para. 86; Decision denying Oneissi Defence certification to appeal Rule 158 decision (Witness PRH103), paras 9-10; Decision denying Sabra Defence certification to appeal Rule 158 decision (Witness PRH103), para. 6; Decision denying Merhi Defence certification to appeal Rule 158 decision (Witness PRH103), para. 7; Decision denying certification to appeal (Witness PRH024), paras 29, 35; Corrected decision under Rule 158 (Witness PRH024), paras 41-42; Rule 158 decision Witness PRH437, paras 15, 18; Rule 158 decision Witness PRH103, paras 33, 44-48, 52; Decision on admission of statements of Witness PRH402 and Witness PRH636, paras 16, 18-19, 23-26; Decision on admission of statements of Witnesses PRH082, PRH041 and PRH459, para. 9. *See also* Decision admitting Hezbollah-related documents, para. 76.

⁴⁶⁰ Decision on admission of Mr Al-Hassan’s interview, para. 86; Rule 158 decision Witness PRH103, para. 36.

2. Documents

353. Rules 149 and 154 permit a chamber to admit relevant evidence in the form of a document or other record, if the probative value of the evidence is not substantially outweighed by the need to ensure a fair trial. After assessing the relevance and probative value of each document, the Trial Chamber received thousands of exhibits into evidence. Many were the subject of written decisions. Some documents were shown to witnesses in court, and their comment was sought, after which they were admitted into evidence. This process may enhance the weight that the Trial Chamber can give to a document.⁴⁶¹

354. Other documents were admitted ‘from the bar table’, meaning that they were not shown to any witness before being tendered. This is a long-standing practice in international criminal law proceedings that promotes judicial economy, particularly in relation to the unopposed admission into evidence of documents. The Trial Chamber may give less weight to such evidence, if, for instance, the creator of a document could not be cross-examined.⁴⁶² However, depending on the circumstances, considerable weight could be given to a document admitted from the bar table. Moreover, the admission into evidence of numerous documents was not challenged by the opposing Party.⁴⁶³

355. Authenticity, relevance and indicia of reliability, business records, telecommunications evidence, derivative evidence and exhibits admitted for limited purposes are relevant here.

(a) Authenticity

356. Authenticity is ‘whether a document is what it professes to be in origin and authorship’ and ‘may be relevant in assessing whether a document is *prima facie* reliable’.⁴⁶⁴ When admitting certain documents into evidence, the Trial Chamber made findings pertaining to their

⁴⁶¹ See for example, Decision admitting Hezbollah-related documents, paras 55-56; Decision denying certification to appeal (admission of Witness PRH707’s evidence), para. 24.

⁴⁶² Decision on admission of documents used with a witness by the Oneissi Defence, para. 40; Corrected decision under Rule 158 (Witness PRH024), para. 42; Decision on admission of attribution documents for Mr Sabra, para. 27.

⁴⁶³ The Ayyash Defence also relevantly submitted that evidence tendered during cross-examination is entitled to as much weight as documents tendered during direct examination or through other methods. Ayyash Defence final trial brief, para. 29 (no authority cited).

⁴⁶⁴ Decision on admission of documents used with a witness by the Oneissi Defence, para. 6; Decision on admissibility of Wikileaks documents, paras 11, 13.

authenticity.⁴⁶⁵ Definitive proof of reliability and authenticity, as opposed to a *prima facie* showing, is not required at the admissibility stage.⁴⁶⁶ Consequently, the Trial Chamber is not bound by those findings on admission.⁴⁶⁷ It may determine, when assessing the weight of a document in light of the totality of the evidence, that the document is not authentic and that no weight can therefore be assigned to it for the purpose of proving the truth of its content.

(b) Relevance and indicia of reliability

357. When determining the admissibility of a document, the Trial Chamber first considered its relevance. If it was irrelevant to the proceedings, it was not further considered for admission into evidence. If considered relevant, even marginally, the Trial Chamber then assessed its probative value. To establish that it had some probative value, the Trial Chamber examined the indicia of reliability to determine whether it was *prima facie* reliable for the purposes of admission into evidence. This included examining any internal inconsistencies;⁴⁶⁸ the source of the document, if known;⁴⁶⁹ the document's temporal alignment with the Prosecution's allegations against the Accused;⁴⁷⁰ and the relationship between the Accused and anyone identified in the documents.⁴⁷¹ Only if satisfied that the document was *prima facie* reliable could it be admitted into evidence. Its weight was only considered in assessing the evidence as a whole during deliberations following the close of the evidence and final trial submissions.

(c) Business records

358. The Prosecution and counsel for the Accused tendered into evidence a number of business records. These are records ordinarily produced in the normal course of business of an organisation

⁴⁶⁵ Decision on admission of attribution documents for Mr Ayyash, Mr Merhi and Mr Sabra, paras 21, 26; Decision on admission of attribution documents for Mr Badreddine, para. 19; Decision admitting Hezbollah-related documents, para. 65; Decision on admission of attribution documents for Mr Oneissi, para. 16; Decision on admission of attribution documents for Mr Sabra, para. 24; Decision on admission of documents (Traffic authority), paras 20-23; Decision on admission of documents (Passport applications), paras 10-12.

⁴⁶⁹ Sabra Defence sixth bar table decision (Abu Adass fax), para. 31.

⁴⁷⁰ Decision on admission of evidence of 31 January 2017, para. 19; Decision on admission of attribution documents for Mr Sabra, para. 23; Decision on admission of documents (Traffic authority), para. 20.

⁴⁷¹ Decision on admission of evidence of 31 January 2017, para. 20; Decision on admission of documents (Traffic authority), paras 20-21.

or workplace. Some business records, relevantly here, such as telecommunication call data records, are generated automatically.

359. Everything else being equal, this gives such records a degree of reliability. Faced with copious and diverse business records produced a long time ago by different people working within diverse sections of large organisations, it may be difficult, if not impossible, to find the maker of each record to testify to its creation. Especially in light of the staff turnover that large organisations experience over time.

360. It was therefore necessary to hear evidence from witnesses who could testify to the process of production of business records in general. For instance, corporate Witnesses 705 and 707 testified about the business records of the Lebanese mobile telecommunication companies Touch and Alfa, respectively.

361. The Ayyash, Sabra and Oneissi Defence opposed the classification of these records as business records and counsel for all four Accused challenged the reliability of the telecommunications evidence provided through Witnesses 705 and 707. These submissions are addressed in detail at paragraphs 1831-1862. After considering them, the Trial Chamber has remained of the view that these were Touch's and Alfa's business records and found that Witnesses 705 and 705 were able to testify about them, by virtue of their positions in each company and their lengthy technical expertise in the industry.⁴⁷² Witnesses 705 and 707 also referred to things that they did not have direct personal knowledge of. The Trial Chamber took these factors into consideration when assessing the weight of the business records received into evidence.⁴⁷³

⁴⁷² See chapter VII 'Reliability of telecommunications evidence', (F) 'Findings on Witnesses 705 and 707 and their evidence'.

⁴⁷³ Decision on admission of attribution documents for Mr Ayyash, Mr Merhi and Mr Sabra, paras 23-24; Decision on admission of attribution documents for Mr Merhi, para. 34; Decision on admission of evidence of 31 January 2017, para. 21; Decision denying certification to appeal (admission of Witness PRH707's evidence), para. 24; Decision on admission of Hajj applications, para. 19; Decision on admission of documents (Subscriber records Touch), paras 24, 35-36; Decision on call sequence tables of 31 October 2016, paras 77-87; Decision on admission of Prosecution's cell site evidence, paras 3, 67-70; Decision on admission of Witness PRH707's statements and annexes into evidence, paras 39, 41-43, 45-52, 67, 118, 140, 146, 152, 154-155, 159-160, 172; Decision on admission of Witness PRH705's statements and annexes into evidence, paras 18-20, 22-26, 128; Decision on Prosecution motion to admit Witness PRH705's statements, paras 24, 31; Decision on admission of documents (Subscriber records Alfa), paras 34-37; Corrected version of Decision on Prosecution motion to admit Witness PRH707's statements, paras 53-60, 62, 64-66, 72, 74; Order in relation to Witness PRH707, paras 4-5, 7-11; Decision on five Prosecution motions on call sequence tables and witness statements, paras 77, 99.

362. The Trial Chamber also considered that records produced by a corporation or other entity for an investigation or for the purposes of litigation, such as for use in court, may be treated differently to those extracted from contemporaneous business records or archives.⁴⁷⁴ This could affect their reliability and the weight that can be given to them.

363. The obvious difference between the two categories is that archived business records will generally have been contemporaneously generated for ‘normal’ everyday operational reasons. This will provide them with a *prima facie* degree of reliability as records produced in the normal course of business. Conversely, documents created for specific court use, or in response to an investigation, could potentially have been shaped or even manipulated with the intention to produce a desired result favourable to someone such as the tendering party. This could lessen or even deprive them of probative value. The Trial Chamber carefully considered these factors in assessing any corporate records that it received into evidence.

364. Official governmental records can also be viewed as a form of business record as they are indeed the product of the ‘business’ of government. As explained above in relation to hearsay evidence, they are deemed to have *prima facie* reliability by virtue of their nature as official records: these include birth, death and marriage certificates; family register extracts; identity, immigration, passport and border records; and land, vehicle and business registration documents. Their authenticity or reliability can be challenged or rebutted.

365. Unless the documents were directly challenged, the Trial Chamber after examining each official record, considered them *prima facie* reliable and hence having some probative value by virtue of their official status. The Trial Chamber has carefully assessed any official record where its reliability has been challenged.

⁴⁷⁴ Decision on admission of Prosecution’s cell site evidence, para. 70; Decision on admission of Witness PRH707’s statements and annexes into evidence, paras 49, 51, 168; Decision on admission of Witness PRH705’s statements and annexes into evidence, paras 25, 27; Decision on Prosecution motion to admit Witness PRH705’s statements, para. 24; Corrected version of Decision on Prosecution motion to admit Witness PRH707’s statements, paras 55, 62 (4), 65-66; *see also* para. 1993.

(d) Telecommunications evidence

366. Of central importance to the case is telecommunications evidence, comprising cell site evidence, call data records and call sequence tables. The Trial Chamber's general approach to this evidence is described here.⁴⁷⁵

i. Cell site evidence and analysis

367. Cell site data includes: the date of the production of the data; name of the person producing the data; a record reference; the cell ID; the name of the cell site; full address of the cell site, including postal code; grid co-ordinates of the cell site; sector number or code; number of sectors and azimuths of all sectors; orientation, azimuth and bearing in degrees from north of all sectors; antenna height; and the date on which a particular cell site was first brought into service.⁴⁷⁶

368. The Trial Chamber admitted cell site evidence, based on information obtained from the Lebanese telecommunications providers, Alfa and Touch, on the locations and names of the cell sites, also called cell towers, comprising their mobile telecommunication networks, and various features of the antennae mounted on these cell towers, such as the direction of the antenna—known as the 'azimuth'—and its tilt.

369. The networks are comprised of cells and each is serviced by at least one cell site. Cell site evidence also includes 'predicted best server coverage maps' that were provided to the Prosecution in 'shape files'. These illustrate the surface area over which each cell site is predicted to emit the strongest signal compared with neighbouring cell sites. One cell may be serviced by more than one cell site. The cell site providing coverage will depend on where the mobile is and can be influenced by variables such as the height of the cell tower, the topography of the cell and the presence of buildings and geographical objects, such as hills and water.⁴⁷⁷

⁴⁷⁵ The telecommunications evidence is dealt with extensively in chapter VII 'Reliability of telecommunications evidence'.

⁴⁷⁶ *See for more details* chapter VII 'Reliability of telecommunications evidence'.

⁴⁷⁷ Decision on admission of Prosecution's cell site evidence, paras 6, 21-23, 138.

370. Alfa had no centralised database for this information before 2007, so it used an approximation or ‘reverse engineering’ method to produce the predicted best server coverage maps for the period relevant to the amended consolidated indictment.⁴⁷⁸

371. Cell site analysis is a forensic technique to identify the approximate location of the user of a mobile based on the cell site to which the mobile connects during a call.⁴⁷⁹ It is used forensically to determine whether different mobiles ‘co-locate’, which can be used to prove that a single person to whom one or more mobiles are attributed used one or more co-locating mobile(s).⁴⁸⁰

372. When weighing cell site evidence, the Trial Chamber considered any discrepancies, gaps, anomalies, inaccuracies, weaknesses and or errors within it. It also considered whether the cell site data was original or reconstructed and whether Witnesses 705 and 707 had first or second-hand knowledge of the cell site evidence about which they testified.⁴⁸¹

ii. Call data records

373. Call data records provide information about communications, such as the source and destination telephone numbers, the type of communication (voice call or text message), the date and time of the communication, the duration of the voice call, the IMEI number of the handset relevant to the communications, and the cell towers to which the mobiles connected.⁴⁸²

374. Call data records are the business records of telecommunication companies generated and retained automatically and legally in the normal course of their business.⁴⁸³ A limited number of Alfa’s and Touch’s records were prepared for the purposes of litigation, specifically, by providing them to the UNIIIC, and then the Prosecution for possible use in court. The Trial Chamber and

⁴⁷⁸ See further chapter VII ‘Reliability of telecommunications evidence’, (C) ‘Alfa network and generation of call data records and cell site data’.

⁴⁷⁹ Decision on opinion evidence (Mr Donaldson), fn. 5; Decision on admission of Prosecution’s cell site evidence, paras 4, 10.

⁴⁸⁰ Decision on opinion evidence (Mr Donaldson), paras 20-38, 69, 81.

⁴⁸¹ Decision on admission of Prosecution’s cell site evidence, paras 6-8, 15-16, 22, 72, 74, 76-81, 83-86, 89-90, 97-159, 161; Decision on admission of Witness PRH707’s statements and annexes into evidence, para. 133; Decision to add Witness PRH705 to the Prosecution’s witness list, para. 17; Decision to add Witness PRH707 to the Prosecution’s witness list, para. 13.

⁴⁸² See for example, Decision denying admission of two call sequence tables, fn. 4; Decision on admission of Prosecution’s cell site evidence, para. 3; Decision on five Prosecution motions on call sequence tables and witness statements, para. 2.

⁴⁸³ Decision on admission of Prosecution’s cell site evidence, para. 3; Decision on five Prosecution motions on call sequence tables and witness statements, paras 77, 99.

Defence were briefed on the call data records database in a Rule 53⁴⁸⁴ meeting convened on 26 November 2013.⁴⁸⁵ The Prosecution performed demonstrations of search queries and answered questions from the Trial Chamber and the Defence.

375. The Trial Chamber declined to admit into evidence the raw call data records given that they are voluminous—comprising billions of entries—and unreadable in their raw form.⁴⁸⁶ To be comprehensible, the records must be extracted and converted into a readable format. Receiving the call data records onto the trial record in their raw format would have been a pointless exercise, and moreover, almost all of them would have been irrelevant to the case.

iii. Call sequence tables

376. Instead of receiving billions of incomprehensible call data records in evidence, the Trial Chamber admitted into evidence numerous call sequence tables; this was on the application of both Prosecution and the Defence of all four Accused and Mr Badreddine.⁴⁸⁷

377. These are tables that present chronological sequences of calls relating to a particular, or target, telephone number—mobile or landline—over a specified period. They are extracted from the records of telecommunication operators and combine call data records and cell site information.⁴⁸⁸ The tables make these records accessible and capable of presentation and analysis without altering the data.⁴⁸⁹

378. The Defence did not challenge the Trial Chamber's decision not to admit billions of irrelevant records—which in their original form are simply long strings of numbers and symbols—into evidence. The Ayyash, Badreddine and Merhi Defence, however, argued that the Prosecution did not tender into evidence the call data records from which the call sequence tables were

⁴⁸⁴ Rule 53 provides: 'The Registrar, or Registry staff designated by the Registrar, shall, as appropriate, take minutes of the plenary meetings of the Tribunal and of the proceedings of a Judge or Chamber, other than private deliberations.'

⁴⁸⁵ Order regarding Rule 53 meeting minutes; F3772, Registrar's Submission Pursuant to Rule 48 (C) in Response to the Trial Chamber's Order of 21 June 2019, 11 July 2019.

⁴⁸⁶ Decision denying admission of two call sequence tables, para. 21; Decision admitting single user report (Grey mobile), para. 27; Decision on five Prosecution motions on call sequence tables and witness statements, para. 113.

⁴⁸⁷ The figure appears to be at least 195 exhibits containing call sequence tables, comprising 156 tendered by the Prosecution, and 39 by the Defence: Ayyash Defence four, Badreddine eight, Merhi Defence seven, Oneissi Defence four and the Sabra Defence 16.

⁴⁸⁸ *See for example*, Decision denying admission of two call sequence tables, fn. 3.

⁴⁸⁹ Decision on call sequence tables of 31 October 2016, para. 3; Decision on admission of Prosecution's cell site evidence, para. 12. *See also* Decision on admission of call sequence tables related to Mr Hariri's movements, paras 65, 69.

produced.⁴⁹⁰ Having not admitted the underlying raw call data records in evidence, to allow it to evaluate the *prima facie* reliability of the call sequence tables, the Trial Chamber needed information on how they were created.

379. Consequently, the Trial Chamber required that call sequence tables, when tendered, were accompanied by witness statements or testimony explaining who prepared them and in what manner, to enable it to review the methodology and thus evaluate their *prima facie* reliability and probative value.⁴⁹¹ Their relevance was not in issue. As both Prosecution and Defence were using the same data collected from the Lebanese telecommunication companies and utilised the same methodology in extracting the data into call sequence tables, this applied equally to all Parties.

380. When assessing the weight to give to call sequences tables, the Trial Chamber considered whether they cover multiple subscriber periods, the methodology for choosing the target date ranges and whether the numbers included in the call sequences tables could be attributed to specific people.⁴⁹² The Trial Chamber, having thoroughly reviewed this evidence, does not believe that there was any serious challenge to the reliability of the call sequence tables as extracts from the call data records. Both the Prosecution and counsel for all Accused tendered call sequence tables into evidence—extracted from the same set of call data records that the Lebanese companies had provided to the UNIIIC and the Prosecution.

(e) Derivative evidence

381. The Trial Chamber also admitted into evidence what can be termed ‘derivative evidence’, although there may be some overlap with what is also called ‘demonstrative evidence’. Essentially this is evidence created by a Party from other evidence, such as to allow its analysis or visual presentation in court.

⁴⁹⁰ Decision on five Prosecution motions on call sequence tables and witness statements, paras 50, 73.

⁴⁹¹ Decision denying admission of two call sequence tables, para. 21; Decision on five Prosecution motions on call sequence tables and witness statements, paras 113, 115. *See also* Decision on call sequence tables of 31 October 2016, paras 89-92, 95.

⁴⁹² Reasons for admission of 22 Sabra Defence documents, paras 32, 54; Decision denying certification to appeal decision admitting ten call sequence tables, para. 17. *See also* Decision on admission of documents (Subscriber records Alfa), para. 16.

382. Call sequence tables provide an example: the call data records are the original evidence, but extracting the relevant information and converting it into call sequence tables permitted it to be analysed and understood.⁴⁹³

383. The Trial Chamber also admitted into evidence ‘subscriber notes’. These are derived from the subscriber databases of the Lebanese telecommunication companies. These too were extracts from massive telecommunication databases of millions of records converted into tables of relevant information. The innate reliability of a document or record is not diminished merely because a Party had created it for its own demonstrative purposes in court,⁴⁹⁴ although in assessing its weight the Trial Chamber was mindful of why and by whom it had been created.

(f) Exhibits admitted for limited purposes

384. In exercising its discretion, the Trial Chamber admitted some documents into evidence for a limited purpose,⁴⁹⁵ rather than strictly for the truth of what was asserted in them.⁴⁹⁶ An example

⁴⁹³ Decision denying admission of two call sequence tables, para. 37. Earlier in the proceedings, the Trial Chamber characterised call sequence tables as ‘a form of demonstrative evidence’ (Decision on admission of call sequence tables related to Mr Hariri’s movements, para. 69) and ‘a derivative form of demonstrative evidence’ (Decision on admission of Witness PRH424’s evidence, para. 12). *See also* Decision on call sequence tables of 31 October 2016, para. 95.

⁴⁹⁴ Decision on admission of documents (Subscriber and user information), para. 30; Decision on admission of photographs, videos, maps and 3-D models, para. 10.

⁴⁹⁵ *Al Jadeed and Al Khayat* Appeal Judgment, paras 64, 66, 68-71, 78.

⁴⁹⁶ Decision on admission of Sabra Defence documents of 28 March 2018, paras 25 (exhibit 5D204 admitted to show what information was available to investigators at the time), 59-60 (exhibits 5D151, 5D153, 5D154, 5D155, 5D156, 5D206, 5D208, 5D255, 5D279, 5D285, 5D290, 5D291 and 5D292 admitted to assist the Trial Chamber’s understanding of the transcript and of the Sabra Defence case); Reasons for admission of 22 Sabra Defence documents, paras 97 (exhibit 5D423 admitted to assess the quality of the UNIIIC’s or the Prosecution’s investigation and analysis), 107 (exhibit 5D420 admitted to assess the quality of the Prosecution’s investigation), 123-124 (exhibit 5D426 admitted to show that the possibility of investigating Mr Al-Hassan’s reasons for not being in Mr Hariri’s convoy on 14 February 2005 and related matters were analysed, and in this case, apparently recommended by someone within the UNIIIC), 133 (exhibit 5D404 admitted to assess the diligence of the Prosecution’s investigations); Decision on Prosecution’s clarification request, para. 4 (exhibit 5D251 admitted to assess the Sabra Defence’s line of defence); Sabra Defence sixth bar table decision (Abu Adass fax), paras 28 (exhibit 5D504 admitted to assess the quality of the UNIIIC’s investigation), 35 (exhibit 5D507 admitted to provide context for the ISF investigation and demonstrate that a fax identifying Mr Abu Adass and his associates was sent to the Lebanese investigative authorities after the assassination of Mr Hariri); Sabra Defence fourth bar table decision (Abu Adass recruitment), para. 30 (exhibit 5D497 admitted to show Mr Khaled Taha’s connections to Mr Abu Adass and his involvement in Mr Abu Adass’s alleged recruitment and disappearance); Sabra Defence third bar table decision (Abu Adass recruitment failure), paras 35 (exhibit 5D496 admitted to provide context to the ISF’s investigation into the plot to attack the Italian embassy and possible connections with Mr Hariri’s assassination and Mr Abu Adass’s recruitment), 40 (exhibit 5D495 admitted to provide some contextual information surrounding the attack on the Future TV station and potential connections with individuals involved in the assassination of Mr Hariri and in Mr Abu Adass’s recruitment, and show that the Lebanese judicial and investigating authorities had relevant information on the alleged plot to assassinate Mr Hariri); Sabra Defence second bar table decision (Abu Adass selection), para. 40 (exhibit 5D254 admitted to assess the quality of the UNIIIC investigation); Decision on redactions to Mr Al-Hassan’s interview, para. 26 (exhibits P2121 and P2122

of this was connected with the thrust of part of the Sabra Defence's defence that the Prosecution had failed to properly investigate allegations within its knowledge that individuals, who were not the Accused, were responsible for the attack on Mr Hariri. To that end, the Trial Chamber accepted some documents, or extracts, into evidence as going to prove that the Prosecution had notice of the existence of these allegations, as opposed to the fact that the information in the witness statement or report in which they were contained was in fact accurate. That is, the Prosecution was aware of the substance of the allegations, not that they were necessarily true. This could have been used to prove that it had inquiry notice of a matter, thereby requiring it to act in a certain manner. The Trial Chamber instructed the Parties not to rely, in their submissions, on such evidence for the truth of its content, as opposed to its existence.⁴⁹⁷

385. Other exhibits were admitted not as substantive evidence, but rather for demonstrative purposes.⁴⁹⁸ These included visual aids such as charts, graphs and diagrams prepared by one Party to assist the Trial Chamber—and the other Parties—in visualising, following and hence understanding the evidence, especially in consideration of the length and complexity of the telecommunications evidence presented. The Defence of each Accused challenged various demonstrative evidence tendered by the Prosecution, on different bases, such as that it consisted

admitted to corroborate other evidence connected to paragraph 49 of the amended consolidated indictment); Decision on admission of geographic documents, paras 13-14, 18 (exhibits P547 and P548 admitted to identify relevant locations); Decision allowing amendment of the Prosecution's exhibit list of 20 November 2014, pp 37-38 (exhibit P314—Democratic Gathering Declaration for Freedoms and Protection of the Constitution and the Democratic Regime, 21 September 2004—admitted to reflect the position of the members who supported this declaration and the fact that that position was maintained publicly); Addendum to decision allowing the Prosecution to recall Mr John Edward Philips (exhibit P2120 admitted to rebut a suggestion made by Defence counsel in cross-examining Mr Donaldson).

⁴⁹⁷ Sabra Defence fourth bar table decision (Abu Adass recruitment), para. 42; Sabra Defence second bar table decision (Abu Adass selection), para. 53.

⁴⁹⁸ Decision on admission of documents used with Witness PRH707, para. 19 (exhibits 4D261 and 4D262); Decision on admission of Sabra Defence documents of 28 March 2018, paras 34 (exhibits 5D147 and 5D162), 59 (exhibits 5D151, 5D153, 5D154, 5D155, 5D156, 5D206, 5D208, 5D255, 5D279, 5D285, 5D290, 5D291 and 5D292); Decision on admission of documents used with a witness by the Oneissi Defence, para. 70 (exhibit 4D539); Reasons for admission of 22 Sabra Defence documents, paras 51-52 (exhibit 5D348 admitted to better understand the Defence case), 59 (exhibit 5D356 admitted to assist the Trial Chamber in understanding certain call sequence tables), 70-72 (exhibit 5D355 admitted to make the Sabra Defence's cross-examination of Mr Platt understandable and graphically illustrate the Sabra Defence's submissions); Decision denying admission of two call sequence tables, para. 8 (exhibit 4D364); Sabra Defence sixth bar table decision (Abu Adass fax), para. 40 (exhibit 5D202 admitted to assist in understanding the Sabra Defence case); Sabra Defence second bar table decision (Abu Adass selection), para. 37 (exhibit 5D218 admitted to assist in understanding the Sabra Defence case); Decision on admission of photographs, videos, maps and 3-D models, para. 10 (admitting 3-D models as exhibits P54, P55, P56 and P57); Procedural matters, T. 3 October 2017, p. 54 (exhibits P1780, P1781 and P1782); Decision under Rule 155 (Witness PRH371) (exhibits P1152 and P1153).

wholly or partly of submissions under the guise of demonstrative evidence.⁴⁹⁹ However, both Prosecution and Defence counsel used such evidence as a tool in presenting their evidence in court.

386. Demonstrative evidence also assisted the Trial Chamber, as a finder of fact, in finding context in the facts and strands of evidence. As evidence, it had to be relevant and have probative value, which includes *prima facie* reliability.⁵⁰⁰ The Trial Chamber considered demonstrative evidence with full appreciation for the advantages and limitations of such evidence.⁵⁰¹ Any inconsistencies between the demonstrative evidence and the underlying evidence were taken into account, and if the demonstrative evidence materially differed from the underlying evidence in some respect, the Trial Chamber has not relied on it in that respect.⁵⁰²

387. Some exhibits admitted for demonstrative purposes contained a mixture of demonstrative evidence and what were in reality Party submissions. In some instances they were tantamount to closing submissions. As some flexibility in a large and complex case was needed and the Parties and Trial Chamber could readily distinguish between what was demonstrative and what was argumentative, the Trial Chamber accepted some documents containing this blend. To the extent these exhibits amounted to submissions, the Trial Chamber assessed them in this light, not mistaking submissions for evidence.⁵⁰³

388. The Trial Chamber has extracted information from the Prosecution's 'electronic presentation of evidence' (EPE) in-court software, and from demonstrative evidence—for example individual slides from slide presentations used by the Parties as visual aids in court—in this

⁴⁹⁹ Ayyash Defence final trial brief, paras 33-34; Merhi Defence final trial brief, para. 75.

⁵⁰⁰ Decision on admission of documents used with Witness PRH707, para. 19; Decision on admission of Sabra Defence documents of 28 March 2018, para. 7; Reasons for admission of 22 Sabra Defence documents, paras 51, 70; Decision on demonstrative evidence (Mr Donaldson), paras 1, 4, 10, 12, 14-16; Decision on Prosecution motion to add four documents to its exhibit list, paras 9-10.

⁵⁰¹ Decision on admission of photographs, videos, maps and 3-D models, para. 10.

⁵⁰² Decision on demonstrative evidence (Mr Donaldson), para. 13.

⁵⁰³ Decision on admission of Sabra Defence documents of 28 March 2018, para. 40; Decision on admission of documents used with a witness by the Oneissi Defence, para. 70; Reasons for admission of 22 Sabra Defence documents, paras 52, 59, 72; Sabra Defence sixth bar table decision (Abu Adass fax), para. 40; Sabra Defence second bar table decision (Abu Adass selection), para. 37; Procedural matters, T. 3 October 2017, p. 54; Decision denying certification to appeal decision on Powerpoints. Similarly, mid-trial summaries, which are explanatory rather than argumentative, assist in the understanding of evidence but do not constitute evidence. In-court summaries decision, paras 15-16, 18-20, 24, 38; Decision on periodic in-court summaries. *See also* Decision allowing Sabra Defence supplement, paras 9-11.

judgment. This, too, is for demonstrative purposes only. Every time this is done it is explicitly identified.

3. Agreed facts or ‘agreements as to evidence’

389. Under Rule 122 ‘Agreements as to evidence’, the Parties may agree that an alleged fact ‘is not contested, and, accordingly, a Chamber may consider such alleged fact as being proved, unless the Chamber is of the opinion that a more complete presentation of the alleged facts is required in the interests of justice, in particular the interests of the victims’.

390. During the trial, the Trial Chamber recorded a number of facts as being agreed between the Parties,⁵⁰⁴ or between some of the Parties.⁵⁰⁵ Some facts were proposed by the Legal Representatives of Victims, who are not a Party to the proceedings. Therefore, the essential point was whether the Parties agreed to these facts.⁵⁰⁶ The Trial Chamber did not record any agreed facts based on documents that it found to lack the requisite relevance and probative value for admission into evidence.⁵⁰⁷

391. The Trial Chamber has the discretion to consider agreed facts as being proven without additional evidence, or to require additional evidence in the interests of justice.⁵⁰⁸ The Trial Chamber exercised its discretion to consider the agreed facts as proven between the relevant Parties. It did not rely on any agreed fact to the detriment of a Party that had not agreed to it. Unless otherwise stated, the Trial Chamber accepted the agreements between the Parties. They are listed in this judgment, together with the evidence, or in annex E.

⁵⁰⁴ Second decision on agreed facts (Merhi), disposition; First decision on agreed facts, para. 8, disposition.

⁵⁰⁵ Decision on agreed facts (participating victims) (Ayyash and Sabra), para. 10, disposition (between the Prosecution, the Ayyash Defence and the Sabra Defence); Second decision on agreed facts in UNIIIC reports (Merhi), para. 8, table B (between the Prosecution and the Merhi Defence); First decision on agreed facts in UNIIIC reports (Sabra), para. 5, disposition, table A (between the Prosecution and the Sabra Defence) – *see* correction in Second decision on agreed facts in UNIIIC reports (Merhi), table A.

⁵⁰⁶ Decision on agreed facts (participating victims) (Ayyash and Sabra), paras 7, 14.

⁵⁰⁷ Decision on agreed facts (participating victims) (Ayyash and Sabra), para. 11; Decision admitting documentary evidence on the Legal Representatives of Victims’ application, paras 39-41.

⁵⁰⁸ *Al Jadeed and Al Khayat* Appeal Judgment, fn. 390. *See also* Decision admitting documentary evidence on the Legal Representatives of Victims’ application, paras 38, 44, 78; Decision admitting into evidence statements of participating victims, para. 17; Decision on the Legal Representatives’ application to call evidence, paras 78, 97, 102.

4. Judicial notice

392. Rule 160 (A) provides that ‘The Trial Chamber shall not require proof of facts of common knowledge but shall take judicial notice thereof.’ Once the Trial Chamber has taken judicial notice of a fact of common knowledge, Rule 160 (A) implies that such facts cannot be challenged during trial.⁵⁰⁹ The Trial Chamber took judicial notice of several facts of common knowledge.⁵¹⁰ Unless otherwise stated in this judgment, the Trial Chamber treated these facts as unchallenged and listed them where necessary in the judgment.

⁵⁰⁹ Decision on taking judicial notice, para. 9.

⁵¹⁰ Decision on taking judicial notice, para. 28, disposition, table A; T. 19 November 2014, pp 45-47 (exhibit P310.1); T. 17 November 2014, pp 21, 32-34, 56-57 (exhibits P304-P307). Exhibit P307 was admitted only to show the position taken by the US towards Syria and to add context to the allegations made that Mr Hariri had aligned himself with the US in 2003, which may provide some background evidence. Decision on admission of documents (movements and events), para. 8, referring to T. 17 November 2014, p. 57.

IV. HISTORICAL AND POLITICAL BACKGROUND TO THE ATTACK

A. Introduction

393. The Trial Chamber's role as a first instance trial court is neither to write nor correct any version of history that witnesses or parties may have urged upon it. Its role is confined to adjudicating whether any of the four Accused are guilty beyond reasonable doubt of any of the charges against them.⁵¹¹ The attack on Mr Hariri, however, did not occur in a political or historical vacuum and the Trial Chamber cannot ignore the background to the attack as providing a possible motive for it. It does this while noting that motive is not an element of any of the crimes charged in the amended consolidated indictment.

394. The assassination by car bombing of a prominent politician—who had recently resigned as the prime minister and was preparing to contest the next parliamentary elections—was undoubtedly a political act. The Trial Chamber should therefore consider whether political motives may be attributed to any of the Accused, or the former accused and named co-conspirator, Mr Mustafa Amine Badreddine. Another important consideration is that of context. Understanding the political background to the attack is necessary to form an understanding of why Mr Hariri was targeted in this manner, but only insofar as it relates to whether or not any of the Accused on trial are guilty of any of the counts charged. Similarly, completeness requires placing the attack within a wider historical setting.

395. The Trial Chamber, however, is neither a fact-finding institution like the UNHCR or the UN Secretary-General's Fact-Finding mission that preceded it, nor a truth and reconciliation commission.⁵¹² Its statutory role is to determine, based solely on the evidence on the trial record, whether the Accused have been proved guilty beyond reasonable doubt of any crime charged in the amended consolidated indictment. It is not searching for the 'truth' in the manner of, say, a

⁵¹¹ *For example*, T. 5 June 2018, pp 27-28.

⁵¹² In a decision rejecting an application by the Sabra Defence asking the Trial Chamber to take judicial notice of the entire contents of the eleven UNHCR reports and that of the preceding Fact-Finding Mission (the FitzGerald Report) to the UN Secretary-General, the Trial Chamber held that it was 'holding a trial to determine whether Accused persons are guilty as charged in the consolidated indictment; it is not reviewing fact-finding reports or conducting a general inquiry'. Decision on taking judicial notice, para. 24.

truth and reconciliation commission; and, moreover, its powers to order the production of additional evidence are limited.⁵¹³

396. The Trial Chamber should also deal with the Prosecutor's pleaded allegation connecting the four Accused and Mr Badreddine with Hezbollah, which was then a political opponent of Mr Hariri's political party, the Future Movement. Paragraph 49 of the amended consolidated indictment pleads that 'All four Accused, as was Mustafa BADREDDINE, are supporters of Hezbollah, which is a political and military organisation in Lebanon'.

397. In examining this pleading, the Trial Chamber is confining itself to the evidence it received during the trial. A number of the facts noted below were recorded as agreements as to evidence between the Parties.

398. During the trial and following the reported death of Mr Badreddine in May 2016, the Trial Chamber ordered the Prosecution to file particulars in support of this allegation.⁵¹⁴ The Prosecution filed a summary statement of the evidence supporting the pleading, stating the following:⁵¹⁵

- the Green mobile network was a Hezbollah operated network—using a Prosecution interview with Mr Wissam Al-Hassan⁵¹⁶ from June 2012⁵¹⁷ and a press conference held by Mr Hassan Nasrallah, Hezbollah's Secretary-General, in August 2010;⁵¹⁸

⁵¹³ Rule 165 'Power of Chambers to Order Production of Additional Evidence', provides 'After hearing the Parties, the Trial Chamber may, *proprio motu* or at the request of a Party, order either Party or a victim participating in the proceedings to produce additional evidence. It may, after hearing the Parties, *proprio motu* summon witnesses and order their attendance.' The Trial Chamber does not view Rule 165 as permitting it to operate as a truth-finding commission outside the boundaries of a system in which a Prosecutor presents a case against accused persons. Any additional evidence that a Trial Chamber orders produced must have a connection with the cases presented by the Parties.

⁵¹⁴ Decision amending the consolidated indictment, paras 54-58.

⁵¹⁵ F2735, Prosecution Summary Statement of Evidence in relation to paragraph 49 of the Amended Consolidated Indictment, 23 September 2019. A public redacted version was filed on 31 October 2017. An update was filed in F2948, Notice Concerning an Updated Prosecution Summary Statement of Evidence in relation to paragraph 49 of the Amended Consolidated Indictment, 20 January 2017.

⁵¹⁶ Mr Al-Hassan was a former Lebanese ISF officer who resigned from the ISF on 4 February 2005. At the time of Mr Hariri's death he was his head of security. In late July 2005, he returned to the ISF and in early 2006, he became the head of the ISF's Information Branch assigned to lead the investigation into Mr Hariri's death. Decision on admission of Mr Al-Hassan's interview, paras 1-2.

⁵¹⁷ Exhibit P2121 (Interview of Wissam Al-Hassan, 17 June 2012); exhibit P2122 (Interview of Wissam Al-Hassan, 16 June 2012).

⁵¹⁸ Exhibit P2098 (Press conference on 9 August 2010).

- Mr Nasrallah made a speech in August 2011 referring to Mr Ayyash, Mr Badreddine, Mr Oneissi and Mr Sabra as ‘four honourable resistance men’;⁵¹⁹
- In a speech in November 2010, Mr Nasrallah stated, of the Special Tribunal, ‘Mistaken is he who believes that we will allow the arrest or detention of any of our mujehdeen. The hand that attempts to reach them will be cut off’;⁵²⁰
- Many witnesses or potential witnesses had refused to attend an interview or follow-up interview with Prosecution investigators, instead referring them to the Hezbollah Security Committee;⁵²¹
- Photographs, articles and videos published after Mr Badreddine’s announced death in May 2016 reveal that he was a Hezbollah member, involved in military operations for over 30 years, and in a leadership position in the organisation; able to access resources, human and logistical to operate his command; was promoted to a position of great seniority in 2008 and his death was publicly commemorated in Lebanon, Syria and Iran;
- Mr Ayyash was selected in December 2003 to escort a Hezbollah MP on the Hajj pilgrimage and was described as a ‘brother’ in a letter from the Office of the Head of the Loyalty to the Resistance Bloc;
- On his death, Mr Merhi’s brother, Mr Youseff Habib Merhi, was proclaimed ‘a martyr’ by Hezbollah, and Mr Nasrallah attended the funeral, the procession of which was led by Hezbollah senior politicians and representatives;
- One witness described Mr Sabra as a Hezbollah supporter when he was younger,⁵²² another that he was connected to Hezbollah⁵²³ and a third that he was a Hezbollah supporter.⁵²⁴ His younger brother, Mr Moussa Hassan Sabra, was recognised as a

⁵¹⁹ Exhibit P2095 (Speech by Hassan Nasrallah on 17 August 2011).

⁵²⁰ Exhibit P2090 (Speech by Hassan Nasrallah on 11 November 2010).

⁵²¹ Exhibit P1136 (Witness statement of Timothy Holford).

⁵²² Exhibit P1149 (Statement of Witness PRH106 dated 15 October 2010), para. 60.

⁵²³ Exhibit P1150 (Interview of Witness PRH069, 19 October 2010), p. 33.

⁵²⁴ Exhibit P2103 (Statement of Abbas Mohammed Alaaeddine), para. 29.

Hezbollah ‘fighter’ at a commemorative ceremony for him, attended by Hezbollah officials;

- The younger brother and nephew of Mr Oneissi, Mr Ahmed Hassan Oneissi and Mr Ali Ahmed Oneissi, were declared ‘martyrs’ by Hezbollah upon their deaths; and
- Certain Hezbollah officials or public representatives were using particular telephone numbers which were in contact with numbers attributed to Mr Merhi, Mr Ayyash or Mr Badreddine.

399. The Trial Chamber has found above that paragraph 49 is not a material fact underpinning criminal responsibility.⁵²⁵ Therefore, the Prosecution does not need to prove this factual allegation beyond reasonable doubt; it is not one that is indispensable to a conviction.⁵²⁶ However, as the Prosecution led evidence supporting its pleading, the Trial Chamber will examine it.

400. Further, in submissions related to Hezbollah, the Prosecution’s final trial brief, under the heading ‘The resources, training, extensive preparation, skill, and experience necessary to execute the Attack is only consistent with the actions of the Accused being led by a sophisticated military actor’, outlines three factors in support of this.

401. These are, relevantly, first, the requirement for ‘sophisticated organisation, planning and financial resources’, second, ‘access to approximately 2 ½ tonnes of military grade high explosives’ and third, ‘a group of highly co-ordinated, organised, disciplined, trusted individuals with the skill, training and experience to, amongst other things: conduct extensive, meticulous and highly co-ordinated covert surveillance of the target’s security and convoy over weeks and months; transport and store the explosives’.⁵²⁷

402. The submission concludes by stating that the ‘existence of all of these features could only be found in a sophisticated, experienced group supported by an unusually well-resourced sponsor’.⁵²⁸ To this must be linked the submission that:

⁵²⁵ See para. 122.

⁵²⁶ Compare para. 205.

⁵²⁷ Prosecution final trial brief, para. 1094.

⁵²⁸ Prosecution final trial brief, para. 1095.

BADREDDINE led the operation at the apex of the Green Network, the covert phone network he used to communicate with AYYASH and MERHI in order to coordinate the actions of separate teams carrying out the preparation and execution of the Attack. The Green Network is acknowledged to be a Hezbollah network, reported to be used by its security apparatus.⁵²⁹

403. The Trial Chamber heard extensive evidence from the Prosecution and the Defence of Mr Oneissi concerning the political and historical background to the attack. During the trial, the Prosecution proposed leading evidence of the political background, including from a Lebanese Druze politician, cabinet minister and Hariri ally, Mr Marwan Hamade, which was strongly opposed by counsel for the then five Accused.

404. The five themes of evidence relevant to this, as summarised by the Prosecution, were:

- Mr Hariri's deteriorating relationship with Syria, as a consequence of his goal to strengthen the Lebanese autonomy;
- Syria's correspondingly increasing resolve to exert control beyond mere influence over Lebanese internal affairs;
- growing concerns voiced by the international community regarding external pressures bearing upon the political affairs of Lebanon;
- the evolution of an effective opposition movement in September 2004, and, thereafter in Lebanon of which Mr Hariri was first a silent and then a more public participant; and
- Mr Hariri's status as an influential statesman in the Gulf region and beyond.⁵³⁰

405. The Defence, on the other hand, argued that the evidence was not relevant to any allegation pleaded in the (then) consolidated indictment.⁵³¹

406. After hearing argument on the point, the Trial Chamber allowed the Prosecution to call evidence of the prevailing political situation in Lebanon at the time, from Mr Hamade who had

⁵²⁹ Prosecution final trial brief, para. 6.

⁵³⁰ Prosecution submissions, T. 11 November 2014, pp 4-6, T. 13 November 2014, pp 35-36.

⁵³¹ Defence submissions, T. 13 November 2014, pp 71-83, 88-92, 94-100, T. 14 November 2014, pp 3, 6-10, 14-36.

himself been the subject of an unsuccessful assassination attempt on 1 October 2004.⁵³² The Trial Chamber held that:

Evidence of the prevailing political situation in Lebanon in 2004 and early 2005 could provide background and give context to much of other evidence adduced by the Prosecution and even by Defence counsel. Mr Hamade, as a close political associate of Mr. Hariri and a Lebanese cabinet minister who was intimately involved in many of the events at the time, is ideally placed to provide some of this evidence. This includes the content of meetings between Mr Hariri and Syrian officials; this could help to explain the wider circumstances leading to Mr. Hariri's assassination. The evidence in general could also be used to explain a non-private motive for the commission of any offence that the Trial Chamber could find proven.⁵³³

407. The Trial Chamber ruled that some of Mr Hamade's evidence would support some material facts pleaded in the amended consolidated indictment—such as evidence of Mr Hariri's movements and meetings between October 2004 and his death, and hence any surveillance of him. The remainder, namely, 'that of the prevailing political situation in Lebanon, including Mr Hariri's deteriorating relationship with the Syrian authorities, provides background evidence that will make some of the evidence more explicable. It may also provide context to the events leading to his assassination.'⁵³⁴

408. Consequently, the Trial Chamber heard evidence from Mr Hamade and other politicians and officials about the events leading to Mr Hariri's assassination. These included:

- Mr Walid Jumblatt, a prominent Lebanese MP who was the leader of the Lebanese Progressive Socialist Party;⁵³⁵

⁵³⁴ Decision denying request to exclude evidence of Witness PRH038, p. 13.

⁵³⁵ Walid Jumblatt, T. 4 May 2015, p. 6. Mr Jumblatt's relationship with Mr Hariri began in the mid-1980s when he came to Lebanon with Prince Bandar Bin Sultan as an envoy of the Saudi King Fahd. They had a 'very firm and strong relationship' and in the years before Mr Hariri's death, they generally met at least once a week on Sundays, until Sunday 13 February 2005. Walid Jumblatt, T. 4 May 2015, p. 56. Mr Jumblatt testified from 4 to 7 May 2015.

- Mr Fouad Siniora, the Minister of Finance in the Hariri governments, and himself prime minister from July 2005 to May 2008;⁵³⁶
- Mr Jamil El-Sayyed, the director of the Lebanese *Sûreté Général* between 1998 and 25 April 2005, who was imprisoned and held without charge by the Lebanese authorities between 30 August 2005 and 29 April 2009, when his release was ordered by the Special Tribunal's Pre-Trial Judge;⁵³⁷
- Mr Marwan Hamade, a minister in Mr Hariri's government;⁵³⁸
- Mr Ghazi El-Youssef, an advisor to Mr Siniora and Mr Hariri;⁵³⁹
- Mr Ghattas El-Khoury, a Lebanese MP from 2000 to 2005;⁵⁴⁰
- Mr Bassem El-Sabeh, a former journalist, and Lebanese MP between 1992 and 2009;⁵⁴¹
- Mr Ghaleb El-Chammaa, a businessperson, friend and associate of Mr Hariri's;⁵⁴²
- Mr Ali Hamade, a journalist;⁵⁴³
- Mr Hani Hammoud, a media advisor to Mr Hariri and editor of the newspaper *Al-Mustaqbal*;⁵⁴⁴
- Mr Faisal Salman, a journalist;⁵⁴⁵

⁵³⁶ Fouad Siniora, T. 23 March 2015, pp 5-6. Mr Siniora testified from 23 to 26 March 2015 and again from 27 to 28 May 2015.

⁵³⁷ Jamil El-Sayyed, T. 5 June 2018, pp 2-3. Mr El-Sayyed testified from 5 to 7 June 2018. *See also* Order regarding the detention of four Generals.

⁵³⁸ Marwan Hamade, T. 17 November 2014, pp 22-24. Mr Hamade testified from 17 to 20 November and 8 to 11 December 2014.

⁵³⁹ Ghazi El-Youssef, T. 10 March 2015, pp 7, 9. Mr El-Youssef testified from 10 to 12 and on 20 March 2015.

⁵⁴⁰ Ghattas El-Khoury, T. 15 January 2015, p. 5. Mr El-Khoury testified on 15, 16, 20 and 21 January 2015.

⁵⁴¹ Bassem El-Sabeh, T. 16 March 2015, pp 5-6, 12-13. Mr El-Sabeh testified from 16 to 19 March 2015.

⁵⁴² Ghaleb Ahmad El-Chammaa, T. 10 February 2015, pp 4-6. Mr El-Chammaa testified from 10 to 12 February 2015 and on 3 March 2015.

⁵⁴³ Mr Ali Hamade is Mr Marwan Hamade's younger brother, and was a journalist for *An-Nahar* newspaper who covered Mr Hariri's activities, Ali Hamade, T. 13 April 2015, pp 3-5. He testified on 13 and 14 April 2015.

⁵⁴⁴ Mr Hani Hammoud, T. 19 May 2015, p. 5. Mr Hammoud testified from 19 to 21 May 2015.

⁵⁴⁵ Mr Salman was a journalist at *As-Safir* between 1974 and 2006 (and its political editor in 2004), and became close to Mr Hariri. Faisal Salman, T. 8 January 2015, pp 8, 14, 30. The visitor's logbook for Quraitem Palace, exhibit P301, records him visiting there 55 times between 27 August 2004 and 13 February 2005. He testified on 8 January 2015.

- Mr Salim Diab a businessman and MP;⁵⁴⁶
- Mr Atef Majdalani, a Lebanese Future Movement MP elected in 2000;⁵⁴⁷ and
- Mr Mustafa Nasser, an adviser to Mr Hariri.⁵⁴⁸

All except Mr El-Sayyed, who appeared as a witness for the Oneissi Defence, were called by the Prosecution.

409. The Sabra Defence, in a mid-trial thematic summary, submitted that Islamic extremists were responsible for Mr Hariri's death. No substantive evidence was presented to support this theory, and it was not pursued at the end of the trial.⁵⁴⁹

410. The evidence also included numerous extracts from the UNIC Beirut Press Review—a daily UN news summary of Lebanese and regional news—and press releases issued by Mr Hariri's *Al-Mustaqbal* newspaper. These press releases were prepared by Mr Hariri's press office at Quraitem Palace and sent to *Al-Mustaqbal* for distribution to other media outlets.⁵⁵⁰

411. The recitation of the evidence and facts below and its analysis is within the confines of the Trial Chamber's decision of 17 November 2014 setting out the parameters for receiving and using this evidence. And, additionally within the bounds of assessing the evidence supporting the pleading in paragraph 49 of the amended consolidated indictment concerning the Hezbollah support of the four Accused and Mr Badreddine.

⁵⁴⁶ Mr Salim Diab is a businessman and politician and a close friend of the Hariri family, who was a Future Movement MP between 1996 and 2000. Salim Diab, T. 22 January 2015, pp 4-7, 13. He testified on 22 and 23 January and 3 February 2015.

⁵⁴⁷ Mr Atef Majdalani is a neurologist who was elected to Parliament in 2000 on Mr Hariri's Future Movement list. Atef Majdalani, T. 28 April 2015, pp 5-7. Mr Majdalani testified from 28 April to 1 May 2015.

⁵⁴⁸ Mustafa Nasser was a journalist who became an adviser to Mr Hariri, serving in that function between 1992 and his assassination. His principal role was to act as a liaison between Mr Hariri and Mr Nasrallah and his assistant, Mr Hussein Khalil. Mustafa Nasser, T. 9 April 2015, pp 6-8. Mr Nasser testified on 9, 10 and 15 April 2015.

⁵⁴⁹ F3108, Annex A, Defence Thematic Summary of Information Relevant to the Chamber in Relation to the False Claim of Responsibility, 28 April 2017. *See also* Decision on admission of documents (Abu Adass).

⁵⁵⁰ Maarouf El-Daouq, T. 12 November 2014, pp 78-84, T. 13 November 2014, pp 9, 14-15. From 1998 to 2004, Mr El-Daouq worked for Mr Hariri as the Head of the Lebanese Press Office for the President of the Council of Ministers. Maarouf El-Daouq, T. 12 November 2014, p. 78.

B. Background, including the Lebanese Civil War

412. The Prosecution's final trial brief states that 'the Accused's political affiliations, coupled with the surrounding political context, assist in understanding the Accused's common interests', and the fact 'that those interests aligned with maintaining the status quo, which HARIRI threatened, is relevant in understanding the timing and motivations behind the Accused's actions'.⁵⁵¹ Further, the attack on Mr Hariri is 'inextricably linked with the question of Syria's continuing hegemony over Lebanon established after the civil war'.⁵⁵²

413. The Trial Chamber received sufficient evidence to be satisfied of Syria's domination—political, military and economic—over Lebanon from at least the Lebanese civil war until the withdrawal of Syrian soldiers from Lebanon in April 2005. Its gist, in essence, was uncontested.

414. The evidence of Syrian influence in Lebanon, however, goes back much further, and the Trial Chamber took judicial notice, under Rule 160, of the following statement in the first UNIIIC report of October 2005:

The Syrian Arab Republic has long had a powerful influence in Lebanon. During the Ottoman Empire, the area that became Lebanon was part of an overall administrative territory governed from Damascus. When the countries were established in the aftermath of the First World War, Lebanon was created from what many Arab nationalists considered to be rightfully part of Syria. Indeed, since the countries became independent, they have never had formal diplomatic relations.⁵⁵³

415. The evidence also is sufficient to establish that the attack on Mr Hariri most likely had some connection with the Syrian presence in Lebanon and tensions between the Syrian government and opponents of its continuing presence. However, the Trial Chamber did not receive evidence that could establish that the leadership of Hezbollah had any direct connection with Mr Hariri's assassination. Nor that the Accused had 'non-private' motives connected with Hezbollah's leadership.

⁵⁵¹ Prosecution final trial brief, para. 26.

⁵⁵² Prosecution final trial brief, para. 627.

⁵⁵³ Judicial notice facts, no. 6.

416. The Lebanese civil war lasted from 1975 to 1990, caused an estimated 120,000 deaths and was largely fought by militias that ‘corresponded to Lebanon’s confessional communities’.⁵⁵⁴ At various times and at the request of the Lebanese Government, Syria and at least ten other countries deployed troops in Lebanon to end the fighting and to stabilise the situation.⁵⁵⁵

417. President Hafez Al-Assad came to power in Syria in 1971 and was president until his death in June 2000 when his son, Mr Bashar Al-Assad, succeeded him.⁵⁵⁶

418. Syria first deployed troops in May 1976, and five months later its deployment was transformed into an Arab Deterrent Force, sanctioned by the League of Arab States. The Trial Chamber took judicial notice of the following:

Syrian troops were invited into Lebanon by Lebanese President Suleiman Franjeh in May 1976 in the early stages of the latter’s civil war. In the Taif Agreement, reached among members of the Lebanese Parliament, that ended the civil war in 1989, inter alia, Lebanon thanked the Syrian Arab Republic for its assistance in deploying its forces in Lebanon. A provision of the agreement called for Lebanon and the Syrian Arab Republic to determine jointly the future redeployment of those forces. A later agreement reached between the two countries in May 1991 regarding cooperation restated that provision. Syrian forces withdrew in May 2005 in compliance with Security Council resolution 1559 (2004).⁵⁵⁷

419. Syrian troops constituted the majority of these troops, and in 2004 the Lebanese Government informed the UN Secretary-General that at one point the Syrian forces in Lebanon had totalled 40,000. The Syrian and Lebanese Governments also informed him that the Syrian soldiers continued to be present in Lebanon ‘by mutual agreement’.⁵⁵⁸

⁵⁵⁴ Exhibit P451 (Report of the UN Secretary-General pursuant to Security Council resolution 1559 (2004)), para. 2.

⁵⁵⁵ Exhibit P451, para. 2 (‘Over the years at various times, France, Italy, the Libyan Arab Jamahiriya, Yemen, Saudi Arabia, the Sudan, the Syrian Arab Republic, the United Arab Emirates, the United Kingdom of Great Britain and Northern Ireland and the United States of America deployed forces in Lebanon at the request of its Government to bring the fighting to an end and to stabilize the situation.’).

⁵⁵⁶ Marwan Hamade, T. 17 November 2014, pp 59-60, 67, T. 18 November 2014, pp 7-8, 56; Fouad Siniora, T. 24 March 2015, p. 68, T. 26 March 2015, p. 36; Jamil El-Sayyed, T. 5 June 2018, p. 56.

⁵⁵⁷ Judicial notice facts, no. 7.

⁵⁵⁸ Exhibit P451, paras 4, 13.

420. Israel carried out frequent military operations in Lebanon during the civil war, including large-scale incursions, and, from June 1982, maintained an extended occupation of southern Lebanon.⁵⁵⁹

421. Hezbollah, a Shia political grouping with a military wing, was formed in the early 1980s, during the war. Mr Hassan Nasrallah has been its Secretary-General since 1992. The UN Secretary-General reported in September 2004 that it was then the ‘most significant remaining armed group’ in the country.⁵⁶⁰ The Lebanese government (Mr Hariri’s) was quoted in the report as referring to it ‘as a “national resistance group” that has as its goal the defence of Lebanon from Israel and the removal of Israeli forces from Lebanese soil, namely, the Shab’a farms’.⁵⁶¹

422. On 22 October 1989, members of the Lebanese Parliament meeting in Taif, Saudi Arabia, agreed to the Lebanese Document of National Accord (Charter of National Reconciliation), known as the Taif Agreement or Taif Accord. Its aim was to end the civil war and provide the basis for a reformed post-war Lebanese Government.⁵⁶² Several countries, including prominently Saudi Arabia, facilitated the agreement.⁵⁶³ Mr Hariri, acting as an emissary of the Saudi royal family, played a crucial role in drafting the agreement and in negotiations between Saudi Arabia, Syria and various Lebanese parties.⁵⁶⁴ Mr Hariri was apparently proud of this role and the Trial Chamber received evidence that in an audio-recorded conversation with the Syrian Deputy Minister for Foreign Affairs on 1 February 2005, he said that ‘I was the one behind the Taif Agreement, and it is my baby.’⁵⁶⁵ The Lebanese Parliament ratified the agreement on 5 November 1989.⁵⁶⁶

⁵⁵⁹ Exhibit P451, paras 2, 5-7.

⁵⁶⁰ Exhibit P451, paras 18-19.

⁵⁶¹ Exhibit P451, para. 19. The UN Secretary-General reported, ‘Lebanon maintains that the Shab’a farms are Lebanese territory, not Syrian. However, in my report of 16 June 2000 (S/2000/590), I had confirmed that Israel had fulfilled as of that date the requirements of Security Council resolutions 425 (1978) and 426 (1978) that it “withdraw forthwith its forces from all Lebanese territory”. The Council endorsed this conclusion in the statement made on behalf of the Council by its President (S/PRST/2000/21), on 18 June 2000.’

⁵⁶² Judicial notice facts, no. 7; exhibit P304 (Taif Agreement).

⁵⁶⁴ Marwan Hamade, T. 17 November 2014, pp 24-25, 62, T. 19 November 2014, pp 22-23; Faisal Salman, T. 8 January 2015, p. 20; Ghaled Ahmad El-Chammaa, T. 10 February 2015, pp 10-11, 14-15; Fouad Siniora, T. 23 March 2015, p. 13; Walid Jumblatt, T. 5 May 2015, p. 13.

⁵⁶⁵ Exhibit P409.1 (Transcript of audio-recorded conversation between Mr Hariri and Mr Walid Moallem, 1 February 2005), p. 8. *See also* Walid Jumblatt, T. 6 May 2015, pp 24-25, 32.

⁵⁶⁶ Exhibit P304, p. 1.

423. The agreement called for the liberation of Lebanon from Israeli occupation and the disbanding of *all* militias,⁵⁶⁷ but envisioned Syria playing a role in Lebanon beyond the civil war. It recognised the ‘special relationship’ between Lebanon and Syria, thanked Syria for its assistance in deploying troops to Lebanon and called on Syrian troops to assist Lebanese forces ‘to reinstate the sovereignty of the Lebanese state’ for up to two years. The Lebanese and Syrian governments were then to jointly determine the redeployment of Syrian troops to the Bekaa area bordering Syria and were to enter a separate agreement as to the ultimate duration of the Syrian presence.⁵⁶⁸

424. The agreement also set out a number of constitutional reforms, including abolishing political sectarianism, mandating the ‘governorate’ as the electoral district and declaring the president the head of state and the prime minister the head of the government.⁵⁶⁹

425. Under the principle of political sectarianism, parliamentary seats are allocated on a formula based upon religious adherence. According to this, the president is a Christian, the prime minister a Sunni Muslim and the parliamentary speaker a Shia Muslim. The Lebanese electoral system is too complicated to summarise here, but its essence is six electoral divisions in which candidates who are identified by their religious confession are elected according to the percentage of votes won. In the 2000 elections at which Mr Hariri was last elected, Beirut, the most populous district of Lebanon, had only three electoral districts.⁵⁷⁰

426. On 22 May 1991, Lebanon and Syria signed the Fraternity, Cooperation and Coordination Treaty (Treaty of Brotherhood, Cooperation and Coordination). While reiterating the Taif Agreement’s provisions regarding the redeployment of Syrian forces and the ultimate duration of their presence in Lebanon, the treaty pronounced the ‘common destiny’ of Lebanon and Syria and sanctioned Syria’s exertion of political influence in Lebanese affairs.⁵⁷¹

427. Notwithstanding the Taif Agreement and the 1991 treaty, Syria maintained its military presence in Lebanon, with the Lebanese Government’s consent, through to the attack on Mr Hariri;

⁵⁶⁷ This included Hezbollah.

⁵⁶⁸ Judicial notice facts, no. 7; exhibit P304, pp 8-10.

⁵⁶⁹ Exhibit P304, pp 1-7.

⁵⁷⁰ Exhibit P304, pp 1-7.

⁵⁷¹ Judicial notice facts, nos 2, 7; exhibit P306 (Treaty of Brotherhood, Cooperation and Coordination between Lebanon Republic and Syrian Arab Republic), p. 1.

and Syrian influence in Lebanese affairs significantly increased.⁵⁷² The Israeli withdrawal envisioned by the Taif Agreement occurred only in May 2000.

428. Mr El-Sayyed, at the relevant time the director-general of the Lebanese *Sûreté Générale*, described the continuing role of Syria at this time as ‘managing political balances in Lebanon’.⁵⁷³

429. The Trial Chamber also received extensive evidence about the influence and role of the Syrian intelligence apparatus in Lebanon in the years preceding Mr Hariri’s death, including in controlling Lebanese political life, such as choosing presidents, prime ministers, cabinet ministers and candidates for parliamentary elections, and in exercising control over how MPs voted in Parliament. The evidence suggested that Syrian intelligence officers stationed in Lebanon were directly responsible for this, and in particular, during the relevant periods, the successive chiefs of Syrian military intelligence in Lebanon, Major-General Ghazi Kanaan and Brigadier-General Rustom Ghazaleh.

430. Until October 2002, Major-General Kanaan was the chief of Syrian military intelligence in Lebanon, stationed at Anjar in the Bekaa valley near the Syrian border. He was succeeded in this post by Brigadier-General Ghazaleh. Until then Mr Ghazaleh had been the chief of the Beirut Section, reporting to Mr Kanaan.⁵⁷⁴

431. The former Lebanese Prime Minister, Mr Fouad Siniora, described Mr Ghazaleh as ‘the face’ of the Syrian security system, and said that Mr El-Sayyed was an important figure on the Lebanese side.⁵⁷⁵ Mr Kanaan, according to Mr El-Sayyed, was a Syrian major-general who served in Lebanon between 1983 and 2003, whose official position was the head of Syrian intelligence in Lebanon.⁵⁷⁶ This accords with the information received from the Syrian government.

432. Other evidence related to the personal and political relationship between the two is interspersed chronologically below.

⁵⁷² Judicial notice facts, no. 2; exhibit P451, para. 13.

⁵⁷³ Jamil El-Sayyed, T. 5 June 2018, p. 33.

⁵⁷⁴ A Syrian Government response, dated 25 April 2006, to a UNIIIC request for assistance specified that Mr Ghazaleh was appointed Chief of Branch Headquarters on 16 October 2002, succeeding Mr Kanaan. Exhibit 5D128 (Response of Syrian Government to UNIIIC request for assistance), p. 5.

⁵⁷⁵ Fouad Siniora, T. 25 March 2015, p. 31. Mr Siniora said that by February 2005, Mr Ghazaleh was the senior figure at the head of military intelligence in Lebanon. Fouad Siniora, T. 25 March 2015, p. 55.

⁵⁷⁶ Jamil El-Sayyed, T. 6 June 2018, p. 5.

C. Mr Hariri's initial term as prime minister—31 October 1992 to 4 December 1998—and following years

433. Mr Hariri 'served as prime minister of Lebanon in five governments from 31 October 1992 to 4 December 1998, and from 26 October 2000 until his resignation on 26 October 2004'.⁵⁷⁷ He 'was a prominent political figure in Lebanon'.⁵⁷⁸

434. The evidence was uncontested that from the end of the civil war in 1990 until Syria withdrew its military from Lebanon in April 2005, Syria had a dominant role in Lebanese political, economic and military affairs. As noted above, this included direct influence over political administrations including cabinet posts and the selection of the prime minister and president. It also had a pervasive intelligence presence in Lebanon. According to Mr El-Sayyed, for example, without Syrian approval 'it would have been impossible for [Mr Hariri] to do what he wanted to do in Lebanon'.⁵⁷⁹ This occurred over the duration of Mr Hariri's five terms as prime minister of Lebanon.

1. Mr Hariri's business and media interests

435. The Trial Chamber received uncontested evidence that Mr Hariri, a Sunni Muslim, was a successful businessperson with numerous political and business connections, most particularly in Saudi Arabia. His business interests included construction and the media. He had a particular role in the reconstruction of Lebanon after the civil war, and especially in Beirut. Witnesses testified that he undertook to rebuild and develop war-torn Lebanon, particularly downtown Beirut, and to implement reforms aimed at facilitating trade and investment.⁵⁸⁰

436. While in his first term as prime minister, Mr Hariri executed a plan to raze and rebuild downtown Beirut—which was extensively damaged in the civil war—through a company, *Solidere*, in which he was a shareholder.⁵⁸¹ In 1994, the Lebanese Parliament ratified a proposal by Mr Hariri and established the company.⁵⁸² According to Mr Siniora, the proposal was that 'the

⁵⁸¹ Salim Diab, T. 22 January 2015, p. 29; Witness PRH256, T. 22 October 2014, p. 83; Ghattas El-Khoury, T. 15 January 2015, p. 31.

⁵⁸² Fouad Siniora, T. 24 March 2015, pp 63-66, T. 26 March 2015, p. 68.

rights owners in that area would become partners and shareholders in Solidere’—meaning the property owners.⁵⁸³ The real estate was expropriated, and the rights owners were given shares in the company—two-thirds of the company went to them, the rest to the investors.⁵⁸⁴ Mr Hariri owned between five and ten per cent of the shares in the company while he also was prime minister.⁵⁸⁵ On 12 September 2004, Mr Hariri received an award from UN-HABITAT in Barcelona for his role in the ‘reconstruction of Lebanon’.⁵⁸⁶

437. This particular reconstruction project was controversial in causing the compulsory relocation of many thousands of residents who lived there. According to Mr Mustafa Nasser—an adviser to Mr Hariri charged with liaising with Hezbollah—some 200,000 to 300,000 people were living in the *Solidere* area, many of whom were Hezbollah supporters who had been displaced by the war in the south of Lebanon. Their relocation required coordination between Hezbollah and Mr Hariri,⁵⁸⁷ including compensating the displaced. Hezbollah helped Mr Hariri in getting these people out of the area so it could be developed. Negotiations about compensation lasted for many years.⁵⁸⁸

438. Prosecution witnesses and Mr El-Sayyed stated that it was understood that Syria gave Mr Hariri its blessing to create *Solidere*.⁵⁸⁹ Mr El-Sayyed was highly critical of this, saying ‘*And with the support of the Syrians, there were also some negative things. For example, the creation of Solidere. It’s a company that controlled the capital, Beirut. It’s the only capital in the world that’s controlled by a private company. Hariri, for example, would not have been able to create that company and to control Beirut as his own private property hadn’t it been for Abdel-Halim Khaddam, who used to summon the Members of Parliament and the opponents and used to tell them that they will never be Members of Parliament again unless they vote for that project ... But*

⁵⁸³ Fouad Siniora, T. 24 March 2015, pp 63-64.

⁵⁸⁴ Fouad Siniora, T. 26 March 2015, pp 64, 66-69. According to Mr Siniora, the shares had equal voting rights, but the price of class A shares could be ten cents higher than that of the class B shares.

⁵⁸⁵ Namely, USD 120 million or 6.66 per cent of its capitalised value of USD 1.8 billion. Fouad Siniora, T. 26 March 2015, p. 69; Salim Diab, T. 22 January 2015, pp 30-31.

⁵⁸⁷ Mustafa Nasser, T. 10 April 2015, pp 79-80.

⁵⁸⁸ Exhibit 2D131 (Witness statement of Mustafa Nasser, 12 August 2010), para. 15.

⁵⁸⁹ Fouad Siniora, T. 24 March 2015, pp 66-67; Marwan Hamade, T. 9 December 2014, pp 56-57.

*there were also some bank accounts that were created in their names and stuff like that in order to facilitate the project of Hariri.*⁵⁹⁰

439. According to Prosecution and Defence evidence, at the time Syria was playing a balancing act between supporting Mr Hariri and his project to rebuild Lebanon while also supporting the Lebanese army, which did not share Mr Hariri's economic vision.⁵⁹¹ According to Mr El-Sayyed, *Solidere* was one of many 'personal requests' that Mr Hariri submitted to Syria.⁵⁹²

440. Apart from his construction business interests, while he was the prime minister of Lebanon, Mr Hariri simultaneously also had extensive media interests, which included ownership of Future TV, *Al-Mustaqbal* and *An-Nahar* newspapers⁵⁹³ and a half-share in the ostensibly state-owned *TeleLiban*.⁵⁹⁴

2. Syrian involvement in Lebanese political affairs

441. Mr Mustafa Nasser testified that in the mid-1990s *TeleLiban*—'the State TV' which was half-owned by Mr Hariri and half state-owned but effectively controlled by Mr Hariri when he was the prime minister—interviewed the Jordanian monarch King Hussein.⁵⁹⁵ Mr Ghazaleh, who then was the chief of Syrian intelligence in Beirut, contacted the head of the board of directors, Mr Fouad Naim, and asked for the show to be stopped. Mr Naim informed Mr Hariri, who in turn ordered him to cancel the broadcast. The video was then given to another station, later New TV, which broadcast it. At the time, King Hussein and the Syrians were not on good terms. To Mr Nasser, that was an example of how the Syrians had the final say in all political and media affairs in Lebanon.⁵⁹⁶

442. Another was given by Mr Bassem El-Sabeh, who was elected as an MP in 1992. In 1994, Mr Hariri asked Mr El-Sabeh, a Shia who was close to him, to join his cabinet.⁵⁹⁷ However, this

⁵⁹⁰ Jamil El-Sayyed, T. 5 June 2018, pp 35-36, 77.

⁵⁹¹ Jamil El-Sayyed, T. 5 June 2018, pp 27, 32; Bassem El-Sabeh, T. 16 March 2015, pp 17-18.

⁵⁹⁶ Mustafa Nasser, T. 9 April 2015, pp 14-23. In 1994, Mr Hariri had appointed Mr Nasser to the board of the station. Mr Naim told Mr Nasser about Mr Ghazaleh's call.

⁵⁹⁷ Bassem El-Sabeh, T. 16 March 2015, p. 14.

caused a political problem with the Speaker of the Parliament, Mr Nabih Berri, who was also Shia and objected, which delayed the formation of the government. Mr Hariri then asked Mr Kanaan to intervene. Mr Kanaan came to Mr El-Sabeh's house to calm things down and to explain the decision rejecting his nomination as a minister. He explained that he was surprised but unfortunately, 'that was the way adopted to form governments in Lebanon at the time'.⁵⁹⁸

443. During Mr Hariri's first term as prime minister, Mr Elias Hrawi was the Lebanese president. Mr Hrawi's mandate was set to expire in 1995, and the commander of the Lebanese armed forces, General Emile Lahoud, was seen as the likely next president.⁵⁹⁹ This, however, was not to Mr Hariri's liking. That year, Mr Hariri and his allies persuaded Syria—then led by President Hafez Al-Assad—to accede to a constitutional amendment to extend Mr Hrawi's mandate.⁶⁰⁰ This was the first time that a presidential term had been extended.⁶⁰¹ According to both Prosecution and Defence witnesses, Mr Hariri saw Mr Hrawi as more flexible and someone who could possibly stop Mr Lahoud, whose presidency would be considered to equate to Syrian control over Lebanon.⁶⁰²

444. In November 1996, Mr Hariri formed his third government, and, according to Mr Siniora, for the first time, Syria imposed all but a handful of ministers on Mr Hariri.⁶⁰³ Mr Ghazi Kanaan and his representative in Beirut, Mr Rustom Ghazaleh, imposed the cabinet members on Mr Hariri.⁶⁰⁴ Mr Hariri was upset and discussed the issue at length with President Al-Assad, but ultimately accepted the Syrian-dominated government.⁶⁰⁵ As an example of Syrian interference in those elections, Mr Atef Majdalani, a political supporter of Mr Hariri, contested the 1996 elections on Mr Hariri's list, but testified that he lost because the Syrians asked 'one of our allies who was also on my electoral list' to take his name off and replace it with another candidate.⁶⁰⁶

445. At that time, Mr Hariri's relations with President Hafez Al-Assad were described as being up and down, but generally good, or at least acceptable. And according to Mr Nasser, who was

⁶⁰⁶ Atef Majdalani, T. 29 April 2015, pp 34-35.

then working for Mr Hariri, he did not need any liaison between him and the Syrians and ‘just went directly to them’.⁶⁰⁷ Mr Hariri, according to some, was considered as an unofficial foreign minister of Syria, working to achieve rapprochement between Syria and Europe, and particularly with France, with whom he had good relations.⁶⁰⁸

446. President Hafez Al-Assad was in ill health between 1998 and 2000.⁶⁰⁹ Around this time, his second son, Bashar, started to gain more influence and was given responsibility for what was described as the ‘Lebanon file’.⁶¹⁰ Mr Bashar Al-Assad, according to Mr Hamade, then tried to exert more control in Lebanon.⁶¹¹

447. Mr Hariri was concerned by Mr Bashar Al-Assad’s growing political role. One witness described Mr Hariri’s reaction, who after meeting Mr Bashar Al-Assad in 1999 apparently said, ‘God help Syria. It will be governed by a child.’⁶¹² Mr Walid Jumblatt described meeting Mr Bashar Al-Assad, along with Mr Ghazi Aridi.⁶¹³ The meeting took place at a time when Mr Al-Assad was demonstrating hostility towards Mr Hariri, because Mr Hariri did not obey Syria’s orders.⁶¹⁴

448. Mr Hariri attempted to have Mr Hrawi’s mandate extended at its expiration in 1998, but, according to Mr El-Sayyed, the Syrians were not responsive to this, due to a ‘popular uprising’ in Lebanon in which the people did not want him to continue as president. And ‘because Syria wanted to preserve a kind of balance in Lebanon, it wanted a new president that will support stability and not to extend for a president that will de-stabilise the situation’.⁶¹⁵

⁶⁰⁷ Exhibit 2D131 (Witness statement of Mustafa Nasser, 12 August 2010), para. 13.

⁶⁰⁸ Atef Majdalani, T. 29 April 2015, pp 18, 22; Walid Jumblatt, T. 4 May 2015, p. 52.

⁶⁰⁹ Bassem El-Sabeh, T. 16 March 2015, pp 19, 22.

⁶¹⁰ Marwan Hamade, T. 17 November 2014, p. 60.

⁶¹¹ Marwan Hamade, T. 17 November 2014, pp 63-64.

⁶¹² Bassem El-Sabeh, T. 16 March 2015, pp 19, 21. ‘I got the impression that the meeting went really badly.’ Mr Hariri said ‘my impression is that things will not be comfortable in the future’.

⁶¹³ Walid Jumblatt, T. 4 May 2015, pp 30-32. Mr Ghazi Aridi was the Culture Minister in Mr Hariri’s cabinet and a member of Mr Jumblatt’s Democratic Gathering—he resigned on 7 September 2004 in protest at the extension of President Lahoud’s mandate past its constitutionally set six years, Marwan Hamade, T. 20 November 2014, pp 2-9; Walid Jumblatt, T. 4 May 2015, pp 87, 97-98; exhibit P303, ERNs D0004610-D0004613.

⁶¹⁴ Walid Jumblatt, T. 4 May 2015, pp 30-32, 39, T. 7 May 2015, p. 48.

⁶¹⁵ Jamil El-Sayyed, T. 5 June 2018, p. 37.

449. At the conclusion of President Hrawi's extended mandate, Mr Lahoud was elected president on 24 November 1998,⁶¹⁶ by an overwhelming vote.⁶¹⁷ Mr Hariri was described as feeling compelled to vote for him, because of the mandate extension and because he thought that they could cooperate.⁶¹⁸ Mr Lahoud, according to Mr El-Sayyed, had Syrian support.⁶¹⁹ Due to his role in building the Lebanese army he had popular support as the people 'aspired to the election of Lahoud in the hope that he will turn Lebanon into a state as he managed with building the Lebanese army'.⁶²⁰ Further, the Syrian authorities advised Mr Lahoud to have Mr Hariri as his prime minister, as they were of the view that this 'political wedding' of a military leader and a business leader would lead to more stability in Lebanon.⁶²¹

450. Mr Jumblatt and the former Lebanese Prime Minister, Mr Fouad Siniora, testified of receiving orders from Syria and of pressure from the Lebanese Syrian security apparatus to support Mr Lahoud.⁶²² Mr Jumblatt's parliamentary bloc voted against Mr Lahoud,⁶²³ which, according to Mr Jumblatt, was the beginning of his break with Syria.⁶²⁴

451. Between 1992 and 1998, Mr Hariri, as prime minister, according to Mr Siniora, was subject to external pressure and although he did not 'have a free hand' he was able to launch various large-scale projects in a variety of sectors.⁶²⁵ Mr Hariri and Mr Lahoud had different approaches to governing Lebanon and had a poor personal relationship,⁶²⁶ and Mr Hariri's supporters testified that Mr Lahoud opposed and blocked reforms that Mr Hariri supported.⁶²⁷

⁶¹⁶ Walid Jumblatt, T. 4 May 2015, p. 18; Jamil El-Sayyed, T. 5 June 2018, pp 31, 46.

⁶¹⁷ Walid Jumblatt, T. 4 May 2015, pp 18, 22-23, 62.

⁶¹⁸ Walid Jumblatt, T. 4 May 2015, pp 62-63.

⁶¹⁹ Jamil El-Sayyed, T. 5 June 2018, p. 31.

⁶²⁰ Jamil El-Sayyed, T. 5 June 2018, p. 40. After Mr Lahoud's election, Mr El-Sayyed was promoted from his position as an assistant director of the Lebanese armed forces intelligence that he had held since 1992 to director-general of general security. Its role was 'to collect and gather political, economic and social information for the benefit of the Lebanese state for the benefit of the Lebanese government'. Jamil El-Sayyed, T. 5 June 2018, p. 41.

⁶²¹ Jamil El-Sayyed, T. 5 June 2018, pp 46-47.

⁶²² Walid Jumblatt, T. 4 May 2015, p. 23; Fouad Siniora, T. 26 March 2015, p. 22.

⁶²⁴ Walid Jumblatt, T. 4 May 2015, p. 27.

⁶²⁵ Fouad Siniora, T. 23 March 2015, pp 39-40, referring to 'huge building projects in various sectors, electricity, telecommunications, roads, hospitals, schools, the university'.

⁶²⁶ Fouad Siniora, T. 26 March 2015, pp 21-22; Bassem El-Sabeh, T. 16 March 2015, pp 33-36.

⁶²⁷ Fouad Siniora, T. 23 March 2015, pp 29-31, 33-36; Atef Majdalani, T. 28 April 2015, p. 10; Walid Jumblatt, T. 4 May 2015, p. 54.

452. According to several witnesses, between 1996 and 1998, Mr Hariri and his political team were subject to a smear campaign, conducted by the Lebanese/Syrian security and intelligence apparatus.⁶²⁸ A number of politicians—including Mr El-Sabeh, Mr Siniora and Mr Demerjian—were subpoenaed by the Lebanese courts on falsified charges.⁶²⁹ Others, such as Mr Nicolas Saba, the former governor of Beirut, were also arrested.⁶³⁰ Mr El-Sabeh described it as the worst smear campaign in the history of Lebanon.⁶³¹ The lawsuits made Mr Hariri feel ‘threatened’,⁶³² and were an attempt to ‘target’ Mr Hariri.⁶³³ According to Mr Majdalani and Mr Siniora, the vexatious prosecutions were intended to be obstacles in the way of Mr Hariri’s socio-economic policies.⁶³⁴

453. Mr Hariri left the government on 4 December 1998—ten days after Mr Lahoud assumed the presidency—following a dispute with Mr Lahoud and his Syrian backers regarding the constitutional process by which the prime minister was to be selected. Mr Selim El-Hoss was then appointed as the prime minister, holding office until October 2000.⁶³⁵

3. Mr Hariri’s relationship with Hezbollah

454. The Trial Chamber received evidence that Mr Hariri maintained a generally positive working relationship with Hezbollah during his initial term as prime minister. Hezbollah had MPs in the Lebanese Parliament, and, Mr Hariri as prime minister—according to Prosecution and Defence witnesses—considered Hezbollah a legitimate Lebanese political party and worked with its members and its leadership.⁶³⁶ As he had to, Mr Hariri maintained a dialogue with Hezbollah throughout his time in office.⁶³⁷

455. The Trial Chamber heard evidence that Mr Hariri and Mr Nasrallah began meeting in 1992. According to Mr Mustafa Nasser—who coordinated the meetings between Mr Hariri and

⁶²⁸ Marwan Hamade, T. 17 November 2014, p. 73; Bassem El-Sabeh, T. 17 March 2015, pp 73-74; Fouad Siniora, T. 24 March 2015, p. 57; Atef Majdalani, T. 30 April 2015, pp 3-5, 55.

⁶³⁶ Mustafa Nasser, T. 10 April 2015, pp 5-7; Atef Majdalani, T. 1 May 2015, p. 11; Jamil El-Sayyed, T. 5 June 2018, pp 99-102.

⁶³⁷ Mustafa Nasser, T. 9 April 2015, p. 11, T. 10 April 2015, pp 13-16, 68-69; Jamil El-Sayyed, T. 5 June 2018, p. 94.

Mr Nasrallah⁶³⁸—the two men first met just before Mr Hariri took office in 1992, and thereafter met frequently from October 1992 onwards.⁶³⁹ Mr Siniora thought that the two men met ‘more than once’ between 1992 and 1998, and then again after 2000.⁶⁴⁰

456. According to Mr Hani Hammoud, a media advisor to Mr Hariri, however, Mr Hariri’s first major ‘phase of dialogue’ with Hezbollah and Mr Nasrallah was after the Israeli withdrawal from Lebanon in 2000.⁶⁴¹ According to Mr Hammoud, following the Israeli withdrawal in 2000, Mr Hariri intended to convince Hezbollah that the purpose of the military resistance had disappeared.⁶⁴² The ‘goal’ at this time was to integrate Hezbollah’s weapons into the Lebanese state.⁶⁴³ Mr Hammoud ‘sensed’ that after the first meeting with Mr Nasrallah, Mr Hariri was comfortable and at ease.⁶⁴⁴

457. Mr El-Sayyed and Mr Siniora testified that Hezbollah did not participate in the government at that time or support Mr Hariri’s candidacy or back him with votes of confidence in Parliament.⁶⁴⁵

458. On 11 September 1993,⁶⁴⁶ Hezbollah held demonstrations under the Airport Bridge in the southern suburbs of Beirut, in relation to the Oslo negotiations on Israel and Palestine.⁶⁴⁷ Mr Hariri decided to prohibit the demonstration. There was confusion at one of the army checkpoints, and an officer gave orders for his soldiers to fire.⁶⁴⁸ Ten to 13 people died,⁶⁴⁹ and another 70 people were injured.⁶⁵⁰

⁶³⁸ Atef Majdalani, T. 1 May 2015, p. 18; Jamil El-Sayyed, T. 5 June 2018, p. 94. Mr El-Chammaa stated that the meetings were arranged/facilitated by a number of people, including Mr Mustafa Nasser and Mr Wissam Al-Hassan. Ghaleb Ahmad El-Chammaa, T. 11 February 2015, p. 76.

⁶³⁹ Mustafa Nasser, T. 9 April 2015, p. 11, T. 10 April 2015, pp 13-14, 68-69; Hani Hammoud, T. 20 May 2015, pp 15-16. Witness PRH045, a journalist, who advised Mr Hariri and was ‘close’ to him, stated that there was no ‘direct’ relationship until the beginning of 2002. Exhibit P1107 (Statement of Witness PRH045, 12 August 2010), para. 26.

⁶⁵⁰ Jamil El-Sayyed, T. 6 June 2018, p. 53.

459. According to Mr El-Sayyed, the event caused problems for relations between Mr Hariri and Hezbollah, but was resolved at the time.⁶⁵¹ Mr El-Sayyed said that the Lebanese government considered the dead people as martyrs for the purposes of compensation, and treated the wounded—this was the end of the incident.⁶⁵² Mr Nasser stated that Mr Hariri and Hezbollah negotiated for one year regarding compensation to resolve the ‘problem’ of the shooting.⁶⁵³

460. According to Witness PRH045, Mr Hariri received a warning from Hezbollah in or around March 2002. Mr Kanaan had promised Mr Hariri that there would not be any Hezbollah operations in south Lebanon, as Syria would cooperate to reduce tensions and pave the way for economic projects there. However, the President of Hezbollah’s Political Committee, Mr Ibrahim Amin Al-Sayyed⁶⁵⁴ communicated to Mr Hariri that there would be a Hezbollah operation the following week, and there was. This convinced Mr Hariri not to consult further with Mr Kanaan.⁶⁵⁵

461. Another issue was *Solidere*.⁶⁵⁶ As noted above, many people were living in that area in Beirut, including displaced Hezbollah supporters from south Lebanon. Negotiation was required between Hezbollah and the government and Mr Hariri in which Hezbollah convinced them to leave their houses, and compensation was negotiated.⁶⁵⁷

462. Relations between Mr Nasrallah and Mr Hariri were strengthened by Mr Hariri’s sympathetic response to the death of Mr Nasrallah’s young son, Mr Hadi Hassan Nasrallah, in combat with Israel in September 1997.⁶⁵⁸ In Mr Siniora’s view, the loss brought the two men closer together, because Mr Hariri had also lost one of his sons in a car accident.⁶⁵⁹ Mr Hariri told

⁶⁵¹ Jamil El-Sayyed, T. 6 June 2018, p. 52.

⁶⁵² Jamil El-Sayyed, T. 6 June 2018, p. 54.

Mr Nasrallah that he ‘surpassed’ Mr Hariri himself, because Mr Nasrallah had sent his son to be a martyr.⁶⁶⁰

463. When an exchange of prisoners between Israel and Hezbollah began in January 2004, Mr Hariri insisted that Mr Nasrallah’s son’s remains be returned.⁶⁶¹ This gesture ‘deeply affected’ Mr Nasrallah.⁶⁶²

Exhibit 2D138—photograph at Beirut Airport, January 2004, showing Mr Hariri, Mr Nasrallah, Sheik Abdul-Karim Obeid and Mr Mustafa Dirani

464. Other evidence related to the personal and political relationship between the two is interspersed chronologically below.

⁶⁶⁰ Mustafa Nasser, T. 10 April 2015, p. 90.

⁶⁶¹ Mustafa Nasser, T. 10 April 2015, p. 91; Fouad Siniora, T. 27 May 2015, pp 71-72. Mr Nasser stated that Mr Hariri insisted that the remains were the ‘first’ to be returned, while Mr Siniora stated that they were ‘among’ the bodies returned. *See also* exhibit 2D138 (Photograph taken at Beirut airport, January 2004), ERN 1DT2-0581. Mr Hariri is next to Mr Nasrallah in the photograph. Fouad Siniora, T. 27 May 2015, pp 71, 75.

⁶⁶² Mustafa Nasser, T. 10 April 2015, pp 90-91.

4. Israeli withdrawal from Lebanon in 2000

465. In the summer of 2000 Israel withdrew its forces from southern Lebanon and, according to the UN Secretary-General's report, the Lebanese military 'had started to re-establish its authority in the area and was considering deploying its armed forces in southern Lebanon'.⁶⁶³ A dispute over the occupation by Israel of the Shebaa farms, a small, disputed area on the Lebanese-Syrian border continued.⁶⁶⁴

466. However, Lebanese forces did not deploy to southern Lebanon—as envisaged in the Taif Accord—and Hezbollah continued to control southern Lebanon based on the justification that Israel had not withdrawn from the Shebaa farms.⁶⁶⁵ Mr Hariri, however, believed that Lebanese territory should be controlled by the Lebanese army.⁶⁶⁶

467. An opposition group called the 'Qornet-Chehwan Gathering' was established in the Christian area of Beirut following the Israeli withdrawal.⁶⁶⁷ It was named after a Maronite town in the Mount Lebanon district⁶⁶⁸ and was made up of Christian leaders from different parties, who opposed the continued Syrian control over Lebanon.⁶⁶⁹

5. 2000 Election

468. In December 1998, Mr Hariri left office after President Lahoud took power; he turned his attention to the next elections due in 2000.⁶⁷⁰ Before that election, the Lebanese Government had adopted a new electoral law. Several witnesses testified that it was known as the 'Ghazi Kanaan

⁶⁶³ Exhibit P451 (Report of the UN Secretary-General pursuant to Security Council resolution 1559 (2004)), para. 9, referring to notifications from Lebanon and Israel received in mid-2000. Marwan Hamade, T. 17 November 2014, pp 45-46, 74-75.

⁶⁶⁹ Marwan Hamade, T. 20 November 2014, pp 22-23; Ghazi El-Youssef, T. 10 March 2015, p. 62; Jamil El-Sayyed, T. 7 June 2018, pp 3-4.

⁶⁷⁰ Jamil El-Sayyed, T. 5 June 2018, pp 54, 59, 61-62.

law’ because Mr Kanaan, who was then the Syrian military intelligence chief in Lebanon, was allegedly behind it.⁶⁷¹

469. When Mr El-Sayyed was the director-general of the *Sûreté Générale*, President Lahoud had entrusted him ‘to be in dialogue with all the parties to draft a law that would be accepted as much as possible by all parties’. He stated that the law had nothing to do with Mr Kanaan who viewed it as an internal Lebanese matter and said that it only got that name later.⁶⁷² There appears, however, common ground between the Parties that whatever the law was called when it was introduced, in time it became associated with Mr Kanaan, and thus Syrian influence over the Lebanese political process. Mr El-Sayyed himself stated that ‘Ghazi Kanaan did not intervene in shaping the elections law, but he intervened in shaping the electoral alliances between political parties ... Ghazi Kanaan may ask one or that bloc to forge this or that alliance’.⁶⁷³

470. The new law divided Beirut into three districts.⁶⁷⁴ Prosecution witnesses stated that it was widely understood as a gerrymandering attempt to dilute Mr Hariri’s base,⁶⁷⁵ by concentrating his supporters into a minimum number of electoral districts. Mr El-Sayyed said that it was the result of a compromise between Mr Hariri, wanting large districts, and the Christians, wanting small districts, and establishing a balance between these two competing interests.⁶⁷⁶

471. In the 2000 election, Mr Hariri stood as a candidate for election in Beirut. According to his supporters this was due to Syrian pressure, as he was not allowed to form electoral lists in other regions.⁶⁷⁷ Mr Hariri won and his lists took all three Beirut districts in a landslide, gaining 18 of 19 candidates, with Hezbollah getting the remaining post.⁶⁷⁸

472. A cause of great tension in the Hariri bloc in the run-up to the 2000 election was the role that Syria had in ‘selecting’ candidates for the election. This was viewed as interference in the

Lebanese democratic process. The Trial Chamber heard evidence of the role of what were termed ‘Syrian deposits’ in the Lebanese Parliament before the withdrawal of the Syrian military forces in mid-2005. Prosecution witnesses described these as candidates that the Syrian Government imposed on Mr Hariri by insisting that he include them in his electoral list. They were seen as loyal to Syria rather than to Mr Hariri’s Future Movement.⁶⁷⁹

473. According to Mr Hamade, Mr Hariri’s 2000 bloc contained three candidates who were imposed on him by the Syrians. They were called the ‘Syrian submarines’. This was well-known, and Mr Hariri had said that Mr Kanaan had asked him to take them.⁶⁸⁰ Mr Hariri’s view was that taking these three was not a very dear price to pay in exchange for having no disturbances in the elections in Beirut, although he was not happy about accepting them. He accepted them to settle things in the best interests of Lebanon.⁶⁸¹ According to both Mr Hamade and Mr Siniora, Mr Hariri was upset but accepted it as the cost of peace.⁶⁸²

474. Mr Hariri indirectly used these MPs to convey messages to Syria. According to Mr Atef Majdalani, the three ‘deposits’ in Mr Hariri’s bloc were Dr Nasser Kandil, Mr Adnan Arakji and Dr Bassem Yamout. Whenever Mr Hariri wanted to send a message to Syria, he waited for one to come to a bloc meeting and then voiced his opinion, thus sending the message indirectly.⁶⁸³ Sometimes he would be asked about something related to or of interest to Syria, and he would say they would talk about it when ‘Nasser or Bassem or X’ comes. It was clear he was waiting for them because they would convey his opinion to the Syrians.⁶⁸⁴

475. At times, when Mr Hariri had left a meeting and arrived at his office, he would receive a call from a Syrian official asking why he had said whatever he said.⁶⁸⁵ Sometimes after a meeting,

⁶⁷⁹ Ghattas El-Khoury, T. 16 January 2015, pp 68-69; Ghazi El-Youssef, T. 10 March 2015, pp 17, 19-21, 24, 28-29, 31-32, T. 11 March 2015, pp 51, 54-55; Bassem El-Sabeh, T. 18 March 2015, pp 90-91.

⁶⁸⁰ Marwan Hamade, T. 20 November 2014, p. 12.

⁶⁸¹ Marwan Hamade, T. 20 November 2014, pp 12-14; Faisal Salman, T. 8 January 2015, p. 44. Mr Faisal Salman testified that they ‘were dubbed in Beirut the dregs or the deposits, i.e., the not backers of President Hariri entirely but they are protected by the Syrian regime or by political – Syrian political figures’.

⁶⁸² Marwan Hamade, T. 20 November 2014, pp 13-14; Fouad Siniora, T. 23 March 2015, p. 24.

⁶⁸³ Atef Majdalani, T. 28 April 2015, pp 46, 48-49. Mr Hariri did not tell the witness explicitly that this was his strategy—however, Mr Majdalani was present in the bloc meetings and knew how Mr Hariri ‘functioned and how he thought’. Atef Majdalani, T. 28 April 2015, p. 49. According to Mr El-Youssef, there were four Syrian deposits imposed on Mr Hariri in Beirut in the 2000 elections, namely Mr Kandil, Dr Yamout, Mr Arakji and Mr Bechara Merhej. Ghazi El-Youssef, T. 11 March 2015, pp 51, 54.

⁶⁸⁴ Atef Majdalani, T. 28 April 2015, p. 49.

⁶⁸⁵ Atef Majdalani, T. 28 April 2015, p. 49.

he would take Mr Kandil aside to talk, meaning that he wanted to convey a message to Syria.⁶⁸⁶ Mr El-Sabeh, an MP and friend of Mr Hariri's, went as far as to state that it was well-known that Mr Kandil was a deputy of the *Mukhabarat*, the Syrian intelligence service, and that he had played a role in the campaign against Mr Hariri.⁶⁸⁷

476. Mr El-Sayyed, on the other hand, testified that the term 'Syrian deposits' was not used before the attack on Mr Hariri, and moreover 'everyone' put requests to Syria, as this was normal.⁶⁸⁸ Conversely, in return, the Syrians made requests the other way, including to Mr Hariri. This was merely political reciprocity. He suggested that between ten and 15 of the 128 MPs were 'deposits'.⁶⁸⁹ Mr Hariri accepted them but was not forced to.⁶⁹⁰ Mr Salim Diab—who had been appointed as Mr Hariri's campaign manager for the 2005 elections—testified that Mr Hariri himself used the terms 'Syrian gifts' and 'deposits' for the Syrian imposed candidates.⁶⁹¹

477. Mr Faisal Salman, a political commentator, who with other journalists met Mr Hariri in the café *Place de l'Étoile*, just before his death on 14 February 2005, testified that Mr Hariri told them that 'he would run for elections without anyone imposing partners or deposits on him ... but also that Lebanon cannot be governed against Syria'.⁶⁹² This was the first time Mr Salman had ever heard Mr Hariri say that he would have no deposits in his candidates.⁶⁹³ Mr Hariri said that the electoral law under discussion in Parliament was being developed to politically weaken him and his allies—certain Christian political figures, especially Mr Jumblatt. He said that regardless of the electoral law, he and his allies would win the elections.⁶⁹⁴

478. During the parliamentary session on 14 February 2005, Mr Hariri sat with Mr El-Sabeh at the back.⁶⁹⁵ Mr Hariri told him that 'these people' were launching a broad-based campaign against

⁶⁹¹ Salim Diab, T. 22 January 2015, p. 37. After his meeting with President Al-Assad in August 2004, Mr Hariri told Mr Diab that 'The gifts that were given to me I will send back', referring to these people but without naming them, Salim Diab, T. 22 January 2015, pp 38-39.

⁶⁹² Faisal Salman, T. 8 January 2015, p. 45.

⁶⁹³ Faisal Salman, T. 8 January 2015, pp 45, 54. Mr Salman knew that this 'was going to cause a problem with the Syrian regime'. And also in particular with President Emile Lahoud.

⁶⁹⁴ Faisal Salman, T. 8 January 2015, pp 37-38.

⁶⁹⁵ Bassem El-Sabeh, T. 17 March 2015, pp 45-46.

‘us’ and thought that ‘we’ were afraid, and suggested that he and Mr El-Sabeh smile widely for the cameras.⁶⁹⁶ According to Mr Majdalani, Mr Hariri spoke during the session about the draft electoral law, mentioned the issues that he had reservations about and then left.⁶⁹⁷

D. Mr Hariri’s final term as prime minister—26 October 2000 to 2004

479. Mr Hariri was re-appointed prime minister on 26 October 2000.⁶⁹⁸ Both Mr Jumblatt and Mr El-Sayyed stated that he was able to form his own government largely free from Syrian pressure.⁶⁹⁹ Consequently, he appointed some ministers, including Mr Siniora, who had been evicted from his previous government.⁷⁰⁰ He appointed three representatives of the Democratic Gathering,⁷⁰¹ which had 18 seats in Parliament,⁷⁰² and was Mr Jumblatt’s Druze group.⁷⁰³ Mr Hariri’s re-appointment was perceived as a blow to Mr Lahoud.⁷⁰⁴ The relationship between Mr Hariri and Mr Lahoud remained tense,⁷⁰⁵ although they seemed more cooperative and understanding of each other.⁷⁰⁶

480. The Trial Chamber heard evidence that from 2000, following the Israeli withdrawal and Mr Bashar Al-Assad’s ascension to power in Syria, there was a perceived increase in the level of Syrian control over Lebanese affairs.⁷⁰⁷ For example, in July 2001, after Mr Hariri had managed to pass a law allowing some extra civil liberties—additional rights in arrest procedures, which had not previously been part of the Lebanese legal system—it was immediately rescinded following threats from the Syrians.⁷⁰⁸

⁶⁹⁶ Bassem El-Sabeh, T. 17 March 2015, p. 46.

⁶⁹⁷ Atef Majdalani, T. 29 April 2015, pp 29-30.

⁶⁹⁸ Agreed facts, no. (v).

⁷⁰⁶ Jamil El-Sayyed, T. 5 June 2018, pp 82-84.

⁷⁰⁷ Marwan Hamade, T. 17 November 2014, p. 67, T. 18 November 2014, p. 8; Ghazi El-Youssef, T. 10 March 2015, pp 17-18; Fouad Siniora, T. 23 March 2015, pp 25-27.

⁷⁰⁸ Ghazi El-Youssef, T. 10 March 2015, pp 36-39.

481. Mr Siniora testified that Mr Hariri's relationship with President Bashar Al-Assad did not feature the same level of communication or trust as the relationship with his father President Hafez Al-Assad.⁷⁰⁹ Their meetings were uncomfortable.⁷¹⁰ Before, Mr Hariri made frequent cross-border visits to Syria and would meet Mr Ghazi Kanaan—the head of the Syrian intelligence in Lebanon between 1983 and 2002.⁷¹¹

482. After 2000, Mr Hariri appointed Mr Wissam Al-Hassan as his liaison officer with Mr El-Sayyed.⁷¹² According to Mr El-Sayyed, he—Mr El-Sayyed—was always the third person present at meetings between Presidents Lahoud and Bashar Al-Assad.⁷¹³ He received information from President Lahoud and Mr Hariri—through Mr Al-Hassan—regarding matters discussed in Syria.⁷¹⁴

483. According to Mr Jumblatt, Syria viewed Mr Hariri as a source of concern because he was prominent internationally and wanted to build a prosperous and independent Lebanon.⁷¹⁵ A Syrian General, Mohammed Nasif, would sometimes jokingly or indirectly ask who Mr Hariri thought he was. Mr Jumblatt perceived such remarks, coming from a high-ranking Syrian official as a threat and an insult.⁷¹⁶ Mr Siniora thought that the Lebanese and Syrian security systems and regimes were displeased because Mr Hariri represented an open and democratic Lebanon and Mr Hariri's achievements were of concern to Syria.⁷¹⁷

484. The Trial Chamber also received evidence that in May or June 2002, Mr Nasrallah and Mr Hariri were on poor terms. Mr Hariri was planning to build a bridge in the Ouzawi area in Beirut to allow the construction of a highway between Beirut and southern Lebanon. After attempting to impose conditions on the plan, Hezbollah communicated to Mr Hariri that if he

⁷⁰⁹ Fouad Siniora, T. 23 March 2015, p. 52.

attended the opening ceremony Mr Nasrallah would attend ‘to face him’.⁷¹⁸ Mr Hariri sent his development adviser, Mr Fadi Fawwaz, in his place, but a Hezbollah MP, Mr Ali Ammar, physically attacked him there.⁷¹⁹

485. In October 2002, Mr Rustom Ghazaleh replaced Mr Kanaan as the Syrian ‘representative’ in Lebanon, making him effectively the head of Syrian intelligence there.⁷²⁰ According to the Syrian government, his tasks as Chief of Branch Headquarters, located in Anjar, were:

to ensure the security of the Syrian Armed Forces operating in Lebanon. The supervision of the functions aimed at controlling the hostile spying activities, in addition to performing a political task through the role played by Syria to help the Lebanese Authorities to consolidate national peace and the unity of the power.⁷²¹

486. Mr Hariri’s principal liaison with Syria was Mr Ghazaleh, who, it was understood, operated with the support of President Al-Assad and controlled political, economic and electoral matters in Lebanon.⁷²² According to Mr El-Chammaa, a friend and associate of Mr Hariri’s, Mr Ghazaleh would deliver threatening messages from President Al-Assad to Mr Hariri, requesting certain courses of action requested specifically by the Syrian president. Mr El-Chammaa, however, was not present at meetings between Mr Hariri and Mr Ghazaleh. Mr El-Chammaa said that Mr Hariri told him this.⁷²³

487. By 2003, Mr Hariri’s tension with Syria had reached the state where he admonished Mr Hamade, one of the drafters of his ministerial statement,⁷²⁴ for proposing a generic line that the Lebanese government should implement all the articles of the Taif Agreement. Mr Hariri told him

⁷¹⁸ Exhibit P1107 (Statement of Witness PRH045, 12 August 2010), paras 41-42.

⁷¹⁹ Exhibit P1107 (Statement of Witness PRH045, 12 August 2010), paras 41-42. According to Mr Mustafa Nasser, Mr Hariri and Mr Ammar were on bad terms because Mr Ammar represented the Dahyieh area in Parliament and he had problems with Mr Hariri’s ‘Elissar’ project. Mustafa Nasser, T. 9 April 2015, pp 30-31.

⁷²⁰ Marwan Hamade, T. 18 November 2014, p. 54; Fouad Siniora, 25 March 2015, p. 69, T. 26 March 2015, p. 36; Walid Jumblatt, T. 4 May 2015, pp 50-51; Jamil El-Sayyed, T. 6 June 2018, pp 4-5.

⁷²¹ Exhibit 5D128, p. 5, specifying the hierarchy and role of Syrian intelligence officials in Lebanon. It stated that Mr Ghazaleh was appointed Chief of Branch Headquarters on 16 October 2002, succeeding Mr Kanaan.

⁷²² Ghazi El-Youssef, T. 10 March 2015, p. 18 (Mr Kanaan was the one ‘who would implement Damascus’s policies’, before being replaced by Mr Ghazaleh—who was then ‘the one who was controlling the political scene, the economic and electoral scenes’); Ghaleb Ahmad El-Chammaa, T. 10 February 2015, p. 23 (Mr Ghazaleh ‘represented’ President Al-Assad’s ‘orders’ and ‘desires’, and ‘was given a free hand and total support by President Bashar Assad’).

⁷²³ Ghaleb Ahmad El-Chammaa, T. 10 February 2015, pp 27-29.

⁷²⁴ The ministerial statement is a government policy document, drafted by the Council of Ministers.

that such a suggestion would be a declaration of war against the Syrian regime that could get them killed.⁷²⁵

1. Beginnings of an organised opposition to Syrian domination

488. The Trial Chamber received consistent evidence that with the Israeli withdrawal in 2000, Lebanon increasingly divided into two camps: those who supported the Syrian presence and the continued presence of Hezbollah as an armed militia within Lebanon, and those who called for the Syrian withdrawal and the disbanding of Hezbollah's militia.⁷²⁶

489. Those who supported the continued presence of Syria and Hezbollah argued that Israel still occupied Lebanon⁷²⁷ through its occupation of the Shebaa farms.⁷²⁸ In 2000, the Maronite Christian Patriarch, Mr Nasrallah Boutros Sfeir, and the Maronite bishops called for Syria's implementation of the Taif Agreement, withdrawal from Lebanon, respect for its sovereignty and for all weapons to be remitted to the Lebanese State.⁷²⁹

490. Mr Jumblatt then publicly called on Syria to withdraw at least to the Bekaa valley, as envisioned by the Taif Agreement.⁷³⁰ In Parliament, a pro-Syrian MP responded by accusing Mr Jumblatt of being an Israeli spy.⁷³¹ In 2001, Patriarch Sfeir and Mr Jumblatt met and reconciled their religious factions, the Maronites and the Druze, who had fought against each other during the Lebanese Civil War.⁷³²

2. International opinion

491. After 2000, the US and some European states made it known that they did not welcome the continued Syrian presence in Lebanon. These states began raising the issue, including France

⁷²⁵ Marwan Hamade, T. 18 November 2014, pp 8-10, 17-23, T. 9 December 2014, p. 56.

through its President, Jacques Chirac, who did so before the Lebanese Parliament in 2002.⁷³³ Mr Jumblatt, however, testified that Mr Chirac, when addressing the Lebanese Parliament, mentioned that the Syrian presence in Lebanon was a necessity for the time being.⁷³⁴

492. The international opposition to the continued Syrian presence in Lebanon culminated in the passage of Security Council resolution 1559 in September 2004, as described below.

3. Mr Hariri's shift towards the opposition

493. Mr Hariri's relationship with Syria was seen to change after the death of President Hafez Al-Assad, and according to Mr El-Chammaa, Syria was seen to be more aggressive, dominant and provocative.⁷³⁵ Mr Hamade said that Mr Hariri was privately upset by the increasing Syrian influence in Lebanon, but he knew that any public declaration on the subject would result in a rupture with Damascus. This was particularly so from 2003 with the increased tension following the US-led invasion of Iraq.⁷³⁶

4. Mr Hariri's relationship with Hezbollah from 2000

494. Throughout Mr Hariri's second term as prime minister from 2000 to 2004, Hezbollah was generally supportive of President Lahoud.⁷³⁷ Mr Hariri criticised a Hezbollah operation in the Shebaa farms area shortly after the 11 September 2001 attacks in the US, and this criticism created a conflict with Hezbollah.⁷³⁸

495. According to Witness PRH045, Mr Hariri and Hezbollah's direct relationship began in early 2002.⁷³⁹ Mr Nasrallah had mentioned to the witness about telling Mr Hariri that they were 'two mountains' that should not collide so as not to create a large earthquake.⁷⁴⁰ As noted above,

⁷³³ Jamil El-Sayyed, 5 June 2018, p. 104. The Prosecution submitted, upon a query from the Trial Chamber, that Mr Chirac addressed the Lebanese Parliament at a francophone summit on 17 October 2002, Prosecution submissions, T. 5 May 2015, pp 46, 72. The parties agreed that the francophone summit took place between 18 and 20 October 2002. T. 22 October 2014, p. 66. Mr Tarek Soubra, who drove for Mr Hariri's security detail, stated that he was Mr Chirac's chauffeur during the summit. Exhibit P336 (Statement of Tarek Soubra), para. 48 (ERNs 60295674-60295675).

⁷³⁴ Walid Jumblatt, T. 5 May 2015, p. 46.

⁷³⁹ Exhibit P1107 (Statement of Witness PRH045, 12 August 2010), para. 26.

⁷⁴⁰ Exhibit P1107 (Statement of Witness PRH045, 12 August 2010), paras 29-30.

in mid-2002, a Hezbollah MP and an adviser on one of Mr Hariri's development projects were involved in a public confrontation.⁷⁴¹

496. Mr Siniora testified that in late 2003 or early 2004, Mr Hariri told him that he was concerned about his personal security, as he had been informed of several Hezbollah assassination attempts targeting him.⁷⁴²

497. In January 2004, Mr Hariri and Mr Nasrallah appeared together at the Beirut airport to welcome prisoners freed by Israel.⁷⁴³ As discussed above, Mr Siniora also said that as a gesture of respect, which brought the two men closer together, Mr Hariri had been involved in negotiations to recover the body of Mr Nasrallah's son, who had been killed in the conflict with Israel.⁷⁴⁴ Mr El-Sabeh opined that it was well-known by June 2004 that Mr Hariri and Mr Nasrallah were discussing the possibility of political cooperation.⁷⁴⁵

498. According to Mr El-Sayyed, Mr Mustafa Nasser coordinated regular meetings between Mr Nasrallah and Mr Hariri.⁷⁴⁶ He also stated that Hezbollah did not stand to benefit from Mr Hariri's death. This was because a strategic shift occurred after the assassination as efforts were made to disarm Hezbollah in line with Security Council resolution 1559.⁷⁴⁷

5. 2001 and 2002: Paris Conferences

499. In 2001 and 2002, with Lebanon in economic crisis, the French Government sponsored two international conferences, which resulted in Lebanon pledging to implement reforms and foreign states and international organisations pledging upwards of around USD five billion to Lebanon.⁷⁴⁸

⁷⁴¹ Exhibit P1107 (Statement of Witness PRH045, 12 August 2010), paras 41-42; exhibit 2D131 (Witness statement of Mustafa Nasser, 12 August 2010), paras 19-22; Mustafa Nasser, T. 9 April 2015, pp 30-31.

⁷⁴⁶ Jamil El-Sayyed, T. 5 June 2018, pp 94, 98.

⁷⁴⁷ Jamil El-Sayyed, T. 5 June 2018, pp 95-96.

⁷⁴⁸ Marwan Hamade, T. 17 November 2014, p. 74; Ghazi El-Youssef, T. 10 March 2015, pp 45-46; Bassem El-Sabeh, T. 17 March 2015, p. 75; Fouad Siniora, T. 23 March 2015, pp 37-38, 42-43. Mr El-Youssef said it was USD 4.4 billion, while Mr Siniora, who had been the Lebanese Finance Minister at the time, said it was USD five billion.

500. President Chirac hosted the conferences at the *Palais Elysée*,⁷⁴⁹ the first in February 2001. At the second Paris Conference in November 2002, Mr Hariri said to his finance minister, Mr Siniora, ‘God help us when we return to Lebanon’, which Mr Siniora interpreted as meaning that people would feel threatened by Mr Hariri’s success in achieving international support, and try to stop it.⁷⁵⁰

501. Following the conferences, there was a smear campaign against Mr Hariri in the pro-Syrian media; Mr Hariri was accused of favouring Muslims and of wanting to Islamise Lebanon.⁷⁵¹ The reform laws were passed after the second Paris Conference, but according to Mr Siniora, they were not implemented,⁷⁵² and after the second Paris Conference, all of Mr Hariri’s vital projects were obstructed.⁷⁵³ These included laws that Mr Hariri introduced between 2002 and 2004 for reforms, which Mr Siniora considered to be essential, to sectors such as power generation, telecommunications and civil aviation.⁷⁵⁴

6. April 2003: Cabinet reshuffle

502. The US and its allies invaded Iraq on 19 March 2003. Following this, in April 2003, Mr Hariri resigned as prime minister, according to witnesses, under pressure from Syria.⁷⁵⁵

503. The Trial Chamber heard hearsay evidence that Mr Ghazaleh personally delivered the message to Mr Hariri that he was expected to resign. Mr El-Youssef explained how Mr Hariri was ‘asked to resign’ during a meeting with Mr Ghazaleh.⁷⁵⁶

504. Mr Hariri was then re-appointed prime minister, but he was only permitted to retain a handful of ministers of his choosing, while the rest were allocated to supporters of Syria.⁷⁵⁷

⁷⁵⁶ Ghazi El-Youssef, T. 10 March 2015, pp 48-50.

⁷⁵⁷ Marwan Hamade, T. 17 November 2014, pp 76-77; Ghazi El-Youssef, T. 10 March 2015, pp 49, 51; Ghattas El-Khoury, T. 15 January 2015, pp 82-83, 85-86, 92; Jamil El-Sayyed, T. 6 June 2018, p. 18. According to Mr El-Youssef there were three, Mr Siniora, Mr Samir El-Jisr and Mr Tabbara, while Mr El-Khoury said that it was Mr Siniora and Mr Jisr.

Mr Bassel Fuleihan was forced to resign as a minister.⁷⁵⁸ Mr Hamade testified that Mr Hariri had told him that Mr Ghazaleh had delivered a message from Mr Al-Assad ‘regarding the component parts of his government’.⁷⁵⁹ According to Mr El-Yousef, Mr Hariri had said that the cabinet was imposed on him by Mr Lahoud and Mr Ghazaleh, that it was their government and not his. Mr Hariri was upset and the witness recalls him saying, ‘This was not my government -- this is not my government; it’s the government of Lahoud and Ghazaleh.’⁷⁶⁰ Mr Hariri was upset, but chose to avoid confrontation with Syria, awaiting and relying on the forthcoming presidential elections.⁷⁶¹ He saw that Syria was reacting to feeling threatened by the American-led invasion of Iraq.⁷⁶²

505. Mr El-Sayyed explained that as a result of American threats to Syria following the Iraqi invasion, the Syrians and President Al-Assad in particular, ‘felt that they should immunise the Syrian scene and the Lebanese scene’. Therefore, the Syrian and Lebanese presidents agreed with Mr Hariri to have a cabinet reshuffle. Mr Hariri and President Lahoud had briefed Mr El-Sayyed with this information. In his government’s policy statement before Parliament, Mr Hariri explained the cabinet reshuffle with the challenges in the region and the unacceptable American invasion of Iraq posing threats to Lebanon.⁷⁶³

506. Mr El-Khoury, who was an MP in Mr Hariri’s government and was seen to be close to him, publicly objected on TV to foreign involvement in the formation of the government and to Mr Hariri not being allowed to appoint ministers of his own choosing.⁷⁶⁴ Immediately after the broadcast, Mr Ghazaleh called Mr El-Khoury and directed insults at both him and Mr Hariri, telling him ‘to bugger off or to fuck off’.⁷⁶⁵ Mr El-Khoury informed Mr Hariri, who asked him to calm the situation and said that ‘we’ would attempt to find a solution.⁷⁶⁶

7. 17 April 2003: Parliamentary statement on US Syria Accountability Act

507. In mid-April 2003, while combat operations were continuing in Iraq, the ‘Syria Accountability and Lebanese Sovereignty Restoration Act’ was introduced into the US Congress.⁷⁶⁷ It provided that:

Approximately 20,000 Syrian troops and security personnel occupy much of the sovereign territory of Lebanon exerting undue influence upon its government and undermining its political independence.

Large and increasing numbers of the Lebanese people from across the political spectrum in Lebanon have mounted peaceful and democratic calls for the withdrawal of the Syrian Army from Lebanese soil.

Syria will not allow Lebanon—a sovereign country—to fulfil its obligation in accordance with Security Council Resolution 425 to deploy its troops to southern Lebanon.⁷⁶⁸

508. Mr Hariri responded to this development in the US by issuing a statement to Parliament on 17 April 2003—the date of the formation of his new cabinet—that said:

The government affirms its solidarity with its sister-state Syria in the face of all unfair pressure, accusations and threats against it, including the Syria Accountability Act which ... affects Lebanon as much as it affects Syria, if not more ... The special relations between Lebanon and Syria are a permanent and vital choice determined by heritage, history, geography, brotherhood and common interests. They are not a seasonal wager based on changing circumstances; the government is also determined to deepen these relations both politically and culturally, to develop them economically, and to strengthen them through common projects and the regulation of the exchange of facilities, services and expertise under the Lebanon-Syria Treaty of Brotherhood, Cooperation, and Coordination and its institutions.⁷⁶⁹

⁷⁶⁷ Exhibit 3D126 (extract of the Lebanese Presidency of the Council of Ministers website), p. 3 (ERN 1DT3-0022); exhibit P307 (US Syria Accountability and Lebanese Sovereignty Restoration Act). Its long title is ‘An Act to halt Syrian support for terrorism, end its occupation of Lebanon, and stop its development of weapons of mass destruction, and by so doing hold Syria accountable for the serious international security problems it has caused in the Middle East, and for other purposes’.

⁷⁶⁸ Exhibit P307, p. 2 (sections 2 (7), (10), (13)).

⁷⁶⁹ Exhibit 3D126, pp 1, 3 (ERNs 1DT3-0020, 1DT3-0022).

509. The US Congress eventually passed the act on 12 December 2003.⁷⁷⁰

8. June 2003: Attack on Future TV

510. In June 2003, the Future TV/*Al-Mustaqbal* station in Beirut—owned by Mr Hariri⁷⁷¹—was attacked with missiles.⁷⁷² The attack was late at night and no one was killed,⁷⁷³ but the station was heavily damaged.⁷⁷⁴ For some, Syria was behind the attack⁷⁷⁵ and it was meant as a warning to Mr Hariri.⁷⁷⁶ Mr Hariri shared this interpretation, according to Mr Hammoud,⁷⁷⁷ but was of the view that no Islamic group would kill him.⁷⁷⁸

511. An unknown jihadist group claimed responsibility for the attack,⁷⁷⁹ and the Lebanese investigations—which were headed by the Lebanese military intelligence chief, Brigadier General Raymond Azar, whom witnesses described as politically aligned with President Lahoud and the Syrian government⁷⁸⁰—did not determine who the perpetrators were.⁷⁸¹ Kuwaiti and Lebanese newspapers later reported that a Syrian detained in Iraq confessed that, while serving as a Syrian intelligence officer, he had been ordered to perpetrate the attack.⁷⁸²

⁷⁸² Exhibit 5D129.

9. Late December 2003: ‘Damascus Protocol’

512. The Trial Chamber heard evidence of a meeting between Mr Hariri and President Al-Assad in Damascus in December 2003. The evidence is hearsay as no one who was present at it testified. According to witnesses who heard about it, Mr Hariri met President Al-Assad in the presence of three Syrian intelligence generals, Mr Kanaan, Mr Ghazaleh and Mr Mohammed Khallouf.⁷⁸³ The meeting concerned the relationship between Lebanon and Syria, as well as Syrian concerns with *An-Nahar* newspaper, of which Mr Hariri was a 34.57 per cent shareholder.⁷⁸⁴

513. The Syrians imparted to Mr Hariri several messages and commands, which came to be known as the ‘Damascus Protocol’.⁷⁸⁵ The Syrians accused Mr Hariri of conspiring against the Syrian regime⁷⁸⁶ and informed him that Syria would decide the next president of Lebanon.⁷⁸⁷ They prohibited Mr Hariri from contradicting President Lahoud,⁷⁸⁸ holding public gatherings including at his residence or attending Friday prayers in public places.⁷⁸⁹ According to Mr Jumblatt, Mr Al-Assad told Mr Hariri—referring to Lebanon—‘I am the one who rules here. No one rules other than me’.⁷⁹⁰

514. The Syrians believed that the *An-Nahar* newspaper was inciting the Lebanese to oppose the Syrian regime.⁷⁹¹ They ordered Mr Hariri to sell his shares in the newspaper⁷⁹² and to remove

⁷⁸³ Marwan Hamade, T. 18 November 2014, pp 38-40, 52-54; Ghaleb Ahmad El-Chammaa, T. 10 February 2015, pp 31-33, 38, T. 12 February 2015, pp 33, 35-38; Bassem El-Sabeh, T. 16 March 2015, pp 23-27; Fouad Siniora, T. 23 March 2015, pp 49-51; Walid Jumblatt, T. 4 May 2015, pp 58-59; exhibit 4D137 (Witness statement of Hani Hammoud), para. 23; Hani Hammoud, T. 19 May 2015, pp 26-27. According to exhibit 5D128, the Syrian government described Mr Khallouf as a Staff Brigadier General who was appointed to head the Beirut section of the Syrian military intelligence in Lebanon on 1 November 2002 and remained in the post until 26 April 2005 when the Syrian troops withdrew from Lebanon. Exhibit 5D128, pp 8, 10.

⁷⁹² Marwan Hamade, T. 18 November 2014, pp 27-32, 39-40, 42-43; Ghaleb Ahmad El-Chammaa, T. 10 February 2015, pp 32, 35; Bassem El-Sabeh, T. 16 March 2015, p. 25; Walid Jumblatt, T. 4 May 2015, pp 59-60; Hani Hammoud, T. 19 May 2015, pp 28-29.

his people from the board of directors.⁷⁹³ He was to provide a copy of the shares' sale contract to Mr Ghazaleh.⁷⁹⁴ Mr Hariri told Mr Hamade that President Al-Assad was disturbed by Mr Ghassan Tueini's editorials and Mr Samir Kassir's and Mr Gebran Tueini's 'writings' and considered 'that in the final analysis, Mr Hariri was comforting financially an independent media which was not in the liking of the Syrian government and system.'⁷⁹⁵

515. Mr Hariri described the tone of the meeting to his political collaborators as harsh and admonishing,⁷⁹⁶ and considered as unusual and surprising the presence of the security officials at such a meeting.⁷⁹⁷ Mr Hariri felt that he had been threatened, and he was upset and humiliated.⁷⁹⁸ When he left the meeting, he was so distressed that he hit his head on the front car window and bloodied his nose.⁷⁹⁹ Mr Hamade testified that Mr Hariri and Mr Yahya Al-Arab (also known as Abu Tarek)—who was the supervisor of Mr Hariri's close protection security team⁸⁰⁰—told him about this the same day.⁸⁰¹

516. Mr Hariri believed that President Al-Assad's intention was to bankrupt *An-Nahar*.⁸⁰² He devised a solution to buy time until tensions de-escalated: he would sell his stake in *An-Nahar* to Mr Gebran Tueini, who was the editor-in-chief,⁸⁰³ for USD 18 million to be paid in three instalments—the first due 30 June 2005, after the next elections.⁸⁰⁴ The agreement also stipulated

Mr Al-Arab, with Mr Talal Nasser, decided on the composition of Mr Hariri's convoys, exhibit P335 (Zakaria Badawi's witness statement), para. 12. A (ERNs 60295782-60295783); exhibit P336 (Statement of Tarek Soubra), paras 58, 68 (ERNs 60295679-6025680, 60295683). His daughter thought that he was the chief of security. Exhibit P726 (Statement of Alia Al-Arab), para. 9.

⁸⁰¹ Marwan Hamade, T. 18 November 2014, pp 49-51.

⁸⁰² Marwan Hamade, T. 18 November 2014, pp 38, 45.

⁸⁰³ Marwan Hamade, T. 18 November 2014, p. 29.

⁸⁰⁴ Exhibit P308; Marwan Hamade, T. 18 November 2014, pp 32-38, 45-46; Ghaleb Ahmad El-Chammaa, T. 10 February 2015, p. 40.

that its directors, Mr Bassil Yared,⁸⁰⁵ Mr Antoine Andraos⁸⁰⁶ and Mr Aref Mneinmeh would submit their resignations from the board by 2 January 2004.⁸⁰⁷ Mr Hariri sent a message to Mr Ghazaleh that the arrangement was made to allow *An-Nahar* time to find a purchaser.⁸⁰⁸ He believed that President Al-Assad was unhappy with the arrangement.⁸⁰⁹

517. Those close to Mr Hariri considered this incident as a major turning point and the beginning of the rupture between Mr Hariri and the Syrian regime.⁸¹⁰ Mr Hamade considered that it was an attempt to diminish Mr Hariri's influence and power 'and weaken him as well as his allies, his political and media allies' and to undermine a major independent and Christian newspaper that had allies in the Muslim community.⁸¹¹

518. On the other hand, Mr El-Sayyed testified that the meeting did not occur in this manner. Mr El-Sayyed was of the view that by virtue of his position he would have known had the meeting occurred. Mr Wissam Al-Hassan visited him frequently and always communicated what was happening between the Syrians and Mr Hariri, and had this happened, Mr Al-Hassan would have told him as 'he never hid any information' from him.⁸¹²

519. Mr El-Sayyed provided another interpretation of the relationship between *An-Nahar* and Syria. He stated that Mr Gebran Tueini, the co-owner of *An-Nahar*, came to visit him in 2001 or 2002 seeking his assistance to prevent Mr Hariri from increasing his share, which was either 30 or 33 per cent. Mr El-Sayyed intervened and had an unnamed 'friend' provide a cheque for one million US dollars, which prevented Mr Hariri from acquiring the majority of the shares in the

⁸⁰⁵ He is a lawyer who was described as having been close to Mr Hariri. Marwan Hamade, T. 18 November 2014, p. 47. The visitor logbook for Quraitem Palace, dated 2 January 2004 to 14 February 2005, also includes numerous visits by Mr Yared. *See generally*, exhibit P301 (Visitor logbook for Quraitem Palace).

⁸⁰⁶ Mr Andraos was an MP who opposed the Lahoud extension. Marwan Hamade, T. 18 November 2014, p. 47; exhibit P406 (*An-Nahar* article, 4 September 2004), p. 2. Mr El-Sabeh described him as under Mr Hariri's political umbrella (Bassem El-Sabeh, T. 16 March 2015, p. 49) and Mr Marwan Hamade described him as Mr Hariri's close associate (Marwan Hamade, T. 8 December 2014, p. 79). He also participated in the three Bristol Group meetings, Bassem El-Sabeh, T. 16 March 2015, pp 55, 62 on the first and second Bristol Group meetings, respectively; Ghattas El-Khoury, T. 16 January 2015, p. 10, on the third Bristol Group meeting.

⁸⁰⁷ Exhibit P308, p. 6; Marwan Hamade, T. 18 November 2014, pp 46-47.

⁸⁰⁸ Marwan Hamade, T. 18 November 2014, pp 40-42.

⁸⁰⁹ Marwan Hamade, T. 18 November 2014, p. 42; Ghaleb Ahmad El-Chammaa, T. 10 February 2015, pp 40-41.

⁸¹⁰ Marwan Hamade, T. 18 November 2014, p. 48; Ghaleb Ahmad El-Chammaa, T. 10 February 2015, p. 31.

⁸¹¹ Marwan Hamade, T. 18 November 2014, p. 45.

⁸¹² Jamil El-Sayyed, T. 6 June 2018, p. 37.

newspaper. Mr Tueini was an opponent of Syria and Mr El-Sayyed made this strategic intervention in an attempt to contain his animosity towards Syria.⁸¹³

520. In Mr El-Sayyed's view, Syria's interest was served by Mr Hariri remaining as a shareholder, as Mr Hariri was not anti-Syrian and he 'wasn't bothering us by being in *An-Nahar*, but Gebran Tueini was bothering us, so he came to us for help and we helped him', and it would therefore have been a mistake for Mr Hariri to leave the newspaper.⁸¹⁴

521. The Trial Chamber understands the strength of Mr El-Sayyed's argument that because of his powerful position in Lebanese politics that he should have known about the meeting had it occurred in the manner described. It also accepts the logic of his intervention in 2001 or 2002 when Mr Tueini apparently sought his assistance. However, the two events are distinct and separated by a period of maybe two years during which there were a number of political developments that may have altered the Syrian perspective in relation to *An-Nahar*.

522. In addition, Mr Al-Hassan worked for Mr Hariri and the Trial Chamber has received no credible evidence suggesting that Mr Al-Hassan informed Mr El-Sayyed of everything, including such a meeting. Thus, in the Trial Chamber's view, it is equally consistent—despite Mr El-Sayyed's seeming insistence that Mr Al-Hassan told him everything—that Mr Al-Hassan did not, if he was aware of the meeting, inform Mr El-Sayyed about it. And Mr El-Sayyed conceded that Mr Al-Hassan was not obliged to share any other conversation that he did not want to share with him.⁸¹⁵ The mere fact that Mr El-Sayyed was unaware of a meeting does not transform it into a non-event. Further, the Trial Chamber has received the evidence of the agreement for the sale of shares, which corroborates the thrust of the witness testimony.

523. The evidence of those who heard about the meeting is generally consistent and its content matches other evidence about the methodology employed to ensure Lebanon's compliance with Syria's wishes. The Trial Chamber, however, does not have to make any legal or factual findings about whether the meeting occurred in the manner described.

⁸¹³ Jamil El-Sayyed, T. 6 June 2018, pp 27-33.

⁸¹⁴ Jamil El-Sayyed, T. 6 June 2018, p. 34.

⁸¹⁵ Jamil El-Sayyed, T. 6 June 2018, p. 82.

10. Syrian intelligence role in Lebanese political affairs in 2004

524. The Trial Chamber also heard evidence of the role of Syrian intelligence in ‘managing’ Lebanese political affairs, including what could be seen to be micro-managing candidates for Parliament. For example, Mr Atef Majdalani testified that in May 2004, Mr Ghazaleh even attempted to impose an electoral list on Mr Hariri for the Beirut municipal elections and threatened him before the two reached a compromise.⁸¹⁶ Following his discussion with Mr Ghazaleh, Mr Hariri told Mr Majdalani that there would be a strong battle, meaning ‘Hariri versus Ghazaleh’, for the upcoming elections.⁸¹⁷

E. President Lahoud’s mandate extension

525. President Lahoud’s term should have ended in 2004, with no possibility of renewal according to the Lebanese Constitution—a fact that the Trial Chamber took judicial notice of⁸¹⁸—as Article 49 mandates that a presidential term is of six years.⁸¹⁹ The first UNIIIC report stated that ‘during 2004, certain voices in Lebanon suggested amending the Constitution in order to extend the term of Mr Lahoud’. The Lebanese electorate was divided on the issue, and there were debates in the media about the potential extension.⁸²⁰

526. The relationship between Mr Hariri and President Lahoud was very poor throughout this period.⁸²¹ Tensions ran high, and according to Mr El-Sayyed, the Syrian regime repeatedly instructed both men to calm the situation, particularly when Security Council resolution 1559 was under discussion,⁸²² which would have been around August 2004.

⁸¹⁶ Atef Majdalani, T. 28 April 2015, pp 52-54, T. 29 April 2015, p. 6.

⁸¹⁷ Atef Majdalani, T. 29 April 2015, p. 6.

⁸¹⁸ Judicial notice facts, no. 3.

⁸¹⁹ Exhibit P305 (Lebanese Constitution), Article 49 provides relevantly, that ‘The President of the Republic shall be elected by secret ballot and by a two thirds majority of the Chamber of Deputies. After a first ballot, an absolute majority shall be sufficient. The President’s term is six years. He may not be re-elected until six years after the expiration of his last mandate. No one may be elected to the Presidency of the Republic unless he fulfils the conditions of eligibility for the Chamber of Deputies’.

⁸²⁰ Ali Hamade T. 13 April 2015, p. 6; Jamil El-Sayyed, T. 6 June 2018, pp 23, 41.

⁸²¹ Marwan Hamade, T. 18 November 2014, pp 71-72.

⁸²² Jamil El-Sayyed, T. 6 June 2018, pp 23, 41, 43-44.

527. Mr Hariri opposed Mr Lahoud's extension, and—by early summer of 2004—he was optimistic of working with Syria to find a suitable candidate to replace the president.⁸²³ Mr Hariri reached agreements with Mr Jumblatt and Mr Gebran Tueini, a prominent Qornet-Chehwan Gathering member, to oppose the extension.⁸²⁴

528. Mr Hariri publicly stated that he opposed the amendment, including saying in June 2004 that he would cut off his hand rather than sign a decree to extend the mandate.⁸²⁵

529. From 14 July 2004, Future TV aired—with Mr Hariri's approval—a programme featuring potential candidates to replace President Lahoud.⁸²⁶ In early 2004, the journalist Mr Ali Hamade had presented an idea to Mr Hariri for a political program that would convey to the Syrians that Mr Hariri had reactivated his political tools to oppose the extension.⁸²⁷ In Mr Hamade's view, by doing this, Mr Hariri was officially declaring his opposition to the extension. He explained that there were two phases, the first from 14 July until early September 2004, 'during which we invited as many potential candidates to the election'. The idea was to show the public and the Syrians that there were capable people in the Maronite community, political personalities that could become president rather than Mr Lahoud. In the second phase, the program took a different shape and 'became a political fight against Syrian tutelage'.⁸²⁸

530. Likewise in July 2004, Mr Atef Majdalani, an MP allied with Mr Hariri, appeared on Lebanese TV and expressed his opposition to the extension. This prompted pro-Syrian MP Mr Adnan Arakji to visit Mr Hariri and demand an explanation.⁸²⁹

531. According to Mr Siniora, Syria initially appeared open to President Lahoud's replacement as president,⁸³⁰ and President Al-Assad met some potential candidates.⁸³¹ Mr El-Sayyed testified that in mid-2004, President Al-Assad stated publicly that all of the potential replacement

⁸³¹ Ghattas El-Khoury, T. 15 January 2015, pp 60-64.

candidates were friends of Syria.⁸³² However, at some point in 2004—Mr El-Youssef says it was mid-to late-July 2004—it became apparent that Syria would support the mandate extension.⁸³³ According to Mr Majdalani, MP Mr Nasser Kandil—who was known as a ‘Syrian deposit’—told him that President Al-Assad wanted Mr Hariri’s bloc to vote for the extension and that any votes against the extension would be taken as insults to the Syrian regime.⁸³⁴

532. On 22 August 2004, Patriarch Sfeir publicly condemned President Al-Assad’s meddling in Lebanese affairs, warning that ‘amending the constitution in order to pave the ground for the extension or renewal of President Emile Lahoud’s mandate ... would wipe out and eliminate the small democracy that Lebanon still enjoyed’.⁸³⁵ The Qornet-Chehwan Gathering was also outspoken in its opposition to the extension.⁸³⁶

533. On 24 August 2004, President Lahoud formally announced that he was seeking to renew his mandate as president.⁸³⁷ Patriarch Sfeir responded by saying that ‘I will cling to my firm position against amending the constitution and I will keep my voice loud’ and strongly denounced ‘Syria’s interference in the presidential elections’.⁸³⁸ Mr Hani Hammoud testified that Mr Hariri conveyed to him the position of Mr Ghazaleh as having been, ‘Hajj, stop dealing with this. This is a decision issued by President Bashar Assad’.⁸³⁹ This was before the meeting with Mr Al-Assad on 26 August 2004—as described immediately below.

1. Meeting between President Al-Assad and Mr Hariri in Damascus, 26 August 2004

534. On 25 August 2004, Mr Ghazaleh separately met Mr Hariri, Mr Jumblatt⁸⁴⁰ and the Parliamentary Speaker, Mr Nabih Berri—the leader of the Shia Amal Movement—concerning

⁸³⁴ Atef Majdalani, T. 28 April 2015, p. 32.

⁸³⁵ Exhibit P364 (UNIC Beirut press review, 23 August 2004), p. 6. The press review described the intervention as the Patriarch having ‘detonated a political bomb’.

⁸³⁶ Exhibit P364, p. 6: ‘other opponents of the renewal/extension option were outspoken over the weekend, including the Christian broad-based opposition Qornet-Shahwan Gathering, which met Patriarch Sfeir on Saturday’.

⁸³⁷ Exhibit P532 (UNIC Beirut press review, 25 August 2004), pp 7-8, describing the announcement as a ‘political bomb’ and that Mr Hariri was a ‘staunch opponent of the renewal/extension option’.

⁸³⁸ Exhibit P532, p. 8, reporting the Patriarch’s comments to *An-Nahar*.

⁸³⁹ Hani Hammoud, T. 19 May 2015, pp 31, 35-36. Mr Wissam Al-Hassan had first told him this, then Mr Hariri did.

⁸⁴⁰ Walid Jumblatt, T. 4 May 2015, pp 64, 68-70.

Mr Hariri meeting President Al-Assad the next day in Damascus to discuss Mr Lahoud's mandate extension.⁸⁴¹

535. Mr Ghazaleh went to Mr Jumblatt's house, but Mr Jumblatt told him that he would not approve an extension of Mr Lahoud's term. During the meeting, Mr Ghazaleh asked him 'are you with us or against us?' referring to Syria.⁸⁴² That night, Mr Ghazi Aridi called him and told him that Mr Ghazaleh had cancelled his invitation to the meeting.⁸⁴³ Mr Hariri, however, agreed with Mr Ghazaleh to discuss the matter with President Al-Assad without committing to supporting the extension.⁸⁴⁴ Witnesses testified that Mr Hariri hoped to persuade President Al-Assad to change his mind.⁸⁴⁵

536. Mr Hariri's meeting with Mr Ghazaleh on 25 August 2004 was audio-recorded.⁸⁴⁶ In the meeting, Mr Ghazaleh told Mr Hariri that Mr Al-Assad wanted to see him the following day.⁸⁴⁷ Mr Ghazaleh suggested that Mr Al-Assad could raise the matter of Mr Lahoud's mandate extension.⁸⁴⁸ During the meeting, he repeatedly pushed Mr Hariri to state his position on the mandate extension but Mr Hariri parried these attempts, insisting that he speak to Mr Al-Assad personally about this issue.⁸⁴⁹

537. The following day, 26 August 2004, Mr Hariri drove to Damascus to meet President Al-Assad. The meeting occurred in the presence of Syrian security officials.⁸⁵⁰

⁸⁴¹ Exhibit P301 (Visitor logbook for Quraitem Palace), p. 199; Marwan Hamade, T. 18 November 2014, pp 77-79, 81; Walid Jumblatt, T. 4 May 2015, pp 64, 66, 73-74; Jamil El-Sayyed, T. 6 June 2018, pp 75-77.

⁸⁴⁶ Exhibit P422.1, pp 6, 11-12. *See also* Prosecution submissions, T. 4 May 2015, pp 80-81, noting that Mr Wissam Al-Hassan had provided it to UNHCR. Mr Jumblatt identified the voices on the tape as Mr Hariri's and Mr Ghazaleh's. Portions of the tape were played in court during Mr Jumblatt's testimony. Walid Jumblatt, T. 4 May 2015, pp 69-81.

⁸⁴⁷ Exhibit P422.1, pp 3-4.

⁸⁴⁸ Exhibit P422.1, p. 6.

⁸⁴⁹ Exhibit P422.1, pp 11-13, 17-18. "[Ghazaleh]: Forget the joking, in your opinion should it be an amendment for one term, or two, regardless. [Hariri]: Twelve, twelve ... [Ghazaleh]: Really now, without joking ... [Hariri]: I swear twelve, we will make it twelve. You will not find someone like him. [Ghazaleh]: (laughs) ... [Hariri]: And you, what do you want? Twelve or eighteen? [Ghazaleh]: No I want either three or five, either three or five. [Hariri]: (laughs)."

⁸⁵⁰ Marwan Hamade, T. 19 November 2014, pp 10-11; exhibit P1107 (Statement of Witness PRH045, 12 August 2010), para. 44; Hani Hammoud, T. 19 May 2015, pp 36-39; Salim Diab, T. 22 January 2015, pp 32-35; Ghazi El-Youssef, T. 10 March 2015, pp 58-59; Ghaleb Ahmad El-Chammaa, T. 10 February 2015, pp 50-51.

538. No one present at the meeting provided evidence to the Trial Chamber. But according to witnesses Mr Hariri spoke to or others they informed, President Al-Assad instructed Mr Hariri to support Mr Lahoud's extension, stating that Syria alone could choose the president of Lebanon.⁸⁵¹ The tone of the meeting was described as harsh.⁸⁵²

539. According to these witnesses, President Al-Assad told Mr Hariri that should Mr Hariri contradict the will of the Syrian regime he would 'break Lebanon over Hariri's head'. Mr Siniora said that he and Mr Fuleihan lunched with Mr Hariri at his Faqra Villa just after his return from Damascus and he told them that Mr Al-Assad had said, 'You are going to approve the extension, otherwise I will break Lebanon over your head'. Mr Siniora described Mr Hariri as looking very distressed, and that 'he was very glum and we could see in his eyes a mixture of anger, suffering, and the feeling of humiliation'.⁸⁵³

540. Mr Siniora said that Mr Hariri had repeatedly said to him that these were the words used by Mr Al-Assad.⁸⁵⁴ Mr Hariri understood this as a threat⁸⁵⁵ and, according to Mr Hamade, one 'extremely dangerous' to both Mr Hariri and Mr Jumblatt.⁸⁵⁶ Mr Hamade testified that Mr Hariri told him that Mr Al-Assad had said, 'I will destroy Lebanon over yours and Walid Jumblatt's head if you believe that you can impose a president of the republic and if you think that you can fulfil the wishes of the United States'.⁸⁵⁷ Mr Diab—Mr Hariri's 2005 election campaign manager—testified that Mr Hariri had told him that Mr Al-Assad 'told him that he would break Lebanon over his head if he did not accept what he has offered him', and that having heard this, Mr Hariri had made the decision to run candidates all over Lebanon in the election.⁸⁵⁸

⁸⁵⁶ Marwan Hamade, T. 19 November 2014, pp 7-8, 21. Mr Hariri had told him that Mr Al-Assad had said, 'if you do not abide, we will destroy Lebanon on your head and on Walid's head'.

⁸⁵⁷ Marwan Hamade, T. 19 November 2014, pp 6-7.

⁸⁵⁸ Salim Diab, T. 22 January 2015, pp 32-35.

541. According to those Mr Hariri spoke to, the meeting lasted less than 15 minutes, and Mr Hariri was not permitted to sit and was hardly given an opportunity to respond.⁸⁵⁹ Mr Hariri was upset and humiliated by the meeting,⁸⁶⁰ and afterwards drove to Mr Jumblatt's residence, where he met Mr Jumblatt, Mr El-Aridi, Mr El-Sabeh and Mr Hamade.⁸⁶¹ The group were 'all surprised' by Mr Hariri's appearance.⁸⁶² Mr Hamade testified that Mr Hariri was 'very upset' and 'sweating in the face.'⁸⁶³ Mr Jumblatt described Mr Hariri as having a 'strange' demeanour.⁸⁶⁴

542. Upon hearing of the meeting, Mr Jumblatt advised that Mr Hariri and his bloc should support the extension—while Mr Jumblatt and his bloc continued to oppose it—and then Mr Hariri should resign and leave Lebanon,⁸⁶⁵ as Mr Hariri was at imminent risk.⁸⁶⁶ Mr Hariri then travelled to his residence in Faqra and met Mr Siniora and Mr Fuleihan—as described above—and both advised him to resign.⁸⁶⁷

543. Mr Jumblatt listened to the audio-recording of a meeting between Mr Hariri and the Syrian Deputy Foreign Minister, Mr Walid El-Moallem, of 1 February 2005, in which Mr Hariri described a ten to 15-minute meeting with Mr Al-Assad concerning Mr Lahoud's proposed extension, as 'the worst day of my life'. Mr Jumblatt was of the view that Mr Hariri was referring to that particular meeting.⁸⁶⁸

⁸⁵⁹ Marwan Hamade, T. 19 November 2014, pp 4-5; Ghattas El-Khoury, T. 15 January 2015, pp 36-37; Fouad Siniora, T. 23 March 2015, p. 58; Atef Majdalani, T. 28 April 2015, p. 34; Walid Jumblatt, T. 5 May 2015, p. 29.

⁸⁶² Bassem El-Sabeh, T. 16 March 2015, pp 37-38.

⁸⁶³ Marwan Hamade, T. 19 November 2014, p. 4.

⁸⁶⁴ Walid Jumblatt, T. 4 May 2015, p. 82.

⁸⁶⁵ Marwan Hamade, T. 19 November 2014, pp 8-10, 25-26; Bassem El-Sabeh, T. 16 March 2015, p. 40; Walid Jumblatt, T. 4 May 2015, pp 82-88.

⁸⁶⁶ Marwan Hamade, T. 19 November 2014, pp 8-10, 26-27; Bassem El-Sabeh, T. 16 March 2015, p. 40; Walid Jumblatt, T. 4 May 2015, pp 83-88, T. 5 May 2015, p. 29.

⁸⁶⁷ Marwan Hamade, T. 19 November 2014, pp 21, 23; Ghattas El-Khoury, T. 15 January 2015, pp 20-22; Bassem El-Sabeh, T. 16 March 2015, pp 46-47; Atef Majdalani, T. 30 April 2015, p. 21; Walid Jumblatt, T. 4 May 2015, p. 87.

⁸⁶⁸ Exhibit P409 (Audio-recorded conversation between Mr Hariri and Mr Walid Moallem, 1 February 2005); exhibit P409.1 (Transcript of audio-recorded conversation between Mr Hariri and Mr Walid Moallem, 1 February 2005), ERN 4000843A_Side B_U_EN, p. 1; Walid Jumblatt, T. 6 May 2015, pp 58-62.

544. Mr El-Sayyed, on the other hand, strongly disputed that the meeting occurred in the manner described. When testifying he was adamant that because of his position in Lebanon at the time he would have known about it.⁸⁶⁹ Moreover, Mr Al-Assad would not have behaved in that manner.⁸⁷⁰

545. Mr El-Sayyed was of the view that the meeting did not occur as described above for a number of reasons. These included that he would have known about it, Mr Wissam Al-Hassan would have told him, it was never discussed at the Lebanese or Syrian level, it was not reported in the media at the time and no one ever mentioned it to him, including Mr Jumblatt, Mr Ghazaleh or Mr Hariri's friends.⁸⁷¹ His only knowledge of the meeting was that he knew that it occurred on that day and Mr Ghazaleh had told him before that its purpose was for Mr Al-Assad to ask Mr Hariri to proceed with Mr Lahoud's extension.⁸⁷² Mr El-Sayyed also said that Syrian officers never attended meetings between Mr Al-Assad and other dignitaries and he (Mr Al-Assad) 'would not invite the officers into a meeting and then insult Prime Minister Hariri during that meeting'.⁸⁷³

546. Mr El-Sayyed explained how Mr Hariri used to communicate with the Syrian government through Mr Al-Assad's aides.⁸⁷⁴ Mr El-Sayyed also stated Mr Hariri became 'more open' to liaising with him after Mr Hariri resigned. Mr Hariri used to communicate with him through two 'liaison officers', journalists Mr Mohammed Chukr from *Al Khayat* newspaper and Mr Faisal Salman. Mr Hariri also used to summon Mr El-Sayyed to visit him at home.⁸⁷⁵

547. The Trial Chamber has thus considered Mr El-Sayyed's evidence about his own role in Lebanese politics during Mr Lahoud's presidency, which included regular meetings and contacts with all key political players including the president, Mr Hariri, Mr Jumblatt and Mr Nasrallah, in which he said he discussed 'very important policies relating to the country'.⁸⁷⁶

548. Given Mr El-Sayyed's role at the time, his assertion does have some strength. However, the Trial Chamber has balanced the evidence of those who heard about the meeting from Mr Hariri

⁸⁶⁹ Jamil El-Sayyed, T. 6 June 2018, pp 70-73. Mr El-Sayyed said that 'For sure this did not happen. Otherwise, I would have known about it.'

⁸⁷⁰ Jamil El-Sayyed, T. 6 June 2018, p. 73.

⁸⁷¹ Jamil El-Sayyed, T. 6 June 2018, pp 70-71.

⁸⁷² Jamil El-Sayyed, T. 6 June 2018, pp 76-79.

⁸⁷³ Jamil El-Sayyed, T. 6 June 2018, p. 85.

⁸⁷⁴ Jamil El-Sayyed, T. 5 June 2018, p. 33.

⁸⁷⁵ Jamil El-Sayyed, T. 5 June 2018, p. 54.

⁸⁷⁶ Jamil El-Sayyed, T. 5 June 2018, p. 105.

himself—and immediately afterwards—against Mr El-Sayyed’s negative assertion that he would have had to have known about it and is of the view that this of itself does not displace the positive evidence of what happened at the meeting.

549. Having heard only hearsay evidence about what happened at the meeting, the Trial Chamber cannot make any positive findings about what actually occurred. However, it notes that the accounts that Mr Hariri is said to have given about what happened are consistent with other evidence regarding the role that Syria was then playing in Lebanese internal political and economic affairs. The Trial Chamber is satisfied that the meeting occurred, that its subject matter was Mr Lahoud’s mandate extension and that Mr Al-Assad informed Mr Hariri that he was going to have to accept that this was occurring.

2. 28 August 2004: Council of Ministers meeting

550. Mr Hariri did not support the extension of Mr Lahoud’s mandate. But ultimately, in order to avoid confrontation with Syria, he opted to support and facilitate it.⁸⁷⁷ On 28 August 2004, he initiated the process of amending the Lebanese Constitution to allow this by convening a meeting of his Council of Ministers.⁸⁷⁸

551. At the meeting, Mr Hariri made some perfunctory remarks⁸⁷⁹ during what was a ten-minute session,⁸⁸⁰ and the Council voted to refer the matter to the Lebanese Parliament.⁸⁸¹ The vote was 25 to four with Mr Hamade, Mr Aridi and Mr Farhat—all members of the Democratic Gathering—and Mr Fares Boueiz opposing the extension.⁸⁸² The Foreign Minister, Mr Jean Obeid, was absent, which was understood to be an expression of his opposition, and Mr Siniora arrived very late after being convinced by Mr Hariri to attend as his absence could have been interpreted as Mr Hariri opposing the measure.⁸⁸³

⁸⁷⁷ Marwan Hamade, T. 19 November 2014, pp 35, 80-81; Fouad Siniora, T. 23 March 2015, p. 61; Mustafa Nasser, T. 15 April 2015, pp 58, 60; Walid Jumblatt, T. 5 May 2015, pp 28-29.

⁸⁷⁸ Exhibit P309 (*An-Nahar* article, 29 August 2004), pp 1-2; Ghazi El-Youssef, T. 10 March 2015, p. 60; Fouad Siniora, T. 26 March 2015, p. 28; Jamil El-Sayyed, T. 6 June 2018, p. 66.

⁸⁸¹ Marwan Hamade, T. 19 November 2014, p. 42.

⁸⁸² Exhibit P309, pp 2-3, which describes Mr Bouiez and Mr Obeid as being absent from the meeting; Marwan Hamade, T. 19 November 2014, pp 36, 39-42.

⁸⁸³ Marwan Hamade, T. 19 November 2014, pp 41-42; Fouad Siniora, T. 23 March 2015, pp 61-63.

552. It was understood that this vote was the result of Syria wanting to keep Mr Lahoud in his post. Mr Hamade and Mr El-Sabeh both described how, a few weeks before the vote, it had become commonly understood in the public eye—through the media—that Syria desired to maintain the Lahoud presidency.⁸⁸⁴ After the adoption of the draft amendment, according to a newspaper article on 29 August 2004, Mr Nasib Lahoud MP accused the Syrian leadership of being responsible for the ‘erroneous choice’, and another MP, Mr Fares Sa’id, described Syrian pressure as ‘disgraceful.’⁸⁸⁵ The UN Secretary-General also reported on 1 October 2004 that:

It was widely contended in Lebanon, and asserted by the co-sponsors of resolution 1559 (2004), that the extension of President Lahoud’s term in office was the result of a direct intervention by the Government of the Syrian Arab Republic. Ten members of the Chamber of Deputies have tabled a motion in the Chamber to abrogate the law extending President Lahoud’s term. Both the Lebanese and Syrian Governments have denied Syrian influence on the extension.⁸⁸⁶

553. According to a number of witnesses, Mr Hariri understood that, if he supported the constitutional amendment to extend Mr Lahoud’s term, Syria would give him a free hand to select several ministers in his government and would pressure Mr Lahoud to be cooperative with him.⁸⁸⁷

554. Following the vote, Mr Hariri travelled to Sardinia, where he fell ill due to hypotension. He also broke his arm and shoulder and was flown to Nice for treatment.⁸⁸⁸

3. 1 September 2004: Council of Maronite Bishops statement

555. On 1 September 2004, the Council of Maronite Bishops, led by Patriarch Sfeir, issued a strong statement in response to the constitutional amendment, accusing Syria of treating Lebanon like a Syrian province.⁸⁸⁹ The statement accused Syria of being responsible for everything that had happened in Lebanon since the Taif Agreement, saying of Syria that:

⁸⁸⁴ Marwan Hamade, T. 19 November 2014, pp 40-41; Bassem El-Sabeh, T. 16 March 2015, p. 45.

⁸⁸⁸ Marwan Hamade, T. 19 November 2014, pp 43-44; Fouad Siniora, T. 23 March 2015, pp 66-67, T. 25 March 2015, p. 94.

⁸⁸⁹ Exhibit P364 (UNIC Beirut press review, 2 September 2004), p. 3; Ghattas El-Khoury, T. 15 January 2015, pp 50-52; Bassem El-Sabeh, T. 16 March 2015, p. 46; Walid Jumblatt, T. 4 May 2015, pp 93-94.

it interferes in all Lebanese affairs, be it administration, judiciary, economy and especially politics through its representatives here and collaborators ... It compromises Lebanese interests at international forums, and protects the corrupt ... That is how the culture of bribes, perversion and corruption has flourished in Lebanon, while the Lebanese people are being impoverished and Lebanese youth are emigrating in big numbers.⁸⁹⁰

556. To some, this was viewed as an important turning point in relations between Lebanon and Syria.⁸⁹¹

4. 2 September 2004: Security Council resolution 1559

557. At the same time as the moves to extend President Lahoud's mandate, concurrent speculation was occurring in Lebanon that the UN Security Council was planning to pass a resolution condemning Syrian influence in Lebanon, and particularly in the presidential election.⁸⁹² In August 2004, a draft resolution was circulated and—in letters to the UN Secretary-General and the President of the Security Council dated 30 August 2004 and 1 September 2004—Lebanon and Syria, respectively, opposed the draft. Lebanon submitted that the 'presence of Syrian troops in Lebanon is linked to the Taif Treaty and other bilateral agreements' between Lebanon and Syria.⁸⁹³

558. According to Mr El-Sayyed, on 2 September 2004, Mr Al-Hassan visited him to pass on a message from Mr Hariri that he was prepared to form a government under Mr Lahoud in his extended term in office. Mr El-Sayyed passed the message on to Mr Lahoud and 'we found that this was comfortable, given the objection and the uproar in the country'.⁸⁹⁴

559. On 2 September 2004, the UN Security Council adopted resolution 1559 calling upon 'all remaining foreign forces to withdraw from Lebanon'. It expressed grave concern 'at the continued presence of armed militias in Lebanon, which prevent the Lebanese Government from exercising its full sovereignty over all Lebanese territory'. It called for 'the disbanding and disarmament of all Lebanese and non-Lebanese militias'. It declared 'its support for a free and fair electoral process

⁸⁹³ Exhibit P310.2 (Letters dated 30 August 2004 from the Permanent Representative of Lebanon); exhibit P310.3 (Letters dated 1 September 2004 from the Permanent Representative of the Syrian Arab Republic); Marwan Hamade, T. 8 December 2014, pp 45-46.

⁸⁹⁴ Jamil El-Sayyed, T. 6 June 2018, p. 89.

in Lebanon's upcoming presidential elections conducted according to Lebanese constitutional rules devised without foreign interference or influence'.⁸⁹⁵

560. According to the witnesses, it was generally understood that 'foreign interference or influence' referred to Syrian attempts to extend President Lahoud's mandate, that 'foreign forces' referred to Syrian troops and that 'Lebanese and non-Lebanese militias' referred to Hezbollah and Palestinian militias.⁸⁹⁶

561. In addressing the Security Council, the US Permanent Representative to the UN said that Syrian actions over the preceding week had made a 'crude mockery' of the principle of free and fair elections by pressuring and even threatening the Lebanese Parliament to extend Mr Lahoud's mandate. Further, the Security Council had been forced to move quickly in order to issue the resolution prior to the vote in the Lebanese Parliament.⁸⁹⁷ According to Mr Hamade, President Chirac had asked President Al-Assad to postpone the vote in Parliament on Mr Lahoud's extension until the UN Security Council had finalised the resolution.⁸⁹⁸

562. The UN Security Council also resolved to remain actively seized of the matter, and asked the Secretary-General to report on the implementation of the resolution within 30 days.⁸⁹⁹

563. On 1 October 2004, the Secretary-General reported that there had been no discernible change in status since the passage of the resolution and that its requirements had not been met.⁹⁰⁰ He noted that Syrian troops were the only significant foreign forces deployed in Lebanon—according to Syria, their troops in Lebanon numbered 14,000—and that Hezbollah was the most significant armed group and carried out operations independently of Lebanese government control or sanction.⁹⁰¹

⁸⁹⁵ Exhibit P451, para. 10; exhibit P310.1 (UN Security Council resolution 1559 (2004)). *See also* exhibit P310.4 (UN Security Council press release, 2 September 2004), stating that the resolution was passed with nine votes in favour and six abstentions.

⁹⁰⁰ Exhibit P451, paras 20, 33, 36.

⁹⁰¹ Exhibit P451, paras 12, 16, 19, 23.

564. On 19 October 2004, the President of the Security Council issued a statement noting the Council's 'concern that the requirements set out in resolution 1559 (2004) have not been met'.⁹⁰² On 14 December 2004, the Secretary-General appointed Mr Terje Rød-Larsen as Special Envoy for the implementation of Security Council resolution 1559.⁹⁰³ The Prosecutor, at the Trial Chamber's request, wrote to the United Nations Office of Legal Affairs seeking a waiver of immunity to permit Mr Rød-Larsen to testify in the trial. This was refused.⁹⁰⁴

565. A media campaign, which according to a number of Prosecution witnesses was understood to have been driven by the Syrian regime, then accused Mr Hariri of having been behind resolution 1559 or having failed to use his influence to prevent it from passing.⁹⁰⁵ Mr El-Sayyed, by contrast, disputed that Syria had held that opinion or had made such an accusation against Mr Hariri, stating that 'we cannot lower ourselves by saying that a person, even in the position of Prime Minister Hariri, could really push or work such a resolution in the UN Security Council'.⁹⁰⁶ He agreed that there were daily accusations in the media to that effect and also noted that the Israelis, including their Foreign Minister, Mr Silvan Shalom, had said that the Israelis were behind the resolution.⁹⁰⁷

566. Mr Hariri, according to his associates, shared the resolution's goal of removing Syrian troops and influence from Lebanon. However, he had hoped to achieve this without provoking Syria.⁹⁰⁸ Mr El-Sayyed was of the view that Mr Hariri did not support the resolution.⁹⁰⁹ Mr Hariri's position, which he communicated to Syria and to other states, was that Syrian withdrawal should

⁹⁰⁹ Jamil El-Sayyed, T. 6 June 2018, pp 61-62.

begin with redeployment pursuant to the Taif Agreement and that the disarmament of Hezbollah—an issue that he did not view as urgent—should be negotiated through national dialogue.⁹¹⁰

567. Mr Hariri denied having been behind the resolution, and those close to him believed that he had nothing to do with it.⁹¹¹ The Trial Chamber has seen no evidence that Mr Hariri was associated with it, and to the contrary, it would appear that the passage of the resolution did not coincide with his political interests at the time.

568. There was strong opposition in Lebanon and Syria to the resolution. Both President Al-Assad and Mr Nasrallah, and Syrian and Hezbollah representatives, which included Mr Nasser Kandil, publicly defended the Syrian presence in Lebanon and condemned the resolution.⁹¹² In November 2004, Mr Nasrallah stressed that Hezbollah was committed ‘to standing by Syria and to defending Syria just like Syria has defended us’, and thousands of Hezbollah supporters marched in Beirut to express condemnation of resolution 1559, brandishing pictures of Presidents Al-Assad and Lahoud.⁹¹³

569. Mr El-Sayyed’s conclusion, however, was that ‘in a nutshell ... Hariri’s assassination implemented the resolution’,⁹¹⁴ meaning that its effect was to force Syria to withdraw its troops, in April 2005.

5. 3 September 2004: Parliament vote

570. On 3 September 2004, less than 24 hours after the passage of the UN Security Council resolution, the Lebanese Parliament approved the constitutional amendment extending President

⁹¹⁴ Jamil El-Sayyed, T. 6 June 2018, p. 62.

Lahoud's term.⁹¹⁵ Mr Hariri attended the session, voted for the measure⁹¹⁶ and asked his bloc to vote in support of the measure.⁹¹⁷

571. Mr El-Khoury and Mr Majdalani testified that before the vote, Syrian security officers attempted to contact members of Mr Hariri's bloc and threatened their safety should they vote against the amendment.⁹¹⁸ In Parliament, Mr Jumblatt and others spoke against the measure,⁹¹⁹ and 29 members—dubbed the 'list of honour' in some media, and the 'list of shame' by Mr Kandil—voted against it,⁹²⁰ including Mr El-Khoury.⁹²¹ The measure required a two-thirds majority, which it received due to the support of the majority of Mr Hariri's bloc.⁹²²

572. According to the UNIC Beirut press review, the White House then issued a statement condemning Syrian interference in the Parliamentary vote and branding it a direct contradiction of resolution 1559.⁹²³

573. From August/September 2004 until shortly before his death, Mr Hariri engaged in close dialogue with Mr Nasrallah,⁹²⁴ and in that period the two met between ten and 20 times,⁹²⁵ each

⁹¹⁵ Marwan Hamade, T. 19 November 2014, pp 78, 82; Ghattas El-Khoury, T. 15 January 2015, pp 65, 67; Walid Jumblatt, T. 4 May 2015, p. 87; exhibit P424 (UNIC Beirut press review, 6 September 2004), p. 4. On 1 October 2004, the Secretary-General reported that, 'On 3 September 2004, less than 24 hours after resolution 1559 (2004) was adopted, the Chamber of Deputies approved Constitutional Law 585 by a vote of 96 to 29 with three members not present, thereby extending President Lahoud's term by three years. The law stated that "for a one and exceptional time, the mandate of the current President of the Republic will be renewed to three additional years that should end on 23 November 2007".' Exhibit P451, para. 27.

⁹²⁵ Mustafa Nasser, T. 9 April 2015, pp 27, 35-40. A UNIC Beirut press release dated 24 September 2004 quoted Mr Jumblatt as stressing that there would be no coexistence with the Lahoud regime and states that Mr Jumblatt said Mr Hariri and Mr Nasrallah were pleading with him to tone down his language, exhibit P430 (UNIC Beirut press release, 24 September 2004), p. 5. In his testimony, however, Mr Jumblatt did not recall a meeting with Mr Nasrallah in this time, Walid Jumblatt, T. 5 May 2015, p. 35.

meeting lasting two to three hours.⁹²⁶ There were also four to five meetings between Mr Hariri and Mr Hussein Khalil—described as Mr Nasrallah’s right-hand man, in charge of political relations with prominent figures and blocs⁹²⁷—without Mr Nasrallah.⁹²⁸ Mr Mustafa Nasser—the journalist who was an advisor to Mr Hariri and intermediary between Mr Hariri and Hezbollah—stated that most ‘negotiations’ were done by himself, and the two men met rarely in person.⁹²⁹

574. According to a press release, on 5 September 2004, after an accident in Sardinia, Mr Hariri received telephone calls from both Mr Nasrallah and Mr Lahoud.⁹³⁰

575. According to Mr Nasser, the meetings between Mr Hariri and Mr Nasrallah always occurred outside Quraitem Palace.⁹³¹ Mr Hariri would go in one car, along with his ‘most trusted security’—usually Mr Al-Arab, and sometimes Mr Al-Hassan. Mr Hariri would drive himself. One of Hezbollah’s security vehicles would meet Mr Hariri at the edge of the ‘security zone’ and lead him to the meeting location. Mr Nasser also explained that most of the time, the meetings would take place in different locations,⁹³² including more than once at Mr Nasser’s home.⁹³³ According to Mr Nasser, only he, Mr Hussein Khalil, Mr Hariri and Mr Nasrallah would be present in the meetings.⁹³⁴ The meetings took place in complete secrecy.⁹³⁵ No notes were taken.⁹³⁶ Most of the meetings would take place at night.⁹³⁷ Mr El-Sayyed, on the other hand, insisted in his testimony that these meetings ‘were not secret meetings’.⁹³⁸

576. According to Mr Soubra, one of Mr Hariri’s close protection officers, the convoy’s composition changed when Mr Hariri was meeting Mr Nasrallah—Mr Nasrallah would send one

⁹³⁸ Jamil El-Sayyed, T. 5 June 2018, p. 98.

of his cars, and two armoured cars would be used for Mr Hariri, plus two standard Peugeot cars for security.⁹³⁹

577. A number of witnesses stated that meetings between Mr Nasrallah and Mr Hariri increased in frequency over time, in response to political events. Mr Nasser and Mr El-Youssef said that the increase came with the extension of Mr Lahoud's mandate in August to September 2004.⁹⁴⁰ Mr El-Youssef, additionally, stated that it was the attempted assassination of Mr Hamade⁹⁴¹ after 1 October 2004. Mr Salim Diab said that it coincided with Mr Hariri's resignation as prime minister.⁹⁴² Mr Nasser also stated that the meetings became 'far more frequent' in the last six months of Mr Hariri's life.⁹⁴³

578. The overall aim of the meetings was to establish political cooperation with Hezbollah.⁹⁴⁴ A range of topics was covered. According to Mr Hammoud and Mr Siniora, the meetings were at first focused on attempting to block the proposed extension of Mr Lahoud's mandate as president.⁹⁴⁵ When this failed, the dialogue concentrated on the adoption of Security Council resolution 1559 in September 2004.⁹⁴⁶

579. Mr Hariri was convinced that the resolution would lead to the Syrian withdrawal from Lebanon and, according to Mr Hammoud, aimed to convince Mr Nasrallah that this was not a 'catastrophe' for Hezbollah.⁹⁴⁷ Mr Hariri said that in order to respect the Taif Agreement, he would agree to the withdrawal of Syria to the Bekaa area, not all the way out of Lebanon.⁹⁴⁸ Mr El-Khoury, Mr El-Sabeh and Mr Nasser each described how Mr Hariri was hoping for an electoral alliance with Mr Nasrallah.⁹⁴⁹ Mr El-Chammaa, who discussed the meetings with Mr Hariri,

described their ongoing purpose as an attempt to build a new future for Lebanon and to preserve good relations between Lebanon and Syria.⁹⁵⁰

580. The evidence varied as to discussions about Hezbollah's arms. Mr Jumblatt was certain that the meetings between Mr Hariri and Mr Nasrallah did not include discussion of Hezbollah's weapons, and that Mr Hariri did not want to put the issue of armament on the table.⁹⁵¹ Mr Nasser also stated that Mr Nasrallah's primary concern was the potential disarmament of Hezbollah under the UN Security Council resolution, and that Mr Hariri assured him that Hezbollah would retain its weapons until a peace agreement was reached with Israel. Mr Hariri told Mr Nasrallah that he would have no bargaining chip to negotiate with Israel if the resistance were disarmed.⁹⁵²

581. By contrast, Mr El-Chammaa testified that Mr Hariri had told him that the two were discussing the eventual disarming of Hezbollah in the weeks and months before February 2005.⁹⁵³ Mr Hariri did not consider that the presence of arms in the hands of any party other than the Lebanese security forces was acceptable.⁹⁵⁴

F. Background to the Bristol Group meetings

582. On 4 September 2004, the day after the Parliamentary approval for Mr Lahoud's mandate extension, the Qornet-Chehwan Gathering held an extraordinary meeting at Patriarch Sfeir's summer residence in Diman.⁹⁵⁵ It called for a better balance of power in Lebanon and for Syrian

⁹⁵⁰ Ghaleb Ahmad El-Chammaa, T. 10 February 2015, pp 73, 76.

⁹⁵¹ Walid Jumblatt, T. 6 May 2015, p. 45. Mr Jumblatt said that 'He told Nasrallah: "Your weapons are our weapons." This is what he told us after meeting Mr Nasrallah, because Resolution 1559 contains an article or a point regarding the necessity to disarm all Lebanese and non-Lebanese militias.'

⁹⁵² Exhibit 2D131 (Witness statement of Mustafa Nasser, 12 August 2010), para. 41.

⁹⁵³ Ghaleb Ahmad El-Chammaa, T. 11 February 2015, p. 71. 'Q: You knew in broad terms what Mr Hariri and Sayyed Hassan Nasrallah were talking about because Mr Hariri told you what they were talking about in broad terms? You weren't getting it from another source; you were getting it directly from Mr. Hariri's mouth. Is that correct? A: I can say yes in general; however, I would like to add that I was not following up exactly what was going on between Sayyed Hassan Nasrallah and the late Prime Minister Hariri. He did not mention to anyone, as far as I know, he did not mention to anyone the content, the gist of the conversations that were held and that were ongoing between them. And I cannot know for sure because I would not be able to know unless he told me. I do not ask. I only know what he tells me. What I mentioned previously, I mentioned it and I cannot add anything to it.' Ghaleb Ahmad El-Chammaa, T. 11 February 2015, p. 73.

⁹⁵⁴ Ghaleb Ahmad El-Chammaa, T. 10 February 2015, p. 56.

⁹⁵⁵ Exhibit P423 (Accord of Qornet-Chehwan Gathering, 4 September 2004).

withdrawal⁹⁵⁶ and issued an ‘Accord’ condemning the constitutional amendment to extend the presidential term.⁹⁵⁷

583. Meanwhile, in early September 2004, a broader opposition coalition began meeting at the Hotel Bristol and became known as the Bristol Group or Gathering.⁹⁵⁸ The Bristol Group included a number of groups and individuals⁹⁵⁹ and became wide enough to represent all factions—right and left.⁹⁶⁰ Witnesses testified that the Bristol Group reflected a broader public opposition to Syria,⁹⁶¹ aimed at ‘raising the voice’ against Syria in line with Security Council resolution 1559 and the withdrawal of Syrian troops.⁹⁶²

584. The evidence differed slightly as to the precise start date of the Bristol Group meetings, at least in the sense of when the participants started their discussions—although the evidence is consistent that its first formal meeting was at the Bristol Hotel in Beirut on 22 September 2004. Mr El-Khoury explained that the participants all shared the same view, to put an end to interference in the judiciary and to amend the electoral law in a way that is just and fair to everyone.⁹⁶³ Mr El-Chammaa said the meetings began ‘back then’, meaning when Mr Hariri returned from Damascus in late August 2004.⁹⁶⁴ Mr El-Khoury referred to summer 2004—and says the preparations for the first Bristol meeting started immediately after the vote amending the constitution.⁹⁶⁵

⁹⁵⁶ Marwan Hamade, T. 20 November 2014, pp 22-25.

⁹⁵⁷ Exhibit P423, saying, ‘The Gathering requested the decision makers and authorities of today’s Lebanon to resort to reason, logic and fundamentals and reconsider the grave error which put Lebanon in confrontation with the international law, pushing it into major risks’. *See also* Walid Jumblatt, T. 4 May 2015, pp 93-95.

⁹⁵⁸ Marwan Hamade, T. 20 November 2014, p. 28, T. 8 December 2014, p. 5; Ghaleb Ahmad El-Chammaa, T. 10 February 2015, pp 57-58.

⁹⁵⁹ The evidence, however, differs on the relationship between the Bristol Group and the Qornet-Chehwan Gathering. Mr El-Youssef said that the five or six groups in the Bristol Group included the Qornet-Chehwan Gathering. Ghazi El-Youssef, T. 10 March 2015, p. 62. Mr El-Chammaa stated that the Bristol Gathering remained separate from the Qornet-Chehwan Gathering. Ghaleb Ahmad El-Chammaa, T. 10 February 2015, pp 57-58. Mr El-Sayyed stated that it was the Qornet-Chehwan Gathering itself which expanded and then became the Bristol Group. Jamil El-Sayyed, T. 7 June 2018, pp 3-4. While, Mr El-Khoury said that the Bristol Group came together under the umbrella of the Qornet-Chehwan Gathering. Ghattas El-Khoury, T. 15 January 2015, p. 13. The Trial Chamber is of the view that nothing turns on these differences of recollection or interpretation.

⁹⁶⁰ Ghattas El-Khoury, T. 15 January 2015, p. 74.

⁹⁶⁴ Ghaleb Ahmad El-Chammaa, T. 10 February 2015, pp 56-57.

⁹⁶⁵ Ghattas El-Khoury, T. 15 January 2015, p. 76.

585. A number of Mr Hariri's political advisors joined the Bristol Group.⁹⁶⁶ Mr Walid Jumblatt, who was a friend and political ally of Mr Hariri's, was a 'main figure' in the group.⁹⁶⁷ Another was Mr El-Khoury, Mr Hariri's physician,⁹⁶⁸ who also had a role to play because he was a friend of Mr Jumblatt's.⁹⁶⁹ Mr Fuleihan, an MP, who was also a professor at the American University of Beirut and a close associate of Mr Hariri,⁹⁷⁰ and Future Movement MP Mr Ahmad Fatfat, who was the first Muslim minister to join the opposition coalition, were two others.⁹⁷¹

586. Evidence about Mr Hariri's direct involvement in the early Bristol Group varied. Mr El-Khoury stated that he was 'mandated' by Mr Hariri to develop the coalition, and was entrusted with the coordination with Mr Hariri and Mr Jumblatt.⁹⁷² According to Mr Jumblatt, his and Mr Hariri's shared agenda was 'to enlarge the coalition and to gather the biggest number of Lebanese parties in order to voice our opposition to the extension.'⁹⁷³

587. Mr El-Chamma said that while Mr Hariri 'implicitly' supported the opposition by allowing his close allies to engage in contact with the Bristol Group, he maintained a real hope that he would be able to change the Syrians' position.⁹⁷⁴ Mr El-Sayyed said that he had never heard that Mr Hariri met the group or intended to be a member of it.⁹⁷⁵ Mr El-Youssef also said that while Mr Hariri's heart was with the opposition, he was not able to say so publicly in September 2004.⁹⁷⁶ Mr Hani Hammoud stated that while Mr Hariri had a clear intention to join or create an opposition alliance, he wanted to be represented at the meeting but not attend himself.⁹⁷⁷ Mr El-Sayyed explained that the presence of Mr Hariri's allies in the group was a clear sign that Mr Hariri was not boycotting it,⁹⁷⁸ however, he wanted to take an intermediate position, not going as far as the Bristol Group. He did not, for example, call for the withdrawal of Syrian troops.⁹⁷⁹ Mr Mustafa Nasser also stated

⁹⁷⁹ Jamil El-Sayyed, T. 7 June 2018, p. 6.

that the members of the Bristol Group did not share the same political opinions as Mr Hariri.⁹⁸⁰ Mr Hariri was an Arab nationalist who had good relations with Syria, whereas the Bristol Group was absolutely against Syria.⁹⁸¹

588. On 6 and 7 September 2004, four ministers—Mr Marwan Hamade, Mr Ghazi Aridi, Mr Abdullah Farhat⁹⁸² and Mr Fares Boueiz—resigned from Mr Hariri’s government.⁹⁸³ On 12 September 2004, Mr Hariri announced, after having just received the UN award in Barcelona that day, that his government would resign before the end of September.⁹⁸⁴

589. In Mr Hammoud’s view, Mr Hariri had made up his mind to take part in the upcoming elections from a position of opposition in order to break the status quo and to be part of the Bristol Group.⁹⁸⁵

590. During September 2004, Mr Jumblatt became increasingly vocal about Syrian interference in Lebanon. He and Mr Nasib Lahoud—leader of the Democratic Renewal Movement—met on 11 September 2004. Mr Jumblatt opposed Syria’s intervention in respect of the extension, while Mr Lahoud stated that Lebanon’s democracy/sovereignty/liberties must be safeguarded, and urged a timetable for the Syrian withdrawal.⁹⁸⁶ On 13 September 2004, Mr Jumblatt’s Democratic Gathering bloc announced that it was preparing a ‘Ten Point’ document directed, among other issues, at the Syrian interference in Lebanese affairs.⁹⁸⁷ The same day, the US government called

⁹⁸⁰ Mustafa Nasser, T. 10 April 2015, p. 61.

⁹⁸¹ Mustafa Nasser, T. 15 April 2015, pp 108-109.

⁹⁸² According to *An-Nahar*, their three identical resignation letters read, ‘Mr Prime Minister, in keeping with the principled position of the Democratic Gathering in opposition to an extension of the term of office of the President of the Republic, and desiring as we do to respect the Constitution, protect freedom and democracy in Lebanon, prevent the conversion of our political system into a presidential system, and preserve what hope remains of rescuing the country from its crises, we find it impossible to participate in bearing responsibility for the results and impact of what has happened and is happening. Accordingly, we hereby tender to you our resignations from the Government, hoping that you will accept them. We thank you for your confidence and your cooperation with us, and we wish you and Lebanon continued success.’ Exhibit P312 (*An-Nahar* article, 8 September 2004), p. 2.

⁹⁸³ Exhibit P303 (Press releases), ERNs D0004611-D0004612; exhibit P312; Marwan Hamade, T. 20 November 2014, pp 3, 6-9, 11. Mr Hamade resigned only from the Council of Ministers but not from the Council of Deputies, because it was presided over by President Lahoud and it was necessary to show disapproval of the extension.

for a Syrian withdrawal from Lebanon and an end to its interference in Lebanon's internal affairs.⁹⁸⁸

591. On 17 September 2004, Mr Hariri met the French President Mr Jacques Chirac in Paris.⁹⁸⁹

592. Also on 17 September 2004, Mr Jumblatt was quoted as saying that what was happening in Lebanon confirmed that 'Lebanon was transforming into a big prison'.⁹⁹⁰ In a press release on 19 September 2004, Mr Jumblatt announced he was 'in solidarity with the opposition. We either participate in the government together or not'.⁹⁹¹

593. On 21 September 2004, a press conference publicly announced the Bristol Group's 'Democratic Gathering Declaration for Freedoms and the Protection of the Constitution and the Democratic Regime, Beirut, 21 September 2004'.⁹⁹² Mr Hariri was not present—according to Mr Hamade, he, rather than Mr Hariri, read the statement, to not 'blow up' the situation between Lebanon and Syria.⁹⁹³ Mr El-Sabeh, who was then an MP aligned with Mr Hariri, said that the declaration meant that Mr Jumblatt and Mr Hariri would either participate in the government with the opposition or not at all—thus mirroring Mr Jumblatt's earlier statement.⁹⁹⁴

G. First Bristol Group Meeting: 22 September 2004 and aftermath

594. The first Bristol Group meeting took place on 22 September 2004.⁹⁹⁵ Six of Mr Hariri's cabinet ministers participated.⁹⁹⁶ Mr El-Khoury and Mr Fuleihan did not attend,⁹⁹⁷ in Mr El-

⁹⁸⁸ Exhibit P425, p. 1, reporting a statement by the US Assistant Secretary of State for Near Eastern Affairs, after talks with President Al-Assad.

⁹⁹⁶ Bassem El-Sabeh, T. 16 March 2015, pp 50-52.

⁹⁹⁷ Ghattas El-Khoury, T. 15 January 2015, pp 77-78.

Khoury's case, because he was attending a medical conference.⁹⁹⁸ Mr Fatfat also attended, although he did so in his personal capacity. At the time, neither Mr Fatfat's presence, nor Mr El-Khoury's intended attendance, were understood to be a clear sign of Mr Hariri's support for the Bristol Group.⁹⁹⁹ Mr El-Khoury and Mr Hariri knew in advance the identity of the attendees.¹⁰⁰⁰

595. Mr El-Khoury described what was agreed during the first Bristol Group meeting, although he was not present himself, and the source of his knowledge was unclear. He stated that 'we' agreed on a series of topics: the implementation of the Taif Agreement, free elections and calling for President Lahoud to resign. There were two opinions on the Syrian presence. Some called for the implementation of the Taif Agreement, meaning the withdrawal of Syrian forces to the Bekaa and then to the Syrian border. Others said the gradual withdrawal under the Taif Agreement should have already happened and they wanted a full and complete withdrawal of Syrian forces from Lebanon.¹⁰⁰¹

596. Inside the meeting was a prominent banner which read 'Defending the freedoms and protecting the constitution, the preparatory committee'; a publicity video clearly shows this.¹⁰⁰² Mr Jumblatt testified that the banner reflected 'the general slogan of the opposition'.¹⁰⁰³ Mr Jumblatt sat with three allies, Mr Carlos Edde, the head of the National Bloc Party, and Mr Nehmeh Tomeh and Mr Salah Hnein, who were MPs in his coalition.¹⁰⁰⁴

597. Media reporting described it as a 'tumultuous' meeting in which both sides crossed the 'point of no return'.¹⁰⁰⁵ According to Mr Jumblatt, a media article stated that another group, of factions opposed to the Lahoud extension, was scheduled to meet on 23 September 2004, to support the extension and denounce Mr Jumblatt as 'subversive and treacherous'.¹⁰⁰⁶ Mr Jumblatt described this as the opposition 'move', which was the Syrian regime unleashing supporters to attack him.¹⁰⁰⁷ Mr Jumblatt was also quoted as saying that if 'anyone of us leaves this Lebanese-

¹⁰⁰⁷ Walid Jumblatt, T. 5 May 2015, p. 23.

Arab democratic and diverse consensus, he/she will end; and if Walid Jumblatt leaves this consensus, he will also end.’¹⁰⁰⁸

598. According to an *Al-Mustaqbal* press release, on 24 September 2004, Mr Hariri met Patriarch Sfeir in Bkirki in what was described as a ‘constructive and positive meeting’.¹⁰⁰⁹ On 29 September 2004, he met President Chirac for the second time in a fortnight. According to *Al-Mustaqbal*, they discussed the most recent developments in the region and bilateral relations between Lebanon and France.¹⁰¹⁰

599. The Trial Chamber can conclude from this evidence that Mr Hariri’s political allies attended the Bristol Group meetings with his support. This was contemporaneous with growing concern about the involvement of Syria in Lebanese political affairs. It was clearly a provocative move against Syria, which the evidence suggests was how the Syrians took it.

H. Security arrangements and concerns in late 2004

600. The Trial Chamber heard evidence that Mr Hariri’s security was seen to be at greater risk in the late months of 2004.

601. Mr Siniora testified that Mr Hariri expressed concerns to him about his personal security. For example, in late 2003 to early 2004, Mr Hariri told him, ‘You know, Fouad, we have now -- by now discovered many assassination attempts by Hezbollah targeting me’. He did not know what time Mr Hariri was referring to.¹⁰¹¹

602. In or around November 2004, Mr Salim Diab was told by two members of Mr Hariri’s security detail—Mr Al-Hassan and Mr Al-Arab—that there were concerns about Mr Hariri’s security.¹⁰¹² There were no specific grounds or concrete threats,¹⁰¹³ but due to Mr Hariri’s positions on Security Council resolution 1559 and the Lahoud extension, the team wanted to strengthen Mr Hariri’s protection. Mr Hariri had laughed at these concerns when Mr Al-Hassan and Mr Al-

Arab raised them, and they hoped he might listen to Mr Diab.¹⁰¹⁴ However, the response was similar when Mr Diab did raise it—Mr Hariri said that they—meaning Mr Al-Assad and Mr Lahoud—would not ‘dare to touch him’.¹⁰¹⁵

603. According to Mr El-Youssef, in December 2004, Mr El-Youssef met Mr Ghassan Salameh, advisor to the UN Secretary-General. Mr Salameh asked Mr El-Youssef to tell Mr Hariri to be careful. He said: ‘Let him be very careful. The Syrians want his political assassination or otherwise.’¹⁰¹⁶ The witness then met Mr Hariri and conveyed the threat—Mr Hariri was shocked and called Mr Salameh for a meeting at his house in Paris.¹⁰¹⁷ Mr Salameh told Mr Hariri that the threat was serious—he said that if Mr Hariri returned to Lebanon he should be ready for ‘political assassination’, which, if he resisted, would result in his death. Mr Hariri was shocked, and said that he was what the French and Americans called a ‘red line’, meaning that no one could touch him.¹⁰¹⁸

604. Mr Hariri’s security detail included both ISF police officers and civilian bodyguards.¹⁰¹⁹ When Mr Hariri was still prime minister, his car would be accompanied by a reconnaissance car, 30-40 people and explosive experts.¹⁰²⁰ Sometimes there would be a decoy convoy, without Mr Hariri.¹⁰²¹

605. According to Witness PRH076, Mr Hariri’s personal security detail included three civilian protection vehicles as well as Mr Hariri’s armoured car and an ambulance.¹⁰²² With the exception of Mr Hariri’s vehicle, none of the cars were armoured. However, they were fitted with signal jamming devices.¹⁰²³ ISF vehicles and motorcycles would also form part of the convoy.¹⁰²⁴ According to Mr Amer Chehadeh, a close protection officer and occasional driver for Mr Hariri, there would be an ISF vehicle to match each of civilian convoy cars.¹⁰²⁵ Every convoy that went

out would include between 17 and 20 ISF officers.¹⁰²⁶ The ISF personnel would check the convoy routes in advance, using dogs and ‘specific people’.¹⁰²⁷ When Mr Hariri was prime minister, Mr Talal Nasser—who remained team leader for Mr Hariri’s close protection up until his death in the explosion¹⁰²⁸—would decide the route in consultation with the ISF.¹⁰²⁹ The relationship between the ISF and the civilian members of the convoy was ‘excellent’.¹⁰³⁰

606. The Trial Chamber heard evidence that Mr Hariri was sometimes resistant to complying with the security measures. Mr Zakaria Badawi—a driver and civilian bodyguard for Mr Hariri’s family¹⁰³¹—stated that around four months before he died, Mr Hariri cancelled a second armoured vehicle in the convoy. According to the witness, Mr Hariri was considered ‘careless’ when it came to security and was over-confident.¹⁰³² Mr Youssef Al-Ajouz, another driver and security guard for Mr Hariri’s family,¹⁰³³ stated that even before the reduction in staff, Mr Hariri did not like big convoys.¹⁰³⁴

607. After Mr Hariri resigned on 26 October 2004, he initially retained around the 30 to 50 ISF protection officers he had been allocated as prime minister.¹⁰³⁵ However, on 29 November 2005, while Mr Hariri was in Monte Carlo, he was informed by Mr Wissam Al-Hassan that his ISF security detail would be reduced.¹⁰³⁶ Mr Hariri’s close protection staff were reduced from approximately 30 to 50 officers to eight,¹⁰³⁷ which was a ‘drastic’ cut.¹⁰³⁸ Witness PRH357 also

stated that the ISF took away all the explosive experts, as well as the specific ISF vehicles that had been allocated to Mr Hariri.¹⁰³⁹

608. After his security detail was reduced following his resignation, Mr Hariri's usual convoy consisted of 12 civilian bodyguards, including two medical staff, and four ISF police officers.¹⁰⁴⁰ Mr Hariri selected the ISF members he retained following the reduction in his security.¹⁰⁴¹

609. According to Witness PRH149, Mr Hariri was upset by the decision.¹⁰⁴² Mr Hariri had told Mr Hammoud that Mr Lahoud had assured him nothing would change with regard to security.¹⁰⁴³ Further, while General Ali Al-Hajj—the ISF Director General—had ordered the reduction in numbers,¹⁰⁴⁴ Mr Hariri told Mr Hammoud that the decision could not have been taken without orders from Syria or from Mr Lahoud.¹⁰⁴⁵ Mr El-Khoury also stated that he was told by Mr Hariri that he understood the decision as a message that 'they' were targeting him—by which Mr Hariri meant the Syrian/Lebanese security apparatus.¹⁰⁴⁶

610. Several witnesses described how reduction in ISF personnel meant that Mr Hariri's security arrangements became less effective. The decrease in security detail was unusual, according to Mr Majdalani, as other former prime ministers had many more ISF officers for their protection—up to 30 or 40.¹⁰⁴⁷ Witness 149 stated that Mr Hariri's close protection staff was now unable to conduct advance checks—with explosive experts and dogs—for Mr Hariri's transport routes.¹⁰⁴⁸ In Witness 357's view, the changes had a 'big effect' on the security levels of the convoy.¹⁰⁴⁹ Mr Al-Ajouz stated that he does not remember the decoy car being used after the ISF numbers were

reduced,¹⁰⁵⁰ and Mr Soubra also described how there was no longer the potential for counter-surveillance.¹⁰⁵¹

611. According to Mr Diab, however, Mr Hariri had never relied 100 per cent on official security and retained enough private security of his own.¹⁰⁵² Witness 76 also stated that after the decrease in ISF security, Mr Al-Arab—the head of Mr Hariri’s close protection detail¹⁰⁵³—decided to increase the number of civilian bodyguards.¹⁰⁵⁴ Mr Hariri’s resistance to security also continued, even after the cuts. He ‘did not like to be protected that much’, and his civilian convoy had to sometimes take steps to ensure that their protective arrangements were not noticed by him.¹⁰⁵⁵ In fact, both Mr Hariri and Mr Al-Arab tried to reduce the number of cars in the convoy even further.¹⁰⁵⁶ Witness PRH101 said that decoy convoys were never used after Mr Hariri’s resignation at Mr Hariri’s own request, and stated that Mr Hariri ‘didn’t really cooperate’.¹⁰⁵⁷ Mr Mohammed Dia, however, stated that decoy convoys continued to be used.¹⁰⁵⁸ Mr Hariri also ‘used to roll down his window and greet people in the street.’¹⁰⁵⁹

I. Attack on Marwan Hamade

612. The next significant event, chronologically, was an attack against Mr Hariri’s and Mr Jumblatt’s close ally, Mr Marwan Hamade, who had just resigned as the Minister for Trade in Mr Hariri’s government. That Mr Hamade was the subject of an attack in a car bombing is undisputed in this case. Under Rule 122, the Trial Chamber noted the following agreement as to evidence between the Prosecution and Sabra Defence, ‘On 1 October 2004 former Minister Marwan Hamade narrowly escaped death when a bomb exploded next to his car. His guard was killed in the explosion’.¹⁰⁶⁰

¹⁰⁶⁰ Sabra Defence – Prosecution agreements, no. (ii) and correction in Second decision on agreed facts in UNIIIC reports (Merhi).

613. On 5 August 2011, the Pre-Trial Judge determined that the Special Tribunal has jurisdiction over the attack on Mr Hamade under Article 1 of the Statute of the Special Tribunal.¹⁰⁶¹ In recounting evidence about the attack on Mr Hamade, the Trial Chamber is not making any legal or factual findings about it, nor whether it was connected to the attack on Mr Hariri four months later.

614. The Trial Chamber received evidence that on 1 October 2004, Mr Hamade left his home at around 09:00 intending to go to Parliament; he was accompanied by his driver, Mr Osama Abdel-Samad and his bodyguard Mr Ghazi Abou-Karroum.¹⁰⁶² They were in an unarmoured car.¹⁰⁶³ As they left the house, a car parked on the side of the street exploded close to Mr Hamade's car.¹⁰⁶⁴ The first explosion lasted less than a second,¹⁰⁶⁵ followed by another explosion caused by the fuel in the car.¹⁰⁶⁶ Mr Hamade tried to get out of the car, but his leg was broken.¹⁰⁶⁷ He fell and started crawling.¹⁰⁶⁸ Mr Abdel-Samad had broken arms but also managed to get out the car.¹⁰⁶⁹ Mr Abou-Karroum was killed instantly, and, according to Mr Hamade, 'evaporated in the flames'.¹⁰⁷⁰

615. Mr Hamade testified that he suffered a life-threatening injury to the head, many broken ribs and burns to the face, which put him out of action for months.¹⁰⁷¹ He underwent surgery on his eye, skull and leg,¹⁰⁷² and had to return to the hospital with a repeated subdural haemorrhage

¹⁰⁶¹ Pre-Trial Judge order on deferral of case file regarding the attack on Mr Hamade, p. 2, referring to Pre-Trial Judge decision on jurisdiction over connected cases, pp 41-42. On 16 September 2019, the Pre-Trial Judge of the Special Tribunal lifted the confidentiality of the decision confirming an indictment against Mr Ayyash relating to the attacks against Mr Marwan Hamade, Mr Georges Hawi and Mr Elias El-Murr on 1 October 2004, 21 June 2005 and 12 July 2005 respectively. Pre-Trial Judge order lifting confidentiality of indictment against Mr Ayyash in STL-18-10 case and other documents. On the same day, the Pre-Trial Judge filed a public redacted version of the Pre-Trial Judge decision on jurisdiction over connected cases. *See also* Public redacted indictment against Mr Ayyash in the STL-18-10 case.

¹⁰⁷¹ Marwan Hamade, T. 8 December 2014, pp 22, 26.

¹⁰⁷² Marwan Hamade, T. 9 December 2014, p. 25.

once after the attempt, and a second time in late November.¹⁰⁷³ He then underwent critical surgery in the first week of January 2005 for the head injury.¹⁰⁷⁴ While he was in hospital, Mr Hamade said that he heard from numerous visitors that the attack was an implementation of the threats made in August 2004 by the Syrian leadership against Mr Hariri.¹⁰⁷⁵ Mr Hariri, who visited continuously during Mr Hamade's convalescence,¹⁰⁷⁶ told him that the attempted assassination was 'a clear message specifically to those who opposed the will of President Bashar Al-Assad'.¹⁰⁷⁷ This was also Mr Jumblatt's understanding.¹⁰⁷⁸

616. A number of other witnesses also gave evidence that the attack was viewed as a political message, targeting Mr Hariri and or Mr Jumblatt.¹⁰⁷⁹

617. Mr Ali Hamade, Mr Marwan Hamade's younger brother, was a journalist for *An-Nahar* newspaper who covered Mr Hariri's activities.¹⁰⁸⁰ He stated that Mr Hariri was 'not very far from' Mr Ali Hamade's own understanding that the Syrian military intelligence apparatus was responsible for the attack.¹⁰⁸¹ In Mr El-Khoury's view, it would not have been possible to perpetrate such an attempt without any knowledge from the Lebanese-Syrian security agencies.¹⁰⁸²

¹⁰⁷³ Marwan Hamade, T. 8 December 2014, p. 26.

¹⁰⁷⁴ Marwan Hamade, T. 8 December 2014, pp 26, 64.

¹⁰⁷⁵ Marwan Hamade, T. 8 December 2014, p. 16.

¹⁰⁷⁶ Marwan Hamade, T. 8 December 2014, pp 37-38.

¹⁰⁷⁷ Marwan Hamade, T. 8 December 2014, pp 48-49. Mr El-Chammaa said that Mr Hariri visited Mr Hamade so often as a message to those who had perpetrated the crime. Ghaleb Ahmad El-Chammaa, T. 10 February 2015, p. 60.

¹⁰⁷⁸ Marwan Hamade, T. 8 December 2014, p. 49; Walid Jumblatt, T. 5 May 2015, pp 43-44.

¹⁰⁷⁹ Mr El-Chammaa and Mr El-Sayyed said that Mr Hariri viewed the incident as a harsh political message, sent directly to him and to Mr Jumblatt. Ghaleb Ahmad El-Chammaa, T. 10 February 2015, p. 59; Jamil El-Sayyed, T. 6 June 2018, pp 95-96. Mr Salim Diab testified that it was known in Mr Hariri's circle that the attempted assassination was a message to Mr Hariri. Salim Diab, T. 22 January 2015, pp 65-66. Mr El-Youssef said that Mr Hariri considered the attack to be a message to himself and to Mr Jumblatt, as well as against French policy in the region. Ghazi El-Youssef, T. 10 March 2015, pp 75-77. Mr El-Khoury said that both he and Mr Hariri viewed the attack as a message targeting Mr Hariri and Mr Jumblatt equally. Ghattas El-Khoury, T. 15 January 2015, p. 79, T. 20 January 2015, p. 43. According to Mr El-Sabeh 'everyone' thought that the attack was a message to Mr Hariri and Mr Jumblatt, including Mr Hariri and Mr Jumblatt. Bassem El-Sabeh, T. 16 March 2015, pp 55, 58. Mr Majdalani testified that the 1 October 2004 attack on Mr Hamade was a message addressed to Mr Jumblatt because Mr Hamade was on Mr Jumblatt's list and in Mr Jumblatt's bloc. It was also a message to Mr Hariri because Mr Hamade was very close to Mr Hariri. Atef Majdalani, T. 29 April 2015, pp 6-7. Mr Siniora testified that Mr Hariri considered this attack as a message addressed to him, as did all the others around him. Fouad Siniora, T. 23 March 2015, p. 91.

¹⁰⁸⁰ Ali Hamade, T. 13 April 2015, pp 3-5.

¹⁰⁸¹ Ali Hamade, T. 13 April 2015, p. 83.

¹⁰⁸² Ghattas El-Khoury, T. 20 January 2015, pp 44-45, T. 21 January 2015, p. 15.

618. While on his way to visit Mr Hamade in hospital, Mr Jumblatt said that he received a call from Syrian general Mr Hikmat Chehabi, who was in Paris, telling him to ‘be careful’.¹⁰⁸³ Mr Jumblatt concluded from this that ‘there is an imminent danger that could target me as well’; Mr Chehabi had never used that form of language with Mr Jumblatt before.¹⁰⁸⁴ According to Mr Siniora, Mr Hariri thought the security system was behind the attack, but he did not have evidence to make such accusations. There were political motives behind the attack, including intimidating others. The witness believed this was the motive of the attack.¹⁰⁸⁵

619. According to Mr Hamade, there was no proper investigation of the attack on himself, or those on other political figures.¹⁰⁸⁶ Mr Hamade testified that a few days after the attack someone from a police station, but not ‘an officer’, came and took Mr Hamade’s testimony in the presence of a judge.¹⁰⁸⁷ However, he understood that whenever such an attack occurred—including that on him—Syrian intelligence would come and take all of the files from the Lebanese authorities.¹⁰⁸⁸

620. About ten days after the attack, the then Minister of the Interior, Mr Elias El-Murr, came to the hospital where Mr Hamade was recovering, and told him that he had been following up the investigation until ‘the Syrian intelligence came, took over the file, and took all the evidence and files and reports to the Syrian intelligence headquarters in Anjar’.¹⁰⁸⁹ In November 2004, the head of the Lebanese ISF, Mr Marwan El-Zein, told Mr Hamade that Mr Ghazaleh had called him and told him that the investigation was pointless because ‘we know the perpetrators or either Israel or maybe he made it himself, he was the main perpetrator’ and to reduce the investigation.¹⁰⁹⁰

¹⁰⁸³ Walid Jumblatt, T. 5 May 2015, pp 36-38.

¹⁰⁸⁴ Walid Jumblatt, T. 5 May 2015, p. 38. Mr Hariri had been on very good terms with Mr Chehabi (and Mr Abdel-Halim Khaddam), Bassem El-Sabeh, T. 16 March 2015, p. 17. According to Mr El-Sayyed, Mr Hariri used to communicate with President Hafez Al-Assad through specific aides such as Mr Khaddam and Mr Chehabi, Jamil El-Sayyed, T. 5 June 2018, pp 33, 56-57.

¹⁰⁸⁵ Fouad Siniora, T. 23 March 2015, p. 92.

¹⁰⁸⁶ Marwan Hamade, T. 8 December 2014, pp 29-30. Mr Hamade stated that there was no investigation into other attacks either – listing those on Mr Kamal Jumblatt, Mr Bashir Gemayel, Mr Rene Mouawad, Mr Salim Lawzi, Mr Riad Taha and Mr Qadri (journalists and politicians). However, Mr El-Sayyed stated that the attack on Mr Hamade was the first political assassination attempt in Lebanon in many years, since almost the civil war. Mr El-Sayyed also stated that the army and the ISF investigated the crime scene. Jamil El-Sayyed, T. 6 June 2018, pp 96-97.

¹⁰⁸⁷ Marwan Hamade, T. 8 December 2014, p. 29.

¹⁰⁸⁸ Marwan Hamade, T. 8 December 2014, pp 31-34.

¹⁰⁸⁹ Marwan Hamade, T. 8 December 2014, pp 31-36.

¹⁰⁹⁰ Marwan Hamade, T. 8 December 2014, pp 32, 36-37.

621. Mr El-Murr also told Mr Hamade that Syrian intelligence services took preliminary evidence from the police station.¹⁰⁹¹ Mr Majdalani also said that he had been told by Mr Hamade that the investigation was not serious and that the investigation file disappeared, showing a conspiracy between the Lebanese and Syrian security agencies regarding this matter.¹⁰⁹² On 31 October 2004, Mr Jumblatt made a statement to the media, saying that concrete results from the investigation had not emerged.¹⁰⁹³

622. After the attack, Mr Hariri went to Syria and met Mr Ghazaleh. Mr El-Sabeh believed Mr Ghazaleh had denied any Syrian involvement in the attack.¹⁰⁹⁴ Mr Jumblatt stated that after the attack, the French President, Mr Chirac, told Mr Hariri he had sent an envoy to Mr Al-Assad with a warning.¹⁰⁹⁵ Mr Hariri thought that a ‘very firm and harsh message’ from Mr Chirac to Mr Al-Assad would be enough to stop the threat.¹⁰⁹⁶ Mr Jumblatt warned Mr Hariri that this would not be enough.¹⁰⁹⁷

623. Mr Hamade was not dissuaded from continuing in politics by the assassination attempt, and nor, in his opinion, were Mr Jumblatt or Mr Hariri.¹⁰⁹⁸ Mr El-Sayyed stated that the attack fuelled Mr Jumblatt’s resentment and his subsequent attacks on Syria.¹⁰⁹⁹ He further testified that ‘the conclusion was that it was a Syrian bloody message to Walid Jumblatt’.¹¹⁰⁰ Mr Salim Diab stated that it was ‘known in the circle of Mr Hariri that the ... attempt of assassination of Mr Hamade was a message to Mr Hariri’.¹¹⁰¹ Mr El-Sabeh, who was an MP, believed that many MPs did, however, fear for their safety.¹¹⁰²

624. Ms Alia Arab, the daughter of Mr Al-Arab, the supervisor of Mr Hariri’s close protection team, stated that her father was very nervous after the attempt on Mr Hamade’s life. He seemed very worried, refused to go out and spent even more time than usual with Mr Hariri, and, a few

days before his own death (in the attack on Mr Hariri), ‘told my young son not to cry for him if he dies’.¹¹⁰³

625. Following the attempt on Mr Marwan Hamade’s life, Mr Hariri asked Mr Hamade’s brother, Ali, to open up a communication channel with the Syrians through General Mohammed Nasif to President Al-Assad.¹¹⁰⁴ This was because General Nasif was a senior intelligence officer who was very close to the Al-Assad family and Mr Hariri thought that his other channels were conveying distorted messages to Mr Al-Assad.¹¹⁰⁵ On 16 November 2004, Mr Hamade travelled to Damascus and met the general and conveyed Mr Hariri’s message, namely, that the Lebanese and Syrians were allies, and the Syrians should trust the Lebanese ‘and start believing that they do have allies in Lebanon and not people who are subservient to them’.¹¹⁰⁶ And ‘this would benefit them completely if they remove the stranglehold over Lebanon’ and allow the Lebanese institutions to work freely and properly.¹¹⁰⁷

626. Mr Ali Hamade then returned to Beirut and briefed Mr Hariri. He went back to Damascus on 28 November 2004 to meet the general who told him that the Syrians were not opposed to Mr Hariri, but were ‘a bit annoyed by some of his political actions, the way he deals with us’ and that they ‘will try to improve things’ with Mr Hariri, and to pass on a positive message to him.¹¹⁰⁸

627. In mid-December 2004, Mr Ali Hamade made a third visit to General Nasif on Mr Hariri’s request, this time to ask what the position of the Syrian leadership and Mr Al-Assad was towards him.¹¹⁰⁹ This time, however, the general spoke harshly and told Mr Hamade that President Al-Assad considered that Mr Hariri’s messages of support ‘are just mockery’, meaning that he was sending reassuring messages while actually supporting the opposition and participating in its work behind the scenes.¹¹¹⁰

¹¹⁰⁹ Ali Hamade, T. 13 April 2015, p. 53.

¹¹¹⁰ Ali Hamade, T. 13 April 2015, pp 54-55.

628. According to Mr Jumblatt, ‘after the attempt on Mr Hamade’s life we reached a conclusion and a conviction that the Syrians were the perpetrators of that attempt.’¹¹¹¹ Mr El-Sayyed also stated that Mr Jumblatt—believing, like Mr Hariri and many others, that the attack was a message from the Syrians—remembered the assassination of Mr Jumblatt’s father Kamal in 1977 and started attacking the Syrians with a stronger voice.¹¹¹² By 4 February 2005, Mr Jumblatt was reported as ‘openly blaming Syria for the assassination of his father’.¹¹¹³ Mr Jumblatt testified that by expressing this sentiment, he ‘was adopting a tone of escalation’ in his confrontation with the Syrian regime.¹¹¹⁴

J. Mr Hariri’s resignation as prime minister

629. On 12 September 2004, as noted above, while in Barcelona, Mr Hariri stated that he and his government would resign before the end of the month.¹¹¹⁵ On 15 September 2004, according to the *An-Nahar* website, Mr Hariri agreed to postpone his resignation until after UN Secretary-General, Mr Kofi Annan, had reported to the UN Security Council on the implementation of resolution 1559.¹¹¹⁶

630. On 19 October 2004, Mr Hariri and over 100 MPs and ministers attended a parliamentary session, at which the main topic of discussion was the timing of the government’s resignation and the consultation process for forming the next government.¹¹¹⁷

631. On the morning of 20 October 2004, Mr Hariri was informed that the issue of the government formation was no longer on the table and he was supposed to resign in the following

¹¹¹¹ Walid Jumblatt, T. 6 May 2015, p. 106.

¹¹¹² Jamil El-Sayyed, T. 6 June 2018, p. 96. Despite his conviction that the Syrians had assassinated his father, around 40 days afterwards, Mr Jumblatt began a working relationship with Syria. Walid Jumblatt, T. 4 May 2015, pp 9-11. In his view, he had ‘no choice’ but to ‘seal a deal ... with those who assassinated Kamal Jumblatt.’ Walid Jumblatt, T. 4 May 2015, pp 10-11.

¹¹¹³ Exhibit P448 (UNIC Beirut press review, 4 February 2005), pp 3-4, reporting that for the first time Mr Jumblatt had openly blamed Syria for this assassination.

¹¹¹⁴ Walid Jumblatt, T. 6 May 2015, p. 106. Mr Jumblatt described as ‘improper’ the removal of a commemorative statue of Mr Kamal Jumblatt from the Lebanese president’s summer palace during Mr Lahoud’s presidency, but did not mean that he did not have ‘very friendly feelings’ towards Mr Lahoud, because Mr Lahoud’s father and his own had been allies. Walid Jumblatt, T. 7 May 2015, pp 84-85.

¹¹¹⁵ Exhibit P470 (Press release, 13 September 2004), pp 1, 10-11; exhibit P328 (Press release, 13 September 2004), p. 1; exhibit P532 (UNIC Beirut press review, 10 September 2004), p. 1. *See also* exhibit P1782 (Narrative overview of telephone activity and relevant events), para. 26.

hours.¹¹¹⁸ According to Mr Hani Hammoud, by then it had become clear to Mr Hariri that he would not be able to set up the kind of government that he wanted.¹¹¹⁹ At the time, according to Mr Marwan Hamade, the Parliament was under Syrian influence and there was an overwhelming pro-Syrian majority. He learned through media reports that ‘parliamentary sources’ told Mr Hariri to resign.¹¹²⁰ Mr Hariri travelled to Baabda Palace, the president’s official residence, at around 14:30 and presented his resignation to President Lahoud.¹¹²¹

632. On 21 October 2004, President Lahoud appointed Mr Omar Karami as Lebanon’s new prime minister.¹¹²² Mr Hariri’s resignation became effective on 26 October 2004, when Mr Karami announced the formation of his new cabinet.¹¹²³ Mr El-Youssef and Mr Jumblatt stated that it was composed of ministers who were Syrian allies and opposed to Mr Hariri.¹¹²⁴

633. According to Mr El-Youssef, Mr Hariri had not resigned earlier because he had been promised that, after the extension of Mr Lahoud’s term, things would get better, but those were empty promises.¹¹²⁵ The main issue that prompted Mr Hariri to resign was Mr Lahoud’s extension because under Mr Lahoud’s presidency it would be impossible to form a cabinet other than one endorsed by the Syrian authorities.¹¹²⁶ According to Mr El-Youssef, Mr Hariri’s goal after resigning was to start working for the next parliamentary elections.¹¹²⁷ The Trial Chamber also recorded as an agreed fact between the Parties that, ‘After his resignation, Mr Rafik Hariri started preparing for parliamentary elections which were due to start in late May 2005’.¹¹²⁸

634. Mr Hammoud also testified that before he resigned in October 2004, Mr Ghazaleh told Mr Hariri that he could choose three ministers in his own government, being himself and two

¹¹²⁸ Agreed facts, no. (vii).

others, and the rest would be chosen by the Syrians.¹¹²⁹ Mr Jumblatt was of the view that the government was ‘being formed in the office of Rustom Ghazaleh’.¹¹³⁰

635. On 14 October 2004, Mr Hariri met the US ambassador to Lebanon, Mr Jeffrey Feltman, and expressed his opposition to US Congress members asking President George W. Bush to ‘freeze the assets of Lebanese and Syrian officials as a means to exercise pressure on Lebanon and Syria’.¹¹³¹

K. Electoral Law

636. Lebanese electoral law, as noted above, is complicated and difficult to summarise. Setting electoral boundaries in Lebanon is a highly politicised issue, as it has no independent electoral commission charged with neutrally reviewing and drawing electoral divisions based upon population size or other relevant factors. Rather, the Parliament itself—which is by its nature a political institution—makes this determination. The Trial Chamber heard evidence of how highly politically charged this process was, including active involvement in it by the Syrian authorities.

637. In autumn 2004, Mr Karami’s government submitted a draft electoral law to Parliament.¹¹³² It was known as the ‘Suleiman Frangieh law’, after the then-Minister of the Interior¹¹³³ who was closely allied with Mr Lahoud and Syria.¹¹³⁴ The law was to determine the constituencies, or electoral districts, for the spring 2005 elections.¹¹³⁵

638. The new law returned to smaller districts based on the *caza*¹¹³⁶—a historical Ottoman administrative division. Beirut remained divided into three electoral constituencies as before, but the division changed in the second constituency.¹¹³⁷ The second constituency was a mixed one with voters from various backgrounds—about 35 per cent Sunni, 35 per cent Shia and the rest Christian and Armenian.¹¹³⁸ Under the new law, the Shia were grouped together with Armenian

areas, so Sunnis and Christians were given a smaller number of votes.¹¹³⁹ The number of MPs was increased to nine seats,¹¹⁴⁰ and the second constituency became the biggest constituency in Beirut.¹¹⁴¹ The Taif Agreement on the other hand specified that electoral reform had to be based upon governorates divided between the Christian and Muslim communities, until Parliament passed a law free of sectarian restriction.¹¹⁴²

639. According to Mr Hariri's political supporters, these changes were intended to make Mr Hariri lose the extra seats in the second constituency, and thus curtail his political capacity.¹¹⁴³ Mr El-Youssef testified that the law was developed based on a decision by Mr Ghazaleh and the Lebanese-Syrian security apparatus.¹¹⁴⁴ Mr Jumblatt described Mr Frangieh as 'one of Syria's staunchest allies,' and an ally of Mr Lahoud.¹¹⁴⁵ Mr El-Khoury said that 'we' were targeted by a hostile government campaign.¹¹⁴⁶ On 25 January 2005, the UNIC Beirut press review quoted Mr Hariri as criticising the draft law to *An-Nahar*, saying that constituencies had 'been tailored for political goals' and that he would run in the third rather than the first constituency.¹¹⁴⁷

640. Mr Hariri first rejected the law and then tried to modify it. Mr Jumblatt said that Mr Hariri rejected the draft law outright and said if it was passed, he would resign.¹¹⁴⁸ Mr Hariri threatened that if the bill was adopted by Parliament, he would resign with his bloc from Parliament.¹¹⁴⁹

641. The electoral law was debated in Parliament between 8 and 14 February 2005.¹¹⁵⁰ Mr Hariri, according to his official website, tried to modify the draft law.¹¹⁵¹ However, Mr El-

Hariri, told Assafir newspaper yesterday (13 February 2005) that he will resume his struggle to amend the draft electoral law submitted by the government, especially with regard to Beirut's districts in order to achieve equilibrium at this level'). See also Ghazi El-Youssef, T. 11 March 2015, p. 20; Ghattas El-Khoury, T. 16 January 2015, p. 52.

Youssef stated that Mr Hariri's efforts in opposing the law were 'pointless'.¹¹⁵² Still, he believed in his capacity to win in Beirut, even in the second constituency.¹¹⁵³ Mr Atef Majdalani thought that Mr Hariri's chances in the second constituency were slim, but stated that Mr Hariri always said that no matter what the electoral law was, he would participate in the elections.¹¹⁵⁴

642. The Trial Chamber also took judicial notice of the following statement in the seventh UNHCR report of March 2007, that:

Negotiations unfolded during that period between Hariri and other individuals, including potential candidates, and intense interest was focused upon the draft electoral law, including the drawing of electoral district boundaries in Lebanon and, in particular, in Beirut.¹¹⁵⁵

L. Second Bristol Group meeting: 13 December 2004 and aftermath

643. On 13 December 2004, the second Bristol Group meeting was held at the Bristol Hotel. Participating was a wide coalition of opposition groups, including for the first time close associates of Mr Hariri's bloc in parliament, among them Mr Ghattas El-Khoury MP. The Bristol Group publicly adopted a joint position supporting the Taif Agreement and rejected continued Syrian interference in and control over Lebanese domestic affairs.¹¹⁵⁶

644. Mr Walid Jumblatt explicitly emphasised his commitment to the historic alliance and his personal and political unity with Mr Hariri on the issue.¹¹⁵⁷ He testified that he stood beside his long-term political opponent, the former Lebanese president and *Kataeb* Party leader, Mr Amine Gemayel—they had been military opponents in the civil war—while the Lebanese national anthem was played, thus symbolising the breadth of the alliance against continued Syrian control.¹¹⁵⁸ During an interview on 14 December 2004, Mr Hariri stated that everybody at the Bristol Group

meeting was supporting the Taif Agreement and asserted that the parliamentary elections next year would be ‘decisive and essential’.¹¹⁵⁹

645. During the meeting, no consensus emerged on the model for Syrian withdrawal. Some participants approved of UN Security Council resolution 1559 as a basis, while others approved of the Taif Agreement.¹¹⁶⁰ Two Hariri loyalists, Mr El-Khoury and Mr Fatfat, favoured implementing the Taif Agreement with a more moderate, staged withdrawal of Syrian forces to the Bekaa valley as a first step.¹¹⁶¹ According to Mr Jumblatt, they deemed UN Security Council resolution 1559 not suitable for Lebanon, especially when it came to disarming and disbanding the militias as this could not be done without internal agreement.¹¹⁶²

646. The interpretation of the Taif Agreement differed from resolution 1559, which called for Syria’s full and complete withdrawal.¹¹⁶³ Those relying on the Taif Agreement as a basis talked about a gradual withdrawal and then a discussion between Syrian and Lebanese authorities to achieve a full and complete withdrawal. According to Mr Jumblatt, this was Mr Hariri’s clear position.¹¹⁶⁴ Mr El-Khoury testified that by February 2005, Mr Hariri had changed his position and agreed to the total withdrawal of the Syrian forces from Lebanon, which he did not openly declare, as he wanted to leave himself a margin of political manoeuvre.¹¹⁶⁵

647. Mr Hariri did not attend but sent Mr Farid Makari, Mr Fatfat and Mr El-Khoury to the meeting. That was seen as a sign that he was slowly joining it. He did not want to make an abrupt turn in the confrontation with Syria. In Mr Jumblatt and Mr El-Sabeh’s assessment, previous threats from Mr Ghazaleh drove him to join the opposition.¹¹⁶⁶ Mr Hariri followed the activities of the Bristol Group and heard all the details.¹¹⁶⁷ Mr El-Khoury stated that the ‘security apparatus’ accused Mr Hariri of having established the opposition.¹¹⁶⁸

M. Political events between the second Bristol Group meeting and the third Bristol Group meeting

648. On 21 December 2004, telephone calls occurred between Mr Nasser and Mr Khalil to arrange a meeting between Mr Hariri and Mr Nasrallah.¹¹⁶⁹ The meeting transpired around midnight in Haret Hreik, in the Dahyieh area of Beirut.¹¹⁷⁰ It lasted for around half an hour, and Mr Hariri then returned to Quraitem Palace.¹¹⁷¹ The Trial Chamber received no evidence about the content of this meeting.

649. On 22 December 2004, Mr Hariri met Patriarch Sfeir and discussed the electoral law.¹¹⁷² Patriarch Sfeir was calling for an electoral law based on *cazas*.¹¹⁷³ Afterwards, Mr Hariri spoke to the press and emphasised his support for the Taif Agreement—underlining that if the electoral law were tailored to serve the interests of one side, it would further complicate Lebanon’s problems.¹¹⁷⁴ According to Mr El-Khoury, President Lahoud’s government hoped that this would create a division between Patriarch Sfeir and Mr Hariri, to divide the opposition forces.¹¹⁷⁵ However, while Mr Hariri wanted an electoral law based on the governorate, he thought that national unity was more important, and would accept a law based on the *cazas*.¹¹⁷⁶

650. On Thursday 23 December 2004, an *Al-Mustaqbal* reporter questioned Mr Hariri about alleged statements from ministers in Mr Karami’s government accusing him and Mr Jumblatt of forming an opposition and being a threat to the country. Ministers had allegedly referred to Mr Hariri as the ‘snake’ of Quraitem.¹¹⁷⁷

¹¹⁷⁷ Exhibit P366, p. 2 (ERN 60302903).

651. On 24 December 2004, Mr Jumblatt and Mr Aridi met Mr Hariri at Quraitem Palace. After the meeting, Mr Jumblatt stated, in a press release, ‘we wish the next year will see the determination to safeguard freedoms and to come up with an electoral law with a threshold of integrity. We hope that the Services will stop their manoeuvres and involvement in every internal matter, of course we mean here and elsewhere’. By ‘services’, Mr Jumblatt was referring to the ‘Lebanese security agencies, authorities, that are attached and closely co-operating with the Syrian regime’.¹¹⁷⁸

652. Unusually for closely-tied neighbours, Syria and Lebanon did not have diplomatic relations. On 7 January 2005, Mr Jumblatt called for the establishment of diplomatic relations between Lebanon and Syria, saying that ‘the concept that the Lebanese and the Syrians are one people in two states has to be reconsidered’ and that state-to-state relations should be established. He also urged Syria to disband its secret service apparatus in Lebanon.¹¹⁷⁹ In Mr Jumblatt’s view, it was time to achieve normal diplomatic relations between the two countries.¹¹⁸⁰

653. According to Mr Ali Hamade, during a trip to Paris in early January 2005, Mr Hariri received a telephone call from Mr Taha Mikati—brother of former Prime Minister Mr Najib Mikati, who was on good terms with President Al-Assad. After meeting with Mr Mikati in person, Mr Hariri told Mr Hamade that he had come with a message from President Al-Assad, which was that he had no hard feelings towards Mr Hariri and would change Mr Karami’s government to allow Mr Hariri to build a new government.¹¹⁸¹ The witness expressed his doubts about this, and they—he, Mr Hariri and others around them in Paris—discussed whether this was President Al-Assad communicating ‘for real’, or whether it was a manoeuvre.¹¹⁸²

¹¹⁸¹ Ali Hamade, T. 13 April 2015, p. 71.

¹¹⁸² Ali Hamade, T. 13 April 2015, p. 80.

654. On 9 January 2005, Mr Hariri met Mr Ghazaleh and Mr Charles Ayoub, the owner of *Diyar*, a pro-Syrian Lebanese newspaper,¹¹⁸³ at Quraitem Palace.¹¹⁸⁴ The meeting was audio-recorded—yet much of the dialogue was inaudible and not transcribed.¹¹⁸⁵ Mr El-Youssef, Mr El-Khoury and Mr Hammoud did not attend the meeting, but testified about what was expressed in it, as did Mr El-Chammaa, who was told about the meeting by Mr Hariri. According to Mr El-Chammaa, the aim of the meeting was for Mr Ghazaleh to ascertain whether Mr Hariri was determined to go ahead with his plan to run for elections.¹¹⁸⁶ Mr El-Youssef believed that Mr Ghazaleh's purpose was to remind Mr Hariri that he (Mr Hariri) governs with Syrian consent, whereas Mr Hariri intended to make clear that Syrian presence in Lebanon was legitimised by the Taif Agreement.¹¹⁸⁷

655. Mr Hariri began the meeting by stating that the electoral law proposals were based on the Taif Agreement, and informed Mr Ghazaleh that Mr Nasrallah would 'go along with' the law.¹¹⁸⁸ Mr Hariri also said that if Syria promoted a bad law in Lebanon, it would 'pay the price.'¹¹⁸⁹ He told Mr Ghazaleh that if he wanted a majority in Parliament, he would not achieve it if he considered Mr Hariri and Mr Jumblatt to be the opposition.¹¹⁹⁰ Mr Hariri asked Mr Ghazaleh why the attempted assassination of Mr Hamade had not been referred to the Judicial Council—the highest judicial authority in Lebanon, responsible for dealing with crimes threatening national security.¹¹⁹¹ He warned Mr Ghazaleh that if anything else happened to Mr Hamade and the case had not been referred, accusations would be made against the government and or Syria.¹¹⁹²

¹¹⁸³ Mr Ayoub had constant relationships and friendships with the Syrians, Ghaleb Ahmad El-Chammaa, T. 11 February 2015, p. 4. Mr El-Chammaa stated that Mr Ayoub was sometimes given financial assistance by Mr Hariri. He originally stated that he did not think Mr Ayoub was paid large sums, but then recalled, after being shown Mr Ayoub's statement, that Mr Ayoub was paid USD 100,000 per month by Mr Hariri for around ten years. Ghaleb Ahmad El-Chammaa, T. 12 February 2015, pp 69-70.

656. Mr Hariri told Mr El-Chammaa that he had told Mr Ghazaleh and Mr Ayoub that he would run for elections throughout Lebanon and that they were not happy.¹¹⁹³ In Mr El-Youssef's opinion—having read the audible parts of the transcript of the meeting—Mr Hariri refused any help from the Syrians.¹¹⁹⁴ He told Mr Ghazaleh that there should be coordination, but that a prime minister should govern Lebanon with more freedom and powers.¹¹⁹⁵

657. According to Mr El-Youssef, Mr Hariri's emphasis on the Taif Agreement was intended to show the problems in proposing an electoral law based on districts.¹¹⁹⁶ He thought that Mr Hariri was not telling Mr Ghazaleh the full truth about the elections, because he was planning to run for prime minister and believed that he would be elected.¹¹⁹⁷ Mr El-Youssef thought that Mr Ghazaleh was saying that 'we' would not intervene in the election 'this time', which, according to Mr El-Youssef, meant that the Syrians had interfered every other time.¹¹⁹⁸ In Mr El-Youssef's view, Mr Hariri was not confrontational in the meeting.¹¹⁹⁹ Mr El-Khoury and Mr Hammoud testified that in the meeting, Mr Hariri was informing Mr Ghazaleh that he was going to stand for elections in the Lebanese regions and would not accept the Syrians on his electoral list.¹²⁰⁰ According to Mr El-Khoury, this reflected the outcome of discussions in an earlier meeting, in December 2004.¹²⁰¹

658. After the meeting, according to Mr Nasser, Mr Ghazaleh went straight to Haret Hreik, from where he contacted the Syrian Presidential Palace.¹²⁰² Mr Hariri then visited Mr Jumblatt at his residence and declared that 'our alliance with Mr Walid is strong and unshakeable'.¹²⁰³

¹²⁰³ Exhibit P444 (Press release, 10 January 2005), p. 1.

659. The same day, Sunday 9 January 2005, a press release reported that Mr Nasrallah met two members of the Qornet-Chehwan Gathering—Mr Samir Franjeh and Mr Samir Abd al-Malak.¹²⁰⁴ That evening, Mr Hussein Khalil contacted Mr Nasser to arrange a meeting between Mr Hariri and Mr Nasrallah.¹²⁰⁵ They met that night in Mar Michael, in south Beirut, rather than Haret Hreik, where earlier and subsequent meetings took place,¹²⁰⁶ between 18:35 and 20:14, with Mr Nasser there.¹²⁰⁷ Also on 9 January 2005, the Syrian Deputy Foreign Minister, Mr Walid El-Moallem, visited Lebanon.¹²⁰⁸

660. Subsequently, in January 2005, Mr Hariri had another encounter at Quraitem Palace with Mr Ghazaleh. Witness 357—a surviving member of Mr Hariri’s convoy on 14 February 2005—was an ISF officer who had been assigned since 2001 to work with Mr Hariri’s security detail. He described Mr Ghazaleh visiting Quraitem Palace around 15 days before the attack on Mr Hariri accompanied by a convoy of Syrian *Mukhabarat* security. The witness stated that it seemed ‘as if they were coming to kill or kidnap’ Mr Hariri.¹²⁰⁹ The witness heard Mr Ghazaleh tell Mr Hariri that if he made ‘a mistake’, his daughter would be kidnapped.¹²¹⁰ In the witness’s words, ‘They came, they threatened, and they left. They didn’t stay long.’¹²¹¹

661. On 16 January 2005, Mr Jumblatt and Mr Hariri attended the annual dinner of the *Koura* branch ‘of the reform movement, within the Phalangist’, with a press release referring to it as ‘similar to a “Northern Bristol meeting”’. Its attendees included Mr Fatfat, Mr Samir Jisr and the former president Mr Amin Gemayel.¹²¹² Mr Jumblatt described it as a meeting with the same objective of the Bristol meetings, namely, to ‘expand the opposition, make it as wide as possible’ to confront Mr Lahoud’s ‘unconstitutional and illegal extension’ and to implement the Taif

¹²⁰⁴ Exhibit P444, p. 1.

¹²⁰⁵ Mr Mustafa Nasser did not recall the date of 9 January specifically, but telephone and Quraitem Palace logs are consistent with Mr Khalil wanting to meet Mr Hariri, that happening, then Mr Hariri meeting Mr Nasrallah on that date. ¹²¹² Exhibit P445 (Press release, 16 January 2005).

Agreement. He and Mr Hariri were coordinating their actions but each had their own personal method.¹²¹³

662. That same day, according to a UNIC Beirut press release, Mr Nasrallah gave a speech in which he stated that UN Security Council resolution 1559 ‘is a reflection of Israeli demands’. He observed that Israel was trying ‘through the so-called international community, to accomplish these demands’ as they had failed to achieve them by force during the two-decade occupation of southern Lebanon. Mr Nasrallah also attacked the opposition, describing some of its members as ‘fanatics’.¹²¹⁴

663. On 18 January 2005, Mr Hariri spent the day receiving visitors at Quraitem Palace, including meeting Mr Khalil for around half an hour at 21:00.¹²¹⁵ An hour later Mr Khalil had a 15-minute call with Mr Wafik Safa, the head of the central unit for liaison and coordination in Hezbollah,¹²¹⁶ in south Beirut.¹²¹⁷

664. On Thursday 20 January 2005, in honour of the *Eid al-Adha* religious holiday, Mr Hariri received a large number of well-wishers at Quraitem Palace.¹²¹⁸ Following a previous meeting between Mr Hariri and President Al-Assad in December 2003, during which Mr Hariri was prohibited from organising rallies and having public gatherings near Quraitem Palace, Mr Wissam Al-Hassan told Mr Hammoud that we were ‘going to get beaten because of this’.¹²¹⁹

665. On 25 January 2005, Mr Hariri and Mr Jumblatt criticised the proposed electoral law reform.¹²²⁰

666. According to a UNIC Beirut press review, on Wednesday 26 January 2005, Mr Hariri threatened to resign from Parliament, along with his parliamentary bloc, if the electoral law proposed by the minister of interior, Mr Suleiman Franjeh, was passed.¹²²¹

¹²²¹ P532 (UNIC Beirut press review, 27 January 2005), p. 3.

667. On 29 January 2005, Mr Hariri travelled to his Naameh residence with Mr El-Khoury and Mr Fuleihan and held a meeting with them there. Apart from members of his security detail such as Mr Abu Tarek, no one else was present.¹²²² The purpose of the meeting was to discuss the exclusion of the ‘Syrian deposits’—Syrian-nominated candidates Mr Bassem Yammout, Mr Nasser Kandil and Mr Adnan Arakji—from Mr Hariri’s electoral lists for the May 2005 election.¹²²³ According to Mr Majdalani, the rejection of Syrian deposits did not extend to the Hezbollah representative, who at the time was Mr Mohamed Berjawi.¹²²⁴

668. Mr Hariri told Mr El-Khoury that the Syrians had directly requested that he take the deposits.¹²²⁵ Mr El-Khoury and Mr Fuleihan told Mr Hariri that the opposition did not believe that the Syrian deposits would be excluded.¹²²⁶ Mr El-Khoury described the rejection of the Syrian deposits as another ‘message’ to the opposition—the first message being attendance at the Bristol Group meetings.¹²²⁷ In his view, Mr Hariri was not going to make compromises.¹²²⁸

669. According to Mr El-Khoury, when Mr Hariri returned to Quraitem Palace on 29 January 2005, he arranged appointments with Mr Yammout, Mr Kandil and Mr Arakji, and informed them that they would not appear on his electoral lists.¹²²⁹ According to Mr Majdalani, however, Mr Kandil said that he first learned of Mr Hariri’s decision through the media.¹²³⁰

670. Mr Majdalani testified that Mr Kandil was very upset at not being included on Mr Hariri’s electoral list—as well as not being informed in person of the decision.¹²³¹ In the morning of 4 February 2005, Mr Hariri received Mr Kandil at Quraitem Palace.¹²³² Mr Majdalani was not

present at the meeting, but understood from Mr Kandil and Mr Hariri that the meeting was intended to allow Mr Hariri to clarify the reasons for this decision.¹²³³

671. A UNIC Beirut press review issued on 29 January 2005 reported that Mr Nasrallah had stated that Israel, not France, had convinced the US to adopt UN Security Council resolution 1559. He accused those who supported the implementation of the resolution, and the disarming of Hezbollah, of taking the country back to the pre-Taif Agreement regime ‘when Lebanon was never protected by its own armed forces or by the international community’.¹²³⁴

672. On 1 February 2005, the Syrian Deputy Minister of Foreign Affairs, Mr Walid El-Moallem, visited Mr Hariri at Quraitem Palace,¹²³⁵ during a two-day official visit to Lebanon. The meeting was audio-recorded and the Trial Chamber received the audio recording and its transcript into evidence.¹²³⁶ Mr Wissam Al-Hassan had given the tape to the UNIIC.¹²³⁷

673. At the beginning, Mr El-Moallem asked: ‘Mr Prime minister, how can we succeed together?’ Mr Hariri replied, ‘Let me tell you, there is something you need to know first, apart from everything else: whatever happens, Syria will remain in my heart.’¹²³⁸ Mr Hariri then went on:

We want a pro-Syrian regime in Lebanon. But, at the same time, Lebanon will not be ruled by Syria forever. This is unacceptable because we have reached a point where we are harming ourselves and Syria in everything.¹²³⁹

...

I have been resisting reports for 4 years now. I gave up because I can no longer resist them. First, there is no communication with you [in plural], nor with Bachar. There is someone here named “Emile Lahoud” who has someone, from your side, working with him here, and has nothing to do but a “cell” focused on Rafic El-Hariri. They send reports. They can send a report about something, now, we did sit together, which is a fact, we sat together.

But they turn the facts upside down and draft a dialogue and announce that they are monitoring the El-Hariri residence and recording everything.¹²⁴⁰

...

Things in this country have gone too far and you cannot bring them back to where they used to be by using a cosmetic operation.¹²⁴¹

...

If Bachar doesn't ask me to become Prime Minister, I will not become Prime Minister ... But at the same time, I will become a Prime Minister with full powers ... both countries' interests do not mean that Syria appoints the high and low ranks in this country.¹²⁴²

...

I was not treated as a friend, not even as an acquaintance [by Assad in August 2004]. I was treated like someone to whom you would say: Come here, you are either with us or against us ... Is that so? Is that what you want?!¹²⁴³

...

I am on your side. I will not be against you whatever happens. I may not be with you in the sense of taking your orders. I can no more bear orders ... If it was someone who knows better than me, it's possible, I may accept him to guide me, but should I accept to listen to nonsense from someone whom I don't respect? Why should I take it, tell me why? ... Frankly, three quarters of me is already on the opposition side ... all what I am being informed of is that Syria has written Hariri off.¹²⁴⁴

...

Brother, you are like a father to me. Is there more? Can you be more than that? You may be my father, ok, but I can't accept for you to choose the woman I will marry, what she will wear, name my children, which school they will attend ... you know how there is interference in every small detail in the country.¹²⁴⁵

674. Mr Jumblatt reviewed the tape of the meeting¹²⁴⁶ and testified that Mr Hariri was explaining in these last excerpts that Syria cannot interfere in every detail of internal Lebanese

affairs.¹²⁴⁷ Mr Hariri wanted to govern Lebanon independently from Syrian intelligence. Lebanon was Syria's ally but he wanted a certain margin of manoeuvre in the context of government-related matters.¹²⁴⁸

675. In the conversation, Mr Hariri also said to Mr El-Moallem—in reference to the ‘Governorate options’ for electoral redistribution—as specified in ‘II Political Reforms, A. Parliament, 4.’ of the Taif Agreement:¹²⁴⁹

Do you know what this means? This means the implementation of the Taif Agreement ... Your political presence in the country is based on the Taif Agreement, your military presence is based on the Taif Agreement, and the agreements between us are based on the Taif Agreement. So what are you doing here? You are undermining the Taif Agreement which is the basis of your existence here. There are two options today: either you withdraw to El-Beqaa¹²⁵⁰ or implement the 1559 and leave the country. According to the Taif Agreement, you withdraw to El-Beqaa, isn't it? Right. You are nearly there, in El-Beqaa, except for few positions and you will be done. We are defending this option. Walid is still demanding the implementation of the Taif Agreement.¹²⁵¹

676. According to Mr El-Sabeh who learned of the meeting and what occurred at it from Mr Hariri, Mr El-Moallem conveyed the wishes of the Syrian leadership that ‘this period’ should go without any political problems. Mr Hariri responded that he was not in control of ‘this particular situation’. Mr El-Moallem, according to Mr El-Sabeh, said: ‘But you are also responsible. You should shoulder this responsibility.’ The meeting ended with a ‘cool reaction’ and no agreement as to what to do next. Mr El-Sabeh said that this was Mr Hariri's last communication with the Syrian leadership before his death.¹²⁵² Mr El-Sayyed believed that Mr Al-Assad, in dispatching a senior minister such as Mr El-Moallem to meet Mr Hariri, was showing respect, and it was a courteous gesture and not a ‘security message’.¹²⁵³

¹²⁵³ Jamil El-Sayyed, T. 7 June 2018, pp 9-10.

677. A further meeting between Mr Hariri and Mr Nasrallah appears to have taken place a couple of weeks before the assassination, possibly on 1 February 2005.¹²⁵⁴

N. Third Bristol Group meeting: 2 February 2005

678. The following day, Wednesday 2 February 2005, the third Bristol Group meeting occurred. Its participants agreed that there should be an immediate and total withdrawal—as opposed to a staged one for example to the Bekaa valley—of Syrian forces from Lebanese territory.¹²⁵⁵

679. Between the second and third Bristol Group meetings, the Hariri camp had recognised that to succeed in the May 2005 elections a political alliance was needed.¹²⁵⁶ Mr Hariri shifted his position from a staged to a direct and full withdrawal of Syrian troops.¹²⁵⁷ Mr El-Khoury, a close confidant of Mr Hariri, testified that his positions at the Bristol Group meetings on the withdrawal of Syrian troops resulted from discussions with Mr Hariri. Mr El-Khoury, Mr Fuleihan and Mr Fatfat obtained preliminary approval and instructions from Mr Hariri on the Bristol Group draft communiques.¹²⁵⁸

680. Leading up to 2 February 2005, those associated with the Bristol Group did not meet in an official manner or on official visits.¹²⁵⁹ Such meetings had a much lower profile than other meetings Mr Hariri held.¹²⁶⁰ Mr El-Khoury said that there were daily meetings among Bristol Group participants, and there was an attempt to reach local agreements in every region and electoral list.¹²⁶¹

¹²⁵⁴ Exhibit 2D131 (Witness statement of Mustafa Nasser, 12 August 2010), para. 37 (the last meeting between Mr Nasrallah and Mr Hariri may have occurred in the last two weeks of Mr Hariri's life. Like all of the meetings at that time, this meeting would have been about Mr Hariri trying to get Hezbollah's support in the forthcoming election); exhibit P1107 (Statement of Witness PRH045, 12 August 2010), para. 49 (the last meeting took place in January 2005). *See also* Marwan Hamade, T. 9 December 2014, p. 39 (Mr Hariri met Mr Nasrallah a month before the attack).

¹²⁶⁰ Ghazi El-Youssef, T. 11 March 2015, p. 34.

¹²⁶¹ Ghattas El-Khoury, T. 16 January 2015, p. 62.

681. According to Mr Hariri's political supporters, he wanted to send a message of support for the third Bristol Group meeting. And the presence of Mr Fuleihan, Mr El-Khoury and Mr Fatfat at the meeting was a clear message that Mr Hariri had taken an irrevocable position to join the ranks of the opposition.¹²⁶² Mr Fuleihan was considered to be extremely close to Mr Hariri and 'someone who would never oppose the opinion or the will of Premier Hariri'.¹²⁶³ It was no secret that Mr Fuleihan and Mr El-Khoury participated in the meetings in Mr Hariri's name.¹²⁶⁴

682. According to the Bristol Group's statement, released immediately after the meeting:

Today, the Lebanese people agree on refusing the *status quo* and demand a change. The whole country, from South to North, is largely objecting to the government's choices and practices.

The opposition groups reassert that their political battle has two main goals:

First: To end Syrian hegemony in Lebanon, restore sovereignty and restructure national authority on the basis that the Lebanese people are the sole source of power. The opposition also acknowledges the importance of finding an honourable settlement with Syria based on the full withdrawal of the Syrian army from Lebanon pursuant to the Taif Agreement in order to put an end to the serious crisis between the government and the international legitimacy which followed Resolution 1559.

Second: To restore the Lebanese democratic system by dismantling the security apparatus and putting an end to the interference of Syrian intelligence and their Lebanese accessories in public political life.¹²⁶⁵

683. The Bristol Group's call for total withdrawal of Syrian forces was Mr Hariri's 'true position', but he did not declare this position personally because he wanted to leave himself a

¹²⁶⁵ Exhibit P407, p. 2.

margin of political manoeuvre.¹²⁶⁶ For the same reason, he did not attend the Bristol Group meetings.¹²⁶⁷

684. Mr El-Sabeh stated that the meeting showed that Mr Hariri was ‘about to move to the opposition, unequivocally’.¹²⁶⁸

O. Political events between the third Bristol Group meeting and the attack

685. On the evening of Friday 4 February 2005—two days after the third Bristol Group meeting—a journalist met Mr Khalil in Dahyieh in southern Beirut. Mr Khalil directed the journalist to tell Mr Hariri that he would be forced to accept the Syrian deposits if he refused to do so voluntarily. Mr Khalil expressed anger that Mr Hariri would defy Syria and threatened to ‘turn the country’ upside down if he handed Lebanon to the ‘Christians’.¹²⁶⁹

686. Following the third Bristol Group meeting, Mr El-Moallem rejected Mr Jumblatt’s call to establish diplomatic relations between Lebanon and Syria. Mr Jumblatt had also refuted Mr El-Moallem’s claim that there was no Syrian interference in Lebanese internal affairs.¹²⁷⁰ Explaining this, Mr Jumblatt said that ‘we’ wanted the joint Lebanese-Syrian intelligence networks to be replaced by independent Lebanese intelligence and security agencies, which could cooperate on an equal footing with their Syrian counterparts.¹²⁷¹ He also openly blamed Syria for the assassination of his father, Kamal, in 1977.¹²⁷² Mr Jumblatt explained that by saying this he was ‘adopting a tone of escalation’ in his confrontation with the Syrian regime.¹²⁷³

687. Mr Hariri had told Mr Jumblatt that he had met Mr Nasrallah on the night of 9 February 2005.¹²⁷⁴ Mr Hariri had reassured Mr Nasrallah that he was opposed to resolution 1559 and that ‘the weapons of the resistance are our weapons’. In other words, as of that date ‘Mr Hariri was still

¹²⁷⁴ Walid Jumblatt, T. 6 May 2015, p. 51. Mr Jumblatt was told this by Mr Hariri ‘after the meeting’.

actively seeking to reassure the Hezbollah leadership that he was not intending to promote their disarmament pursuant to 1559'. Mr Hariri was constantly conveying a message to Hezbollah through Mr Nasrallah that this issue will only be dealt with on the domestic front.¹²⁷⁵ The Quraitem Palace visitor log shows Mr Mustafa Nasser at the palace late on that night,¹²⁷⁶ but he could not specifically recall if it related to such a meeting, as he visited the palace daily.¹²⁷⁷ Mr Al-Hassan also stated that he thought that he had been present outside this meeting, but that he did not remember anything unusual about it.¹²⁷⁸

688. On 10 February 2005, a friend of Mr El-Youssef's¹²⁷⁹ asked Mr Hariri about his position vis-à-vis the Bristol Group. According to Mr El-Youssef, Mr Hariri responded:

What do you want more than Bassel being there and attending the Bristol meeting? It means I am there. It's not Rafik Hariri who will go to the Bristol. It's the Bristol Group that is coming to Rafik Hariri. So the Bristol Group and myself we are one ... we are discussing today the electoral law, let them do whatever they want. I do not have a problem. Let them decide whatever law they want. I will be running for the elections in Lebanon throughout Lebanon with the opposition. Wait for one month and you will see me on the steps of Bkirki, we will be there hand in hand with Walid Jumblatt, with the patriarch, and we will have joint lists because this is the only way for us to win the elections in order for the Syrians to leave Lebanon. There will be no salvation for Lebanon if the Syrians keep interfering the way they are.¹²⁸⁰

689. Bkirki is the seat of the Maronite patriarchy, which Mr El-Youssef described as the symbol for the Christian opposition against the Syrian presence in Lebanon.¹²⁸¹

Mr El-Youssef described himself as a 'regular visitor' to Quraitem Palace but appeared to have more of a coordination/arrangement role as he would go early in the morning and remain there throughout the day. Ghazi El-Youssef, T. 11 March 2015, pp 26-27.

¹²⁸⁰ Ghazi El-Youssef, T. 11 March 2015, pp 27-28.

¹²⁸¹ Ghazi El-Youssef, T. 11 March 2015, p. 29.

690. According to Mr Nasser, Mr Hariri's last meeting with Hezbollah was when he met Mr Hussein Khalil on 11 or 12 February 2005.¹²⁸² The meeting was calm and cordial and lasted about one or two hours.¹²⁸³ Mr Hariri did not feel threatened and was open to dialogue.¹²⁸⁴

691. Mr Hariri told Mr Khalil that he did not want the Syrians to ask him to put candidates on his ballot in Beirut, he wanted to choose the candidates himself. When Mr Khalil advised him to put pro-Syrians on the list, Mr Hariri refused—but said that he would permit Hezbollah two candidates.¹²⁸⁵ Mr Khalil said that this was not enough¹²⁸⁶ and that he would arrange an appointment for Mr Hariri with the Syrian president later that week, in order to discuss the matter further.¹²⁸⁷

692. Mr Nasser described how, on 12 February 2005, Mr Hariri asked him to tell Mr Nasrallah that Mr Chirac and France would prevent Hezbollah from being included in the list of terrorist organisations being prepared by the European Union. Mr Nasser did this by communicating it to Mr Hussein Khalil, who expressed his gratitude. According to Mr Nasser, this showed the good terms and relations between Hezbollah and Mr Hariri at the time.¹²⁸⁸ Also, around this time Mr Hariri promised to arrange top oncological treatment in France for the daughter of a Hezbollah MP who was not on good terms with him, Mr Ammar, and to book accommodation for the family. He was supposed to do so on the day of his death.¹²⁸⁹

693. Witnesses generally described Mr Hariri and Mr Nasrallah as having a positive relationship throughout 2004 and 2005. Mr Nasser said that in the first of their meetings Mr Hariri told Mr Nasrallah that he wanted to be his ally, but Mr Nasrallah said that Hezbollah had heard that Mr Hariri was 'a corrupt American against the weapons of the Resistance'.¹²⁹⁰ Only once Mr Hariri

had built trust, would Mr Nasrallah convince Hezbollah to be his ally in the forthcoming elections.¹²⁹¹

694. Mr Nasser stated that Mr Hariri and Mr Nasrallah developed a relationship of friendship and respect which continued up to the last minute.¹²⁹² Mr Siniora testified that Mr Hariri and Mr Nasrallah had mutual respect for one another and were honest and frank with one another.¹²⁹³ Mr Hariri, according to Mr Nasser, successfully kept Hezbollah's name off the European Union's list of terrorist organisations which was published on 15 February 2005. Mr Nasrallah was accordingly happy and expressed his gratitude and thanks, which, in Mr Nasser's view, showed the good relations between Mr Hariri and Hezbollah at that time.¹²⁹⁴ In the recorded meeting between Mr Hariri and Mr El-Moallem on 1 February 2005, Mr Hariri told the Syrian deputy minister that he had managed to prevent Hezbollah being listed on the European Union list of terrorist organisations.¹²⁹⁵

695. Mr El-Sayyed stated that the meetings between Mr Nasrallah and Mr Hariri saw 'no problems at all on any issue'.¹²⁹⁶

696. Mr El-Youssef, however, said that he did not believe that Mr Hariri had accomplished any of the goals he had hoped to achieve with Hezbollah in advance of the elections, because if he had, Mr Hariri's allies would have been told.¹²⁹⁷ He also said that, in his view, Mr Hariri was 'not very close' with Hezbollah before the attack,¹²⁹⁸ and that Mr Hariri had told him that the meetings with Mr Nasrallah did not progress the way that he had wanted them to.¹²⁹⁹

This very day, today, today, just a little while ago, I learnt that Spain is willing to put Hezbollah on the Terror List. Do you know who is stopping them from doing that? The French! And who is stopping the French? Me. Ok? Up to this day. Why would I stop them? As we are in disagreement and you could use Hezbollah against me, so why do you think I am stopping them? Am I seeking a reward? I am not seeking a reward.'

¹²⁹⁶ Jamil El-Sayyed, T. 6 June 2018, p. 52. Mr El-Sayyed did not personally attend these meetings.

¹²⁹⁹ Ghazi El-Youssef, T. 20 March 2015, p. 55.

697. Mr Wissam Al-Hassan stated that meetings between the two used to occur before May 2004 but were spread out and there was sometimes a lack of understanding between the two men. After demonstrations on 5 May 2004, tensions increased with Mr Nabih Berri, and Hezbollah had a positive role in defusing it, so meetings increased to once or twice a month.¹³⁰⁰ Mr Al-Hassan did not attend the meetings but accompanied Mr Hariri to Hezbollah's headquarters and waited outside.¹³⁰¹ The meetings never occurred at Quraitem Palace and Mr Hariri refused to 'welcome or host' Mr Nasrallah there because he did not want to be concerned about his security.¹³⁰² In Mr Al-Hassan's view, relations remained positive until the assassination.¹³⁰³ As noted above, the Trial Chamber received this statement under Rule 158, as a deceased, and therefore unavailable witness, and the Sabra Defence attacked Mr Al-Hassan's credibility, and submitted that his statements had no reliability or weight.¹³⁰⁴ However, his statements on this particular topic are generally consistent with the evidence of other witnesses and the Trial Chamber thus can accept them in this general sense.

698. On 10 February 2005, Mr Hariri and Mr El-Sabeh visited the bishopric of Archbishop Boulos Matar, the Maronite archbishop of Beirut.¹³⁰⁵ Also present at the meeting, unusually, was Dr Daoud El-Sayegh, who was the liaison point between Mr Hariri and the Maronite patriarchy.¹³⁰⁶ According to Mr El-Sabeh, Dr El-Sayegh's presence was unusual because he had been 'blacklisted'—meaning that the Syrian leadership had asked Mr Hariri to side-line him, as an indirect way of preventing Mr Hariri from meeting Patriarch Sfeir.¹³⁰⁷

699. In a statement issued at a press conference straight after the meeting, Mr Hariri said that the visit was intended to 'wish our friends a happy feast'.¹³⁰⁸ In Mr El-Sabeh's opinion, the first purpose of the meeting—which took place one day after the Lebanese feast of St Maron, and on the Islamic New Year's day—was to send a message that 'Lebanon is a country of life in common

between the Christians and the Muslims’.¹³⁰⁹ In his press statement, Mr Hariri stated that reforms to the electoral law were discussed, and that it was important to make amendments in terms of the electoral division of Beirut.¹³¹⁰

700. According to Mr El-Sabeh, however, while Mr Hariri’s press statement contained points of principle, Mr Hariri had wanted to send ‘very clear political messages’ in the meeting itself.¹³¹¹ Mr El-Sabeh recalled how Mr Hariri told Archbishop Matar that the problem was not with the patient—Lebanon—but rather with the doctor treating the patient—Syria.¹³¹² Mr Hariri also said that there would be no more electoral deposits, and that he would ‘support any law that suits and is convenient to the Maronite patriarchy’.¹³¹³ Mr El-Sabeh described the meeting on 10 February 2005 as heralding a new approach to politics in Lebanon—following which Mr Hariri was using ‘baby steps’ towards joining the opposition.¹³¹⁴

701. On the evening of Sunday 13 February 2005, Mr Hariri met Mr Ghazi Ariri—a minister who had resigned on 11 September 2004—Mr Hamade, Mr Jumblatt and Mr El-Sabeh.¹³¹⁵ Mr El-Sabeh described the meeting as a declaration of the political alliances that Mr Hariri and Mr Jumblatt wanted.¹³¹⁶

702. On the morning of Monday 14 February 2005, Mr Hariri told journalists—including Mr Faisal Salman—‘very clearly’ that he would not allow anyone to impose candidates upon him.¹³¹⁷ This was the first time Mr Salman had heard Mr Hariri say that he would accept no deposits, and Mr Salman believed that the message would cause problems with the Syrians and with Mr Lahoud.¹³¹⁸

P. The ‘olive oil crisis’

703. The Trial Chamber also heard some evidence about what was termed the ‘olive oil crisis’ that occurred in late 2004 to early 2005. The Beirut Association for Social Development was a privately-funded charitable organisation—with paid members, having the aim of assisting the Lebanese public—but funded by Mr Hariri.¹³¹⁹ Some employees of the Beirut Association for Social Development were also working as volunteers on Mr Hariri’s election campaign.¹³²⁰

704. During Ramadan, Mr Hariri often distributed food to poor people via the association—but without advertising it— as part of his religious duty of *zakat*, or alms.¹³²¹ In October 2004, there was a shortage of olive oil in Lebanon.¹³²² After Ramadan, the association bought a quantity of olive oil and started distributing it to the families as a supplement to the Ramadan food packages that they had already received.¹³²³ Distribution began in the beginning of February 2005.¹³²⁴ Around 50,000 gallons of olive oil were distributed to selected poor Lebanese people.¹³²⁵

705. On Friday 11 February 2005, the Lebanese ‘authorities’ came and arrested four people in charge of distribution, took them in for questioning and seized their computers.¹³²⁶ The allegation was that Mr Hariri was distributing the olive oil to manipulate the upcoming elections.¹³²⁷ The acting Lebanese Prosecutor-General, Ms Rabiha Ammash Kaddoura, threatened to search the association’s premises to find lists of the names of the recipients.¹³²⁸

706. Upon hearing of the arrests, in the presence of Mr Diab and Mr El-Youssef, Mr Hariri deliberately used a landline and asked the Quraitem Palace operator to get General Ali Al-Hajj, the director-general of the ISF, on the line.¹³²⁹ He knew that his landlines were tapped and that

¹³²⁹ Ghazi El-Youssef, T. 20 March 2015, pp 15-24. The Trial Chamber took judicial notice of the following: ‘On 14 February 2005, General Ali Al-Hajj was the Head of the ISF. He was promoted to the post in November 2004.’ Judicial notice facts, no. 8.

people were monitoring his communications when he spoke on them.¹³³⁰ Mr Hariri put the call on speakerphone. He reproached Mr Al-Hajj.¹³³¹ Mr Hariri then called General Raymond Azar, the chief of Lebanese military intelligence, asking him why he was arresting people associated with him. This was more than a reproach, as Mr Hariri was directly accusing Mr Azar of involvement in the arrests.¹³³² By this, he was reminding Mr Azar that he would be returning as head of the government and would need to sign off on Mr Azar's next promotion.¹³³³

707. According to Mr El-Youssef, Mr Hariri viewed the arrests as entirely politically motivated.¹³³⁴ He wanted to convey a message to those listening to his calls. The message was that Mr Hariri was serious in the political path he had chosen, that people taking unfair and unjust decisions against him would not prevent him from continuing down this path, namely going into the elections with the opposition.¹³³⁵ Mr El-Youssef had never seen Mr Hariri react in such a way, which reflected his frustration. His attitude showed how determined Mr Hariri was to break his shackles and to end the obstacles put around him by the military intelligence apparatus.¹³³⁶ Mr Hariri believed—by deliberately using tapped lines—that he was speaking directly to Mr Ghazaleh.¹³³⁷ According to Mr El-Khoury, the detainees were released on the night of 12 February 2005.¹³³⁸

Q. Monthly payments to Mr Ghazaleh from Mr Hariri

708. The Trial Chamber also received evidence that Mr Hariri was making regular cash payments to Mr Ghazaleh through intermediaries.¹³³⁹ Mr Hariri's friend and business associate, Mr El-Chammaa, administered these payments.¹³⁴⁰ Mr Ghazaleh had first requested a payment in 1993 during a meeting with Mr El-Chammaa at Mr Ghazaleh's office.¹³⁴¹ The amount was initially

USD 40,000 per month, which increased, in less than a year, to USD 67,000 per month.¹³⁴² Mr El-Chammaa's role was to keep track of the payments and to ensure their timeliness; the money was kept in a safe and he used to ask at least two employees to prepare the amount and put it in envelopes.¹³⁴³

709. Besides these regular payments, Mr Hariri made other payments to Mr Ghazaleh, the biggest of which in one sum was USD 250,000, of which Mr El-Chammaa remembered paying USD 100,000 on one occasion and USD 150,000 on another. Mr Ghazaleh always justified the requests under different pretexts, for example, needing to refurbish or renovate his home, or to buy a new car, but this was unimportant to Mr Hariri. He was paying Mr Ghazaleh to 'preserve the relationship with him' and never refused these requests.¹³⁴⁴

710. These payments were not voluntary, because, as Mr El-Chammaa explained, Mr Hariri believed that if he did not pay 'for sure Rustom Ghazaleh would have placed many obstacles in the face of his career and of course he would have exerted greater pressure on him'.¹³⁴⁵ The fact of the payments was not widely known.¹³⁴⁶ Mr Siniora was aware that Mr Hariri was providing 'periodic assistance', that is 'cash help', to Mr Ghazaleh, but, in his view, this was a form of blackmail as the payments were 'imposed, not volunteered'.¹³⁴⁷

711. The payments were in cash,¹³⁴⁸ at the beginning¹³⁴⁹ or the end of the month.¹³⁵⁰ Mr Al-Arab—whom his daughter, Ms Alia Al-Arab, described as a long-time intermediary between Mr Hariri and Syrian representatives, including Mr Ghazi Kanaan, Mr Ghazaleh and Brigadier General Khallouf—was responsible for taking the payments to Mr Ghazaleh.¹³⁵¹ Ms Al-Arab said 'On occasion my father would deliver presents to Mr Ghazaleh, amongst other people', or asked someone to deliver 'things in big envelopes' in his absence.¹³⁵² The two people who were in charge

¹³⁵² Exhibit P726 (Statement of Alia Al-Arab), para. 14.

of taking money from the safe and putting it into the envelopes would record the payments, but records were not retained.¹³⁵³

712. On Saturday 12 February 2005—two days before the assassination—Mr Ghazaleh called Mr Hariri's office requesting an additional payment, claiming that he had not received the first payment earlier that month.¹³⁵⁴ This was the first time that Mr Ghazaleh had made such a request.¹³⁵⁵ Mr El-Chammaa was certain that the payment had in fact been made, but said that they had 'no choice' but to make the payment.¹³⁵⁶ Witness PRH017 said that Mr Hariri instructed them to make the payment, but was upset by the request.¹³⁵⁷ Unusually, the payment was divided into three portions.¹³⁵⁸ Mr Al-Arab took the money to Mr Ghazaleh on Sunday 13 February 2005, to his headquarters in the Bekaa.¹³⁵⁹ When Mr Al-Arab returned from meeting Mr Ghazaleh, he was in poor spirits, 'a very, very pessimistic mood'. Mr Al-Arab told Mr El-Chammaa what had happened upon his return.¹³⁶⁰

713. Mr Ghazaleh had been very insulting and threatening towards Mr Hariri, causing Mr Al-Arab to fear an attempt on the former prime minister's life.¹³⁶¹ The threats were not described by Mr Al-Arab in detail, but included the allegation of treachery.¹³⁶² Mr Al-Arab appeared to be 'expecting something.'¹³⁶³ Mr El-Chammaa told Mr Hariri what Mr Al-Arab had told him, and that it was 'very upsetting and scary'.¹³⁶⁴

¹³⁵³ Ghaleb Ahmad El-Chammaa, T. 11 February 2015, pp 40-41. He stated that 'every now and then' the records would be destroyed. In cross-examination, Mr El-Chammaa stated that there was a small piece of paper where an amount was recorded, which was destroyed one to four days later. Ghaleb Ahmad El-Chammaa, T. 12 February 2015, p. 52. *See also* Witness PRH017, T. 1 December 2016, p. 5, where the witness explained that there was no record of the payments made because this was something private and added 'We only wrote on small papers the amounts of money we used to pay per week or per day just to be reminded of it in case we were asked about it.'

¹³⁵⁴ Ghaleb Ahmad El-Chammaa, T. 11 February 2015, pp 46, 51-52.

¹³⁶² Ghattas El-Khoury, T. 20 January 2015, pp 48-49.

¹³⁶³ Ghaleb Ahmad El-Chammaa, T. 11 February 2015, p. 56.

¹³⁶⁴ Ghaleb Ahmad El-Chammaa, T. 11 February 2015, p. 59.

714. Ms Alia Al-Arab also described her father's reaction after his return from Anjar meeting Mr Ghazaleh, saying 'How could I tell Hariri what happened in Anjar?'¹³⁶⁵

715. This evidence, in the Trial Chamber's view, is sufficient to establish that Mr Ghazaleh had a reason to demand a double payment on the day before Mr Hariri's death, meaning that he had grounds to believe that there would be no more payments from that date onwards.

R. Warnings to Mr Hariri about his personal security immediately before the attack

716. A number of witnesses gave evidence about threats and warnings to Mr Hariri about his security in the early part of 2005.

717. A UNIC Beirut press review dated 7 January 2005 reported that the US Assistant Deputy Secretary of State for Middle East Affairs, Ms Elizabeth Debell, had stated that the US government would 'not be lenient' in the event of any physical harm befalling Lebanese politicians.¹³⁶⁶ According to Mr Hammoud, he and others discussed potential security risks with Mr Hariri in this time—Mr Hariri did not give any credence to the risk, because he thought that it would be 'suicide' to target him.¹³⁶⁷

718. On 10 January 2005, Mr Hariri received Mr Ali Jaber, a journalist and former colleague of Mr Hammoud's at Future TV, at Quraitem Palace.¹³⁶⁸ Mr Jaber had gone to Mr Hammoud to tell him that he had personally met Syrian officials, and that they were 'going mad', and 'talking harshly' about Mr Hariri.¹³⁶⁹ The Syrians were 'paranoid' about resolution 1559—for which they believed Mr Hariri to be responsible—and the US presence in Iraq, and were expecting a military attack.¹³⁷⁰ Mr Hammoud thought that it was serious enough to take Mr Jaber to see Mr Hariri.¹³⁷¹ Mr Hariri, however, did not believe that Syria would act against him.¹³⁷²

¹³⁶⁵ Exhibit P726 (Statement of Alia Al-Arab), para. 32.

¹³⁷¹ Exhibit 4D137 (Witness statement of Hani Hammoud), para. 17.

¹³⁷² Exhibit 4D137 (Witness statement of Hani Hammoud), para. 19.

719. Mr Hammoud also testified about another meeting between himself, Mr Hariri and Witness 45, on 11 January 2005. Witness 45 had met Mr Hariri to relay comments that had been made to him by the president of the Hezbollah Political Committee, Mr Ibrahim Amin El-Sayyed.¹³⁷³ According to Mr Hammoud, Mr El-Sayyed asked Witness 45 if Mr Hariri had ‘gone crazy’, and said that ‘people will kill him’ because of his refusal to change the electoral lists.¹³⁷⁴ Mr Hariri again did not pay much heed—he thought that if people tried to kill him, they would be committing suicide.¹³⁷⁵ Mr Hammoud said that Mr Hariri considered these comments an attempt to intimidate and scare him and to pressure him to change his political behaviour.¹³⁷⁶

720. On 10 February 2005, according to a UNIC Beirut press release, Mr Terje Rød-Larsen, the UN Special Envoy, visited Mr Al-Assad in Damascus to discuss the implementation of Security Council resolution 1559.¹³⁷⁷ The press release described Mr Rød-Larsen as saying that the talks were ‘extremely encouraging and constructive’.¹³⁷⁸ However, according to Mr Hamade, Mr Rød-Larsen then insisted on visiting Quraitem Palace before returning to Europe, so as to inform Mr Hariri of President Al-Assad’s ‘very angry’ threats, and to warn him to leave Lebanon for his own safety.¹³⁷⁹

721. After the meeting of 13 February 2005 between Mr El-Sabeh, Mr Hamade, Mr Jumblatt and Mr Hariri, Mr El-Sabeh told Mr Hariri—with reference to the attack on Mr Hamade—that he was afraid of what might happen to Mr Hariri and Mr Jumblatt. Mr Hariri laughed it off—Mr Hamade warned him, however, that the situation should be taken seriously.¹³⁸⁰

722. On 13 February, Mr Ali Hamade also spoke to Mr Hariri about the political and security pressures. He asked Mr Hariri whether he feared for his security, and Mr Hariri responded ‘Do you believe that he’d be silly enough to do it?’—by which, in Mr Hamade’s view, he meant President Al-Assad killing Mr Hariri or Mr Jumblatt.¹³⁸¹

¹³⁸¹ Ali Hamade, T. 13 April 2015, pp 69-70.

723. A number of other witnesses also gave evidence about the perception of risk immediately before the attack. Mr Amer Chehadeh, a close protection officer and driver for Mr Hariri, stated that although the team had been advised to remain alert in the weeks before the attack, Mr Hariri ‘felt reassured’, and the team ‘never felt any danger or any threat’.¹³⁸²

724. However, Ms Roula Nasser said that, in the last few weeks before the attack, her brother Mr Talal Nasser and his team ‘had a feeling that something was going to happen’.¹³⁸³ According to Ms Nasser, her brother had to work on the day of the attack because of the ‘critical’ political situation.¹³⁸⁴ Mr Tarek Soubra, a member of Mr Hariri’s close protection team who was on leave on the day of the attack, also stated that Mr Nasser had told him that ‘they’ wanted to target ‘us’, around a week or ten days before the attack.¹³⁸⁵

725. Ms Zeina Chehade Tarraf also stated that her late husband Mr Ziad Tarraf—one of Mr Hariri’s close protection officers who died in the attack—had been stressed with work before the attack because there were ‘lots of threats by the Syrian intelligence’.¹³⁸⁶ Mr Majdalani stated that the reduction in security led to the feeling that there might be a physical threat to the former prime minister.¹³⁸⁷ Witness 357 stated that before the assassination Mr Hariri did not feel at ease and there were threats against him.¹³⁸⁸

726. Mr El-Khoury testified that on 13 February 2005, Mr Bassel Fuleihan returned from abroad, visited him at home and the two then went together to visit Mr Hariri at Quraitem Palace. There, Mr Fuleihan told Mr Hariri that there were serious threats to kill political figures in Lebanon, namely either Mr Hariri or Mr Jumblatt. The source of the information may have been British intelligence. Mr El-Khoury said that the result was that ‘for the first time it appeared to me that the Prime Minister was taking such threats very seriously’.¹³⁸⁹ Mr Hammoud, who was also there, gave a similar account stating that, upon returning from vacation in Switzerland, Mr Fuleihan told Mr Hariri that there was ‘an attempt ongoing’ to kill him and that the information

¹³⁸⁹ Ghattas El-Khoury, T. 20 January 2015, pp 39-41.

had been received from a ‘British agency’.¹³⁹⁰ According to Mr El-Khoury, Mr Hariri had previously always said that ‘they will never dare to do and they will have to pay a very high price on any attempt on [my] life’ and considered it ‘a red line’. But this time he did not give this usual response, saying instead that he would make a few contacts or calls. Mr Hariri seemed upset, disturbed and seemed to take the threats very seriously.¹³⁹¹

727. Similarly, according to Mr Majdalani, Mr Fuleihan—who had gone to Quraitem Palace at around 19:00 straight from the airport after returning from a European vacation¹³⁹²—told Mr Hariri that he had heard about a wave of assassinations.¹³⁹³ Without revealing the source of this information, Mr Fuleihan emphasised that the threat should be taken seriously¹³⁹⁴ and told Mr Hariri ‘Try as much as possible to change your routes, your convoys, your cars, because these threats are serious.’¹³⁹⁵

728. Coincidentally, the same day, Sunday, 13 February 2005, *Al-Hayat* carried an article headed, ‘New warning against attacks targeting any of the symbols of the Lebanese opposition’ stating that:

Sources said that the international community sent a clear message to Syria “not to shed the blood” of any of the opposition figures in Lebanon. The message asserted that should Walid Joumblat or Rafic Hariri be victims of any assassination attempt, “this will mark the final severance in the relationship between Syria and the international community.”¹³⁹⁶

729. In January 2006, the UNHCR Commissioner, Mr Detlev Mehlis, conducted what could only be considered in investigatory terms as irregular, a joint ‘interview’ with three prominent Lebanese

¹³⁹⁰ Exhibit 4D137 (Witness statement of Hani Hammoud), para. 31.

¹³⁹¹ Ghattas El-Khoury, T. 20 January 2015, pp 42-43. On the other hand, Mr Salim Diab, who was also present at Quraitem Palace that night, 13 February 2005, with some of the participants to the meeting, had no memory of an MP referring to threats against Mr Hariri’s life. However, Mr Hariri told the witness to watch out and to be careful. Salim Diab, T. 3 February 2015, pp 72-73.

¹³⁹² Mr Hariri had contacted Mr Fuleihan on his holiday, insisting that he return in order to join Mr Hariri at the joint parliamentary committee on 14 February 2005 to discuss the draft electoral law. Atef Majdalani, T. 29 April 2015, pp 9-10.

¹³⁹³ Atef Majdalani, T. 29 April 2015, p. 9. Mr Majdalani was present when Mr Fuleihan relayed this, as—according to Mr Majdalani—was Mr El-Khoury. Atef Majdalani, T. 30 April 2015, pp 21-22.

¹³⁹⁴ Atef Majdalani, T. 29 April 2015, p. 11.

¹³⁹⁵ Atef Majdalani, T. 29 April 2015, p. 11, T. 30 April 2015, pp 21-22.

¹³⁹⁶ Exhibit P369 (*Al-Hayat* article, 13 February 2005), p. 2.

figures, Mr Siniora, Mr Berri and Mr Hariri's sister, Ms Bahia Hariri, on the topic of suspicion of Mr Ghazaleh's involvement in Mr Hariri's death.

730. Ms Hariri told Mr Mehlis that during the four months after the attempt on Mr Hamade's life 'we used to receive a lot of information that he was at risk, that he should be careful, that he was under threat, that they could not forgive him for 1559 and that they don't trust him and after looking into all the electoral laws, they realised that his electoral bloc would still be very significant and this increased the danger'. Further, 'Actually, they didn't want Rafik Hariri out of the government. They wanted him out of politics. Period.'¹³⁹⁷

731. The Trial Chamber also recorded as an agreement between the Parties that 'In his armoured vehicle, Mr Hariri was accompanied by MP Mr Bassel Fuleihan.' The Trial Chamber additionally recorded Mr Fuleihan's death in the explosion as an agreed fact between the Parties; Mr Fuleihan was in the passenger seat of Mr Hariri's vehicle.¹³⁹⁸

S. The Accused's and Mustafa Amine Badreddine's alleged associations with Hezbollah

1. Evidence on Accused's and Mr Badreddine's alleged associations with Hezbollah

(a) General evidence

732. The Trial Chamber received some evidence that the Accused and Mr Badreddine were associated with, supporters of or supported by, Hezbollah.

733. In a speech on 11 November 2010—shortly before the Prosecutor submitted an indictment against Mr Ayyash, Mr Badreddine, Mr Oneissi and Mr Sabra to the Pre-Trial Judge for confirmation¹³⁹⁹—the Secretary-General of Hezbollah, Mr Nasrallah, stated that the resistance was being targeted 'via an indictment' at the Special Tribunal.¹⁴⁰⁰ Of the Special Tribunal generally,

¹³⁹⁷ Exhibit 2D139 (Transcript of a recorded conversation between Mr Fouad Siniora, Mr Nabih Berri, Ms Bahia Hariri and UNIIIC Commissioner Mr Detlev Mehlis, 14 January 2006), pp 25-26 (ERNs 312975-312976).

¹³⁹⁸ Agreed facts, nos (i), (ix).

¹³⁹⁹ It was submitted on 17 January 2011 and confirmed on 28 June 2011.

¹⁴⁰⁰ Exhibit P2090 (Speech by Hassan Nasrallah on 11 November 2010), p. 11, where Mr Nasrallah stated: 'The fifth and last phase is the STL and the indictment. (That is at the present time. Only Allah knows. As long as there is America and "Israel" and there is a beautiful country like Lebanon which has water and perhaps oil and diversities and special properties conspiracies will not stop). We go back to the very beginning - dragging us to a confrontation

he said, ‘(This is to those who are looking forward to the issuance of the indictment.) Mistaken is he who believes that we will allow the arrest or detention of any of our mujahedeen. The hand that attempts to reach them will be cut off.’¹⁴⁰¹

734. On 2 July 2011—shortly after the Pre-Trial Judge confirmed the original indictment¹⁴⁰²—Mr Nasrallah responded, stating that it had been issued ‘against brothers in the resistance’.¹⁴⁰³

735. The Pre-Trial Judge issued international arrest warrants for the apprehension of Mr Ayyash, Mr Badreddine, Mr Oneissi and Mr Sabra in the original indictment on 8 July 2011, and on 28 July 2011 ordered the lifting of the confidentiality of their names and biographical details.¹⁴⁰⁴

736. Two weeks later, on 17 August 2011, in a speech for *Iftar* at the Women’s Branch of the Islamic Resistance Support Association, Mr Nasrallah criticised the indictment and the evidence supporting it. He referred to Mr Ayyash, Mr Badreddine, Mr Oneissi and Mr Sabra as ‘four honourable resistance men’. The relevant portion reads:

However, I would like to begin with giving evidences by what took place today to give it priority. It has to do with the indictment. Indeed, at previous times we talked lengthily to the effect that the Special Tribunal for Lebanon is moving in this perspective. It focused on one supposition. It refused to work on any other suppositions despite the existence of indications and conditional evidences through which Israel might be accused or investigating Israel would be valid. Still they are moving on that track and through the past period, they accused four honourable resistance men. Today, either the complete text or the greater part of what is called the indictment of these Resistance men was published.¹⁴⁰⁵

with the international community. Now we entered forcefully in a new stage of targeting the Resistance via an indictment? What is the whole idea?’

¹⁴⁰¹ Exhibit P2090, p. 13.

¹⁴⁰² Decision relating to the examination of the Indictment of 10 June 2011.

¹⁴⁰³ Exhibit P458.1 (Transcript of Hassan Nasrallah’s response to the Special Tribunal ‘indictment’, 2 July 2011), p. 6 (ERN 60223025).

¹⁴⁰⁴ Arrest warrant for Mr Ayyash; Arrest warrant for Mr Badreddine; Arrest warrant for Mr Oneissi; Arrest warrant for Mr Sabra; Pre-Trial Judge order partly lifting the confidentiality of the indictment.

¹⁴⁰⁵ Exhibit P2095 (Speech by Hassan Nasrallah on 17 August 2011), p. 5.

In the same speech he said:

To you sisters and to all the public opinion who are listening to me I say: Today we are more confident that what is taking place is of a high level of injustice, politicisation and accusation. These honourable resistance men should not even be referred to as accused. This is slander, and they are accused by this slander.¹⁴⁰⁶

737. In a speech commemorating Mr Badreddine, broadcast on 20 May 2016, Mr Nasrallah said that the Special Tribunal is ‘being exploited as a weapon to target this Resistance and the leaders of this Resistance and their moral and bodily assassination’.¹⁴⁰⁷

738. The Trial Chamber also received evidence that witnesses or potential witnesses called by the Prosecution refused to attend an interview or follow-up interview with Prosecution investigators, instead referring them to the Hezbollah Security Committee. And, further, that the Committee’s permission was required before certain witnesses would attend interviews or court.¹⁴⁰⁸

739. The four Accused and Mr Badreddine are Muslim Shiite.¹⁴⁰⁹

(b) Mustafa Amine Badreddine

740. On 13 May 2016, Hezbollah announced through *Al-Manar* TV’s website that Mr Badreddine had died in Syria.¹⁴¹⁰ In the article, Hezbollah stated that it would ‘accept blessings

¹⁴⁰⁶ Exhibit P2095, p. 6.

¹⁴¹⁰ Exhibit P1982 (*Al-Manar* TV news article, 13 May 2016), referring to a Hezbollah statement: ‘After a lifetime full of jihad, prison, wounds and considerable achievements, Sayed Zou Al-fiqar concluded his life by martyrdom, joining other martyr commanders; among them is his partner in jihad, the commander Hajj Imad MUGHNIYEH. This is the nature of resistance; it does grow with its leaders when they are alive, and it does pride itself with them when they die. We ask the Almighty to bless him with vast mercy and permanent happiness’ and to another Hezbollah statement, according to which ‘The initial instigations show that a large explosion targeted one of our centres near Damascus International Airport, and led to the martyrdom of the commander Mustafa Badreddine (Al-Sayed Zou Al-fiqar) and the injury of others.’

on commander jihadist Hajj Mustafa Badreddine (Al-sayed Zou Al-fiqar)' starting that day, on 13 May 2016, at the *Al-Mujtaba* compound.¹⁴¹¹

741. *Al-Manar* broadcast the condolence ceremony and funeral procession for Mr Badreddine held on 13 May 2016 in Beirut.¹⁴¹² Senior Hezbollah members, Mr Amine Sherri, Mr Wafik Safa, Mr Ali Ammar, Mr Hussein Hajj Hassan, Mr Hasan Fadlallah, Sheikh Naim Qassem and Mr Sayyed Hashem Safieddine attended the memorial ceremony.¹⁴¹³ The broadcast showed footage of this procession—with a coffin draped with a Hezbollah flag and Mr Badreddine's brothers Mr Mohammed Amine Badreddine and Mr Adnan Badreddine—following it. A military band played and a guard of honour wearing military fatigues with Hezbollah flags flanked the procession.¹⁴¹⁴

¹⁴¹¹ Exhibit P1982, p. 2.

¹⁴¹² Exhibits P1986-P1987 (Video extracts of *Al-Manar* TV broadcast of Mustafa Badreddine's condolence ceremony, 13 May 2016); exhibit P1988 (Video extract of *Al-Manar* TV broadcast of Mustafa Badreddine's funeral procession, 13 May 2016).

¹⁴¹⁴ Exhibit P1988.

Exhibit P1988 – a video extract of Al-Manar TV broadcast of Mustafa Badreddine’s funeral procession, 13 May 2016

742. At a commemoration ceremony held on 20 May 2016, Mr Nasrallah lauded Mr Badreddine as one of Hezbollah’s ‘best leaders’.¹⁴¹⁵ *Al-Manar* broadcast a two-hour tribute to Mr Badreddine—which included a live broadcast of Mr Nasrallah’s speech to the gathering of almost an hour and a quarter—praising at length Mr Badreddine’s role in the resistance. Mr Nasrallah stated that Mr Badreddine had been involved in the resistance from its ‘first moments and hours’, by forming, training and directing *jihadi* groups and being involved in multiple military operations.¹⁴¹⁶

743. Mr Nasrallah described Mr Badreddine as a military leader in confronting Israel in the war in July 2006. ‘Among his achievements was dismantling the networks of collaborators with the “Israeli” enemy in 2008 and the years that followed’ and he ‘was in charge of leading and

¹⁴¹⁵ Exhibit P1989, pp 1-2.

¹⁴¹⁶ Exhibit P1989, p. 2.

commanding the Hezbollah military and security units inside Syrian territories’ after Hezbollah entered the conflict in Syria.¹⁴¹⁷

744. Mr Badreddine had assumed the ‘leadership of the Military Central Command in Hezbollah’ in 1995, was a military leader in July 2006 and by 2016 commanded Hezbollah military and security units in Syria.¹⁴¹⁸ Mr Nasrallah acknowledged that upon his death, Mr Badreddine’s name and true identity could be openly used.¹⁴¹⁹ Mr Badreddine’s brother, Mr Mohammed Badreddine, was present and gave a speech at the commemoration ceremony.¹⁴²⁰

Exhibit P1983 – a photograph of Mr Badreddine in military uniform released by Hezbollah in May 2016, published in Alahed

745. A biography of Mr Badreddine, with accompanying military photographs under the heading ‘In the photos: Who is the great jihadist leader, the martyr Mustafa Badreddine “Al-Sayyed Zoulfiqar”?’ was published on *Alahed*’s website on 13 May 2016, and stated the following:

- In 1982, he worked on the formation of *jihadist* groups and trained them to confront the Zionist enemy.
- He is considered one of the most prominent *mujahedeen* who combated the Israeli invasion at the entrances of *Kheldah* region, south of Beirut and was injured in the

¹⁴¹⁷ Exhibit P1989, p. 3.

¹⁴¹⁸ Exhibit P1989, pp 2-3.

¹⁴¹⁹ Exhibit P1989, p. 2.

¹⁴²⁰ Exhibit P1989, p. 1.

clashes. He was also among the vanguards of participants in *El-Ghobeiri* clashes and the Airport Bridge in 1982.

- The martyr leader worked on the formation and the training of military resistance groups against the Israeli occupation to expel them from the capital and suburbs.
- In 1992, he became in charge of the Central Military Unit Command and built formations and set out military plans. He planned many heroic and martyrdom operations and special operations such as the assault on hostile positions, planting explosives and clashes, which forced the Zionist occupier to withdraw in 2000.
- He played a prominent role in facing the aggression in July 1993 and forced the enemy's Prime Minister Rabin, at the time to admit defeat by Hezbollah.
- In 1996, during the aggression of the 'Grapes of Wrath', he established the foundations for a new stage which made the world recognise the legitimacy of resistance and its right to defend its territory.
- In 1997, he had a prominent role in the planning and supervision of special operation *Ansarieh*.
- He worked on dismantling dozens of espionage networks of the Israeli enemy agents inside Lebanon.
- With the start of the Syrian crisis in 2011, he was one of the first leaders who attended, planned, led and faced the *takfiri* plan on the Syrian territory, military and security.
- The martyr leader continued to follow up his *jihad* activities until he was granted the honour of martyrdom near the Damascus International Airport on 13 May 2016.¹⁴²¹

746. During the alleged attribution period, Mr Badreddine, using his personal mobiles 354 and 944, also had telephone contacts with Mr Safa, Mr Ammar and Mr Sherri.¹⁴²²

747. On 18 May 2016, another commemoration ceremony was held in Mr Badreddine's honour in Damascus, Syria. The memorial was held at the *Sayyeda Zeinab* shrine and various senior Syrian officials, religious leaders and military representatives attended. These included Mr Abou El-Fadl El Tabtabaii, the representative of the Islamic Revolution Commander in Syria, Major-General

¹⁴²¹ Exhibit P1983 (*Alahed* news article, 13 May 2016), pp 1-2. See also exhibit P1984 (photographs of Mustafa Badreddine from *Alahed* news article, 13 May 2016); exhibit P1985 (video excerpt of Mustafa Badreddine from *Alahed* news article, 13 May 2016).

¹⁴²² See paras 4112, 4181.

Oussama Khaddour, the Director of Political Administration of the Syrian Arab Republic and Sheikh Qaouk Fachad.¹⁴²³

748. Sheikh Qaouk Fachad lauded Mr Badreddine as a ‘great jihadist commander at the resistance who was killed as a martyr in the battle of defending Syria, Lebanon and the Nation’.¹⁴²⁴ Major-General Khaddour praised Mr Badreddine’s ‘jihadist personality’, his ‘commitment to the resistant approach’ and his positive relationship with his comrades.¹⁴²⁵

Exhibit P1990 – extract of Tasnim news article on memorial ceremony in Syria, 18 May 2016

749. On 25 May 2016, the Iranian Supreme Leader, Ayatollah Ali Khamenei, met Mr Badreddine’s family in Tehran and gave his ring to Mr Badreddine’s son, Ali. The Tasnim Iranian News Agency reported that the Ayatollah had said, ‘Your family is the family of a martyr. Not just the family of martyr Badreddine but martyr Imad Mughniyeh, his son and others.’¹⁴²⁶ The

¹⁴²³ Exhibit P1990 (*Tasnim* news article on memorial ceremony in Syria, 18 May 2016), pp 1, 3.

¹⁴²⁴ Exhibit P1990, pp 1-2.

¹⁴²⁵ Exhibit P1990, p. 3.

¹⁴²⁶ Exhibit P1991 (*Tasnim* news article, 26 May 2016), p. 2. The late Imad Mughniyeh was Mr Badreddine’s brother-in-law.

report was accompanied by photographs of Mr Khamenei with the family, and presenting the ring to Mr Ali Badreddine.¹⁴²⁷

750. The evidence that Mr Badreddine was a long-standing and senior Hezbollah military commander is uncontested and incontrovertible. However, for the reasons set out in chapter XIV ‘Legal findings on elements of the crimes and Individual criminal responsibility’, (B) (3) (f) (i) ‘Mustafa Badreddine and Hezbollah’, the Trial Chamber did not consider that it received reliable evidence of his position in Hezbollah in 2004 and 2005, namely in the indictment period.

(c) Salim Jamil Ayyash

751. The Trial Chamber received limited evidence on Mr Ayyash’s affiliations with Hezbollah. Apart from Mr Nasrallah’s statement that he was one of the ‘honourable men of the resistance’, Mr Ayyash was selected in December 2003 to escort a Hezbollah MP in the 1424 Hajj pilgrimage in January 2004 and was described as a ‘brother’ in a letter from the Office of the Head of the Loyalty to the Resistance Bloc.¹⁴²⁸ For the Hajj in 2004, two applications were entered in the Hajj database for Mr Ayyash.¹⁴²⁹ The first application was rejected while the second was accepted because a Hezbollah MP sponsored him.¹⁴³⁰

752. A year later, with a letter to the Head of the Pilgrimage Affairs Committee, the Loyalty of the Resistance Bloc again assisted Mr Ayyash and his wife in obtaining a visa to Saudi Arabia to perform the Hajj pilgrimage in 2005.¹⁴³¹ Although Mr Ayyash had travelled to the Hajj in 2004, the following year the Hajj Committee granted his application because he was sponsored by the Loyalty to the Resistance Bloc.¹⁴³² Mr Ayyash was also listed in the contact details of a vehicle insurance policy for Mr Abdallah Ali Safieddine, Hezbollah’s representative in Iran, to whom Mr Ayyash has family connections.¹⁴³³

¹⁴²⁷ Exhibit P1991.

¹⁴²⁸ Exhibit P1673 (Lists of persons sponsored by the Loyalty to the Resistance Bloc to the President regarding the Hajj pilgrimages in years 2004 to 2011), p. 6; exhibit P1672 (Witness statement of Ibrahim Itani, 16 April 2012), paras 40-41, 47-50.

¹⁴²⁹ Exhibit P1672 (Witness statement of Ibrahim Itani, 16 April 2012), paras 46-48.

¹⁴³¹ Exhibit P1673, pp 11-13.

¹⁴³² Exhibit P1672 (Witness statement of Ibrahim Itani, 16 April 2012), paras 48, 50.

¹⁴³³ Exhibit P693 (Statement of Ghassan Saab), paras 7-12, p. 12 (ERN 60302632); exhibit P1107 (Statement of Witness PRH045, 12 August 2010), para. 72. *See also* exhibit P2026.2 (Attribution report of Andrew Donaldson

753. As set out in its statement of September 2016, the Prosecution intended to tender into evidence the witness statements of a Prosecution investigator that demonstrated that a number of people associated with Mr Ayyash referred investigators to the Hezbollah Security Committee for approval.¹⁴³⁴ In January 2017, the Prosecution notified the Trial Chamber of its strategic decision not to tender this evidence.¹⁴³⁵ The four were on the Prosecution's witness list until at least December 2016, when the Prosecution informed the Defence and the Legal Representatives of Victims that it no longer intended to call them.¹⁴³⁶ The Ayyash Defence cross-examined Mr Andrew Donaldson on their statements because he had used them as source material in early versions of his attribution report relating to Mr Ayyash.¹⁴³⁷

754. Mr Ayyash also had telephone contacts with Hezbollah officials, Mr Wafik Safa, the secretary of Hezbollah's Security Command, and Mr Safieddine, using his personal mobile 170 and his network mobile, Yellow 669.¹⁴³⁸ The Prosecution submits that the presence of mobiles attributed to and used by Mr Ayyash—Green 300 and Yellow 294—in the vicinity of a meeting between Mr Hariri and Mr Nasrallah at Haret Hreik on 21 December 2004 means that he may have known about it, thus adding to the evidence of his connections to Hezbollah.¹⁴³⁹

regarding Mr Ayyash), para. 92 (g); exhibit P1032 (Family personal status extracts), pp 9-10; exhibit P1034 (Family personal status extracts), pp 3 (ERN 60144966), 15 (ERN 60144978), 24-25 (ERNS 60144986-60144987).

¹⁴³⁴ F2735, Prosecution Summary Statement of Evidence in Relation to Paragraph 49 of the Amended Consolidated Indictment, 23 September 2016, para. 14. A public redacted version was filed on 31 October 2017.

¹⁴³⁵ F2948, Notice Concerning an Updated Prosecution Summary Statement of Evidence in relation to paragraph 49 of the Amended Consolidated Indictment, 20 January 2017, para. 2. *See also* F2948, Public Redacted Annex A, Updated Prosecution Summary Statement of Evidence in relation to paragraph 49 of the Amended Consolidated Indictment, 31 October 2017, para. 14.

¹⁴³⁶ F2626, Prosecution Notice of Updated Revised Witness List, 20 June 2016, Annex A, pp 6, 14, 23; Procedural matters, T. 16 October 2017, pp 36, 43-46, T. 17 October 2017, pp 8-9.

¹⁴³⁷ *See for example*, Andrew Donaldson, T. 17 October 2017, pp 12-15, 20-24, 30-33, 36-37, 40-45, exhibit P2026 (Attribution report of Andrew Donaldson regarding Mr Ayyash, version 4), Annex D. The statements were marked for identification for the Ayyash Defence as 1D456 MFI, 1D457 MFI, 1D458 MFI and 1D459 MFI. The Ayyash Defence then applied for their admission into evidence which the Trial Chamber dismissed. Decision denying admission of statements tendered by Ayyash Defence, paras 10, 23-24, 26-27, disposition. The Trial Chamber found that the statements most properly belonged to the Defence case, and their admission into evidence—over the Prosecution's opposition before its case was closed—may cause procedural unfairness to the Prosecution, as it would be forced to elect whether to cross-examine a witness without knowing where the evidence fits into the Defence's case.

¹⁴³⁸ *See* chapter IX 'Attribution of mobile telephones to the Accused and Mustafa Amine Badreddine', (B) 'Salim Jamil Ayyash' (1) (e) (i) c. 'Contact profile' and (2) (a) (i) d. 'Contact profile'.

¹⁴³⁹ Prosecution final trial brief, paras 327-332.

755. From all of this—independently of Mr Nasrallah’s description of Mr Ayyash as one of the ‘four honourable Resistance men’—the Trial Chamber can conclude that Mr Ayyash had affiliations with Hezbollah.

(d) Hassan Habib Merhi

756. The Trial Chamber received no evidence of Mr Nasrallah making any public statement about Mr Merhi—directly or indirectly—connecting him with Hezbollah. Mr Merhi had some family Hezbollah affiliations.

757. The only evidence connecting Mr Merhi with Hezbollah is through his younger brother, Mr Youssef Habib Merhi, who died according to media reports on 10 March 2004, while ‘doing his jihad duty’. Mr Youssef Merhi was proclaimed ‘a martyr’ by Hezbollah and his funeral procession on 10 March 2004 was led by Hezbollah senior politicians and representatives. Mr Nasrallah himself made a speech at a memorial service for Mr Youssef Merhi at the end of a one-week commemoration period.¹⁴⁴⁰

758. According to Prosecution investigator and expert witness Mr Gary Platt, on 30 November 2004, two ‘Syrian deposit’ MPs, Mr Nasser Kandil and Mr Adnan Arakji, were in contact with Mr Ghazaleh multiple times throughout the day, mostly in the evening. Mr Kandil was also unusually contacted by Mr Ali Ammar, the Hezbollah MP who was also a common contact of Mr Badreddine and Mr Merhi.¹⁴⁴¹ Mr Merhi, using his personal mobile, Purple 231, also called Mr Ammar twice on 30 November 2004: once in the morning and once in the evening.¹⁴⁴² According to the Prosecution, this suggests that Purple 231 may be a ‘non-personal phone’ and that its user was a cadre of Hezbollah.¹⁴⁴³

¹⁴⁴⁰ Exhibit P2097 (News article on the death of Youssef Habib Merhi); exhibit P2100 (News articles on the death of Youssef Habib Merhi, March 2004), pp 1-3. *See also* exhibit P1051 (Personal status extracts and certificates).

¹⁴⁴³ Prosecution final trial brief, para. 123.

759. The Trial Chamber is of the view that it has received insufficient evidence in relation to Mr Merhi to draw any conclusions as to whether he was a supporter of Hezbollah.

(e) Hussein Hassan Oneissi

760. The strongest evidence of Mr Oneissi's Hezbollah affiliation is Mr Nasrallah's description of him as one of the 'four honourable resistance men'. Added to this is a family connection with Hezbollah in that his younger brother, Mr Ahmed Hassan Oneissi, and nephew, Mr Ali Ahmed Oneissi, were declared 'martyrs' by Hezbollah upon their deaths.¹⁴⁴⁴ The Trial Chamber is satisfied that at least in 2010, Mr Oneissi could have been described as a Hezbollah supporter.

(f) Assad Hassan Sabra

761. Mr Sabra is also one of the 'four honourable resistance men' and the Trial Chamber has no reason to disbelieve Mr Nasrallah's uncontested description to this effect. Further, one witness described Mr Sabra as a Hezbollah supporter when he was younger,¹⁴⁴⁵ another that he was connected to Hezbollah¹⁴⁴⁶ and a third that he was a Hezbollah supporter.¹⁴⁴⁷ His younger brother, Mr Moussa Hassan Sabra, was recognised as a Hezbollah 'fighter' at a commemorative ceremony for him, attended by Hezbollah officials.¹⁴⁴⁸

(g) Conclusion

762. From this evidence, and with reference to paragraph 49 of the amended consolidated indictment, the Trial Chamber can safely conclude that Mr Badreddine, Mr Ayyash, Mr Oneissi and Mr Sabra were Hezbollah supporters. It has insufficient evidence to make this finding in Mr Merhi's case but notes that a member of his immediate family certainly fell into that category. Mr Badreddine was undoubtedly a valued senior Hezbollah military commander.

763. In September 2016, the Prosecution argued that 'certain senior Hezbollah officials or public representatives' were using particular telephone numbers which 'were in contact with some of the

¹⁴⁴⁴ Exhibit P2092 (National News Agency article, 7 August 2006), p. 7. *See also* exhibit P1066; exhibit P2096 (Photographs of Ahmed Hassan Oneissi and Ali Ahmed Oneissi).

¹⁴⁴⁸ Exhibit P2094 (*Al-Manar* TV news report, 9 September 2007).

telephone numbers attributed’ to the Accused or Mr Badreddine.¹⁴⁴⁹ Specifically, the Prosecution alleges that behavioural and contact patterns of senior Syrian and Hezbollah officials, including Mr Wafik Safa, and the reaction of the covert networks, reinforces the conclusion that the networks were controlled by Mr Ayyash and overseen by Mr Badreddine.¹⁴⁵⁰

764. It alleges in particular that Mr Ghazaleh had contact with Mr Safa immediately after the first and second Bristol Group meetings, as well as Mr Hariri’s refusal to accept Syrian ‘deposits’ on 9 January 2005 and his meeting with Mr Kandil on 4 February 2005.¹⁴⁵¹ The calls are relevant only to establish links—in the sense of contacts—between Mr Ayyash and Mr Badreddine and Hezbollah officials. But it can go no further as the Trial Chamber has already found that it would not make findings on Mr Safa—who has been neither charged nor named in the amended consolidated indictment as a co-conspirator—having any role in the conspiracy alleged.¹⁴⁵²

765. The Trial Chamber received no positive evidence that either any specific Hezbollah member or its leadership, and in particular, Mr Nasrallah, had any motive to kill Mr Hariri. The evidence from both Prosecution and Defence witnesses was of the existence of a constructive relationship between the two men.

2. Submissions

766. The Prosecution, the Legal Representatives of Victims and the Ayyash, Oneissi and Sabra Defence made submissions on the ‘political’ evidence.

(a) Prosecution

767. The Prosecution submits that Mr Hariri’s assassination was political in nature. There is no other reasonable explanation for the meticulously planned, audacious attack against one of Lebanon’s most prominent political figures that was carried out in a way that was obviously designed to make a dramatic public statement.

¹⁴⁴⁹ F2735, Prosecution Summary Statement of Evidence in Relation to Paragraph 49 of the Amended Consolidated Indictment, 23 September 2016, para. 20. A public redacted version was filed on 31 October 2017.

¹⁴⁵⁰ Prosecution final trial brief, para. 625.

¹⁴⁵¹ Prosecution final trial brief, paras 656-660, 670, 688-694, 696, 739, 741, 743-746.

¹⁴⁵² See para. 132.

768. According to the Prosecution, the Accused and Mr Badreddine were connected through their common support for Hezbollah, independent of their telephone usage. The Accused were part of a conspiracy that was led and coordinated by Mr Badreddine, a ‘celebrated martyr who fought for Hezbollah for 30 years’.

769. The Accused’s actions alone demonstrated their participation in the conspiracy and their criminal responsibility. However, the Trial Chamber does not need to find that the Accused were acting on behalf or at the behest of any organisation for a conviction. Links between the Accused and Hezbollah demonstrate the Accused’s common interests and explain the political context in which the attack occurred.¹⁴⁵³

770. The Prosecution argues that Mr Badreddine was ‘an experienced operative with the necessary skills, knowledge and ability to train others in the sophisticated preparation and execution’ of the attack. And, further, his ‘affiliation with Hezbollah explains how he was able to operate using a phone network belonging to Hezbollah’.¹⁴⁵⁴

771. The Prosecution also relies upon the Green network being a Hezbollah network—by virtue of Mr Nasrallah’s alleged admission of this to Mr Al-Hassan—to prove that the Accused were using a covert network.¹⁴⁵⁵ The Trial Chamber has found that the Green network was operating as a closed network, but that it was not satisfied of the reliability of Mr Wissam Al-Hassan’s assertion of what Mr Nasrallah allegedly said to him about the ownership of the 18 mobiles in the wider Green network.¹⁴⁵⁶

772. The Prosecution concludes that the evidence on the historical and political background reveals a growing tension in the months leading up to the attack arising from Mr Hariri’s and others’ opposition to Syrian control in Lebanon. Certain groups, including Hezbollah, were aligned with Syria and had an interest in maintaining the *status quo*.¹⁴⁵⁷ The Accused’s political affiliations, coupled with the surrounding political context, assist in understanding the Accused’s common interests. The fact that those interests aligned with maintaining the *status quo*, which

¹⁴⁵³ Prosecution final trial brief, paras 5-6, 21-26, 317-324, 341; Prosecution closing submissions, T. 11 September 2018, pp 21-22. *See also* Amended consolidated indictment, para. 49.

¹⁴⁵⁶ *See* paras 2243, 2246.

¹⁴⁵⁷ Prosecution final trial brief, para. 24.

Mr Hariri threatened, is relevant in understanding the timing and motivations behind the Accused's actions.¹⁴⁵⁸

(b) Defence

773. The Ayyash Defence argues that the Prosecution's attempts to link the political evidence to the allegation that the Accused were supporters of Hezbollah asks the Trial Chamber to draw inferences which extend well beyond this allegation. The Prosecution led no evidence that the Accused, by virtue of their alleged support for Hezbollah, had access to its resources. Further, the Ayyash Defence had no notice of the Prosecution's allegation that Mr Ayyash, as a supporter of Hezbollah, had any reason to know of a confidential meeting on 21 December 2004 between Mr Hariri and Mr Nasrallah.¹⁴⁵⁹

774. The Trial Chamber has found in analysing Defence claims of a lack of notice, that no notice issue arises, because the submission that the Accused were supporters of Hezbollah—and related arguments—does not go to a material fact underpinning any criminal responsibility.¹⁴⁶⁰

775. The Ayyash Defence submits that the Prosecution failed to persuasively demonstrate a link between the political context and the activity of the network phones, advancing that the political evidence in large part serves as a distraction from the real issues before the Trial Chamber.¹⁴⁶¹ The Prosecution's submission that Mr Hariri was killed by the pro-Syrian side, specifically Hezbollah, to 'maintain the status quo' is not borne out by the Prosecution's own evidence when viewed objectively.¹⁴⁶² To the contrary, Mr Hariri and Mr Nasrallah engaged in continuous dialogue.¹⁴⁶³ The evidence shows a friendly and cooperative relationship between Mr Hariri and Mr Nasrallah and a dialogue with Syria on various issues. While the relationship with Syria was not without its tensions, these tensions do not rise to the level necessary to support the ambiguous insinuations of a 'non-personal motive' to kill Mr Hariri.¹⁴⁶⁴ In reality:

¹⁴⁵⁸ Prosecution final trial brief, paras 24, 26.

¹⁴⁵⁹ Ayyash Defence final trial brief, paras 46, 64-66, 68; Ayyash Defence closing submissions, T. 17 Sept 2018, pp 19-21, 23. *See also* section chapter II 'The Prosecution's pleaded case', (B) (5) 'Hezbollah and the political context'.

¹⁴⁶⁰ *See* para. 122.

¹⁴⁶¹ Ayyash Defence final trial brief, para. 45.

¹⁴⁶² Ayyash Defence final trial brief, para. 74.

¹⁴⁶³ Ayyash Defence final trial brief, para. 78.

¹⁴⁶⁴ Ayyash Defence final trial brief, para. 90.

Prime Minister Hariri was, in fact, a permanent friend to the Syrians. And the foreign minister of Syria, Walid Moallem, described him as being the foreign minister of Lebanon and Syria together. And this happened nine days before the assassination.¹⁴⁶⁵

776. The Prosecution's political evidence also 'lacks any material evidence regarding Hezbollah's motive or Syria's motive' to kill Mr Hariri.¹⁴⁶⁶

777. The Merhi Defence submits that the Prosecution infers the existence of links between the Accused and Hezbollah on the basis of prejudices and tenuous associations, including religious confessions of the Accused and their presumed places of residence in Dahyieh. Similarly, it argues that the only evidence tendered by the Prosecution to link Mr Merhi to Hezbollah—calls from Purple 231 to a telephone attributed to Mr Ali Ammar, a Hezbollah MP, and connections between Mr Merhi's brother and Hezbollah—is insufficient to establish such a link which is central to its case.¹⁴⁶⁷

778. The Oneissi Defence argues that the Prosecution has not established that Mr Oneissi was a supporter of Hezbollah. In particular, it submits that Mr Nasrallah's speeches have no evidentiary weight and Mr Oneissi is not referred to by name in any of them and that evidence suggesting that Mr Oneissi's brother and nephew were declared martyrs by Hezbollah upon their death does not constitute evidence of links between Mr Oneissi and Hezbollah. Familial links cannot be used to infer Mr Oneissi's support for Hezbollah. The underlying evidence is uncorroborated and unreliable to confirm his family members' deaths let alone their Hezbollah membership. In addition, it cannot be inferred from Mr Oneissi's religion or place of residence that he was a Hezbollah supporter. The Prosecution did not present any evidence directly linking Mr Oneissi to Hezbollah. Even if proven, such a link does not establish the political context in which the attack occurred, nor demonstrates that the assassination was political, nor proves his individual criminal responsibility.¹⁴⁶⁸

779. Further, the Prosecution's political background witnesses are all allies and friends of Mr Hariri, thus presenting a one-sided view of the situation.¹⁴⁶⁹ Contrary to the Prosecution's

¹⁴⁶⁵ Ayyash Defence closing submissions, T. 17 September 2018, p. 17.

¹⁴⁶⁶ Ayyash Defence closing submissions, T. 17 September 2018, pp 25-26.

¹⁴⁶⁸ Oneissi Defence final trial brief, paras 618-622.

¹⁴⁶⁹ Oneissi Defence final trial brief, para. 625.

narration, another approach considers that the Syrian role in Lebanon was to preserve stability and remain on good terms with both Mr Hariri and his opponents.¹⁴⁷⁰

780. The Sabra Defence argues that the Prosecution's allegation that the Accused are supporters of Hezbollah is based on insufficient, weak and tangential evidence. By relying on the alleged connections between the Accused and Hezbollah, yet claiming that the Trial Chamber does not need to find they were acting on behalf of or at the behest of Hezbollah, the Prosecution is attempting to support its weak and circumstantial case while seeking to 'have its cake and eat it'.¹⁴⁷¹

781. Counsel for Mr Sabra further contend that the Prosecution should have pleaded—as material facts in the amended consolidated indictment—the alleged role in Mr Hariri's assassination of Hezbollah and others, such as Mr Ghazaleh, Mr Safa or President Al-Assad.¹⁴⁷² These arguments, the Sabra Defence submits, are absolutely crucial to the allegation that the Accused had access to the necessary means to carry out the assassination, as otherwise there is no evidence that they would have had access to the military resources necessary to undertake the attack.¹⁴⁷³

782. Consequently, counsel for Mr Sabra argue that the Trial Chamber cannot make findings on the supposed non-personal motive for the assassination; on Syria's or Hezbollah's alleged position in relation to the non-personal motive; on the relationship of authority or control between the Syrian regime and Hezbollah; on Hezbollah's internal military and political functioning; on any military or operational capacity of Hezbollah to plan, prepare or conduct military or alleged terrorist activities; and on the alleged motivations or acts of Mr Ghazaleh, Mr Safa, or President Al-Assad.¹⁴⁷⁴

(c) Legal Representatives of Victims

783. The Legal Representatives of Victims argue that between October 2004 and June 2005, a number of pro-Hariri and anti-Syrian public figures were killed or injured by bombs in Beirut.

¹⁴⁷⁰ Oneissi Defence final trial brief, para. 629.

¹⁴⁷¹ Sabra Defence final trial brief, paras 440, 451-452.

¹⁴⁷² Sabra Defence closing submissions, T. 21 September 2018, pp 13, 21-22.

¹⁴⁷³ Sabra Defence closing submissions, T. 21 September 2018, pp 22-23.

¹⁴⁷⁴ Sabra Defence closing submissions, T. 21 September 2018, p. 25.

This highlights the uncertainty that was clouding Lebanon at that time, and how anti-Syrian politicians and prominent figures in Lebanon were constantly targeted due to their political stance.¹⁴⁷⁵

784. The Legal Representatives of Victims also submit that it was inconceivable that the assassination was plotted and executed only by the four Accused and Mr Badreddine. This ‘was not the work of a simple criminal gang. This was the work of a political organisation, which killed for its political beliefs’.¹⁴⁷⁶ In the Legal Representatives of Victims’ submission, this organisation was Hezbollah. The Accused were associated with Hezbollah—Mr Badreddine’s commitment to Hezbollah is of particular note.¹⁴⁷⁷ Further, given the sophistication and the complexity of the crime and its professionalism, it relied on a highly powerful security, technical and military organisation that worked with such ease and tranquillity on a terrain where it had full control—this, in the Legal Representatives of Victims’ submission, was Hezbollah.¹⁴⁷⁸

785. Although the evidence that ‘Syria’s dark hand was on the tiller’ is admittedly less direct, the ‘dots appear ... to join up sufficiently convincingly’. The target of the attack was undoubtedly Mr Hariri and it is inconceivable that the reason for his murder was not political.¹⁴⁷⁹

786. The Legal Representatives of Victims further submit that Mr Hariri and Hezbollah were capable of cooperation, even alliance. It was Syria that stood to gain from Mr Hariri’s death and to lose from his election as prime minister. There is abundant evidence in this respect and of Hezbollah’s fidelity to Syria. The idea that Hezbollah did Syria’s bidding without being asked seems fairly remote, especially in light of the evidence that Mr Hariri received threats from the Syrian regime and the pattern of attacks against other anti-Syrian politicians and advocates.¹⁴⁸⁰

T. Summary

787. The Trial Chamber is satisfied from the evidence that:

¹⁴⁷⁵ Legal Representatives of Victims final trial brief, para. 72.

¹⁴⁷⁶ Legal Representatives of Victims final trial brief, paras 89-90.

¹⁴⁷⁷ Legal Representatives of Victims closing submissions, T. 14 September 2018, pp 81-82, 89.

¹⁴⁷⁸ Legal Representatives of Victims closing submissions, T. 14 September 2018, p. 106.

¹⁴⁷⁹ Legal Representatives of Victims closing submissions, T. 14 September 2018, p. 82.

¹⁴⁸⁰ Legal Representatives of Victims closing submissions, T. 14 September 2018, p. 82.

- From the end of the civil war Syria had an overwhelming political, military and economic dominance in Lebanon;
- From the Israeli withdrawal from southern Lebanon in 2000, internal Lebanese opposition grew to the continuing presence of Syrian soldiers in Lebanon and to Hezbollah maintaining an armed militia, contrary to the Taif Agreement;
- The opposition was expressed through political allegiances including of Mr Jumblatt's Druze political faction, Christians and members of Mr Hariri's Future Movement;
- Mr Hariri's political allies vocally supported UN Security Council resolution 1559;
- The Syrian government wanted the mandate of President Lahoud—who was a strong supporter of Syria—to be extended by the Lebanese Parliament;
- Mr Hariri and his allies were opposed to this;
- The Syrian Government imposed certain electoral candidates on Mr Hariri, which were known as 'Syrian deposits';
- In August 2004, President Al-Assad effectively ordered Mr Hariri to support the extension of President Lahoud's mandate, stating that Syria alone would choose the President of Lebanon;
- Mr Hariri did not publicly support UN Security Council resolution 1559, passed on 2 September 2004, which called for the withdrawal of foreign troops from Lebanon and the disbanding of armed militias. The foreign troops in question were Syrian and the militia was Hezbollah's;
- On 3 September 2004, Mr Hariri and his bloc voted in Parliament to extend the mandate and on 12 September 2004 he announced that his government would resign;
- In the months before his assassination, Mr Hariri's allies were publicly calling for an end to the Syrian political, military and economic dominance over Lebanon;

- Their efforts increased after the passage of resolution 1559, including in the three Bristol meetings, 22 September 2004, 13 December 2004 and 2 February 2005, in which Mr Hariri was represented by his political supporters;
- According to many witnesses, the attempted assassination of Mr Marwan Hamade on 1 October 2004 could be construed as a warning to Mr Hariri and Mr Jumblatt not to cross the line;
- Mr Hariri resigned on 20 October 2004 and was planning to run in the May 2005 elections. He would have been proposing the loosening of Syrian dominance over Lebanon and supporting the immediate withdrawal of Syrian troops;
- A proposed electoral law for the 2005 elections—supported by the Syrian government—was designed to diminish Mr Hariri’s chances of having members of his bloc elected to Parliament and hence his prospects of a new term as prime minister;
- The Syrian government was insisting that Mr Hariri accept so-called Syrian ‘deposits’ in his electoral list, and Mr Hariri was opposed to this;
- The Chief of Syrian Military Intelligence in Lebanon, Mr Ghazaleh, received regular monthly cash payments from Mr Hariri through intermediaries from 1993 onwards, including a ‘double’ payment on Sunday 13 February 2005;
- Mr Hariri and Mr Nasrallah had good relations in the years immediately before his death and were meeting regularly;
- Mr Hariri believed that Hezbollah’s militia should be disarmed, at the very least, when peace with Israel was achieved;
- Mr Badreddine, Mr Ayyash, Mr Oneissi and Mr Sabra were Hezbollah supporters;
- Mr Mustafa Badreddine was a senior Hezbollah military official;
- The growing opposition to the Syrian presence in Lebanon threatened Syria’s interests;

- Syria and Hezbollah may have had motives to eliminate Mr Hariri, and some of his political allies;
- There is no evidence that the Hezbollah leadership had any involvement in Mr Hariri's murder and there is no direct evidence of Syrian involvement in it;
- There is no evidence that either Mr Ayyash or Mr Badreddine were directed by the Hezbollah leadership to arrange logistical support for Mr Hariri's assassination; and
- The attack involved an RDX-based explosive. Some witnesses observed that 'RDX is so powerful that it is most suitable for military purposes'.¹⁴⁸¹ From this, it may be concluded that those responsible for co-ordinating the attack had access to what could be described as 'military-grade explosives'.

¹⁴⁸¹ See para. 1143.

V. PARTICIPATION OF VICTIMS

A. Victims' role and participation in trials before international, hybrid or internationalised tribunals

788. The role and participation of victims in trials conducted under international criminal law procedural law varies between the different international criminal institutions. Victims of international crimes tried before the ICTY, the ICTR and the SCSL had no standing to participate in the proceedings—except as witnesses called by a party. The IRMCT—which is mandated to perform a number of ‘residual’ functions previously carried out by the ICTY and the ICTR, and whose Statute and Rules of Procedure and Evidence are modelled on the Statute and Rules of those tribunals—also does not envisage victim participation.

789. The Statute and the Rules of the Special Tribunal, like the Rome Statute of the ICC and the Law on the Kosovo Specialist Chambers and Specialist Prosecutor's Office, allow a form of victim participation. Victims granted participant status at the Special Tribunal—as well as at the ICC and the Kosovo Specialist Chambers¹⁴⁸²—are not a ‘party’ to the proceedings.¹⁴⁸³

790. The ECCC—which is a national court with the presence of international judges, prosecutors and defence counsel—follows a different, civil law, model where victims may participate in the proceedings as ‘civil parties’ or ‘*parties civiles*’.¹⁴⁸⁴

¹⁴⁸² The Kosovo Specialist Chambers are established within the Kosovo justice system—they are attached to each level of the court system in Kosovo—but are staffed by international judges and personnel. They apply, among other sources of law, customary international law and the substantive criminal law of Kosovo insofar as it complies with customary international law.

¹⁴⁸³ Rule 2 defines the term ‘Party’ as ‘the Prosecutor or the Defence’. *See also* Decision on the Legal Representatives’ application to call evidence, para. 2, fn. 2. The Lebanese Code of Criminal Procedure has the civil party system. As the Explanatory Memorandum of the Special Tribunal’s President of 12 April 2012 illustrates, the Statute excludes that victims may act as ‘*parties civiles*’. The main *raison d’être* of *parties civiles*, namely their participation in criminal proceedings for the purpose of seeking compensation, is removed. Rules of Procedure and Evidence — Tribunal’s President’s Explanatory Memorandum (as of 12 April 2012), paras 15-16; UN Doc. S/2006/893 (15 November 2006), ‘Report of the Secretary-General on the Establishment of a Special Tribunal for Lebanon’, paras 31-32. *See also* Law No. 05/L-053 on Specialist Chambers and Specialist Prosecutor’s Office, 3 August 2015, Art. 22; Rules of Procedure and Evidence before the Kosovo Specialist Chambers, Rule 2 (defining the terms ‘Party’ and ‘Victims Participating in the Proceedings’).

¹⁴⁸⁴ ECCC Internal Rules (rev. 9), as revised on 16 January 2015, Rule 23 ‘General Principles of Victims Participation as Civil Parties’. This Rule provides that the purpose of civil party action before the ECCC is to: a) participate in criminal proceedings against those responsible for crimes within the jurisdiction of the ECCC by supporting the Prosecution, and b) seek collective and moral reparations.

791. Article 17 of the Special Tribunal’s Statute and Article 68 (3) of the Rome Statute set out in identical terms the frameworks of victim participation. They are drawn from the 1985 UN Declaration of Basic Principles of Justice for Victims of Crime and Abuse of Power, whose Article 6 (b) provides that the responsiveness of judicial processes to the needs of the victims should be facilitated by allowing their ‘views and concerns’ to be presented at ‘appropriate stages of the proceedings’.¹⁴⁸⁵ Article 22 of the Law on the Kosovo Specialist Chambers and Specialist Prosecutor’s Office does not use this same expression—victims’ ‘views and concerns’—but according to a similar rationale envisages representations on behalf of the victims during the proceedings.¹⁴⁸⁶

792. The main difference in the victim participation procedures before the Special Tribunal and the ICC concerns the compensation regime. The ICC can itself grant reparations to victims—and it has its own statutory Trust Fund for Victims—whereas the Statute specifies that victims may bring an action for compensation in a national court or other competent body, based on a judgment finding an accused ‘guilty of a crime that has caused harm to a victim’.¹⁴⁸⁷ In both, the right to compensation is conviction-based, meaning it requires an accused to be convicted of a charged crime. The Kosovo Specialist Chambers can make reparation orders, after convicting an accused of a crime.¹⁴⁸⁸

B. Who are the Participating Victims?

793. Article 17 of the Statute provides that:

where the personal interests of the victims are affected, the Special Tribunal shall permit their views and concerns to be presented and considered at stages of the proceedings

¹⁴⁸⁵ In the UN Declaration, the General Assembly called upon States to take the necessary steps to give effect to the provisions contained in the Declaration and affirmed the necessity of adopting national and international measures to secure the universal and effective recognition of, and respect for, the rights of victims of crime and abuse of power; UN Doc A/RES/40/34/Annex (1985).

¹⁴⁸⁶ Law No. 05/L-053 on the Kosovo Specialist Chambers and Specialist Prosecutor’s Office, 3 August 2015, Art. 22, which provides that the victims’ personal interest and rights in the criminal proceedings are ‘notification, acknowledgement and reparation’. According to Article 22 (5), victims will be represented by a Victims’ counsel and no self-representation is permitted.

¹⁴⁸⁷ Statute, Art. 25; Rome Statute, Art. 75; *Bemba* decision on reparations proceedings, para. 3. Further, under the Special Tribunal’s Rules, victims cannot participate before the confirmation of an indictment, during the investigation stage (Rule 86 (A)).

¹⁴⁸⁸ Alternatively, where appropriate, the Specialist Chambers may refer the victims to civil litigation within the other courts of Kosovo; Law No. 05/L-053 on the Kosovo Specialist Chambers and Specialist Prosecutor’s Office, 3 August 2015, Art. 22 (8)-(9).

determined to be appropriate by the Pre-Trial Judge or the Chamber and in a manner that is not prejudicial to or inconsistent with the rights of the Accused and a fair and impartial trial.

Victims, therefore, have a conditional right to participate in the Special Tribunal's proceedings.¹⁴⁸⁹

794. Rule 2 defines a *victim* as 'a natural person who has suffered physical, material, or mental harm as a direct result of an attack within the Tribunal's jurisdiction'. This definition of a victim encompasses both 'direct' victims and 'indirect' victims who personally suffered harm as a direct result of the attack.¹⁴⁹⁰ It includes the 22 people killed in the explosion or as a result of it, who are normally referred to as the 'victims of the attack'—all the Parties agreed that this fact is uncontested¹⁴⁹¹—and the 226 who were injured in the explosion—another fact that each Party agreed is uncontested.¹⁴⁹²

795. A victim participating in the proceedings is defined as a 'victim of an attack within the Tribunal's jurisdiction who has been granted leave by the Pre-Trial Judge to present his views and concerns at one or more stages of the proceedings after an indictment has been confirmed'.¹⁴⁹³ Necessarily, this definition is encompassed within the definition of 'victim', which is broader. The 'participating victim' status first depends on a victim having applied to the Special Tribunal to participate in the proceedings.

796. In this case, the Pre-Trial Judge granted this status to 76 people.¹⁴⁹⁴ However, the participatory status of six participating victims was withdrawn either by the Pre-Trial Judge or the Trial Chamber—for four of them at the request of the Legal Representatives of Victims following their deaths.¹⁴⁹⁵ The Pre-Trial Judge's decisions granting the 'participating victim' status was

¹⁴⁸⁹ Decision on the Legal Representatives' application to call evidence, para. 5.

¹⁴⁹⁰ Pre-Trial Judge decision on victims' participation in the proceedings, paras 43, 45.

¹⁴⁹¹ Second decision on agreed facts (Merhi), para. 1 (i). In addition to killing Mr Rafik Hariri, the explosion killed 21 other persons listed in Schedule A of the amended consolidated indictment.

¹⁴⁹² Second decision on agreed facts (Merhi), para. 1 (ii).

¹⁴⁹³ Rule 2. Under Rule 86, if the Pre-Trial Judge has confirmed the indictment, a person claiming to be a victim of a crime within the Special Tribunal's jurisdiction may be granted the status of victim participating in the proceedings pursuant to Article 17.

¹⁴⁹⁴ Pre-Trial Judge decision on victims' participation in the proceedings; Second decision on victim participation; Third decision on victim participation; Fifth decision on victim participation; Sixth decision on victim participation; Seventh decision on victim participation; Eighth decision on victim participation.

¹⁴⁹⁵ Decision authorising two victims to withdraw their participation; Decision authorising a victim to withdraw their participation; Decision withdrawing one participating victim; Decision withdrawing participating victim (2020); Decision delivered in court authorising one victim to withdraw their participation.

based on his examining and finding *prima facie* evidence that the applicants had suffered physical, material or mental harm as a direct result of the attack of 14 February 2005.¹⁴⁹⁶ The participating victims in this case are either relatives of those who died in or as a result of the explosion, or people who were physically injured and or who suffered material damage in the explosion.

797. The Pre-Trial Judge, in his decision on victims' participation in the proceedings, decided, consistently with ICC case law and to ensure the expeditiousness and fairness of the proceedings, that the victims authorised to participate in proceedings could only do so through a legal representative. He also decided that they formed a single group for the purpose of their legal representation before the Special Tribunal.¹⁴⁹⁷ The Registrar, pursuant to the Pre-Trial Judge's decision, designated common legal representatives to represent the interests of those granted the status of participating victims.¹⁴⁹⁸ Twenty-six participating victims, including one former participating victim, were granted protective measures, either by the Pre-Trial Judge or the Trial Chamber, including as witnesses in the trial.¹⁴⁹⁹ Their names or any identifying information were expunged from any record disclosed to the public.

798. The Statute explicitly provides that the Special Tribunal may identify victims who have suffered harm as a result of the commission of crimes by an Accused convicted by the Special Tribunal.¹⁵⁰⁰ While this does not require that the Special Tribunal 'identify' them to seek compensation before a national court or other competent body, it makes the 'identification' of the victims and the related harm of enhanced relevance to the trial proceedings and to the victims' right to participate. In support of this, the Explanatory Memorandum on the Rules of Procedure and Evidence states (legally incorrect in part) that:

¹⁴⁹⁶ Pre-Trial Judge decision on victims' participation in the proceedings, paras 2-3. The Pre-Trial Judge stated that his determinations on the status of victims participating in the proceedings, due to the *prima facie* standard applied, were 'without prejudice to another Chamber's determination in a final judgment that an individual who has been granted VPP [victim participating in the proceedings] status by the Pre-Trial Judge on the basis of *prima facie* evidence is or is not a victim of an attack falling within the Tribunal's jurisdiction'.

¹⁴⁹⁷ Pre-Trial Judge decision on victims' participation in the proceedings, paras 112, 127, disposition.

¹⁴⁹⁸ Designation decision for Legal Representatives of Victims. Rule 2 defines the *legal representative of a victim participating in the proceedings* as 'counsel representing a victim participating in proceedings before the Tribunal'.

¹⁴⁹⁹ The Pre-Trial Judge granted requests for protective measures for 32 participating victims, but protective measures in relation to six of them (Victims V10, V43, V54, V55, V80 and V84) were later rescinded. *See for example*, Decision on eight requests for protective measures; Decision rescinding protective measures granted to Victims 54 and 55. *See also* Decision on protective measures for 11 witnesses.

¹⁵⁰⁰ Statute, Art. 25.

Notwithstanding that the trial proceedings in the Tribunal are not aimed at determining compensation but rather establishing whether an accused is guilty or innocent, the drafters of the Rules of Procedures and Evidence deemed it fair and appropriate to grant extensive participation in proceedings to victims.

Based on the Tribunal's "identification", victims may later bring an action for compensation before a national court and, for the purpose of such "identification", the participation of victims in the criminal proceedings before the Tribunal may prove of enormous value.¹⁵⁰¹

799. It is legally incorrect because a trial chamber does not pronounce on the innocence of an accused person, who is always presumed innocent until pronounced guilty after a trial.¹⁵⁰²

800. The Legal Representatives of Victims presented evidence at trial showing that academics had 'argued for the formulation of a broader definition' for those who are considered to be 'victims of terrorism'.¹⁵⁰³ According to expert academic commentary, acts of terrorism spread outwards affecting primary, secondary and tertiary victims.¹⁵⁰⁴

801. 'Primary victims', who are also referred to as direct victims, include those who are killed or injured in the terrorist attack; 'secondary victims' include dependants and relatives of the direct victims and first responders; and 'tertiary victims', also referred to as 'vicarious victims', are those

¹⁵⁰¹ Rules of Procedure and Evidence — Tribunal's President's Explanatory Memorandum (as of 12 April 2012), para. 16; Statute, Art. 25.

¹⁵⁰² The text states, incorrectly, 'establishing whether an accused is guilty or innocent', whereas the Trial Chamber, consistent with the principles of international human rights law, is only required to determine whether guilt was established beyond reasonable doubt. Article 16 (3) (c) of the Statute provides that 'In order to convict the accused, the relevant Chamber must be convinced of the guilt of the accused beyond reasonable doubt'. According to Rule 148, 'A finding of guilt may be reached only when a majority of the Trial Chamber is satisfied that guilt has been proved beyond reasonable doubt'.

¹⁵⁰³ Exhibit 1V42 (Professor Letschert's report), pp 7-8. The Trial Chamber permitted Professor Rianne Letschert, a victimologist, to provide opinion evidence as part of the victims' case and admitted her report into evidence. Professor Letschert pointed to the definition provided by Alex Schmid, who distinguishes between primary and secondary victims of terrorism, Alex Schmid, *Magnitudes and Focus of Terrorist Victimisation*, in U. Ewald and K. Turkovic (eds), *Large-scale victimisation as a potential source of terrorist activities* (IOS Press, Amsterdam), pp 3-19.

¹⁵⁰⁴ Professor Letschert explained that a study of 2010—carried out at the request of the European Commission—suggested dividing the large group of secondary victims, as defined by Alex Schmid, into two groups, introducing in this way a category of tertiary victims. The rationale was that 'terrorist acts specifically target tertiary victims as well as primary and secondary victims'. In the research project, they 'were asked by the European Commission to assess whether there was a need to have separate legal principles for victims of terrorism'. A publication resulted from this project, exhibit 1V42 (Professor Letschert's report), pp 7-9, citing Rianne Letschert, Ines Staiger and Antony Pemberton, *Victims of Terrorism in Assistance to Victims of Terrorism, Towards a European Standard of Justice* (Springer Press, 2010); Legal Representatives of Victims final trial brief, paras 6-7; Rianne Letschert, T. 8 September 2017, p. 25.

who may suffer psychological effects beyond the primary or secondary victims or the object of the attack. These include: those who have well-founded reasons to fear that they might be a victim of terrorism in the future; those whose normal lifestyle is changed; and those who experienced income loss or property damage due to acts of terrorism. Professor Letschert testified that, with respect to the crime of terrorism, ‘we don’t only talk about the direct victim but we talk about actually the entire population, and we could stretch it even further, the entire international community’.¹⁵⁰⁵

802. Each Accused is charged with participating in a conspiracy aimed at committing a terrorist act and either with committing a terrorist act (Mr Ayyash) or as accomplices to a terrorist act (Mr Merhi, Mr Oneissi and Mr Sabra).¹⁵⁰⁶ According to the Legal Representatives of Victims’ submissions, ‘it is the victims’ case that the bombing was an act of terrorism’.¹⁵⁰⁷ To the extent that the Trial Chamber finds that the attack on 14 February 2005 amounted to a terrorist act, the victims of the attack are ‘victims of terrorism’. The cited academic definition of victims of terrorism does not affect or impact the legal definition of a victim under the Statute or Rules. Nevertheless, the Trial Chamber finds that it is a useful working definition for the purpose of considering the impact of the attack of 14 February 2005 on ‘victims’, including participating victims, and the harm that they have suffered and or suffer as a result.

803. The Trial Chamber also acknowledges, based on Professor Letschert’s evidence, that ‘for many bereaved family members, the term “victim” refers to the deceased. They themselves often prefer to be considered “survivors”’.¹⁵⁰⁸

C. Modes of victims’ participation in the trial

804. Specific Rules define the modes of victims’ participation during the trial.¹⁵⁰⁹ Further, before the trial’s commencement, after hearing the Parties and the Legal Representatives of

¹⁵⁰⁵ Exhibit 1V42 (Professor Letschert’s report), pp 7-8; Legal Representatives of Victims final trial brief, paras 6-7; Rianne Letschert, T. 8 September 2017, pp 44-45.

¹⁵⁰⁶ Amended consolidated indictment, paras 53-55, 63-64.

¹⁵⁰⁷ Legal Representatives of Victims final trial brief, paras 58, 65-66.

¹⁵⁰⁸ Exhibit 1V42 (Professor Letschert’s report), p. 6. As there are no references in the relevant passage of the report, it is not clear whether this view on the term ‘victim’ has been expressed by the participating victims in these proceedings or derives from previous work on victims conducted by Professor Letschert.

¹⁵⁰⁹ *See for example*, Rule 87 (A)-(B) ‘Modes of Participation of Victims in the Proceedings’; Rule 143 ‘Opening Statements’; Rule 147 (A) ‘Closing Arguments’.

Victims, the Trial Chamber gave directions on the conduct of the proceedings under Rule 130 (A),¹⁵¹⁰ to supplement the Statute and the Rules. These included guidelines in relation to the participation of victims in the trial. In these, the Trial Chamber stated that it could call witnesses to testify for the participating victims and allow them, through their legal representatives, to tender documents and records into evidence. The guidelines also stated that the Legal Representatives of Victims could: participate in meetings and conferences before the Trial Chamber unless otherwise ordered, access written material consistent with the practice ordered by the Pre-Trial Judge,¹⁵¹¹ file motions and briefs and make oral submissions in relation to any issue that affected the victims' personal interests.¹⁵¹²

805. Through their legal representatives, the participating victims made opening statements,¹⁵¹³ questioned witnesses upon the Trial Chamber's invitation,¹⁵¹⁴ filed motions and observations,¹⁵¹⁵ filed a final trial brief,¹⁵¹⁶ presented closing submissions,¹⁵¹⁷ received all documents filed by the Parties, except for some limited material filed *ex parte* to which their access was restricted, and participated in status conferences and trial case management meetings.¹⁵¹⁸ The Trial Chamber also authorised the Legal Representatives of Victims to present evidence. The presentation of *viva voce* or live evidence and written statements—through their formal admissions and reading out of

¹⁵¹⁰ Directions on the conduct of the proceedings, para. 1. Rule 130 (A) relevantly provides that 'The Trial Chamber, after hearing the parties, may give directions on the conduct of the proceedings as necessary and desirable to ensure a fair, impartial, and expeditious trial'.

¹⁵¹¹ Decision on modalities of victim participation.

¹⁵¹² Directions on the conduct of the proceedings, paras 1-2, and annexed 'Guidelines on the Conduct of the Proceedings', para. 19.

¹⁵¹³ Legal Representatives of Victims opening statement, T. 17 January 2014, pp 53-87. *See also* Order on modes of victim participation, T. 29 October 2013, p. 31, where the Trial Chamber granted two applications from the Legal Representatives of Victims, to make an opening statement and have a small number of victims present in the courtroom during the opening statement.

¹⁵¹⁴ *See for example*, where the Legal Representatives of Victims questioned witnesses, Abdel-Qader Darwiche, T. 22 January 2014, pp 17-18; Gerard Murray, T. 30 September 2014, pp 21-24; Rachid Hammoud, T. 4 December 2014, pp 28-44.

¹⁵¹⁵ As to filings from the Legal Representatives of Victims *see for example*, F2325, Request of the Legal Representative of Victims to Allow Three Participating Victims to Attend Proceedings in the Courtroom, 17 November 2015; F2660, Request of the Legal Representative of Victims to Rescind Protective Measures Granted to One Participating Victim, 20 July 2016.

¹⁵¹⁸ Status conference, T. 17 May 2017.

summaries—took place over six days between 28 August and 8 September 2017. This is described as the ‘victims’ case’.¹⁵¹⁹

806. While the Rules only expressly refer to a Prosecution case and a Defence case¹⁵²⁰—as is normal in adversarial proceedings—the Statute and Rules allow a ‘victims’ case’. The Trial Chamber authorised one based on the criteria and principles described below,¹⁵²¹ ensuring that participating victims do not act as an auxiliary Prosecutor or double up on the Prosecution’s evidence. Participating victims must not present further evidence that simply supports the Prosecution’s case. The Trial Chamber was mindful of the necessity to avoid, as much as possible, any overlap between the two cases. It acknowledged the inevitable tension between the two competing objectives of allowing the participating victims to present their views and concerns and the right of the Accused to a fair and expeditious trial. It was also aware that participating victims would probably support a Prosecution case against those they may believe harmed them or their relatives.¹⁵²²

807. Professor Rianne Letschert commented in her testimony that ‘this Tribunal has really made an effort to make participation meaningful and to give also what I would call genuine attention to the voice of the victims in this case. So if that’s a lesson learned for future tribunals, I think it is an example that this Tribunal has been setting’.¹⁵²³

808. During the trial, participating victims themselves gave evidence, *viva voce* and or through written statements, either as Prosecution witnesses or as witnesses in the victims’ case, at the Legal Representatives of Victims’ request and with the Trial Chamber’s permission. Participating victims also personally attended public sessions of the proceedings in the courtroom, including during the opening statements, the presentation of evidence in the victims’ case and closing submissions. Thirty-three participating victims attended proceedings in the courtroom.¹⁵²⁴

¹⁵¹⁹ Decision on the Legal Representatives’ application to call evidence, paras 60, 93, 98. *See also* Decision admitting into evidence statements of participating victims; Decision permitting Professor Letschert to provide opinion evidence; Decision admitting documentary evidence on the Legal Representatives of Victims’ application.

¹⁵²¹ *See below*, sub-section (D) ‘The principles and criteria the Trial Chamber applied in deciding on the participating victims’ application to present or call evidence and on the appropriate stage of the proceedings for such presentation’.

¹⁵²² Decision on the Legal Representatives’ application to call evidence, paras 34-35, 70-72, 76.

¹⁵²³ Rianne Letschert, T. 8 September 2017, pp 106-107.

¹⁵²⁴ Mr Robert Aoun, Ms Ghina Mneimneh Ghalayini, Mr Raymond Abou-Chaaya, Ms Maria Al-Kasti, Ms Sanaa El Sheikh, Mr Wissam Naji, Mr Rachid Hammoud, Mr Nabih Mhanna, Mr Mahmoud Wazzan, Ms Liliane Khallouf, Mr Mehi Elddin Meneimneh, Mr Abdel-Qader Darwiche, Ms Nivine Darwiche, Ms Hana Diab El-Arab, Mr Saadeddine

Participating victims who testified in the victims' case were also asked, at the end of their testimony, whether they wished to stay in the courtroom, with the other participating victims, to continue attending the proceedings.¹⁵²⁵

809. The Trial Chamber issued general directions on the attendance of participating victims in the courtroom and permitted it on a case-by-case basis. It underlined that, in accordance with Article 17 of the Statute, the views and concerns of victims may be presented in court by their legal representatives. Logistical and physical considerations, however—and notably the Tribunal's limited resources and the size of the courtroom—imposed limitations on the number of victims who could be present in the courtroom at any one time. The Trial Chamber considered requests for the attendance of victims in the courtroom within this context. It also considered whether the proceedings at which the attendance was requested were to be held in a public session, whether any testifying witness had protective measures and whether the participating victims had a dual status, namely whether they were simultaneously a victim and a witness.¹⁵²⁶

810. During the presentation of the victims' evidence, the Trial Chamber authorised the Registrar to facilitate live courtroom streaming of public hearing sessions via a one-way video-conference link to a secure location in Beirut. This allowed public participating victims to observe public hearing sessions without a 30-minute broadcasting delay—which otherwise applies for the broadcasting of the proceedings to the public through the internet.¹⁵²⁷ This offered participating victims sufficient access to follow the proceedings as though they were present in the courtroom's public gallery.¹⁵²⁸ During the victims' case, the Trial Chamber's Presiding Judge and the other Judges asked the participating victims who attended the proceedings in the courtroom questions directly from the floor.¹⁵²⁹ Some of them had also provided evidence through witness statements, which were formally admitted into evidence while they were present.

Darwiche, Ms Clémence Tarraf, Mr Mamdouh Tarraf, Ms Bakiza Nasser (who is now deceased), Mr Kamal Nasser, Mr Bilal Nasser, Ms Roula Nasser, Ms Ihsan Fayed, Ms Sahar Kalaoui, Mr Saadeddine Hariri, Ms Yasma Fuleihan, Mr Bassam Osman, Mr Hicham Osman, Mr Rabih Nohra, Ms Rima Ghalayini, Ms Zeina Chehade Tarraf, Ms Fatme El Bahi (who is now deceased), Ms Dina Ghalayini, Mr Mohammed Diab. Twenty-three of them also provided evidence, either live or in written form.

¹⁵²⁵ *For example*, Ihsan Fayed, T. 7 September 2017, p. 56.

¹⁵²⁶ *See for example*, Decision on Participating Victims' attendance of proceedings.

¹⁵²⁷ STL website, <https://www.stl-tsl.org/en/contacts/visiting-the-stl/the-courtroom>.

¹⁵²⁸ Decision authorising live courtroom streaming.

¹⁵²⁹ Evidentiary matters, T. 29 August 2017, pp 89-102, T. 6 September 2017, pp 13-16, T. 7 September 2017, pp 71-75, 80-81, 86-87.

811. The Judges' questions concerned the impact, and any continuous impact, on them of the explosion on 14 February 2005—including resulting from the death of any relative; the effect of attending the proceedings in the courtroom or hearing the other participating victims' evidence; their expectations from the Special Tribunal; whether they had sought, or received, compensation for their harm and its amount; possible recommendations to the Lebanese government on mechanisms for compensation; and more generally their views and concerns as participating victims. The Trial Chamber emphasises that neither the questions nor the responses went to the individual criminal responsibility of the Accused.

812. According to Professor Letschert's evidence,¹⁵³⁰ the fact that victims sat in the courtroom behind their lawyers, instead of in the public gallery, is 'a novelty in international criminal justice', and victims described it as an empowering experience.¹⁵³¹ According to her, 'victims who were asked to testify also reported feelings of empowerment'.¹⁵³²

813. The Legal Representatives of Victims stated in their closing submissions that victims' participation has 'enriched' the proceedings and 'added human substance'. It allowed those who 'are the principal audience of these proceedings' to participate in them.¹⁵³³

D. The principles and criteria the Trial Chamber applied in deciding on the participating victims' application to present or call evidence and on the appropriate stage of the proceedings for such presentation

814. The Special Tribunal's Rules explicitly envisage that victims participating in the proceedings can seek, and be permitted, to present evidence. Rules 87 (B) and 146 (A) provide that a victim participating in the proceedings may request the Trial Chamber, after hearing the Parties, to call witnesses.

815. On 3 May 2017, the Legal Representatives of Victims submitted an application seeking the Trial Chamber's permission to call nine live witnesses—seven participating victims and two non-

¹⁵³⁰ As noted above (*see fn. 1503*), the Trial Chamber permitted Professor Letschert, a victimologist, to provide opinion evidence as part of the victims' case and admitted her report into evidence.

¹⁵³¹ Exhibit 1V42 (Professor Letschert's report), pp 29, 36-37; Rianne Letschert, T. 8 September 2017, pp 50-51; Legal Representatives of Victims final trial brief, paras 715-716, 745.

¹⁵³² Exhibit 1V42 (Professor Letschert's report), p. 29.

¹⁵³³ Legal Representatives of Victims closing submissions, T. 14 September 2018, p. 79.

victim witnesses—and present the evidence of 19 other witnesses in written statements, under either Rules 155 or 158. They additionally presented a schedule of ‘proposed agreed facts’, submitting that the Parties’ agreement to them would have substantially eliminated the need to seek the admission of most of the approximately 400 documents contained in their exhibit list.¹⁵³⁴ On 10 May 2017, the Legal Representatives of Victims sought leave to amend their witness list by adding four witnesses—who were victims participating in the proceedings—whose statements they intended to tender into evidence under Rule 155.¹⁵³⁵

816. In considering that application, the Trial Chamber examined the pertinent international case law. It found that the criteria used by the ICC to permit victims to give or call evidence could be relevant. At the same time, however, the Trial Chamber noted the differences between the Special Tribunal and the ICC,¹⁵³⁶ namely, the victims’ entitlement to apply to give or call evidence is not explicitly provided for in the Rome Statute or the ICC’s Rules, it is only recognised in the case law.¹⁵³⁷ Further, the presentation of evidence by the participating victims is conditional upon the victims ‘making a real contribution to the search for the truth’, based on a provision that has no equivalent in the Special Tribunal’s Statute or Rules.¹⁵³⁸

817. The Trial Chamber also found that some requirements of the ICC case law are explicitly provided in the Special Tribunal’s statutory provisions on victims’ participation, namely that the presentation of the victims’ views and concerns must not be prejudicial to or inconsistent with the

¹⁵³⁴ F3116, Request of the Legal Representative of Victims to Call Witnesses and Tender Other Evidence and for Guidance on Its Disclosure Obligations, in Compliance with the Judge Rapporteur’s 11 April 2017 Order, with Confidential Annexes A, B and C, 3 May 2017.

¹⁵³⁵ F3132, Request of the Legal Representative of Victims to add four Witnesses to its Witness List, with Confidential Annex A, 10 May 2017.

¹⁵³⁶ Decision on the Legal Representatives’ application to call evidence, paras 16-22.

¹⁵³⁷ Decision on the Legal Representatives’ application to call evidence, para. 12, referring to *Lubanga* decision on appeals regarding victims’ participation, paras 97-99. *See also Banda* decision on victim participation, para. 24.

¹⁵³⁸ Decision on the Legal Representatives’ application to call evidence, para. 19, referring to *Katanga and Ngudjolo* decision on modalities of victim participation at trial, para. 91. The ICC case law has interpreted Article 69 (3) of the Rome Statute (reading, relevantly, that the Court ‘shall have the authority to request the submission of all evidence that it considers necessary for the determination of the truth’) as to leave ‘open the possibility for victims to move the Chamber to request the submission of all evidence that it considers necessary for the determination of the truth’. The ICC Appeals Chamber has ruled that, in order to allow victims to participate meaningfully in the trial, the Trial Chamber may, where appropriate, authorise them to tender evidence. *Lubanga* decision on appeals regarding victims’ participation, paras 97-99; *Katanga and Ngudjolo* decision on modalities of victim participation at trial, para. 81.

rights of the Accused to a fair and impartial trial,¹⁵³⁹ and that the victims' personal interests must be affected by the proceedings, issue or evidence.¹⁵⁴⁰

818. The Trial Chamber, therefore, noted, considered or decided the following:¹⁵⁴¹

- The overriding principle in deciding whether victims may present or call evidence must be that in Rule 150 (D), namely, 'that the interests of justice so require';¹⁵⁴²
- This principle must be read jointly with Articles 17 and 25 of the Statute;
- Consistent with ICC case law,¹⁵⁴³ submitting evidence at trial may be a means for the participating victims to express their 'views and concerns'—which they have a qualified statutory right to do before the Special Tribunal, under Article 17 of its Statute;
- Article 25 of the Statute explicitly envisages the identification, in the judgment, of the victims and the harm they suffered. As the Explanatory Memorandum on the Rules of Procedure and Evidence states, 'based on the Tribunal's "identification", victims may later bring an action for compensation before a national court, and, for the purpose of such "identification", the participation of victims in the proceedings before the Tribunal may prove of enormous value';¹⁵⁴⁴
- It follows that recognising, and adequately recording, the participating victims' harm may make their participation meaningful; and the interests of justice may therefore permit hearing evidence for this purpose;

¹⁵³⁹ Article 17—and more generally Articles 16 and 21—of the Statute require the Trial Chamber to ensure that the presentation of the victims' views and concerns will not be prejudicial to or inconsistent with the rights of the Accused to a fair and impartial trial. Article 16 sets forth the rights of the Accused, including the right to be tried without undue delay, and that the onus is on the Prosecutor to prove the guilt of the Accused. Article 21, 'Powers of the Chambers', relevantly provides that the Special Tribunal shall confine the trial strictly to an expeditious hearing of the issues raised by the charges and take strict measures to prevent any action that may cause unreasonable delay.

¹⁵⁴⁰ Decision on the Legal Representatives' application to call evidence, paras 18-19.

¹⁵⁴¹ Decision on the Legal Representatives' application to call evidence.

¹⁵⁴² Rule 150 (D) provides that 'a victim participating in the proceedings may be permitted to give evidence if a Chamber decides that the interests of justice so require'. The Trial Chamber considered that Rule 150 (D), by providing that a victim may be permitted to give evidence, does not distinguish between *viva voce* evidence and evidence in the form of written statements. Decision on the Legal Representatives' application to call evidence, paras 13, 87.

¹⁵⁴³ *Katanga and Ngudjolo* decision on modalities of victim participation at trial, para. 82.

¹⁵⁴⁴ Rules of Procedure and Evidence —Tribunal's President's Explanatory Memorandum (as of 12 April 2012), para. 16.

- Further, as acknowledged by the Appeals Chamber, the personal interests of the victims include their potential ability to claim compensation;¹⁵⁴⁵
- Consistent with ICC case law,¹⁵⁴⁶ material may be admitted into evidence if it ‘relates to matters that are properly to be considered by the Trial Chamber in its investigation of the charges against the Accused or in its evaluation of the views and concerns of participating victims’;¹⁵⁴⁷
- Receiving evidence from a victim must be considered appropriate, considering its capacity to assist the Trial Chamber in understanding the case or evidence heard;¹⁵⁴⁸
- Victims’ participation, through the presentation of evidence, must be proportionate and consistent with the right of the Accused to a fair and expeditious trial;¹⁵⁴⁹
- Participating victims cannot act as a second or auxiliary Prosecutor;¹⁵⁵⁰ and
- While noting that under the ICC’s case law, victims are not generally and under all circumstances precluded from tendering ‘evidence relating to the guilt or innocence of the accused’¹⁵⁵¹ or testifying on the role of the accused in the crimes charged,¹⁵⁵² it must be

¹⁵⁴⁹ Decision on the Legal Representatives’ application to call evidence, para. 27, referring to *Lubanga* decision allowing victims to express their views and concerns and to present evidence at trial, para. 26.

¹⁵⁵⁰ Decision on the Legal Representatives’ application to call evidence, paras 34, 70, referring to *Katanga and Ngudjolo* directions for the conduct of the proceedings, paras 22 (b), 82; *Katanga and Ngudjolo* decision dismissing Mr Katanga’s appeal regarding the modalities of victim participation at trial, paras 110-113; *Situation in the DRC* decision of 17 January 2006 on victims’ participation, para. 51.

¹⁵⁵¹ *Lubanga* decision on appeals regarding victims’ participation, para. 97 (*see also* paras 93-95). *See also* *Katanga and Ngudjolo* decision dismissing Mr Katanga’s appeal regarding the modalities of victim participation at trial, para. 113. Judges Pikis and Kirsch—dissenting from *Lubanga* decision on appeals regarding victims’ participation—stated that victims cannot adduce evidence on the guilt of the accused and that their participation is confined to the expression of their views and concerns. Partly Dissenting Opinion of Judge G.M. Pikis, paras 4-6, 15; Partly Dissenting Opinion of Judge Philippe Kirsch, paras 4-5, 23-24, 39 (referring to the Rome Statute envisaging that the accused is faced by one Prosecutor, ‘rather than, potentially, multiple accusers’).

¹⁵⁵² *Katanga and Ngudjolo* decision dismissing Mr Katanga’s appeal regarding the modalities of victim participation at trial, paras 110-113; *Katanga and Ngudjolo* directions for the conduct of the proceedings, paras 22 (b), 82. *See also* *Situation in the DRC* decision of 17 January 2006 on victims’ participation, para. 51.

ensured that participating victims do not double up on the Prosecution's evidence by presenting further evidence that simply supports the Prosecutor's case.¹⁵⁵³

819. The Trial Chamber, in deciding about the appropriate stage of the proceedings for the victims to present their evidence—and therefore in scheduling the victims' case—considered that, while under the Rules participating victims can be heard at the sentencing stage, this does not preclude the Trial Chamber from hearing them on the harm suffered at an earlier stage in the proceedings, namely during the presentation of the evidence. It also noted the possible tension between Rules 146 (B) and 167. Rule 146 (B) provides that the evidence called by the Trial Chamber at the request of the participating victims shall be presented between the evidence for the Prosecutor and the evidence for the Defence. Rule 167 states that, at the close of the Prosecutor's case, the Trial Chamber must enter a judgment of acquittal on any count if there is no evidence capable of supporting a conviction on that count.

820. The Trial Chamber considered that, if it had acquitted the Accused under Rule 167 either *proprio motu* or on the application of an Accused, the Trial Chamber could not have heard any evidence for the participating victims—as the case would have been over—and their right to participate in the manner proposed would have been 'nullified'.¹⁵⁵⁴ As Rule 146 (B) allows the Trial Chamber, in the interests of justice, to alter the sequence of presentation of evidence, it decided that varying the order was warranted and interposed the presentation of the authorised evidence before the formal closure of the Prosecutor's case.¹⁵⁵⁵ The Parties were consulted before the Trial Chamber made this decision and did not object.

821. The Trial Chamber also noted that at the ICC, according to directions from trial chambers, any 'no case to answer motion'¹⁵⁵⁶ has followed the completion of the evidence called at the victims' request.¹⁵⁵⁷ The Trial Chamber further considered that the anticipated evidence it authorised did not provide *direct* evidence of the individual criminal responsibility of any Accused

¹⁵⁵³ Decision on the Legal Representatives' application to call evidence, paras 34, 71-72.

¹⁵⁵⁴ Decision on the Legal Representatives' application to call evidence, paras 42-43, 74, 94.

¹⁵⁵⁵ Decision on the Legal Representatives' application to call evidence, paras 94-95.

¹⁵⁵⁶ At the Special Tribunal an application under Rule 167.

¹⁵⁵⁷ Decision on the Legal Representatives' application to call evidence, para. 97, referring to *Ruto and Sang* decision on the conduct of the proceedings, para. 34, and *Ntaganda* decision on the conduct of the proceedings, para. 17. The Trial Chamber has also noted, however, that there are no ICC statutory provisions on a judgment of acquittal at the close of the Prosecutor's case.

and, therefore, its presentation could not impact any subsequent Trial Chamber determination under Rule 167.¹⁵⁵⁸

E. The victims' case

822. On 31 July 2017, the Trial Chamber granted the Legal Representatives of Victims' application to present the evidence of eight *viva voce* (live) witnesses—seven participating victims and a victimologist, Professor Letschert—and to submit 23 written statements for admission into evidence—21 from participating victims, one from a deceased former participating victim and one from another person, namely Witness PRH352.¹⁵⁵⁹

823. The Trial Chamber deferred its decision on the Legal Representatives of Victims' application to call a second non-victim witness, Dr Fares Souaid—a surgeon, political observer and former Lebanese MP.¹⁵⁶⁰ Dr Souaid, according to the Legal Representatives of Victims, was expected to testify about the political background and chain of events that preceded and followed the attack of 14 February 2005 and, as a physician, about the victims' humanitarian and psychological problems and pain. The Oneissi Defence opposed the application on the basis that the Legal Representatives of Victims had not demonstrated how Dr Souaid's expected evidence on political aspects would have affected the victims' personal interests nor had they explained whether he had examined the victims to provide an opinion on their problems and pain or whether he was presented as a lay or expert witness.

824. The Trial Chamber then ordered the Legal Representatives of Victims to provide to the Trial Chamber and disclose to the Parties a statement or report from this witness or a document outlining the scope of his testimony, before deciding whether to permit him to testify.¹⁵⁶¹ The Legal Representatives of Victims, however, subsequently withdrew Dr Souaid from their witness list, submitting that, after having reviewed the totality of the evidence at their disposal, and that presented during the Prosecution's case, Dr Souaid's evidence would have been 'otiose'.¹⁵⁶²

¹⁵⁵⁸ Decision on the Legal Representatives' application to call evidence, para. 97.

¹⁵⁵⁹ Decision on the Legal Representatives' application to call evidence, para. 89, disposition.

¹⁵⁶⁰ Decision on the Legal Representatives' application to call evidence, disposition.

¹⁵⁶¹ Decision on the Legal Representatives' application to call evidence, para. 86, disposition.

¹⁵⁶² F3270, Request of the Legal Representative of Victims to withdraw one witness from its witness list, 11 August 2017, paras 8-9; Decision on the Legal Representatives' application to withdraw one witness, para. 6.

825. One of the seven participating victims authorised by the Trial Chamber to testify could not attend, and the Legal Representatives of Victims instead sought the admission into evidence of his statement under Rule 155.¹⁵⁶³ The Trial Chamber ultimately admitted into evidence 24 witness statements, under Rules 155 and 158, and heard seven witnesses—six of them were participating victims. Six testified in person and one via video-conference link from the Special Tribunal's office in Beirut.

826. At the request of the Legal Representatives of Victims, the Trial Chamber also admitted into evidence documents—22 exhibits—under Rule 154. They were either tendered through a witness or through bar table motions. One of them was a compilation of 181 documents—the Trial Chamber admitted 175 of them into evidence.¹⁵⁶⁴ They consist of medical records, identification documents, family or individual status extracts, death certificates of people who died in or as a result of the explosion, documents relating to financial expenses and employment, photographs, press clippings and Lebanese court decisions.

827. The Trial Chamber also recorded, under Rule 122, the agreement of the Prosecutor and counsel for Mr Ayyash and Mr Sabra that 172 facts proposed by the Legal Representatives of Victims were uncontested. The Trial Chamber found that it may consider them proved at trial, in the cases against Mr Ayyash and Mr Sabra. They are listed in annex E to this judgment. As the Statute gives participating victims a qualified right to present their views and concerns and explicitly envisages the identification, in a judgment, of the victims and the harm they suffered, the Trial Chamber interpreted Rule 122 as allowing it to record agreements as to evidence between the Parties on 'facts' regarding the participating victims' identification and harm, which the Legal Representatives proposed.¹⁵⁶⁵

828. On 11 April 2017, the Trial Chamber's Presiding Judge, as Judge Rapporteur for reaching agreement between the Parties on matters in dispute, ordered the Legal Representatives of Victims to submit to the Parties, by 3 May 2017, proposals for agreements as to the content of any

¹⁵⁶³ Victim 27. Decision admitting into evidence the statements of Victims 27 and 73; Decision admitting into evidence statements of participating victims, paras 2-3.

¹⁵⁶⁴ Exhibit 1V45 (Rule 154 documents Legal Representatives of Victims). The Legal Representatives of Victims sought the admission into evidence of 189 documents. Of these, the Trial Chamber had already admitted eight. Of the remaining 181 documents, the Trial Chamber denied the admission of six. Decision admitting documentary evidence on the Legal Representatives of Victims' application, para. 6, fns 11-13, disposition.

¹⁵⁶⁵ Decision on agreed facts (participating victims) (Ayyash and Sabra), paras 6-8, disposition.

documents whose admission into evidence they intended to seek. The Legal Representatives of Victims accordingly filed a schedule of ‘proposed agreed facts’.

829. While the Prosecution and the Ayyash and Sabra Defence did not contest any of the ‘proposed agreed facts’, the Merhi and Oneissi Defence submitted that they could not agree to *any* of them because of the absence of instructions from the Accused, who are being tried *in absentia*. In both its decision authorising the presentation of evidence by victims and its decision recording the agreement as to evidence of the Prosecutor and the Ayyash and Sabra Defence, the Trial Chamber expressed its difficulty in understanding the basis for counsel for Mr Merhi and Mr Oneissi not accepting those facts as uncontested and how the absence of direct instructions from the Accused in this regard could affect this process. The Trial Chamber noted that most of the proposed agreed facts were uncontroversial, relating to matters such as dates of birth and medical reports of injuries.¹⁵⁶⁶ These are not matters that appear to be legitimately in dispute.¹⁵⁶⁷

830. The 175 documents admitted as a single exhibit¹⁵⁶⁸ contain the documents supporting those uncontroversial facts. The lack of agreement by counsel for Mr Merhi and Mr Oneissi meant that the presentation of those facts was required. The Trial Chamber accordingly authorised the Legal Representatives of Victims to submit the supporting documents for admission into evidence.¹⁵⁶⁹

831. The Trial Chamber was satisfied that the victims’ case, as proposed by the Legal Representatives of Victims, was contained and proportionate. It was also generally unopposed. It could not therefore have affected the Accused’s right to a fair trial and in particular their right to be tried without undue delay.¹⁵⁷⁰ Further, as it related to the identification of the victims and their

¹⁵⁶⁶ Decision on agreed facts (participating victims) (Ayyash and Sabra), paras 9-10; Decision on the Legal Representatives’ application to call evidence, para. 101. *See also* Procedural matters, T. 4 May 2017, pp 85-88; Status conference, T. 17 May 2017, pp 4-8.

¹⁵⁶⁷ Procedural matters, T. 4 May 2017, p. 85 (where the Presiding Judge—when hearing from the Parties about the time they needed to submit their position on the Legal Representatives of Victims’ ‘proposed agreed facts’—raised the issue of whether any connection may exist at all between the content of documents such as medical reports or birth certificates and a client’s instructions to Defence counsel, and as to ‘what a client would instruct ... to do in relation to medical reports’. Counsel for Mr Oneissi responded that while understanding these remarks, ‘as a matter of general principle it’s difficult for Defence counsel to agree to any facts in the absence of the instructions of a client’).

¹⁵⁶⁸ Exhibit 1V45 (Rule 154 documents Legal Representatives of Victims).

¹⁵⁶⁹ Decision on the Legal Representatives’ application to call evidence, para. 101, disposition.

¹⁵⁷⁰ Decision on the Legal Representatives’ application to call evidence, para. 75.

harm—as envisaged under Article 25—it could not alter the Prosecutor’s onus to prove the guilt of the Accused beyond reasonable doubt.¹⁵⁷¹

1. *Viva voce* (live) witnesses—six participating victims

832. The Trial Chamber heard the evidence of six participating victims, Mr Robert Aoun, Ms Lama Ghalayini, Ms Maria Al-Kasti, Ms Liliane Khallouf, Ms Ihsan Fayed and Victim 16.

833. The evidence concerns mostly uncontested matters because the fact that Ms Al-Kasti, Ms Khallouf and Victim 16 were injured in the explosion and that the relatives of Mr Aoun—his brother, Mr Joseph Aoun—of Ms Ghalayini—her father, Mr Abdul Hamid Ghalayini—and of Ms Fayed—her husband, Mr Talal Nasser—were killed by the explosion were already facts agreed between all the Parties.¹⁵⁷²

834. Under Rule 122, however, the Trial Chamber decided that a more complete presentation of those facts was required in the interests of justice, in particular in the interests of the victims. It found that the evidence would have provided a more comprehensive narrative of the events and offered a more complete picture of the impact of the charged crimes upon their individual victims.¹⁵⁷³

835. The evidence is relevant to the explosion on 14 February 2005, its effects on victims and the consequent harm suffered by them. It enabled the participating victims to express their views and concerns and therefore, in the Trial Chamber’s view, helped to ensure their meaningful participation in the proceedings. It has also assisted the Trial Chamber to better understand what happened and the impact of the crime on the victims.¹⁵⁷⁴ The victims shared their personal stories of the attack on 14 February 2005—unique to each of them—together with their grief, concerns and hopes. As noted below,¹⁵⁷⁵ it has broadened the Prosecution’s narrative and is relevant to the Trial Chamber’s assessment of the gravity of the crimes.

¹⁵⁷¹ Decision on the Legal Representatives’ application to call evidence, para. 76.

¹⁵⁷² Second decision on agreed facts (Merhi), para. 1.

¹⁵⁷³ Decision on the Legal Representatives’ application to call evidence, paras 78-79.

¹⁵⁷⁴ Decision on the Legal Representatives’ application to call evidence, paras 76-79, 83.

¹⁵⁷⁵ See below, sub-section (F) (6) (d) ‘Broadening the narrative—the scope of the Trial Chamber’s findings’.

836. According to the academic definition of victims of terrorism proposed by Professor Letschert as described, three witnesses were ‘secondary victims’.¹⁵⁷⁶ Mr Aoun, Ms Ghalayini and Ms Fayed lost close family members in the attack. They described the last time they saw or spoke to them before the attack, how they found out about their fate, their search of the crime scene or going to the hospitals or morgues in Beirut searching for their relatives and the effects of the loss on themselves and family members. This included their anxiety and suffering PTSD.¹⁵⁷⁷

837. Ms Al-Kasti, Ms Khallouf and Victim 16 were injured in the blast while they were at the HSBC bank near the St Georges Hotel. Ms Al-Kasti and Ms Khallouf worked in the bank, and Victim 16 was visiting it for a work-related transaction. Ms Khallouf and Victim 16 described the moment of the explosion—but Ms Al-Kasti had no recollection as a result of losing consciousness. They testified about how they were injured or escaped from the building, how they were transferred to hospitals or that they regained consciousness there and about their physical or psychological harm, including for continuous or permanent damages.¹⁵⁷⁸ Their evidence is described in more detail in chapter VI ‘Explosion on 14 February 2005’, (G) ‘Victim harm’ regarding the impact of the explosion on the victims.

838. The witnesses were uniquely placed to give evidence about their experiences and the personal harm suffered, which is specific to each victim. While other Prosecution witnesses may have provided oral testimony of similar facts, their evidence could not strictly be considered as cumulative as ‘none of their personal histories are the same’.¹⁵⁷⁹ The Trial Chamber considered this aspect because Rule 155 includes—among the factors favouring the admission of evidence in the form of a written statement in lieu of oral evidence—that the evidence is cumulative and concerns the impact of crimes upon victims.

¹⁵⁷⁶ Above, at fns 1503-1504.

¹⁵⁷⁷ Ms Ghalayini, Mr Aoun and Ms Fayed testified, respectively, on 28 August, 30 August and 7 September 2017.

¹⁵⁷⁸ Ms Al-Kasti and Ms Khallouf testified on 29 August 2017 and Victim 16 testified on 30 August 2017.

¹⁵⁷⁹ Decision on the Legal Representatives’ application to call evidence, paras 81-82, quoting the *Lubanga* decision allowing victims to express their views and concerns and to present evidence at trial (para. 37), referring, in that case, to the account of former child soldiers.

2. Professor Dr Rianne Letschert's evidence

839. Professor Letschert is a professor of international law and victimology at the Maastricht Law School, in the Netherlands, and is *Rector Magnificus*¹⁵⁸⁰ of Maastricht University.¹⁵⁸¹ She previously held the victimology and international law chair at Tilburg University, where she directed the International Victimology Institute of Tilburg.¹⁵⁸² At the time of her testimony, she had authored or co-authored what she described as nine 'key' academic publications and books.¹⁵⁸³

840. Considering Professor Letschert's professional experience and qualifications, the Trial Chamber permitted her to provide opinion evidence on the victimological profile of the participating victims as the victims of an explosion, their needs and the ways in which access to justice can fulfil those needs, and it admitted into evidence her report on the participating victims' views and concerns.¹⁵⁸⁴ The Trial Chamber found that her evidence was conducive to giving a more complete picture of the impact of the attack upon the victims and therefore it found that it was in the interests of justice to authorise its presentation.¹⁵⁸⁵

841. Professor Letschert's report provides an overview of the main findings from academic literature on the effects of terrorist incidents on victims and societies in general and, based on her previous work, the victims' needs with regard to the criminal justice system.¹⁵⁸⁶

842. Alongside this analysis from both her work and general scholarly publications, Professor Letschert made her 'findings' based on interviews with the participating victims. Professor Letschert testified that she had interviewed all except three participating victims—who did not agree to talk to her. She interviewed most of them several times between October 2013 and October 2016. Professor Letschert also reviewed the participating victims' applications and supporting

¹⁵⁸⁰ This title, using English terminology, corresponds to a provost, or in some systems, to the vice chancellor. It is someone responsible for the quality of the education and research within the entire institution. It is 'an administrative function in the governance, in the executive board of a university'. Rianne Letschert, T. 8 September 2017, p. 21.

¹⁵⁸¹ Rianne Letschert, T. 8 September 2017, pp 6, 21-22; exhibit 1V43 (Professor Letschert's *curriculum vitae*).

¹⁵⁸³ Exhibit 1V43.

¹⁵⁸⁴ Decision permitting Professor Letschert to provide opinion evidence, paras 6, 20, disposition; exhibit 1V42 (Professor Letschert's report).

¹⁵⁸⁵ Decision permitting Professor Letschert to provide opinion evidence, para. 6, referring to Decision on the Legal Representatives' application to call evidence, para. 85.

¹⁵⁸⁶ Exhibit 1V42 (Professor Letschert's report), p. 11.

documents.¹⁵⁸⁷ She interviewed most of them several times.¹⁵⁸⁸ Her report addresses the psychological impact and the physical and financial consequences of the attack on the participating victims and their views, concerns and justice needs and expectations of the Special Tribunal, including the need for participation in the criminal justice system.¹⁵⁸⁹ Professor Letschert also explored how the victims' views and expectations changed over time and provided recommendations for future situations where international criminal justice may aim to provide redress to victims.¹⁵⁹⁰

843. Professor Letschert explained that events and circumstances in the aftermath of a crime can have a considerable impact on an individual victim, such as the media attention, the experiences with the criminal justice system and the influence of a support network—including from a government. From her interviews with participating victims, she testified that media attention and attacks on the Special Tribunal's legitimacy caused the victims frustration, concern and additional stress, which she described as 'secondary victimization'.¹⁵⁹¹

844. Her evidence is described in more detail in chapter VI 'Explosion on 14 February 2005', (G) 'Victim harm' below on the impact of the attack on the victims.

845. Professor Letschert's report considers the participating victims as 'victims of terrorism'. It describes the potential consequences of terrorist victimisation and how the participating victims have experienced these consequences.¹⁵⁹² This was of course premised on the attack of 14 February 2005 being a terrorist attack, which in court proceedings requires a legal characterisation. The Trial Chamber accordingly decided to disregard, at the time of admission into evidence of the report and presentation of Professor Letschert's oral evidence, any suggestion or assumption in it that the participating victims were *legally* victims of a terrorist act. It found that this went to the legal characterisation of the attack and, therefore, the Trial Chamber's adjudication

¹⁵⁸⁷ Rianne Letschert, T. 8 September 2017, pp 35, 37; exhibit 1V42 (Professor Letschert's report), p. 11; Decision permitting Professor Letschert to provide opinion evidence, para. 20.

¹⁵⁸⁸ Exhibit 1V42 (Professor Letschert's report), p. 3.

¹⁵⁸⁹ Exhibit 1V42 (Professor Letschert's report), p. 3; Rianne Letschert, T. 8 September 2017, pp 27, 41.

¹⁵⁹⁰ Exhibit 1V42 (Professor Letschert's report), pp 37-38.

¹⁵⁹¹ Rianne Letschert, T. 8 September 2017, pp 54, 58-64.

¹⁵⁹² Exhibit 1V42 (Professor Letschert's report), pp 10-23. *See in particular* p. 11, where Professor Letschert states 'I will first address the potential psychological, physical and financial consequences of terrorism in general and secondly how the participating victims have experienced *these*' (emphasis added).

of the charges.¹⁵⁹³ However, the Trial Chamber has now found, in chapter XIV ‘Legal findings on elements of the crimes and Individual criminal responsibility’, (A) (1) (a) ‘The crime’ below, that the explosion that targeted Mr Hariri and affected the participating victims, was a terrorist act. Consequently, it can now consider Professor Letschert’s report in its entirety, including its assumptions that the participating victims were victims of terrorism.

846. In admitting it into evidence, the Trial Chamber considered that Professor Letschert’s report, with its summary of the views and concerns of the majority of the participating victims, provided an effective, convenient and judicially economical manner of receiving their views and concerns without affecting the Accused’s rights to a fair trial. The alternative manner of receiving evidence from all the participating victims would have consumed much court time and Special Tribunal resources.¹⁵⁹⁴

847. The Trial Chamber considered that, based on her *curriculum vitae*, Professor Letschert was conceivably well qualified to provide expert evidence in the field of victimology.¹⁵⁹⁵ The Legal Representatives, however, requested the Trial Chamber to hear her as a witness who could provide opinion evidence, rather than as an expert, and the Trial Chamber received her evidence in this manner. The Trial Chamber nevertheless notes that Professor Letschert undoubtedly appears to be an expert in this field. The Prosecution did not object to the application for the admission of Professor Letschert’s report. The Sabra Defence took no position and did not file a response. The Oneissi Defence opposed the admission into evidence of Professor Letschert’s report. It noted that Professor Letschert’s experience in the field of victimology is multidisciplinary and academic and that, based on her CV, it was unclear whether, prior to the investigations for the report, she had any experience of the subject, either involving interviews with victims of alleged terrorism or of any other crime. The Ayyash and Merhi Defence took no position on the admission of the report or application for Professor Letschert to provide opinion evidence, on the premise that it was not an expert report and that there was no request to grant her expert status.

¹⁵⁹³ Decision permitting Professor Letschert to provide opinion evidence, paras 21-23.

¹⁵⁹⁴ Decision permitting Professor Letschert to provide opinion evidence, para. 29.

¹⁵⁹⁵ Decision permitting Professor Letschert to provide opinion evidence, para. 19.

848. The Trial Chamber is not aware of any prior cases at the ICC—and therefore in any other trial conducted under international criminal law procedural law—where non-victim witnesses have been authorised to present evidence upon a request from participating victims.¹⁵⁹⁶

3. Witness statements

849. Seven participating victims who provided written statements were injured in the explosion. They are: Mr Raymond Abou-Chaaya, Ms Sanaa El Sheikh, Mr Wissam Naji, Mr Mehi Elddin Meneimneh, Mr Rabih Nohra, Victim 33 and Victim 73.¹⁵⁹⁷ Their evidence provides information on their whereabouts and activities on 14 February 2005 and the harm they suffered.

850. Mr Mehi Elddin Meneimneh and V033 were members of Mr Hariri's convoy. The others, at the time of the explosion, were working in buildings in the area affected by it. V073 was in his nearby shop, Ms El Sheikh was in the St Georges branch of the HSBC bank, Mr Naji was in his office in the nearby Machkhas Centre building and Mr Nohra was in a restaurant in the Phoenicia International Hotel. Mr Abou-Chaaya was an ISF postman who was passing the Phoenicia International Hotel on his motorcycle.

851. The other 17 witnesses are relatives of people who died in, or as a result of, the explosion.¹⁵⁹⁸ They are:

- Ms Nivine Darwiche—the sister of Mr Mohammed Darwiche, one of Mr Hariri's personal bodyguards;
- Ms Clemence Tarraf—the sister of Mr Ziad Tarraf, a member of Mr Hariri's convoy;
- Ms Zeina Chehade Tarraf—Mr Tarraf's wife;

¹⁵⁹⁶ *Ntaganda* decision on the presentation of victims' evidence, views and concerns, paras 16-19 (noting the Defence submissions that 'only participating victims have been authorized to give evidence in past cases'). More recently, in the *Ongwen* case before the ICC, the Trial Chamber authorised three expert witnesses—proposed by the Common Legal Representative for Victims—to present evidence. *Ongwen* decision authorising the presentation of victims' evidence, disposition.

¹⁵⁹⁷ Exhibits 1V11, 1V12, 1V13, 1V14, 1V22, 1V40 and 1V41.

¹⁵⁹⁸ Exhibits 1V21, 1V23, 1V24, 1V25, 1V26, 1V27, 1V28, 1V29, 1V30, 1V31, 1V33, 1V34, 1V35, 1V36, 1V37, 1V38 and 1V39.

- Mr Kamal Nasser—the brother of Mr Talal Nasser, a leader of Mr Hariri’s personal protection team;
- Ms Roula Nasser—Mr Nasser’s sister;
- Ms Bakiza Nasser—another sister of Mr Nasser. Her status as participating victim was withdrawn following her death on 17 February 2017, at the Legal Representatives of Victims’ request. The Trial Chamber admitted her statement into evidence under Rule 158 as that of an unavailable witness;
- Mr Hicham Osman and Mr Mohamad Osman—brothers of Mr Haitham Osman, who was in the area of the explosion and died after he was hit in the stomach by flying shrapnel;
- Ms Dina Ghalayini—the sister of Mr Mohammed Riad Ghalayini, one of Mr Hariri’s bodyguards;
- Victim 58—a relative of a member of Mr Hariri’s convoy;
- Witness 352—a relative of one of Mr Hariri’s bodyguards; and
- Victims 26, 27, 36, 37, 38 and 78—relatives of different people who were in the area affected by the explosion who died due to the attack.

852. These witnesses’ evidence provides information on their last contacts with the deceased relatives, their relationship with them, how they learned about the explosion and, in several cases, who identified the bodies. The evidence is also of the material, physical or mental harm they and their family members suffered as a result of their relatives’ deaths.

853. Some had already testified as Prosecution witnesses in the trial. The Trial Chamber, however, received additional submissions from the Legal Representatives of Victims as to why they sought to present evidence by witnesses who had already provided evidence as Prosecution witnesses. It was satisfied by the Legal Representatives of Victims’ explanation that the relevant witness statements supplemented the previous evidence and either included information that the participating victims became aware of only after giving their evidence, or was related to the harm

they suffered. Further, no Party raised any objection or concern.¹⁵⁹⁹ The Trial Chamber accordingly found that the interests of justice allowed the Legal Representatives of Victims to present these statements by applying for their admission under Rule 155.¹⁶⁰⁰ The Trial Chamber then admitted them into evidence under that Rule.

4. A single exhibit containing 175 documents and the 172 facts that the Prosecution, Ayyash and Sabra Defence agreed are uncontested

854. The Trial Chamber found 175 documents, grouped into a single exhibit,¹⁶⁰¹ relevant and probative of: the participating victims' identities; the relationship of some of them with those killed in the attack; and the participating victims' physical, mental or material harm. Further, some documents corroborated other evidence. They are described in more detail below.¹⁶⁰²

855. The 172 facts that the Prosecution, the Ayyash and Sabra Defence agree are uncontested, supported by the 175 documents, concern the deaths and injuries resulting from the explosion. This includes the specific causes of death and the type of injuries, the relationship between those killed and the participating victims, the material, physical and mental harm the participating victims suffered and related diagnoses and treatments.¹⁶⁰³ The Trial Chamber did not record four facts as uncontested, as proposed by the Legal Representatives of Victims, which were based on documents that the Trial Chamber found lacking the requisite relevance and probative value for admission into evidence. They related to certain participating victims' treatments, operations or diagnoses.¹⁶⁰⁴ The Trial Chamber found that the Legal Representatives of Victims did not provide submissions or information to establish that the medical conditions described in the documents proposed for admission were related to the explosion.¹⁶⁰⁵

¹⁵⁹⁹ Decision on the Legal Representatives' application to call evidence, paras 49, 57, 91.

¹⁶⁰⁰ Decision on the Legal Representatives' application to call evidence, paras 90-92.

¹⁶⁰¹ Exhibit 1V45 (Rule 154 documents Legal Representatives of Victims).

¹⁶⁰² Regarding the impact of the explosion on the victims, *see* chapter VI 'Explosion on 14 February 2005', (G) 'Victim harm'.

¹⁶⁰³ Decision on agreed facts (participating victims) (Ayyash and Sabra), para. 4.

¹⁶⁰⁴ Proposed agreed facts nos 37, 105, 190-191 concerning: (i) the treatment prescribed for Victim 12's medical conditions; (ii) an operation undergone by Victim 30; and (iii) certain diagnoses concerning Victim 73. Decision on agreed facts (participating victims) (Ayyash and Sabra), para. 11, fn. 19, referring to Decision admitting documentary evidence on the Legal Representatives of Victims' application, paras 39-41.

¹⁶⁰⁵ The Trial Chamber did not disbelieve the existence of such a connection but was concerned that the Legal Representatives of Victims had failed to establish the supporting documents' relevance or probative value. Decision admitting documentary evidence on the Legal Representatives of Victims' application, paras 39-41, 62, 64, 68, disposition.

F. The probative value of the evidence presented by and for the participating victims

856. Several times during the trial the Trial Chamber informed the Parties that it wished to receive submissions on the weight that could be given to the evidence that it permitted the Legal Representatives of Victims to present. In an order scheduling final trial briefs and closing submissions, the Trial Chamber ordered the Parties and the Legal Representatives of Victims to address this in their final trial briefs. The Legal Representatives of Victims and all the Parties—with the exception of the Oneissi Defence—did so. During their oral closing submissions, upon the Presiding Judge’s query, the Oneissi Defence clarified that it took no specific position on this matter.¹⁶⁰⁶

1. The Legal Representatives of Victims’ submissions

857. The Legal Representatives of Victims requested that, irrespective of findings in relation to the individual Accused, the judgment record the fact that the participating victims are individually and collectively victims of the explosion of 14 February 2005 and the extent of their suffering. In this way, the certified copy of the Trial Chamber’s ‘judgment will be an effective tool as a means of securing compensation before domestic courts’.¹⁶⁰⁷

858. The Legal Representatives of Victims submitted that the evidence adduced during the victims’ case should be given ‘the highest probative value and crucial weight’. This is because the participating victims coherently and consistently provided a detailed narrative to the case and assisted the Trial Chamber in understanding the extent of the harm caused by the attack not just on themselves, but also on other participating victims, non-participating victims and more generally the Lebanese people.¹⁶⁰⁸ The victims’ case furnished the Special Tribunal with facts and evidence that the Parties did not provide, thus broadening and enriching the narrative.¹⁶⁰⁹

859. As an example, Ms Liliane Khallouf and Victim 16 provided vivid accounts of the explosion, as they were in the HSBC building when it occurred.¹⁶¹⁰ Ms Ghalayini’s evidence shed

¹⁶⁰⁶ Oneissi Defence closing submissions, T. 20 September 2018, pp 122-123.

¹⁶⁰⁷ Legal Representatives of Victims final trial brief, paras 656 (referring to Article 25 of the Statute), 748.

¹⁶⁰⁸ Legal Representatives of Victims final trial brief, para. 120.

¹⁶⁰⁹ Legal Representatives of Victims final trial brief, paras 729-731.

¹⁶¹⁰ Legal Representatives of Victims final trial brief, para. 730.

light on the inefficiency and incapability of the search and rescue efforts of the ‘Lebanese authorities’¹⁶¹¹ during the immediate aftermath of and the days following the attack, such as ‘the security forces’,¹⁶¹² and how the victims were treated by the ‘Lebanese authorities’.¹⁶¹³ According to the Legal Representatives of Victims, the inadequacy of search operations and investigations and inefficiency of the ‘local authorities’ are further highlighted in the UN ‘Report of the Fact-Finding Mission to Lebanon inquiring into the causes, circumstances and consequences of the assassination of former Prime Minister Rafik Hariri’ of 24 March 2005.¹⁶¹⁴

860. The witnesses’ evidence is relevant to and probative of the events and the harm that each suffered. It is first-hand and uncontroversial. The *viva voce* witnesses took the solemn declaration and each witness statement contains a declaration of truth and was signed. The Parties neither objected to the witnesses testifying, asked questions, nor objected to the admission into evidence of the witness statements. The live witnesses provided concrete and corroborative evidence which is consistent with the evidence of other participating victims, the Legal Representatives of Victims’ documentary evidence, the Prosecution’s evidence and the ‘unsworn statements’ of participating victims who answered the questions that the Trial Chamber asked them directly from the floor when attending the proceedings in the courtroom during the victims’ case. The participating victims all knew that the Special Tribunal cannot grant compensation or order reparations. According to the Legal Representatives of Victims, their willingness to testify was not financially motivated but stemmed from the determination to assist the Special Tribunal in finding the truth behind the attack.¹⁶¹⁵

861. Their evidence can also assist the Trial Chamber in assessing the gravity of the crimes.¹⁶¹⁶ The Legal Representatives of Victims invite the Trial Chamber to find: first, that the crimes are especially grave as crimes of a terrorist nature, being indiscriminate and involving the use of a huge amount of explosives detonated in a location likely to cause massive destruction and loss of life. And second, that terrorist acts such as this impact more seriously on victims and necessarily

¹⁶¹⁶ Legal Representatives of Victims final trial brief, para. 117.

upon a wider group of people.¹⁶¹⁷ This massive crime ‘did not distinguish between politicians and civilians, between rich and poor, man or woman, Muslim or Christian, or target or passer-by’.¹⁶¹⁸ The gravity of the crime and the harms suffered define the gravity of the offences charged in the amended consolidated indictment, as the mode of commission of an offence and its impact upon victims are similarly components of the gravity of an offence.¹⁶¹⁹

862. These findings should be part of the judgment on conviction, as ‘the regime at this court, at this Tribunal, relating to the question of reparations’ entitles victims to receive a signed copy of the judgment to take elsewhere. Therefore, findings of fact on the gravity of the offences are important to victims. Since these findings could also be, in some cases, aggravating factors, the Trial Chamber should be wary not to engage in double counting. The Legal Representatives of Victims submitted that ‘double-counting would be to assess the gravity of the offence, for example, by reference to the fact that it involved the planting of a bomb and then further to aggravate the sentence by referring to the same circumstance’.¹⁶²⁰

863. The participating victims’ oral evidence can also assist the Trial Chamber in understanding the culture in Lebanon, how victims are perceived there and the societal customs that contributed to the hardship suffered by the participating victims and victims generally. In this respect, the Legal Representatives of Victims point to Professor Letschert’s evidence that many participating victims complained about the lack of psychological support in Lebanon and how some of them, especially male, could be stigmatised for seeking such assistance. The Legal Representatives of Victims cited ICC case law in support of relying on victims’ testimonies for understanding local customs.¹⁶²¹

864. Regarding Professor Letschert’s evidence, the Legal Representatives of Victims submit that ‘it should bear significant weight’ in the Trial Chamber’s evaluation as to the gravity of the

¹⁶¹⁷ Legal Representatives of Victims closing submissions, T. 14 September 2018, p. 83.

¹⁶¹⁸ Legal Representatives of Victims closing submissions, T. 14 September 2018, p. 103.

¹⁶¹⁹ Legal Representatives of Victims closing submissions, T. 14 September 2018, p. 83.

¹⁶²⁰ Legal Representatives of Victims closing submissions, T. 14 September 2018, p. 84. The Legal Representatives added, ‘So you aggravate the sentence twice.’ The Trial Chamber understands that the Legal Representatives of Victims intended to submit that the same factor cannot be used to aggravate the sentence twice: both to assess the gravity of the offence and as an aggravating circumstance. This is established in international criminal case law. *See for example, Dragomir Milošević Appeal Judgment*, para. 306; *Deronjić Judgment on sentencing appeal*, para. 106.

¹⁶²¹ Legal Representatives of Victims final trial brief, paras 117-118, referring to *Katanga Trial Judgment*, para. 66, which states ‘In-court testimonies allowed the Chamber to measure the very specific significance of local customs and the role of family relationships in Ituri’.

crimes and the harm suffered by the participating victims and the victims in general. Her evidence presents an overview of the victims' suffering, views and concerns without the need to call or present the evidence of all, and in particular of those who could not be heard due to time constraints or for any other reasons could not participate in the proceedings in a more direct manner.¹⁶²²

865. The Legal Representatives of Victims submit that, according to ICTY case law, summarising uncontroversial material—either in a document or through a witness—amounts to ‘a considerable saving of time’.¹⁶²³ Professor Letschert’s research, interviews and testimony are heavily and consistently corroborated by participating victims’ evidence, documents tendered by the Legal Representatives of Victims and the participating victims’ unsworn statements.¹⁶²⁴ Professor Letschert clearly set out the methodology. Although she did not testify as an expert under Rule 161, the Trial Chamber could assess her evidence based on similar criteria.¹⁶²⁵

866. Professor Letschert—echoing concerns expressed by the victims—suggested that the judgment should include a statement raising awareness on the consequences that negative media reporting may have on victims of a crime and, consequently, on the media’s responsibilities.¹⁶²⁶

867. Regarding the documents tendered under Rule 154, the Legal Representatives of Victims submit that they are reliable, have high probative value and cause no prejudicial effects on the Parties. The Trial Chamber should therefore accord them due weight.¹⁶²⁷ They are official documents issued by reliable sources including hospitals, clinics and the Lebanese Ministry of Interior and Municipalities. They can prove, or corroborate other evidence that proves, the identities of the participating victims. They also complement and corroborate their narratives. Additionally, they prove the different types of harm the participating victims suffered due to the

¹⁶²² Legal Representatives of Victims final trial brief, paras 123, 128-129.

¹⁶²³ Legal Representatives of Victims final trial brief, para. 127, referring to *Slobodan Milošević* Appeal decision on admissibility of evidence, para. 21.

¹⁶²⁴ Legal Representatives of Victims final trial brief, para. 126.

¹⁶²⁵ Legal Representatives of Victims final trial brief, para. 126. In the chapter on the assessment of the evidence (*see* chapter III ‘Assessment of evidence’, (D) (1) (c) (ii) ‘Expert witnesses’), the Trial Chamber has explained that, in assessing the evidence of expert witnesses, it considers factors such as the professional competence of each witness in his or her field of expertise, the material at his or her disposal, the methodologies used, the sources upon which the expert based his or her opinion and the extent to which the findings were consistent with other evidence in the case. It has found international criminal case law on the matter persuasive and has followed it. *Mladić* Trial Judgment, para. 5282; *Taylor* Trial Judgment, para. 208; *Lubanga* Trial Judgment, para. 112; *Nyiramasuhuko and others* Trial Judgment, para. 196.

¹⁶²⁷ Legal Representatives of Victims final trial brief, para. 134.

attack. They also illustrate their expectations regarding reparations, and add weight to the evidence regarding the gravity of the crimes. As none of the documents go to proving the acts and conduct of the Accused, the Trial Chamber can conclude that facts are proven beyond reasonable doubt when there is only one reasonable finding to be made.¹⁶²⁸

868. Many participating victims did not have the financial means to periodically have medical consultations since the attack and did not ‘keep a record of all their consultations’. As to documents attesting the harm suffered that are dated years after the attack, the Trial Chamber did not receive any contradicting documents proving that the harm did not result from the attack. To the contrary, the documents corroborate the *viva voce* evidence, witness statements and other documents. The documents were tendered to reduce the length of the victims’ case considerably and to avoid the risk of re-traumatising participating victims.¹⁶²⁹

869. In evaluating the harm suffered by the participating victims, ‘including the matter of lack of financial aid’, the Trial Chamber should also rely on the statements made by those participating victims—albeit not under oath—who were present in the courtroom as observers during the victims’ case.¹⁶³⁰ The Legal Representatives of Victims submit that those participating victims responded to several questions posed by the judges on the harm they suffered and the compensation they received or did not receive in Lebanon. They cite in support of their argument the ICC case law permitting victims to present views and concerns that do not have the status of evidence.¹⁶³¹ The Legal Representatives of Victims also rely on the ECCC rules¹⁶³² and case law, according to which civil parties only provide unsworn testimonies in court, which can however be relied on by a trial chamber in its evaluation of the gravity of the crimes and for its findings on the guilt of the accused.¹⁶³³

¹⁶²⁸ Legal Representatives of Victims final trial brief, para. 131, referring to *Katanga* Trial Judgment, para. 110; *Bemba* Trial Judgment, para. 246.

¹⁶²⁹ Legal Representatives of Victims final trial brief, paras 132-133.

¹⁶³⁰ Legal Representatives of Victims final trial brief, paras 135, 138.

¹⁶³¹ Legal Representatives of Victims final trial brief, para. 136, referring to *Bemba* decision on the Legal Representatives of Victims’ application to present evidence and the views and concerns of victims, para. 19; *Lubanga* decision allowing victims to express their views and concerns and to present evidence at trial, annex, para. 25.

¹⁶³² ECCC Internal Rules (rev. 9), as revised on 16 January 2015, Rule 23 (4) stating that ‘the Civil Party cannot be questioned as a simple witness in the same case and, subject to Rule 62 relating to Rogatory Letters, may only be interviewed under the same conditions as a Charged Person or Accused’.

¹⁶³³ Legal Representatives of Victims final trial brief, paras 137-138, referring to *Nuon Chea and Khieu Samphan* Case 002/01 Appeal Judgment, paras 312-313, 317-320.

870. Further, they submitted that the Trial Chamber heard evidence, and should make findings, on ‘the failures of the relevant Lebanese authorities’ to properly discharge their functions during the immediate aftermath of the attack and throughout their search for missing persons, including Mr Abdul Hamid Ghalayini and Mr Zahi Bou Rjeily.¹⁶³⁴ This caused additional distress and suffering to the victims.¹⁶³⁵

871. The Legal Representatives of Victims submit that not every finding in a judgment has to relate directly to the charges—like background, historical and political findings—and that criminal courts’ findings on shortcomings in investigations are not only proper but rather common. They refer to the example of cases of child abuse, in which judges make findings about inadequate social services or poor police work.¹⁶³⁶

872. Finally, the Trial Chamber cannot ignore the evidence heard on this from Ms Lama Ghalayini or the evidence about Mr Bou Rjeily’s death, which occurred on 15 February 2005 from suffocation, after he was buried under rubble for 15 hours.¹⁶³⁷ The Legal Representatives of Victims submit that, had he been discovered on 14 February, he might very well have lived.¹⁶³⁸

2. Prosecution submissions

873. According to the Prosecution, as the *viva voce* witnesses testified under oath, the witness statements and the documents were admitted into evidence under Rules 155, 158 and 154—respectively—and the Trial Chamber followed its consistent practice on the relevant opinion evidence, the Trial Chamber should assess the evidence presented by the Legal Representatives of Victims within the framework of the Statute and the Rules. Therefore, it should assess it in the same manner as all other admitted evidence.¹⁶³⁹

¹⁶³⁴ Legal Representatives of Victims final trial brief, para. 662 (*see also* paras 660, 668-670, 735).

¹⁶³⁵ Legal Representatives of Victims final trial brief, para. 670.

¹⁶³⁶ Legal Representatives of Victims closing submissions, T. 14 September 2018, p. 85.

¹⁶³⁷ Legal Representatives of Victims closing submissions, T. 14 September 2018, pp 85, 92.

¹⁶³⁸ Legal Representatives of Victims closing submissions, T. 14 September 2018, p. 92. *See also* Legal Representatives of Victims final trial brief, paras 96, 325-335, referring to the evidence of Mr Nazih Abu Rjeily, Mr Zahi Bou Rjeily’s brother (Nazih Abu Rjeily, T. 24 January 2014, pp 3-14). The Trial Chamber has found at para. 6285 of chapter XIII ‘Applicable law’, that the failure to recover someone who was buried under rubble alive is an example of a subsequent cause of a victim’s death that would not preclude the causal link with the Accused’s act under Article 204 of the Lebanese Criminal Code.

¹⁶³⁹ Prosecution final trial brief, para. 48.

3. Ayyash Defence submissions

874. The Ayyash Defence takes no position on the weight to be given to the Legal Representatives of Victims' evidence, apart from submitting that the Trial Chamber should give no weight to Professor Letschert's *viva voce* opinion evidence, her report¹⁶⁴⁰ and the slide presentation that she used in court.¹⁶⁴¹

875. Professor Letschert's evidence falls into two categories, namely, summarising materials from the victims and a study of the collective harm they suffered.¹⁶⁴² The summary of material already admitted through the victims provides no added value and no need has been established for such a summary.¹⁶⁴³ The Trial Chamber should instead look to the material admitted through the victims themselves.¹⁶⁴⁴

876. Professor Letschert's 'study of the collective harms suffered by victims is not relevant to the mandate of the Chamber at this stage of the trial to assess the guilt or innocence of the Accused'.¹⁶⁴⁵ Relying on Article 25 (3) of the Statute and Rule 86 (G), the Ayyash Defence submits that the Trial Chamber has no mandate to address these issues and to make any reparation orders.¹⁶⁴⁶ Such evidence is more appropriate in the determination of compensation or reparations before a national court, *after* the Trial Chamber renders a judgment and only if there are convictions.¹⁶⁴⁷

4. Merhi Defence submissions

877. The Merhi Defence submits that the participating victims have presented no evidence relating to the Accused's guilt or innocence. For this reason, their evidence has no impact on establishing the truth and can therefore only be considered as the expression of their observations.¹⁶⁴⁸ In support of this argument, the Merhi Defence relies on ICC case law stating

¹⁶⁴⁰ Exhibit 1V42 (Professor Letschert's report).

¹⁶⁴¹ Exhibit 1V44 (Professor Letschert's PowerPoint presentation).

¹⁶⁴⁵ Ayyash Defence final trial brief, para. 44; Ayyash Defence closing submissions, T. 17 September 2018, p. 10.

¹⁶⁴⁶ Ayyash Defence final trial brief, para. 44, also referring to the *Lubanga* Appeals Chamber decision on the principles and procedures to be applied to reparations, para. 65; Ayyash Defence closing submissions, T. 17 September 2018, p. 10.

¹⁶⁴⁷ Ayyash Defence final trial brief, para. 44; Ayyash Defence closing submissions, T. 17 September 2018, p. 10.

¹⁶⁴⁸ Merhi Defence final trial brief, para. 593.

that evidence ‘which does not pertain to the guilt or innocence of the accused would most likely be considered inadmissible and irrelevant’.¹⁶⁴⁹

878. Further, contrary to the Legal Representatives of Victims’ submissions, evidence on the nature and the extent of the harm suffered by the victims and the gravity of the crime should not be taken into account ‘in a judgment relating to the guilt or innocence of an accused’.¹⁶⁵⁰ In addition, the Trial Chamber should not try to quantify any possible damage or the victims’ harm. The appropriate forum to deal with the issue of compensation is a national jurisdiction or any other competent body, and not the Special Tribunal.¹⁶⁵¹

5. Sabra Defence submissions

879. The Sabra Defence submits that relying on the participating victims’ evidence must be limited to assessing their individual experiences and the personal harm suffered. It cannot be used to bolster the Prosecution’s evidence against the Accused.¹⁶⁵²

880. The Legal Representatives of Victims’ submissions on ‘the possibility of identification, and recommendation of appropriate forms of reparations’ are premature, exceed the scope of Article 25 and should only be considered upon conviction.¹⁶⁵³

6. Findings

(a) Scope of the evidence

881. The testimony and material presented either by or for the participating victims does not provide *direct* evidence of the individual criminal responsibility of any Accused.¹⁶⁵⁴ Collectively, however, it goes to proving the elements of the offences charged to the extent that harm to the

¹⁶⁴⁹ Merhi Defence final trial brief, para. 593, referring to the *Lubanga* decision on appeals regarding victims’ participation, para. 97. The Merhi Defence also relies on the *Katanga and Ngudjolo* decision dismissing Mr Katanga’s appeal regarding the modalities of victim participation at trial, which states, in paras 112-113, that evidence relating to the role of the accused can be included in the evidence deemed necessary for the determination of the truth and that, on this basis, victims may be allowed to participate in the proceedings by presenting evidence ‘pertaining to the guilt or innocence of the accused’.

¹⁶⁵⁰ Merhi Defence final trial brief, para. 594.

¹⁶⁵¹ Merhi Defence final trial brief, para. 594.

¹⁶⁵² Sabra Defence final trial brief, para. 162, referring to Decision on the Legal Representatives’ application to call evidence, paras 71-72, and *Lubanga* decision on appeals regarding victims’ participation, paras 3, 93-95.

¹⁶⁵³ Sabra Defence final trial brief, para. 163, referring to Legal Representatives of Victims final trial brief, Chapter 6 ‘Expectations expressed and reparations sought by the participating victims’.

¹⁶⁵⁴ Decision on the Legal Representatives’ application to call evidence, para. 97.

named victims of the attack, or death, is an element of proof in relation to the charges—for example, intentional homicide with premeditation by using explosive materials.¹⁶⁵⁵ In fact, the Prosecution itself called some of the participating victims to testify in its case.

882. The Trial Chamber however was mindful to ensure that the participating victims did not ‘double up’ on the Prosecution evidence or act as a second Prosecutor. In authorising the presentation of the evidence, the Trial Chamber considered that it concerned mostly uncontroversial matters, in the sense that the evidence or facts were not contested by the Defence.

883. The Parties had previously agreed that the explosion killed, in addition to Mr Hariri, the 21 people listed in schedule A to the amended consolidated indictment and injured the 226 listed in its schedule B.¹⁶⁵⁶ As the participating victims who were injured in the explosion are included among those in schedule B—except for one, Victim 73¹⁶⁵⁷—and the list of deceased in schedule A includes the relatives of the other participating victims, the deaths or general harm and or injury the participating victims’ evidence relates to, is uncontested by the Parties.¹⁶⁵⁸

884. The Prosecution, as a result of these agreements as to evidence between the Parties, submitted that certain documents that the Trial Chamber had decided to admit on the Prosecution’s application were duplicative of what was ‘already deemed to be proven’. Therefore, it did not produce them for formal admission into evidence.¹⁶⁵⁹ The Trial Chamber later admitted them into evidence upon the Legal Representatives of Victims’ request.¹⁶⁶⁰ The Trial Chamber has found under Rule 122—as noted above¹⁶⁶¹—that the interests of justice required a more complete presentation of those uncontested facts, in particular in the interests of the victims, to allow a more comprehensive narrative of the explosion and a more complete picture of the impact of the charged crimes upon individual victims.¹⁶⁶²

¹⁶⁵⁵ See para. 6274.

¹⁶⁵⁶ Second decision on agreed facts (Merhi).

¹⁶⁵⁷ Decision admitting documentary evidence on the Legal Representatives of Victims’ application, para. 66; Decision admitting into evidence statements of participating victims, para. 17, fn. 24.

¹⁶⁵⁸ One participating victim, Mr Mahmoud Wazzan, is not a relative to the immediate victims of the explosion nor was he injured in it. Mr Wazzan was the owner of a service company which had to vacate the premises it used due to the damages caused to it by the explosion. He claims to have suffered material damages. Legal Representatives of Victims final trial brief, paras 269-270.

¹⁶⁵⁹ Evidentiary matters, T. 26 June 2014, p. 31.

¹⁶⁶⁰ Decision admitting documentary evidence on the Legal Representatives of Victims’ application, paras 42-43.

¹⁶⁶¹ See para. 834.

¹⁶⁶² Decision on the Legal Representatives’ application to call evidence, paras 78-79.

885. The focus of the victims' case in these proceedings consists in identifying the victims and having the harm suffered recorded and thus recognised. Regarding the Merhi Defence's submission that the participating victims' evidence is only the expression of their observations and would be inadmissible or irrelevant according to ICC case law¹⁶⁶³—as it does not relate 'to the guilt or innocence' of the Accused—as outlined above,¹⁶⁶⁴ at the ICC the victims' entitlement to give or call evidence is neither in the Rome Statute nor the ICC Rules but rather is only recognised in the case law.¹⁶⁶⁵ Further, the presentation of evidence by the participating victims at the ICC is conditional upon the victims 'making a real contribution to the search for the truth', based on a provision that is not contained in the Special Tribunal's Statute or Rules.¹⁶⁶⁶

886. Besides, the Trial Chamber is only concerned with whether the Accused are guilty beyond reasonable doubt, under Article 16 (3) (c) of the Statute, and not their innocence. Otherwise this would reverse the onus, as they are presumed innocent until proven guilty.¹⁶⁶⁷ In this respect, the Merhi Defence submission is legally incorrect.

887. In authorising the victims' case, the Trial Chamber relied on reading Rule 150 (D) and Articles 17 and 25 together. Under Rule 150 (D), participating victims may be permitted to give evidence if 'the interests of justice so require'. The submission of evidence at trial may be a means for the participating victims to express their 'views and concerns', to which they have a qualified statutory right, under Article 17 of the Statute. Article 25 explicitly envisages the identification of victims and the harm they suffered in the judgment. Therefore, recognising and adequately recording their harm may make victim participation meaningful, and the interests of justice may therefore permit hearing evidence for this purpose.¹⁶⁶⁸ The Trial Chamber has also decided that material is admissible not only when relevant to matters that the Trial Chamber has to consider in

¹⁶⁶³ Merhi Defence final trial brief, para. 593, referring to the *Lubanga* decision on appeals regarding victims' participation, para. 97.

¹⁶⁶⁴ See above, at para. 816.

¹⁶⁶⁵ Decision on the Legal Representatives' application to call evidence, para. 12, referring to *Lubanga* decision on appeals regarding victims' participation, paras 97-99.

¹⁶⁶⁶ Article 69 (3) of the Rome Statute.

¹⁶⁶⁷ Under Article 16 (3) (b) of the Statute, the onus is on the Prosecutor to prove the guilt of the Accused. An Accused is presumed innocent until a trial chamber finds that their guilt has been established beyond reasonable doubt.

¹⁶⁶⁸ Decision on the Legal Representatives' application to call evidence, paras 14-15, 24.

determining the charges against the Accused, but also in evaluating the participating victims' views and concerns.¹⁶⁶⁹

888. Additionally, the Merhi Defence never objected to the Trial Chamber receiving the *viva voce* evidence presented by the Legal Representatives of Victims. The Merhi Defence did not object either to the Legal Representatives of Victims' application for admission into evidence of 24 witness statements under Rules 155 and 158. It opposed only the admission into evidence of 13 out of the 181 documents which the Legal Representatives of Victims tendered in a single exhibit.¹⁶⁷⁰

(b) Identifying the victims and recording their harm

889. The Trial Chamber, as the Merhi Defence correctly submits, has no role in quantifying the harm suffered by any victim—it has several times noted that the Special Tribunal cannot grant reparations¹⁶⁷¹—but this is not what the Legal Representatives of Victims ask from the Trial Chamber. The Trial Chamber understands that the Legal Representatives of Victims, when seeking that the Trial Chamber record the *extent* of the victims' suffering, refer to the scope, breadth or gravity of this harm, rather than to any estimate or pecuniary measure. That would of course form the basis of an assessment of compensation or reparations in a national system. But this is not the Trial Chamber's role.

890. Under Rule 86 (G):

any person identified in a final judgement as a victim, or otherwise considering himself or herself victim, who has suffered harm as a result of the commission of crimes by an accused convicted by the Tribunal may request from the Registrar a certified copy of the judgement for the purpose of exercising his or her rights under national or other relevant law, as provided by Article 25 of the Statute.

¹⁶⁶⁹ Decision admitting into evidence statements of participating victims, para. 16.

¹⁶⁷⁰ The Merhi Defence submitted that the 13 documents were not relevant and or probative and therefore did not meet the requirements set out in Rule 149 (C). Under Rule 149 (C), a 'Chamber may admit any relevant evidence which it deems to have probative value'. Further, while the Merhi Defence did not formally object to the admission of invoices, it submitted that this did not amount to agreeing with possible claims for financial compensation for damages or the amounts paid by certain victims. Decision admitting documentary evidence on the Legal Representatives of Victims' application, para. 5.

¹⁶⁷¹ Decision on the Legal Representatives' application to call evidence, para. 6; Decision admitting into evidence statements of participating victims, para. 19.

891. Article 25 explicitly envisages the identification, by the Special Tribunal, of the victims who have suffered harm—from which they may later bring an action for compensation before a national court or other competent body.

892. The Trial Chamber's role, therefore, includes identifying the victims and considering any harm suffered. In granting the 'participating victim' status, the Pre-Trial Judge applied a *prima facie*¹⁶⁷² standard of proof. He assessed whether there were sufficient *prima facie* credible grounds that the applicants suffered harm and whether the particular circumstances of the harm suffered corresponded *prima facie* to those of the attack on 14 February 2005.¹⁶⁷³

893. Under Article 25, the Trial Chamber may now identify, based on the evidence it heard or received, the 'victims' who have suffered harm as a result of the attack and within this can determine whether the individuals who were granted participating victim status are victims of the attack.

894. The Trial Chamber will also, where appropriate, make findings about harm caused to Prosecution witnesses who are not participating victims. Article 25 of the Statute allows the Trial Chamber—for the purpose of facilitating any future claim for compensation before any competent authority in Lebanon—to 'identify victims who have suffered harm' as a result of the explosion of 14 February 2005. There is nothing in this provision or elsewhere in the Special Tribunal's legal framework that limits this identification to victims formally admitted as participating in the proceedings.

895. With regard to the applicable standard of proof, the Special Tribunal's Statute and Rules do not contain any explicit provision or guidance. Under international criminal case law, ICC trial chambers apply a *prima facie* standard for victims' participation at trial,¹⁶⁷⁴ and do not further consider, in their judgments, the victims' status or identification unless a chamber 'concludes that its original *prima facie* evaluation was incorrect' and amends their previous orders by withdrawing

¹⁶⁷² An ICTY judge, Judge Sidhwa, applying the '*prima facie* case test' in confirming an indictment, commented that 'in Latin the expression "*prima facie*" means at first sight, or on the face of it, or on first impression', *Rajić* Confirmation of the Indictment, p. 2. Under Rule 86 (B), governing the granting of victim participation status to applicant victims by the Pre-Trial Judge, 'an applicant must provide *prima facie* evidence that he is a victim as defined in Rule 2'.

¹⁶⁷³ Pre-Trial Judge decision on victims' participation in the proceedings, paras 1-2, 51, 61-62.

¹⁶⁷⁴ *Al Mahdi* reparations order, para. 39; *Al Mahdi* decision on victim participation, paras 17-22.

the right of any victim to participate in the proceedings.¹⁶⁷⁵ After a judgment of conviction, a specific phase may be devoted, at the ICC, to identifying victims for the purposes of reparations. While the Prosecution must establish the material facts ‘beyond reasonable doubt’ during the trial, the standard of proof applicable to reparation proceedings—also in light of the difficulties victims may face in obtaining evidence in support of their claim—is on a ‘balance of probabilities’.¹⁶⁷⁶

896. The Trial Chamber cannot order reparations but may identify victims, which may assist them in claiming compensation before a national court or another competent body. It could be reasoned that the Trial Chamber, while applying the standard of proof beyond reasonable doubt to establish the facts forming the elements of the crimes—including the death of the *direct* victims of the crimes of intentional homicide—could apply the preponderance of evidence or balance of probabilities standard to its findings on the harm suffered by victims in instances when it relates to facts which are not material to the elements of the pleaded crimes.¹⁶⁷⁷

897. The Trial Chamber however—as explained below at paragraphs 1455 and 1495—is satisfied beyond reasonable doubt that direct and indirect victims suffered harm. Further, consistent with the Pre-Trial Judge’s decisions and the case law of other international criminal

¹⁶⁷⁵ On this basis, in the *Lubanga* Trial Judgment, the Trial Chamber by majority withdrew the right to participate in the proceedings of certain victims who had testified as Prosecution witnesses. Judge Odio Benito interestingly commented that ‘it is unfair and discriminatory to impose upon individuals with dual status a higher evidentiary threshold (beyond reasonable doubt) as regards their victim status, while all other victims participating in the proceedings have not been subject to thorough examination by the parties and the Chamber, as these young persons have been. When reparations are evaluated, it will be up to the Trial Chamber to determine the criteria utilised in determining their final status. Consequently, I consider they should maintain their status as victims for the remaining proceedings in this trial.’ *Lubanga* Trial Judgment, paras 484, 502, 1362-1363; *Lubanga* Trial Judgment, Separate and dissenting opinion of Judge Odio Benito, para. 35.

¹⁶⁷⁶ *Katanga* order for reparations, paras 45-51; *Lubanga* Appeals Chamber decision on the principles and procedures to be applied to reparations, paras 82-84; *Lubanga* decision on the principles and procedures to be applied to reparations, paras 251-254; *Al Mahdi* reparations order, paras 42-44.

¹⁶⁷⁷ According to international criminal case law, the preponderance of evidence standard—also known as the balance of probabilities—requires that a court is satisfied that what is asserted is, more probably than not, true. While it does not require the same degree of conviction as the beyond reasonable doubt standard applicable to the facts on which a finding of guilt is based, it nonetheless still requires sufficiently convincing evidence to satisfy a court that the matter is proven. This standard allows judges to take into account the nature of the matter to be proven and the consequences flowing from the particular finding of fact, when deciding whether or not they are sufficiently convinced as to the existence of the fact at issue. It has been applied in assessing whether an accused is fit to stand trial or whether mitigating factors have been established for sentencing. *Kajelijeli* Appeal Judgment, para. 294; *Muhimana* Appeal Judgment, para. 231; *Strugar* Appeal Judgment, para. 56; *Popović and others* Appeal decision denying request to terminate appellate proceedings, para. 21; *Kvočka and others* decision on review of Registrar’s withdrawal of legal aid, para. 12; *Strugar* decision dismissing Defence motion to terminate proceedings, para. 38.

courts and Lebanese courts, the psychological/mental harm suffered by (close) family members can be presumed in the case of the death of the direct victims.¹⁶⁷⁸

898. As to the Legal Representatives of Victims' request that the judgment record that participating victims are victims of the explosion on 14 February 2005, including their suffering, 'irrespective of findings in relation to the individual Accused',¹⁶⁷⁹ the Trial Chamber notes that the victims' personal interest in compensation, according to the Statute—as at the ICC and at the Kosovo Specialist Chambers—is conviction-based. Article 25 envisages the identification of the victims by a judgment finding an Accused guilty of the crimes that have caused them harm.¹⁶⁸⁰

899. Article 25, however, is relevant to define the compensation regime for the victims and does not limit, of itself, the scope of the Trial Chamber's findings, based on the evidence it heard and received. Even in the absence of a conviction, the Trial Chamber may identify the people who were victims of the attack on 14 February 2005. It must do this for the direct victims where their death or injury must be proved beyond reasonable doubt. In this case, the Trial Chamber has found the deaths and injuries proven after the Parties agreed to the names of those deceased or injured in the explosion, as listed in the schedules to the amended consolidated indictment.

900. The participating victims who observed the proceedings in the courtroom during the victims' case provided additional information when answering questions posed by the Trial Chamber Judges. The Trial Chamber does not find convincing the Legal Representatives of Victims' reliance on the ECCC's rules and case law to submit that the Trial Chamber should also rely on theses 'unsworn statements' to assess the harm suffered by the victims. The ECCC has a different legal framework, where victims are civil parties to the proceedings.

901. The Legal Representatives of Victims' reliance on ICC case law—to submit that those 'unsworn statements' represent views and concerns that do not have the status of evidence—is more persuasive. The ICC case law distinguishes between the presentation of evidence by victims and the expression of their 'views and concerns in person', which are governed by different

¹⁶⁷⁸ Pre-Trial Judge decision on victims' participation in the proceedings, para. 84, referring to *Duch* Appeal Judgment, para. 562 and *Kony and others* Appeals Chamber decision on victims' participation, para. 36. *See also*, *Katanga* order for reparations, paras 57, 61-62, 121-122; *Murr* Judgment, p. 60 (with regard to moral damages awarded due to the pain suffered by close relatives of persons killed in the attack).

¹⁶⁷⁹ Legal Representatives of Victims final trial brief, para. 748.

¹⁶⁸⁰ Statute, Art. 25 (1).

requirements. Expressing views and concerns in person is equivalent to presenting submissions and does not form part of the trial evidence.¹⁶⁸¹ The Trial Chamber, in authorising the presentation of the victims' case, has not followed the ICC case law in distinguishing between these two forms of participation. It has already outlined the differences from the ICC statutory framework and has allowed the participating victims to present evidence when the interests of justice so required—reading this principle jointly with Articles 17 and 25.

902. However, in the specific circumstances—as the participating victims who provided additional information in court were not previously authorised to provide evidence nor took any oath—the Trial Chamber will consider their statements in reply to its questions as views and concerns given in person. While not evidence, the Trial Chamber nonetheless will consider them in its overall assessment of the harm suffered by the victims. Further, there was no objection to this course, it will cause no prejudice to the Accused and no counsel of an Accused cross-examined any participating victim.

(c) Gravity of the crimes

903. The Legal Representatives of Victims submit that the participating victims' evidence can assist the Trial Chamber in assessing the gravity of the crimes, that the harm suffered by the victims is a component of the gravity of an offence and that, due to the Statute's reparation regime, findings on this gravity—including as resulting from the nature and modalities of the act of terrorism—should be a part of the judgment on conviction.¹⁶⁸² The Merhi Defence responds that evidence on the nature and the extent of the harms suffered by the victims and the gravity of the crime should not be taken into account in a judgment relating to the guilt of an accused.¹⁶⁸³

¹⁶⁸¹ ICC Trial Chambers authorise this form of participation in the alternative to the presentation of evidence, when victims fail to reach the higher threshold to testify, requiring them to 'make a genuine contribution to the truth'. *Ntaganda* decision on the presentation of victims' evidence, views and concerns, paras 10, 22, 25, 28, 31, 49; *Bemba* decision on the Legal Representatives of Victims' application to present evidence and the views and concerns of victims, paras 19-20, 23 (ii), 33.

¹⁶⁸² Legal Representatives of Victims closing submissions, T. 14 September 2018, pp 83-84; Legal Representatives of Victims final trial brief, para. 117.

¹⁶⁸³ Merhi Defence final trial brief, para. 594.

904. The Trial Chamber considers that the gravity of the offence is one of the factors that a trial chamber must take into account in sentencing.¹⁶⁸⁴ Under Article 24 (2) of the Statute, ‘in imposing sentence, the Trial Chamber should take into account such factors as the gravity of the offence and the individual circumstances of the convicted person’. A similar provision was in the ICTR and ICTY Statutes and appears in the IRMCT and Rome Statutes.¹⁶⁸⁵

905. The gravity of the offence includes the inherent gravity of the crime and the Accused’s criminal conduct—their form and degree of participation—and also encompasses the impact of the crimes on the victims.¹⁶⁸⁶ In particular, in assessing the gravity of the crimes, ICTY trial chambers have taken into account the number of victims, the effect of the crimes on broader targeted groups and the suffering inflicted on the victims.¹⁶⁸⁷ According to the ICTY Appeals Chamber, factors relevant to sentencing include both the consequences of the crimes for the victims who were directly injured and the effects on the immediate victims’ relatives.¹⁶⁸⁸ ICC Trial Chambers too have considered, in sentencing, the gravity of the crimes with regard to the extent of the damage caused and in particular ‘the harm caused to the victims and their families’.¹⁶⁸⁹ The actual infliction of terror on the civilian population has also been taken into account in assessing the gravity of a crime.¹⁶⁹⁰

¹⁶⁸⁴ According to ICTY case law, gravity is the primary factor or ‘litmus test’ in determining the appropriate sentence. *Galić* Appeal Judgment, para. 392; *Delalić and others (Čelebići)* Appeal Judgment, para. 731; *Aleksovski* Appeal Judgment, para. 182; *Blaškić* Appeal Judgment, para. 683.

¹⁶⁸⁵ These are, respectively, Article 23 (2), Article 24 (2), Article 22 (3) and Article 78(1) in the ICTR, ICTY, IRMCT and Rome Statutes.

¹⁶⁸⁶ *Blaškić* Appeal Judgment, para. 683; *Vasiljević* Appeal Judgment, para. 182; *Furundžija* Appeal Judgment, para. 249; *Galić* Appeal Judgment, para. 410; *Galić* Trial Judgment, para. 758.

¹⁶⁸⁷ *Galić* Appeal Judgment, paras 410, 446, 454; *Galić* Trial Judgment, paras 758, 764.

¹⁶⁸⁸ *Blaškić* Appeal Judgment, para. 683 (‘the effects of the crime on relatives of the immediate victims may be considered as relevant to the culpability of the offender and in determining a sentence’); *Krnjelac* Appeal Judgment, para. 260 (‘the Appeals Chamber considers that, even where no blood relationships have been established, a trier of fact would be right to presume that the accused knew that his victim did not live cut off from the world but had established bonds with others’).

¹⁶⁸⁹ This factor is explicitly envisaged in Rule 145 of the ICC Rules of Procedure and Evidence, ‘Determination of sentence’, among those to be given consideration in determining the sentence. *Lubanga* decision on sentence, para. 44.

¹⁶⁹⁰ *Galić* Trial Judgment, para. 764; *Galić* Appeal Judgment, para. 449.

906. The Special Tribunal's Rules provide for bifurcated trial proceedings,¹⁶⁹¹ as at the ICC. One is designed to find whether the guilt of the Accused is established beyond reasonable doubt, and the other is for sentencing, if the Accused's guilt has been established.¹⁶⁹²

907. Under Rule 87 (C), a victim participating in the proceedings may be heard by the Trial Chamber on the personal impact of the crimes or file written submissions on the matter at the sentencing stage, upon the Trial Chamber's authorisation. The Trial Chamber, in authorising the presentation of evidence by the Legal Representatives of Victims, considered that the victims' evidence during sentencing proceedings goes to the Trial Chamber's consideration of their suffering for determining the gravity of the crime, or as an aggravating circumstance on sentence. The Trial Chamber also considered that this did not preclude it from allowing the victims to be heard, in relation to the harm they suffered, at an earlier stage of the proceedings, while ensuring that the issues and facts are not unnecessarily repeated.¹⁶⁹³

908. As argued by the Legal Representatives of Victims,¹⁶⁹⁴ although they do not rely on any authority, the participating victims' evidence may assist the Trial Chamber in assessing the gravity of the crimes—and their harm is a relevant factor to this determination. The Trial Chamber finds the relevant international criminal case law reviewed above persuasive. The question here, however, is whether the Trial Chamber may make findings on the gravity of the offences in this judgment, given the Rules provide for a distinct sentencing phase for this purpose, subsequent to a conviction.

909. In support of their request that the Trial Chamber make findings on the gravity of the crime in the judgment, the Legal Representatives of Victims submit that this is important to the victims as they are entitled to receive a signed copy of the judgment and take it to a competent authority for claiming 'reparations'.¹⁶⁹⁵ The Legal Representatives of Victims do not articulate or explain in

¹⁶⁹¹ Rule 171, 'Sentencing Procedure'. Its paragraph A provides that, if the Trial Chamber finds the accused guilty of a crime, the Prosecutor and the Defence may submit any relevant information that may assist the Trial Chamber in determining an appropriate sentence'. *See also* Rome Statute, Art. 76 (1).

¹⁶⁹² Rules of Procedure and Evidence —Tribunal's President's Explanatory Memorandum (as of 12 April 2012), paras 45-46. In the original ICTY and ICTR frameworks, sentencing was a distinct phase, but later the two sets of proceedings were merged.

¹⁶⁹³ Decision on the Legal Representatives' application to call evidence, para. 27, referring to *Lubanga* decision allowing victims to express their views and concerns and to present evidence at trial, para. 26.

¹⁶⁹⁴ Legal Representatives of Victims closing submissions, T. 14 September 2018, pp 83-84.

¹⁶⁹⁵ Legal Representatives of Victims closing submissions, T. 14 September 2018, p. 84.

more detail why findings on the gravity of the crime would be important in this context and do not point to any relevant provision when describing the Lebanese law applicable in a civil action for damages suffered as a result of a crime. They submit that, according to Article 134 of the Lebanese Code of Obligations and Contracts—to which reparations are subject—reparations due to the victim of an offence should correspond to the totality of the harm they have suffered.¹⁶⁹⁶ Maybe, although it is not expressly stated, they assume that the graver the crime, the greater the possible compensation.

910. According to the ICC case law on the principles and procedures to be applied to reparations,¹⁶⁹⁷ the scope of a convicted person's liability for reparations must be proportionate to the harm caused and, among other things, their participation in the commission of the crime. Moreover, ICC reparation orders refer to the relevant Trial Chamber's decisions on sentence and their findings on the gravity of the crimes.¹⁶⁹⁸ Further, the UN 'Basic principles and guidelines on the right to a remedy and reparation for victims of gross violations of international human rights law and serious violations of international humanitarian law' provide that reparation must be proportional to the *gravity of the violation* and the harm suffered.¹⁶⁹⁹

911. The Trial Chamber will assess the evidence presented by and for the participating victims and make the relevant findings on this and, consequently, on the impact of the crimes on them.¹⁷⁰⁰ However, making findings on the gravity of the crimes at this stage would require consideration of other factors—on which the Parties may wish to present relevant submissions or evidence—and this assessment belongs, according to the Statute, to a different phase of the trial proceedings. Further, there is no gravity requirement in respect of the elements of any offence charged or of any offence within the jurisdiction of the Special Tribunal.

912. Nevertheless, there is no doubt that terrorism is one of the most serious and heinous crimes and that the attack on 14 February 2005 was very grave. As the Appeals Chamber noted in its first interlocutory decision on the applicable law, the UN Security Council has defined terrorism as

¹⁶⁹⁶ Legal Representatives of Victims final trial brief, paras 679-690.

¹⁶⁹⁷ As noted above, the ICC can itself grant reparations to victims.

¹⁶⁹⁸ *Lubanga* Appeals Chamber decision on the principles and procedures to be applied to reparations, para. 118; *Katanga* order for reparations, paras 252, 259-260, 264.

¹⁶⁹⁹ UN Doc. A/RES/60/147/Annex, principle IX, para. 15.

¹⁷⁰⁰ As noted above at para. 907, with regard to Rule 87 (C), the Trial Chamber will ensure that the related issues and facts are not repeated at the sentencing stage.

‘one of the most serious threats to peace and security’ and has considered the ‘terrorist attacks’ under the Tribunal’s jurisdiction as ‘particularly grave acts of terrorism’.¹⁷⁰¹ The Trial Chamber has found, in chapter XIV ‘Legal findings on elements of the crimes and Individual criminal responsibility’, (A) (1) (a) ‘The crime’, that the explosion that targeted Mr Hariri, a leading political figure, was a terrorist act. It also found that it used 2,500 to 3,000 kilograms of TNT equivalent explosive,¹⁷⁰² which was detonated in a busy public street, in the middle of the day and caused an indiscriminate loss of life, destruction and was designed to and in fact inflicted terror.

913. As to the Legal Representatives of Victims’ submission that the Trial Chamber should not engage in double counting because findings such as those on the impact of the crimes on the victims can also be aggravating factors,¹⁷⁰³ the Trial Chamber agrees with international criminal case law that factors that a Trial Chamber takes into account for the gravity of the crime cannot additionally be taken into account as separate aggravating circumstances.¹⁷⁰⁴ However, these submissions are relevant to calculating a sentence, which is not what the Trial Chamber will do in this judgment under Rule 168.

914. In assessing the impact of the crimes on the victims, the Trial Chamber has also considered Professor Letschert’s evidence. Contrary to the Ayyash Defence’s submission, her evidence—summarising views and concerns from the participating victims—adds to the participating victims’ evidence. Whereas only a limited number of participating victims provided evidence, the Trial Chamber is satisfied that Professor Letschert’s evidence, based on her interviews, reflects the views and concerns of most of them. Moreover, counsel for Mr Ayyash chose not to cross-examine her and did not challenge her evidence on this point.

915. The Ayyash Defence’s submission that Professor Letschert’s evidence on the victims’ ‘collective harm’ is only relevant to determining compensation is also unconvincing. The 1985 UN Declaration of Basic Principles of Justice for Victims of Crime and Abuse of Power defines victims as ‘persons who individually or *collectively* have suffered harm’¹⁷⁰⁵—a definition that Professor

¹⁷⁰¹ First interlocutory decision on applicable law, paras 104, 110 (referring to UN Doc. S/RES/1566 (2004)), 124.

¹⁷⁰² See para. 1250.

¹⁷⁰³ Legal Representatives of Victims closing submissions, T. 14 September 2018, p. 84.

¹⁷⁰⁴ See for example, *Deronjić* Judgment on sentencing appeal, para. 106; *Dragomir Milošević* Appeal Judgment, para. 306.

¹⁷⁰⁵ UN Doc. A/RES/40/34/Annex (1985), para. 1 (emphasis added).

Letschert refers to in her evidence. The ICC Appeals Chamber has noted that harm can ‘be both personal and collective in nature’.¹⁷⁰⁶ The Trial Chamber agrees: harm can be both personal to an individual victim and collective, as it was suffered across a multitude of people or a community. The specific nature of the crime is relevant to this result. An act of terrorism is intended to cause a state of terror and can therefore affect a large number of people.¹⁷⁰⁷ By its definition, that is its objective.

916. While Professor Letschert does not use the expression ‘collective harm’, she explains that acts of terrorism spread outwards affecting primary, secondary and tertiary victims, in other words the society at large.¹⁷⁰⁸ She pointed to the views of certain participating victims that the attack affected the entire country and that losing Mr Hariri—a ‘prime minister that could have guaranteed a stable Lebanon’—amounted to losing ‘a dream’ relating to the country.¹⁷⁰⁹ The attack affected a cross-section of the population.¹⁷¹⁰ The Legal Representatives of Victims point to the feeling of insecurity and fear shared by participating victims and submit that the participating victims’ *viva voce* evidence too characterises the impact of the bombing upon themselves, the other participating victims and the ‘wider societal, cultural and economic impact of the events upon the Lebanese people’.¹⁷¹¹ Professor Letschert also explains—as described in more detail below¹⁷¹²—common or similar psychological consequences to those who survived the bombing, including having a lasting fear of further terrorist attacks.¹⁷¹³

917. To the extent that the Ayyash Defence, with ‘collective harm’, means to refer to Professor Letschert’s evidence either on the harm to ‘tertiary victims’, as society at large, or on the harm that several victims collectively suffered,¹⁷¹⁴ the Trial Chamber finds that this evidence is relevant to the assessment of the impact of the crimes on victims and, later, on their gravity. As noted above, according to international criminal case law, the number of victims, the effects of the crimes on

¹⁷⁰⁶ *Lubanga* decision on appeals regarding victims’ participation, para. 35.

¹⁷¹⁴ This evidence will be illustrated, in more detail, in chapter VI ‘Explosion on 14 February 2005’, (G) ‘Victim harm’.

broader targeted groups and the actual infliction of terror on the civilian population are factors that a trial chamber can take into account in assessing the gravity of a crime.¹⁷¹⁵

918. The Defence may have confused the issue of ‘collective harm’ with that of the ‘collective measures’ that the Legal Representatives of Victims ask the Trial Chamber to recommend as appropriate forms of reparation.¹⁷¹⁶ Reparations can either be individual or collective and, according to ICC case law, ‘collective reparations’ to a community may be appropriate to repair harm caused to a community.¹⁷¹⁷ Despite the intertwining between the two issues—collective harm and collective reparations—any evidence that victims suffered harm collectively or that harm was done to a collective/community, will be considered by the Trial Chamber in assessing the impact of crimes on victims and later, if need be, the gravity of the crimes. The distinct request that the Trial Chamber issue recommendations on reparations is considered in more detail below.¹⁷¹⁸

(d) Broadening the narrative—the scope of the Trial Chamber’s findings

919. As submitted by the Legal Representatives of Victims, the victims’ case broadened the Prosecution’s narrative. In particular, on the explosion and its aftermath, the Trial Chamber heard the accounts of people, victims, who were not in the convoy but in the proximity of the explosion, like Ms Khallouf and Victim 16. The Trial Chamber also heard evidence on the search for missing persons and rescue efforts after the attack. Certain evidence also goes—according to the Legal Representatives of Victims—to ‘how the victims were treated’ or ‘perceived’ in Lebanon. Based on the victims’ concerns, Professor Letschert invited the Trial Chamber to raise awareness of the consequences that negative media reporting may have on victims of crimes, and media’s responsibilities by adding ‘a statement within the judgement that would say that victims have expressed concern relating to negative media reporting and what that does with them’.¹⁷¹⁹

920. ‘The scope of a trial is fixed by the indictment’,¹⁷²⁰ and by the statutory provisions on the Tribunal’s jurisdiction. According to international criminal case law, in conformity with human

¹⁷¹⁵ At para. 905.

¹⁷¹⁷ *Al Mahdi* reparations order, paras 45, 49, 53-54, 59.

¹⁷¹⁸ *See below*, sub-section (H) ‘Repairing the harm—sought recommendations for appropriate forms of reparations.

¹⁷¹⁹ Legal Representatives of Victims final trial brief, paras 695-697, 729-730.

¹⁷²⁰ Separate opinion of Judge Shahabuddeen in *Gacumbitsi* Appeal Judgment, para. 63.

rights law,¹⁷²¹ a Trial Chamber is required to provide clear, reasoned findings of those facts which are essential to its determinations either to convict or acquit an individual, on the basis of the pleaded charges.¹⁷²²

921. By virtue of the victims' participation at the Special Tribunal, however—which some other international criminal tribunals did not allow—and the relevant statutory provisions, the scope of the findings that a Trial Chamber may, or should, enter is broader. As noted above, the Trial Chamber, under Article 25, will also make findings relevant to the identification of the victims of the crimes who have suffered harm.

922. Accordingly, to the extent that any evidence relates to, or demonstrates, any harm suffered by the victims—or shows any fact that may have contributed to exacerbate such harm—the Trial Chamber will consider it and make any relevant findings.

923. The Legal Representatives of Victims made no specific reference in their submissions on the propriety and frequency of criminal courts making findings on the shortcomings of investigations. However, precedent exists for this in international criminal case law, as international trial chambers have been critical of the manner in which investigations or parts of them were conducted. The Trial Chamber considers therefore that making such a finding in the circumstances is appropriate.

924. In the ICC's *Katanga* trial judgment, for example, the Trial Chamber noted the absence of Prosecution forensic investigation missions close to the date of the events and that 'before the opening of the trial, it would have been desirable for the Prosecution to visit the places where the Accused persons lived and where preparations for the attack on Bogoro were allegedly made', including to allow situating and determining the locations of certain key places. The ICC Trial Chamber also noted that proper knowledge of the topography of the region would have been

¹⁷²¹ As noted by the ICTY Appeals Chamber, the case law that has developed under the European Convention on Human Rights establishes that a reasoned opinion is a component of the fair hearing requirement, but that 'the extent to which this duty ... applies may vary according to the nature of the decision' and 'can only be determined in the light of the circumstances of the case'. The European Court of Human Rights has held that a 'tribunal is not obliged to give a detailed answer to every argument'. *Furundžija* Appeal Judgment, para. 69, citing *Ruiz Torija* Judgment, para. 29; *Van De Hurk* Judgment, para. 61.

¹⁷²² Article 23 of the Statute provides that the Trial Chamber's judgment 'shall be accompanied by a reasoned opinion in writing'. *Hadžihasanović and Kubura* Appeal Judgment, para. 13; *Kvočka and others* Appeal Judgment, para. 23; *Renzaho* Appeal Judgment, para. 320.

helpful in eliciting useful clarification from several witnesses. It found that it would have been desirable for the Prosecution to have called certain military leaders and taken a statement from Mr Katanga at the investigating stage. This would have allowed the Trial Chamber to compare his testimony at the end of trial, after he had heard all the witnesses, with any previous statement. The Trial Chamber also noted that the Prosecution should have thoroughly reviewed the civil status and educational background of its witnesses and pursued certain specific issues in its investigation.¹⁷²³

G. Participating Victims' expectations—establishing the truth

1. Legal Representatives of Victims' submissions

925. The Legal Representatives of Victims submit that victims expect and are entitled to the most detailed examination of the chain of responsibility possible and request the Trial Chamber to identify all persons and or organisations responsible for the attack.¹⁷²⁴ This right is not inconsistent with the Accused's right to a reasoned opinion and can be derived from the right to compensation consistent with Article 25.¹⁷²⁵ The Prosecution is focused on proving the guilt of the Accused, but the victims' interest goes beyond that.¹⁷²⁶

926. They submit that, in addition to the four Accused and Mr Badreddine, 'a larger scale of network and organisation' was responsible for the attack on 14 February 2005. It was not the work of a simple criminal gang but of a political organisation which killed for its political belief.¹⁷²⁷ According to the Legal Representatives of Victims, the political organisation is Hezbollah, very probably acting as the agent of the Syrian regime.¹⁷²⁸

927. The reason behind the Special Tribunal's creation was that '*all those responsible* for the terrorist bombing that killed former Lebanese Prime Minister Rafiq Hariri and others be identified and brought to justice'.¹⁷²⁹ Only to determine the issues necessary to find the case proved against the four named Accused would be 'unforgivable', especially to the victims. They want to know

¹⁷²³ *Katanga* Trial Judgment, paras 59-67.

¹⁷²⁹ Legal Representatives of Victims final trial brief, para. 658 (emphasis omitted).

why they were injured or their loved ones were killed.¹⁷³⁰ The judgment must be comprehensive, say the whole truth and embrace the circumstances, ‘the whys and the wherefores’.¹⁷³¹ Lebanese people wait to hear this judgment to break the vicious circle of silence and indifference.¹⁷³² Regardless of whether some findings are necessary for the conviction of the Accused, specific factual and contextual findings are necessary and intrinsic to justice and to the truth.¹⁷³³ The judgment cannot and should not take into account the political effect that it might or might not have.¹⁷³⁴

928. The more detailed Legal Representatives of Victims’ arguments, which rely on Prosecution evidence concerning the political context or other Prosecution evidence, including the alleged role of Hezbollah in the attack, are dealt with in chapter IV ‘Historical and political background to the attack’.

2. Findings

929. In UN Security Council Resolution 1664—cited by the Legal Representatives of Victims—the Security Council requested the UN Secretary-General ‘to negotiate an agreement with the Government of Lebanon aimed at establishing a tribunal of an international character based on the highest international standards of criminal justice’. In the preamble, the Security Council stated that it was ‘*mindful* of the demand of the Lebanese people that all those responsible for the terrorist bombing that killed former Lebanese Prime Minister Rafiq Hariri and others be identified and brought to justice’.

930. This same clause is contained in UN Security Council Resolution 1757, in which the Security Council established the Special Tribunal by deciding, acting under Chapter VII of the Charter of the UN, that the provisions of the Agreement on the establishment of the Special Tribunal for Lebanon, including its attachment, the Statute, entered into force.

¹⁷³⁰ Legal Representatives of Victims closing submissions, T. 14 September 2018, pp 80, 95, 99.

¹⁷³¹ Legal Representatives of Victims closing submissions, T. 14 September 2018, p. 89, *see also* p. 95; Legal Representatives of Victims of Victims final trial brief, para. 747.

¹⁷³² Legal Representatives of Victims closing submissions, T. 14 September 2018, p. 98.

¹⁷³³ Legal Representatives of Victims closing submissions, T. 14 September 2018, pp 99, 101-102.

¹⁷³⁴ Legal Representatives of Victims closing submissions, T. 14 September 2018, p. 100.

931. On 10 June 2011, the Prosecutor submitted an indictment against Mr Ayyash, Mr Oneissi, Mr Sabra and Mr Badreddine to the Pre-Trial Judge, who confirmed it on 28 June 2011. This indictment was later amended due to a number of developments, including the joinder with Mr Merhi's case¹⁷³⁵ and the termination of the proceedings against Mr Badreddine. The scope of the trial is defined by the amended consolidated indictment and the Special Tribunal's statutory provisions.

932. According to Rule 55 (C), in performing his functions, 'the Prosecutor shall assist the Tribunal in establishing the *truth*'.¹⁷³⁶ Further, the Trial Chamber may exercise control over the mode and order of questioning witnesses and presenting evidence so that the questioning and presentation of evidence is effective for the 'ascertainment of the *truth*'.¹⁷³⁷

933. The 'truth' that a trial chamber, within the scope of a trial, can and must establish—and to which the Rules refer—is any that a court can establish from the evidence before it. When Professor Letschert stated that a court has a role in explaining to the victims its mandate's limitations and that 'to establish [the] truth according to legal principles is different and difficult', the Presiding Judge underlined that 'a court can only deal with the evidence which is before the court'.¹⁷³⁸

934. Within this context, a tribunal can exercise a judicial 'truth-finding function'—as an ICTY trial chamber has described one of that tribunal's objectives.¹⁷³⁹

935. However, Professor Letschert herself—while praising the system of victims' participation at the Special Tribunal, its giving 'genuine attention to the voice of the victims in this case' and setting an example for future tribunals¹⁷⁴⁰—stated that one of the few recommendations for

¹⁷³⁵ Case no. STL-13-04.

¹⁷³⁶ Emphasis added.

¹⁷³⁷ Rule 150 (G) (emphasis added). The relevant part of this provision reads 'upon an objection raised by a Party, the Chamber may exercise control over the mode and order of questioning witnesses and presenting evidence so as to: (i) make the questioning and presentation effective for the ascertainment of the truth'.

¹⁷³⁸ Rianne Letschert, T. 8 September 2017, p. 107.

¹⁷³⁹ *Sikirica and others* Sentencing Judgment, para. 149, referring to the *Todorović* Sentencing Judgment, para. 81 ('a guilty plea is always important for the purpose of establishing the truth in relation to a crime').

¹⁷⁴⁰ Rianne Letschert, T. 8 September 2017, pp 106-107.

improvement consisted in informing the victims about the limitations of the Special Tribunal's mandate.¹⁷⁴¹

936. She testified that several participating victims want to know the 'whole truth'—beyond 'sentencing' the Accused¹⁷⁴²—namely know who or what organisation or State actually gave the order for the assassination.¹⁷⁴³ In her view, explaining how a legal system works would help in tempering their expectations at the start of the process. In her opinion, that a court cannot solve everything that victims might require, is an important message of itself.¹⁷⁴⁴

937. The Trial Chamber is confident that the Legal Representatives of Victims have explained to the participating victims how a criminal trial works, as they have an important role and responsibility in this regard. The Trial Chamber reiterates that the scope of the trial is defined by the amended consolidated indictment, the statutory provisions and the evidence heard. Within these boundaries, the Trial Chamber has made the findings necessary or appropriate to understand the events alleged in the amended consolidated indictment, as comprehensively as possible, and determine whether the Accused's guilt has been established beyond reasonable doubt. In consideration of the victims' participation—as noted above—the scope of the Trial Chamber's findings also include identifying the victims of the crimes and recording their harm.

938. The Trial Chamber is not a truth and reconciliation commission or a commission of inquiry. It applies rules of evidence—as expressly provided in the Rules of Procedure and Evidence—to admit evidence, and also to exclude it when required for a fair trial.¹⁷⁴⁵ These Rules reflect the highest standard of international criminal procedure and must be interpreted in a manner consonant

¹⁷⁴¹ Exhibit 1V42 (Professor Letschert's report), pp 37-38; Rianne Letschert, T. 8 September 2017, p. 107.

¹⁷⁴² Professor Letschert testified that by no means she 'meant to make any link between the views and concerns of the victims participating in the case to the accused' (Rianne Letschert, T. 8 September 2017, pp 11-12). Therefore, the witness may have rather meant to state that the participating victims' expectations go further than 'having the criminal responsibility of the Accused ascertained'. The victims' case, however, appears to favour the establishment of the Accused's criminal responsibility as the Legal Representatives of Victims submitted that '*in addition to the four Accused and Mr Badreddine ... a larger scale of network and organisation was responsible for the 14 February attack*' (Legal Representatives of Victims final trial brief, paras 89-90 (emphasis added)). The Trial Chamber has already noted that 'it is also inevitable that participating victims will most probably support a Prosecution case against those they may believe have harmed them or their relatives. The interest of some may be in ensuring that Accused persons are convicted and sentenced'. Decision on the Legal Representatives' application to call evidence, para. 71.

¹⁷⁴³ Exhibit 1V42 (Professor Letschert's report), pp 37-38; Rianne Letschert, T. 8 September 2017, p. 107. About the 'difficult concept of truth', Professor Letschert said that a tribunal will only 'provide part of the puzzle'.

¹⁷⁴⁴ Rianne Letschert, T. 8 September 2017, pp 107-108.

¹⁷⁴⁵ Under Article 21 (2) of the Statute and Rule 149 (D).

with the Statute and the international standards on human rights.¹⁷⁴⁶ The Trial Chamber, unlike fact-finding missions or commissions of inquiry, is bound by the Statute and international human rights law, to ensure that the Accused's rights to a fair trial are respected. It is not therefore equipped to establish an 'objective truth'—behind what is pleaded in an indictment and is proved by the evidence before it—if in fact an 'objective truth' exists.

939. However, within the boundaries defined by the amended consolidated indictment and the evidence received, it follows from the victims' right to claim for compensation under Article 25—and their right to participation—that they have a personal interest in the Trial Chamber's conclusions on the individual criminal responsibility of the Accused. Within this context, victims have a personal interest in having the responsibilities for the attack ascertained—to the extent that they were pleaded and that the Prosecutor has established them.

940. However, as to the comparison with the Accused's right to a reasoned opinion—requiring a trial chamber to provide reasoning in support of its findings on the substantive considerations relevant for a decision¹⁷⁴⁷—the Trial Chamber notes that the Accused's right to a reasoned opinion is a function of his or her ability to exercise a right of appeal. The right to appeal a judgment, or sentence, is explicitly envisaged only for the *persons convicted* and the *Prosecutor*.¹⁷⁴⁸ Therefore, any parallel between the Accused's right to a reasoned opinion and any victims' entitlement to have, within the scope of the trial, the responsibilities for the attack ascertained may have limited validity or applicability.¹⁷⁴⁹

¹⁷⁴⁶ Article 28 (2) of the Statute; Rule 3 (A) (ii), 'Interpretation of the Rules'.

¹⁷⁴⁷ *Mladić* Appeal decision regarding fair trial and presumption of innocence, para. 25. According to international criminal case law, 'there may be an indication of disregard when evidence, which is clearly relevant to the findings, is not addressed in the Trial Chamber's reasoning'. *Uwinkindi* Appeal decision dismissing request for revocation of referral, para. 40.

¹⁷⁴⁸ Article 26 (1) of the Statute, 'Appellate proceedings'; Rule 177 (A) (ii), 'Notice of Appeal', which sets the time limit for any *Party* to appeal a judgment or sentence.

¹⁷⁴⁹ Rule 87 (D) provides that, 'At the appeal stage, subject to the authorisation of the Appeals Chamber, after hearing the Parties, a victim participating in the proceedings may participate in a manner deemed appropriate by the Appeals Chamber'.

H. Repairing the harm—sought recommendations for appropriate forms of reparations

1. Introduction

941. The ‘Basic principles and guidelines on the right to a remedy and reparation for victims of gross violations of international human rights law and serious violations of international humanitarian law’, adopted by the United Nations General Assembly Resolution 60/147, provide for a right to ‘adequate, effective and prompt reparation for harm suffered’ by victims of serious human rights violations. Reparation should be proportional to the gravity of the violations and the harm suffered.¹⁷⁵⁰ These principles also establish that, in accordance with its domestic laws and international legal obligations, a State must provide reparation to victims and should endeavour to establish national programs for reparation and other assistance to victims in the event that the parties liable for the harm suffered are unable or unwilling to meet their obligations.

942. Further, according to Article 8 of the 1985 UN Declaration of Basic Principles of Justice for Victims of Crime and Abuse of Power:

offenders or third parties responsible for their behaviour should, where appropriate, make fair restitution to victims, their families or dependants. Such restitution should include the return of property or payment for the harm or loss suffered, reimbursement of expenses incurred as a result of the victimization, the provision of services and the restoration of rights.¹⁷⁵¹

943. Under Article 12 of this declaration, ‘when compensation is not fully available from the offender or other sources, States should endeavour to provide financial compensation to: (a) victims who have sustained significant bodily injury or impairment of physical or mental health as a result of serious crimes; and (b) the family, in particular dependants of persons who have died or become physically or mentally incapacitated as a result of such victimizations’. Finally, under Article 13:

the establishment, strengthening and expansion of national funds for compensation to victims should be encouraged. Where appropriate, other funds may also be established for

¹⁷⁵⁰ UN Doc. A/RES/60/147/Annex, principle IX, paras 15-16.

¹⁷⁵¹ UN Doc. A/RES/40/34/Annex (1985), paras 8, 11-13.

this purpose, including in those cases where the State of which the victim is a national is not in a position to compensate the victim for the harm.¹⁷⁵²

944. In domestic laws, depending on whether a State provides for a national statutory compensation scheme, two channels may exist for a victim to claim compensation for the injuries or damages they have suffered: from the offender during criminal proceedings—or other legal proceedings—or from the state, namely from a compensation authority or any relevant body. For example, a European Union Council Directive requires each European Union member state to establish a national scheme on compensation to victims of violent intentional crimes committed in their respective territories.¹⁷⁵³ They must establish or designate one or several authorities or any other bodies to be responsible for deciding upon applications for compensation.

945. Under Lebanese law, there is no general national compensation scheme for victims of crimes. A victim of an offence can claim compensation for the damages suffered by initiating a civil action,¹⁷⁵⁴ either before the same criminal court where the alleged perpetrators and accomplices are prosecuted or, separately, before the competent civil authority.¹⁷⁵⁵ Article 138 of the Lebanese Criminal Code provides that ‘the perpetrator of any offence causing harm, be it material or moral, to another person shall be held liable for compensation’. Under Article 129 of the same code, the civil sanctions that a criminal court judge can impose are: restitution, damages, confiscation, publication of the judgment and court fees. According to Article 134 of the Lebanese

¹⁷⁵² UN Doc. A/RES/40/34, Annex (1985), paras 8, 11-13.

¹⁷⁵³ Council Directive 2004/80/EC of 29 April 2004 relating to compensation to crime victims, Article 7. In Italy, for example, according to the national law implementing the directive, compensation can be claimed for medical and assistance costs—except in instances of sexual assault or homicide, in which case the victims are paid a fixed amount of compensation, determined by a Ministerial decree, even if there are no medical and assistance costs to be paid. A claim must be submitted within 60 days following an order finding that the offence was committed by a person or persons unknown, or following the last step in enforcement proceedings undertaken without success, or following the date that a criminal conviction becomes final. Italian Law no. 122 of 7 July 2016, Article 11. In England and Wales, according to ‘The Criminal Injuries Compensation Scheme 2012’, the types of payments that may be made include those for injuries, loss of earning, bereavement and dependency. The amount of an injury payment is determined in accordance with a set tariff (Article 33, annex E). An award will be withheld unless the incident has been reported to the police as soon as reasonably practicable. A person may be eligible for an award whether or not the incident giving rise to the criminal injury has resulted in the conviction of an assailant. The application must be submitted within two years after the date of the incident. A claims officer may defer determination of an application until satisfied that the applicant has taken all reasonable steps to obtain any social security benefits, insurance payments, damages or compensation to which the applicant may be entitled in respect of the same injury (Article 98 (b)).

¹⁷⁵⁴ Lebanese Code of Criminal Procedure, Art. 5.

¹⁷⁵⁵ With regard to crimes falling within the jurisdiction of military courts, actions on personal civil rights can be brought only before a civil court, which will render its decision after a final criminal judgment has been issued. Lebanese Military Code, Art. 25.

Code of Obligations and Contracts, reparations due to a victim of an offence must correspond to the entire damage the victim has sustained. Moral damage as well as material damage is taken into account.

946. In international criminal law, the ICTY and ICTR Statutes provided that a trial chamber, in a judgment convicting the accused, could ‘order the return of any property and proceeds acquired by criminal conduct, including by means of duress, to their rightful owners’.¹⁷⁵⁶ Restitution was hence the only form of reparations that the ICTY and ICTR could order. The IRMCT Statute contains the same provision.¹⁷⁵⁷ However, no ICTY or ICTR Trial Chamber ever made such an order. As to compensation, the ICTY and ICTR Rules, similar to Article 25 of the Statute, provided that the Registrar transmitted to the competent authorities of the States concerned the judgment finding the accused guilty of a crime that had caused injury to a victim and that a victim could then bring an action in a national court or other competent body to obtain compensation.¹⁷⁵⁸ However, there was no provision regarding the identification in the judgment of the victims—as contained in Article 25 (1) of the Special Tribunal’s Statute.

947. As noted already,¹⁷⁵⁹ the ICC can itself grant reparations to victims—and it has its own statutory Trust Fund for Victims.¹⁷⁶⁰ The Kosovo Specialist Chambers can also order reparations. Alternatively, ‘where appropriate, the Specialist Chambers may refer the Victims to civil litigation in the other courts of Kosovo’.¹⁷⁶¹ And under Article 25 of the Statute, victims may bring an action for compensation in a national court or other competent body. As at the ICC and the Kosovo Specialist Chambers, the right to compensation depends upon the conviction of an accused person.

2. Submissions

948. According to the Legal Representatives of Victims, the participating victims’ main preoccupation, based on Professor Letschert’s evidence, is the ‘reclamation of their rights’.

¹⁷⁵⁶ ICTY Statute, Art. 24 (3); ICTR Statute, Art. 23 (3), under the title ‘Penalties’. *See also* ICTY Rules 98 and 105; ICTR Rules 88 and 105.

¹⁷⁵⁷ IRMCT Statute, Art. 22 (4), reading: ‘In addition to imprisonment, the Single Judge or Trial Chamber may order the return of any property and proceeds acquired by criminal conduct, including by means of duress, to their rightful owners’.

¹⁷⁵⁸ Rule 106 in the ICTY and ICTR Rules.

¹⁷⁵⁹ At para. 792.

¹⁷⁶⁰ Rome Statute, Art. 75.

¹⁷⁶¹ Law No. 05/L-053 on the Kosovo Specialist Chambers and Specialist Prosecutor’s Office, 3 August 2015, Art. 22 (8)-(9).

Repairing the harm caused to victims may require the application of both individual measures—including restitution, compensation and rehabilitation—and general or collective measures—which could include the identification and conviction of the perpetrators, the erection of statues or memorials and apologies by the wrongdoers.¹⁷⁶²

949. Relying on ICC case law, the Legal Representatives of Victims note that the Special Tribunal’s legal framework does not provide the participating victims with the possibility to seek reparations before the Tribunal. This however is no bar to the Trial Chamber providing guidance on a financial compensation scheme and recommending appropriate forms of reparation for the participating victims and victims of the attack that might serve as a baseline to State authorities.¹⁷⁶³

950. The Legal Representatives of Victims cite, in support of this argument, that the Presidents of the ICTY and ICTR—before which victims could not claim reparations—sent to the UN Security Council letters on their findings on compensation to victims for their injuries. In completion strategy reports, they also noted that the absence of reparations for victims had hindered the goal of providing justice to them.¹⁷⁶⁴

951. According to the participating victims’ ‘testimony and expressions’, there was no universally applicable compensation scheme available to the victims of the attack.¹⁷⁶⁵ There was an inconsistent and even iniquitous distribution of compensation to victims in this case by various employers, insurance schemes and government bodies, in particular the Lebanese High Relief Commission (HRC).¹⁷⁶⁶

¹⁷⁶² Legal Representatives of Victims final trial brief, paras 652-653.

¹⁷⁶³ Legal Representatives of Victims final trial brief, paras 654-655 (referring to *Lubanga* Appeals Chamber decision on the principles and procedures to be applied to reparations, paras 53, 200, 202 and *Lubanga* decision on the principles and procedures to be applied to reparations, para. 222).

¹⁷⁶⁴ Legal Representatives of Victims final trial brief, para. 667, referring, for example, to UN Doc. S/2017/1001, Letter dated 29 November 2017 from the ICTY President, addressed to the UN Security Council, para. 204.

¹⁷⁶⁵ Legal Representatives of Victims final trial brief, para. 673.

¹⁷⁶⁶ Legal Representatives of Victims final trial brief, paras 673-678, 749. The HRC is a Lebanese public agency that reports to the prime minister. It is up to the prime minister or the cabinet to ask this commission to compensate, as a matter of urgency, people affected in cases of catastrophes, floods, act of war or famines. T. 29 August 2017, pp 78-79, 83-84 (where these explanations were provided by counsel for the Legal Representatives of Victims, Mr Mohammad F. Mattar). Certain victims of the attack applied for compensation from the HRC and Victim 30 received a cheque from the HRC. Exhibit 1V45 (Rule 154 documents Legal Representatives of Victims), pp 528-529 (ERN V030-E051); Maria Al-Kasti, T. 29 August 2017, pp 74-75; Mr Robert Aoun, T. 30 August 2017, p. 26; V016, T. 30 August 2017, p. 72 (where Victim 16 stated that he was not aware that a mechanism to ask for compensation existed); Maria Al-Kasti, T. 29 August 2017, pp 75-83. According to Mr Mattar, the HRC’s awarding compensation

952. The Legal Representatives of Victims invite the Trial Chamber to remind the Lebanese Government of the terms of the UN Declaration of Basic Principles of Justice for Victims of Crime and Abuse of Power on the matter of ‘compensation’ and the importance of the availability of an adequate compensation scheme for the victims¹⁷⁶⁷ or, alternatively, to recommend the establishment of a voluntary trust fund to compensate the victims in the cases ‘within the Tribunal’s jurisdiction’—‘possibly even the HRC itself’.¹⁷⁶⁸ Victims cannot ask the HRC for compensation—although its main mission is to receive and distribute donations made to the Lebanese Government—due to the different nature of compensation at issue.¹⁷⁶⁹

953. In determining awards, the trust or body could have regard to criteria and scales used by, for example, national criminal injuries compensation bodies elsewhere in the world.¹⁷⁷⁰ According to Professor Letschert, ‘since it will be quite difficult to receive compensation in a Lebanese court after this trial, also there one has to be realistic, it could be advisable to set up a victims trust fund through which victims could have access to financial relief’. As an example, she pointed to a fund set up after the terrorist attacks in the US on 11 September 2001, which was administered by a ‘Special Master’.¹⁷⁷¹ According to the Legal Representatives of Victims, the amount of reparations awarded by Lebanese courts for moral damages is usually insignificant and inappropriate compared to the actual loss and pain suffered by the victims.¹⁷⁷²

954. The Legal Representatives of Victims submit that the identification of victims—as envisaged under Article 25 of the Statute—is a form of symbolic reparation and serves as an

depends on the discretion of the government, although decisions on individual claims will be taken by the higher council.

¹⁷⁶⁷ UN Doc. A/RES/40/34/Annex (1985). The Legal Representatives of Victims point to the provisions in articles 12 and 13 of the UN declaration, which are cited above, in para. 943. The Legal Representatives of Victims also underline that, as good practice, the UN Office on Drugs and Crime (UNODC) recommends that ‘States should consider establishing national victims’ funds, resourced by proceeds derived from assets seized in accordance with legislative provisions from persons convicted of serious crimes related to terrorism or legal entities that have been restrained and forfeited, having been found civilly liable for financing terrorist activities’ (UNODC, Good Practices in supporting victims of terrorism within the criminal justice framework, October 2015, p. 49).

¹⁷⁶⁸ Legal Representatives of Victims final trial brief, paras 673-675, 749.

¹⁷⁶⁹ Legal Representatives of Victims final trial brief, paras 676-678.

¹⁷⁷⁰ Legal Representatives of Victims final trial brief, para. 750.

¹⁷⁷¹ Professor Letschert explained that victims of those terrorist acts were put in categories and their harms were calculated in these categories. Rianne Letschert, T. 8 September 2017, pp 94, 109-110.

¹⁷⁷² Legal Representatives of Victims final trial brief, para. 690. The Legal Representatives refer to the cases of reparations for the equivalent of USD 25,000 and USD 66,666 ordered, respectively, by the Lebanese Criminal Appeal Court and the Criminal Cassation Court, for a mother who lost her child in a car accident and the six heirs of a murdered man.

acknowledgement of the harm suffered by the participating victims and victims generally. A judgment that identifies the victims and acknowledges the impact of the crimes on them is an authoritative affirmation of the harm they suffered.¹⁷⁷³ According to a number of victims, as meaningful symbolic reparation, an apology is due from: those convicted and those who stood behind them in the conspiracy, those who mismanaged the search and rescue operations, the Lebanese Security Services, judicial investigators and the HRC.¹⁷⁷⁴

955. According to the Sabra Defence, the Legal Representatives of Victims' submissions on 'the possibility of identification and recommendation of appropriate forms of reparations' are premature, exceed the scope of Article 25 and, in any event, should only be considered upon conviction.¹⁷⁷⁵ Counsel for Mr Sabra 'will therefore only address these submissions in the event that Rule 171 proceedings are initiated against' Mr Sabra.¹⁷⁷⁶ The Merhi Defence rejects the Legal Representatives of Victims' submissions that the Trial Chamber should make recommendations, because this does not fall within its mandate.¹⁷⁷⁷

3. Findings

956. According to the 1985 UN Declaration of Basic Principles of Justice for Victims of Crime and Abuse of Power, redress for victims of crimes includes restitution and *compensation*.¹⁷⁷⁸ Under the Rome Statute, the ICC may order 'reparations'—to or in respect of victims—which include restitution, *compensation* and rehabilitation, although this list is not exclusive.¹⁷⁷⁹

957. The Special Tribunal, as noted, cannot grant compensation or order reparations. Article 25 of the Statute, '*Compensation to victims*', provides that a victim may bring an action to obtain *compensation* in a national court or other competent body.¹⁷⁸⁰ The Lebanese Code of Criminal Procedure allows a party aggrieved by an offence to initiate a 'civil action for *compensation*' for

¹⁷⁷³ Legal Representatives of Victims final trial brief, para. 656.

¹⁷⁷⁴ Legal Representatives of Victims final trial brief, paras 702-703, 751.

¹⁷⁷⁵ Sabra Defence final trial brief, para. 163, referring to Legal Representatives of Victims final trial brief, Chapter 6 'Expectations expressed and reparations sought by the participating victims'.

¹⁷⁷⁶ Namely sentencing after conviction. Sabra Defence final trial brief, para. 163.

¹⁷⁷⁷ Merhi Defence final trial brief, para. 595, referring to Legal Representatives of Victims final trial brief, paras 750-755.

¹⁷⁷⁸ UN Doc. A/RES/40/34/Annex (1985), paras 8-13.

¹⁷⁷⁹ Rome Statute, Art. 75. Other types of reparations include the Court's conviction and sentence themselves, the judgment's wide publication and establishing or assisting campaigns designed to improve the position of victims.

¹⁷⁸⁰ *Indemnisation des victimes* (in the French version).

damages suffered as a result of it.¹⁷⁸¹ According to ICC case law, restitution is the modality of reparation to restore the victims to their circumstances before the crime was committed, when this is achievable, and rehabilitation may include the provision of medical services, psychological or social assistance and legal services.

958. While some of the distinctions between reparations and compensation may be more terminological than substantive, *compensation* is generally made in the form of a monetary payment and must be considered when appropriate and if the economic harm is sufficiently quantifiable.¹⁷⁸² Also the ‘Basic principles and guidelines on the right to a remedy and reparation for victims of gross violations of international human rights law and serious violations of international humanitarian law’ refer to compensation as a form of reparation for any economically assessable damage.¹⁷⁸³

959. The harm suffered by the victims of the attack on 14 February 2005—lost lives, personal injuries or the loss of a family member—cannot be restituted, as restoration of the original situation of the victim, before the violation, is impossible. Nevertheless, the Trial Chamber does not interpret Article 25 of the Statute as limiting the type of reparations a victim of the attack may seek before a national court or competent body, by narrowing it to ‘*compensation*’ in its strict sense, as defined in international criminal case law. Victims will be able to seek, pursuant to the relevant legislation, the type of reparations they consider more appropriate, including those with a symbolic value.¹⁷⁸⁴

960. The Legal Representatives of Victims submit that the identification of victims and the acknowledgement of the harm in the judgment is a form of symbolic reparation. The Trial Chamber agrees with these submissions. As noted above at paragraph 818, the Trial Chamber in this judgment identifies the victims of the attack and records their harm.

¹⁷⁸¹ Lebanese Code of Criminal Procedure, Art. 5.

¹⁷⁸² *Lubanga* decision on the principles and procedures to be applied to reparations, paras 222-241.

¹⁷⁸³ UN Doc. A/RES/60/147/Annex.

¹⁷⁸⁴ Under Article 136 of the Lebanese Code of Obligations and Contracts (English translation by Gabriel M. Bustros, January 2009), ‘in principle, reparation is in the form of cash; it is granted by way of damages but it lies with the judge to give it a form more appropriate to the victims’ interest; it then comes in kind and may notably consist in insertions in press media’. *See also* *Lubanga* decision on the principles and procedures to be applied to reparations, para. 222.

961. The Legal Representatives of Victims rely on ICC case law to argue that the Trial Chamber can identify and recommend the most appropriate modalities of reparations. However, the relevant ICC statutory provisions require the Court to establish principles relating to reparations—which it can later issue.¹⁷⁸⁵ As the Special Tribunal cannot order reparations, accordingly, it will not provide guidance to State authorities on financial schemes for reparations, or on the criteria and scales that a trust or body should use.

962. In admitting the participating victims' witness statements into evidence, the Trial Chamber noted that several contained information as to the 'reparations' that they would consider appropriate. It acknowledged that these witnesses did not request reparations before the Trial Chamber and it received those portions of the statements into evidence only as expressing the participating victims' 'views and concerns'. It considered, however, that those portions had no probative value and the Trial Chamber would not have relied upon them for its findings in the judgment.¹⁷⁸⁶ Nevertheless, the identification by the Trial Chamber of the harms suffered by the victims may assist the victims in obtaining compensation. But the Trial Chamber cannot assess them.

963. The Trial Chamber has heard about a dramatic disparity in treatment among the participating victims as to 'compensation'—meaning the pecuniary remedy, for the loss or damage suffered, not depending on prosecutorial charges or judicial accountability, that participating victims received, or not, or applied for after the attack.¹⁷⁸⁷ The Trial Chamber underlines that compensation should be appropriate and proportional to the gravity of the harm suffered. The Trial Chamber notes the sense of injustice perceived by some victims because some were compensated while most, it appears, were not. Compensation should not depend on the circumstances of the victims, their connections, employment relationship or insurance scheme.¹⁷⁸⁸ Finally, as a general

¹⁷⁸⁵ Rome Statute, Art. 75.

¹⁷⁸⁶ Decision admitting into evidence statements of participating victims, para. 19.

¹⁷⁸⁷ The evidence and information the Trial Chamber heard on this matter is set out in chapter VI 'Explosion on 14 February 2005', (G) 'Victim harm'.

¹⁷⁸⁸ According to Article VIII of the 'Revised Guidelines of the Committee of Ministers of the Council of Europe on the protection of victims of terrorist acts', adopted on 19 May 2017, 'victims should receive fair, appropriate and timely compensation for the damages which they suffered'.

proposition, the Trial Chamber agrees that victims of crimes should be entitled to receive a form of statutory compensation, such as those mandated by the European Union, referred to above.¹⁷⁸⁹

I. Length of the trial

964. Professor Letschert stated that, during the last round of interviews with the participating victims, some showed signs of frustration because of the length of the proceedings and expressed a lack of understanding ‘as to why it takes so long to present evidence which they often found boring and technical’.¹⁷⁹⁰ The mere acknowledgement of their victimisation became less empowering and less valuable. The younger victims showed more signs of frustration than the older generation, but also some relatively older victims expressed concerns ‘if they would live through the verdict’.¹⁷⁹¹ According to Professor Letschert, their continuous support for the Special Tribunal, despite that, can be explained by the importance they attribute to the fact that ‘a tribunal is investigating this case in a country where there is a culture of impunity with regard to this kind of crimes’, and by the symbolic acknowledgement that they receive from it.¹⁷⁹²

965. International criminal law case law has addressed the issue of the length of proceedings only in relation to the Accused’s right to be tried without undue delay. This right is established in Article 16 (4) (c) of the Statute. As to the interrelation between the length of proceedings and victims’ participation, a trial chamber needs to be satisfied that the presentation of evidence by or for victims does not infringe on the right of the Accused to be tried without undue delay.¹⁷⁹³ Further, the Trial Chamber has a duty, under the Statute, to confine the trial to an expeditious hearing and to take strict measures to prevent any action that may cause unreasonable delay.¹⁷⁹⁴

966. The ICTR Appeals Chamber has stressed that it is not unreasonable to expect that the judicial process before that tribunal will not always be as expeditious as before domestic courts

¹⁷⁸⁹ See para. 944.

¹⁷⁹⁰ Exhibit 1V42 (Professor Letschert’s report), pp 26, 30-31; Rianne Letschert, T. 8 September 2017, p. 103.

¹⁷⁹¹ Rianne Letschert, T. 8 September 2017, pp 104-106; Legal Representatives of Victims final trial brief, para. 400.

¹⁷⁹² Rianne Letschert, T. 8 September 2017, pp 104-106.

¹⁷⁹³ Statute, Art. 17, ‘Rights of Victims’. Decision on the Legal Representatives’ application to call evidence, paras 18, 75; *Lubanga* decision allowing victims to express their views and concerns and to present evidence at trial, para. 17; *Katanga and Ngudjolo* directions for the conduct of the proceedings, paras 21-22; *Katanga and Ngudjolo* decision on modalities of victim participation at trial, para. 87; *Bemba* decision on the Legal Representatives of Victims’ application to present evidence and the views and concerns of victims, paras 21-22.

¹⁷⁹⁴ Statute, Art. 21 (1), ‘Powers of Chambers’.

because of the inherent complexity of the cases.¹⁷⁹⁵ Factors relevant to determining the level of complexity of a particular case include the number of counts, the number of accused, the number of witnesses, the quantity of evidence and the complexity of the facts and of the law.¹⁷⁹⁶

967. In closing remarks before declaring that the hearing was closed under Rule 148 (A), the Trial Chamber—through its Presiding Judge—highlighted that the trial record comprises some 3,131 exhibits and the evidence of 307 witnesses, and that the transcript is just under 37,000 pages in English, around 37,500 in French and over 19,100 pages in Arabic.¹⁷⁹⁷ It also pointed to the many overlapping factors which slow the processes of international trials, such as the need for witnesses to travel to the seat of the court (or testify via video-link), the challenges of witnesses testifying with simultaneous translation into at least two other languages, the international aspect of the investigation and trial and complex matters involving the protection of witnesses.¹⁷⁹⁸

968. Other unique specific factors had the effects of adding several months to this trial or delaying its commencement. The Special Tribunal was established in March 2009, four years after the attack in 2005; between March 2005 and December 2008, 12 UN fact-finding reports were produced, including 11 by the UNIIC.

969. The indictments against the five Accused were submitted in six sets of filings over a period of almost two and half years. The Prosecutor submitted his first indictment on 17 January 2011—against Mr Ayyash. This was just under two years after the Special Tribunal’s commencement. On 11 March 2011, the Prosecutor submitted a second indictment, this time adding as accused persons Mr Oneissi and Mr Sabra. He submitted his third indictment—also against Mr Badreddine—on 6 May 2011. The Pre-Trial Judge confirmed a subsequent amended indictment against all four Accused on 28 June 2011. This case was not transferred to the Trial Chamber until 25 October 2013.

¹⁷⁹⁵ *Nyiramasuhuko and others* Appeal Judgment, para. 359.

¹⁷⁹⁶ *Nyiramasuhuko and others* Appeal Judgment, para. 360. Further, in the *Nyiramasuhuko and others* case, two years and two and a half months between closing arguments and the written delivery of the Trial Judgment was considered a not excessive period for the judgment drafting phase due to the size and complexity of the case considered. *Nyiramasuhuko and others* Appeal Judgment, para. 377.

¹⁷⁹⁷ Presiding Judge’s closing remarks, T. 21 September 2018, pp 99-100. As updated by the Special Tribunal’s Court Management Services Section, the exhibits are 3,135 and the witnesses were 297. From the start of trial to 21 September 2018, the pages of transcript are 36,993 in English, 37,683 in French and 19,257 in Arabic.

¹⁷⁹⁸ Presiding Judge’s closing remarks, T. 21 September 2018, p. 101.

970. The Prosecutor filed his fifth indictment on 8 February 2012—more than a year after submitting his first indictment—seeking to add Mr Merhi’ name to the existing indictment against the original four Accused. But, a month later, the Pre-Trial Judge ordered the Prosecutor to file a separate indictment, rather than an amendment to the existing indictment. The new Prosecutor submitted a separate indictment against Mr Merhi in October 2012, but withdrew it in December 2012, and then resubmitted it on 5 June 2013. It was eventually confirmed on 31 July 2013.

971. On 18 December 2013—virtually on the eve of the scheduled commencement of the trial of Mr Ayyash, Mr Badreddine, Mr Oneissi and Mr Sabra—the Prosecutor sought the joinder of the two indictments into one. This was one month short of three years from the filing of the initial indictment for confirmation against Mr Ayyash, and 22 months after the Prosecutor first sought to add Mr Merhi to the existing confirmed indictment.

972. The trial against the first four Accused started on 16 January 2014, and on 11 February 2014 the Trial Chamber joined the two cases and adjourned the trial. The adjournment was to allow the newly appointed Merhi Defence counsel to absorb the evidence and prepare for trial. The trial recommenced only on 18 June 2014.

973. There were also several prosecutions for contempt, for the broadcasting or the publishing of information on purported confidential witnesses.

974. The proceedings against Mr Badreddine were terminated pursuant to an order of the Appeals Chamber—that, after suspending the trial, set aside a Trial Chamber’s decision and found that sufficient evidence had been presented to convince it that Mr Badreddine’s death had been proved to the requisite standard.

975. Other factors included a strategic litigation decision by the Merhi Defence that led the Prosecution to reinvestigate an aspect of the case against Mr Merhi and produce new evidence; an unsuccessful application to disqualify the Trial Chamber Judges, which was filed by the Oneissi Defence; and a human element in judicial illness.¹⁷⁹⁹

¹⁷⁹⁹ Presiding Judge’s closing remarks, T. 21 September 2018, pp 101-108.

976. Therefore, despite the Trial Chamber's best endeavours to ensure that the judicial process could finish earlier, it took in total four and a half years.

977. The Trial Chamber considers that victims have a personal interest that the trial be expeditious, and understands the frustration expressed by some participating victims about the duration of the proceedings. However, the Trial Chamber has always been very aware of its duty to confine the trial to an expeditious hearing and take strict measures to prevent any action that may cause unreasonable delay.

978. As to the time the Trial Chamber has dedicated to drafting the judgment—of 2,641 pages with more than 13,000 footnotes—the Trial Chamber had to carefully analyse the evidence presented throughout 415 sitting days, including very technical evidence, and the Parties' competing arguments on this in order to do justice to the Accused, the Prosecution and the participating victims in such a complex case.

J. Participating victims' views and concerns on protective measures and psychological support

979. Professor Letschert stated that some victims are fearful of retaliation after the verdict and are concerned that the Special Tribunal has not addressed the question of the continuation of protective measures after trial or 'if the Tribunal ends'.¹⁸⁰⁰ Professor Letschert suggested to 'investigate what could be offered to those confidential victims who have these concerns and how their needs could be accommodated'.¹⁸⁰¹

980. Professor Letschert also underlined that psychological assistance during trial proceedings is of paramount importance 'in particular in countries such as Lebanon, where a victim support network is absent'. As the Legal Representatives of Victims' team lacked psychological victim support, and although the work of the psychologist in the Special Tribunal's Victims and Witnesses Unit was appreciated, participating victims expressed the need for more psychological support in the Netherlands and in Lebanon.¹⁸⁰² On the basis of Professor Letschert's view that professional psychological support to participating victims should be available not only during trial proceedings

¹⁸⁰⁰ Exhibit 1V42 (Professor Letschert's report), p. 38; Rianne Letschert, T. 8 September 2017, p. 101.

¹⁸⁰¹ Exhibit 1V42 (Professor Letschert's report), p. 38.

¹⁸⁰² Exhibit 1V42 (Professor Letschert's report), p. 38; Rianne Letschert, T. 8 September 2017, pp 108-109.

but also in Beirut, the Legal Representatives of Victims invite the Trial Chamber to make recommendations regarding the management of future proceedings. The Legal Representatives of Victims add that these are matters that the Victims' Participation Unit at the Special Tribunal can develop and report on in the future.¹⁸⁰³ It is a lesson to be learned also for other tribunals.¹⁸⁰⁴

981. As to the participating victims' protective measures, as noted above,¹⁸⁰⁵ 26 participating victims, including one former participating victim, were granted protective measures, either by the Pre-Trial Judge or the Trial Chamber, including as witnesses in the trial. Their names or any other identifying information were redacted from any record disclosed to the public. The protective measures were granted under Rule 133. No person may disclose information protected by the Tribunal's orders. Any knowing violation of them may result in prosecution under Rule 60 *bis* 'Contempt and Obstruction of Justice', punishable by a term of imprisonment not exceeding seven years, or a fine not exceeding 100,000 Euros, or both.¹⁸⁰⁶

982. Rule 133 (G) provides that, once protective measure have been ordered in respect of a victim or witness in any proceedings before the Tribunal, they 'continue to have effect *mutatis mutandis* in any other proceedings before the Tribunal', unless and until they are varied in accordance with the procedure set out in Rule 133, when a Party to subsequent proceedings applies to vary the ordered protective measures.

983. This Rule explicitly provides for the protective measures' continued effect in relation to subsequent proceedings before the Special Tribunal. The Trial Chamber wants to stress that, once victims or witnesses are covered by a protection order, the protection mechanism is triggered. Until a protection order is rescinded or varied, the order remains in force.¹⁸⁰⁷ This is so even if no subsequent proceedings are pending, or after the Special Tribunal's mandate is completed. Every person in the Special Tribunal to whom the protected information was disclosed has the continuous obligation to keep the protected identity confidential. Further, anyone who becomes aware of the protected information and of the victim's or witness's involvement in the proceedings can never

¹⁸⁰³ Legal Representatives of Victims final trial brief, paras 692-694, 754.

¹⁸⁰⁴ Rianne Letschert, T. 8 September 2017, p. 108.

¹⁸⁰⁵ See para. 797.

¹⁸⁰⁶ Rule 60 *bis* (J).

¹⁸⁰⁷ *Nshogoza* Trial Judgment, para. 162-163, referring to *Nahimana and others* decision on Defence violations of Decisions and Rules, para. 14.

disclose it, unless the relevant protective measure is rescinded. While this is not expressly provided in Rule 133 (G), protective measures continue to have effect also in any other proceedings, including before the Lebanese jurisdiction.¹⁸⁰⁸

984. The purpose of protective measure is to safeguard the victims' or witnesses' 'privacy and protection', as stated in Rule 133. The protective measures' purpose would be frustrated should they dissolve at the end of the trial or of the Special Tribunal's mandate. As is underlined by international criminal case law, 'protected information has to remain so until confidentiality is lifted'. 'To hold otherwise would mean to undermine all protective measures imposed by a Chamber'.¹⁸⁰⁹ An order remains in force until a chamber decides otherwise.¹⁸¹⁰

985. A protection order is an assurance that participating victims' or witnesses' identities will be protected.¹⁸¹¹ The Trial Chamber and the Special Tribunal take seriously their obligation to protect victims and witnesses. Accordingly, the 'protection and support of victims and witnesses' is one of the (residual) functions that the Special Tribunal has identified as a core obligation, pursuant to its legal foundations, that cannot terminate upon the conclusion of all trials and appeals. As occurred with regard to other *ad hoc* international criminal tribunals, once the Special Tribunal's mandate is completed, this function should be continued by a successor entity.

986. As to the Legal Representatives of Victims' request that the Trial Chamber make recommendations—based on Professor Letschert's and the participating victims' views—on the need for professional psychological support in Beirut in future proceedings, the Trial Chamber endorses any improvement in supporting the participating victims' needs. It refers the matter of Professor Letschert's recommendation—based on the participating victims' views—to the Registrar and the Victims' Participation Unit, for their consideration. This is an ancillary matter,

¹⁸⁰⁸ The ICTY Rule 75 on 'Measures for Protection of Victims and Witnesses' was amended in July 2007 to explicitly add that protective measures, once ordered, continued to have effect—not only in any other proceedings before the ICTY—but also before '*another jurisdiction*' (unless and until they were rescinded, varied, or augmented) (Rule 75 (F) (i)). Rule 75 (H) was also amended to set out the procedure for any request for variation of protective measures from judges and parties in another jurisdiction. At the ICTY, even prior to that amendment, and at the ICTR—where the relevant Rule 75 on 'Measures for Protection of Victims and Witnesses' was never amended accordingly—a variation of the relevant protective measures was sought before a bench or parties in another jurisdiction were able to access any confidential material. *Slobodan Milošević* decision varying protective measures, para. 9; *Nyiramasuhuko and others* Appeals Chamber decision of 17 May 2012, para. 13. *See also* Rule 86 (F) (i) and (H) of the IRMCT Rules.

as it is not a formal finding for the purpose of determining whether the Accused are guilty, or for any other purpose accepted by the Trial Chamber to be within its mandate as set out above.

VI. EXPLOSION ON 14 FEBRUARY 2005

A. Introduction

987. On the morning of Monday 14 February 2005, Mr Hariri left Quraitem Palace to attend a morning session of the Lebanese Parliament.¹⁸¹² Shortly before 12:00, he left Parliament and went to café *Place de l'Étoile*, where he stayed for around 45 minutes.¹⁸¹³ At around 12:45, he left the café and asked his security detail to prepare his convoy to go back to the palace to attend a lunch appointment.¹⁸¹⁴ At around 12:49, he entered his armoured vehicle, accompanied by MP Mr Bassel Fuleihan.¹⁸¹⁵ At approximately 12:55, as the convoy passed a Mitsubishi Canter on *Rue Minet el Hosn* outside the St Georges Hotel, the suicide bomber detonated the explosives.¹⁸¹⁶

988. The Trial Chamber has heard uncontested evidence about what happened on 14 February 2005 from participating victims—both relatives of those who died in or as a result of the explosion, and people who were physically injured and or suffered material damage in the explosion—and from other witnesses. The victims shared their personal stories of the attack on 14 February 2005—unique to each of them—together with their grief, concerns and hopes, thus broadening the Prosecution's narrative. The Trial Chamber did not consider the evidence of participating victims in determining the Accused's criminal responsibility; the Parties had previously agreed that the explosion killed, in addition to Mr Hariri, the 21 people listed in schedule A to the amended consolidated indictment and injured the 226 listed in its schedule B.¹⁸¹⁷

B. Before the explosion on Monday 14 February 2005

989. In the early morning of Monday 14 February 2005, Mr Hariri was at Quraitem Palace attending meetings,¹⁸¹⁸ before departing for a session of the joint parliamentary committees to

discuss the proposed electoral law,¹⁸¹⁹ scheduled for 11:00.¹⁸²⁰ Civilian bodyguards Mr Amer Chehadeh and Mr Mohammed Dia were told about the trip 30 and 45 minutes in advance, respectively.¹⁸²¹ Other convoy members were informed about the trip at the last moment.¹⁸²² It departed half an hour or 45 minutes before the Parliamentary session,¹⁸²³ and took between ten and 15 minutes to arrive there.¹⁸²⁴

990. On arriving at Parliament, Mr Hariri greeted attendees, then walked over to MP Mr Bassem El-Sabeh and asked to sit with him.¹⁸²⁵ Mr Hariri reportedly told Mr El-Sabeh that:

these people are launching ... a broad-based campaign against us. They consider that we are in a bad state ... They think we are afraid. But I want to send them a message. You and I, both of us, as soon as the cameramen arrive, we are going to flash them a wide smile. Let them film us and let them see us like this. We are comfortable and we are at ease.¹⁸²⁶

991. During the session, Mr Hariri spoke about his views and reservations about the draft electoral law for about 15 minutes, then left.¹⁸²⁷

Exhibit P90 (Photographs of Parliament provided with Ahmad Nabil Ismail's witness statement), p. 103 (Photograph of Mr Hariri and Mr El-Sabeh taken in Parliament on 14 February 2005)

992. At around noon, Mr Hariri left Parliament and walked to the café *Place de l'Étoile*.¹⁸²⁸ He was accompanied by his close protection team and conferred with journalists including Mr Faisal Salman.¹⁸²⁹ The convoy then left Parliament around 12:45 or 12:50, hurrying to return for a lunch reception at Quraitem Palace with Mr Hariri driving himself and Mr Fuleihan in the front passenger seat.¹⁸³⁰

Exhibit P90, p. 397 (Photograph of Mr Hariri after leaving the café Place de l'Étoile)

993. The composition of Mr Hariri's convoy was decided on each occasion by his close protection officers Mr Al-Arab and Mr Nasser for the civilian side, and his chief of security, Mr Wissam Al-Hassan, for the ISF side.¹⁸³¹ It usually consisted of six or seven cars. An ISF black or navy blue Toyota Land Cruiser VX-R four wheel drive, with four ISF members,¹⁸³² and equipped with a siren and lights,¹⁸³³ would be in the lead.¹⁸³⁴ Its role was to clear the road before the convoy.¹⁸³⁵

994. This was followed by one of three black Mercedes S500 vehicles used by Mr Hariri's close protection detail; all were equipped with jamming devices.¹⁸³⁶ Each of these cars had, in addition to a driver, a close protection officer in the passenger seat and one behind the driver, to monitor the road on their respective side and report anything unusual.¹⁸³⁷ Radios were used for communication throughout the convoy and with the palace because the jammers blocked mobile telephone signals.¹⁸³⁸

995. Next came Mr Hariri's car: he mainly drove himself,¹⁸³⁹ in an armoured Mercedes S600,¹⁸⁴⁰ with darkened windows.¹⁸⁴¹ A second identical armoured car was used as a spare vehicle for long trips and as a decoy vehicle.¹⁸⁴² Following Mr Hariri would be the second and third black Mercedes

S500 security cars. These would travel almost side by side where there was enough room or otherwise fall into a single line behind Mr Hariri's vehicle.¹⁸⁴³

996. Finally, there would be a blue Chevrolet Suburban converted to act as an ambulance,¹⁸⁴⁴ driven by a security officer. Witnesses varied on the distance that the ambulance would drive behind the third security Mercedes S500. According to Mr Tarek Soubra, a civilian bodyguard who was not on duty on 14 February 2005, Mr Al-Arab had decided that the ambulance would drive a few hundred metres behind the convoy.¹⁸⁴⁵ Witness PRH234, also not in the convoy on 14 February, stated that the ambulance would usually be around two to three metres behind because the convoy would drive fast; he could not remember ever hearing about the ambulance keeping back from the convoy.¹⁸⁴⁶

997. As it departed from Parliament on Monday 14 February 2005, the convoy was constituted as usual.¹⁸⁴⁷ There were six vehicles. The ISF Toyota Land Cruiser was up front.¹⁸⁴⁸ The ISF officers were armed as usual¹⁸⁴⁹ and, on departing for Quraitem Palace, were told: 'anyone who gets near the convoy, shoot them because the situation is not good.'¹⁸⁵⁰ Mr Hussein Diab was driving the Land Cruiser.¹⁸⁵¹

998. The Land Cruiser was followed by the first black Mercedes S500 close protection vehicle.¹⁸⁵² Mr Chehadeh was, unusually, driving the second vehicle,¹⁸⁵³ and Mr Dia was in the

999. Behind Mr Hariri's car—fourth and fifth in the convoy—were the other two close protection vehicles.¹⁸⁵⁷ Mr Mohamed Darwiche—one of Mr Hariri's personal bodyguards—was driving the fourth car, and with him were Mr Nasser and Mr Al-Arab, the supervisor of the close protection team.¹⁸⁵⁸ Mr Ziad Tarraf, a bodyguard, was driving the fifth car. Mr Mohammed Ghalayini and Mr Omar Al-Masri were in that vehicle with him.¹⁸⁵⁹ The ambulance was last,¹⁸⁶⁰ with a driver and two paramedics, Mr Rachid Hammoud and Mr Mazen Al-Zahabi.¹⁸⁶¹

1000. Witnesses varied on who usually decided the convoy's route.¹⁸⁶² According to Mr Tarek Soubra—one of Mr Hariri's bodyguards¹⁸⁶³—Mr Al-Arab would decide the route.¹⁸⁶⁴ According to Mr Dia, Mr Nasser decided the route without consulting the ISF.¹⁸⁶⁵ On the day of the explosion, according to Witnesses 9 and 357, Mr Al-Arab and Mr Nasser decided the route 'as usual'.¹⁸⁶⁶

1001. The journey from Parliament to Quraitem Palace would usually take ten to 15 minutes.¹⁸⁶⁷ On 14 February 2005, the convoy took the road around the harbour, known as the 'maritime' or 'coastal' road, back to the palace.¹⁸⁶⁸ The jamming devices were switched on, and the commercial radios and mobiles were not working.¹⁸⁶⁹ The radio was on in the ambulance, although it was 'disturbed once or twice'.¹⁸⁷⁰

1002. At the start of its journey, the convoy had to stop for a few minutes as it was driving through Foch Street, due to work on the sidewalk or footpath.¹⁸⁷¹ As it approached the St Georges Hotel, however, the convoy was moving smoothly. Witness 76 and Witness 256 both stated that the convoy was going at about 70 kilometres per hour.¹⁸⁷² Mr Chehadeh testified that the convoy was moving at 60 to 80 kilometres per hour.¹⁸⁷³ Mr Dia could not remember the speed, but said that the convoy usually moved between 90 and 120 kilometres per hour,¹⁸⁷⁴ and Mr Hammoud thought that the convoy was going at a ‘normal’ speed immediately before the explosion, between 60 to 70 kilometres per hour.¹⁸⁷⁵

1003. The ambulance vehicle was some distance behind the other cars in the convoy. Witness 256 stated that the ambulance was driving ‘at a distance’ from the rest of the cars in the convoy, approximately ten to 15 metres.¹⁸⁷⁶ Mr Chehadeh testified that the ambulance would usually ‘stay at a far distance from the last vehicle’ but he did not know its precise distance on that day.¹⁸⁷⁷

1004. As the convoy neared the explosion site, the ‘Phoenicia tunnel’, opposite the Phoenicia Hotel, was to its left.¹⁸⁷⁸ Mr Chehadeh and Mr Dia stated that there were no vehicles blocking their way, parked in an unusual manner or trying to pull into traffic.¹⁸⁷⁹ Witnesses 357, 9 and 149 stated that a large yellow truck, driven by an elderly man and carrying metal, was driving in front of the convoy.¹⁸⁸⁰ The driver of the Land Cruiser moved closer to the lorry in order to ‘push’ him aside and allow for the convoy to pass easily. The yellow truck passed over the spot at which the explosion occurred, there was no other vehicle on that site.¹⁸⁸¹

1005. As the convoy neared the St Georges Hotel, the alarms of parked cars were activated by the jammers.¹⁸⁸² No witness saw a white Mitsubishi Canter on the right-hand side outside the St Georges Hotel.¹⁸⁸³

C. The explosion and immediate aftermath

1006. The Parties agree that the explosion occurred at 12:55, killing 22 persons and injuring at least 226 others. The Legal Representatives of Victims submit that the aftermath of the attack was chaotic and ‘hell-like’.¹⁸⁸⁴

1007. The explosion occurred around 40 or 50 metres behind the lead vehicle in Mr Hariri’s convoy.¹⁸⁸⁵ Witnesses described two deep sounds a second apart,¹⁸⁸⁶ a ‘huge roaring sound’ and ‘a wave of hot pressure’,¹⁸⁸⁷ a ‘huge explosion’,¹⁸⁸⁸ ‘the sound of an aircraft going through the sound barrier’,¹⁸⁸⁹ or ‘a missile thrown by a large artillery gun’,¹⁸⁹⁰ and described it as ‘like an earthquake’.¹⁸⁹¹ The explosion was heard throughout the city, up to 25 kilometres away.¹⁸⁹² While some could barely remember the ordeal due to the injuries and shock,¹⁸⁹³ and described it as ‘dream-like’,¹⁸⁹⁴ many gave a vivid account of the explosion and immediate aftermath.

1008. In the convoy, windows shattered in the ISF Land Cruiser at the front, and the vehicle was pushed several metres forward away from the explosion.¹⁸⁹⁵ The vehicle rolled forward until it

came to a stop on the pavement.¹⁸⁹⁶ The driver lost consciousness,¹⁸⁹⁷ and several passengers were thrown out of the car.¹⁸⁹⁸ The second convoy vehicle also flew forward and then hit the ground very hard.¹⁸⁹⁹ Mr Hariri was thrown outside his car.¹⁹⁰⁰ The ambulance bumped into the car in front,¹⁹⁰¹ and the front part of the ambulance caught fire.¹⁹⁰² The photograph immediately below shows the scene shortly after the explosion:

an envelope to Quraitem Palace.¹⁹⁰³ At the moment of the explosion, he was thrown off his motorcycle about four metres, ‘as though a storm had hit me’.¹⁹⁰⁴

1010. The minutes immediately after the explosion were confused and horrific. Objects were falling out of the sky around the convoy.¹⁹⁰⁵ There was fire and black smoke all around the explosion site,¹⁹⁰⁶ and the visibility was very poor due to the dust, fumes and fire.¹⁹⁰⁷ One witness describes a ‘black, mushroom like cloud’.¹⁹⁰⁸

1011. The HSBC building was a scene of ‘chaos and destruction’.¹⁹⁰⁹ People were screaming.¹⁹¹⁰ There were ‘fire and flames everywhere,’¹⁹¹¹ dust and smoke,¹⁹¹² and it was dark.¹⁹¹³ The moment of the explosion was described as ‘hell ... like the whole building was collapsing’.¹⁹¹⁴ The upper floors had no doors, windows or ceiling left.¹⁹¹⁵ It was described as total chaos.¹⁹¹⁶ The windows shattered and the ceiling fell onto people;¹⁹¹⁷ Ms Al-Kasti was trapped with the frame of one of the glass windows around her neck.¹⁹¹⁸ Cheques blew out of the windows.¹⁹¹⁹

1012. In the *Machkas* Centre, glass smashed everywhere and the gas in the air-conditioner exploded.¹⁹²⁰ In a nearby shop, glass shattered, merchandise broke and the metal doors of the shop were destroyed.¹⁹²¹ An electric lamp post was blown into the ground floor of the Phoenicia

1015. A call was made from the ISF vehicle—which had been at the front of the convoy—to the control room, advising that the explosion had occurred.¹⁹³⁶ Mr Hammoud escaped through the roof of the ambulance, as it was catching fire.¹⁹³⁷ The fire extinguisher from the Land Cruiser was used to try to put out the fire consuming Mr Hariri's vehicle.¹⁹³⁸ Mr Fuleihan was 'melting because of the fire',¹⁹³⁹ in flames, burning.¹⁹⁴⁰ Mr Chehadeh went to see if Mr Hariri or anyone else was alive, but could not see properly because of the fire and smoke.¹⁹⁴¹ Witness 357 ran towards Mr Hariri's vehicle, which was on fire, but Mr Hariri was not inside.¹⁹⁴² Mr Dia, Witness 9 and Witness 357 saw Mr Hariri's body on the ground; Mr Dia identified him by his wedding ring.¹⁹⁴³ After about ten to 15 minutes, the fuel tanks in the convoy vehicles started to explode,¹⁹⁴⁴ and the ammunition loaded inside one of the Mercedes vehicles also began to explode.¹⁹⁴⁵

1016. Firefighters arrived and tried to put out the fire.¹⁹⁴⁶ Mr Zakaria Badawi, one of Mr Hariri's civilian bodyguards,¹⁹⁴⁷ went to the explosion site and saw his friends covered 'in blood' and firemen trying to extinguish fires on cars, bodies and buildings.¹⁹⁴⁸ Sometime afterwards, ambulances arrived at the scene; some witnesses stated that there was a delay in their arrival.¹⁹⁴⁹ The ambulances were very cramped, and 'there was blood everywhere'.¹⁹⁵⁰ Witness 357 saw Mr Hariri being carried to an ambulance, which transported him to the American University Hospital.¹⁹⁵¹ At the hospital, according to one witness, Mr Walid Jumblatt told Mr Bahaa Hariri, Mr Hariri's son, that his father died.¹⁹⁵² Mr Fuleihan survived the immediate impact of the

explosion. He was transferred from the American University of Beirut Medical Center to France for treatment, where he succumbed to his injuries two months later on 18 April 2005.¹⁹⁵³

D. Searching for relatives in the hospitals

1017. The Legal Representatives of Victims argue that due to the chaos and disorder in the hospitals, many relatives and friends of the victims failed to obtain accurate information about them.¹⁹⁵⁴ Witnesses and victims gave evidence about the hardship of searching for information—from Quraitem Palace, the explosion site and the hospitals— about their relatives, throughout the remainder of the day and night of 14 February 2005. For some of them, this too continued well into the days and weeks after.

1018. Many learnt of the attack through TV news broadcasts,¹⁹⁵⁵ which were sometimes speculative. A Dubai-based station broadcast the news that everyone in the convoy was dead. After receiving this information from her brother, Mr Hammoud's wife collapsed. She was seven or eight months pregnant at the time of the explosion.¹⁹⁵⁶

1019. Witnesses testified that the mobile networks were 'down' after the attack,¹⁹⁵⁷ meaning that calls to relatives did not go through. A number of witnesses tried to contact Quraitem Palace for information, but often received no reply, or inaccurate information. When Mr Talal Nasser's brother called, nobody answered.¹⁹⁵⁸ Ms Roula Nasser, Talal Nasser's sister, called and the palace hung up on her.¹⁹⁵⁹ Ms Zeina Tarraf went to Quraitem Palace in person—some people told her that

her husband had been out with the convoy, while others said he was there in the palace.¹⁹⁶⁰ Mr Abdel-Qader Darwiche called the palace and was told that his brother was fine.¹⁹⁶¹

1020. While some witnesses were unable to reach the explosion site,¹⁹⁶² others reached the site and tried to get information about their missing relatives. Mr Robert Aoun drove to about one-and-a-half kilometres from the location of the explosion, parked and walked on foot to the explosion site. He described the site as ‘the end of the world. Blood everywhere. Fire everywhere. Destruction.’¹⁹⁶³ The security forces would not let him enter the site, and the officer in charge told him that there were no more bodies or wounded persons at the site, and that he should look in the hospitals.¹⁹⁶⁴ Ms Roula Nasser went to the explosion site and saw someone that she knew, who told her that Mr Nasser was ‘fine and alive’, and had been taken to the American University Hospital.¹⁹⁶⁵

1021. Many witnesses described searching between the various hospitals in Beirut looking for missing persons.¹⁹⁶⁶ The hospitals were extremely crowded,¹⁹⁶⁷ and full of burned bodies.¹⁹⁶⁸ While the American University Hospital had a list on the wall with injured people’s names,¹⁹⁶⁹ records were not complete. Misinformation was rife. Mr Wissam Naji’s father was first informed that his son was dead, and only found out that he was alive after about four hours.¹⁹⁷⁰ Ms Zeina Tarraf stayed until the evening at the hospital, ‘running around and looking for answers’.¹⁹⁷¹ Victim 37 was told by an official at the American University Hospital to go home because they could not do anything for her.¹⁹⁷²

¹⁹⁷⁰ Exhibit 1V13 (Wissam Naji’s statement), para. 10.

¹⁹⁷¹ Exhibit 1V37 (Zeina Tarraf’s statement), para. 13.

¹⁹⁷² Exhibit 1V30 (V037’s statement), para. 12.

1022. Information about deceased family members was disseminated through unofficial channels. Mr Darwiche was told by one of Mr Hariri's bodyguards that his brother was dead;¹⁹⁷³ and Ms Clemence Tarraf was informed by a convoy member.¹⁹⁷⁴ Mr Kamal Nasser was informed by a bodyguard that there was 'nothing left' of his brother.¹⁹⁷⁵ Ms Clemence Tarraf described opening curtains in all of the rooms in the American University Hospital to try to find her brother.¹⁹⁷⁶

1023. Some witnesses described how they were not given access to the morgues. Others, who were allowed in, vividly described the horrors of looking among unknown dead bodies for their dead family members.¹⁹⁷⁷ Mr Kamal Nasser 'was opening the drawers of the dead. The authorities forgot about me there due to the chaotic situation. I was left alone, searching for my brother's corpse, but I could not find it.'¹⁹⁷⁸ Witness PRH352's son was given a shoe belonging to a completely burnt unidentified body.¹⁹⁷⁹ Mr Nasser saw Mr Hariri's body in one of the drawers, as well as Mr Darwiche's, whose body had been cut in half. Some drawers contained only the remains of human bodies.¹⁹⁸⁰ Victim 37 searched among the bodies in the morgue of the American University Hospital and described the scene as 'terrifyingly unpleasant': 'There were body parts everywhere. I cannot erase that disturbing sight from my head since then ... One of the deceased had a bullet proof vest on his body, but all his limbs were missing.'¹⁹⁸¹

1024. While Mr Abu Rjeily described how his brother 'did not seem dead',¹⁹⁸² other witnesses told of the especially traumatic experience of seeing the damaged bodies of loved ones. Mr Abdel-Qader Darwiche's brother's head was 'totally maimed', with only a bit of his hair remaining, and

¹⁹⁷⁶ Exhibit 1V36 (Clemence Tarraf's statement), para. 11.

¹⁹⁷⁷ Lama Ghalayini testified that her sister was given access to the morgue of the American hospital to check whether her father was there because his name was not listed among the deceased, Lama Ghalayini, T. 28 August 2017, p. 19. After a suggestion made at one of the hospitals, Mr Aoun began to search the morgues, Robert Aoun, T. 30 August 2017, p. 16. Other witnesses were not immediately given access to the morgues. When Mamdouh Tarraf arrived at the American University Hospital, he asked to be let in to the morgue, but was not allowed in there by policemen. He was finally given access to the morgue after a request by someone from Quraitem Palace, Mamdouh Tarraf, T. 22 January 2014, p. 25. Victim 27 went to the hospital but was not allowed to see the body, exhibit 1V21 (V027's statement), para. 13.

¹⁹⁷⁸ Exhibit 1V33 (Kamal Nasser's statement), para. 12.

¹⁹⁷⁹ Exhibit 1V39 (Witness PRH352's statement), para. 9.

¹⁹⁸² Nazih Abu Rjeily, T. 24 January 2014, p. 11.

he was missing arms and legs.¹⁹⁸³ Mr Nasser was given a bag of mixed body parts, some of which were initially buried in a grave designated for his brother despite not belonging to him.¹⁹⁸⁴ He 'did not dare to tell this to the rest of the family.'¹⁹⁸⁵

E. Search and rescue efforts of the Lebanese authorities at the explosion site

1025. The Trial Chamber heard evidence about the way in which the Lebanese authorities dealt with search and rescue operations at the explosion site. The Legal Representatives of Victims highlighted the lack of cooperation and coordination, inefficiency of search efforts and lack of professionalism on behalf of the Lebanese authorities, in particular in relation to the death of Mr Zahi Bou Rjeily.¹⁹⁸⁶ Mr Abu Rjeily and the Ghalayini family offered particularly tragic accounts of the failures of the Lebanese authorities in relation to their family members.

1026. Mr Abu Rjeily, Mr Zahi Bou Rjeily's brother, went to the explosion site at around 20:00 in the evening of 14 February 2005. He was unable to pass the secure perimeter and was told that no further injured people or bodies were found.¹⁹⁸⁷ He tried to give a statement to the police, but was told that they were unable to do anything.¹⁹⁸⁸ The following day he returned around 09:00 and saw an ambulance leaving the St Georges for the American University Hospital. The family was told that a body had been found and the officer in charge later confirmed that the body belonged to Mr Zahi Bou Rjeily.¹⁹⁸⁹ Mr Abu Rjeily learnt from the coroner's report that his brother had lived for 12 hours after the explosion. He had suffocated to death, as late as 05:00 in the morning of 15 February 2005.¹⁹⁹⁰

1027. Ms Lama Ghalayini provided evidence about her family's traumatic experiences in trying to find her father's body. The Ghalayini family made repeated efforts to ensure that the explosion site was adequately searched, including bringing their own search equipment. Body parts not

belonging to Mr Ghalayini were found on Friday 18 and Monday 21 February 2005.¹⁹⁹¹ The family was permitted access to the crime scene on 2 March 2005, at 09:00, to observe the search operations which were being undertaken.¹⁹⁹² At around 10:30, Ms Ghalayini's uncle tried to negotiate with the senior police officer on site to gain entry, and as he did so, he smelled 'a really bad smell. The smell of bodies.'¹⁹⁹³ Her uncle asked the Civil Defence to check that spot.¹⁹⁹⁴ After the removal of a thin layer of sand of around ten centimetres, they found a foot, which did not belong to Mr Ghalayini, but underneath it was Mr Ghalayini's body.¹⁹⁹⁵

F. Forensic evidence

1028. The Trial Chamber heard from witnesses who were members of the international and Lebanese forensic teams which investigated the explosion. The Lebanese Military Intelligence and ISF conducted their own investigation and analyses of the explosion in February and March 2005.¹⁹⁹⁶ Several witnesses provided evidence on their role in the investigation, such as members of the Lebanese ISF forensic team—Mr Mahmoud Khashab, Mr Hussein Krayem,¹⁹⁹⁷ Mr Walid Othman, Mr Joseph Safi and Witness PRH566—and Lebanese ISF judicial police, including Mr Mohammed Kheireddine, Mr Tanios Gemayel, Mr Elie Hawa and Mr Michel Jbeily.

1029. Lebanese military investigating judges—first Judge Rasheed Mezher and later Judge Michel Abou-Arraj—were in charge of overseeing the investigation and delegated the investigation of the crime scene to the ISF directorate-general.¹⁹⁹⁸

1030. Following a request from the Lebanese prime minister, the UN Secretary-General dispatched a fact-finding mission to Beirut to inquire into the causes, the circumstances and the consequences of this assassination.¹⁹⁹⁹ Following its arrival in Beirut on 25 February 2005, the

mission met Lebanese officials and representatives of different political groups, thoroughly reviewed the Lebanese investigation and legal proceedings, examined the crime scene and the evidence collected by the Lebanese authorities, collected and analysed samples from the crime scene and interviewed witnesses in relation to the crime.²⁰⁰⁰

1031. On 1 March 2005, Mr Peter FitzGerald, the head of the UN fact-finding mission,²⁰⁰¹ asked the Swiss government to send a team of specialists in the areas of explosives, ballistics, DNA and crime-scene work to assist in the investigation.²⁰⁰² The Swiss government sent a team of experts to Beirut on 5 March 2005, and they issued a report later that month.²⁰⁰³

1032. In July 2005, the UNIIC—which had been established by Security Council Resolution 1595 on 7 April 2005 and was operational as of 16 June 2005—contacted the Dutch government asking it to conduct a forensic investigation of the crime scene.²⁰⁰⁴ Between 28 and 31 July 2005, Mr Joe Hoffman²⁰⁰⁵ and Dr Anick van de Craats²⁰⁰⁶ made an initial visit to the crime scene.²⁰⁰⁷ The Dutch forensic team arrived on 11 August 2005, headed by Mr Hoffman, and was comprised of crime scene investigators from the Dutch Forensic Police, including Mr Jan Kuitert²⁰⁰⁸ and Dr van de Craats.²⁰⁰⁹ It started the investigation of the crime scene on 13 August 2005.²⁰¹⁰ Their report came out at the end of September 2005.²⁰¹¹

1033. The Dutch forensic team received assistance: from Lebanese ISF officers in searching the crime scene; a team of six British divers and divers from the Lebanese fire brigade in searching

²⁰²⁰ Dr Ayoub was declared by the Trial Chamber under Rule 161 as an expert in forensic science specialised in human identification, Decision on expert reports of 1 July 2014; Decision on expertise (Professor Ayoub and Dr Mansour). *See also* Fouad Ayoub, T. 1 July 2014, pp 11-13, 15-16. Dr Ayoub wrote seven reports for the UNIIC, of which two were co-authored. The reports describe the collection of human remains from the crime scene of the explosion, information about the DNA profiling of those remains and the DNA profiling of individuals related to alleged suspects.

²⁰²¹ Exhibit P244 (Report of forensic investigations, Ministry of Justice, Netherlands Forensic Institute), p. 8.

²⁰²² Witness 155 was declared by the Trial Chamber as a forensic expert under Rule 161, Decision on expertise (Witness PRH155), paras 1, 3-4, disposition.

²⁰²³ Witness PRH155, T. 24 September 2014, p. 17; exhibit P266 (Spanish forensic team expert report), pp 2-3, 13, 291.

As examined more fully below, several other experts conducted subsequent forensic analyses of the explosion.

1. Crime scene investigation and recovery of evidence

(a) Initial surveillance and investigation at the crime scene

1035. Members of the Lebanese security, military, judicial and Civil Defence services, and of the Red Cross, participated in the rescue, evacuation and body recovery operations at the crime scene immediately after the explosion. This included fire stations from different sectors of Beirut, the ISF Central Accidents Bureau, falling under the ISF judicial police, the ISF Explosives Bureau and the ISF Counter-terrorism and Major Crimes Unit.

1036. Mr Khaled Toubaili is a retired fireman who served in the Beirut Fire Department as a first lieutenant at the time of the attack.²⁰²⁴ At 12:55 on 14 February 2005, he was on duty at the Bashoura Barracks in Beirut when he heard a massive explosion and immediately took his crew to the scene with two fire trucks and one ambulance. Mr Toubaili and his crew reached the Four Seasons Hotel and saw columns of fire and thick black smoke.²⁰²⁵ There was no visibility at the crime scene; it was completely dark because of the smoke and breathing was impossible without a mask.²⁰²⁶

1037. Mr Toubaili realised that his resources were inadequate to extinguish the fire and called for reinforcements from the three fire department sectors in Beirut.²⁰²⁷ He and his crew could not advance past an area between the St Georges Hotel and the Phoenicia Hotel—ten to 15 metres from the crater—because of rubble on the road.²⁰²⁸ At that point, Mr Toubaili instructed fire fighters to approach the crater while the ambulance team took five or six injured people to the American University Hospital in Beirut.²⁰²⁹ The fire brigade command and teams from the three fire department sectors arrived at the scene ten minutes after Mr Toubaili; the Red Cross and the Civil Defence arrived later.²⁰³⁰

²⁰²⁴ Khaled Toubaili, T. 27 January 2014, p. 6.

²⁰²⁵ Khaled Toubaili, T. 27 January 2014, p. 7.

²⁰²⁶ Khaled Toubaili, T. 27 January 2014, p. 39.

²⁰²⁷ Khaled Toubaili, T. 27 January 2014, pp 7, 11.

²⁰²⁸ Khaled Toubaili, T. 27 January 2014, p. 12.

²⁰²⁹ Khaled Toubaili, T. 27 January 2014, p. 13.

²⁰³⁰ Khaled Toubaili, T. 27 January 2014, pp 13, 30.

1038. Mr Toubaili's crew extinguished the burning vehicles on the north side of the crater, near the Byblos building, while crews from the second and third sectors who had arrived from the south worked to extinguish the fire on the other side of the crater.²⁰³¹ The area between the crater and the St Georges Hotel was impassable.²⁰³²

Aerial photograph of the crime scene with the crater in the middle and the two hotels

Exhibit P244 (Report of forensic investigations, Ministry of Justice, Netherlands Forensic Institute), p. 11 (photograph 1)

1039. The first two floors of the Byblos building were on fire. Smoke was coming from the uninhabited St Georges Hotel. This smoke made breathing hard for anyone near the building.²⁰³³ Mr Toubaili took some team members into the first two floors of the Byblos building to search for people in need of assistance and to evacuate victims and extinguish fires.²⁰³⁴ The team found four or five people who had been injured and had lost consciousness and immediately took them to the

hospital.²⁰³⁵ Inside the Byblos building, a member of Mr Toubaili's team informed him that the bombing had targeted Mr Hariri.²⁰³⁶

1040. Mr Toubaili and his team were forced to fight the fire lying down for fear of more explosions from petrol tanks.²⁰³⁷ The fire was constantly reigniting until large quantities of foam were used to completely extinguish it. The armoured cars in Mr Hariri's convoy posed a much greater difficulty to the firefighters than civilian cars, due to their large and protected fuel tanks.²⁰³⁸ The firefighters commenced the cooling-down process after the fire was completely extinguished—the entire process took over three hours.²⁰³⁹ Mr Toubaili and his team left the area at around 19:00 that evening.²⁰⁴⁰

1041. A total of 70 to 80 firefighters were called to assist at the explosion site, in addition to military officers both in plain clothes and in uniform²⁰⁴¹ who directed the operations.²⁰⁴² Mr Toubaili clarified that it was not the fire department's role to prevent civilians from entering the crime scene, however, the fire brigade used yellow cordon tape to create a perimeter around the area after the fire was extinguished.²⁰⁴³ This perimeter did not cover the narrow St Georges side of the crater.²⁰⁴⁴ Mr Toubaili was not concerned about the crater as it did not contain any injured people or any fires—the military and security forces were in charge of the crater.²⁰⁴⁵ No one from Mr Toubaili's team moved any bodies from the crime scene.²⁰⁴⁶

1042. Mr Mohammed Kheireddine, an adjutant-in-chief with the ISF judicial police in the Central Accidents Bureau,²⁰⁴⁷ was working at the Helou barracks in Beirut on 14 February 2005 when he

heard the explosion.²⁰⁴⁸ He and his team received an order from the police operation centre²⁰⁴⁹ and following an order from the section chief, they rushed to the crime scene.²⁰⁵⁰ They arrived about an hour after the explosion,²⁰⁵¹ where they took photographs, recorded a video and made notes.²⁰⁵² He had not previously inspected such a large crime scene.²⁰⁵³

1043. Mr Kheireddine and his team spent four to five hours at the crime scene, dressed in civilian clothing.²⁰⁵⁴ On arrival, there was no barrier to entering the crime scene, and no one registering the names of all persons present.²⁰⁵⁵ There were many people at the crime scene, including members of the ISF, army intelligence and military police.²⁰⁵⁶ Mr Kheireddine observed numerous damaged and burned vehicles and wreckage surrounding the crater, including two Mercedes vehicles from which charred bodies, two from one and three from the other, were lifted out.²⁰⁵⁷

1044. Some bodies had already been transferred to local hospitals when Mr Kheireddine and his team arrived at the scene.²⁰⁵⁸ Authorities removed the top of a vehicle with a small bulldozer in order to remove bodies from the vehicle.²⁰⁵⁹ The fire at the crime scene had been extinguished when he arrived,²⁰⁶⁰ and the crater was filled with water from broken pipes and water used to put out the fire.²⁰⁶¹

Removal of convoy vehicles from the crime scene

1045. Six vehicles, including five from Mr Hariri's convoy, were removed by the ISF from the inner crime scene to the police headquarters at Helou Barracks during the evening on 14 February 2005.²⁰⁶²

1046. First Sergeant Tanios Gemayel, an adjutant with the ISF judicial police working in the Central Accidents Bureau, like Mr Kheireddine, was asked to go to the crime scene between 22:00 and 23:00 on 14 February 2005 to film the transfer of Mr Hariri's convoy vehicles to the Helou Barracks in Beirut.²⁰⁶³ He worked until around 02:00 the next morning.²⁰⁶⁴ Mr Gemayel assigned each damaged vehicle from the convoy a number from 'one'—Mr Hariri's vehicle—to 'six' while at the crime scene.²⁰⁶⁵ The vehicles were taken to the barracks on a big truck; Mr Gemayel accompanied them and photographed the vehicles once at the barracks.²⁰⁶⁶ He described the presence of trucks, bulldozers and other vehicles at the crime scene.²⁰⁶⁷ He noted that there was a level of urgency to remove the cars quickly from the crime scene, for reasons he did not know.²⁰⁶⁸ Stills from the video of the removal of the vehicles are immediately below:

1047. Mr Jamil El-Sayyed, a military officer and director of the Lebanese General Security Directorate at the time of the attack,²⁰⁶⁹ who testified for the Oneissi Defence stated that he was

²⁰⁶⁹ Jamil El-Sayyed, T. 5 June 2018, pp 2-3.

informed that military investigating Judge Rasheed Mezher ordered that the vehicles be moved the same night and the authorities were planning on opening the road for traffic the following day.²⁰⁷⁰ Mr El-Sayyed testified that he intervened and told the Minister of Interior and Brigadier-General Al-Hajj that this was not a normal traffic accident and that they could not open the road and must preserve the crime scene.²⁰⁷¹ According to Mr El-Sayyed, there was no contamination of the crime scene after this, but ‘of course there were some mistakes that were committed’.²⁰⁷²

Examination of convoy vehicles

1048. The Dutch forensic team examined the vehicles and the remains at the barracks, almost five months later, on 5 and 6 September 2005.²⁰⁷³ The Spanish forensic team examined the convoy vehicles during a five day period between 11 May and 3 June 2006 as part of its forensic analysis of the crime scene.²⁰⁷⁴ All of the vehicles were stored at the Lebanese police headquarters and were covered with blue plastic when the Dutch team’s investigations started, however they reported that it was not clear whether the vehicles had been protected in this way during the previous six months.²⁰⁷⁵ The Spanish team reported that all of the vehicles were covered with tarpaulins and were under cover when they conducted their later investigation.²⁰⁷⁶

1049. Witness 155, working with the Spanish forensic team, testified that in terms of his analysis as a ballistics expert, the transfer of the cars from the crime scene to the Helou Barracks before their examination did not cause a problem, as precautions had been taken not to lose the evidence.²⁰⁷⁷ However, he said that an examination of the vehicles at the crime scene would have provided a clearer picture.²⁰⁷⁸

²⁰⁷⁶ Exhibit P266 (Spanish forensic team expert report), p. 144.

²⁰⁷⁷ Witness PRH155, T. 25 September 2014, p. 34.

²⁰⁷⁸ Witness PRH155, T. 25 September 2014, pp 35-36.

1050. The Dutch forensic team numbered the convoy vehicles 401, 402, 403, 405 and 406.²⁰⁷⁹ Metal debris from another vehicle was also removed from the crime scene and placed next to the six vehicles.²⁰⁸⁰ It was numbered 404.²⁰⁸¹

1051. A black Toyota Land cruiser VX-R, with number plate B485868, was numbered vehicle 401.²⁰⁸² The damage the vehicle sustained was typical of a blast wave of an explosion. It was hit on the rear by the explosion but with insufficient impact to make any perforations.²⁰⁸³

1052. Vehicle 402, a black Mercedes Benz S500 with number plate B186395, had also been severely damaged.²⁰⁸⁴ Vehicle 402 was hit from the rear by the blast and had more damage than vehicle 401 because it was closer to the blast.²⁰⁸⁵

1053. Vehicle 403 was an armoured Mercedes Benz S600, driven by Mr Hariri himself.²⁰⁸⁶ It had structural damage despite the armour, and both the exterior and interior were completely

²⁰⁷⁹ Exhibit P244 (Report of forensic investigations, Ministry of Justice, Netherlands Forensic Institute), p. 49; exhibit P266 (Spanish forensic team expert report), pp 264-266. Another vehicle, numbered 301, was a black BMW with number plate B400745 that had also been transferred and placed in the barracks. The Dutch forensic team noted specifically that the vehicle's roof was bent inwards, the front windshield was broken and all other windows were missing. The body had several perforations and the back of the vehicle was more severely damaged than the front. The Dutch forensic team concluded that this vehicle was not in close range of the explosive device, and that this type of vehicle was not used in Mr Hariri's convoy, therefore it did not belong to the convoy, exhibit P244 (Report of forensic investigations, Ministry of Justice, Netherlands Forensic Institute), p. 49.

²⁰⁸⁰ Exhibit P244 (Report of forensic investigations, Ministry of Justice, Netherlands Forensic Institute), p. 49.

²⁰⁸¹ Exhibit P244 (Report of forensic investigations, Ministry of Justice, Netherlands Forensic Institute), pp 60, 65.

²⁰⁸² Exhibit P244 (Report of forensic investigations, Ministry of Justice, Netherlands Forensic Institute), pp 49-50; exhibit P266 (Spanish forensic team expert report), p. 264. Specifically, the vehicle had dents in the front, on the sides and on top and a large dent in the rear. Its rear bumper was perforated twice. The front windshield was blown in, all other windows were missing and the airbags had been activated, exhibit P244 (Report of forensic investigations, Ministry of Justice, Netherlands Forensic Institute), pp 49-50; exhibit P266 (Spanish forensic team expert report), pp 144-159.

²⁰⁸³ Exhibit P244 (Report of forensic investigations, Ministry of Justice, Netherlands Forensic Institute), pp 49-50; exhibit P266 (Spanish forensic team expert report), pp 264-265.

²⁰⁸⁴ Exhibit P244 (Report of forensic investigations, Ministry of Justice, Netherlands Forensic Institute), pp 51-52; exhibit P266 (Spanish forensic team expert report), p. 264.

²⁰⁸⁵ Exhibit P244 (Report of forensic investigations, Ministry of Justice, Netherlands Forensic Institute), pp 51-52; exhibit P266 (Spanish forensic team expert report), pp 264-265. Specifically, both sides of the vehicle and the roof were heavily dented and the sun roof window was broken. The spare wheel cover at the bottom was ripped open and the exhaust was perforated. The bonnet was penetrated by the four suspension springs and the front bumper was partially detached. The right side of the vehicle was perforated and dented at full length. The rear bumper had a large number of perforations and was partly detached. The trunk lid was heavily deformed. The windshield and the rear right window were perforated, the rear left window was pulled down and had a crack and the other windows were broken. Airbags had been activated in the front and on the left side. The front left wheel was intact, the front right tyre was perforated and the rear tyres slid off the rims, exhibit P244 (Report of forensic investigations, Ministry of Justice, Netherlands Forensic Institute), pp 51-52. *See also* exhibit P266 (Spanish forensic team expert report), pp 159-182.

²⁰⁸⁶ Exhibit P266 (Spanish forensic team expert report), p. 264; exhibit P244 (Report of forensic investigations, Ministry of Justice, Netherlands Forensic Institute), pp 53-54.

destroyed.²⁰⁸⁷ The expert forensic teams concluded that the vehicle was hit from the rear right side by the blast wave.²⁰⁸⁸

1054. Vehicle 404, a Mercedes Benz S, was almost completely destroyed.²⁰⁸⁹ Some of the vehicle parts, for example, the remains of a spare wheel, a metal part of one of the seats and part of the axis, were identified by their article numbers as belonging to a Mercedes S type built after 1998.²⁰⁹⁰ The Dutch forensic team found further severely damaged vehicle parts, for example bottom plates with seat railings and an engine block,²⁰⁹¹ ‘showing Mercedes characteristics’.²⁰⁹² Based on information received from Mr Hariri’s bodyguards that there had been another Mercedes in the convoy similar to vehicle 402 with a jamming device, the Dutch forensic team concluded that these vehicle parts likely belonged to vehicle 404.²⁰⁹³ The parts were heavily damaged and therefore the forensic teams concluded that they belonged to a vehicle which had been located close to the explosion centre and was the second protection vehicle.²⁰⁹⁴ As primarily parts of the left side of the chassis were recovered, this vehicle had most likely been hit by the blast from the right side.²⁰⁹⁵

²⁰⁸⁷ Exhibit P266 (Spanish forensic team expert report), pp 183, 265. The number plates were missing. The vehicle identification number was ‘WDB 2201 781A 258991’. The Dutch forensic team reported that its body work was heavily burned and rusted and its colour could not be determined. Its bonnet and front bumper were missing. The engine was present but burnt. Only the rear right armoured window was found, placed on the engine block, and other windows were missing. The rear right door was separated from the vehicle and was found on the engine block. The front left door was separated too and was found on the front seats or what remained of them. Its tyres were completely burned to the rims. A large armouring plate was detached from the rear side. The chassis beam was deformed and bent to the left. The rear wheel casings were damaged, more on the right side. The bottom plate of the trunk was missing. The petrol tank was torn open and found inside the vehicle, exhibit P244 (Report of forensic investigations, Ministry of Justice, Netherlands Forensic Institute), pp 53-54; exhibit P266 (Spanish forensic team expert report), pp 183-201.

²⁰⁹⁴ Exhibit P266 (Spanish forensic team expert report), pp 207, 264-265; exhibit P244 (Report of forensic investigations, Ministry of Justice, Netherlands Forensic Institute), pp 64-65; Anick van de Craats, T. 28 August 2014, p. 81.

²⁰⁹⁵ Exhibit P244 (Report of forensic investigations, Ministry of Justice, Netherlands Forensic Institute), pp 64-65; Anick van de Craats, T. 28 August 2014, p. 81; exhibit P266 (Spanish forensic team expert report), pp 207, 265.

1055. Vehicle 405 was a Mercedes Benz S500 and was completely burned and severely damaged, especially on the right front side.²⁰⁹⁶ The Dutch forensic team concluded that vehicles 403 and 405 were equally close to the explosive device. Vehicle 403 had just passed by the device and vehicle 405 was facing it.²⁰⁹⁷

1056. Vehicle 406 was a blue General Motors Company Chevrolet Suburban used for medical assistance and emergencies, referred to as ‘the ambulance’.²⁰⁹⁸ The expert forensic teams concluded that vehicle 406 faced the explosive device with its right front side and was further away than vehicles 403 and 405 because it sustained less damage.²⁰⁹⁹

²⁰⁹⁶ Exhibit P266 (Spanish forensic team expert report), pp 208, 264-266; exhibit P244 (Report of forensic investigations, Ministry of Justice, Netherlands Forensic Institute), pp 55-56. The plates were missing. The vehicle identification number was ‘WDB 2201 751A 209162’. The Dutch forensic team reported that the vehicle’s front bumper and bonnet were missing and the engine was burned and partially torn. The right side doors were severely deformed, dented and perforated. The left front door was missing. All of its windows were missing. Only the left rear tyre was in place, albeit burned, and all other tyres were missing. Rims were in place but heavily damaged. The left rear door, the rear bumper and the trunk lid were dented and deformed. *See also* exhibit P266 (Spanish forensic team expert report), pp 208-220.

²⁰⁹⁷ Exhibit P244 (Report of forensic investigations, Ministry of Justice, Netherlands Forensic Institute), pp 55-56; Anick van de Craats, T. 28 August 2014, p. 77. *See also* exhibit P266 (Spanish forensic team expert report), pp 265-266.

²⁰⁹⁸ Exhibit P266 (Spanish forensic team expert report), pp 221, 264; exhibit P244 (Report of forensic investigations, Ministry of Justice, Netherlands Forensic Institute), pp 57-58. Both number plates were missing and the Dutch forensic team could not locate its vehicle identification number. According to the Dutch forensic team’s observations, the bonnet was torn in two pieces, perforated and folded on the windshield. The front bumper and the suspension were damaged and moved. The grill and the car batteries were missing. The Dutch forensic team recorded many horizontal perforations on the right side and dents and burns on the left side of the body work. The left front wheel was also burned. Wheels on the right side were flat and damaged. All of the windows were missing. *See also* exhibit P266 (Spanish forensic team expert report), pp 221-255.

²⁰⁹⁹ Exhibit P244 (Report of forensic investigations, Ministry of Justice, Netherlands Forensic Institute), pp 57-58; Anick van de Craats, T. 28 August 2014, p. 78; exhibit P266 (Spanish forensic team expert report), pp 263, 266.

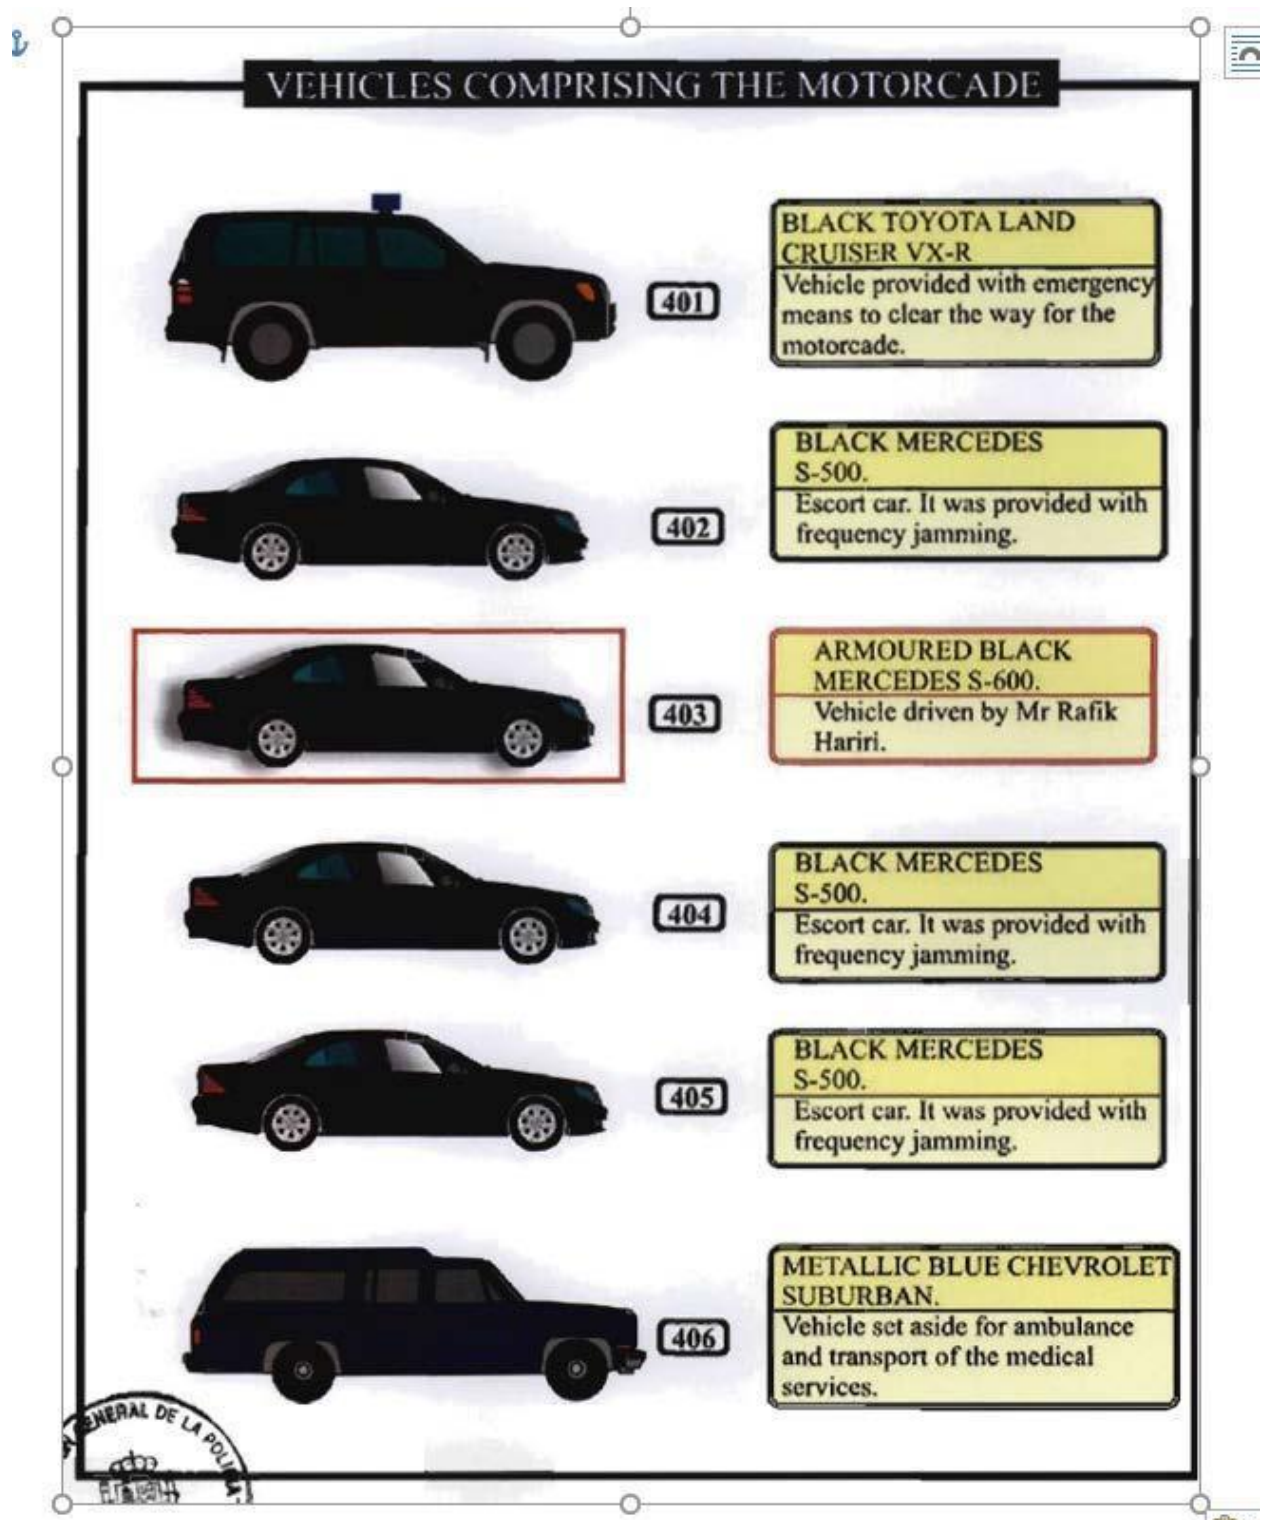

Exhibit P266 (Spanish forensic team expert report), p. 272

1057. The expert forensic teams determined the relative position of the vehicles at the time of the explosion, as reflected in their numbering of the vehicles. Vehicles 401, 402 and 403 had passed the explosive device before it exploded as damages to them were more severe in the rear or on the rear right side.²¹⁰⁰ The rear of vehicle 401 was less affected than that of vehicles 402 and 403.²¹⁰¹ It is likely that vehicle 404 was located very close to the IED,²¹⁰² closer than 403 and 405, at the time of the explosion.²¹⁰³ Vehicles 405 and 406 were more heavily damaged on the front right side; therefore they were facing the explosion centre.²¹⁰⁴ Vehicle 405 was almost fully destroyed, and vehicle 406 had less damage.²¹⁰⁵

²¹⁰⁰ Exhibit P244 (Report of forensic investigations, Ministry of Justice, Netherlands Forensic Institute), p. 89; Anick van de Craats, T. 28 August 2014, p. 79; exhibit P266 (Spanish forensic team expert report), pp 258-260, 264-265.

(b) Collection of evidence

1058. On Monday 14 February 2005, after the explosion, Judge Mezher organised a meeting of ten to 20 people including high-ranking officers from state security, the army, the ISF and general security, and junior officers.²¹⁰⁶ The judge issued instructions to all security units to work together in the investigation of the crime scene.²¹⁰⁷ Members of the ISF's Bureau of Explosives and two soldiers brought two to four vehicle parts found in the crater to the meeting.²¹⁰⁸

i. Collection of vehicle parts

1059. Judge Mezher assigned the ISF Bureau of Explosives the task of identifying the vehicle, if any, to which the parts belonged.²¹⁰⁹

1060. The Explosives Bureau's task was to inspect and examine suspicious vehicles, disarm devices, confiscate explosive material and inspect explosion sites.²¹¹⁰ Within an hour of the explosion, Witness PRH566, who worked at the bureau, and four explosive experts went to the crime scene to inspect it.²¹¹¹ These experts were: Mr Joseph Safi, First Sergeant Hussein Krayem and two civilian contractors working at the bureau, Mr Mahmoud Khashab and Mr Walid Othman.²¹¹² Witness 566 and his colleagues were the first to enter the crater after the explosion.²¹¹³ They retrieved items from the explosion, including vehicle parts—examined in detail below—

noted where they were found and stored them at the bureau in Helou Barracks.²¹¹⁴ Witness 566 and his colleagues then prepared a report.²¹¹⁵

Underwater collection

1061. About four days after the explosion, Mr Samir Yazbek, the Head of the Lebanese Civil Defence's Marine Rescue Team, was assigned by the Directorate General to conduct a diving mission in the St Georges area to look for Mr Mohammed Ghalayini who was missing.²¹¹⁶ During the mission, Mr Yazbek recognised vehicle parts and filmed them.²¹¹⁷ Almost a month later, between 12 and 16 March 2005, he conducted several diving missions to retrieve vehicle parts in coordination with officials from the ISF Central Accidents Bureau.²¹¹⁸ Dr Schlatter from the Swiss team of experts was involved in the dive with Mr Yazbek on 12 March 2005, and they found a metal part containing Mitsubishi insignia.²¹¹⁹ Mr Yazbek retrieved 62 parts from the seabed facing the St Georges Hotel on these dives and handed them over to the Central Accidents Bureau.²¹²⁰

1062. On 16 March 2005, Mr Gemayel, with the Central Accidents Bureau of the ISF judicial police, photographed artefacts collected by Mr Yazbek from the seabed, 500 metres to one kilometre from the explosion.²¹²¹ When an item was recovered, it was photographed and assigned a brief description and a number up to 62.²¹²² The item was then given to an explosives expert.²¹²³

²¹²³ Tanios Gemayel, T. 10 February 2014, pp 53, 55.

1063. One of the Lebanese divers retrieved an indicator handle—a vehicle part near the steering wheel—and it was later found to belong to the Mitsubishi Canter.²¹²⁴ However, according to Mr Othman, this part was never taken to a laboratory for fingerprint analysis. He was not aware of any judicial order to test for fingerprints and such an order would not be logical given that the part had been in salt water and the fingerprints would not have remained.²¹²⁵

1064. Mr Malcolm Wilson, a police officer with the Anti-Terrorist branch of the Counter-Terrorism Command in the UK,²¹²⁶ and two other police officers travelled to Beirut from the UK on 20 June 2005 at the UNIIIC's request.²¹²⁷ Their purpose was to establish the feasibility of an underwater search of the Mediterranean Sea and a swimming pool near the crime scene to recover evidence.²¹²⁸ The swimming pool could not be emptied as it was fed by sea water and needed to be searched by divers.²¹²⁹ It was in a horrible state, containing rotting material, rubbish and other detritus.²¹³⁰ At the end of this visit, Mr Wilson and his team estimated that a team of six divers from the UK Metropolitan Police, assisted by local Lebanese divers, could systematically search the designated area of the sea and swimming pool in eight to ten days.²¹³¹

Aerial photograph of the crime scene showing the sea, the marina and the crater

Exhibit P244 (Report of forensic investigations, Ministry of Justice, Netherlands Forensic Institute), p. 11 (photo 2)

1065. On 26 August 2005, Mr Wilson and six police officers returned to the crime scene and commenced a forensic search of the marine areas.²¹³² They were assisted by 12 or more Lebanese divers, depending on the day, most of whom were unpaid volunteers.²¹³³ The dive team marked the designated search area in the sea with buoys and weighted ropes in an arc shape in front of where the explosion occurred, beginning some 100-120 metres from the crater.²¹³⁴

1066. When an item was recovered from the seabed, the divers brought it from the point of recovery to Mr Wilson at the marina, where he was informed as to where it was found. These items were cleaned and examined to see if they had any identifying marks and Mr Wilson then

sequentially labelled them and handed them over to the UN local investigator, Mr Rizvi Kaiser.²¹³⁵ Mr Wilson assigned letters to the recovered items depending on whether they came from the sea and if they were vehicle parts.²¹³⁶ At the conclusion of the search, the divers had performed a sweep of beyond 230 metres offshore.²¹³⁷ Two divers recovered several items, including vehicle parts, from the swimming pool.²¹³⁸ The dive team concluded its search on 3 September 2005 and recovered a total of 40 items.²¹³⁹

ii. Collection of videotaped claim of responsibility by Lebanese authorities

1067. On the night of 14 February 2005, Mr El-Sayyed heard from journalist Mr Ibrahim El-Amine that the chief of Al-Jazeera's Beirut office, Mr Ghassan Ben-Jeddo,²¹⁴⁰ was in possession of a videotaped claim of responsibility for the attack.²¹⁴¹ Al-Jazeera employees collected it from a cardboard box placed in a tree near their office. Mr El-Sayyed called Mr Ben-Jeddo and requested that he bring him the video tape.²¹⁴² The following morning, Mr Ben-Jeddo met Mr El-Sayyed and gave him the tape in a white envelope.²¹⁴³ Mr Ben-Jeddo informed him about the telephone calls leading up to the collection of the video tape and Mr El-Sayyed asked him if anyone had opened the envelope; Mr Ben-Jeddo stated: 'We tried to hold it with a handkerchief'.²¹⁴⁴

1068. Mr El-Sayyed believed there may have been fingerprints on the video tape and attached a 'highly confidential' seal and a note to it: 'Please do not carry or put your hand on the tape in order

to protect the fingerprints’.²¹⁴⁵ He then provided the tape to Judge Abou Arraj; according to procedure, it is the military investigating judge’s responsibility to take control of all evidence related to a case and he or she can then refer the case to the ISF for further investigation if necessary.²¹⁴⁶ Mr Ben-Jeddo testified that the letter—attached to the video tape—was not handled with the same care as the video tape.²¹⁴⁷ He gave the original letter either to Mr El-Sayyed or to the FitzGerald fact-finding mission.²¹⁴⁸ The Al-Jazeera employees had not retrieved the cardboard box from the tree, only the envelope containing the tape and the letter.²¹⁴⁹

(c) Management of the crime scene and investigation

i. Lebanese officials’ investigation of the crime scene

Lack of training and coordination by Lebanese authorities

1069. General Ashraf Rifi was the ISF Deputy Inspector General, and also the liaison officer of the Ministry of Interior and Municipalities with the UN Fact-Finding Mission sent to Beirut to investigate the attack.²¹⁵⁰ He produced a report on 15 March 2005 with his conclusions about the investigation immediately following the attack and his proposals.²¹⁵¹ He reported that immediately following the attack, the security, military, judicial and civil defence services who rushed to the crime scene ‘unfortunately failed to meet the required standards expected from them and errors were committed’.²¹⁵² He reported a myriad of serious errors committed by the various authorities involved. They included that the crime scene was chaotic, not only in the first few hours after the incident but for an ‘unjustifiably long period afterwards’, and a lack of coordination between all of the security services present at the crime scene.²¹⁵³

1070. Mr El-Sayyed testified that the ‘crime scene investigators, particularly in the Lebanese interior forces, didn’t have the right experience. There were a lot of mistakes made’.²¹⁵⁴ According

²¹⁵⁴ Jamil El-Sayyed, T. 5 June 2018, p. 108.

to Witness 566, the lack of co-ordination between the security organs was illustrated when the security forces and the Lebanese army were extracting metal objects from the crime scene without informing the other of what they had found.²¹⁵⁵ There was a sense of competition between the security organs to discover what had happened.²¹⁵⁶

1071. Witness 566 testified that he and his colleagues were not trained either to conduct an investigation or preserve a crime scene for forensic analysis.²¹⁵⁷ They also were not supplied with the required equipment to manage the crime scene.²¹⁵⁸ However, they were not in charge of protecting the crime scene.²¹⁵⁹

1072. Critical evidence was removed from the crime scene when the six convoy vehicles were removed and taken to the Helou Barracks ‘under the pretext of preserving them’.²¹⁶⁰ Tow trucks and other heavy duty vehicles used to remove the vehicles drove into the crime scene within hours of the explosion to remove the convoy vehicles.²¹⁶¹ Another vehicle, a BMW, which was not part of the convoy, was also removed. According to General Rifi, care should have been taken to preserve the vehicles in the exact positions they were in after the explosion to assist in establishing the circumstances of the attack.²¹⁶²

1073. Furthermore, General Rifi noted that a bulldozer entered the crime scene on the evening of 14 February 2005 for no justifiable reason; as soon as the Minister of Interior and Municipalities became aware of this, he ordered that it be removed and for the crime scene to be preserved.²¹⁶³

1074. Mr Kheireddine, a Lebanese police officer and one of the first responders at the crime scene, noted the presence of a bulldozer in a video taken by him and his team although he had not been informed of any plan to clear the crime scene on 14 or 15 February 2005.²¹⁶⁴ Bulldozers and

heavy machinery were used to rescue victims who were still alive and remove bodies. There was no clear organisation of such tasks.²¹⁶⁵

1075. Yellow crime scene tape had not been used, at least in one instance, across the front of the St Georges building.²¹⁶⁶ According to Mr Kheireddine, a crime scene should have had tape around the entire perimeter, and people who were not supposed to be there should have been removed.²¹⁶⁷ He also testified that explosives experts at the crime scene on 14 February 2005 were not wearing gloves but that using gloves and special clothing would have been proper procedure for anyone inspecting a crime scene involving an explosion.²¹⁶⁸ Mr Kheireddine said that standard practices and training for such investigations have changed post-February 2005.²¹⁶⁹

1076. Mr Othman, a member of the ISF forensic team sent to the crime scene immediately after the explosion, testified that his team did not wear special clothing or gloves while examining the crime scene; it was chaos and they were working under difficult circumstances and their main concern was to ‘find any evidence in order to preserve it and use it later on’.²¹⁷⁰ Procedures have changed since 2005 and now forensic teams in Lebanon use internationally-recognised protective clothing to attend crime scenes.²¹⁷¹

1077. According to Dr Murray, an expert in forensic explosives investigations,²¹⁷² using gloves and forensic suits is standard procedure for anyone entering a crime scene, particularly after an explosion has occurred.²¹⁷³

Exhibit P160

1079. Although formal guidelines existed regarding processing evidence after an explosion,²¹⁷⁵ Witness 566 testified that, for example, the parts collected from the crime scene and brought to the meeting at the military court on 14 February 2005 were not labelled or even stored in a container.²¹⁷⁶ The experts did not have an official log of recovered items, nor were records kept of the timing of when each item was retrieved.²¹⁷⁷ The vehicle parts were only given codes once the experts finished collecting all of the parts.²¹⁷⁸

1080. Mr Othman, Mr Khashab and Mr Krayem, members of the ISF forensic team and Witness 566's colleagues, testified that, at the request of investigating Judge Abou-Arraj, their team returned around 33 vehicle parts they had retrieved on the day of the explosion—including four Mitsubishi vehicle parts—to the crime scene on 17 or 18 February 2005.²¹⁷⁹ The judge told them to return the parts to the crime scene because the UN Fact-Finding Mission wanted them back in

the locations where they were initially found.²¹⁸⁰ Mr Khashab and Mr Krayem returned the parts and tried to place them in their approximate locations, both inside and around the crater.²¹⁸¹ Mr Khashab testified that they did not have any notes or diagrams to remind them of where the parts were originally found, however, Mr Krayem testified they had drafted a small map and they put the parts back at the crime scene according to this map.²¹⁸² They then photographed and labelled the parts.²¹⁸³

Search for victims at the crime scene

1081. General Rifi reported that the search for missing people was conducted in ‘an irresponsible, unprofessional and careless manner; some missing persons were found by chance or by families at a later date’. For example, Mr Zahi Bou Rjeily’s body was found on Tuesday 15 February 2005 and based on the medical examiner’s report he was alive for 12 hours after the explosion.²¹⁸⁴ Another victim’s body was found eight days after the explosion and Mr Ghalayini’s body was found 16 days after the attack by his family rather than by police officers or civil defence services.²¹⁸⁵

1082. Ms Lama Abdul Hamid Ghalayini, Mr Abdul Hamid Ghalayini’s daughter, testified during the victims’ case about the search for her father’s body.²¹⁸⁶ She testified that her sister first went to the explosion site on 15 February at 11:00 and was surprised to find that no search and rescue operations were ongoing; only the convoy vehicles had been removed.²¹⁸⁷ Civilians and politicians

were also present at the site.²¹⁸⁸ Ms Ghalayini and her family asked the police to use trained dogs to search the area but the police said it was not authorised.²¹⁸⁹

1083. On 17 or 18 February, Ms Ghalayini and her family then sought and received permission from an investigative judge to bring their own trained dogs ‘from a special school for dogs’ to search the crime scene for Mr Ghalayini because they were not given police dogs.²¹⁹⁰ First Lieutenant Shadi Saadeddine, from the ISF Counter-terrorism and Major Crimes Unit,²¹⁹¹ escorted the family—including Ms Ghalayini, her sister, two uncles and cousins—during the search on 17 February.²¹⁹² The dogs were given Mr Ghalayini’s clothes to smell first before searching for him.²¹⁹³ According to Mr Saadeddine, search dogs are usually trained and accompanied by a member of the judicial police and based on his recollection this was not the case during this visit.²¹⁹⁴ Ms Ghalayini pointed out burned body parts and other evidence to Dr Ayoub and police officers who were searching the crime scene that day and they collected the evidence.²¹⁹⁵ They started the search late in the day and it got dark quickly and they could not see anything so the family left the crime scene with the dogs without finding Mr Ghalayini.²¹⁹⁶

1084. On Saturday 19 February, the police brought their own dogs to search the crime scene for Mr Ghalayini for about 20 minutes but did not find him.²¹⁹⁷ Ms Ghalayini and her sister were present at the crime scene during this search and were told that the dogs they used that day were not trained to search for bodies, but rather for explosives and drugs.²¹⁹⁸ However, someone told her that a search for bodies with the assistance of dogs would have been easier if it had been done much earlier, immediately following the explosion.²¹⁹⁹

²¹⁹⁹ Lama Ghalayini, T. 28 August 2017, p. 36.

1085. On Monday 21 February, Ms Ghalayini and her family participated in an unsuccessful search for her father's body at sea with a team of professional divers from the Civil Defence.²²⁰⁰

1086. On Tuesday 22 February, Ms Ghalayini and her sister returned to the crime scene where they did not see any obvious search operation continuing; vehicles were still in place, or cut into pieces, at the crime scene, including on the side of the Byblos building where their father's body was later found.²²⁰¹

1087. Ms Ghalayini and members of her family met Judge Abou-Arraj on Saturday 26 February and he informed them that the search operation of the crime site was completed and they were no longer searching for bodies. He said that there were only two bodies which had not been found—her father's and Mr Abu Adass's—and that they would not find any of her father's 'dust', or any of his remains, at the crime scene.²²⁰²

1088. Following this meeting—and a report in the media that a stray cat at the crime scene was seen holding a hand in its mouth—Ms Ghalayini and her family organised a peaceful sit-in on 1 March close to the St Georges Hotel to put pressure on the authorities to continue searching the explosion site.²²⁰³ Hundreds of people participated in the sit-in, including demonstrators already at the scene, friends and family and opposition MPs.²²⁰⁴

1089. The same day, with additional pressure from some of the MPs at the sit-in, the investigative judge authorised the family to enter the crime scene on 2 March at 09:00 together with a search team.²²⁰⁵ The family initially was not allowed to enter and while Ms Ghalayini's uncle was negotiating with the Beirut police chief near the Byblos building, he detected a bad smell and saw flies surrounding one area.²²⁰⁶ He pointed this out and Civil Defence personnel then checked this spot, where vehicles had been parked the day before. They found a foot under a small layer of

sand, and under the foot, they found Mr Ghalayini's body.²²⁰⁷ After his body was found, there was a state of chaos as civilians and media entered the crime scene and photographed the body.²²⁰⁸

1090. General Rifi reported that another serious error which undermined the investigation was the delay in and the failure to appoint an investigating judge to oversee the case.²²⁰⁹ According to General Rifi, as soon as Judge Abou-Arraj took over the investigation, all of the security services and judicial police officers fell under his command; he issued writs and took measures in particular to preserve the crime scene. However, the measures did not meet the required standards for dealing with a crime scene of this magnitude. General Rifi stated that stricter measures were required to prevent tampering with the crime scene and preserving the evidence to assist in the investigation, while ensuring that priority was given to search for the dead and injured and provide necessary first aid.²²¹⁰ According to Witness 566, following the instructions from the investigating judge, coordination improved.²²¹¹

1091. General Rifi also reported that the ISF Inspectorate General conducted disciplinary investigations pursuant to instructions from the Minister of Interior and Municipalities on 25 February 2005 following the flawed investigation of the explosion. As a result, the ISF Inspectorate General recommended the dismissal of both Chiefs of the Beirut Police and the Judicial Police.²²¹²

1092. At some point before the explosion, Witness 566 was introduced to Mr Jameh Jameh, an officer with the Syrian Intelligence, by Mr Krayem and Mr Khashab, his colleagues at the ISF Explosives Bureau.²²¹³ He was requested to regularly inform Mr Jameh whenever an incident related to security occurred. This disturbed Witness 566.²²¹⁴ Mr Jameh called Witness 566 on Tuesday 15 February to ask about the explosion the previous day.²²¹⁵ Witness 566 further called

Mr Jameh on 15, 16, 17 and 23 February to relay further information about the explosion.²²¹⁶ According to Witness 566, Mr Jameh and his staff were the ‘de facto rulers’ of the crime scene and needed to be involved in order to prevent clashes.²²¹⁷

ii. Swiss forensic team investigation of crime scene—March 2005

1093. The Swiss forensic team arrived in Beirut in March 2005.²²¹⁸ Dr Konrad Schlatter, a Swiss chemist who the Trial Chamber declared an expert in examining explosives,²²¹⁹ identified a number of ways in which the crime scene in Beirut was altered. Evidence was moved as a matter of course because a lot of emergency personnel and other officials were on and around the crime scene.²²²⁰ The convoy vehicles had already been removed, in some instances not very carefully, and pieces of evidence had been removed when he and his team arrived.²²²¹ In fact, the removal of vehicles by mechanical means allowed for the potential for distortion or damage of the vehicles.²²²² Dr Schlatter and his team reviewed videos taken at the time and it was evident that little attention was given to securing evidence at the crime scene.²²²³

1094. Dr Schlatter described that environmental influences, such as heat from the explosion and sunshine, moisture due to a burst water pipe and several periods of rain, wind and light, can all lead to chemical changes in the evidence.²²²⁴ Heavy machinery was used at the crime scene²²²⁵ and some repair work had already been carried out.²²²⁶ Dr Schlatter testified that altering the crime scene made his team’s work more difficult as the crime scene was no longer in its original state

and he was not confident that items found at the scene were all from the explosion.²²²⁷ Despite the alterations, he acknowledged that it was still possible to obtain information about the explosion.²²²⁸

iii. Dutch forensic team investigation of crime scene—August 2005

1095. The Dutch forensic team started its investigation of the crime scene on 13 August 2005, assisted by other experts and Lebanese officers.²²²⁹ The area of the explosion stretched along the main road, *Rue Minet el Hosn*, for around 250 metres in between the St Georges Hotel to the north, north-east, and Hotel Byblos to the south, south-west.²²³⁰ The team divided the crime scene into inner and wider parts, and the inner crime scene into 11 zones.²²³¹ The inner crime scene included the St Georges and Byblos Hotels, part of *Rue Minet el Hosn* between the two hotels and the crater.²²³² The wider crime scene included longer stretches of *Rue Minet el Hosn*,²²³³ a park, a building next to the HSBC Bank to the east, part of the Marina road, the coastal area of the Mediterranean Sea, a swimming pool and a parking lot with three power generators to the west.²²³⁴

mostly metal or plastic fragments from vehicles, including from a red Ford, one or more Mercedes and a Mitsubishi, electronic wires and circuit boards, a weapon with eleven spent cartridges, two discharged and one damaged bullets, personal items, such as a note with telephone numbers, a SIM card, a valet, a pair of glasses, keys and a TV remote control.²²⁴⁴

iv. Spanish forensic team investigation of crime scene—May to June 2006

1099. The Spanish government sent a team of experts to Beirut in May 2006 to assist in the investigation.²²⁴⁵ Witness 155 described the methodology of the Spanish team, including the recording of evidence located,²²⁴⁶ dividing the crime scene into specific search zones,²²⁴⁷ and its search practices.²²⁴⁸ He said that debris was searched, sifted then piled to leave a clear central area,²²⁴⁹ and that it was expected that they would clear the crime scene of all traces of evidence.²²⁵⁰ Every mound of debris found at the crime scene was opened and examined carefully, even where the materials had been moved from another area of the crime scene after the explosion.²²⁵¹ The team collected items of interest and listed them in an inventory as an appendix to their final report.²²⁵² Given the time constraints, Witness 155 said a selective approach was taken, focusing on items such as possible metallic parts from the bomb, the vehicles involved and possible organic remains from the victims.²²⁵³ The materials collected were consistent with other crime scenes where there had been an explosion, including bone fragments, clothing, wiring, electronic circuits and parts of vehicles.²²⁵⁴

1100. However, according to the witness, there were shortcomings in the preservation of the crime scene.²²⁵⁵ Heavy machinery had been used to move debris, which included evidence, and

other forensic teams had examined the crime scene before his team arrived.²²⁵⁶ He highlighted that evidentiary material was still found by his team 15 months after the explosion, and even after the scene had already been searched by the Swiss and Dutch forensic teams and Lebanese investigating authorities.²²⁵⁷ However, he acknowledged that an initial search may have been difficult because of the confusion after the explosion and the risk of further attack or of a fire following the initial explosion.²²⁵⁸ Further, the crime scene was an 11,000 square metre site covered with rubble, and evidence may have been as small as a finger nail. Finally, some areas, such as the terraces of the St Georges Hotel, had not previously been cleared, and items found by his team there had not been moved there after the explosion.²²⁵⁹

v. Submissions

1101. The Merhi Defence argues that the crime scene was a state of chaos and mismanaged following the explosion.²²⁶⁰ The crime scene was severely contaminated and this therefore casts doubt on the reliability of the evidence collected there and on the results of its analysis.²²⁶¹ The crater and its content were mismanaged by the 'Lebanese authorities'. They allowed a significant number of people in and around the crater to collect human remains and move vehicle parts from the explosion.²²⁶² The area around the crater was disturbed by bulldozers and the crime scene was not sealed off or restricted and family members and unaccompanied dogs were allowed to enter.²²⁶³ The crater had also flooded with water which further damaged the evidence in it.²²⁶⁴ Also, vehicle fragments found at the scene were mishandled and the convoy vehicles were removed the evening of the explosion. Explosive experts removed a number of vehicle parts and then returned them 'roughly to the location at the crime scene where they had been found'.²²⁶⁵

1102. The Prosecution responded that any issues with the management of the crime scene by the Lebanese authorities did not affect the collection of the DNA.²²⁶⁶

vi. Findings on the management of the crime scene and investigation

1103. The Trial Chamber received extensive evidence about the crime scene investigation, including from members of the Lebanese police, fire department, Civil Defence and ISF Explosives Bureau who were the first responders at the explosion site. It also received evidence from members of the international investigation teams sent to assist in the investigation and to collect further evidence at the crime scene between March 2005 and July 2006.

1104. The Trial Chamber has also considered further evidence, including from surviving members of the convoy and participating victims, either relatives of those who died in or as a result of the explosion or people who were physically injured. This is analysed in detail in relation to the harm to the victims.²²⁶⁷

1105. The evidence reveals a mismanaged, disorganised and chaotic approach to the crime scene investigation, particularly in the initial period after the explosion. Extensive evidence was received from which the Trial Chamber can conclude that there was little to no coordination between the various responsible Lebanese authorities during this period.

1106. While acknowledging the ease of hindsight criticism, it is also evident that many elementary crime scene procedures were either ignored or not followed. The Trial Chamber recognises the inevitability of turmoil in the immediate aftermath of such a terrorist attack—including of course the uncertainty of whether another may follow—and especially where someone as prominent as Mr Hariri was its target. On top of this was the natural concern of friends and family of those who may have been victims of the explosion, who rushed to the scene and were allowed onto it. And into this mix must be added the distrust—that some Lebanese people had towards their state institutions—that some victims testified about. The evidence revealed the frustration that some victims felt in relation to the competence of the investigation, with some even taking investigatory matters into their own hands.

²²⁶⁶ Prosecution closing submissions, T. 13 September 2018, pp 53-54.

²²⁶⁷ See sub-section (G) ‘Victim harm’, below.

1107. The Trial Chamber also recognises that the priority immediately after the explosion was rescue and recovery—with an emphasis on the wounded—and safety in, for example, putting out the fire. This would inevitably contaminate any crime scene. Securing the crime scene was, it appears, very much a secondary issue.

1108. However, putting these factors aside, some of the most basic crime scene processes were virtually non-existent. For example, while the fire brigades on the scene in the first hours used yellow tape to cordon off at least part of the crime scene after putting out the fire, they were not responsible for preventing civilians from entering the crime scene. Nor were the fire brigades in charge of protecting the crater. These responsibilities fell to the military and security forces. As a result, numerous civilians including journalists were allowed to enter the crime scene haphazardly within hours of the explosion and in the days following. Although the Trial Chamber received evidence that the wider crime scene was cordoned off on Tuesday 15 February 2005, and guarded by the ISF, photographs and videos showed numerous non-essential personnel trampling over an unsecured crime scene.

1109. Also, members of the Lebanese forensic team and police did not wear gloves or forensic suits while investigating the crime scene or handling exhibits, while according to Dr Murray, using such protective gear is standard procedure following an explosion. These lapses were inexplicable and the Trial Chamber agrees with General Rifi's contemporaneous critique in this sense.

1110. But what is perhaps more incomprehensible was the removal of the convoy vehicles from the crime scene immediately after the explosion—by mechanical means, and in some instances not very carefully. Bulldozers and heavy machinery also were used at the crime scene. The removal process allowed for potential damage to the vehicles and the heavy machinery disturbed the crime scene at a crucial time before any forensic experts could search for or analyse evidence. The video of the removal shows a reckless destruction of a crime scene which may have resulted in the loss of crucial forensic evidence. This was completely avoidable. It was done on the evening of Monday 14 February when there was no reason, much less any urgency, in suddenly—and during the night—clearing a live crime scene in this rough and insensitive manner. Although it is possible that the Lebanese authorities, including Judge Mezher, instructed the immediate removal of the convoy vehicles to preserve them from any interference at the crime scene, the Trial Chamber is not satisfied that this was justified or prudent, at least not in the manner it occurred.

1111. And thereafter, the crime scene was neither properly secured nor protected from further potential contamination, such as from the elements. In this respect the Trial Chamber has considered the environmental influences on the evidence found at the explosion site, including rainfall at least on 19 February 2005,²²⁶⁸ which added to the water damage from the fire hoses used to extinguish the fire.

1112. Furthermore, the authorities had no coordinated procedure to search for missing persons in the days following the explosion, and some victims' bodies were found weeks after the explosion. This cannot be attributed to the initial panic and chaos at the crime scene immediately after the explosion. As an example, Mr Ghalayini's body was found only after repeated attempts by his family to search for him at the crime scene, on their own and on one occasion with search dogs they brought onsite and paid for themselves. After contacting authorities on multiple occasions, Mr Ghalayini's family members themselves ultimately found his body buried under rubble, over two weeks after the explosion occurred, on 2 March 2005.²²⁶⁹

1113. As noted, the Trial Chamber refers to General Rifi's conclusions, and especially that the crime scene was chaotic not just in the first hours but for an 'unjustifiably long period afterwards'. In particular, it accepts his conclusion that the search for missing persons was unprofessional and careless and care was not exercised in processing and preserving evidence from the crime scene.

1114. The Trial Chamber also agrees with the international experts' criticisms of the management of the crime scene. The Swiss forensic experts—who arrived on 5 March 2005, three weeks after the explosion—noted that little attention had been given to securing evidence at the crime scene and that heavy machinery was used to remove vehicles and for other purposes. Further, environmental influences also negatively affected the reliability of the evidence.

1115. However, despite this, the Swiss experts could still collect evidence to assist in the investigation. The Dutch forensic team arrived in Beirut six months after the explosion, in August 2005, and recovered more than 1,000 exhibits from the crime scene. But to exacerbate this, the Spanish team found evidence at the crime scene *15 months after* the explosion, even *after* the scene

²²⁶⁸ On Dr Ayoub's evidence, *see* para. 1383, below.

²²⁶⁹ *See* paras 1027, 1391.

had already been searched by Swiss *and* Dutch teams, *and* Lebanese authorities. The Spanish experts even cleared new areas of the explosion site which had never been previously searched.

1116. The Trial Chamber cannot comprehend the lack of coordination in the investigation following the explosion which even continued—albeit to a lesser degree—in the subsequent searches by the international forensic teams, as is demonstrated by the fact that they continued to find and process evidence 15 months after the attack. The Trial Chamber acknowledges, however, that, as noted by the Spanish forensic team, the crime scene spanned 11,000 square metres and evidence may have been as small as a finger nail.

1117. In light of the above, the Trial Chamber finds that the mismanagement of the initial investigation could have affected the reliability of some evidence recovered at the crime scene, including aspects of the collection of human remains. This is further considered below in relation to the findings on the human remains recovery and their DNA analysis, and in particular as it relates to an unidentified male.

1118. Despite all this, the Trial Chamber is satisfied that Lebanese officers and experts, assisted by multiple international forensic teams, conducted thorough and successful investigations into various aspects of the explosion in very difficult circumstances. This included explosives, ballistics and forensic crime scene investigation—including Lebanese volunteers and international underwater diving teams and experts in identifying vehicle parts—and forensic science and human identification.

1119. The Trial Chamber is satisfied that the various investigations resulted in the reliable collection of key evidence at the crime scene, such as the vehicle parts and some of the human remains, which are addressed below. The Trial Chamber is not convinced that the gross deficiencies in the initial investigation affected in any material manner the evidence underlying the issues that require deliberation on the guilt of the Accused.

2. Forensic analysis of the explosion

1120. How the explosion occurred was a significant focus of the trial. Conflicting evidence was presented as to the quantity of explosives used, whether the explosion took place above or below ground and how it was triggered.

1121. The Trial Chamber has carefully reviewed the enormous body of technical and forensic evidence relating to these and other issues. This included forensic reports, several of which were hundreds of pages long.²²⁷⁰ Around 30 witnesses provided statements or testified before the Trial Chamber, some over multiple days.²²⁷¹ Defence counsel extensively challenged much of this evidence through cross-examination.²²⁷²

1122. The Trial Chamber designated as experts a number of witnesses who testified and provided their analyses of the explosion: Professors Daniel Ambrosini and Bibiana Luccioni, who are Argentinian professors of engineering and experts in analysing the effects of explosions;²²⁷³ Mr Bart Hoozeboom, an image researcher at the Netherlands Forensic Institute who is an expert in forensic image analysis;²²⁷⁴ Dr Gerard Murray, a chemist from Forensic Science Northern Ireland who is an expert in forensic explosives investigations;²²⁷⁵ Dr Anick van de Craats, a senior forensic advisor at the Netherlands Forensic Institute who is an expert in forensic explosives investigations;²²⁷⁶ Mr Gerhard Geyer, a Mitsubishi manager in Germany who is an expert in identifying Mitsubishi Canter parts;²²⁷⁷ Dr Konrad Schlatter, a Swiss chemist who is an expert in examining explosives;²²⁷⁸ and Witness 507, who designed and built jamming device systems for Mr Hariri's convoy and is an expert regarding the functioning and operation of jamming devices.²²⁷⁹

Nohra²²⁸¹ testified. Ms Robyn Fraser, a former Prosecution investigator,²²⁸² and Mr Ali Mohammed Diab, an electrical engineer who helped to install jamming devices in Mr Hariri's convoy, also gave evidence.²²⁸³

(a) High explosives

1124. The Prosecutor alleges that high explosives were used in the attack.²²⁸⁴ The Trial Chamber heard evidence regarding the science of high explosives as well as the kind of explosion that occurred during the attack.

i. High explosives in general

1125. Dr van de Craats explained that high explosives are chemical substances that react very rapidly, namely in micro-seconds, to suitable stimuli, thereby releasing a large amount of energy.²²⁸⁵ An explosion of high explosive material is known as a detonation reaction.²²⁸⁶

1126. The Dutch forensic team noted that the primary effects of a detonation reaction are a shock wave, a fireball and a blast in the air.²²⁸⁷ The instantaneous production of such a large amount of gases increases the pressure, thereby causing the sound effect.²²⁸⁸ The secondary effects of the explosion can include the projection of high velocity fragments from destroyed materials close to the explosion's centre, the sliding of large objects such as vehicles and the movement of entire walls from the blast.²²⁸⁹

1127. Dr van de Craats explained that the detonation velocity, namely the speed at which the detonation reaction propagates, is higher than the speed of sound²²⁹⁰ and is so fast that it results in

brisanse—the complete destruction of all material in the near vicinity. This explains why there is a crater.²²⁹¹ When the detonation velocity increases, the brisanse effect is greater and the fragments from the explosion are smaller.²²⁹²

ii. Were high explosives used in the attack?

1128. Dr van de Craats opined that the attack consisted of a detonation from high explosives.²²⁹³ She observed that when wall or ceilings have been moved, it shows it was a detonation reaction.²²⁹⁴ The bent column and the canopy bent upwards at the front of the St Georges Hotel demonstrated that a detonation reaction had occurred very close to the building.²²⁹⁵ Similarly, the fact that a three-and-a-half metre section of the front wall of the Byblos Hotel that was 20 centimetres thick had been pushed back 60 centimetres and severely demolished meant that an ‘enormous explosion’ had taken place.²²⁹⁶

²²⁹¹ Anick van de Craats, T. 28 August 2014, p. 46, T. 1 September 2014, p. 57; exhibit P244 (Report of forensic investigations, Ministry of Justice, Netherlands Forensic Institute), p. 9.

Exhibit P244 (Report of forensic investigations, Ministry of Justice, Netherlands Forensic Institute), p. 41

1129. Dr van de Craats observed that the explosion had been so powerful that it had blown out all the sliding doors on the balconies of the Byblos Hotel and propelled some of them into the back wall of the building.²²⁹⁷

²²⁹⁷ Anick van de Craats, T. 28 August 2014, pp 56-59; exhibit P244 (Report of forensic investigations, Ministry of Justice, Netherlands Forensic Institute), pp 45-46.

Photo 34: A frame of a sliding door to the balcony at the front of the Byblos Hotel penetrating into the back wall of the building with in the enlarged photo a detail of this penetration.

Exhibit P244 (Report of forensic investigations, Ministry of Justice, Netherlands Forensic Institute), p. 45

1130. Dr van de Craats explained that the deformation, irregular pattern of sharp edges and shearing off of metal fragments recovered at the scene also demonstrated a large explosive force and intense heat, further demonstrating that a detonation explosion reaction had occurred.²²⁹⁸

1131. The Swiss forensic team also determined that high explosives were used, given the presence of ‘washout’ on pieces of debris, vehicles and metal structures close to the crater.²²⁹⁹ Washout occurs when metals that are very close to high explosive explosions are exposed to

²²⁹⁸ Anick van de Craats, T. 28 August 2014, pp 95-97.

²²⁹⁹ Konrad Schlatter, T. 26 August 2014, pp 57-58; exhibit P242 (Swiss forensic team expert report), pp 9, 19.

extreme pressure and temperatures, resulting in the removal or evaporation of materials. The traces left on the parts from this process are known as washout.²³⁰⁰

1132. Dr Schlatter acknowledged that the same effects produced by washout can also be caused by erosion, corrosion and acid. The Swiss team did not test the metal pieces for washout but relied on visual inspection.²³⁰¹ Dr Schlatter added that, because the team observed washout on several parts, this showed that it was caused by an explosion and not by other factors.²³⁰²

iii. Submissions

1133. None of the Defence made any challenges regarding this issue.

iv. Findings

1134. Based on the above, the Trial Chamber finds beyond a reasonable doubt that the attack consisted of a detonation reaction of high explosives. The damage and destruction to the St Georges and Byblos Hotels demonstrate the nature of the explosion, most notably the bent column and canopy at the St Georges Hotel and the large portion of the Byblos Hotel front wall that slid 60 centimetres. The mangled metal fragments found at the scene of the explosion, and the presence of washout on several of them, further confirms that high explosives were used during the attack.

(b) Type of high explosives

1135. The Prosecution alleges that the attack involved the use of the explosive material RDX.²³⁰³ The Trial Chamber has reviewed the evidence regarding the procedures for determining the type of explosives used, as well as the properties of RDX.

i. Identifying the type of explosives and RDX generally

1136. Dr Murray, who had had 40 years of experience with forensic explosives investigations and had examined hundreds of explosions,²³⁰⁴ explained the process for identifying the type of explosives used in an explosion. An explosion leaves traces because not all of the explosives are

²³⁰⁰ Konrad Schlatter, T. 26 August 2014, pp 57-58, T. 27 August 2014, p. 80.

²³⁰¹ Konrad Schlatter, T. 27 August 2014, p. 81.

²³⁰⁴ Gerard Murray, T. 29 September 2014, pp 7-8. *See also* exhibit P277 (Report of Gerard Murray), p. 2.

consumed in the explosion. Investigators should recover pieces of the explosive device or any other materials that might contain traces of the explosives and send them to a forensic laboratory. Factors that influence the presence of explosive residue on items include the nature of the explosive used, the time since the explosion, the treatment of the item's surfaces and the distance from the explosion.²³⁰⁵ The Swiss forensic team noted additional factors that can negatively affect the likelihood of finding residues, such as heat, humidity and the type and composition of the materials where the residue is found.²³⁰⁶

1137. Mr Khashab noted that explosive residues could be present on vehicle parts.²³⁰⁷ Mr Othman added that metals do not absorb explosive materials, and thus it was better to take samples for residue from tissues, textiles and soils and other materials that do absorb explosive materials.²³⁰⁸

1138. Dr Murray observed that swabs are used as part of the process to identify the type of explosives used. Swabs are made of cotton, wool or nylon, moistened with solvent and kept inside a small sealed polythene bag. The investigator takes the swab out, rubs it over a surface and returns it to a bag. In a general purpose explosives swabbing kit, not all the swabs are used. The unused ones are the control swabs, which are tested to see if the kit has been contaminated.²³⁰⁹

1139. Dr Murray added that, once his laboratory received the swabs, he first extracted any possible residues from the swabs with a solvent. He then processed the solution using high-pressure liquid chromatography to determine if there were potentially any commonly observed organic explosive materials. If the result was positive, another analysis was conducted to see if any particular explosive residue was present.²³¹⁰

1140. In response to questions from the Badreddine Defence, Dr Murray noted that cross-contamination is when an object with explosive residue left traces of that residue on another object.²³¹¹ One cannot distinguish between what was transferred via cross-contamination and what

was already present on the object itself.²³¹² Each transfer results in less residue being present.²³¹³ The amount of residue present on an object from cross-contamination depends on how much residue was on the object originally exposed to the explosive and how prolonged the contact was between the original object and subsequent objects.²³¹⁴

1141. Dr Murray agreed that exhibits at a crime scene should be carefully and individually packaged. Investigators should wear gloves and full forensic suits.²³¹⁵ If an investigator used bare hands to handle an exhibit at an explosion scene, the person should be swabbed before touching any exhibits.²³¹⁶ Exhibits should be transported and stored in sealed containers such as nylon bags to avoid cross-contamination.²³¹⁷

1142. Dr Murray discussed the properties of RDX, or cyclotrimethylenetrinitramine, which is a very powerful high explosive.²³¹⁸ It is typically available in one kilogram blocks that are about the size of a house brick, is malleable like modelling clay such that it can be moulded into any shape and remains stable and usable for years.²³¹⁹ Mr Khashab added that, because RDX is a soft explosive material, it can be compressed into a plastic bag, thereby increasing its destructive effect.²³²⁰

1143. It is relatively easy to acquire the components to make RDX.²³²¹ However, manufacturing RDX in a plasticized form would require chemical expertise and skill.²³²² It is commonly available as Semtex, which is composed of both RDX and an orange-coloured dye, and can be purchased from its manufacturer.²³²³ A couple of witnesses observed that RDX is so powerful that it is most

suitable for military purposes.²³²⁴ The manufacturer of Semtex said that it was available for industrial use but Dr Murray was unaware of any such use.²³²⁵

1144. RDX is about 1.35 times more powerful than TNT, or trinitrotoluene.²³²⁶ RDX's density is around 1.45 gram per cubic centimetre.²³²⁷ RDX requires a detonator with a small amount of high explosive, typically an electric detonator, battery and switch.²³²⁸

ii. Which high explosives were used in the attack?

1145. The Prosecution relies on Dr Murray's evidence to establish the type of high explosives used during the attack.²³²⁹

1146. After visiting the scene of the explosion in September 2005, Dr Murray worked with the Dutch forensic team to decide which items recovered from the scene should be swabbed to check for explosive residue.²³³⁰ Dr Murray and Dr van de Craats selected for swabbing metal fragments that were heavily damaged and highly deformed, thereby indicating they might have been closely involved with the explosion.²³³¹ The exhibits Dr Murray saw in Beirut were not bagged up; some were in cardboard boxes. Cross-contamination was therefore possible.²³³²

1147. Dr Murray provided swab kits and cotton swabs to Dr van de Craats, who performed the swabbing.²³³³ According to Dr van de Craats, the conditions for swabbing were good and the

standard international procedure for taking swabs had been followed.²³³⁴ Dr Murray agreed that the Dutch forensic team had taken steps to avoid cross-contamination.²³³⁵

1148. Specifically, the Dutch forensic team had used a recently renovated office where as far as known no explosive materials were used before. They cleaned the working table and put plastic covers on it, took control swabs of the working surface and the gloves of the person taking swabs and ensured that those taking swabs wore a sterile, surgical coat and gloves. They also processed the gloves and swabs under standard contamination control procedures and ensured that the person taking swabs wore no watches, rings or other ornaments.²³³⁶

1149. Dr Murray's laboratory examined the control swabs and found that they did not have any RDX present, which meant that the surfaces on which the swabs had been taken were not contaminated with RDX.²³³⁷

1150. At Dr Murray's laboratory in Northern Ireland, he analysed the swabs taken by the Dutch team.²³³⁸ Four swabs contained significant amounts of RDX.²³³⁹ Three of these came from parts of a Mitsubishi Canter.²³⁴⁰ The amount of RDX recovered was much higher than he had encountered when investigating explosions in Northern Ireland.²³⁴¹

²³⁴¹ Gerard Murray, T. 29 September 2014, pp 29-30.

1151. Dr Murray did not identify any other explosive materials.²³⁴² He concluded that the attack involved an RDX-based explosive, with no other type of explosive being used.²³⁴³ He could not identify its source.²³⁴⁴

1152. The Swiss forensic team also swabbed various items for explosive residue and took a soil sample from the crater. They divided the swabs and soil sample into three groups labelled A, B and C. Group A was analysed at the American University of Science and Technology in Beirut. Of these, only the soil sample tested positive for explosive residue, specifically TNT.²³⁴⁵ They were unable to test group B.²³⁴⁶ The Swiss team tested group C at their laboratory and did not find any explosive residue, including the soil sample from group C. Dr Schlatter explained that because the Swiss forensic team could not confirm the positive test for the group A soil sample, this result was questionable.²³⁴⁷

1153. The Spanish forensic team determined that, based on a prior UN analysis (meaning presumably the UNIIIC) of the crater soil and other items that were in close contact with the explosion, the explosives were composed of TNT, RDX and PENT.²³⁴⁸ The explosive charge therefore contained either TNT and RDX, connected with a detonating cord made of PENT, or TNT and Semtex—which is made of RDX and PENT.²³⁴⁹

1154. The Lebanese Military Intelligence forensic team found that the type of explosives was TNT, based on the analysis of samples taken from the explosion site.²³⁵⁰ A different forensic team,

²³⁴² Gerard Murray, T. 29 September 2014, p. 28, T. 30 September 2014, p. 38; exhibit P277 (Report of Gerard Murray), p. 3.

²³⁴⁵ Konrad Schlatter, T. 26 August 2014, pp 25-26, 63-65; exhibit P242 (Swiss forensic team expert report), pp 5, 11-12, 17-18.

²³⁴⁶ Dr Schlatter tried to test the soil sample from group B at the American University, but was forced to leave Beirut before he could do so. Konrad Schlatter, T. 26 August 2014, p. 65; exhibit P242 (Swiss forensic team expert report), p. 18.

²³⁴⁷ Konrad Schlatter, T. 26 August 2014, pp 65-68, T. 27 August 2014, pp 81-82.

²³⁴⁸ The Trial Chamber understands PENT to be another acronym of PETN (pentaerythritoltetranitrate). PETN is a well-known type of explosive that is also used for medical purposes, Gerard Murray, T. 29 September 2014, pp 16, 18; exhibit P277 (Report of Gerard Murray), p. 3.

²³⁴⁹ Exhibit P266 (Spanish forensic team expert report), pp 274, 289.

²³⁵⁰ Exhibit P282 (Statement of Ziad Nasr), ERNs 60287014, 60287017.

from the ISF, could not identify the type of explosives used.²³⁵¹ Mr Khashab, a member of the ISF team, explained that the team did not have the technology at that time needed to test for residue.²³⁵²

1155. Mr Othman, also on the ISF team, believed that mortar missiles had been added to the explosives, based on the ISF team finding pieces of shrapnel from such missiles in the Byblos Hotel.²³⁵³ He explained that mortars put in an explosive charge would increase the level of shrapnel.²³⁵⁴ He acknowledged that one could not always distinguish shrapnel from a mortar from shrapnel from another source.²³⁵⁵ On the other hand, Dr van de Craats said that the Dutch forensic team did not find that shrapnel had been intentionally placed in the explosive device.²³⁵⁶ Dr Schlatter could not imagine adding a mortar to a bomb.²³⁵⁷

1156. Mr Assaad Nohra, an ISF officer,²³⁵⁸ accompanied a private expert from the American University of Science and Technology, who had taken cotton swabs and soil samples from the attack site to determine the type of explosives. Mr Nohra did not hear from the expert as to what the test results were.²³⁵⁹

1157. In addition to taking swabs for Dr Murray to analyse, the Dutch team also took a separate set of swabs for the team to examine itself.²³⁶⁰ The Trial Chamber did not receive the results of any separate analysis by the Dutch team.

iii. Submissions

1158. The Prosecution submits that the large amounts of RDX found on the swabs strongly supports the conclusion that an RDX-based high explosive was used in the explosion.²³⁶¹

1159. The Ayyash Defence submits that while Dr Murray determined that an RDX-based explosive was the source of the explosion, the Prosecution led no evidence on the origin of the

²³⁵¹ Walid Othman, T. 3 September 2014, p. 78; exhibit P247 (ISF Explosives Bureau report, 2 March 2005), p. 8.

explosives. Therefore, the Prosecution theory that the Accused had access to explosives as a result of their support for Hezbollah is not supported by the evidence.²³⁶² There were no other Defence submissions on these points.

iv. Findings

1160. In light of the above evidence, the Trial Chamber finds that the specific type of high explosives used was RDX, as determined by Dr Murray.

1161. Dr Murray, in preparing his report for this case, drew upon his four decades of experience in forensic explosives investigations and his examination of hundreds of explosions. The Trial Chamber accepts Dr Murray's and Dr van de Craats's evidence that the Dutch forensic team took sufficient steps to avoid cross-contamination. The team followed international procedures for taking swabs. Most importantly, the Dutch team took control swabs, and Dr Murray confirmed these control swabs did not have RDX, which showed a lack of contamination. This concrete evidence outweighs the mere possibility of cross-contamination from items kept in boxes rather than in bags. Accordingly, the Trial Chamber rejects the Badreddine Defence's suggestion during cross-examination that cross-contamination tainted Dr Murray's results.

1162. Dr Murray also explained the careful process through which his laboratory tested the swabs taken by Dr van de Craats from pieces recovered from the explosion site. Four of these swabs contained significant amounts of RDX, and Dr Murray's analysis did not find the presence of any other types of explosive materials.

1163. Mr Othman from the Lebanese ISF forensic team believed that mortar missiles had been added to the explosives. However, he acknowledged that the shrapnel he identified as coming from mortars might have come from another source. The Dutch forensic team, on the other hand, did not find that shrapnel had been intentionally added to the explosive device. In other words, no positive forensic evidence supports Mr Othman's belief. Given the lack of confirmation by the Dutch team, added to Dr Schlatter's opinion that he could not imagine a mortar being added to a bomb, the Trial Chamber does not accept that mortar missiles were added to the explosives charge.

²³⁶² Ayyash Defence final trial brief, para. 66. *See also* Ayyash Defence closing submissions, T. 17 September 2018, pp 20-21.

1164. Similarly, the evidence from the other forensic teams casts no doubt on Dr Murray's conclusion. The Swiss team had one positive result for TNT from a soil sample, but was unable to duplicate it, thereby calling this result into question. The Spanish team concluded that the explosive charge was a mixture of TNT, RDX and PENT, but the basis for their determination is not clear. The Lebanese Military Intelligence team found that the explosives were made of TNT, but the Trial Chamber did not receive any additional information as to how the samples were taken at the explosion site or how they were analysed. The Trial Chamber also did not receive the results of other tests conducted by Lebanese and Dutch forensic teams.

1165. The Trial Chamber therefore is satisfied beyond a reasonable doubt that the attack involved an RDX-based explosive.

1166. The Trial Chamber received no evidence of how and where this RDX was obtained.

(c) Quantity, height and shape of the explosives

1167. The Prosecutor alleges that around 2,500 kilograms of TNT equivalent explosive material were used, the explosion occurred 50-80 centimetres above ground level and the explosives were distributed, namely laid out in a rectangular shape.²³⁶³

1168. Professor Ambrosini explained that the crater and damage resulting from an explosion depend on the combined effects of the quantity of explosives used, their location above or below ground level and the shape of the explosive charge.²³⁶⁴ The Trial Chamber has accordingly carefully reviewed the evidence as to the possible quantity of explosive materials used in the attack, whether it was placed above or below ground and whether the shape of the explosives was distributed or concentrated.

i. Quantity of explosives

1169. The Trial Chamber received a large amount of technical and forensic evidence on the quantity of explosives, in particular, various analyses of the amount of explosives used.

²³⁶³ Amended consolidated indictment, paras 42, 56 (f), 58 (e) (ii), 60 (h), 62 (g); Prosecution final trial brief, paras 2, 1053, 1057, 1061, 1124, 1137.

²³⁶⁴ Daniel Ambrosini, T. 25 February 2015, p. 90.

a. Calculating the quantity of explosives generally

1170. Professor Ambrosini explained that different types of explosives are more or less powerful than one another.²³⁶⁵ When calculating the quantity of explosives, the concept of ‘TNT equivalence’ is used.²³⁶⁶ Dr Murray explained how TNT equivalence works: TNT is assigned the value of one, explosives that are more powerful than TNT have TNT equivalent values greater than one, while explosives less powerful than TNT are assigned TNT equivalent values less than one.²³⁶⁷

1171. The actual mass of a non-TNT explosive is converted into its equivalent TNT mass through a formula based on the explosive material’s specific energy, peak overpressure or impulse. TNT equivalence is separate for each of these values.²³⁶⁸ Two explosives with a different mass but the same TNT equivalent mass will produce the same effect.²³⁶⁹

1172. A wide variation in the quantity of explosives can produce similar effects.²³⁷⁰ In other words, an explosive charge of 1,000 kilograms of TNT equivalent and an explosive charge of 1,500 kilograms of TNT equivalent will produce similar effects. Only when an explosive charge reaches 5,000 or 10,000 kilograms of TNT equivalent will the effect be significantly different to that of 1,000 kilograms.²³⁷¹

b. Calculating the quantity of explosives used in the attack

1173. The Prosecution relies on Professors Ambrosini’s and Luccioni’s evidence to determine the quantity of explosives.²³⁷² They calculated the quantity based on both the size of the crater and

the damage to the surrounding buildings,²³⁷³ with Professor Ambrosini focusing on the crater and Professor Luccioni on the damage.²³⁷⁴

1174. Professor Ambrosini explained that only a certain range in the quantity could have created the crater. Similarly, only another particular range could produce the level of damage to the nearby buildings. The actual quantity of explosives would therefore fall within the overlap between these two ranges, because only amounts within the overlap could create both the crater and the resulting damage.²³⁷⁵ Professor Ambrosini described this as a ‘dual-monitoring system’.²³⁷⁶ Professor Luccioni added that, because they conducted multiple analyses of the explosion’s effects, this decreased their margin of error.²³⁷⁷

1175. To calculate the possible quantity of explosives used, they created computer simulations²³⁷⁸ that reproduced the effects of explosions in making craters and damaging buildings.²³⁷⁹ These computer models combined physics, chemistry and engineering,²³⁸⁰ and required up to six computers to perform all the calculations.²³⁸¹

1176. Specifically, their computer simulations modelled the behaviour of materials such as air, masonry, concrete, soil and steel during an explosion.²³⁸² The two experts determined the values for each material through their own tests, tests conducted by others, books and manuals.²³⁸³ They

used a range of possible values for various materials' properties. As a result, any variations in a material's properties would not impact the results of their computer simulations.²³⁸⁴

1177. They also used numerical meshes in their computer simulations, because the computer models were so large. For a numerical mesh, the computer model of an explosion was divided into tiny blocks. Calculations were then performed for each block to determine what occurred at that particular point in the model over a period. The finer the mesh was, the more accurate the results would be.²³⁸⁵ They reduced the mesh size in their simulations to the point that its fineness made no difference.²³⁸⁶

1178. Finally, Professors Ambrosini and Luccioni incorporated data from real-world testing of explosives to run their simulations and to calibrate their results.²³⁸⁷ They performed a series of tests using explosives that they included in their simulations.²³⁸⁸ They also incorporated data from explosives tests performed by others in France and Syria.²³⁸⁹

1179. In particular, they relied on the results of a test conducted in October 2010 known as Forensic Project 33 ('FP-33'). It took place in France at the Prosecution's behest, and aimed to reproduce as much as possible the attack explosion.²³⁹⁰ The road, pathway and surrounding vehicles were recreated.²³⁹¹ A Mitsubishi Canter was loaded with 2,467 kilograms of TNT equivalent explosives, laid out in a rectangular shape.²³⁹² The experts modelled the explosion before the test, and their predicted results were similar to the results of the crater size from the

actual test explosion.²³⁹³ Professor Ambrosini himself took part in the test.²³⁹⁴ Following the test, they used its results to refine their computer models and make them more precise.²³⁹⁵ Until his involvement in the FP-33 test, Professor Ambrosini had believed that the quantity of explosives used was smaller.²³⁹⁶

Calculating based on the crater's size

1180. Professors Ambrosini and Luccioni first estimated the quantity of explosives from the crater size. Accordingly, the Trial Chamber has examined the general evidence regarding craters produced by explosions, the evidence as to the size of the crater resulting from the explosion and finally the two experts' analysis of the quantity of explosives needed to create such a crater.

Size of a crater generally

1181. The size of a crater depends on three factors: the quantity of explosives, the shape of the explosive and the height of the explosive above or below ground.²³⁹⁷ As the quantity of explosives increases, so too does the diameter of the crater.²³⁹⁸ Ground reflection also impacts the size of the crater.²³⁹⁹

1182. 'Ejecta' is the material blown out of a crater by the force of the explosion. This material is also referred to as the 'lips' of the crater.²⁴⁰⁰ Professor Ambrosini explained that, rather than measuring from the top of the crater's lips, the actual crater diameter should be measured based on two points located at what would have been ground level before the explosion.²⁴⁰¹ 'Fallback'

is the material that comes out of the crater after the explosion and lands back in it, and thus can hide the crater's true depth.²⁴⁰²

1183. In an ideal scenario, where the ground is homogenous, the crater forms a cone.²⁴⁰³ The presence of rocks, asphalt, pipes or cables can produce deviations from this ideal shape.²⁴⁰⁴

Measuring the crater

1184. The Prosecution relies on Mr Bart Hoogeboom's measurement of the size of the crater's diameter.²⁴⁰⁵ Mr Hoogeboom was an image researcher at the Netherlands Forensic Institute who specialized in photogrammetry—the measurement of images in photographs and videos.²⁴⁰⁶ He had appeared in court as an expert in 15 other cases and drafted photogrammetry reports in approximately 100 cases.²⁴⁰⁷

1185. Mr Hoogeboom prepared a photogrammetry report in 2010 in which he measured the diameter of the crater resulting from the attack.²⁴⁰⁸ He explained how he prepared this report. First, he selected 13 photographs²⁴⁰⁹ from which he could take measurements.²⁴¹⁰ The photographs were divided into three sets: one taken on the day of the explosion and two others taken four days later.²⁴¹¹ He needed three separate sets to ensure there were enough buildings around the crater, to provide a scale for taking measurements.²⁴¹²

1186. His next step was to extract three-dimensional information from the photographs.²⁴¹³ He then combined this three-dimensional information with data from a laser scan of the crater site

made by the Dutch police in 2010.²⁴¹⁴ This laser scan created a three-dimensional representation of the buildings surrounding the location where the crater was.²⁴¹⁵

1187. Once he combined the three dimensional information from the photographs and laser scan, Mr Hoogeboom was able to measure the crater.²⁴¹⁶ It was difficult to identify where the crater rim was, so, he consulted a colleague who was an explosives expert and then applied an inverted truncated cone shape to the points identified on the crater.²⁴¹⁷ Based on the cone shape, Mr Hoogeboom concluded that the crater's diameter was 11.4 metres and the depth was 1.9 metres.²⁴¹⁸ In addition, he conducted several measurements between various identifiable points near the edge of the crater; these measurements were 10.2, 11.1 and 11.5 metres.²⁴¹⁹ Mr Hoogeboom's measurements had a margin of error of 'several per cent'.²⁴²⁰

1188. Several other measurements of the crater's size were received in evidence. The Swiss forensic team measured the crater diameter at about 12.5 metres, with a depth of two metres. They too noted that it was in the shape of an inverted truncated cone.²⁴²¹ The Spanish team measured the crater at 13.72 and 12.82 metres in diameter and 1.83-2.00 metres deep.²⁴²²

1189. Meanwhile, the Lebanese ISF investigators measured the crater diameter at 12.4 metres and the depth at 2.3 metres.²⁴²³ Mr Safi, a member of the ISF team, said the original diameter of the crater was nine metres.²⁴²⁴ The Lebanese Military Intelligence team found that the crater was 12 metres in diameter and 2.3 metres deep.²⁴²⁵

Professors Ambrosini's and Luccioni's calculation of the quantity of explosives based on the crater's size

1190. Professors Ambrosini and Luccioni relied on Mr Hoogeboom's measurement of the crater's diameter when calculating the quantity of explosives used. Professor Ambrosini explained that Mr Hoogeboom's analysis was the most reliable, because of his methodology. Also, while several other forensic teams gave only one measurement for the diameter, Mr Hoogeboom provided two measurements. Two measurements were better because the crater was oval-shaped and not circular, and Mr Hoogeboom's range of values for the crater's diameter accounted for uncertainties in his measuring, such as disturbances to the crater.²⁴²⁶

1191. Mr Hoogeboom measured the crater's diameter as between 10.2 and 11.5 metres.²⁴²⁷ The two experts converted these figures to an equivalent diameter²⁴²⁸ of 10.8 metres. They considered 10.8 metres to be the upper limit, because Mr Hoogeboom used photographs taken four days after the explosion, and, by that time, the crater would have been altered. The two experts calculated the lower limit of the diameter to be 9.7 metres, based on a five per cent variation.²⁴²⁹

1192. They performed a series of computer simulations to calculate the quantity of explosives needed to produce a crater with a diameter of 9.7-10.8 metres.²⁴³⁰ They determined that it would require 2,400-3,100 kilograms of TNT equivalent if the explosive charge had a rectangular shape and was 75-80 centimetres above the ground.²⁴³¹ For an underground explosion, the quantity of explosives would be 500-773 kilograms of TNT equivalent.²⁴³² At ground level with a rectangular-

²⁴²⁶ Daniel Ambrosini, T. 25 February 2015, pp 78-79.

²⁴²⁷ Daniel Ambrosini, T. 25 February 2015, p. 79.

²⁴²⁸ An equivalent diameter is the diameter a crater would have if it was circular in shape with the same area, Daniel Ambrosini, T. 23 February 2015, p. 72.

²⁴²⁹ Daniel Ambrosini, T. 24 February 2015, pp 10, 71, T. 25 February 2015, pp 72, 78-79; exhibit P378 (International College of Experts report on attack of 14 February 2005), annex 2, p. 3.

²⁴³⁰ Daniel Ambrosini, T. 24 February 2015, pp 10, 66-75, T. 25 February 2015, pp 72, 78-79; exhibit P377 (Argentinian expert report on quantity of explosives), pp 37, 42; exhibit P378 (International College of Experts report on attack of 14 February 2005), annex 2, p. 3; exhibit P386. Prior to receiving Mr Hoogeboom's analysis, Professors Ambrosini and Luccioni had relied on the crater's diameter as being between nine and 12 metres when calculating the amount of explosives, Daniel Ambrosini, T. 24 February 2015, pp 72-73; exhibit P386.1.

²⁴³¹ Exhibit P378 (International College of Experts report on attack of 14 February 2005), annex 2, p. 6; Daniel Ambrosini, T. 24 February 2015, p. 88.

²⁴³² Daniel Ambrosini, T. 24 February 2015, p. 13; exhibit P381 (Presentation by Argentinian experts on numerical simulation of building damage), ERN D0437131. Because the ground under the explosion site consisted of rock starting at two metres deep, Professors Ambrosini's and Luccioni's computer simulations for underground explosions only examined possible depths of up to two metres, Daniel Ambrosini, T. 24 February 2015, p. 8.

shaped load, less than 2,500 kilograms of TNT equivalent would be required. Finally, if the explosion occurred at ground level but with a concentrated load, namely a spherical shape, the quantity of explosives needed would be 18,300-28,120 kilograms of TNT equivalent.²⁴³³

1193. Professor Ambrosini testified that the pipes under the road had a negligible influence on the shape of the crater resulting from the attack because the quantity of explosives was so large.²⁴³⁴ However, if the explosives were located inside a truck, the resulting crater would be smaller and rounder in shape.²⁴³⁵

Calculating based on the damage

Damage to surrounding buildings from an explosion generally

1194. Four witnesses testified generally about analysing damage resulting from an explosion. Dr van de Craats explained that damage to surrounding buildings is ‘very important’ for analysing an explosion.²⁴³⁶ Professor Luccioni noted that the damage to surrounding buildings from an explosion is directly related to the overpressure and impulse generated by the explosion.²⁴³⁷ Dr Schlatter defined ‘overpressure’ as the pressure created by an explosion’s shock wave, and ‘impulse’ as the time that the pressure lasts.²⁴³⁸

1195. According to Professor Luccioni, peak overpressure is the highest level of pressure from the explosion,²⁴³⁹ while peak impulse is the maximum impulse.²⁴⁴⁰ The higher the peak overpressure and peak impulse values, the greater the level of damage that is sustained.²⁴⁴¹ The

²⁴³⁸ Konrad Schlatter, T. 27 August 2014, p. 17.

²⁴³⁹ Bibiana Luccioni, T. 26 February 2015, p. 25. Overpressure is calculated by subtracting the atmospheric pressure from the pressure from the blast, Daniel Ambrosini, T. 24 February 2015, p. 24. Overpressure from a blast is followed by the pressure dropping below normal air pressure, exhibit P244 (Report of forensic investigations, Ministry of Justice, Netherlands Forensic Institute), p. 9. Therefore, after a blast there is a positive and negative wave, creating a vacuum, Walid Othman, T. 2 September 2014, pp 53-54; exhibit P247, pp 7-8; Bibiana Luccioni, T. 26 February 2015, p. 26.

further from the centre of an explosion, the lower the overpressure value,²⁴⁴² and thus the lower the amount of damage.²⁴⁴³ As a result, overpressure can be estimated from the observed damage to buildings and windows. The quantity of explosives used can then be estimated based on the damaged materials' distance from the centre of the explosion.²⁴⁴⁴

1196. The damage to surrounding buildings from an explosion can also be influenced by reflected blast waves. Professor Ambrosini explained that when a blast wave from an explosion reaches a solid object, it reflects off that object.²⁴⁴⁵ Professor Luccioni observed that an explosion would produce an initial shock wave, which then bounces off the ground creating a reflected shock wave, both of which strike a building with significant force.²⁴⁴⁶ As the blast waves are reflected, the pressure increases.²⁴⁴⁷ The effect of ground reflection is not significant close to an explosion's centre, but grows larger as the distance from the blast increases.²⁴⁴⁸ Further, the effect of ground reflection is even greater when the explosive charge is located above ground level.²⁴⁴⁹

1197. Indeed, an explosion in a narrow street with tall buildings with few openings will create higher peak pressure and peak impulse values because of reflections from the nearby walls. Professor Luccioni said that this is known as the canyon effect.²⁴⁵⁰ Dr Schlatter added that, in urban areas, there can be damage further away because the pressure is channelled.²⁴⁵¹

Professors Ambrosini's and Luccioni's analysis of damage to surrounding buildings from the attack

1198. For the second part of their analysis, Professors Ambrosini and Luccioni calculated the quantity of explosives needed to produce the damage to the surrounding buildings. They divided

this into three sub-parts: an urban scale analysis, a building analysis of the St Georges and Byblos Hotels and a structural analysis of a portion of the facades of the two hotels.²⁴⁵² Each analysis was conducted separately.²⁴⁵³

1199. Professor Luccioni explained that performing all three analyses provided both an overview of all the damage and focused attention on more specific areas of damage. She said that the smaller the area covered, the more certainty there was as to damage and structural characteristics.²⁴⁵⁴ She added that they considered the structural scale analysis to be the most accurate.²⁴⁵⁵

1200. Professor Ambrosini further explained that their computer models took into account ground reflection for the damage to the Byblos Hotel, because it was further away from the explosion and the reflection effect was greater.²⁴⁵⁶ They did not factor ground reflection into their analysis of the St Georges Hotel, because it was only ten metres from the explosion.²⁴⁵⁷

1201. Professor Ambrosini stated that their computer simulations found that the presence of the nearby buildings had no impact on the damage resulting from the explosion.²⁴⁵⁸ On the other hand, Dr van de Craats opined that the blast wave reflected off the Byblos Hotel and returned to the St Georges Hotel, causing additional damage.²⁴⁵⁹

1202. Professor Luccioni noted that the canyon effect would not have affected the convoy vehicles in the middle of the street. Any such effect would only have impacted locations near the buildings, such as sidewalks.²⁴⁶⁰ Similarly, Professor Ambrosini explained that, because the explosion was on a street that was 36 metres wide, any reflections that were generated from the St Georges or Byblos Hotels did not affect the convoy of vehicles.²⁴⁶¹ Mr Othman, though, testified

²⁴⁶¹ Daniel Ambrosini, T. 24 February 2015, pp 29-31, 35-36, 38-39.

that because the explosion took place near the concrete wall of the St Georges Hotel, the blast reflected off the wall and hit the convoy more powerfully.²⁴⁶²

1203. Finally, Professor Ambrosini noted that a vehicle would have no impact on an explosion's blast waves if the explosives were placed inside the vehicle.²⁴⁶³

1204. Professors Ambrosini and Luccioni first examined the damage to the surrounding buildings through an urban scale analysis, which examines the damage to structures within a specific radius of the blast.²⁴⁶⁴ In performing this analysis, they relied on the Swiss forensic team's observation of the damage to surrounding buildings.²⁴⁶⁵

1205. The Swiss team found that up to 300 metres away some window parts were completely destroyed.²⁴⁶⁶ On the other hand, Mr Othman noted that glass was shattered up to 800 metres away due to reflection of the shock wave.²⁴⁶⁷ Dr Schlatter concluded that, because Beirut has narrow streets, this may have channelled the blast's pressure, resulting in damage to windows further away than expected.²⁴⁶⁸

1206. Professors Ambrosini and Luccioni ran numerical simulations to see what quantity of explosives would result in the observed level of damage at 300-350 metres away from the blast.²⁴⁶⁹ They concluded that it required at least 1,000 kilograms of TNT equivalent to break window glass at that distance from the explosion.²⁴⁷⁰

1207. Professors Ambrosini and Luccioni also conducted a building scale analysis of the St Georges and Byblos Hotels. They chose these two buildings because they were close to the explosion, and there were few obstacles between the explosives and the buildings.²⁴⁷¹

²⁴⁷¹ Exhibit P377 (Argentinian expert report on quantity of explosives), p. 50.

1208. They analysed the distribution of damage to the buildings' facades.²⁴⁷² For the St Georges Hotel, they identified numerous points of damage on the facade of the building—as shown on the photograph below—while, for the Byblos Hotel, they identified a single point on its facade.²⁴⁷³

Exhibit P381, p. 12

1209. Professors Ambrosini and Luccioni then determined the level of damage that would result at each identified point on the building facades from various amounts of explosives and compared their calculations to the actual damage sustained to the facades at these same spots.²⁴⁷⁴ The two experts found that the observed level of damage to the St Georges and Byblos Hotels could have resulted from 1,800-3,600 kilograms of TNT equivalent.²⁴⁷⁵

1210. Finally, Professors Ambrosini and Luccioni conducted a structural scale analysis by examining a specific portion of the facades of the St Georges and Byblos Hotels at ground level.²⁴⁷⁶ As noted, they considered the structural scale analysis the most accurate.²⁴⁷⁷

1211. For this analysis, they chose areas from the buildings' facades that were closest to the blast and most sensitive to the force of the blast.²⁴⁷⁸ With the St Georges Hotel, they focused on a portion of the reinforced concrete frame at ground level just in front of the explosion, which had three columns and a balcony.²⁴⁷⁹ This is shown in the photograph below:

Exhibit P381, p. 16

1212. For the Byblos, they chose part of a shear wall at ground level that was also just in front of the explosion, as is on the photograph below.²⁴⁸⁰

²⁴⁸⁰ Bibiana Luccioni, T. 26 February 2015, p. 80; exhibit P378 (International College of Experts report on attack of 14 February 2005), annex 2, pp 7-8. Dr van de Craats noted that the same part of the Byblos Hotel was closest to the

Exhibit P378 (International College of Experts report on attack of 14 February 2005), annex 2, p. 8

1213. The experts ran a number of computer simulations to compare the effects of different amounts of explosives on the selected portions of the St Georges and Byblos facades with the actual damage sustained.²⁴⁸¹ For both, they found the closest approximation that would result in the same level of damage was 2,500 kilograms of TNT-equivalent at a height of 75 centimetres.²⁴⁸² Their overall conclusion for the structural analysis was that the quantity of explosives was 2,500-3,000 of TNT equivalent, detonated at a height of 50-80 centimetres above the ground.²⁴⁸³

Professors Ambrosini and Luccioni's overall calculation as to the quantity of explosives used in the attack

1214. Based on the entirety of their analysis of the crater size and the damage to the surrounding buildings, Professors Ambrosini and Luccioni concluded that the quantity of explosives was

centre of the explosion, Anick van de Craats, T. 28 August 2014, p. 52. *See also* exhibit P244 (Report of forensic investigations, Ministry of Justice, Netherlands Forensic Institute), p. 42.

²⁴⁸¹ Bibiana Luccioni, T. 26 February 2015, p. 87.

²⁴⁸² Bibiana Luccioni, T. 26 February 2015, pp 88-92; exhibit P378 (International College of Experts report on attack of 14 February 2005), annex 2, pp 19, 26.

²⁴⁸³ Bibiana Luccioni, T. 26 February 2015, p. 92; exhibit P378 (International College of Experts report on attack of 14 February 2005), annex 2, p. 29; exhibit P381, p. 51.

between 2,500 and 3000 kilograms of TNT equivalent for an above ground explosion.²⁴⁸⁴ According to the Prosecution, this would be equivalent to 1,852 to 2,222 kilograms of RDX, which would have a volume of 1.277-1.532 cubic metres.²⁴⁸⁵ This mass and volume of explosives could fit on a Mitsubishi Canter light truck.²⁴⁸⁶

Other calculations as to the quantity of explosives used in the attack

1215. In addition to Professors Ambrosini's and Luccioni's calculations, the Trial Chamber also received evidence of other estimates as to the quantity of explosives used in the attack.

1216. The Swiss forensic team calculated that to create the crater, an underground explosion would use about 300 kilograms of explosives, while an above ground explosion would require 1,000-1,500 kilograms.²⁴⁸⁷ Based on the damage to the surrounding buildings, including the Byblos and St Georges Hotels, around 1,000 kilograms of explosives were used.²⁴⁸⁸ Their conclusion was that the quantity of explosives was 1,000 kilograms.²⁴⁸⁹

1217. The Spanish forensic team estimated that the quantity of explosives was between 1,100 and 1,700 kilograms of TNT equivalent. They based their calculation on the crater, the damage to the convoy and the surrounding buildings and the fragments recovered from the truck bomb.²⁴⁹⁰

1218. The Lebanese Military Intelligence team calculated that the quantity of explosives was 300 kilograms of TNT, based on analysis of samples taken from the explosion site.²⁴⁹¹ A team from

²⁴⁸⁴ Bibiana Luccioni, T. 26 February 2015, p. 98; exhibit P378 (International College of Experts report on attack of 14 February 2005), annex 2, p. 29; exhibit P381, ERN D0437134.

²⁴⁸⁵ Prosecution final trial brief, para. 1061, fns 2192-2193. As noted before at para. 1144, RDX is 1.35 times more powerful than TNT and has a density of 1.45 gram per cubic centimetre. To determine the equivalent mass for RDX, the amount of explosives in TNT equivalent is divided by 1.35. The mass for RDX is then divided by 1.45 to determine the volume in cubic centimetres, which is further divided by 1,000,000 to determine the volume in cubic metres. See also Daniel Ambrosini, 25 February 2015, pp 2-5; exhibit P387 (Screenshot of boxes and measurements in courtroom).

²⁴⁸⁶ Walid Othman, T. 3 September 2014, p. 72; exhibit P378 (International College of Experts report on attack of 14 February 2005), annex 1, pp 2-3, 5; Daniel Ambrosini, 25 February 2015, pp 3-4.

²⁴⁸⁷ Exhibit P242 (Swiss forensic team expert report), pp 13, 19.

²⁴⁸⁸ Exhibit P242 (Swiss forensic team expert report), p. 15.

²⁴⁸⁹ Exhibit P242 (Swiss forensic team expert report), p. 20. Dr Schlatter noted that this was a 'conservative estimate', Konrad Schlatter, T. 27 August 2014, p. 83.

²⁴⁹⁰ Exhibit P266 (Spanish forensic team expert report), pp 278, 289. There is a discrepancy in the report, in that the Spanish team estimated the range of values at 1,100-1,700 at one point and 1,200-1,700 at a later point, with no explanation as to why the two ranges differ.

²⁴⁹¹ Exhibit P282 (Statement of Ziad Nasr), ERN 60287014.

the Lebanese ISF estimated the quantity of explosives at 500 kilograms of TNT equivalent. They derived this figure from the crater and the resulting damage.²⁴⁹²

ii. Height of the explosives

1219. The Prosecution alleges that the explosion took place 50 to 80 centimetres above ground level,²⁴⁹³ namely the height of the rear of a Mitsubishi Canter light truck.

1220. During the trial, the Merhi Defence put into issue whether the explosion occurred above or below ground. The evidence focuses first on the general differences between above and below ground explosions, and then on the different opinions as to where this explosion took place. As noted above, determining the height or depth at which the explosion took place has a significant effect on the resulting crater and damages, along with the quantity and shape of the explosives.²⁴⁹⁴

a. Above and below ground explosions generally

1221. One difference between above and below ground explosions is, as Dr Schlatter noted, the appearance of the resulting crater.²⁴⁹⁵ Professor Ambrosini explained that the ‘lips’²⁴⁹⁶ of a crater will normally be larger if the explosion was underground and not above ground.²⁴⁹⁷ Whether an explosion is underground or above ground cannot be determined based solely on the crater’s lips.²⁴⁹⁸ Also, an underground explosion will produce more fallback²⁴⁹⁹ than an above ground explosion.²⁵⁰⁰ Mr Othman explained that, unlike an above ground explosion, the effects of an underground blast are similar to the shape of an erupting volcano.²⁵⁰¹

1222. Dr Schlatter explained that another difference is that, to produce a similar-sized crater, an above ground explosion requires three times as much explosives as an underground blast. The difference is due to the underground explosive charge contacting the ground directly, unlike an

²⁴⁹² Walid Othman, T. 3 September 2014, pp 69-70, 73-74. *See also* exhibit P247 (ISF Explosives Bureau report, 2 March 2005), p. 6; exhibit P315 (Statement of Joseph Safi), p. 12.

²⁵⁰¹ Walid Othman, T. 2 September 2014, pp 55, 57.

above ground charge.²⁵⁰² Similarly, an explosive charge that is underground but closer to the surface requires more explosives to produce a same-sized crater as a charge that is buried deeper. Dr Schlatter added that, the deeper the explosives are buried, the smaller the damage will be to surrounding buildings and windows.²⁵⁰³ Professors Ambrosini and Luccioni noted that, in effect, the underground explosion will be muffled,²⁵⁰⁴ and the blast wave will be equivalent to an explosion at ground level that is further away.²⁵⁰⁵

1223. By contrast, the blast waves of an above ground explosion spread further than an underground one, resulting in greater damage and injuries.²⁵⁰⁶ Therefore, an above ground explosion is ‘much more destructive’ than an underground one.²⁵⁰⁷ So, to achieve the highest level of damage, an explosive charge should be placed above ground rather than buried.²⁵⁰⁸

b. Was the attack an underground explosion?

1224. The Prosecution relies on Professors Ambrosini and Luccioni’s conclusion that the explosion did not take place underground.²⁵⁰⁹ Professor Ambrosini explained that for an underground explosion, a direct correlation exists between a crater’s diameter, depth and the quantity of explosives used.²⁵¹⁰

1225. Professors Ambrosini and Luccioni calculated that, to produce a crater of 9.7-10.8 metres in diameter from an underground explosion, the quantity of explosives would be between 500 and 773 kilograms of TNT equivalent.²⁵¹¹ Professor Luccioni explained that this quantity would have been insufficient to produce the actual, observed damage to the surrounding buildings, including the St Georges and Byblos Hotels. On the other hand, the quantity of explosives needed from an underground explosion to produce the actual level of damages would result in a ‘gargantuan’

²⁵¹⁰ Daniel Ambrosini, T. 23 February 2015, pp 87-88.

²⁵¹¹ Daniel Ambrosini, T. 24 February 2015, p. 13; exhibit P381, ERN D0437131.

crater, much larger than the size of the actual crater. For these reasons, Professors Ambrosini and Luccioni concluded that the explosion could not have occurred underground.²⁵¹²

1226. Other investigation teams similarly concluded that the explosion was not underground. The Swiss forensic team calculated that an underground explosion would have required about 300 kilograms of explosives to create a crater of that size.²⁵¹³ For such an explosion, the radius for damages to windows would be 170 metres, although the Swiss team observed window damage up to 300 metres.²⁵¹⁴ Given this, Dr Schlatter stated that the explosion could not have taken place underground.²⁵¹⁵

1227. The Spanish forensic team noted that the explosion was not below ground, because the asphalt, pebbles and soil would have directed the blast wave upwards, creating a ‘cannon effect’ that would have resulted in less damage to people, vehicles and buildings.²⁵¹⁶ Dr Murray also concluded that the explosion was not underground based on his examination of the scene.²⁵¹⁷ Dr van de Craats observed that it could not have been an underground explosion, given the damage to the St Georges’s columns and the Byblos wall that slid.²⁵¹⁸

1228. Mr Othman testified that it was not an underground explosion because the damage to the St Georges and Byblos Hotels and the shape of the crater would have been different.²⁵¹⁹ Mr Khashab agreed that the explosion was not below ground, because if it had been, the crater would be bigger, blocks of asphalt would be at a greater distance, the damage to the St Georges Hotel and underground infrastructure would be different and Mr Hariri’s vehicle would have been

²⁵¹² Bibiana Luccioni, T. 26 February 2015, pp 8, 94, 98; exhibit P378 (International College of Experts report on attack of 14 February 2005), annex 2, pp 28-29; exhibit P381, ERNs D0437130-D0437131. *See also* Daniel Ambrosini, T. 24 February 2015, p. 83. Originally, Professor Ambrosini thought it had been an underground explosion, because the blast had sent a manhole cover onto the third floor of the St Georges Hotel and a piece of asphalt of 60-70 kilograms to the 11th floor of the Byblos Hotel. But his full analysis led him to conclude that it was above ground. Daniel Ambrosini, T. 25 February 2015, pp 61, 95.

²⁵¹³ Exhibit P242 (Swiss forensic team expert report), p. 13.

²⁵¹⁴ Exhibit P242 (Swiss forensic team expert report), pp 14-15.

²⁵¹⁵ Konrad Schlatter, T. 26 August 2014, pp 82-83. The Swiss team also conducted a ballistics analysis of the heavy debris found at the scene of the explosion. Based on that analysis, it could not determine whether the explosion was above or below ground, Konrad Schlatter, T. 26 August 2014, pp 73-74, 76; exhibit P242 (Swiss forensic team expert report), pp 15-17, 19. Dr Schlatter himself thought that the pattern of asphalt might indicate that it was an above ground explosion, given that pieces of asphalt at the crater were top side up. He acknowledged that academic literature did not support his interpretation, Konrad Schlatter, T. 26 August 2014, p. 77, T. 27 August 2014, pp 22-23.

²⁵¹⁶ Exhibit P266 (Spanish forensic team expert report), pp 286-287.

²⁵¹⁷ Gerard Murray, T. 30 September 2014, pp 19-20.

upside down afterwards.²⁵²⁰ Mr Krayem also stated that the explosion was not underground. He noted that a lamp post 25 metres from the crater was unaffected. If the explosion was below ground, the lamp post's base would have been damaged.²⁵²¹

1229. Conversely, the Trial Chamber heard some non-expert opinion that it was an underground explosion. Witness PRH009, who rode in Mr Hariri's convoy,²⁵²² testified that the explosion took place underground. He noted that one of the convoy vehicles had been torn to pieces. If the explosion was above ground, it would have been pushed in the opposite direction.²⁵²³ Mr Jamil El-Sayyed, who testified for the Oneissi Defence, agreed that the explosion was underground.²⁵²⁴ Witness PRH351, a civil engineer, stated that the explosion was at ground level or below ground.²⁵²⁵ He noted the displacement of two large pillars at the St Georges Hotel, cracks in columns on the St Georges's terrace level and damage at the basement levels of the St Georges and Byblos Hotels.²⁵²⁶ Witness 351, however, acknowledged that he was not a structural expert and could not give an expert opinion on this issue.²⁵²⁷

c. Was the attack a ground level explosion?

1230. Professors Ambrosini and Luccioni also examined whether the explosion was at ground level. They calculated that a concentrated load lying on the ground and producing a crater with a diameter of 9.7-10.8 metres would require 18,300 to 28,120 kilograms of TNT equivalent. To produce the same-sized crater from a rectangular-shaped load on the ground would require less than 2,500 kilograms of TNT equivalent.²⁵²⁸

²⁵²⁰ Mahmoud Khashab, T. 8 September 2014, p. 64.

²⁵²⁸ Exhibit P378 (International College of Experts report on attack of 14 February 2005), annex 2, p. 6.

1231. Professor Luccioni stated that an explosion at ground level would result in less damage to surrounding buildings than an explosion 76 centimetres above ground.²⁵²⁹ As a result, they concluded that the explosive was not at ground level.²⁵³⁰

1232. Dr van de Craats agreed that the explosion did not take place at ground level. She noted that, if this had happened, the greatest damage would be found at the lowest part of a column at the St Georges, as opposed to the actual damage, which was higher up the column.²⁵³¹

1233. Mr Othman agreed that the explosives had not been lying on the ground. If they had, the shape of the crater would have been slightly different. Also, his forensic team would not have recovered metal parts of vehicles from within the crater.²⁵³²

1234. By contrast, the Swiss forensic team concluded that an explosion at ground level was more likely, given the damage to the surrounding neighbourhood and the dimensions of the crater.²⁵³³ When the Swiss team referred to an above ground explosion, they meant at ground level and not above the ground.²⁵³⁴ Dr Schlatter explained that, in particular, the damage to windows showed that the explosion was at ground level.²⁵³⁵ He added that the low trajectory of metal pieces that embedded in vehicles or bent a lamp post also demonstrated an explosion at ground level, because a buried explosive would have sent metal pieces at a different angle.²⁵³⁶ Also, as stated before, at paragraph 1131, this team noted the presence of washout on pieces of debris, vehicles and metal structures close to the crater, which further demonstrated that an explosion at ground level had occurred. The team, though, acknowledged that it could not exclude the possibility that the washout had come from a below ground explosion.²⁵³⁷ Dr Schlatter added that if the explosion had

²⁵²⁹ Bibiana Luccioni, T. 26 February 2015, p. 75; exhibit P378 (International College of Experts report on attack of 14 February 2005), annex 1, pp 17, 34-35.

occurred above ground level, more explosives would be needed to produce the same-sized crater.²⁵³⁸

d. Was the attack an above ground explosion?

1235. The Prosecution relies on Professors Ambrosini's and Luccioni's analysis that the explosion took place above ground level.²⁵³⁹ The two experts concluded that the best fit for the observed size of the crater and resulting damage to the surrounding buildings was an explosion that occurred between 50 and 80 centimetres above ground level,²⁵⁴⁰ given the overlap between their calculations. As noted earlier,²⁵⁴¹ their calculations for the crater were that the explosive charge was 75 to 80 centimetres above the ground,²⁵⁴² while their structural analysis found that the charge was at a height of 50 to 80 centimetres off the ground.²⁵⁴³ Such a location corresponds to the height of the rear compartment of a Mitsubishi Canter light truck.

1236. Other investigation teams reached a similar conclusion that the explosion was above ground. Dr van de Craats concluded that the centre of the explosion was slightly above ground level, based on the resulting bent columns at the St Georges, the sliding of the wall at the Byblos, the pattern of perforations on the damaged cars and the crater.²⁵⁴⁴ The greatest damage to the Byblos wall was slightly above ground and the concrete part of the wall was missing, further showing that the explosion had been above ground.²⁵⁴⁵

1237. The Spanish team concluded that, based on the items recovered, the damage to vehicles and surrounding buildings, the location of impacts and the fires, that it was an above ground explosion.²⁵⁴⁶

²⁵⁴⁶ Exhibit P266 (Spanish forensic team expert report), p. 286.

1238. Mr Othman similarly noted that it was an above ground explosion, based on the damage to the St Georges and Byblos Hotels.²⁵⁴⁷ His ISF team found that it was an above ground explosion based on the horizontal demolition and fragmentation of the cars, the indentation and 50-centimetre shift of the bottom of the wall at the Byblos Hotel and the bend in the middle of the pillars at the St Georges Hotel.²⁵⁴⁸ Mr Safi also believed that it was an above ground explosion based on the damage to the convoy vehicles and the effects of the shrapnel.²⁵⁴⁹ Mr Krayem stated that the explosion was above ground because they found Mitsubishi parts in the crater and in the sea.²⁵⁵⁰ Witness PRH566 agreed with the ISF team's conclusion that it was an above ground explosion.²⁵⁵¹

1239. The Lebanese Military Intelligence team found that the explosion was above ground based on the damage to nearby vehicles, the radius of the fire, the distribution of shrapnel and the absence of cracks in the ground or blown out sewer openings.²⁵⁵²

iii. Shape of the explosives

1240. The Prosecution alleges that the explosives used in the attack were distributed, namely laid out in a rectangular shape.²⁵⁵³ The Trial Chamber received evidence as to the shape of the explosive charge, which is also known as the distribution of the explosive load. As noted above at paragraph 1168, the shape of the charge is a significant factor for the resulting crater and level of damage, together with the height and quantity of explosives.

a. Shapes of explosives generally

1241. Professor Ambrosini explained that an explosive charge can be concentrated or distributed. A concentrated load is where the three dimensions are similar, such as a sphere or cube. A distributed load is where one of the three dimensions of the charge is longer or shorter than the other sides, such as a sheet of paper.²⁵⁵⁴

²⁵⁵³ Prosecution final trial brief, paras 1057, 1061.

²⁵⁵⁴ Daniel Ambrosini, T. 23 February 2015, pp 55-59.

1242. Professor Ambrosini noted how the shape of the load impacts the resulting crater and explained that the area of the charge is more important than its volume for the resulting shape of the crater.²⁵⁵⁵ For example, a square load would produce a circular crater, while a rectangular load would create an oval crater.²⁵⁵⁶ The area of the charge also affects the size of the crater; a large rectangular-shaped charge produces a larger crater than one with the shape of a cylinder, even if both have the same quantity of explosives.²⁵⁵⁷ A crater caused by a missile would be smaller and have a different shape because the missile has a concentrated load.²⁵⁵⁸

1243. Professor Luccioni explained that the shape of the load also affects the resulting damage to the surrounding buildings. The more concentrated a load is, the higher the pressure and impulse values from the explosion are, and therefore the greater the level of damage.²⁵⁵⁹ When analysing structural damage, the difference between a rectangular and square-shaped load would not be significant unless the load was extremely elongated.²⁵⁶⁰

b. Shape of explosives used in the attack

1244. Professors Ambrosini and Luccioni examined whether the explosive charge was distributed or concentrated. Professor Ambrosini testified that a concentrated load might have caused the crater but would have resulted in ‘other types’ of damage.²⁵⁶¹ Also, based on the FP-33 test, referred to above at paragraph 1179, Professors Ambrosini and Luccioni found that a more concentrated load would have resulted in greater damage to surrounding buildings.²⁵⁶² The two experts added that an above ground explosion with a concentrated load was unlikely, given that the crater would have been smaller had the quantity of explosives been 3,600 kilograms or less, while the damage would have been greater if above 3,600 kilograms.²⁵⁶³

1245. Both experts further agreed that the explosives charge was distributed. Professor Ambrosini explained that the shape of the crater demonstrated that the explosive load was more likely to be rectangular-shaped, and that the crater and damage to surrounding buildings correlated with a distributed load.²⁵⁶⁴ Based on their analyses and computer simulations, Professor Luccioni added that a distributed load corresponded best with their determinations as to the quantity and height of the explosives.²⁵⁶⁵

1246. The Spanish forensic team also examined the shape of the explosive charge. They similarly concluded that the load was rectangular given the crater, the surrounding objects and the use of the Mitsubishi Canter.²⁵⁶⁶

iv. Location of the detonation point

1247. Professors Ambrosini and Luccioni examined another aspect as to how the explosives were detonated, namely the location of the detonation point.²⁵⁶⁷ If a detonator is placed in the middle of the explosive charge, the detonation will spread evenly throughout the explosives. But if a detonation point is located off centre, the overpressure increases on the opposite side of the charge.²⁵⁶⁸ As a result, when planning an attack with explosives, the detonation point should be placed on the side opposite of where a target is located, because that will produce greater overpressure and thus more damage at the target's location.²⁵⁶⁹

1248. Mr Othman testified that a guided charge is designed to push the blast in a given direction.²⁵⁷⁰ The Spanish forensic team explained that, when it is not possible to direct an explosive charge, the quantity of explosives is usually increased to achieve the intended results.²⁵⁷¹

²⁵⁶⁴ Daniel Ambrosini, T. 24 February 2015, p. 81, T. 25 February 2015, p. 90; exhibit P377 (Argentinian expert report on quantity of explosives), p. 45; exhibit P378 (International College of Experts report on attack of 14 February 2005), p. 28.

²⁵⁶⁹ Daniel Ambrosini, T. 24 February 2015, pp 56-57, T. 25 February 2015, p. 6. *See also* exhibit P266 (Spanish forensic team expert report), p. 278.

²⁵⁷⁰ Walid Othman, T. 4 September 2014, p. 42.

²⁵⁷¹ Exhibit P266 (Spanish forensic team expert report), p. 278.

1249. As for the attack itself, Professor Ambrosini explained that, given the enormous quantity of explosives used and the short distance between the explosives and the convoy, the damage to the vehicles and the surrounding buildings would have been the same regardless of where the detonation point was located.²⁵⁷² For an explosion that took place 80 centimetres off the ground, the location of the detonation point also would not affect the size of the crater.²⁵⁷³ Based on their analysis of the damage to the surrounding buildings, the two experts were unable to determine the location of the detonation point.²⁵⁷⁴

v. Findings on the quantity, height and shape of the explosives

1250. The evidence as to the quantity, height and shape of the explosives is extensive, technical and complex. Nevertheless, the conclusions from this evidence are straightforward. Relying on Professors Ambrosini and Luccioni's analysis, the Trial Chamber finds that the quantity of explosives used in the attack was in the range of 2,500 to 3,000 kilograms of TNT equivalent, the explosion took place approximately 50 to 80 centimetres above ground level and the explosive charge was rectangular in shape.

1251. The Trial Chamber accepts the validity of Professors Ambrosini and Luccioni's methodology in creating the computer simulations that reproduced the effects of explosions. These simulations incorporated data from real-world testing of explosives and the behaviour of certain materials such as masonry and steel during an explosion. The two experts validated and updated their computer models based on new data, most notably the FP-33 test conducted in France. They also relied on a range of values for the properties of various materials to account for any variations in the materials themselves.

1252. The Trial Chamber likewise accepts Mr Hoogeboom's measurement as to the size of the crater. Professors Ambrosini and Luccioni relied upon these measurements. Mr Hoogeboom testified at length as to his methodology for measuring the crater through photogrammetry. The absence of a similarly detailed explanation underlying the other measurements of the crater's size in evidence leads the Trial Chamber to place less weight on the measurements of others. The Trial Chamber therefore finds that the explosion created a crater that, based on the cone shape, had a

²⁵⁷² Daniel Ambrosini, T. 24 February 2015, pp 52-53, T. 25 February 2015, pp 6-7.

²⁵⁷³ Daniel Ambrosini, T. 24 February 2015, p. 59; exhibit P377, p. 36.

diameter of around 11.4 metres with a depth of around 1.9 metres, within a margin of error of several per cent.

1253. As for the quantity of explosives used, the Trial Chamber highlights Professor Ambrosini's evidence that producing a crater similarly sized to the one from the attack would require some 2,400 to 3,100 kilograms of TNT equivalent if the explosion took place 75 to 80 centimetres above the ground and was rectangular-shaped. Professor Luccioni also set out how, given the damage sustained in the surrounding urban environment, the facades of the St Georges and the Byblos Hotels and specific parts of them, the quantity of explosives was 2,500 to 3,000 kilograms of TNT equivalent, for an explosion 50 to 80 centimetres above the ground and distributed in shape. This calculation also served as their overall conclusion regarding the quantity of explosives, given the overlap with the calculation of the crater.

1254. The two experts' calculations as to the quantity of explosives far exceeded that of other forensic teams, which provided estimates such as 300, 500, 1,000 and 1,100 to 1,700 kilograms of TNT equivalent. The Trial Chamber notes Professor Ambrosini's evidence that even he initially thought the quantity of explosives used was smaller, until his involvement in the FP-33 test, which involved an explosion of 2,467 kilograms of TNT equivalent, convinced him otherwise. More importantly, the Trial Chamber finds that Professors Ambrosini and Luccioni's 'dual-monitoring system'—determining the range of explosives that corresponded to both the size of the resulting crater and the level of damage sustained by the nearby buildings, especially the St Georges and Byblos—makes their calculation the most reliable.

1255. Professor Ambrosini and Dr van de Craats differed on whether nearby buildings impacted the level of damage from the explosion, and Professors Ambrosini and Luccioni disagreed with Mr Othman on whether the canyon effect impacted the convoy of vehicles. However, any isolated differences between these witnesses' evidence does not detract from the validity of Professors Ambrosini and Luccioni's overall calculations as to the quantity of explosives. This is because the two experts performed multiple analyses of the explosion's effects, which, as Professor Luccioni noted, decreased the margin of error for their results.

1256. Likewise, the reliability of the two experts' analysis is not undermined by comparing the Swiss team's finding—which Professor Luccioni relied on for the urban scale analysis—that

windows were damaged up to 300 metres away with Mr Othman's testimony that glass was shattered up to 800 metres away. This apparent discrepancy can be explained by the effect of channelling in urban areas such as Beirut with narrow streets, which results in window damage further away than expected. Professor Luccioni described the urban scale analysis as less accurate, and the two Argentinian experts relied more on the structural scale analysis of the damage, which they described as more precise. Thus, any conflict between the Swiss team and Mr Othman's evidence does not affect the two experts' overall calculation of the quantity of explosives.

1257. Regarding the placement of the explosives, the Trial Chamber accepts Professors Ambrosini and Luccioni's conclusion that an explosion 50 to 80 centimetres off the ground best fits the results of the attack, especially the crater and level of damage. Several other forensic teams reached a similar result. The international forensic teams and the Lebanese ISF forensic team agreed that the explosion did not occur underground, given the damage to the surrounding buildings and other factors. Dr van de Craats and Mr Othman supported Professors Ambrosini and Luccioni's determination that the explosion was not at ground level. Both agreed that the explosion took place above ground level, as did the Spanish team, other members of the Lebanese ISF team and the Lebanese Military Intelligence team, based primarily on the damage to the surrounding buildings or vehicles.

1258. On the other hand, the Swiss team determined that the explosion took place at ground level. However, Dr Schlatter testified that, for an above ground explosion, the quantity of explosives would be greater than their estimate of 1,000 kilograms. He thus implicitly accepted the possibility of an explosion off the ground. Witness 351 thought that the explosion was below ground, based on the damage he observed to the St Georges and Byblos Hotels. But Witness 351 was frank that he could not give an expert opinion on this issue. The Trial Chamber disregards his assertion in light of this concession. Witness 9 and Mr El-Sayyed also believed the explosion took place underground. Witness 9 relied on a convoy vehicle being torn to pieces rather than pushed to one side. However, such destruction is equally consistent with an above ground explosion, which can be much more destructive than an underground one. Mr El-Sayyed had no relevant expertise and provided no basis for his opinion. In any event, these non-expert views about the height of the explosion have no probative weight.

1259. With regard to the shape of the explosives, Professors Ambrosini and Luccioni were clear that a rectangular-shaped explosive charge best conformed to the shape of the crater and the damage to the surrounding buildings. A concentrated explosive load did not match either the crater or the resulting damage. The Spanish forensic team concurred that the explosive charge was rectangular-shaped, further strengthening their conclusion.

1260. The Trial Chamber cannot make a finding as to where the detonation point was located, because the two Argentinian experts could not determine this. However, any uncertainty over this minor aspect of the explosion does not affect the Trial Chamber's determination as to the explosives' quantity, height and shape.

1261. Finally, counsel for Mr Badreddine and Mr Merhi both suggested that Professors Ambrosini and Luccioni did not act independently from the Prosecution. Counsel posited that the two experts were instead brought in to validate the Prosecution's prior conclusions about the explosion.²⁵⁷⁵ Professor Ambrosini rejected this suggestion and said that the two experts were free to conduct an independent study and to reach their own conclusions.²⁵⁷⁶ The Trial Chamber, having heard Professors Ambrosini and Luccioni testify and having reviewed their reports, rejects the Defence's suggestion that they were somehow influenced by the Prosecution. Both experts demonstrated throughout their evidence that they formed their conclusions on the basis of their own independent analyses. For example, Professor Ambrosini explained that his initial hypothesis was that an underground explosion had occurred, but the results of his and Professor Luccioni's analysis convinced him otherwise.²⁵⁷⁷

(d) Use of Mitsubishi Canter light truck

1262. The Prosecutor alleges that the explosives were concealed in the cargo area of a Mitsubishi Canter open tray truck.²⁵⁷⁸ The Trial Chamber has found that a white 2002 Mitsubishi Canter right-hand-drive light commercial truck, with chassis number FE52CE560619 and engine block number 4D33J01926, was sold in Tripoli in January 2005.²⁵⁷⁹ The Trial Chamber received evidence of

²⁵⁷⁹ *See* chapter XI 'Importation and sale of Mitsubishi Canter'.

CCTV images of a white truck in the immediate area of the attack before the explosion, and the recovery of Canter parts from the crime scene afterwards.

- i. Was a Mitsubishi Canter seen near the explosion site before the attack?

1263. The Prosecutor alleges in the amended consolidated indictment and final trial brief that CCTV footage first shows that a Mitsubishi Canter exited the Suleiman Frangieh tunnel near the explosion site less than one hour before the attack, and then shows it driving slowly to the explosion site a few minutes before the attack.²⁵⁸⁰ The Trial Chamber has carefully reviewed the relevant CCTV footage, including videos and still images, and the testimony of the witnesses who commented on the footage. It also considered the evidence of witnesses from Mr Hariri's convoy who survived the attack.

- a. CCTV systems near the explosion site

1264. The Prosecution relies on CCTV footage from three locations close to the explosion site: the Suleiman Frangieh tunnel, the Phoenicia Hotel and the HSBC Bank. The Suleiman Frangieh tunnel exits onto Fakhreddine Street, close to the Phoenicia and Monroe Hotels.²⁵⁸¹ The HSBC Bank is on *Minet el Hosn* Street, between the Phoenicia Hotel and the attack site.²⁵⁸² These locations are shown on the following aerial photograph:

²⁵⁸² Exhibit P5, para. 17; exhibit P18 (Supporting map for Robyn Fraser report), p. 4.

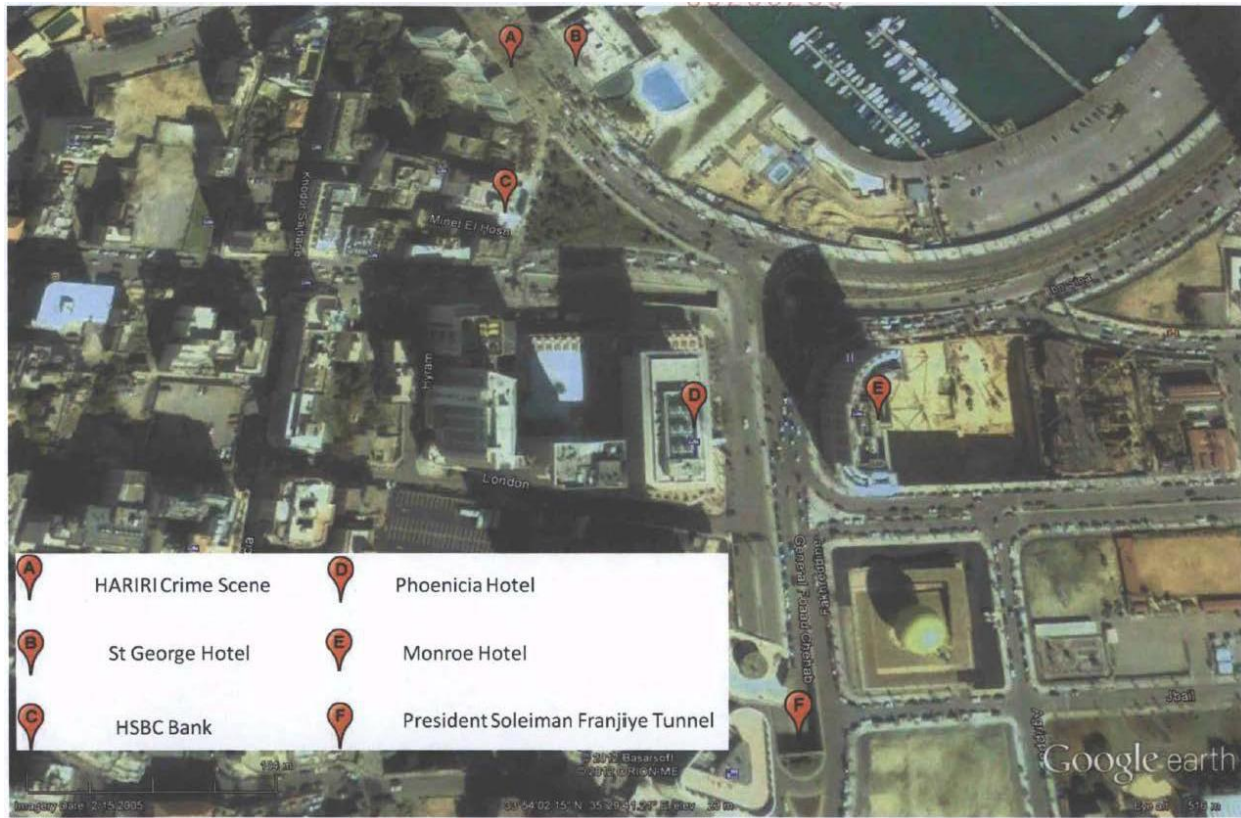

Exhibit P18, p. 4

1265. On 14 February 2005, the Suleiman Frangieh tunnel, Phoenicia Hotel and HSBC Bank each had their own CCTV system.²⁵⁸³ Soon after the attack, Lebanese and international investigators obtained copies of CCTV footage from each location for the period before and after the attack.²⁵⁸⁴

1266. After reviewing CCTV footage from all three locations, investigators determined that none of the CCTV systems had been set to the correct time on the day of the attack. As a result, the time stamps displayed in the relevant CCTV footage were not accurate.²⁵⁸⁵ Ms Robyn Fraser, a former Prosecution investigator,²⁵⁸⁶ identified when each CCTV system captured the explosion and

²⁵⁸³ Robyn Fraser, T. 22 January 2014, pp 42, 83, 110; exhibit P5, paras 9-10, 18, 41-43, 47, 80, 95-97, 116, 130-133.

²⁵⁸⁵ Exhibit P5, paras 52-59, 102, 135-139.

²⁵⁸⁶ Robyn Fraser, T. 22 January 2014, p. 36.

compared the explosion's actual time to the time as recorded in the CCTV footage.²⁵⁸⁷ Based on this, she calculated that the time for the Suleiman Frangieh tunnel CCTV system was slow by one minute and 54 seconds,²⁵⁸⁸ the time for the Phoenicia Hotel CCTV system was fast by 47 minutes and 48 seconds²⁵⁸⁹ and the time for the HSBC Bank CCTV system was slow by 58 minutes and 37 seconds.²⁵⁹⁰ The Trial Chamber has accepted Ms Fraser's calculations as reliable and has cited to the times she calculated,²⁵⁹¹ rather than to those displayed on the CCTV still images.

b. CCTV footage of a white truck

1267. A white truck first appeared in CCTV footage from the Suleiman Frangieh tunnel. Six different cameras within the tunnel recorded a white truck traveling through and exiting the tunnel onto Fakhreddine Street around 11:56:57.²⁵⁹² The truck's number plate was obscured, and none of the digits were legible, as is shown in the still below.²⁵⁹³

²⁵⁸⁷ Robyn Fraser, T. 22 January 2014, p. 79; exhibit P5, paras 55-57, 103, 139-140.

²⁵⁸⁸ Robyn Fraser, T. 22 January 2014, p. 79; exhibit P5, para. 140.

²⁵⁸⁹ Robyn Fraser, T. 22 January 2014, p. 102; exhibit P5, para. 103.

²⁵⁹⁰ Exhibit P5, para. 57. *See also* exhibit P80 (Statement of Timothy Jolly), para. 13.

²⁵⁹¹ Ms Fraser stated that the actual time of the explosion was 12:55:03, based on an underlying seismology report from the Lebanon National Centre of Geophysics, Robyn Fraser, T. 22 January 2014, p. 79; exhibit P5, para. 55. However, the evidence submitted at trial (a different seismology report) shows the explosion's actual time was two seconds later, at 12:55:05, exhibit P317 (National Council of Scientific Geophysique report related to earthquake signals), p. 16. For ease of reference, the Trial Chamber relies on Ms Fraser's times as she calculated them and has not updated them to address this two-second gap.

²⁵⁹² Robyn Fraser, T. 22 January 2014, pp 49-56, T. 23 January 2014, pp 41, 49; exhibit P5, paras 146-147, 163; exhibits P6-P10 (Still images from Suleiman Frangieh tunnel CCTV footage), P73-P79 (Video excerpts from Suleiman Frangieh tunnel CCTV footage).

²⁵⁹³ Robyn Fraser, T. 23 January 2014, pp 60-61.

Exhibit P6

1268. The last camera in the tunnel then recorded the truck after it left the tunnel. In CCTV footage from this camera, the truck moved to the right and disappeared from view.²⁵⁹⁴ According to Ms Fraser, this shows that, after the truck exited the tunnel, it did not continue straight on Fakhreddine Street. Rather, the truck merged to the right, left Fakhreddine Street and entered a side street in front of the Monroe Hotel.²⁵⁹⁵ Prosecution investigator Mr Gary Platt agreed that the

²⁵⁹⁴ Exhibits P11 (Video excerpt from Suleiman Frangieh tunnel CCTV footage), P33-P43 (Still images from Suleiman Frangieh tunnel CCTV footage), P73.

²⁵⁹⁵ Robyn Fraser, T. 22 January 2014, pp 62-64, 72-75, T. 23 January 2014, pp 29-30, 41-43; exhibit P4 (Marked image); exhibit P5, paras 148, 165; exhibit P49 (Marked image). See also exhibit P81 (Statement of Quentin Mugg), para. 11.

truck merged onto a side street after leaving the tunnel and then drove around the front of the Monroe Hotel.²⁵⁹⁶

1269. Mr Platt believed that at this point the truck would have remained near the Monroe Hotel. Given all the explosives it was carrying, the truck had a heavy load and needed to drive at a slow speed. In his view, it would have needed a location where it could stay close to the explosion site, have easy access to the road leading to the site and not draw any attention, namely the area east of the Monroe Hotel.²⁵⁹⁷

1270. A white truck next appeared on CCTV footage more than 50 minutes later, again on the Suleiman Frangieh tunnel's CCTV system. CCTV footage from the last camera in the tunnel shows it entering from the side street onto Fakhreddine Street at 12:50:58. The white truck then drove towards the explosion site.²⁵⁹⁸

1271. Less than 30 seconds later, a white truck appeared on a different CCTV system, from the Phoenicia Hotel. CCTV footage, consisting of one still image, showed the truck traveling north on Fakhreddine Street at 12:51:26.²⁵⁹⁹ According to Ms Fraser who analysed the images, the truck was moving, and not parked in front of the Monroe Hotel. This is because the truck did not appear in the frames before and after the still image.²⁶⁰⁰ The white truck is circled in the video stills below:

Exhibit P15

1272. One minute after, a white truck was captured in CCTV footage from the HSBC Bank. This video showed a white truck traveling along *Minet el Hosn* Street towards the location of the attack from 12:52:36 until 12:53:17.²⁶⁰¹ Other cars could be seen passing the white truck. The truck was captured in 30 frames of the CCTV footage, while other vehicles only appeared in three to five frames. According to Ms Fraser, this shows that the truck travelled slowly, approximately ten times slower than normal traffic.²⁶⁰²

²⁶⁰¹ Robyn Fraser, T. 23 January 2014, pp 4-6, 15-18, 50; Gary Platt, T. 14 March 2017, p. 53; exhibit P5, paras 74, 168; exhibit P24 (Video excerpt from HSBC Bank CCTV footage); exhibit P26 (Still images from HSBC Bank CCTV footage); exhibit P80 (Statement of Timothy Jolly), para. 14; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 1191; exhibit P1923, slide 127.

²⁶⁰² Robyn Fraser, T. 23 January 2014, p. 7; exhibit P5, paras 74-75.

Extract from exhibit P1923 (Chronology PowerPoint presentation – 13 February 2005 to 16 February 2005), slide 127²⁶⁰³

1273. Two minutes later, the same HSBC Bank CCTV camera captured Mr Hariri's convoy as it sped towards the St Georges Hotel. The CCTV system recorded the convoy at 12:54:57.²⁶⁰⁴

c. Identification of the truck in the CCTV footage

1274. Several witnesses testified about whether the vehicle in the CCTV footage was a Mitsubishi Canter.

²⁶⁰³ See also exhibit P26, p. 2.

²⁶⁰⁴ Robyn Fraser, T. 23 January 2014, pp 6, 19-20; exhibit P5, paras 77, 169; exhibit P27 (Still images from HSBC Bank CCTV footage), pp 14-23; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 1192; exhibit P1923, slides 135-136.

1275. Ms Fraser compared the white trucks seen in the CCTV footage from the Suleiman Frangieh tunnel, Phoenicia Hotel and HSBC Bank and concluded that they were similar to each other and a Mitsubishi Canter stolen in Japan in October 2004 and suspected of being involved in the explosion.²⁶⁰⁵ She noted that the tarpaulins on the backs of the trucks had the same dimensions, the tarpaulins and the trays had similar shading, the tops of the tarpaulins were in similar positions, the front cabins had similar shading, height and appearance, the side front windows were similarly shaped and the front bumpers were similar.²⁶⁰⁶

1276. However, Ms Fraser could not say for certain that they were all the same vehicle.²⁶⁰⁷ She could not identify the make and model of the vehicle in each set of CCTV footage.²⁶⁰⁸ She acknowledged that she was not a vehicle expert.²⁶⁰⁹ Tellingly, she could not affirm from viewing the various CCTV footages that the vehicle in the footage was a Mitsubishi Canter, that it carried explosives or that it was involved in the explosion.²⁶¹⁰

1277. Similarly, Mr Gerhard Geyer, an expert in identifying Mitsubishi Canter parts,²⁶¹¹ testified that he could not determine if the vehicle in the three sets of CCTV footage was a Canter.²⁶¹² Many still images that he viewed were too small and out of focus to make an identification.²⁶¹³ Further, it was not possible to identify a Canter from the rear, because truck bodies came from different suppliers.²⁶¹⁴

1278. Witness PRH041, who worked for the vehicle dealership in Tripoli that sold the Canter in January 2005,²⁶¹⁵ could not identify the truck in the Suleiman Frangieh tunnel CCTV footage.

²⁶⁰⁵ Robyn Fraser, T. 23 January 2014, pp 8-9; exhibit P5, paras 12-13, 74, 76, 113, 151, 159-161.

²⁶¹⁰ Robyn Fraser, T. 23 January 2014, p. 92.

²⁶¹¹ The Trial Chamber found that Mr Geyer is a technical manager of Mitsubishi Motors Germany and has 17 years of experience between 1990 and 2007 in servicing Mitsubishi vehicles and their parts, which enables him to identify Mitsubishi parts from those of other vehicles, Decision on expertise (Mr Geyer). *See also* Gerhard Geyer, T. 16 July 2014, pp 9, 12; exhibit P233 (Statement of Gerhard Geyer), p. 2. Mr Geyer obtained technical qualifications in regard to motor vehicles in 1974, initially working with agricultural machinery, and commenced employment with Mitsubishi in Germany in 1990. From 1990-1995, he was responsible for heavy vehicles and up to that point was just working on Canters. As of 1995, he became a manager working with Canters and L200s, Gerhard Geyer, T. 16 July 2014, pp 7-8, 31.

²⁶¹⁵ Witness PRH041, T. 17 June 2015, pp 5-7.

Because the image showed the rear of the vehicle, he thought it could be either a Mitsubishi or an Isuzu truck.²⁶¹⁶ He added that the vehicle in the CCTV footage was different from the Mitsubishi Canter that was in the Tripoli dealership because that one had a metallic flatbed and no tarpaulin.²⁶¹⁷

1279. Likewise, Witness PRH075, who imported Japanese pick-up trucks and owned the Mitsubishi Canter that was sold in Tripoli,²⁶¹⁸ said that the vehicle in the Suleiman Frangieh tunnel CCTV footage was different to the Canter he sold. Unlike his Canter, that in the tunnel had a tarpaulin, a closed flatbed and higher sides in the back,²⁶¹⁹ but the two vehicles were otherwise similar.²⁶²⁰ If the additions to the tunnel truck's flatbed were removed, Witness 75 thought that it would be '80 per cent' similar to his Canter.²⁶²¹ Otherwise, the tunnel truck could be a Mitsubishi, or a Toyota, or an Isuzu; the three truck brands looked '90 per cent' similar when viewing their flatbeds from the rear.²⁶²²

1280. Witness PRH063, who sold the Mitsubishi Canter in Tripoli,²⁶²³ saw a photograph of the truck in the media, presumably from the CCTV footage, that was different to the Canter he sold. The headlights and front fascia were different,²⁶²⁴ and the truck pictured in the media was a left-hand drive,²⁶²⁵ while the Canter he sold was a right-hand drive.²⁶²⁶

1281. The Dutch forensic team noted in their report that a Mitsubishi vehicle had been recorded by the CCTV camera at the HSBC Bank.²⁶²⁷

d. Evidence from convoy survivors

1282. The Trial Chamber heard from witnesses who were part of Mr Hariri's convoy and survived the attack.

1283. Witness PRH076,²⁶²⁸ Mr Amer Chehadeh,²⁶²⁹ Witness PRH256²⁶³⁰ and Witness 9²⁶³¹ all did not see a Mitsubishi Canter in front of the St Georges Hotel.²⁶³² Likewise, Mr Mohammed Dia²⁶³³ testified that he did not see a truck or van outside the St Georges Hotel.²⁶³⁴ Witness 9 spoke to survivors, and none mentioned a Mitsubishi Canter at the explosion site.²⁶³⁵ He heard that a few days after the attack people in the Lebanese intelligence services went to the buildings near the St Georges Hotel and took away any relevant CCTV footage.²⁶³⁶

e. Submissions

1284. The Prosecution submits that there are strong similarities between the white trucks seen in the three sets of CCTV footage and the Mitsubishi Canter sold in Tripoli, after allowing for modification to the Canter, arguing that the 'white truck in the CCTV footage is visually indistinguishable from a Mitsubishi Canter'.²⁶³⁷

1285. The Prosecution further argues that the truck's movements in the hour before the explosion, as recorded on CCTV, show that the truck was used in the attack. Specifically, the truck exited the Suleiman Frangieh tunnel close to when Mr Hariri was expected to leave Parliament. When Mr Hariri went to a nearby café instead, the truck pulled off to the side of the road near the Monroe Hotel to wait. Once Mr Hariri's convoy was on its way, the truck re-emerged in front of the Suleiman Frangieh tunnel and passed the Phoenicia and Monroe Hotels. It then slowed to a crawl

²⁶³⁷ Prosecution final trial brief, paras 1073, 1078, 1081.

in front of the HSBC Bank, so that it could reach the explosion site just before Mr Hariri's convoy arrived.²⁶³⁸ While the evidence shows that the truck in the CCTV footage was the Mitsubishi Canter, the Trial Chamber need not be satisfied of this beyond a reasonable doubt. Whether the Canter was captured on CCTV cameras is not an essential fact for conviction, namely not a material fact.²⁶³⁹

1286. The Ayyash Defence notes that the same white truck might be present in the CCTV footage from the Suleiman Frangieh tunnel, Phoenicia Hotel and HSBC Bank.²⁶⁴⁰ However, Ms Fraser was not qualified to comment on whether the same vehicle was seen in the three sets of CCTV footage, or whether it was a Mitsubishi Canter.²⁶⁴¹ And Mr Geyer could not say that the truck captured on CCTV cameras was a Canter.²⁶⁴²

1287. The Merhi Defence argues that there is no evidence that the truck in the three sets of CCTV footage was the vehicle used in the attack. Witnesses, such as Mr Dia and Witnesses 76 and 256, denied that the Mitsubishi Canter entered traffic near the explosion site. The Merhi Defence also highlights that there were no photographs of the Canter at the crime scene at the time of the explosion. There were many CCTV systems in the area of the attack, but most CCTV footage 'disappeared in very mysterious circumstances'.²⁶⁴³

f. Findings

1288. The Trial Chamber is unable to find that the white truck seen in CCTV footage exiting from the Suleiman Frangieh tunnel and passing the Phoenicia Hotel and HSBC Bank was a Mitsubishi Canter.

1289. The Trial Chamber has carefully reviewed the CCTV footage from each location, and still images derived from this footage. It appears that the same white truck is depicted in the CCTV footage from the Suleiman Frangieh tunnel, Phoenicia Hotel and HSBC Bank. As noted by

²⁶³⁸ Prosecution final trial brief, paras 1074, 1083-1084; Prosecution closing submissions, T. 13 September 2018, pp 95-106.

²⁶⁴³ Merhi Defence closing submissions, T. 18 September 2018, p. 65.

Ms Fraser, several aspects of the trucks are consistent across the three sets of CCTV footage, such as the front cabin and the tarpaulin being a similar shape, size and colour.

1290. The evidence, however, does not establish that the white truck seen in the CCTV footage was a Mitsubishi Canter. None of the witnesses positively identified that truck as a Canter. The Trial Chamber stresses that witnesses who had extensive experience with Mitsubishi Canters, such as Mr Geyer, an expert in Canter parts, and Witness 75, who imported Japanese pick-up trucks, could not identify the CCTV truck as a Canter. Mr Geyer and Witness 75 further highlighted the difficulties of trying to identify a Canter from its rear. Yet this is the only vantage point for the Suleiman Frangieh tunnel CCTV footage.

1291. Even Ms Fraser, who initially concluded that the truck in the CCTV footage was similar to a Mitsubishi Canter, backtracked. Under cross-examination, she conceded that she could not identify the make and model of that truck, and could not say that it was a Mitsubishi Canter.

1292. The Trial Chamber is not persuaded by the Merhi Defence's argument, namely the consistent evidence of those in the convoy who survived the attack, all of whom testified that they did not see a Mitsubishi Canter before the explosion. Such evidence is unsurprising. Convoy members should not be expected to remember one truck, which presumably looked normal, out of the many vehicles they saw that day. The Trial Chamber does not find these witnesses' evidence helpful to its assessment of the CCTV footage.

1293. The Merhi Defence's claim that CCTV footage disappeared under mysterious circumstances appears to rest on Witness 9's evidence that he heard that Lebanese intelligence services took away CCTV footage from buildings near the St Georges Hotel. The provenance of this information however is unclear and even assuming its truth, would not assist the Trial Chamber with the relevant issue, namely identifying the make and model of the white truck seen in the CCTV footage.

1294. The Dutch forensic team identified the truck in the HSBC Bank footage as a Mitsubishi vehicle, but this comes from its report only. Also, it is only an assertion, and there is no explanation as to why this truck should be a Mitsubishi rather than a different Japanese brand. This evidence thus carries much less weight than that of the witnesses who testified to the contrary and explained their positions.

1295. The Trial Chamber therefore is not satisfied that the Mitsubishi Canter was seen near the attack site shortly before the explosion.

ii. Recovery of Mitsubishi Canter parts at the crime scene after the attack

1296. The Prosecution alleges that the location and condition of Mitsubishi Canter parts recovered at the crime scene after the explosion demonstrate that the explosive device was situated in the Canter's cargo space.²⁶⁴⁴ Several witnesses testified as to how and where vehicle parts were found by the various investigation teams, and how they were identified as belonging to a Mitsubishi Canter.

a. Finding and identifying Mitsubishi Canter parts

1297. The Lebanese explosives experts who were first on the scene found parts from a Mitsubishi vehicle in the centre of the crater. They were found to come from a Mitsubishi Canter.²⁶⁴⁵ The Lebanese experts consulted the exclusive Mitsubishi dealership in Lebanon, and Japanese forensic experts contacted the Mitsubishi factory in Tokyo, Japan, to assist in identifying the heavily damaged vehicle parts. Further, an expert witness in Mitsubishi vehicle identification, Mr Gerhard Geyer, examined vehicle parts in Beirut.²⁶⁴⁶ This led to the identification of 41 items.²⁶⁴⁷ Most of these items were discovered by the Lebanese investigating authorities and the UNIIC investigators to the west of and inside the crater. Some parts were found in the St Georges Hotel, others in the Mediterranean Sea. The Lebanese investigators however did not record all of the places where they found parts.²⁶⁴⁸

1298. ISF forensic team members, including Witness 566, Mr Othman, Mr Krayem, Mr Khashab and Mr Safi, were responsible for retrieving the first vehicle parts from inside the crater.²⁶⁴⁹

²⁶⁶⁶ Exhibit P244 (Report of forensic investigations, Ministry of Justice, Netherlands Forensic Institute), p. 70.

b. Forensic examination of Mitsubishi Canter parts

1303. Dr van de Craats testified that the most likely scenario was that the Mitsubishi Canter carried the explosive.²⁶⁶⁷ It was the most damaged vehicle at the scene and only very small parts were recovered from it.²⁶⁶⁸ Dr van de Craats could not rule out the possibility that another vehicle had carried the bomb and had been obliterated by the detonation, but such a scenario was not very plausible on the evidence.²⁶⁶⁹

1304. The Lebanese ISF team concluded that the Canter transported the explosive device. It noted that the Canter's engine was fragmented, and Canter parts were found in the crater and 80 metres away. This indicated that the explosives had been very close to the Canter.²⁶⁷⁰ Other partially destroyed Canter parts, such as from the engine and the axles, had been found in the crater. This demonstrated that the explosives were on top of these parts.²⁶⁷¹ Mr Khashab stated that when a vehicle explodes, its remains are normally found in the crater.²⁶⁷² Mr Krayem testified that the Canter had carried the explosives because the vehicle parts that were closest to the point of explosion and had melted were from a Mitsubishi.²⁶⁷³ Witness 566 concurred that the vehicle parts recovered showed that the exploded vehicle was a Mitsubishi, because the Canter parts suffered more damage than those from other vehicles.²⁶⁷⁴

1305. Moreover, according to Mr Othman, a Mitsubishi Canter could carry up to three tonnes.²⁶⁷⁵

c. Submissions

1306. The Prosecution argues that the Mitsubishi Canter was at the centre of the explosion, in close proximity to it. Canter parts were found in the crater and far away. The engine block was fragmented and contained microscopic fractures, which pointed to its involvement in the

explosion.²⁶⁷⁶ Further, the forensic evidence concluded that the engine block was an unmodified original part.²⁶⁷⁷

1307. The Merhi Defence argues that there is no evidence that the engine block was not removed from the original truck before the explosion.²⁶⁷⁸

d. Findings

1308. The Trial Chamber finds that 41 vehicle parts recovered by the Lebanese and international investigation teams after the explosion came from a Mitsubishi Canter. One part was an engine block, number 4D33-J01926, from a Mitsubishi vehicle with vehicle registration number FE52 CE-0560619.

1309. The Trial Chamber is satisfied with Mr Geyer's identification of the Mitsubishi parts based on his 17 years of experience in working with Mitsubishi vehicles and their parts.

1310. As has already been explained at paragraphs 1069-1119 above, there were serious issues in the crime scene management following the explosion. Some vehicle parts, including at least three parts belonging to a Mitsubishi vehicle, were removed from the crime scene on the day of the explosion and were returned to the crime scene to be photographed and only then were properly logged.²⁶⁷⁹ However, based on the various investigation teams' combined efforts after the initial investigation, including the diving and explosives investigators and forensic experts, the Trial Chamber is satisfied that the 41 parts identified by Mr Geyer came from a Mitsubishi Canter.

1311. Based on the location and number of Mitsubishi Canter parts found at the crime scene after the explosion, the Trial Chamber is satisfied that a Mitsubishi Canter with the identifying engine block number 4D33-J01926 was at the scene of the attack when the explosion occurred. As explained earlier, at paragraphs 1288-1295, the CCTV footage of the white truck does not establish that the Canter was seen near the attack site before the explosion. This, however, does not preclude the Trial Chamber from determining, based on other compelling evidence, that the Canter was there.

²⁶⁷⁶ Prosecution final trial brief, paras 1063-1064.

²⁶⁷⁷ Prosecution final trial brief, fn. 2200.

²⁶⁷⁸ Merhi Defence closing submissions, T. 18 September 2018, p. 73.

²⁶⁷⁹ See para. 1080.

1312. The Trial Chamber further finds that the explosive device was in the Mitsubishi Canter's cargo space. Dr van de Craats testified that the most likely scenario was that the Canter carried the explosive device. The Lebanese ISF team also concluded that the Canter transported the device, given the condition and location of the Canter parts that were recovered. Members of this team explained that the high level of damage to the recovered Canter parts, and the presence of Canter parts in the crater, showed that the explosives were in the Canter.

1313. Dr Murray found that significant amounts of the explosive RDX were found on various Canter parts recovered from the crime scene, further demonstrating that the Canter was in close proximity to the explosives.

1314. A Canter can carry a load of up to three tonnes, meaning one could transport the quantity of explosives as found by the Trial Chamber, namely 1,852 to 2,222 kilograms of RDX. This is set out in paragraph 1305.

1315. The Trial Chamber rejects the Merhi Defence's speculative argument that the engine block had been removed from the original truck before the explosion. Witness 185 examined the engine block and provided an uncontested expert opinion that it was an unmodified original part.

1316. The Trial Chamber is thus satisfied beyond reasonable doubt that the explosives were situated in the rear of a Mitsubishi Canter with the identifying engine block number 4D33-J01926.

(e) Triggering system for the explosives

1317. The Prosecutor pleaded that a suicide bomber detonated the explosives.²⁶⁸⁰ To make a finding on this issue, the Trial Chamber examined witness evidence on how explosive charges are detonated, how jamming devices can prevent remote detonation and how the explosion was triggered.

i. Triggering systems in general

1318. The Dutch forensic team explained that an IED, or improvised explosive device, is a device designed to set off an explosive charge in a certain moment and at a certain place.²⁶⁸¹ An explosive

²⁶⁸⁰ Amended consolidated indictment, paras 4, 13, 41.

²⁶⁸¹ Exhibit P244 (Report of forensic investigations, Ministry of Justice, Netherlands Forensic Institute), p. 10.

device has three main parts: the activation mechanism, the detonator and the explosive charge. The activation mechanism sets off the small explosion in the detonator. The detonator is an igniter specially designed to produce a small explosion that is powerful enough to set off the explosive charge.²⁶⁸² For a high explosive, the explosion starts at the location of the detonator within the explosive charge, and proceeds in stages throughout the rest of the explosive charge in a matter of milliseconds.²⁶⁸³

1319. The Dutch forensic team explained the three ways to activate an explosive device: remotely with a transmitter and receiver, using a time delay activation device and by a suicide bomber who activates the device manually.²⁶⁸⁴ The Swiss forensic team considered other technical devices to trigger the detonation, such as photoelectric barrier or driving over a contact.²⁶⁸⁵ Dr van de Craats explained that detonators can be electronic or non-electronic, such as using mechanical force.²⁶⁸⁶ Most detonators are electronic, and those can be activated by a nine-volt battery.²⁶⁸⁷

ii. Jamming devices

1320. The Prosecution submits that the jamming devices in Mr Hariri's convoy were switched on and operating at the time of the attack, thereby preventing remote detonation of the explosives.²⁶⁸⁸ The Trial Chamber heard evidence on the functioning of jamming devices, the presence of such devices in Mr Hariri's convoy and the likelihood that the devices were activated when the explosion took place.

²⁶⁸⁸ Prosecution final trial brief, paras 1066, 1069-1072.

a. Jamming devices in general

1321. On the Prosecution's application, the Trial Chamber found that Witness 507 was an expert in the field of functioning and operation of jamming devices.²⁶⁸⁹ He had designed and built jamming device systems for Mr Hariri's convoy for ten years.²⁶⁹⁰

1322. Remote controls and mobile telephones are electronic transmitters and receivers²⁶⁹¹ and can be used to detonate IEDs remotely.²⁶⁹² Receivers are set to a certain frequency waiting for signals from transmitters communicating with them at the same frequency.²⁶⁹³ Jammers are designed to block these signals before they reach the receiver by running many frequencies on various frequency bands at the same time, thus creating a disturbed zone or fog around the receivers.²⁶⁹⁴ Jammers are also used to prevent the wire-tapping of mobile telephones or the detonation of explosive devices.²⁶⁹⁵

1323. The efficiency of a jammer depends on different factors. These include the frequency and the strength of the disturbed signal, the conditions at the jammer's location, the distance between the transmitter and the receiver attached to the explosive and environmental conditions, such as the reflection of transmitted signals from buildings, other systems transmitting electromagnetic fields or weather conditions, such as air humidity.²⁶⁹⁶

²⁶⁸⁹ Decision on Witnesses PRH291 and PRH507, para. 10. The Defence did not challenge his qualifications as an expert under Rule 161 (B) (iii).

b. Jamming devices in the convoy

1324. The Trial Chamber received Prosecution evidence that of the six vehicles in Mr Hariri's convoy three were equipped with jamming devices that were switched on and fully operational on 14 February 2005.²⁶⁹⁷

1325. Witness 507 and Mr Ali Mohammed Diab, who worked for Mr Hariri as an electrical engineer,²⁶⁹⁸ installed the jamming devices in three Mercedes sedans which were in Mr Hariri's convoy.²⁶⁹⁹

1326. The jamming device system used in the convoy vehicles was designed to disrupt signals of remotely controlled IEDs and was operating with a power output of 190 Watts in the frequency range of 20 MHz to four GHz.²⁷⁰⁰ Most receivers then available on the market worked within this frequency range.²⁷⁰¹ When switched on and functioning, it disturbed mobiles and radios in the convoy vehicles.²⁷⁰² As the convoy drove by, the jammers occasionally set off the alarms of cars parked along the route²⁷⁰³ and interfered with TV shows that people were watching.²⁷⁰⁴

1327. The jammers in Mr Hariri's convoy cars had four parts. These were first, six channels to generate and transmit energy, each in a specific frequency band of electromagnetic fields;²⁷⁰⁵

Channels and wiring of a jamming device similar to those installed in Mr Hariri's convoy vehicles

Exhibit P244 (Report of forensic investigations, Ministry of Justice, Netherlands Forensic Institute), appendix B, p. 3

1328. The jammers allowed outgoing radio signals only and blocked those incoming.²⁷⁰⁸ Convoy members could communicate with the Quraitem Palace control room, which was equipped with a high gain antenna, via their hand-held radios or through the car radio even if the jammers were switched on but could not receive messages from it.²⁷⁰⁹ Through the same means they could also communicate with each other if the convoy vehicles were close enough,²⁷¹⁰ and particularly if the user of the receiving set was riding in front of the user transmitting the message.²⁷¹¹ The radio transmission, however, gets weaker with distance.²⁷¹²

²⁷⁰⁸ Exhibit P290 (Ali Diab's witness statements), p. 17.

²⁷¹² Witness PRH507, T. 20 October 2014, pp 50-51, T. 21 October 2014, pp 30, 54, 56, 61-62; exhibit P290 (Ali Diab's witness statements), p. 17.

1329. Employing more jamming devices enlarges the protection zone.²⁷¹³ To protect Mr Hariri's vehicle, one car with a jammer would drive in the front; this was the 'clearance vehicle', covering the zone where the convoy was advancing. A second car would drive by the flanks shielding Mr Hariri's vehicle, and a third behind, providing additional protection in the rear. All three would work as one overall jamming system and provide an elliptical shaped protection zone focused on Mr Hariri's vehicle.²⁷¹⁴

1330. Bodyguards in Mr Hariri's convoy and security personnel at Quraitem Palace used simple procedures to check if the jammers worked.²⁷¹⁵ As the convoy prepared to set off and the jammers were switched on, the bodyguards checked whether their mobile handsets and the commercial radio worked because if the jammers were on, they would normally disturb the reception of radio signals.²⁷¹⁶ Another way to check was to observe if the images on TV screens turned fuzzy as the convoy passed by.²⁷¹⁷ The frequency band of the jammer device's third channel was set to 500-1,000 MHz.²⁷¹⁸ This is the same frequency band that TV stations and GSM mobiles then used.²⁷¹⁹ Mr Diab relied on these observations as the primary source of information of the jammers' daily functionality.²⁷²⁰

1331. Mr Hariri's vehicles, equipped with the jammers, were always guarded.²⁷²¹ Only Witness 507 and Mr Diab had access to the jamming devices.²⁷²² To prevent unwanted manipulation, Mr Diab removed the jamming devices before the cars were sent for maintenance and reinstalled

them after their return.²⁷²³ As a general rule, Witness 507 inspected and carried out regular maintenance of these jammers four times a year and additionally whenever irregularities occurred.²⁷²⁴ Mr Diab was in charge of their daily maintenance.²⁷²⁵ Witness 507 last inspected the jammers in the three Mercedes sedans sometime in January 2005.²⁷²⁶ Mr Diab checked the devices two days before the explosion.²⁷²⁷ Both found that all worked properly.²⁷²⁸

c. Penetrating a jamming device

1332. Witness 507 described theoretical ways of penetrating a jamming device system and detonating an explosive remotely.²⁷²⁹ Frequencies outside the jammer's frequency range may be used wirelessly, namely those below 20 MHz and above four GHz.²⁷³⁰ However, an antenna with a minimum of ten metres is needed to send a signal below 20 MHz.²⁷³¹ A much smaller, 30-centimetre long and 15-centimetre wide 'Yagi' antenna could transmit a signal higher than four GHz but any object in between the transmitter and the receiver would disrupt it.²⁷³² Another method is to equip the receiver with a high gain antenna, such as a parabolic antenna, but this would make it visible.²⁷³³ Laser transmitting systems, working in the THz²⁷³⁴ band, may also be

²⁷³³ Exhibit P290 (Ali Diab's witness statements), pp 27-28.

²⁷³⁴ 1 THz = 1,000 GHz.

used but may not work if an object between the transmitter and the receiver interrupts the laser beam.²⁷³⁵

1333. Within the jammer's frequency range, different kinds of transmitters and receivers may randomly succeed.²⁷³⁶ Transmitting a stronger signal than that created by the jammer may also overcome the jammer's defence; however, it requires knowledge of the jammer's capacity and involves a large module with an amplifier, a cooling system, a large battery or other source of power supply.²⁷³⁷ High power transmitters are used by TV and radio stations or for military purposes and are not easily available on the market.²⁷³⁸ Even if available, such a transmitter could only penetrate the jamming system if it was placed within two to four metres from it, and because of its dimensions it would be difficult to hide.²⁷³⁹

1334. Satellite telephones communicate at around 1,600 MHz, falling within the frequency range of the jamming device, making them unreliable tools to defeat a jamming device.²⁷⁴⁰ Even if modified antennae were used to enhance the strength of the signals, the antenna of the receiver should have a clear line of sight to the satellite.²⁷⁴¹ Therefore, using them downtown, such as in a built up area in Beirut, is problematic because of high buildings and narrow streets.²⁷⁴² If the satellite signals are too weak, the telephone will use the GSM network.²⁷⁴³ Additionally, the time needed to connect the satellite telephone used as a receiver to the satellite varies unforeseeably.²⁷⁴⁴

1335. If the explosive and the receiver are placed underground, it would be difficult for a wireless transmitter to send signals to the receiver. If the receiver is placed on the road surface, it is exposed

to other signals' disturbance, namely noise signals, and becomes more susceptible to the jammer's effects blocking the remote control sending the signal to the receiver.²⁷⁴⁵

1336. Witness 507 also explained the theoretical possibility of using the jammer signals to detonate the explosive device.²⁷⁴⁶ As the jammer's radio signals can activate less sophisticated car alarm systems, which are in plastic housing, they can similarly set off a detonating system of a bomb.²⁷⁴⁷ However, the jammer is not the only thing that can trigger this reaction. A portable radio at the right distance may also have the same effect making such triggering system less reliable.²⁷⁴⁸

1337. Jamming devices are defenceless against manual detonation, such as by a suicide bomber.²⁷⁴⁹ They are also ineffective against time-delayed detonation.²⁷⁵⁰

d. Were the convoy's jamming devices turned on?

Evidence from convoy members

1338. The Trial Chamber heard evidence from Mr Hariri's civilian close protection officers, ISF officers and medical personnel travelling in the convoy that the jammers were switched on and working on 14 February 2005 in the second, the fourth and fifth convoy cars²⁷⁵¹ driving from Parliament to Quraitem Palace.²⁷⁵² Witness 357 noted that car alarms activated as the convoy drove by cars parked on the road before the entrance of the St Georges Hotel just before the explosion.²⁷⁵³

²⁷⁵³ Witness PRH357, T. 2 June 2015, pp 37-39.

Witness 149 testified that he could not listen to the radio because the broadcast was disturbed.²⁷⁵⁴ Both concluded that the jammers must have been working.

1339. Mr Amer Chehadeh, the driver of the Mercedes in front of Mr Hariri's armoured Mercedes, testified that he switched on the jammer in the second convoy vehicle when Mr Hariri left café *Place de l'Étoile*.²⁷⁵⁵ When leaving Parliament, the standard checks in the vehicles equipped with jamming devices—whether the mobiles or the commercial radios had reception—were carried out.²⁷⁵⁶

1340. The commercial radio in the sixth convoy vehicle, the ambulance, worked on the day of the attack and when the convoy was *en route* from Parliament to Quraitem Palace, notwithstanding the ambulance's proximity to the convoy vehicles in front of it with the jamming device.²⁷⁵⁷ The ambulance normally kept a greater distance from the convoy to remain intact in case of an incident and thus to be able to help if needed.²⁷⁵⁸ Witness 256 estimated that the average distance of the ambulance, vehicle 406, from the last Mercedes Benz S500 in the convoy, vehicle 405, was ten to 15 metres, and the commercial radio should not have worked in the car.²⁷⁵⁹ Witness 507 and Mr Diab noted, however, that jammers in the convoy are directed to the front, focusing on the protected vehicle, and their signals in the rear are weaker.²⁷⁶⁰

1341. As he left the vehicle after the explosion, Witness 256 looked at the Mercedes in front of the ambulance, which had not yet caught fire, and saw that the LED lights of the jammer's remote control were still on.²⁷⁶¹

Forensic analysis of jamming devices

1342. In August 2005, the Dutch forensic team found parts of jamming devices, remote controls, antennae, batteries and channel casings at the crime scene and in what remained of two of the four Mercedes type S vehicles in Mr Hariri's convoy at Helou Barracks.²⁷⁶² On 15 August 2005, Witness 507, Mr Diab and UNIIC investigators²⁷⁶³ tested whether the jamming devices in Mr Hariri's convoy vehicles were switched on and functioning.²⁷⁶⁴

1343. The Dutch forensic team found jamming device parts in a severely damaged Mercedes Benz S500, with number plate B186395,²⁷⁶⁵ which had been the second car in Mr Hariri's convoy, vehicle 402.²⁷⁶⁶

1344. Witness 507 and Mr Diab observed that the remote control of the jamming device was properly placed in the car cabin, in the armrest, next to the driver's seat.²⁷⁶⁷ The main switch and five channel switches were turned on and still operable.²⁷⁶⁸ One of the channel switches was not functioning and the test could not establish if it had been turned on at the time of the explosion.²⁷⁶⁹ Based on these observations, Witness 507 and Mr Diab concluded that the remote control may have been functioning properly, and the main switch and five of the channel switches had been turned on.²⁷⁷⁰

²⁷⁷⁰ Exhibit P244 (Report of forensic investigations, Ministry of Justice, Netherlands Forensic Institute), appendix B, p. 4; Witness PRH507, T. 20 October 2014, pp 42-43.

1345. The six channels of the jamming device and one of its batteries were in the rear compartment.²⁷⁷¹ Mr Diab testified that the jamming device could work on one battery as long as the vehicle's generator provided the necessary power to it.²⁷⁷² Witness 507 noted that the plugs and the safety fuses connecting the channels to the antennae and to the remote control had been forcibly removed, and the wires were screwed out between the remote control and the channels.²⁷⁷³ This could not have been caused by the explosion, but rather by someone unexperienced in jamming devices.²⁷⁷⁴

1346. Mr Diab extracted still images from Future TV footage of the crime scene after the explosion to show that the damaged door of the second vehicle's boot was open, and the cable connecting the top left channel—the fourth frequency band—with its antenna was disconnected.²⁷⁷⁵ He explained that the explosion could have forced the boot lid open and could have unplugged the cable or the cable may have been connected improperly.²⁷⁷⁶

1347. A test of this jammer with an electronic spectrum analyser, a tool designed to measure high-frequency signals broadcast from the channels to the antennae,²⁷⁷⁷ showed that the frequency range of each of the six channels was wider than the range specified for each channel, providing overlaps between the neighbouring frequency bands.²⁷⁷⁸ Notwithstanding that Witness 507 and Mr Diab did not determine the energy output of each channel, they concluded that electronically the six channels had likely been intact and operating properly at the time of the explosion.²⁷⁷⁹

²⁷⁷⁹ Exhibit P244 (Report of forensic investigations, Ministry of Justice, Netherlands Forensic Institute), appendix B, pp 4-5; Witness PRH507, T. 21 October 2014, pp 43-44.

1348. The Dutch forensic team also found a jamming device remote control inside another severely damaged and burnt Mercedes S500, convoy vehicle 405, and the antennae on its boot door.²⁷⁸⁰ It identified wirings, some of the channels and the channels casing of this vehicle in the debris placed next to convoy vehicles.²⁷⁸¹

1349. The channels of the jamming device were heavily burnt and could not be electronically tested.²⁷⁸² The remote control plugs, the channels and the antennae were still intact.²⁷⁸³ The wires between the remote control and the channels were broken.²⁷⁸⁴ The antennae were severely damaged and the connection to the channel was broken.²⁷⁸⁵ The remote control was in its correct position inside the vehicle, and the main switch was on.²⁷⁸⁶ Four switches were turned on but only one was functioning.²⁷⁸⁷ The remaining two channel switches were damaged and it could not be determined if they had been switched on at the time of the explosion.²⁷⁸⁸ Based on these observations, Witness 507 and Mr Diab concluded that this jamming device was also most likely operating properly when the explosion occurred.²⁷⁸⁹

1350. The Dutch forensic team collected remains of a third jamming device from debris around the crater.²⁷⁹⁰ These included parts of the antenna box, an antenna splitter, electronic circuit boards

with metal casings and coax cable connectors.²⁷⁹¹ These could not be tested.²⁷⁹² The forensic team concluded that these belonged to the fourth car of Mr Hariri's convoy, vehicle 404, which was close to the explosion centre.²⁷⁹³

1351. To find out if the jammers worked properly on the day of the attack, on 16 August 2005 Witness 507 and Mr Diab conducted a test at the crime scene of the jammers installed in two vehicles.²⁷⁹⁴ These were the same type, set on the same frequency bands as the jammers installed in Mr Hariri's convoy.²⁷⁹⁵ Witness 507 and Mr Diab used four Nokia and Siemens mobiles.²⁷⁹⁶ A portable mobile base station was placed close to the crater.²⁷⁹⁷ The test showed that when the vehicles with the jammers were about 40 metres from the crater, the mobiles at the crater stopped working.²⁷⁹⁸

e. Submissions

1352. The Prosecution submits that the jamming devices in the convoy were switched on and working on the day of the attack. The driver of the second convoy vehicle testified that he turned on the devices for his car. Convoy security personnel noted interference with their mobiles and commercial radio as well as car alarms being triggered, which demonstrated that the jamming devices were working.²⁷⁹⁹ Immediately after the explosion, the ambulance driver saw that the lights of the jammer's remote control in the fifth convoy vehicle were still on.²⁸⁰⁰ The devices were checked and monitored on a regular basis, and each time found to work properly.²⁸⁰¹ Finally,

²⁸⁰¹ Prosecution final trial brief, para. 1071.

experts inspected the jamming devices after the explosion and found that devices in two convoy vehicles were turned on and working at the time of the explosion.²⁸⁰²

1353. The jamming devices sent stronger signals towards the front than to the rear. As a result, people riding in the ambulance, the last convoy vehicle, sometimes experienced no interference with their mobiles or the commercial radio.²⁸⁰³

1354. Counsel for Mr Ayyash and Mr Merhi and the former Accused, Mr Badreddine, cross-examined Prosecution witnesses testifying on the jamming devices in the convoy. They challenged the Prosecution's case and the testimony about whether the jamming devices were switched on and functioning before the explosion, whether these devices were well-maintained and ways to overcome their effect. They also challenged the credibility of their accounts.²⁸⁰⁴ The Defence did not repeat these challenges in their final trial briefs or oral closing submissions.

f. Findings

1355. The Trial Chamber finds that the jamming device systems were activated at the time of the attack.

1356. There is no dispute that three vehicles in Mr Hariri's convoy had jamming devices installed. The only issue is whether they were turned on and working. The evidence from before and after the attack is consistent that the jammers were operational.

1357. The Trial Chamber is satisfied that the convoy witnesses who saw the jammers were functioning were credible and reliable. They had an independent recollection of the events which corroborated each other's accounts. Mr Chehadeh, the driver of the second convoy vehicle, testified that he switched on the vehicle's jammer after they left *café Place de l'Étoile* near Parliament. Others in the convoy saw various indicators that the devices were working, such as car alarms going off as the convoy passed and interference with the convoy vehicles' radios. Right

after the explosion, Witness 256 saw that the lights on the fifth convoy vehicle's jammer remote control were still on.

1358. Subsequent forensics analyses of the jamming devices further confirm that they were switched on. In August 2005, Witness 507 and Mr Diab, who had installed the jamming devices in the convoy vehicles, tested the devices twice in two days. They found that the devices were still working properly and most likely had been activated on the day of the attack.

1359. The regular inspections of the jamming devices also provide strong support that they functioned properly. The jammers underwent daily and quarterly maintenance. The convoy vehicles were guarded and only a few select and trusted people could access the devices. The most recent checks before the attack, including one just two days prior, found the jamming devices worked properly.

1360. Further, Witness 256, consistent with his statement from 2006, testified that the commercial radio in the ambulance was working just before the attack. Normally, jamming devices in the convoy vehicles would have interfered with the vehicles' radios. Witness 507 and Mr Diab, though, explained that the jammers in the convoy aimed their signals to the front more than to the rear. So, the radio working properly in the ambulance, which was the last convoy vehicle, does not demonstrate that the jamming devices were turned off. It also does not outweigh all the contrary evidence referred to above.

(f) Triggering system used in the attack

i. Evidence

1361. The consensus of the various Lebanese and international investigation teams was that a suicide bomber triggered the explosion.

1362. The Dutch forensic team observed that it was not possible to use a time delay activation device for the attack because it was not clear when Mr Hariri's convoy would pass the St Georges Hotel.²⁸⁰⁵

²⁸⁰⁵ Exhibit P244 (Report of forensic investigations, Ministry of Justice, Netherlands Forensic Institute), p. 83.

1363. A remote control device was possible because the hotels and other tall buildings surrounding the explosion site allowed for ideal positioning to trigger the explosion remotely. These locations were far enough away to be safe and they allowed a clear view of the convoy. Even if the convoy's jammer devices were working, this would not mean all remote control devices had been blocked. However, the Dutch team found it highly unlikely that a TV remote control recovered at the crime scene on the road was used to activate the IED.²⁸⁰⁶ The TV remote had not been modified. A TV remote works at close range and would not have worked from the Monroe Hotel.²⁸⁰⁷ The Dutch team concluded that a suicide bomber was slightly more likely. It noted that, for one deceased person, only tiny human remains had been recovered and the person had not been identified or reported missing.²⁸⁰⁸

1364. The Spanish forensic team concluded, based on their other findings in their report, that the 'most feasible' hypothesis was a suicide bomber. However, they noted the lack of clear evidence supporting this theory. They also acknowledged the possibility that the bomb was detonated by remote control, after the Canter driver had parked the vehicle and left in another vehicle. But they found this to be unlikely given the amount of time involved to conduct such an operation.²⁸⁰⁹

1365. Dr Murray agreed with the Dutch forensic team that the most likely scenario for activating the explosion was a suicide bomber.²⁸¹⁰ He explained that there would not have been enough time for a driver to park the Mitsubishi Canter truck and then go into a nearby building to trigger the explosives.²⁸¹¹ He acknowledged, though, that it was possible for one person to drive the vehicle and another person to wait nearby and trigger the explosion remotely.²⁸¹²

1366. The Swiss forensic team thought that it was not possible for the explosion to be triggered by time delay, photoelectric barrier or driving over a contact, because these were not precise enough to strike a moving vehicle. They said that a suicide bomber, a person triggering the

²⁸¹² Gerard Murray, T. 30 September 2014, p. 16.

explosion remotely or the use of technical devices were all possible means of triggering the explosion.²⁸¹³ They did not find anything at the scene of the explosion that indicated what kind of trigger it was.²⁸¹⁴

1367. The ISF team could not determine how the explosives were detonated.²⁸¹⁵ Mr Othman thought that both a suicide bomber or remote control were possible.²⁸¹⁶ Mr Khashab noted that because of the jamming devices in the convoy, it would have been difficult to detonate the explosives by remote control.²⁸¹⁷

1368. The Lebanese Military Intelligence team concluded that the most likely method of ignition was a suicide bomber. They noted the jamming devices in the convoy would block a remote control signal. Using a wired detonation method was unlikely because of the difficulty in manoeuvring the explosives and the ease of identifying a perpetrator.²⁸¹⁸

ii. Submissions

1369. The Prosecution submits that using a suicide bomber to detonate the explosives was the only viable option for executing an attack on such a complex target. It would be a workaround for the jamming devices in Mr Hariri's convoy, which precluded wireless detonation. A suicide bomber could also detonate the explosive device immediately next to the target, which was crucial given the convoy's high speed. Moreover, experts agreed that the method of detonation was a suicide bomber.²⁸¹⁹

1370. The Ayyash Defence submits that the Prosecution did not present evidence on the triggering mechanism used to detonate the explosion and international investigators were unable to find any indication of how the explosion was detonated. Similarly as noted above,²⁸²⁰ the

²⁸¹⁹ Prosecution final trial brief, paras 1065-1068.

²⁸²⁰ See para. 1159.

Ayyash Defence argues that the evidence does not support the Prosecution's contention that the explosives and detonation device came from Hezbollah.²⁸²¹

iii. Findings

1371. The Trial Chamber has no reason to disagree with the consensus of the forensic teams that a suicide bomber triggered the explosion. Each team eliminated the other possible means of detonation as inappropriate for targeting a moving convoy of vehicles. This leaves only the possibilities of a remote control device or a suicide bomber. As Dr Murray and the Spanish team explained, triggering the explosion remotely was difficult. There was only a limited amount of time available for the Canter driver to park the vehicle and get away quickly in another vehicle driven by someone else.

1372. Having one person drive the vehicle and another trigger the explosion remotely was possible. However, the jamming devices used by Mr Hariri's convoy would hinder the use of a remote control device. The jammers were switched on and working when the explosion took place. So they would have disrupted the transmission of any signals within the jammer system's frequency range from a remote control to a wireless explosive device that was close to the convoy. Witness 507 and Mr Diab found it unlikely that transmitters working outside this range were used to overcome the jamming devices. Long antennae transmitting signals below 20 MHz could not be set up in a short time in a concealed way. Beyond the range, namely above four GHz, any object between the transmitter and the receiver would interrupt the signal.

1373. Finally, the evidence as to the single unidentified deceased male whose remains were recovered at the explosion site²⁸²² supports the conclusion that a suicide bomber detonated the explosion. This unidentified male was the person closest to the explosive device when it detonated, just one or two metres away. In other words, he was close enough to activate the device in person.

1374. Lastly, the Trial Chamber also considered that the letter attached to the claim of responsibility tape placed in a tree near the Al-Jazeera offices also makes reference of a 'suicide operation'.²⁸²³

²⁸²¹ Ayyash Defence final trial brief, para. 66.

²⁸²² See para. 1378.

²⁸²³ See para. 4880.

1375. The Trial Chamber therefore finds beyond a reasonable doubt that a suicide bomber triggered the attack.

3. Human remains recovery and forensic analysis

1376. The amended consolidated indictment pleads that in addition to killing Mr Hariri, the explosion killed 21 others and injured 226 persons.²⁸²⁴ The Parties agreed upon these facts, namely that (i) in addition to killing Mr Hariri, the explosion killed 21 others,²⁸²⁵ and (ii) injured 226 persons.²⁸²⁶ The number and identification of the deceased and injured victims is uncontested.²⁸²⁷ The names of the deceased and injured victims are listed below or in annex D of this judgment.

1377. The Trial Chamber received evidence from members of the ISF police and Lebanese and international experts in forensic science about the recovery of bodies, human remains and the identification of victims following the explosion.

(a) Recovery of human remains

1378. Twenty-three people died in the explosion or in the aftermath of the blast, including the suicide bomber.²⁸²⁸ However, only 20 complete bodies were recovered from the crime scene.²⁸²⁹ Mr Bassel Fuleihan died on 18 April 2005, in Paris, France, from his injuries caused by the explosion.²⁸³⁰ Two known victims whose bodies were not recovered were Mr Yahya Al-Arab, one of Mr Hariri's security chiefs, and Mr Talal Nabih Nasser, a personal bodyguard for Mr Hariri and deputy of his security detail.²⁸³¹ They were travelling in vehicle number 404 and due to the complete destruction of the vehicle, it was likely the closest vehicle to the epicentre of the explosion.²⁸³² The third victim's body was not identified and is described below as the 'unidentified man'.²⁸³³

²⁸²⁴ Amended consolidated indictment, para. 4, schedules A-B.

²⁸²⁵ Agreed facts, no. (i).

²⁸²⁶ Agreed facts, no. (ii).

²⁸²⁷ Agreed facts, nos (i)-(ii).

²⁸²⁸ Exhibit P194 (Statement of Fouad Ayoub), p. 3; Fouad Ayoub, T. 2 July 2014, pp 30-31; exhibit P244 (Report of forensic investigations, Ministry of Justice, Netherlands Forensic Institute), p. 87.

²⁸²⁹ Exhibit P194 (Statement of Fouad Ayoub), p. 3; exhibit P192 (Medical report on Mr Bassel Farid Fuleihan).

²⁸³⁰ Exhibit P194 (Statement of Fouad Ayoub), p. 3; exhibit P192, p. 27.

²⁸³¹ Exhibit P194 (Statement of Fouad Ayoub), p. 3.

²⁸³² Exhibit P266 (Spanish forensic team expert report), p. 265.

²⁸³³ Exhibit P194 (Statement of Fouad Ayoub), p. 3.

1379. Twenty death certificates were issued.²⁸³⁴ Death certificates were issued for Mr Al-Arab and Mr Nasser even though their bodies were not recovered.²⁸³⁵ The Lebanese Ministry of Interior and Municipalities did not issue death certificates for Mr Sobhi Mohammed Al-Khodr or Mr Farhan Ahmad Issa because they were Syrians.²⁸³⁶

1380. Immediately after the explosion, the ISF requested Dr Fouad Ayoub, who the Trial Chamber declared an expert in forensic science specialised in human identification,²⁸³⁷ to assist in identifying the bodies found at the crime scene and which were later transported to several hospitals in Beirut.²⁸³⁸ Over the next 48 hours, Dr Ayoub, and Mr Kheireddine, a Lebanese police officer, and their teams went to the American University Hospital, Hotel *Dieu* Hospital and *Al Makassed* Hospital in Beirut to assist in identifying bodies.²⁸³⁹ The remaining bodies were identified by the victims' relatives.²⁸⁴⁰

1381. At the hospitals, Mr Kheireddine photographed the bodies of deceased victims, a number of which were heavily charred, and took their fingerprints.²⁸⁴¹ He and Dr Ayoub examined, photographed and lifted fingerprints from eight bodies at the American University Hospital.²⁸⁴² Dr Ayoub took six additional samples from bodies at the morgue to send for DNA analysis at the American University of Science and Technology in Beirut.²⁸⁴³ Mr Kheireddine and his team compiled a report and sent the film negatives to the forensic laboratory.²⁸⁴⁴

²⁸³⁴ Exhibit P191 (Death certificates); exhibit P192, p. 27.

²⁸³⁵ Exhibit P191, pp 7-45.

²⁸³⁶ Exhibit P191, p. 4; exhibit P204 (Report by Dr Ayoub on DNA data of individuals recovered from crime scene), pp 6, 17, 24, 32.

²⁸³⁷ Dr Ayoub was declared by the Trial Chamber under Rule 161 as an expert in forensic science specialised in human identification, Decision on expert reports of 1 July 2014, Decision on expertise (Professor Ayoub and Dr Mansour). *See also* Fouad Ayoub, T. 1 July 2014, pp 11-13, 15-16. Dr Ayoub wrote seven reports for the UNIIC, of which two were co-authored. The reports describe the collection of human remains from the crime scene of the explosion, information about the DNA profiling of those remains and the DNA profiling of individuals related to alleged suspects.

²⁸³⁸ Exhibit P194 (Statement of Fouad Ayoub), pp 2-3; Fouad Ayoub, T. 1 July 2014, pp 13-15, 17-18.

²⁸³⁹ Exhibit P194 (Statement of Fouad Ayoub), p. 5; Fouad Ayoub, T. 1 July 2014, pp 17-18; Mohammed Kheireddine, T. 23 July 2014, pp 34-35, 49; exhibit P236 (Statement of Mohammed Kheireddine), p. 9.

²⁸⁴⁰ Fouad Ayoub, T. 1 July 2014, pp 17-18.

²⁸⁴¹ Mohammed Kheireddine, T. 23 July 2014, pp 34-35, 49; exhibit P236 (Statement of Mohammed Kheireddine), p. 9.

²⁸⁴² Exhibit P236 (Statement of Mohammed Kheireddine), pp 24, 44-54. However, Mr Kheireddine admitted that it is not possible to lift fingerprints off a heavily charred surface such as those at the crime scene after this type of explosion, Mohammed Kheireddine, T. 23 July 2014, p. 49.

²⁸⁴³ Exhibit P194 (Statement of Fouad Ayoub), p. 5.

²⁸⁴⁴ Exhibit P236 (Statement of Mohammed Kheireddine), p. 9.

1382. On Monday 14 February 2005, late into the night, Dr Ayoub identified the following bodies at the American University Hospital: Mr Hariri, Mr Mahmoud Saleh Al-Khalaf, Mr Mohammed Saadeddine Darwiche, Mr Issa, Mr Tarraf and Mr Mohamed Riad Hussein Ghalayini. Early in the morning on 15 February, he went to Hotel *Dieu* Hospital and identified Mr Omar Al-Masri's body through a dental record examination.²⁸⁴⁵ He then went to *Al Makassed* Hospital and learned that Ms Rima Bazzi's body had been identified by her parents; her body was released the following morning.²⁸⁴⁶

1383. Dr Ayoub finalised a report with the initial results of his analysis on Thursday 17 February 2005, after which Lebanese judicial authorities, including Judge Mezher, asked him to go to the crime scene to retrieve further human remains.²⁸⁴⁷ On Friday 18 February 2005, Dr Ayoub and his team searched for human remains at the crime scene.²⁸⁴⁸ There were still missing bodies, including those of Mr Abdul Hamid Ghalayini and the presumed suicide bomber, and Dr Ayoub wanted to search the crime scene for their remains and, in particular, before the start of expected rain.²⁸⁴⁹ He recalled that it rained on the following day, Saturday 19 February, but that between 14 and 18 February there was no rainfall in Beirut.²⁸⁵⁰ He was concerned that if it started raining, the human tissue and remains could be moved by the water, making it difficult to collect them. Water can also have a negative impact on DNA.²⁸⁵¹ The crater was already entirely filled with water at this point, but Dr

²⁸⁴⁵ Exhibit P194 (Statement of Fouad Ayoub), pp 5-6.

²⁸⁴⁶ Exhibit P194 (Statement of Fouad Ayoub), p. 5.

²⁸⁴⁷ Exhibit P194 (Statement of Fouad Ayoub), p. 3. Dr Ayoub later drafted a portion of the report entitled 'DNA results of samples taken from the crime scene, indicated on the map and taken five days after the explosion' of 24 February 2005 (exhibit P196). It contains annotated photographs of the collected samples and an extensive DNA analysis of the samples collected, including details of the methodology, results and their interpretation, Fouad Ayoub, T. 1 July 2014, pp 21-27, 31-60.

²⁸⁴⁸ Fouad Ayoub, T. 1 July 2014, pp 19-21; exhibit P194 (Statement of Fouad Ayoub), p. 3; exhibit P196 (Dr Ayoub's report on DNA results of samples from crime scene, 24 February 2005), p. 3. *See also* exhibit P200 (Dr Ayoub's forensic report on human parts of unidentified male), p. 10; exhibit P244 (Report of forensic investigations, Ministry of Justice, Netherlands Forensic Institute), pp 48, 87. Dr Ayoub repeatedly stated that he visited the crime scene on 18 February 2005. However, he also stated that it was 'some five days after the explosion' and the expert report on the forensic investigation of the explosion prepared by the Dutch forensic team (exhibit P244) states that Dr Ayoub and his team were at the crime scene on 19 February 2005. Based on the evidence before it, in particular the multiple written witness statements signed by Dr Ayoub, the Trial Chamber is satisfied that Dr Ayoub went to the crime scene on 18 February 2005, not 19 February 2005.

²⁸⁴⁹ Fouad Ayoub, T. 1 July 2014, pp 19, 36-37, T. 2 July 2014, pp 33-35, 48.

²⁸⁵⁰ Fouad Ayoub, T. 2 July 2014, p. 35.

²⁸⁵¹ Fouad Ayoub, T. 1 July 2014, pp 19, 36-37.

Ayoub was confident that it was filled with water when the explosion happened, and he did not think there were any human remains in the crater.²⁸⁵²

1384. The judicial authorities restricted Dr Ayoub's search to open spaces visible by the naked eye; he was not allowed to search the crater itself, in or around burned vehicles or any rubble because he was told that the Swiss experts were expected to arrive.²⁸⁵³ He marked a large perimeter around the crime scene and moved toward the centre of it to collect all of the remains inside.²⁸⁵⁴ He collected remains in the Byblos building, up to the second floor, and up to the first floor of the St Georges Hotel, but was unable to go any higher due to debris obstructing the stairways.²⁸⁵⁵ On 18 February, Dr Ayoub recovered seven samples of human remains.²⁸⁵⁶

1385. Mr Michel Jbeily and Mr Bashir Al-Hamsi, warrant officers at the ISF Central Accidents Bureau, which took fingerprints, DNA and photographs and issued crime investigation reports,²⁸⁵⁷ collected human remains from the crime scene after the explosion on Monday 14 February 2005 and on the following day.²⁸⁵⁸

1386. Mr Jbeily found remains at the ground floor entrance to and on the first floor of the Byblos building; he photographed the remains as he found them and gave them reference numbers.²⁸⁵⁹ On 15 February 2005, he and a colleague also found the body of Mr Zahi Bou Rjeily under rubble on the first floor of an unoccupied building across from the St Georges Hotel.²⁸⁶⁰ Mr Al-Hamsi found the remains of a human finger.²⁸⁶¹ They took samples of the human remains and photographs.²⁸⁶² The same evening, Civil Defence personnel also found a foot and they took a sample.²⁸⁶³

1387. The remains collected on 14 February were put into envelopes and taken to the laboratories at the American University for Science and Technology and St Joseph University in Beirut.²⁸⁶⁴

1388. On Monday 21 February 2005, Witness PRH450, a judicial investigator working with the military police, discovered the burned body of a man under a vehicle about four metres from the crater.²⁸⁶⁵ On Saturday 26 February 2005, Dr Ayoub performed DNA analysis on a body recovered from the crime scene about a week after the explosion and it revealed that it was the body of Mr Mahmoud Saleh Al-Hamad Al-Mohammed.²⁸⁶⁶

1389. On 25 and 26 February 2005, Judge Abou-Arraj instructed Mr Al-Hamsi and Mr Gemayel, who were working in the ISF Central Accidents Bureau, to inspect human remains at the explosion site, lift samples and take photographs.²⁸⁶⁷ On 25 February, Mr Al-Hamsi collected human remains on the ground floor of the Byblos building.²⁸⁶⁸ On 26 February, Mr Gemayel carried out a technical inspection of part of a foot that was found at the crime scene by the Borj squad, a police squad in charge of the area in Beirut covering the crime scene—specifically the area between Manara and St Georges and downtown Beirut.²⁸⁶⁹

1390. On 1 March 2005, Mr Kheireddine returned to the crime scene to photograph human remains and to collect a sample from a hand found at the scene that day.²⁸⁷⁰ Mr Saadeddine informed him that he had moved the hand from under the rubble and showed Mr Kheireddine where it was.²⁸⁷¹ Mr Kheireddine took the sample to Dr Ayoub at the American University of Science and Technology.²⁸⁷²

1391. On 2 March 2005, Mr Jbeily and his colleague from the ISF Central Accidents Bureau, with the assistance of the Civil Defence and family members,²⁸⁷³ found the body of Mr Ghalayini under rubble in front of the Byblos Hotel building.²⁸⁷⁴ Mr Jbeily and his colleagues also found a foot not belonging to the body under the rubble.²⁸⁷⁵

1392. On 6 March 2005, Mr Elie Hawa, a First Sergeant and Crime Scene Officer with the ISF Central Accidents Bureau,²⁸⁷⁶ was informed about a human tooth found at the explosion site.²⁸⁷⁷ Mr Hawa and his colleague went to the crime scene to inspect the tooth and where it was found—on the northern sidewalk to the east of the explosion, about nine metres away from the first

St Georges Hotel entrance and 35 metres from the crater caused by the explosion.²⁸⁷⁸ The tooth was 2.5 centimetres long with a broken part and the remainder was black, burned by the fire.²⁸⁷⁹ Mr Hawa inspected it, took photographs and delivered it to the laboratory for testing.²⁸⁸⁰

1393. On 10 March 2005, investigating Judge Abu-Arraj instructed the Borj squad to appoint a patrol to go to the explosion site and take further samples and photographs of human remains and other items.²⁸⁸¹ Following this instruction, Mr Gemayel and Mr Al-Hamsi, of the Central Accident Bureau, were appointed to the patrol.²⁸⁸² When they arrived, they joined members of the Civil Defence in removing rubble from an area south of the crater, by the Byblos building. They removed light rubble by hand and used a small Bobcat bulldozer to remove heavy rubble to extract human remains and other items.²⁸⁸³ The items found and photographed included a handgun and holster, a car number plate and a purse with car papers.²⁸⁸⁴ They took several samples of the human remains to identify victims.²⁸⁸⁵

1394. The Dutch forensic team discovered more human remains at the crime scene. On 19 August 2005, they found bone fragments of a hip and a femur. On 30 August, they recovered the remains of a hand.²⁸⁸⁶ They found these in front of the Byblos Hotel.²⁸⁸⁷

1395. The Spanish forensic team investigated the crime scene between May and June 2006 and collected further biological remains.²⁸⁸⁸ Witness 155, a member of the Spanish team of experts, found fragments from human bodies at the crime scene, specifically on the base of a crane attached

to the Byblos Hotel and in the crater.²⁸⁸⁹ The Spanish team found 207 presumed biological exhibits.²⁸⁹⁰ On 30 May 2006, they found a second tooth.²⁸⁹¹

1396. Although the Spanish forensic team observed the standard forensic protocols, they could not guarantee that samples had not decomposed, or been contaminated by previous forensic searches, interference by animals, the lapse of time or weather conditions.²⁸⁹² Also, some evidence may have been missed.²⁸⁹³ Dr Ayoub assisted the Spanish experts and was involved in the same capacity as in 2005 in retrieving remains, analysing the DNA and preparing the relevant reports.²⁸⁹⁴

(b) Forensic analysis of victims' remains

1397. Human remains from three members of Mr Hariri's convoy were recovered from the crime scene: Mr Darwiche's mutilated body and smaller body parts from Mr Nasser and Mr Al-Arab.²⁸⁹⁵ Two bags of unknown human remains were given to Mr Al-Arab's family for burial before any DNA analysis was done on them.²⁸⁹⁶ The bone fragments recovered at the crime scene on 19 August 2005 were identified as Mr Nasser's, and a part of the hand found on 30 August was identified as Mr Darwiche's.²⁸⁹⁷ Notably, human remains of these three members of the convoy, who had been seated in the fourth convoy vehicle, were found in the same area in front of the Byblos Hotel.²⁸⁹⁸

1398. Smaller pieces of tissue and bones belonging to a third unidentified person, the 'unidentified man', were also recovered.²⁸⁹⁹

1399. Human remains collected at the crime scene which were too small or damaged to be identified visually were sent for analysis at laboratories at St Joseph University in Beirut, the

American University of Science and Technology and later to the Netherlands Forensics Institute to establish DNA profiles to potentially match to victims.²⁹⁰⁰ Analysts established DNA profiles from the remains and by comparison created groups of matching DNA.²⁹⁰¹

1400. Dr Ayoub documented the remains he collected on a map of the crime scene²⁹⁰² to link to the DNA the results of the DNA analysis.²⁹⁰³ The remains were separated and numbered, ‘preserved in a scientific manner’ and transported in a vehicle to the two laboratories for DNA testing.²⁹⁰⁴

1401. Mr Asaad Nohra, the Head of the ISF Forensic Laboratories Bureau from 1991 to 2010, testified that after the explosion, the Bureau received samples from ISF investigators and forwarded them to one or both of the laboratories at St Joseph University and the American University of Science and Technology for DNA or chemical analysis.²⁹⁰⁵ Records were kept of incoming and outgoing samples and samples were also sent directly by investigators to private laboratories without first being submitted to the Bureau.²⁹⁰⁶ It did not conduct its own analysis on these samples.²⁹⁰⁷ The Bureau’s staff generally did not attend crime scenes, but received evidence provided by investigators; an exception was when a judicial or rogatory writ²⁹⁰⁸ was issued ordering them to go to the crime scene.²⁹⁰⁹ This occurred during the investigation and Mr Nohra

was required to accompany an expert from the American University of Science and Technology to the crime scene to collect swabs and soil samples.²⁹¹⁰

i. DNA analysis of human remains: timeline

1402. Dr Issam Mansour, whom the Trial Chamber declared an expert in forensic science,²⁹¹¹ headed the forensic DNA laboratory at the American University of Science and Technology.²⁹¹² In February and March 2005, his laboratory received samples, some from ISF officials and others from Dr Ayoub, taken from the unidentified bodies of victims at hospitals in Beirut or from the crime scene.²⁹¹³ To avoid contamination, Dr Ayoub and his colleagues delivered the material to the laboratories in sealed plastic pillboxes. They placed larger pieces of human remains in transparent, nylon bags.²⁹¹⁴

1403. Dr Ayoub was not involved in the DNA analysis himself but interpreted the results of the DNA analyses carried out at the laboratories.²⁹¹⁵ It was not possible to extract a complete DNA profile from some samples because they were mixed with soil or kept under heat for a long period. Extreme temperature such as exposure to fire would not change the DNA profile but would make it more difficult to extract.²⁹¹⁶ He explained that DNA is often taken from the head of the femur or the teeth during exhumation of human remains as teeth in particular do not degrade and are resistant to different chemical changes.²⁹¹⁷

1404. In 2012, Dr Reza Gerretsen, a forensic pathologist at the Netherlands Forensic Institute, whom the Trial Chamber declared an expert in forensic anthropology,²⁹¹⁸ further analysed the

²⁹¹⁷ Fouad Ayoub, T. 2 July 2014, pp 3-4.

²⁹¹⁸ Dr Gerretsen was declared by the Trial Chamber under Rule 161 as an expert in forensic anthropology, Decision on twelve expert witnesses, paras 32-33; Reza Gerretsen, T. 30 September 2014, p. 42. Dr Gerretsen stated that he was then the only forensic pathologist in the Netherlands. He was not a DNA expert and did not carry out DNA analysis. According to him, pathologists work with soft tissue, while forensic pathologists work with hard tissue, such

human remains recovered from the explosion.²⁹¹⁹ Specifically, he analysed the DNA of various materials which had not rendered a clear DNA profile in the previous analyses. This material included items recovered from the crime scene in May 2006 and, to a smaller extent, remains which had been buried and exhumed from graves later.²⁹²⁰

1405. The Netherlands Forensic Institute received the remains in large sealed bags and smaller envelopes.²⁹²¹ The large bags were photographed and x-rayed and then after opening them, their contents were photographed and analysed.²⁹²² Dr Gerretsen sorted the hard tissue and deteriorated soft tissue and worked with a DNA specialist to determine the likely sources of the DNA material.²⁹²³ Dr Gerretsen and the DNA specialist selected pieces of bone which had a larger outer layer, rather than spongy pieces, and after cleaning, they were submitted for DNA testing.²⁹²⁴ The smaller envelopes contained dry pieces of evidence and it was easier to process them and recognise the human remains.²⁹²⁵

ii. Results of DNA analysis: identification of victims

a. Remains of Mr Nasser and Mr Al-Arab

1406. To identify Mr Nasser's remains, Dr Ayoub analysed remains he found at the crime scene on 18 February 2005 together with a bag of remains received at the American University hospital on 17 February. Based on these remains, he requested approval from investigating Judge Abou-Arraj to take DNA samples from victims' families. After obtaining approval to take samples from

as bones and teeth and the areas surrounding those tissues. The basic work of a forensic pathologist is the forensic identification of bone tissue and, in particular, whether that tissue is human. Reza Gerretsen, T. 30 September 2014, pp 42-43, T. 1 October 2014, pp 35-37. Dr Gerretsen's reports were admitted as exhibits P278 (Netherlands Forensic Institute report on forensic anthropological and DNA related investigation, 31 October 2012) and P279 (Netherlands Forensic Institute report on forensic anthropological investigation, 4 March 2013).

²⁹²⁴ Reza Gerretsen, T. 30 September 2014, pp 54-55; exhibit P278 (Netherlands Forensic Institute report on forensic anthropological and DNA related investigation, 31 October 2012), p. 21.

²⁹²⁵ Reza Gerretsen, T. 30 September 2014, pp 56-57.

the families, on 9 April 2005, Dr Ayoub determined that these remains belonged to Mr Nasser by comparing them with a DNA analysis of a sample taken from his mother.²⁹²⁶

1407. Regarding the identification of Mr Al-Arab, similarly on 9 April 2005, Dr Ayoub identified human remains recovered on 18 February 2005, plus an additional three human remains discovered by the ISF, to belong to Mr Al-Arab. Immediately following the explosion, Mr Al-Arab's family took human remains from the American University Hospital, yet to be analysed by Dr Ayoub, and buried them and had a funeral.²⁹²⁷ Mr Nasser's family also had a funeral and buried a body but according to Dr Ayoub, there was no body identified as Mr Nasser at the time of the funeral on Wednesday 16 February 2005.²⁹²⁸

1408. On 30 January 2006, Dr Ayoub exhumed bags of human remains from Mr Al-Arab's grave to determine if they contained any of Mr Ahmad Abu Adass's remains, but the DNA analysis of the remains was inconclusive.²⁹²⁹ The same night, Dr Ayoub opened Mr Nasser's grave and identified the body with dental records.²⁹³⁰

1409. Later DNA analysis and cross-comparison by Professor Christophe Champod, whom the Trial Chamber declared an expert in the forensic analysis of human remains,²⁹³¹ and the Dutch and Spanish forensic experts, identified Mr Al-Arab²⁹³² and Mr Nasser²⁹³³ by small human remains recovered at the crime scene.

b. Analysis of other human remains

1410. DNA analysis of the small human remains collected at the crime scene connected the remains to other known deceased victims.²⁹³⁴

1411. Dr Mansour performed DNA analyses on 46 samples he received between 14 February and 10 March 2005.²⁹³⁵ He also received eight samples which were oral swabs and toothbrushes to be used as reference samples for the DNA forensic profiling comparisons.²⁹³⁶ One of the toothbrushes was said to belong to Mr Ahmad Abu Adass.²⁹³⁷ Dr Mansour successfully extracted DNA profiles and analysed 45 total samples.²⁹³⁸ He concluded that the samples belonged to seven humans—six males and one female.²⁹³⁹

1412. Samples of one of the six males were consistent with the DNA profile from the remains identified as Mr Ghalayini, the last body discovered at the crime scene.²⁹⁴⁰ Dr Mansour analysed two oral swabs from Mr Ghalayini's daughters as reference samples and concluded that the samples from Mr Ghalayini's remains belonged to their biological father.²⁹⁴¹

1413. In 2012, Dr Gerretsen conducted further DNA analyses on the human remains.²⁹⁴² Dr Gerretsen identified four people in addition to Mr Nasser and Mr Al-Arab—one female and

²⁹⁴¹ Issam Mansour, T. 3 July 2014, pp 50-51; exhibit P207 (Report on DNA profile analysis for human identity testing, 15 March 2005), pp 6-10.

²⁹⁴² Reza Gerretsen, T. 30 September 2014, pp 46-47.

three males: Ms Aalaa Osfour, Mr Mohammed Darwiche, an unidentified male and another male who was determined to be alive.²⁹⁴³

iii. Submissions

1414. The Merhi Defence submits that the crime scene was severely contaminated casting doubt on the reliability of the evidence collected there and on the results from its analysis.²⁹⁴⁴ The human remains were not collected before rain fell the day after the explosion and such rainfall or water flooding the crater further damaged the evidence and could eliminate DNA traces.²⁹⁴⁵ Furthermore, no one collected samples from the crater for the purposes of DNA analysis.²⁹⁴⁶

1415. The Prosecution responded to the Merhi Defence submission that DNA may not have been found, was washed into the sea or was displaced by water from firefighters or rain, arguing that it is speculative, not substantiated by the evidence and did not affect the collection of the DNA at the crime scene.²⁹⁴⁷

iv. Findings

1416. The Trial Chamber received agreed facts which establish that Mr Hariri and 21 others died and 226 persons were injured as a result of the explosion on 14 February 2005. The Trial Chamber considered the death certificates in evidence for 20 of the deceased victims, including Mr Hariri, as follows:

1. Mr Yahya Al-Arab;
2. Mr Omar Al-Masri;
3. Mr Mazen Al-Zahabi;

²⁹⁴³ Reza Gerretsen, T. 30 September 2014, pp 57-62; exhibit P278 (Netherlands Forensic Institute report on forensic anthropological and DNA related investigation, 31 October 2012), pp 23-40. *See also* exhibit P283 (*Aide-mémoire* for Dr Gerretsen on identified human remains). Dr Gerretsen identified a single sample, a piece of human tibia bone, as being 'slightly more probable' that it belonged to the alive injured male, DNA profile F, than to anyone else; however, the Netherlands Forensic Institute did not have a DNA profile from the injured male for comparison, exhibit P279 (Netherlands Forensic Institute report on forensic anthropological investigation, 4 March 2013), pp 3-5; exhibit P279.1 P279.1 (Photograph of tibia); exhibit P279.2 (Photograph of tibia); Reza Gerretsen, T. 30 September 2014, pp 68-74.

²⁹⁴⁴ Merhi Defence final trial brief, para. 459.

²⁹⁴⁵ Merhi Defence final trial brief, paras 460, 463-464.

²⁹⁴⁶ Merhi Defence final trial brief, paras 464, 473.

²⁹⁴⁷ Prosecution closing submissions, T. 13 September 2018, pp 53-54.

4. Mr Mohammed Darwiche;²⁹⁴⁸
5. Mr Bassel Farid Fuleihan;
6. Mr Mohammed Riad Ghalayini;
7. Mr Rafik Hariri;
8. Mr Talal Nasser;
9. Mr Ziad Tarraf;
10. Mr Joseph Aoun;
11. Mr Zahi Bou Rjeily;
12. Mr Mahmoud Al-Hamad Al-Mohammed;
13. Mr Mahmoud Al-Khalaf;
14. Ms Rima Bazzi;
15. Mr Abdo Bou Farah;
16. Ms Yamama Damen;
17. Mr Abdul Hamid Ghalayini;
18. Mr Rawad Suleiman Haidar;
19. Ms Alaa Osfour; and
20. Mr Haitham Osman.

1417. Although death certificates were not issued for Mr Sobhi Mohammed Al-Khodr or Mr Farhan Ahmad Issa, the Trial Chamber is satisfied that their bodies were identified and that they died as a result of the attack.

1418. The Trial Chamber also considered specific DNA evidence of human remains recovered for at least seven people—one female and six males, including Ms Aalaa Osfour, Mr Nasser,

²⁹⁴⁸ Transliteration of names from Arabic to English has resulted in some variation in spelling across different documents, for example between Darwish and Darwiche, Othman and Osman, Ghalayeeni and Ghalayini, Riyadh and Riad.

Mr Al-Arab, Mr Mohammed Darwiche, Mr Ghalayini, a male victim who was determined to be alive and an unidentified male.

1419. The Trial Chamber already found above that evidence at the crime scene was mishandled and that the investigation following the explosion was flawed.²⁹⁴⁹ The Trial Chamber considers that it is probable that rainfall and other sources of water damaged the evidence, and in particular the DNA evidence, found at the crime scene. It is also very likely that the mismanagement of the crime scene affected the quality and quantity of the evidence recovered there. However, based on the agreed facts and the totality of the supporting forensic evidence discussed above, the Trial Chamber finds that Mr Hariri and 21 others died and 226 people, as pleaded, were injured as a result of the explosion on 14 February 2005.²⁹⁵⁰

(c) Forensic examination of the DNA of the unidentified male and of Mr Abu Adass

1420. The Prosecution submits that the evidence proves the unidentified man was closest to the blast when the explosive device detonated based on the overall distribution of human remains found at the crime scene. However, the unidentified man's DNA did not match that of Mr Abu Adass nor was Mr Abu Adass's DNA found at the crime scene.²⁹⁵¹ The Trial Chamber received evidence from various experts on the forensic analysis of human remains and forensic odontology.

i. DNA analysis of the unidentified male

1421. The Spanish forensic team, Dr Ayoub and Lebanese authorities, including Mr Jbeily and colleagues with the ISF Central Accidents Bureau, recovered remains from the unidentified man at the crime scene.²⁹⁵² In total, the experts and investigators recovered and identified 92 human

²⁹⁴⁹ See sub-section (F) (1) (vi) 'Findings on the management of the crime scene and investigation', and generally, sub-section (F) (1) 'Crime scene investigation and recovery of evidence'.

²⁹⁵⁰ The Trial Chamber, in considering the Legal Representatives of Victims' submissions, has found, in sub-section (G) (2) (b) (x) 'Victim 73', that a participating victim, Victim 73, whose name was not included among the 226 injured people listed in schedule B to the amended consolidated indictment, was also injured as a result of the explosion. This is only relevant to identifying, in the judgment, the victims who have suffered harm due to the attack.

²⁹⁵¹ Prosecution final trial brief, paras 1088-1089, 1096-1099; Prosecution closing submissions, T. 13 September 2018, pp 53-55.

²⁹⁵² Exhibit P319 (*Aide-mémoire* for Christophe Champod's evidence on DNA profiles of the unknown man); exhibit P319.1 (Map of location of 92 biological exhibits recovered at crime scene).

parts belonging to the unidentified man.²⁹⁵³ The total quantity of remains was small, with a combined weight of less than one kilogram.²⁹⁵⁴

1422. Dr Ayoub was involved in analysing the DNA related to the remains of the unidentified individual recovered from the crime scene.²⁹⁵⁵ In other suicide bombing cases in which he was involved—numbering more than 25—Dr Ayoub had always had human remains to analyse even if the suicide bomber's body had been destroyed given its close proximity to the bomb.²⁹⁵⁶ In this case, the remains of the individual closest to the bomb could not be identified.²⁹⁵⁷

1423. Dr Ayoub compared the size of Mr Nasser's and Mr Al-Arab's remains and their positioning in relation to the blast with those of the unidentified man as a factor determining that the remains of the unidentified man were the closest to the explosion.²⁹⁵⁸ According to Dr Ayoub, there was no evidence to suggest that there may have been a second unknown man between the unidentified male and the bomb or otherwise present at the crime scene.²⁹⁵⁹

1424. In 2006, the Spanish forensic team recovered 33 parts of the unidentified man.²⁹⁶⁰ It reported that remains of the unidentified man were found in two specific areas of the crime scene, as allocated by the experts,—areas 6 and 1I.²⁹⁶¹ Area 6 was the exit way from the crime scene, west of the general forensic examination area.²⁹⁶² Area 1I—the lower flat roof surface of the St Georges Hotel—was in the same direction as area 6.²⁹⁶³ This is shown in the diagram from exhibit P266 below.

1425. Dr van de Craats and the Dutch forensic team reached the same conclusion as Dr Ayoub regarding the position of the unidentified man in the explosion. The Dutch team relied on Dr Ayoub's analysis of the human remains he collected—small pieces of tissue, a tooth, a piece of his thumb, a piece of his cheekbone, a piece of an ear and a hair—with the DNA profile of an unidentified man, which were found to the west of the explosion centre, at the intersection of *Rue Minet el Hosn* and the Marina road.²⁹⁶⁴ According to the Dutch forensic team, this demonstrates that the unidentified man must have been very close to—one or two metres—the explosive device on the west side.²⁹⁶⁵ The recovered human remains are marked on the diagram below, prepared by the Dutch forensic team.

1426. Dr Ayoub, who also specialised in forensic odontology,²⁹⁶⁶ was informed on 6 March 2005 of the burned tooth recovered at the crime scene.²⁹⁶⁷ Forensic odontology is a science dealing with human identification based on dental records and x-rays. It is used in particular in circumstances where the bodies of victims were subject to the forces of a blast, fire or water, for example, and where the jaw, mouth and the unique shape of the teeth could help in identifying the victims.²⁹⁶⁸

1427. He examined the tooth, analysed its DNA and determined that it belonged to a male, based on the size of its root and neck.²⁹⁶⁹ The tooth's colouring and lack of calcium deposits suggested that it belonged to a young person, in his early 20s, not older than 25 years.²⁹⁷⁰ Finally, he found that there was a distinguishing feature on the tooth—its surface shape was in the form of a spade, which is a feature rarely seen among the Lebanese.²⁹⁷¹ Dr Ayoub concluded that the tooth thus belonged to a 20-25-year-old man who was not Lebanese, or who had not lived in Lebanon for a long period before his death.²⁹⁷² Based on the DNA analysis and shape, Dr Ayoub concluded that the tooth belonged to the unidentified individual whose remains they had found earlier.²⁹⁷³

Exhibit P198

1428. Dr Ayoub analysed the DNA of the second tooth found on 30 May 2006 but could not obtain a DNA profile from it.²⁹⁷⁴ Dr Ayoub explained that this could be because it was retrieved from the crime scene a year and a half after the incident and that it had been exposed to various conditions, such as soil and sun.²⁹⁷⁵ Based on x-rays, it appeared to come from a young person.²⁹⁷⁶

ii. DNA analysis related to Mr Ahmad Abu Adass

1429. On the evening of the explosion, following the release of the video recording showing Mr Abu Adass, ISF officers took Mr Abu Adass's parents' fingerprints and DNA samples in saliva form at the ISF headquarters.²⁹⁷⁷ Mr Gemayel collected the samples in the presence of the head of the Information Branch and immediately delivered them to the forensic laboratories office of the

Scientific Division of the police.²⁹⁷⁸ Saliva samples were also obtained from Mr Abu Adass's two sisters and his mother on 18 March 2006—more than a year later.²⁹⁷⁹

1430. The ISF also retrieved Mr Abu Adass's toothbrush from his family residence and provided it to Dr Mansour on 16 February 2005 for analysis.²⁹⁸⁰ This toothbrush, and two other sample toothbrushes, were delivered to Dr Mansour in an envelope or bag and labelled on the outside of the packaging.²⁹⁸¹ A nuclear DNA profile for Mr Abu Adass was created from samples taken from the toothbrush, in addition to a nuclear DNA profile taken from his presumed mother and father.²⁹⁸² The DNA profile from the toothbrush belonged to a male and matched at least one allele²⁹⁸³ from each of Mr Abu Adass's parents, and both Dr Ayoub and Dr Mansour confirmed that it belonged to a biological son of the Abu Adass family.²⁹⁸⁴ Dr Mansour did not conduct any further DNA analysis on another male member of the Abu Adass family, such as Mr Abu Adass's brother.²⁹⁸⁵

1431. Professor Champod confirmed that the DNA evidence he analysed provided 'very strong support' for the proposition that Mr Abu Adass is the biological son of his parents.²⁹⁸⁶

1432. Dr Mansour identified four samples, including the partially burned tooth, as belonging to the unidentified man.²⁹⁸⁷ However, none of the samples retrieved at the crime scene matched Mr Abu Adass's DNA profile.²⁹⁸⁸

²⁹⁸⁸ Issam Mansour, T. 3 July 2014, p. 44; exhibit P206 (Report on DNA profile analysis for human identity testing, 8 March 2005), pp 16, 18; Fouad Ayoub, T. 2 July 2014, pp 22, 28-29. *See also* exhibit P196 (Dr Ayoub's report on DNA results of samples from crime scene, 24 February 2005), p. 7; exhibit P204 (Report by Dr Ayoub on DNA data of individuals recovered from crime scene).

1433. On 21 June 2005, Dr Mansour received another evidentiary sample—a chewed piece of chewing gum from Ms Ibtissam Taha, the mother of a person of interest in the attack, Mr Khaled Taha.²⁹⁸⁹ The sample was collected by an official in the forensic laboratories office of the Scientific Division of the police at the request of investigating Judge Elias Eid. The Judge instructed the official to take samples from Mr Taha’s parents and proceed with a DNA profile analysis on him.²⁹⁹⁰ Dr Mansour analysed the sample and found that it did not match any of the DNA profiles of samples recovered from the crime scene.²⁹⁹¹

1434. According to the ISF Forensic Laboratories Bureau, a DNA analysis of 17 biological samples from the crime scene concluded that none of the genetic imprints matched the genetic imprints of either of Mr Abu Adass’s parents.²⁹⁹²

1435. Professor Champod compared all the DNA profiles from the human remains collected at the crime scene to Mr Abu Adass’s DNA profile and none of the comparisons ‘led to any match or close correspondence’. Professor Champod also compared Mr Abu Adass’s mother’s DNA profile with all of the DNA profiles of the human remains recovered after the explosion and found that none of them were her ‘biological child or relative of maternal lineage’.²⁹⁹³

iii. Submissions

1436. According to the Prosecution, 92 biological parts of the ‘unknown man’ were recovered, including a tooth demonstrating that he was no more than 25 years old. The distribution of the remains of the unidentified man demonstrates that he was inside or immediately in front of the cab of the vehicle and no more than one to two metres from the explosive device when it exploded.²⁹⁹⁴

²⁹⁹⁴ Prosecution final trial brief, paras 1086-1088.

However, his DNA did not match that of Mr Abu Adass, nor was Mr Abu Adass's DNA found at the crime scene. Therefore, he could not have been the suicide bomber.²⁹⁹⁵

1437. According to the Merhi Defence, it was impossible to conclude that all individuals were identified after the explosion and therefore, the Trial Chamber cannot find beyond reasonable doubt that Mr Abu Adass's remains were not at the crime scene.²⁹⁹⁶ Given the contamination of the crime scene, it is a reasonable possibility that the biological evidence which could prove Mr Abu Adass's presence disappeared or was destroyed before it was analysed.²⁹⁹⁷ There were eight samples of human fragments found at the crime scene without a DNA profile.²⁹⁹⁸ While the Prosecution alleges that the tooth found at the crime scene did not belong to Mr Abu Adass, there was a second tooth found at the crime scene a year after the explosion and it was not possible to extract any DNA from it, despite the fact that teeth are among the best DNA sources.²⁹⁹⁹

1438. Further, Dr Ayoub conceded that there could have been smaller fragments of an individual who had been even closer to the explosion which had not been found—they could have been propelled into the sea or elsewhere during the blast as the remains of the unknown man were propelled in the direction of the sea.³⁰⁰⁰ Finally, it is a reasonable possibility that although Mr Abu Adass was not driving the van—because he could not drive—he could have been inside, or immediately in front of, the van to ensure the manual detonation of the bomb at the right time.³⁰⁰¹

1439. The Prosecution responded to the Merhi Defence argument about the eight bone fragment samples with no DNA profile, submitting that one of the items had a DNA profile that matched one of the identified victims, Mr Al-Arab. The remaining seven samples without a profile were too deteriorated to find a match and in any case, it is 'highly unlikely and speculative that the one

man ostensibly to be found there just happened to be' one of the seven that could not be profiled.³⁰⁰²

iv. Findings

1440. The Trial Chamber has considered that Dr Ayoub and the Dutch forensic team reached the same conclusion based on the distribution of the remains at the crime scene—that the unidentified man was very close, within one to two metres to the explosive device when it detonated. The Spanish forensic team's findings on where the remains were found are also consistent with this conclusion. In light of this, the Trial Chamber is satisfied that based on the remains of the unidentified male recovered at the crime scene, he was the closest in proximity—within one to two metres—to the explosive device when it detonated. He was most likely the suicide bomber.

1441. The Trial Chamber has carefully considered the evidence on the teeth found at the crime scene on 6 March 2005 and 30 May 2006, and in particular Dr Ayoub's evidence that the first tooth came from an unidentified male. Dr Ayoub concluded that it belonged to a 20-25-year-old man who was not Lebanese, or had not lived in Lebanon for a long period. Dr Ayoub's conclusion on the identity of the unidentified male based on this tooth is unconvincing, in particular that it belonged to a man 'who had not lived in Lebanon for a long period before his death'. Dr Ayoub refers to a distinguishing feature on the tooth that is rarely seen among the Lebanese to substantiate this conclusion, but there is no scientific support for such a conclusion, which rather was based on Dr Ayoub's own personal observations. The Trial Chamber therefore will not base any findings on this aspect of Dr Ayoub's evidence.

1442. The Trial Chamber however is satisfied with Dr Ayoub's evidence about the other characteristics of the tooth found on 6 March 2005 and accepts that it belonged to a young male in his early 20s.

1443. Beyond the evidence that the tooth belonged to a young male in his early 20s, there is no further identifying evidence in the human remains analysed by the forensic experts on his identity. The Trial Chamber therefore cannot make a finding on the identity of the 'unidentified male'.

³⁰⁰² Prosecution closing submissions, T. 13 September 2018, pp 55-58.

1444. For the second tooth found in 2006, Dr Ayoub could not retrieve a DNA profile from it and therefore there is insufficient evidence to make any finding on this tooth.

1445. The expert forensic evidence shows that none of the human remain samples found at the crime scene matched Mr Abu Adass's DNA profile. The Trial Chamber has considered the contamination which occurred at the crime scene and how it may have affected the quality, and quantity, of human remains recovered.³⁰⁰³ It has also considered that there were at least seven samples of human remains with no DNA profile. However, there is no further evidence that these samples belong to Mr Abu Adass. Therefore, the Trial Chamber cannot be satisfied, from the totality of the evidence before it, that these samples belonged to Mr Abu Adass.

1446. However, based on the DNA evidence found at the scene and the analysis of DNA samples from Mr Abu Adass's family members, the Trial Chamber is satisfied beyond a reasonable doubt that Mr Abu Adass was not the suicide bomber.

4. Conclusion

1447. In summary, the Trial Chamber finds that the crime scene investigation was mismanaged and chaotic, particularly in the initial period after the explosion. While the disorganised nature of the initial investigation affected the reliability of some evidence recovered at the crime scene, the subsequent investigations by the Lebanese authorities and various international teams resulted in the reliable collection of the key evidence referred to above.

1448. The Trial Chamber further finds that the attack involved an explosion of high explosives material, specifically RDX, in the quantity of 2,500 to 3,000 kilograms of TNT equivalent, laid out in a rectangular shape, located 50 to 80 centimetres above the ground in the rear of a Mitsubishi Canter truck, and triggered by a suicide bomber. Finally, the Trial Chamber finds that the attack killed 22 people, including Mr Hariri, and injured 226 others, as pleaded, and that the unknown suicide bomber died in the explosion.³⁰⁰⁴

³⁰⁰³ See above, at para. 1419.

³⁰⁰⁴ See paras 1416-1418.

G. Victim harm

1. Introduction

1449. In this section, the Trial Chamber sets out the harm caused to the victims of the explosion of 14 February 2005. The Trial Chamber will make findings of harm in relation to indirect and direct victims.³⁰⁰⁵ Direct victims are those who were directly killed or injured by the explosion,³⁰⁰⁶ while indirect victims are those who are dependants or relatives of persons who died or were injured in the explosion.³⁰⁰⁷ The Trial Chamber will satisfy itself to ‘beyond a reasonable doubt’ standard with respect to direct victims. Arguably, a ‘balance of probabilities’ standard suffices for indirect victims,³⁰⁰⁸ the Trial Chamber is in any case satisfied beyond reasonable doubt that indirect victims suffered harm.

1450. The Trial Chamber has also, where appropriate, made findings about harm caused to Prosecution witnesses who are not participating victims.³⁰⁰⁹ Article 25 of the Statute allows the Trial Chamber—for the purpose of facilitating any future claim for compensation before any competent authority in Lebanon—to ‘identify victims who have suffered harm’ as a result of the explosion of 14 February 2005. Nothing in this provision, or elsewhere in the Special Tribunal’s

³⁰⁰⁵ Rule 2 defines a victim as ‘a natural person who has suffered physical, material or mental harm as a direct result of an attack within the Tribunal’s jurisdiction’. This definition of a victim encompasses both ‘direct’ victims and ‘indirect’ victims who personally suffered harm as a direct result of the attack. Professor Letschert, relying on the definition provided by Alex Schmid, adopted the phrase ‘primary’ and ‘secondary’ victims. Exhibit 1V42 (Professor Letschert’s report), pp 7-8.

³⁰⁰⁶ Pre-Trial Judge decision on victims’ participation in the proceedings, paras 43, 45. *See also* exhibit 1V42 (Professor Letschert’s report), p. 8. Professor Letschert did not provide a definition of ‘primary’ victims, but referred to a definition provided by Mr Schmid, which provides that this category of victims can include: a) Those who are killed by terrorist kidnappers, hostage-takers, gunmen or bombers; b) Those who are injured, mutilated or mentally tortured by terrorists but are ultimately released or liberated; c) Those who are wounded or die in a counter-terrorist rescue operation at the hands of terrorists or armed first responders; and d) Those who become mentally or physically handicapped or die (by suicide) in a causal sequence to one or several terrorist events in which they were involved or of which they were direct witnesses.

³⁰⁰⁷ Pre-Trial Judge decision on victims’ participation in the proceedings, paras 43, 45. *See also* exhibit 1V42 (Professor Letschert’s report), p. 8. Professor Letschert defined secondary victims as ‘dependants or relatives of the deceased and first responders to acts of terrorism’. The Trial Chamber considers that this category could also include dependents or relatives of those injured in the attack and in the present case, there is no evidence of actual first responders to acts of terrorism. In the present case, the category of secondary victims was quite narrow and Professor Letschert referred to this: there was ‘a limited range of familial relationship between the bereaved victims and the deceased’. Rianne Letschert, T. 8 September 2017, pp 49, 54-56.

³⁰⁰⁸ *See* paras 895-896.

³⁰⁰⁹ *See* para. 894; *see also* sub-section (4) ‘Witnesses who are not participating victims’, below.

legal framework, limits this identification to victims formally authorised to participate in the proceedings.

1451. In her evidence, victimologist Professor Rianne Letschert, who provided evidence for the Legal Representatives of Victims, also identified a category of ‘tertiary’ victims, ‘in other words society at large’.³⁰¹⁰ The impact on this category is, for Professor Letschert, what is distinctive about the crime of terrorism. The Special Tribunal’s Statute and Rules restrict participation as victims to natural persons who can show physical, material or mental harm consequential to the attack. To avoid confusion, the Trial Chamber has therefore considered evidence on the question of broader societal harm, without using the term ‘victim’.

2. Direct victims

(a) Deceased victims

1452. The Prosecution and counsel for each Accused agreed, under Rule 122, that the explosion on 14 February 2005, in Beirut, killed the former Prime Minister of Lebanon, Mr Rafik Hariri, and 21 others, listed in schedule A of the amended consolidated indictment.³⁰¹¹ The Trial Chamber concluded that further evidence is not required, in the interests of justice, to prove these deaths.³⁰¹²

1453. The Trial Chamber found that the explosion on 14 February 2005 killed Mr Hariri and eight members of his motor convoy: Mr Yahya Al-Arab, Mr Omar Al-Masri, Mr Mazen Al-Zahabi, Mr Mohammed Darwiche, Mr Bassel Farid Fuleihan, Mr Mohammed Riad Ghalayini, Mr Talal Nasser and Mr Ziad Tarraf. Additionally, it found that the explosion caused the death of 13 bystanders: Mr Joseph Aoun, Mr Zahi Bou Rjeily, Mr Mahmoud Al-Hamad Al-Mohammed, Mr Mahmoud Al-Khalaf, Mr Sobhi Mohammed Al-Khodr, Ms Rima Bazzi, Mr Abdo Bou Farah, Ms Yamama Damen, Mr Abdul Hamid Ghalayini, Mr Rawad Suleiman Haidar, Mr Farhan Ahmad Issa, Ms Alaa Osfour and Mr Haitham Osman.³⁰¹³

³⁰¹⁰ Exhibit 1V42 (Professor Letschert’s report), p. 9.

³⁰¹¹ Agreed facts, no. (i).

³⁰¹² The Trial Chamber has in any event received into evidence the death certificates for the majority of the victims who perished in the explosion. Exhibit P191 (Death certificates); exhibit 1V45 (Rule 154 documents Legal Representatives of Victims), pp 739, 741, 745-746.

³⁰¹³ See paras 1416-1417.

(b) Participating victims

1454. The Legal Representatives of Victims submit that the following victims participating in the proceedings suffered direct physical, mental and or material harm as a result of the explosion: Ms Liliane Khallouf,³⁰¹⁴ Ms Maria Al-Kasti,³⁰¹⁵ Victim 16,³⁰¹⁶ Ms Sanaa El-Sheikh,³⁰¹⁷ Mr Nabih Mhanna,³⁰¹⁸ Mr Wissam Naji,³⁰¹⁹ Mr Rabih Nohra,³⁰²⁰ Victim 35,³⁰²¹ Mr Raymond Abou-Chaaya,³⁰²² Victim 73,³⁰²³ Victim 30,³⁰²⁴ Mr Mahmoud Wazzan,³⁰²⁵ Mr Mohammed Dia,³⁰²⁶ Mr Rachid Hammoud,³⁰²⁷ Victim 34,³⁰²⁸ Victim 12,³⁰²⁹ Victim 13³⁰³⁰ and Victim 33.³⁰³¹

1455. The Trial Chamber finds beyond reasonable doubt that the following participating victims suffered relevant harm as a direct result of the explosion, as follows.

i. Liliane Khallouf

1456. Ms Liliane Khallouf³⁰³² was working in the HSBC building when the explosion took place. She fell flat on her face, causing head, facial and nose trauma.³⁰³³ Immediately after the explosion, she left the building and sat on the pavement outside the HSBC building; she felt dizzy, and her face was swollen and covered in blood.³⁰³⁴ She was taken to the St Georges Hospital, where she remained for five or six days, undergoing an operation for injuries to her nose and face.³⁰³⁵ She had 12 days of sick leave, starting from 17 February 2005.³⁰³⁶ Ms Khallouf spent money on

hospital fees and medication after the explosion.³⁰³⁷ Her condition improved after a second operation on her nose a year later, although she still experiences discomfort and sinus infections.³⁰³⁸ Ms Khallouf also suffered a concussion.³⁰³⁹ Moving her head quickly causes her dizziness due to the severity of the concussive blow.³⁰⁴⁰ This sometimes occurs on a daily basis.³⁰⁴¹ The sound of an ambulance siren transports Ms Khallouf back to the day of the explosion.³⁰⁴²

ii. Maria Al-Kasti

1457. Ms Maria Al-Kasti³⁰⁴³—also working in the HSBC building—lost consciousness in the explosion and was in a state of semi-consciousness in hospital for around 48 hours.³⁰⁴⁴ Her husband told her that she underwent a CT (computerised tomography) scan and a wound on the back of her head was stapled.³⁰⁴⁵ When she woke up, she was vomiting blood.³⁰⁴⁶ Doctors told her that she had internal bleeding in her head and a fracture on the right side of her skull.³⁰⁴⁷ She had head trauma, a right frontal concussion and right frontal small subdural and subarachnoid hematoma.³⁰⁴⁸

1458. When she first left the hospital, she was taking a number of medications, including strong painkillers and medicine for nausea,³⁰⁴⁹ she was unable to drive for a period.³⁰⁵⁰ She was signed off work until early April 2005, due to the head injury.³⁰⁵¹ She stayed with her in-laws for around two months as she felt unable to be alone at home,³⁰⁵² and suffered depression, for which she was prescribed an anti-depressant for a short time.³⁰⁵³ Her husband took over helping her children with their homework for a period of three or four months.³⁰⁵⁴

³⁰⁵⁴ Maria Al-Kasti, T. 29 August 2017, pp 61-62.

1459. Ms Al-Kasti suffered long-lasting effects from the explosion. She testified that it is impossible to forget and has seriously impacted her life.³⁰⁵⁵ She has lost a fraction of her senses of taste and smell due to damage to the olfactory nerve in her head.³⁰⁵⁶ This damage to her senses has been difficult for her psychologically³⁰⁵⁷ and affects her everyday life.³⁰⁵⁸ Ms Al-Kasti also suffers from neck pain and headaches, as well as dizziness, and some memory loss about the time before her marriage.³⁰⁵⁹ She has stopped celebrating Valentine's Day.³⁰⁶⁰

iii. Victim 16

1460. Victim 16,³⁰⁶¹ who was inside the HSBC building at the time of the explosion, was bruised and scratched from the shattered glass.³⁰⁶² He could not sleep on the night of 14 February 2005 for fear he might die, and wrote his will.³⁰⁶³ A doctor who examined him the following day noted that he was suffering from 'severe headaches, stress, incoherence and has several bruises over his whole body', and recommended he be examined by a neurologist.³⁰⁶⁴

1461. The mental and physical harm Victim 16 suffered was long-lasting. He stayed home and was unable to return to Beirut for four months after the explosion.³⁰⁶⁵ A urologist who examined him on 10 April 2005 certified that he suffered from insomnia and hearing the sound of explosions while sleeping, urinary incontinence and sexual impotence.³⁰⁶⁶ These symptoms persisted in 2017.³⁰⁶⁷ Victim 16 explained that he was constantly anxious and, wanting to isolate himself from family and friends, struggled at home; he eventually visited a neurologist on the insistence of his wife.³⁰⁶⁸ On 29 April 2005, Victim 16 was diagnosed with a spastic colon.³⁰⁶⁹ In June 2005, a neurological examination found that, as a result of the explosion, over the previous four months,

³⁰⁶⁹ Exhibit 1V45, p. 333.

Victim 16 suffered from ‘a serious state of stress accompanied by depression and panic attacks’.³⁰⁷⁰ These symptoms persisted in 2010³⁰⁷¹ and 2017.³⁰⁷²

1462. Victim 16 was diagnosed with PTSD in 2010; at that time, he was suffering chronic stress, headaches, stomach aches and sexual impotence, and required ongoing medical care.³⁰⁷³ He was still suffering from these effects and taking a number of medications in 2017.³⁰⁷⁴ He explained to the Trial Chamber that he is a changed person; unable to endure loud noise; and added: ‘I panic. I’m afraid about the future, about the present. I’m always in a state of fear.’³⁰⁷⁵ Victim 16 also suffered material damage from the explosion. His car was completely destroyed in the blast.³⁰⁷⁶

1463. He had been unable to work since the explosion.³⁰⁷⁷ He had not sought or received any financial or moral compensation; he hopes that the Special Tribunal will be able to establish the truth and bring the perpetrators to justice, and he hopes to be compensated.³⁰⁷⁸

iv. Sanaa El-Sheikh

1464. Ms Sanaa El-Sheikh³⁰⁷⁹ was in her office on the second floor of the HSBC at the moment of the explosion.³⁰⁸⁰ Ms El-Sheikh was injured by glass shrapnel falling on her head. Colleagues later told her that she was covered in blood; she was carried out of the building and driven to the American University Hospital.³⁰⁸¹ She began to comprehend what had happened at the hospital, where she remained until 21:30 that evening.³⁰⁸² A wound on the left side of her crown required 22 or 25 stitches, performed without anaesthesia.³⁰⁸³ She also suffered from face bruises and hypotension.³⁰⁸⁴ She was given ten days of sick leave, but returned to work a week later.³⁰⁸⁵ Her

head was then still swollen.³⁰⁸⁶ Since the attack, the witness has become ‘very nervous generally’.³⁰⁸⁷

1465. Ms El-Sheikh could not use her car for about eight months after the explosion. She received compensation for damage to her car, covering an insignificant portion of the costs incurred.³⁰⁸⁸

v. Nabih Mhanna

1466. Having driven his employer to the HSBC, Mr Nabih Mhanna³⁰⁸⁹ was standing in front of the building at the moment of the explosion.³⁰⁹⁰ Mr Mhanna sustained an injury to his right hand and was briefly treated at the American University Hospital.³⁰⁹¹ He had to take a week off work.³⁰⁹²

vi. Wissam Naji

1467. Mr Wissam Naji³⁰⁹³ was writing an email at his desk on the third floor of the *Machkhas* Center at the moment of the explosion. When he opened his eyes, the office was destroyed and there was glass everywhere. His ears and eyes were hurting. Mr Naji’s secretary came in and fainted when she saw him. He saw blood on his hand as he tried to wake her. He felt warm blood coming out of his body and realised he was hurt.³⁰⁹⁴

1468. He was taken to the American University Hospital where he received first aid.³⁰⁹⁵ He sustained injuries to his leg and neck, which took two to three weeks to heal. Due to the trauma of the explosion, he was unable to have children for five years after the attack and underwent long and costly treatment.³⁰⁹⁶ Mr Naji could not recall much about the period after the attack, but stated it was a very difficult time in which he suffered psychologically. There were days when he could not work and relied on his mother.³⁰⁹⁷ He could not forget the burned bodies, chaos and screaming

at the hospital,³⁰⁹⁸ or the sadness of the hours after the attack when his family believed him to be dead.³⁰⁹⁹

vii. Rabih Nohra

1469. Mr Rabih Nohra,³¹⁰⁰ at work in the Café Mondo in the Phoenicia Hotel, was pushed toward the inside of the restaurant and saw destruction all around him.³¹⁰¹ Although he did not lose consciousness, it took him about 15 minutes to understand what had happened. A colleague asked him if he was hurt; he realised that he was bleeding and checked himself for injuries.³¹⁰² He could not feel the pain until later in the hospital, but was ‘very anxious and very tired’.³¹⁰³

1470. Mr Nohra sustained injuries from broken glass to the right side of his face, which required stitches and has left scars.³¹⁰⁴ He suffered significant material damage. His place of employment was badly affected by the explosion; his basic salary was lowered and the customer tips on which he relied dried up. This caused him a lot of stress and he was forced to postpone his wedding.³¹⁰⁵ He hopes that the perpetrators will be punished,³¹⁰⁶ and additionally stated that a ‘memorial for the victims, payment of money, apology by the offender, apology by officials ... are all important and should happen ... As for me, I felt that my life had stopped for a while.’³¹⁰⁷

viii. Victim 35

1471. Victim 35,³¹⁰⁸ who was at the Phoenicia Hotel, was knocked to the floor by the force of the explosion and suffered head trauma from a ceiling falling on him.³¹⁰⁹ He was treated at a hospital for two days.³¹¹⁰ Victim 35 was hallucinating, unresponsive to commands and stimuli, and ‘moving his head in a crazy manner’; he was unable to move his lower extremities and complained

of severe pain when minimal pressure was applied, as well as neck pain.³¹¹¹ At the time of his interview, he was still mentally affected by what happened.³¹¹²

ix. Raymond Abou-Chaaya

1472. Mr Raymond Abou-Chaaya³¹¹³ was riding his motorcycle past the Phoenicia Hotel when he was thrown about four meters in the explosion, ‘as though a storm had hit me’.³¹¹⁴ Although wearing a helmet, he used his hands to cover his head and remained conscious.³¹¹⁵ All he could hear was the roaring sound from the explosion, which felt ‘as if an engine had ignited in my head’.³¹¹⁶ After about 15 minutes, Mr Abou-Chaaya retrieved his motorcycle, found it still worked and rode it back to the ISF headquarters. There, he sat on the ground and could not move.³¹¹⁷ Soldiers drove him to the *Sacré-Cœur* Hospital, where he remained for two to three days for observation.³¹¹⁸

1473. Mr Abou-Chaaya suffered scratches, damage to his left eardrum and neck and lower back pain.³¹¹⁹ A medical report dated 16 February 2005 states that he was admitted to the emergency room on 14 February 2005 and ‘suffers from pain in both ears and several bruises on his body from a powerful explosion’. The report gave Mr Abou-Chaaya one week sick leave. Mr Abou-Chaaya took three months off work. In the period immediately after the attack, his ears were so sensitive that he ‘could not stand two persons talking at the same time’.³¹²⁰ He had pain in his neck and lower back, and wore a neck brace for three months.³¹²¹ When he returned to work, Mr Abou-Chaaya’s supervisor allowed him to not ride a motorcycle at work.³¹²²

1474. Mr Abou-Chaaya’s salary was deducted during the period he was off work.³¹²³ His hospital fee was covered by his employer, the ISF, but not his treatment. His supervisor personally paid for

part of Mr Abou-Chaaya's medical treatment until he suffered an accident and could not continue to assist financially.³¹²⁴ At the time of his statement to the Legal Representatives of Victims, Mr Abou-Chaaya had an ear test every 15 days. He was prescribed medications and massages by the doctor, but these were not helping. He continued to feel pain in his neck, lower back and left ear, but had got used to it.³¹²⁵ He had recently resigned from his job.³¹²⁶ The roaring in Mr Abou-Chaaya's ears returns each year as the day of the explosion grows closer.³¹²⁷

1475. Mr Abou-Chaaya stated that there should be compensation and reparations: 'many people lost their loved ones, and some lost parts of their bodies'.³¹²⁸

x. Victim 73

1476. Victim 73³¹²⁹ was in a shop near the explosion site at the moment of the explosion and was thrown on the ground by its force, hurt by shattered glass and bleeding profusely.³¹³⁰ Since the explosion, he is forgetful and has problems with his hearing, sight, heart, veins, arteries and cholesterol. He takes a number of medications and wears corrective lenses.³¹³¹ A 2007 medical note states that, at that time, he suffered from stable angina.³¹³²

1477. In addition to damage to his car, the explosion caused extensive damage to Victim 73's shop and merchandise; his business was also badly affected by the subsequent closure of the area for investigations. He received compensation for the damage to his business and vehicle, but this was insufficient to cover his losses.³¹³³ Victim 73 hoped that the truth about what happened would be uncovered, for a memorial for the victims and financial compensation.³¹³⁴

xi. Victim 30

1478. Victim 30³¹³⁵ was at the Phoenicia Hotel and was hit by glass debris and parts of the ceiling.³¹³⁶ He sustained minor cuts to his head, back and legs.³¹³⁷ More significantly, he suffered PTSD and ‘a serious mental shock’.³¹³⁸ He later suffered a heart attack.³¹³⁹ Victim 30 had had marital problems since the explosion. A psychologist he consulted in 2010 and 2011 stated that he suffered ‘symptoms associated with post-traumatic stress; emotional block, with a sense of detachment from the family circle in general and the spouse in particular, avoidance of emotions, insomnia and disturbed sleep, hypervigilance, flashbacks of the bodies of his dead colleagues which he had to pick up himself, a sense of no future and a strong sense of insecurity’.³¹⁴⁰

1479. In addition to losing friends and colleagues who perished in the explosion, Victim 30 lost his business and with it his earning capacity.³¹⁴¹ Victim 30 also lost a number of valuable office items and had to replace them.³¹⁴² He received a cheque from the Lebanese Higher Relief Commission.³¹⁴³

xii. Mahmoud Wazzan

1480. Mr Mahmoud Wazzan³¹⁴⁴—the owner of the Poly Service maintenance and cleaning company—had an office in the STARCO Complex in Beirut, which was destroyed in the explosion. He was forced to vacate the premises and incurred material damage as a result, losing everything invested in the business, as his insurance did not cover damage related to terrorist attacks.³¹⁴⁵

xiii. Mohammed Dia

1481. Mr Mohammed Dia, passenger in the second convoy vehicle, lost consciousness for several minutes after the explosion.³¹⁴⁶ A witness at the scene saw him ‘crying and slamming his head near the door to the St Georges’.³¹⁴⁷ Mr Dia then went to Quraitem Palace but could not remember how he got there. Once there, he realised that he was injured and was examined by a doctor.³¹⁴⁸ He sustained injury to his ears and received treatment for his hearing.³¹⁴⁹ Following the explosion, he was depressed, stayed at home for about three months and was unable to speak to anyone.³¹⁵⁰ He saw a psychologist. Mr Dia continued to take medication and saw a doctor every year, staying ‘a while for treatment’.³¹⁵¹ He had been unable to return to work since the explosion and stayed at home.³¹⁵²

xiv. Rachid Hammoud

1482. It was immediately clear that Mr Rachid Hammoud,³¹⁵³ a paramedic in the convoy ambulance, was seriously injured in the explosion. His face, head and arms were covered with blood and he could not see through one eye.³¹⁵⁴ He was in pain in the ambulance and unable to stand up because of two fractures in his leg and severe burns.³¹⁵⁵ There was shrapnel in his head and face; some was extracted over the following few days and one piece remained in his right eye.³¹⁵⁶ It took him about ten days to regain some sight in that eye.³¹⁵⁷ He also had a ‘very deep injury’ on his right mandible, which was treated by a plastic surgeon, as well as first and second degree burns on his head and face.³¹⁵⁸ His legs could not initially be put in a cast because of the

burns.³¹⁵⁹ He suffered from burns to his forearm and right leg, multiple lacerations over his cheek and thigh, a fracture in his left leg and a nasal septal deviation.³¹⁶⁰

1483. He spent 25 days in hospital, but discharged himself because he felt threatened by a visit from a man with a Syrian accent.³¹⁶¹ He saw a psychologist and received medication for three or four months after the explosion.³¹⁶² He sought further medical assistance in March, April and May 2005 and was found to require rest because of his fractures and burns.³¹⁶³ In 2017, he was still suffering from PTSD.³¹⁶⁴

1484. Mr Hammoud's wife, who was pregnant at the time of the explosion, collapsed when she was misinformed that Mr Hammoud had died.³¹⁶⁵ She spent the next 25 days in hospital by his side.³¹⁶⁶ His children were unable to recognise him for some days after the explosion due to swelling from his injuries.³¹⁶⁷

1485. Mr Hammoud suffered from a number of long-term physical and psychological effects. These include a hearing impairment, a problem with a disc in his back which required surgery and the piece of glass in his eye.³¹⁶⁸ Since the explosion, he was very nervous and stressed, and took anti-anxiety medication.³¹⁶⁹ Mr Hammoud returned to work about three months after the explosion, but gave up his position at the American University Hospital at the end of 2005 as he felt unable to properly carry out his functions.³¹⁷⁰ He also angers quickly, which affects his entire household.³¹⁷¹ In an interview with Professor Letschert, Mr Hammoud said that he was fearful of future attacks and that 'everyday he says goodbye to his family as if it was the last day'.³¹⁷²

xv. Mehi Eldin Meneimneh

1486. After the explosion, Mr Meneimneh,³¹⁷³ an ISF officer who was part of Mr Hariri's convoy,³¹⁷⁴ was stunned, scared, helpless and in shock. His hands, legs and head were hit by shrapnel. After about an hour, he went to the American University Hospital and was treated for his injuries. He had cuts and bruises all over his body and a hairline fracture in his right leg.³¹⁷⁵

1487. Mr Meneimneh suffered lasting psychological problems, including PTSD.³¹⁷⁶ He was more nervous than before the incident, had difficulty regulating his moods and experienced stress and nervous tension. He was taking anti-depressant medication, in addition to tranquilisers to feel more comfortable at night. Mr Meneimneh did not take time off work in the eight to nine months following the explosion.³¹⁷⁷ He felt marginalised and violated in his rights,³¹⁷⁸ and sought financial and moral compensation.³¹⁷⁹

xvi. Victim 12

1488. Victim 12³¹⁸⁰ lost consciousness in the explosion. His hospital discharge certificate dated 15 February 2005 states that he suffered head trauma, a severe headache and loss of consciousness.³¹⁸¹ He was diagnosed with vertigo and headaches in 2005 and 2006.³¹⁸² A 2011 neurology report states that he suffers from dystychiphobia—fear of accidents—and receives permanent medical treatment.³¹⁸³ He continued to suffer from PTSD.³¹⁸⁴

xvii. Victim 13

1489. Victim 13³¹⁸⁵ did not lose consciousness immediately after the explosion. At the hospital, he underwent two scans and an x-ray, which showed that he suffered from a radial head fracture

and had shrapnel in his right forearm. A piece of iron was lodged in Victim 13's eye, his face and head were swollen and covered in glass, and his hair and parts of his face were burnt. Victim 13 was admitted to hospital on 3 June 2005 for problems with his finger, and discharged the same day.³¹⁸⁶

1490. On 21 November 2011, a neurosurgery report showed that Victim 13 was suffering from nervous system energy depletion, anxiety and depression, for which he received medication. Since the explosion, Victim 13 receives medical treatment for anxiety, phobia, high cholesterol and eczema. In 2017, he was suffering from PTSD.³¹⁸⁷

xviii. Victim 33

1491. Victim 33³¹⁸⁸ suffered a broken leg. He suffers from blood clots in his feet and is unable to stand for long periods. Occasionally, his feet swell up as a result. An angiologist-cardiologist report from 22 November 2011 stated that he had been undergoing treatment for thrombosis and thrombophlebitis in both legs since 21 February 2005.³¹⁸⁹

1492. In 2017, Victim 33 was also suffering from PTSD³¹⁹⁰ and depression, and taking anti-depressants; he felt that he could not live without them. He returned to work immediately after the explosion, while still being treated for his injuries, and was not offered any economic compensation from his work or the government of Lebanon.

3. Indirect participating victims

1493. The Legal Representatives of Victims submitted that the following victims participating in the proceedings suffered physical, mental and or material harm as a result of losing a family member in the explosion on 14 February 2005: Mr Robert Aoun,³¹⁹¹ Ms Ghina Mneimneh Ghalayini; Ms Rana Ghalayini; Ms Lama Ghalayini;³¹⁹² Ms Saada Hachem Abu Rjeily; Mr Nazih

Abu Rjeily;³¹⁹³ Victim 36;³¹⁹⁴ Victim 37;³¹⁹⁵ Victim 38;³¹⁹⁶ Victim 20; Victim 21; Victim 22;³¹⁹⁷ Victim 27; Victim 28;³¹⁹⁸ Victim 26; Victim 78;³¹⁹⁹ Ms Ghazia Hourri; Mr Khaled Osman; Mr Bassam Osman; Mr Abdo Osman; Mr Hicham Osman; Mr Mohammed Osman; Mr Kamal Osman; Ms Laura Osman;³²⁰⁰ Mr Saadeddine Hariri;³²⁰¹ Ms Yasma Fuleihan;³²⁰² Victim 60; Victim 61;³²⁰³ Ms Siham Harb;³²⁰⁴ Ms Ihsan Fayed;³²⁰⁵ Mr Kamal Nasser; Mr Bilal Nasser; Ms Roula Nasser;³²⁰⁶ Ms Hana Diab Al-Arab;³²⁰⁷ Mr Saadeddine Darwiche; Mr Sahar Kalaoui; Mr Abdel-Qader Darwiche; Ms Nivine Darwiche;³²⁰⁸ Victim 58;³²⁰⁹ Ms Zeina Chehade Tarraf; Ms Clemence Tarraf; Mr Mamdouh Tarraf;³²¹⁰ Victim 5; Ms Dina Ghalayini;³²¹¹ and Victim 42.³²¹²

1494. Professor Letschert's report sets out a number of psychological, behavioural and social consequences for the relatives of persons injured or killed in the attack, drawing both on academic research and her own interviews with victims. Professor Letschert also testified that a number of victims, specifically those whose family members were not employed by the Hariri family, have suffered significant financial loss.³²¹³ The Trial Chamber has endorsed the finding of the Pre-Trial Judge:

With regard to the closeness of the relationship between the direct and indirect victims, first-degree relatives are presumed to have a special bond of affection with the direct victim. Therefore, the harm suffered by these immediate family members can be presumed

in case of death of the direct victim, consistent with the jurisprudence of other international courts.³²¹⁴

1495. The Trial Chamber finds beyond reasonable doubt that the following victims suffered relevant harm as a direct result of the explosion, as follows.

(a) Robert Aoun

1496. Mr Robert Aoun,³²¹⁵ who lost his brother Mr Joseph Aoun, was unable to go back to work for six weeks because he was ‘really sad’. He subsequently has provided emotional support to Mr Joseph Aoun’s wife and son.³²¹⁶ Mr Joseph Aoun’s wife was four months pregnant when he died and had to be sedated by a doctor before she could be told the news. She had to return to work after her husband’s death and is also still taking medication.³²¹⁷ Her son Joe, named after his father, has always asked about his father.³²¹⁸ Mr Joseph Aoun had been like a father to the rest of the family since their father had died in 1982, and took care of everyone.³²¹⁹ His mother was greatly affected by her son’s death, and was very emotional at the funeral.³²²⁰ She subsequently suffered nerve problems and high blood pressure, for which she was still taking medication in 2017.³²²¹

(b) Abdul Hamid Ghalayini’s family

1497. Mr Abdel-Hakim Ghalayini spoke to his brother, Mr Abdul Hamid Ghalayini, for the last time at 12:42 on Monday 14 February 2005. His brother, who was taking a walk on the Sea Corniche toward the St Georges Hotel, called him from a payphone at the corner of the Hard Rock Café.³²²² Mr Ghalayini searched for his brother ‘in all hospitals between the injured and the dead’ but was unable to find him.³²²³ He reported his brother missing on 16 February 2005; but his body was not found in the St Georges area until 2 March 2005, when it was handed over to the family.³²²⁴

³²²⁴ Exhibit P265 (Witness statement of Abdel-Hakim Ghalayini), ERN 60291710.

1498. Ms Lama Ghalayini³²²⁵ testified that she was ‘totally devastated’ by the death of her father.³²²⁶ She described the period of searching for his body as ‘a second crime’ committed against him.³²²⁷ Upon the discovery of his body, she was ‘angry’, ‘revolted’ and the image ‘took years to try to remove’.³²²⁸ It took her about two years after the incident to get back on her feet.³²²⁹ After the body of her father was discovered, other family members went to the hospital to formally identify the body because ‘we couldn’t stand on our feet anymore because of the shock and the scene that we had just witnessed’.³²³⁰ She described the psychological harm which was caused to her—particularly by the 17 days of delay in finding his body—which included looking at other bodies, searching the crime scene and being confronted with ‘mistreatment and disrespect’.³²³¹ For a long time afterwards, Ms Lama Ghalayini suffered from PTSD, which in 2017 was still affecting her.³²³² She had not yet told her eldest son about his grandfather, due to fear of causing him trauma.³²³³

1499. Her sister, Ms Rana Ghalayini, was also suffering from PTSD.³²³⁴ Lama Ghalayini also described the impact on her mother, Ms Ghina Mneimneh Ghalayini,³²³⁵ who remained at home for much of the time her daughters were searching, due to being in a state of shock and sedated.³²³⁶ Subsequently, her mother’s life ‘completely changed’ and she was taking anti-depressants and suffering from sleep deprivation.³²³⁷

(c) Saada Hachem Abu Rjeily and Nazih Abu Rjeily

1500. Mr Nazih Abu Rjeily³²³⁸ spent the afternoon and evening of 14 February 2005 frantically searching for Mr Zahi Bou Rjeily in Beirut’s hospitals and at the scene of the explosion, and repeatedly calling his mobile.³²³⁹ The next morning, he identified the body of his brother—who

³²³⁹ Nazih Abu Rjeily, T. 24 January 2014, pp 8-10.

had suffocated in the dust with minor injuries 12 hours after the explosion—at the American University Hospital morgue.³²⁴⁰ He testified that:

my brother did not seem dead. There was no injuries to his head, to his face, or to any other body part ... His body was intact. And of course after that we were not aware of what we said, what we did, where we went. It was really emotional.³²⁴¹

1501. The psychological impact of his brother's death, how he died, and that he could have been saved, was devastating for the whole family.³²⁴² Mr Abu Rjeily described a heavy sense of frustration and guilt: 'If there was anyone who listened to us, maybe he would still be alive today. Maybe he suffocated. Maybe he was screaming for help.' He added that 'until now we still think that we would have been able to do something to save his life'³²⁴³ and wonders 'what was he suffering and thinking?'³²⁴⁴

1502. Having lost their father earlier in life, he stated that 'we only had each other'³²⁴⁵ and with Zahi's death he lost 'a part of me'.³²⁴⁶ Ms Saada Hachem Abu Rjeily,³²⁴⁷ mother of Mr Zahi Bou Rjeily, who lives with Mr Nazih Abu Rjeily, 'keeps crying all the time ... She has nothing else to do but cry, and she remembers him all the time.'³²⁴⁸

(d) Victim 36

1503. Victim 36 lost a family member, with whom she was very close, in the explosion.³²⁴⁹ She stayed at home that day, confused and suffering an unbearable headache in the commotion of the house.³²⁵⁰ On finding out about her family member's death, she felt anger and guilt.³²⁵¹ The stress, and belief that her life no longer had meaning, led her to attempt suicide a couple of weeks later.³²⁵²

³²⁵¹ Exhibit 1V29 (V036's statement), para. 12.

³²⁵² Exhibit 1V29 (V036's statement), para. 13.

1504. At the time of her statement, Victim 36 regularly suffered panic, depression, guilt and social isolation.³²⁵³ She had seen a psychologist but found it unhelpful³²⁵⁴ and refused treatment.³²⁵⁵ She felt responsible for the welfare of her remaining family, and like she had disappointed her deceased family member.³²⁵⁶ Victim 36 wants financial compensation from the Special Tribunal, to enable her to provide a better standard of living and medical care for her remaining family.³²⁵⁷

(e) Victim 37

1505. Victim 37³²⁵⁸ lost ‘the person I loved the most, the person who loved me most in return. Along with his death, the affection and tenderness he used to show me vanished.’³²⁵⁹ She was enduring significant and constant mental anguish.³²⁶⁰ She was also very scared of the dark and could not stand to be alone in a dark room.³²⁶¹ She was waking up in the middle of the night, short of breath, and feeling ‘terrorised and afraid’. She felt imprisoned and like she died together with her family member.³²⁶²

1506. A medical note, dated 10 October 2011, states that she suffered from PTSD and presented signs of depression, fatigue and low self-esteem.³²⁶³ Her depression was ongoing on 10 December 2012.³²⁶⁴ Victim 37 lost her sight in one eye and suffered from high blood pressure, high cholesterol and arthritis—conditions attributed to the stress of her loss.³²⁶⁵

1507. Victim 37 also suffered material damage.³²⁶⁶ She expects that the Special Tribunal will punish the perpetrators, making an example of them to others that they cannot get away with

similar crimes.³²⁶⁷ She hopes that others will not lose their loved ones in the same way³²⁶⁸ and stated that an apology from the perpetrators ‘would mean nothing’.³²⁶⁹

(f) Victim 38

1508. Victim 38’s³²⁷⁰ young age when her close family member died in the explosion means she felt that she lost her chance to develop a relationship with him, or to attend his funeral and say goodbye.³²⁷¹ She stated, ‘I wanted to be there and see him getting buried ... I missed the chance to kiss him one last time. I missed the chance to hold his hand one last time.’³²⁷² She felt often empty and depressed, and that what should be significant celebrations and milestones were meaningless.³²⁷³ A medical report, dated 6 December 2012, states that she was then ‘profoundly shocked’ at her family member’s death; suffered from malaise and had difficulty sleeping; and was irritable, angry and withdrawn. In addition, her depression was severe but she refused all treatment.³²⁷⁴

1509. Victim 38 was enduring a heavy sense of guilt for the sacrifices made by her remaining family member to provide for her needs.³²⁷⁵ She wants compensation for the suffering of remaining family members, to enable them to retire and rest.³²⁷⁶

(g) Victims 20, 21 and 22

1510. Victim 21 lost her husband and her children, Victims 20 and 22, lost their father, in the explosion.³²⁷⁷ Professor Letschert stated that Victim 21 told her that she was sad that her children will not have a normal childhood and sought psychological treatment following her husband’s

³²⁶⁷ Exhibit 1V30 (V037’s statement), para. 25.

death.³²⁷⁸ As her husband was the breadwinner of the family, his death had materially affected them and Victim 21 expressed a need for monetary compensation.³²⁷⁹

(h) Victim 27

1511. Victim 27 lost his father in the explosion.³²⁸⁰ Victim 27 did not initially understand the news of his father's death, then became outraged and collapsed.³²⁸¹ Coming to terms with losing his father in such an arbitrary way was strenuous and had taken a long time.³²⁸² He stated that, while nothing can compensate the family for their loss, the Lebanese government should provide better support for victims of this and other similar attacks.³²⁸³

(i) Victim 26

1512. Victim 26 lost a child in the explosion.³²⁸⁴ She had a nervous breakdown after her child's death, and felt pain in her body because of the shock and trauma she experienced.³²⁸⁵ She was unable to work and personally paid for the treatment costs. She was permanently taking five medications.³²⁸⁶

1513. Victim 26's husband grew old quickly after his child's death. In its immediate aftermath, he developed diabetes and, later on, eyesight problems, back pain and lung deficiency, each of which required long-term treatment with medication and hospitalisation.³²⁸⁷

1514. Victim 26 wanted the perpetrators of the explosion to be punished; to receive an apology by the perpetrators; financial compensation; and believed that a memorial for the victims would be important for those who have lost a loved one.³²⁸⁸

³²⁸⁸ Exhibit 1V27 (V026's statement), para. 12.

(j) Victim 78

1515. Victim 78³²⁸⁹ lost her child, whom she described as tender, kind hearted and ‘brightening everyone’s life’, in the explosion.³²⁹⁰ She suffered ‘indescribable emotional pain’ and remained in psychological turmoil. In the immediate aftermath, Victim 78 suffered a nervous breakdown and was treated with tranquilisers. As a result of the stress, she also suffered a number of physical ailments, requiring surgeries to her knee and shoulder. Since her child’s death, Victim 78 has had diabetes and a heart condition, and was taking eight different medications, including sedatives. She also suffered material damage: aside from losing her child’s financial support, she bore a large part of the costs of her medical treatments.³²⁹¹

1516. Victim 78 hopes that no one else will go through what she went through.³²⁹² From the Special Tribunal, Victim 78 would like the truth and for the perpetrators to be punished; an apology from the offenders; a memorial for the victims; and financial compensation.³²⁹³

(k) Haitham Osman’s family

1517. Mr Mohammed Osman³²⁹⁴ and Mr Hicham Osman³²⁹⁵ gave statements regarding the impact of their brother Haitham’s death, following two surgeries which failed to correct shrapnel damage to his liver.³²⁹⁶ Their mother, Ms Ghazia Hourri,³²⁹⁷ fainted several times on the day of the explosion.³²⁹⁸ She broke down and was unable to see his body, but Mohammed, his father and his brothers viewed the body.³²⁹⁹ Both brothers stated that their mother was gravely impacted by Haitham’s death.³³⁰⁰ His death ‘destroyed her, she did not believe that her son was dead for a full year and would wait on the balcony for him’.³³⁰¹ She began to lose her memory and spent ‘long

hours in the house, sitting and staring blankly'.³³⁰² Ms Houri's health deteriorated and, at the time of her sons' interviews, was bed-ridden, weighing 35 kilograms, fed through a tube and unable to walk or talk.³³⁰³ Their father, Mr Khaled Osman,³³⁰⁴ was also impacted, although he tried to remain calm and control it.³³⁰⁵ His advanced age meant that it was difficult for him to carry his wife around the house and support her.³³⁰⁶

1518. Mr Mohammed Osman found the first month very difficult and suffered from sleeplessness and involuntary crying fits. Almost three years later, he drove close to another bomb blast, in which his car was lifted in the air.³³⁰⁷ He was unharmed but thought about his family almost losing another family member due to a bomb blast.³³⁰⁸ Mr Hicham Osman described his older brother as his best friend. He was unable to eat or talk for many days after his brother's death, and stayed at home with their mother.³³⁰⁹ Mr Bassam Osman,³³¹⁰ Mr Abdo Osman,³³¹¹ Ms Laura Osman³³¹² and Mr Kamal Osman³³¹³ also suffered the loss of their brother.³³¹⁴

1519. The family was also financially impacted by Mr Osman's loss, as he was one of the breadwinners and they were in the habit of relying on each other.³³¹⁵ As a result, they could not afford proper medical care for their mother.³³¹⁶ 'We are all suffering as a family',³³¹⁷ Mr Hicham Osman stated, 'there is a heavy atmosphere and a lot of sadness'.³³¹⁸

(l) Saadeddine Hariri

1520. Mr Saadeddine Hariri,³³¹⁹ who lost his father, Mr Hariri, wants to know the identities of the perpetrators of the crime and who ordered his father's assassination.³³²⁰

(m) Yasma Fuleihan

1521. According to the Legal Representatives of Victims, although he survived the blast, Mr Bassel Fuleihan suffered third degree burns to 95 per cent of his body, and 'quite literally had no skin'. He was initially identified through his wedding ring and the fact that he kept repeating one word: 'Yasma'.³³²¹

1522. He was flown to France for treatment, where his wife Ms Yasma Fuleihan³³²² spent 64 days in hospital by his side, taking an active part in his treatment, until he succumbed to his injuries.³³²³

1523. The Legal Representatives of Victims submit that she and her children have never returned to live in Beirut and live in perpetual fear.³³²⁴

(n) Talal Nasser's family

1524. Ms Ihsan Fayed,³³²⁵ upon hearing of her husband Mr Talal Nasser's death, lost consciousness.³³²⁶ She was then sedated.³³²⁷ She did not initially want to attend her husband's funeral, because she refused to accept that he was dead.³³²⁸ The day after the funeral, she took the flowers she had bought for him on Valentine's Day and laid them on his grave.³³²⁹ In the period immediately following the attack, she was unable to look after the children on her own, and her parents stayed with her.³³³⁰ For the first few months after the bombing, she did not want to leave

the house;³³³¹ she suffered from anxiety and had to take medication to be able to sleep.³³³² Subsequently, her whole life changed, as she had to take charge of all of the household responsibilities, which had previously been undertaken by her husband.³³³³ She received treatment for chronic depression.³³³⁴

1525. Mr Nasser was the sole provider for the family at the time of his passing; Ms Fayed since returned to work.³³³⁵ At the time of Ms Fayed's testimony, Mr Nasser's full salary continued to be paid by the Hariri family, and she had received insurance payouts of USD 100,000. Her children also received tuition and were to receive a trust fund from the Hariri family when they turned 20 years old.³³³⁶

1526. Ms Fayed's eldest daughter, Ms Sarah Nasser,³³³⁷ who was seven in 2005, had a very strong relationship with her father.³³³⁸ She watched images of the explosion as they unfolded.³³³⁹ When she first returned to school, she would tell the teacher she was unwell so that she could leave the classroom to avoid questioning from the other children.³³⁴⁰ Ms Sarah Nasser saw a psychiatrist for around a year and a half to deal with her struggles with accepting the loss of her father.³³⁴¹

1527. Her youngest daughter, Ms Lynn Nasser,³³⁴² who was four-and-a-half in 2005, did not quite understand what had happened.³³⁴³ As she got older, she began to realise that something was missing from her life.³³⁴⁴ This affected her psychologically, and as a consequence she began stuttering when she was about seven or eight years old.³³⁴⁵ She saw a specialist speech therapist

for about a year. She improved, but her stutter recurs under stress, and she still sees the speech therapist from time to time.³³⁴⁶

1528. Ms Roula Nasser³³⁴⁷ described the impact of her brother Mr Talal Nasser's death upon her. She got married, as her wedding was already scheduled, but then got divorced.³³⁴⁸ She was still living with their mother, Ms Siham Harb,³³⁴⁹ who had Alzheimer's and was being treated for chronic depression.³³⁵⁰ Her mother was forgetting things, but not her son.³³⁵¹

1529. Also impacted were Mr Talal Nasser's brothers, Mr Bilal Nasser³³⁵² and Mr Kamal Nasser,³³⁵³ and his sister Ms Bakiza Nasser (who is now deceased).³³⁵⁴

(o) Hana Diab Al-Arab

1530. Ms Hana Diab Al-Arab³³⁵⁵ lost her loving husband of 34 years, Mr Yahya Al-Arab.³³⁵⁶ Having heard the explosion and seen her son on TV footage searching the convoy vehicles, she went to Quraitem Palace to look for her husband.³³⁵⁷ Ms Hana Diab Al-Arab's daughter, Ms Alia Al-Arab, described her parents' relationship as 'lovely' and testified that 'they loved each other and they were also friends. We never had problems in the family. There was a lot of love in our whole household.'³³⁵⁸ Ms Hana Al-Arab was 'devastated' by her husband's death.³³⁵⁹ She is 'not the same person anymore' and is 'always ill'.³³⁶⁰ She was suffering from severe depression,³³⁶¹ for which she was taking medication.³³⁶²

(p) Mohammed Darwiche's family

1531. Ms Nivine Darwiche³³⁶³ last spoke to her younger brother Mr Darwiche—a bodyguard in Mr Hariri's convoy, whom she described as her friend and closest confidant—ten minutes before the explosion. They planned to see each other later in the day and she urged him to finish work soon. He said he had to get into the car as Mr Hariri was ready to leave.³³⁶⁴

1532. The death of her brother, 'the one [she] always sat with', caused Ms Darwiche significant mental harm.³³⁶⁵ She stated that she felt 'crazy': 'I started seeing him standing at the window, feel his hand on my shoulder. I would sometimes wake up and see him standing right in front of me.'³³⁶⁶

1533. Ms Darwiche was afraid to be at home alone and unable to look after her infant child.³³⁶⁷ Her husband took a month of unpaid leave from work to support her.³³⁶⁸ Ms Darwiche also suffered material damage. As her brother was a breadwinner for their parents, the family had to take over this responsibility; additionally, she lost the deposit on a house she had put down with her brother, which she was later unable to purchase. Ms Darwiche hopes that the trial brings justice and the perpetrators are punished.³³⁶⁹

1534. Mr Abdel-Qader Darwiche³³⁷⁰ testified that his deceased brother had been the sole income earner of the family,³³⁷¹ which included their parents and two sisters.³³⁷² On his brother's death, he had to take on his brother's role, and left school to work to provide for his family; this situation continues.³³⁷³ His mother still mourned the loss of his brother, frequently crying and being depressed.³³⁷⁴ His father lost all of his teeth from stress, and his condition was deteriorating.³³⁷⁵

³³⁷⁵ Abdel-Qader Darwiche, T. 22 January 2014, pp 16-17.

Mr Darwiche said he continued to suffer horrible thoughts.³³⁷⁶ Since the experience of fruitlessly searching hospitals for his brother, he had suffered from chronic gastric pain.³³⁷⁷

1535. Ms Sahar Kalaoui,³³⁷⁸ on behalf of herself and her husband Mr Saadeddine Darwiche,³³⁷⁹ provided additional information to the Trial Chamber about how their son's death affected them. Ms Kalaoui told the Trial Chamber that Mr Darwiche's death was very difficult and had caused the health of all family members to deteriorate. Her husband lost his teeth. He fell down on the day of the attack and broke his spine, and subsequently underwent three surgeries; a further surgery was pending at the time of their appearance before the Special Tribunal.³³⁸⁰ He was unable to talk after suffering from cancer.³³⁸¹ The family received Mr Darwiche's salary from the Hariri family for some time after his death, as well as insurance pay-out for her son of USD 100,000.³³⁸² Ms Kalaoui told the Trial Chamber that she hopes the truth will emerge and the perpetrators will be brought to justice, and that the family's losses will be compensated.³³⁸³

(q) Victim 58

1536. Victim 58³³⁸⁴ stated of her immediate family member and friend, who died on 14 February 2005, that 'we used to share everything with each other' and 'he represented everything beautiful in our lives'.³³⁸⁵ When she realised he may have been hurt in the explosion, she panicked and became hysterical. She drove to Beirut, through the smoke and fire of burning tyres on the street to her parents' house, and found them 'in very bad state', having been informed of their family member's death.³³⁸⁶

³³⁸⁵ Exhibit 1V24 (V058's statement), para. 7.

³³⁸⁶ Exhibit 1V24 (V058's statement), para. 9.

1537. Victim 58 suffered a heart attack soon after. She was admitted to an intensive care unit with life-threatening high blood pressure and a swollen heart, and remained there for a week.³³⁸⁷ She received treatment for an extended period and, at the time of her statement, was still taking medication and attending a biannual check-up.³³⁸⁸ Victim 58 continued to suffer considerable sadness and was unable to cook or eat dishes her family member liked or wash the clothes he left behind.³³⁸⁹

1538. Her family suffered material harm as her immediate family member was the main breadwinner.³³⁹⁰ She is hopeful that the Special Tribunal will find the truth and bring the perpetrators to justice and stated that, while nothing can compensate for his death, financial compensation would improve the family's circumstances.³³⁹¹

(r) Ziad Tarraf's family

1539. Mr Mamdouh Tarraf's³³⁹² brother Ziad died in the explosion.³³⁹³ Mamdouh Tarraf explained that his uncles had been unable to identify his brother's body due to the severity of the burns.³³⁹⁴ The death of his brother was a huge and irreparable loss for the entire family.³³⁹⁵ His father and another brother had passed away before his brother, who was the breadwinner for the family.³³⁹⁶ He was particularly close to his brother, and his loss has left a void in his life.³³⁹⁷ At the time of his death, his brother had been married for four years and had two children.³³⁹⁸ He was now raising his brother's children.³³⁹⁹

1540. Ms Zeina Tarraf³⁴⁰⁰ spoke of the loss of her husband, Mr Ziad Tarraf. They had been married for less than five years, but were very attached to one another.³⁴⁰¹ She was still thinking

³⁴⁰¹ Exhibit 1V37 (Zeina Tarraf's statement), para. 8.

about her husband a lot and had been advised to take anti-depressants.³⁴⁰² The death of their father caused her children, who were two and four years old at the time, to suffer.³⁴⁰³ Her older child had trouble at school and saw the school psychologist.³⁴⁰⁴ The Hariri family helped at first by paying money, albeit inconsistently, but eventually the money stopped. Ms Tarraf had to sell the car and borrow money. Ultimately, she had to leave Lebanon because she had no source of income there.³⁴⁰⁵ Ms Tarraf explained that she would like her family to be financially compensated, because apology by the perpetrators ‘means nothing’.³⁴⁰⁶

1541. Ms Clemence Tarraf³⁴⁰⁷ explained the impact of her brother’s death on the family. Her mother went out searching for her son and, a month after his death, woke up at around 03:00 and began searching for him again.³⁴⁰⁸ Her mother hated life, and still wore black all the time, even attending Ms Tarraf’s wedding in black.³⁴⁰⁹ Mr Tarraf’s children were very young at the time; one child was only four years old, but understood what had happened due to the devastation at home.³⁴¹⁰ Ms Tarraf herself experienced headaches and sleeping problems for about 50 days after the attack. She suffered from migraines for three years and lost weight due to the stress. Emotionally, she could not believe what had happened, as she was very close to her brother.³⁴¹¹ It also affected the family financially, as her brother had been the main provider for the family.³⁴¹²

(s) Mohammed Riad Ghalayini’s family

1542. Ms Dina Ghalayini³⁴¹³ explained that her brother, Mr Mohammed Ghalayini, was the ‘pillar of and provider for the family. I used to rely on him for everything. He was part of my heart.’ Her mother was heavily affected by his death and had lost hope in life. Her mother consulted psychiatrists and doctors, and received psychological treatment.³⁴¹⁴

³⁴⁰² Exhibit 1V37 (Zeina Tarraf’s statement), para. 21. Ms Tarraf explained that she did not want to take anti-depressants because she wanted to deal with the loss herself and had her faith as her own medication.

³⁴¹³ Victims agreed facts, V086; exhibit 1V45, p. 177.

³⁴¹⁴ Exhibit 1V38 (Dina Ghalayini’s statement), para. 8.

(t) Victim 42

1543. Victim 42 and his wife suffered immense grief having lost their son.³⁴¹⁵ As their son was the family's breadwinner, they were also materially affected.³⁴¹⁶ For Victim 42, knowing the truth about the attack would be the most important outcome—he wants the perpetrators to be punished.³⁴¹⁷

(u) Victims 5, 7, 47, 51, 60, 61, 83, and Mr Omar Tarraf

1544. The following participating victims lost an immediate family member in the explosion of 14 February: Victim 5,³⁴¹⁸ Victim 7,³⁴¹⁹ Victim 47,³⁴²⁰ Victim 51,³⁴²¹ Victim 60,³⁴²² Victim 61,³⁴²³ Victim 83³⁴²⁴ and Mr Omar Tarraf.³⁴²⁵

4. Witnesses who are not participating victims

1545. The Trial Chamber finds beyond reasonable doubt that the following witnesses suffered relevant harm as a direct result of the explosion, as follows.

(a) Amer Chehadeh

1546. Mr Amer Chehadeh, a close protection officer of Mr Hariri who was driving the second convoy vehicle, did not lose consciousness as the car flew forward and hit the ground.³⁴²⁶ He stayed at the scene and did his utmost to offer assistance.³⁴²⁷ A witness at the scene saw Mr Chehadeh, with a head injury, 'very nervous', shouting and searching for Mr Hariri's car.³⁴²⁸

³⁴²⁸ Exhibit P336 (Statement of Tarek Soubra), paras 72, 90.

1547. After most people had been evacuated from the area, Mr Chehadeh was taken to the American University Hospital in an ambulance.³⁴²⁹ He suffered two punctured eardrums and was bleeding from the ears; he had a cut vein in his neck, skull fracture and a torn muscle in his knee. He was in shock and could not hear anything for a long time.³⁴³⁰

1548. Eighteen months to two years after the explosion, Mr Chehadeh was diagnosed with diabetes and later suffered a heart attack; he linked these conditions to his fluctuating blood pressure and neck injury as well as the stress and suffering.³⁴³¹ He sustained permanent hearing impairment and is now unable to hear anyone speaking softly. At the time of his testimony, Mr Chehadeh was undergoing treatment for neck pain.³⁴³² He explained that, as a result of the injury to his neck, the veins in his neck and head do not work properly and cause fluctuations in blood pressure.³⁴³³ When stressed, the witness feels significant neck pain and sometimes loses his balance and falls.³⁴³⁴

1549. Since the explosion, Mr Chehadeh's memory was weaker,³⁴³⁵ and the memories of what happened upset him a lot.³⁴³⁶ He suffered ever more frequent 'memory flashes' and 'can never forget that day as long as I live'.³⁴³⁷ He 'lost a father figure' on the day of Mr Hariri's assassination.³⁴³⁸

(b) Bilal Omar Yamout

1550. Mr Bilal Omar Yamout suffered bruising and ruptured muscles in his back, from a window falling onto his back in the explosion.³⁴³⁹ He was examined at the American University Hospital and given medication for the pain.³⁴⁴⁰ He remained at the hospital for about two hours before

returning to the HSBC.³⁴⁴¹ The witness took painkillers and applied medication for the bruising, and his daily life was affected, for three months after the explosion.³⁴⁴² Fear from the explosion caused him ongoing nervous tension and high blood pressure.³⁴⁴³ The windows of his 1993 Range Rover were shattered in the explosion, the car had severe dents and the on-board computer did not work.³⁴⁴⁴ He received some compensation for damage to his vehicle from his employer.³⁴⁴⁵

(c) Witness PRH009

1551. Witness 9 was hit by glass debris in the neck and upper body in the explosion. He remained in the hospital for about three hours.³⁴⁴⁶ He suffered a 30 per cent loss of hearing and had continuing headaches lasting several days at a time, for which he was taking medication.³⁴⁴⁷ Untreatable damage to his middle ear, which controls balance, means he was suffering dizziness.³⁴⁴⁸ He was also suffering from ongoing knee pain.³⁴⁴⁹ Although Witness 9 did not feel the emotional impact of the blast immediately, he subsequently suffered the indescribable pain of losing someone very dear to his heart in Mr Hariri.³⁴⁵⁰

(d) Alia Al-Arab and family

1552. Ms Alia Al-Arab and her brothers, Mr Tareq Al-Arab and Mr Wael Al-Arab, lost their father.³⁴⁵¹ They heard the explosion and waited for Mr Yahya Al-Arab's regular call to make sure they were okay. This did not come.³⁴⁵² Ms Alia Al-Arab frantically tried to call her father, her children's school and her parents' home.³⁴⁵³ Mr Tareq Al-Arab went to the explosion site to look for his father among the vehicles.³⁴⁵⁴

³⁴⁵³ Alia Al-Arab, T. 4 December 2015, p. 75.

³⁴⁵⁴ Alia Al-Arab, T. 4 December 2015, pp 75-76.

1553. Ms Alia Al-Arab had a very strong relationship with her father, who was her ‘closest friend’ and support, in constant contact and very attached to his grandchildren.³⁴⁵⁵ On being informed of her father’s death, she was ‘crying and screaming’; for the following two days she was ‘not really aware of what was happening around me’.³⁴⁵⁶ Ms Al-Arab testified that since his death, she has felt constant fear for her children and family, and suffers panic attacks if there is an explosion; she was taking medication for anxiety and panic attacks.³⁴⁵⁷ Mr Wael Al-Arab, whose health situation requires constant support, lost his primary carer,³⁴⁵⁸ a role then taken up by his mother,³⁴⁵⁹ and was taking anti-depressants.³⁴⁶⁰ Ms Alia Al-Arab testified that her family wants truth and justice, for the perpetrators to be punished, and that the Special Tribunal’s work is ‘a great source of relief’ for the family.³⁴⁶¹

(e) Tarek Soubra

1554. Mr Tarek Soubra, a civilian bodyguard for Mr Hariri who was on leave on the day of the explosion,³⁴⁶² dropped to the floor as the windows of the nearby shop in which he was standing shattered. About 15 minutes later, convinced by passers-by that the convoy had been hit, he ran on foot to the explosion.³⁴⁶³ He looked for Mr Hariri’s car but could not recognise any of the convoy vehicles. Mr Soubra saw his colleagues, Mr Mohammed Dia, Mr Hassan Al-Ajouz and Mr Amer Chehadeh, injured and in distress.³⁴⁶⁴ Colleagues told the witness that they saw him in a state of shock and repeating ‘what happened?’³⁴⁶⁵

1555. He remained at the scene for about an hour before taking Mr Chehadeh to the hospital, where many people were shouting and crying.³⁴⁶⁶ Ambulances arrived with the bodies of deceased persons. When he saw Ms Joumana Hariri and Mr Bahaa Hariri, Mr Soubra knew that Mr Hariri’s body had been found. Mr Soubra returned to Quraitem Palace and found his family outside; his

wife had forgotten that he was off work that day and ‘everyone was very stressed’. Inside the palace ‘everyone was crying and whenever I faced one of my colleagues we started crying’.³⁴⁶⁷

1556. For the witness and his family, ‘it was a very dramatic day’. Mr Soubra stated that Mr Yahya Al-Arab was just like his father, and he had been ‘completely different’ since the explosion. Having for a time believed him to be hurt, his wife, mother and son were traumatised by the events.³⁴⁶⁸

5. Tertiary harm

1557. In Professor Letschert’s opinion, the ‘main difference’ between terrorism and other crimes lies ‘in the context in which terrorist victimisation occurs, and its audience. Victims of terrorism, by definition, are attacked as representative of a larger group’.³⁴⁶⁹ In her view, with these crimes, ‘we don’t only talk about the direct victim but we talk about actually the entire population, and we could stretch it even further, the entire international community.’³⁴⁷⁰

1558. The Trial Chamber heard evidence from several victims about the broader impact of the attack. Mr Nohra stated that the attack was on the whole country. ‘What happened has affected everyone.’³⁴⁷¹ Similarly, Mr Amer Chehadeh testified that ‘the assassination of Rafik Hariri was the assassination of the entire country’.³⁴⁷² In Mr Nasser’s view, the death of Mr Hariri meant that he had ‘lost a dream, not only relating to his brother, but also relating to his country, losing a prime minister that could have guaranteed a stable Lebanon’.³⁴⁷³

1559. Some victims feared the prospect of further attacks.³⁴⁷⁴ Mr Mohammed Osman, following his close encounter with another terrorist attack two years later, gave evidence that he ‘holds a grudge against Lebanon, I am sick and tired of it, because we are never safe’.³⁴⁷⁵

³⁴⁷⁵ Exhibit 1V26 (Mohammed Osman’s statement), para. 17.

1560. Victim 16 gave evidence that the perpetrators of the attack ‘have killed tens and hundreds, morally and psychologically. If the sentence is rendered, because we trust the Special Tribunal for Lebanon, then people will recover hope. And then the Lebanese people would decide to keep living in Lebanon.’³⁴⁷⁶ Mr Abou-Chaaya stated that he would like Lebanon to find the truth.³⁴⁷⁷ Similarly, Witness 352 testified that, as a Lebanese person, he wants the Special Tribunal to uncover the truth of who killed Mr Hariri:

We have never seen such a leader in the history of Lebanon. I do not belong to any political party or political affiliation or political group in Lebanon. I’m a Lebanese citizen ... And when we had a leader such as Rafik Hariri, he came to contribute to the development of Lebanon ... He was not only helping people from his sect or religion, he was helping students from all religious groups in Lebanon ... he was the only leader in the history of Lebanon that can be described as a patriotic leader ... we want to see the truth.³⁴⁷⁸

VII. RELIABILITY OF TELECOMMUNICATIONS EVIDENCE

Summary of the evidence and findings

1561. The Prosecution's case relies upon expert cell site analysis of the call data records of mobiles it attributed to the four Accused, and Mr Badreddine. Mr John Edward Philips, an expert in cell site analysis and telecommunications, gave extensive opinion evidence on the telecommunications data provided by two Lebanese telecommunications providers, Alfa and Touch, relating to particular mobiles. This was to identify their approximate geographic location and to track their movements.

1562. Mr Philips used the call data records of these mobiles, and the cell site data relating to the cell masts to which they connected. He also used the networks' coverage maps which show where cell sectors provide the predicted best coverage and plotted them onto Google Earth. The Prosecution used its own software, the 'electronic presentation of evidence', to illustrate the relevant mobile call and movement patterns by plotting the coverage maps onto it.

1563. The Trial Chamber was satisfied that Mr Philips's cell site analysis was sufficiently reliable to use to assess the *general* locations and movements of these mobiles. The Trial Chamber was also satisfied that Alfa's and Touch's call data records and cell site data were business records created in the normal course of their business. Much of the evidence of the Alfa and Touch representatives, respectively Witnesses 705 and 707, was based on business records mainly produced in the normal course of business.

1564. The Trial Chamber was also satisfied of the reliability of their evidence as suitably qualified corporate witnesses who used a range of data from relevant sources, including information from outside of their own personal knowledge. The Trial Chamber was thus satisfied that the telecommunications data had the necessary probative value to use to determine that specified mobiles were communicating with each other in the four pleaded Red, Yellow, Blue and Green networks, and the Purple group of mobiles, and to approximately locate the mobiles.

1565. The evidence is also sufficiently reliable and probative to use to determine whether the four Accused and Mr Badreddine were using the personal mobiles allegedly attributed to each. Hence,

the cell site evidence had the probative value needed to determine whether the personal mobiles of Mr Ayyash, Mr Badreddine and Mr Merhi were co-locating with the relevant pleaded Red, Yellow, Blue and Green network mobiles, and thus whether these mobiles had a single user. In making these findings, the Trial Chamber carefully considered the inherent margin of error in Alfa's and Touch's predicted coverage maps, the non-contemporaneous nature of some of the basic cell data the Prosecution was using and the approximation method used to produce the data.

A. Introductory concepts

1. Introduction and overview

1566. The case against the four Accused and the pleaded co-conspirator, Mr Badreddine, is based upon analysing communications between mobiles attributed to them, on either their personal mobiles or mobiles alleged to have communicated with each other in the four pleaded Red, Yellow, Blue and Green networks. The Prosecution led evidence of the telecommunications data that it argued related to their mobile communications throughout the indictment period. According to the Prosecution, when taken in conjunction with the evidence of Mr Hariri's movements and other key events, this evidence demonstrates their involvement in the planning and execution of the attack, such as by watching his movements and searching for appropriate places to launch the attack on his convoy. This evidence derives from the cell network and call data records of two Lebanese telecommunications providers, Alfa and Touch. To use these records to attribute mobiles to the Accused, the Trial Chamber must be satisfied that they are reliable.

1567. This required evidence of how Alfa and Touch functioned; this included the production of the call data records, and how these companies organised their cell sites, including mapping the relevant cell sectors. The Trial Chamber received extensive evidence on this from representatives of the two companies and from a telecommunications cell site expert.

1568. The Trial Chamber, on the Prosecution's application, declared Mr Philips an expert in telecommunications and cell site analysis and received his eight expert reports on single user analysis into evidence. The reports concern cell site analysis generally, and the analysis of the

pleaded networks and attribution of these mobiles in particular.³⁴⁷⁹ He also provided extensive testimony in support of these reports.

1569. Generally, Mr Philips described how cell site analysis, since its inception in the early 1990s and more widespread use after 2000, has been used to investigate major crimes. He described it as being analogous to, and used in the same way as DNA analysis, fingerprinting, blood analysis and CCTV. Cell site analysis can provide indications of a suspect's presence in an area and movement, a suspect's identity and the contacts of a particular mobile.³⁴⁸⁰

1570. Mr Philips explained that cell site analysis aims to give an approximation of a mobile telephone's location from calls it has made or received.³⁴⁸¹ He believed that it is in many ways superior to forensic evidence, such as finger print and DNA analysis, because it is always available and time-specific. Cell site analysis can lead to or be used in conjunction with other investigative methods, such as reviewing CCTV records, to definitively place a mobile and its user in a specific location.³⁴⁸²

1571. Unlike GPS, cell site analysis cannot pinpoint the location of a mobile, and by extension the mobile's user, at the time of use.³⁴⁸³ It can, however, indicate 'the likely area' of a mobile's location at a particular time with 'extremely high' accuracy.³⁴⁸⁴ Cell site analysis also shows the

³⁴⁷⁹ Decision on opinion evidence (Mr Donaldson), paras 16, 19, 69, 96; Decision on request to strike portions of an expert report, para. 8; Decision on expertise (Mr Philips – GSM); Decision on expertise (Mr Philips – Telecommunications and cell site). As an external expert, the Trial Chamber received Mr Philips's general report on cell site analysis, 'An Introduction to Cell Site Analysis as Applied to GSM Networks' (exhibit P549) and seven single user analysis reports (exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash); exhibit P1112 (Expert report of John Edward Philips – Single user analysis, Suspects 4, 5, 6, 7 and 8); exhibit P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review); exhibit P1936 (Expert report of John Edward Philips – Single user analysis in relation to Blue 322, Blue 324 and Blue 585); exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine); exhibit P1938 (Expert report of John Edward Philips – Single user analysis with end cell review, Suspect 3, Mr Merhi); exhibit P2120 (Expert report of John Edward Philips – Revised single user analysis, Suspect 3, Mr Merhi)). The Trial Chamber received four additional reports on mission phones prepared by Mr Philips (exhibit P1114 (Expert report of John Edward Philips – Red mission phones); exhibit P1115 (Expert report of John Edward Philips – 15 Blue mission phones); exhibit P1116 (Expert report of John Edward Philips – Green mission phones); exhibit P1117 (Expert report of John Edward Philips – Common Mission Phones)). *See also* Decision on opinion evidence (Mr Donaldson), pp 16-19, referring to John Edward Philips, T. 18 August 2015, pp 4-8, 12-39, T. 25 April 2017, pp 7-12 (cross-examination by the Ayyash Defence); exhibit P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review), p. 145.

³⁴⁸² John Edward Philips, T. 18 August 2015, p. 51.

³⁴⁸³ John Edward Philips, T. 18 August 2015, pp 48-49, 55, 58-60.

³⁴⁸⁴ John Edward Philips, T. 18 August 2015, p. 55.

movement of a mobile progressively over time and over multiple calls.³⁴⁸⁵ As a result, if two or more mobiles have similar movement patterns over a sustained period, a cell site analyst may find that these mobiles are ‘co-locating’ and hence have a single user.³⁴⁸⁶

1572. This telecommunications data, on which the Prosecution relied, contains details of the outgoing and incoming numbers; the time date and duration of each call; and the network mast activated by the call. This points to the mobile user’s approximate location.³⁴⁸⁷ Mr Philips explained that mobile networks generate this data for their own billing and system purposes.³⁴⁸⁸ For this reason, the providers have a genuine incentive to ensure its accuracy, especially in competitive markets because networks with subpar coverage or a reputation for inaccurate billing will not last.³⁴⁸⁹ Although the telecommunication providers do not generate the data for forensic purposes, it has evolved and was subsequently adapted and refined for cell site analysis.³⁴⁹⁰

1573. To understand the underlying data, Prosecution analysts extracted the calls relating to a particular mobile number from call data records and presented them in what are termed ‘call sequence tables’, arranged chronologically. These tables are a form of derivative evidence that makes the information in the call data records explicable. The Prosecution also used Alfa’s and Touch’s maps depicting the approximate coverage for the relevant cells in their networks. These are described as ‘best server coverage maps’. During the trial, the Prosecution presented the evidence using demonstrative aids, including its in-house electronic presentation of evidence (EPE) software.³⁴⁹¹

1574. Understanding the cell site evidence in this case requires a more detailed examination of how cellular networks generate this data, and the information that the Prosecution relies upon.

2. GSM system

1575. As part of his overview, Mr Philips explained that mobile networks were first conceptualized in the 1980s, created in 1990, and the first Global System for Mobile

³⁴⁹¹ See sub-section (H) ‘Electronic presentation of evidence (EPE)’, below.

communication, or GSM, was introduced in 1991 in Finland.³⁴⁹² This first generation ‘1G’ network was incompatible with other 1G networks.³⁴⁹³ To facilitate pan-European coverage, a second generation of GSM systems was developed, replacing 1G.³⁴⁹⁴ The ‘2G’ system was adopted worldwide, including in Lebanon, where the system was installed in 1994.³⁴⁹⁵ The three main component groups of GSM architecture are: first, mobile stations, second, a base station subsystem and third, a switching subsystem.³⁴⁹⁶

1576. A mobile station (MS) has two operational parts, namely, mobile equipment and SIM cards.³⁴⁹⁷

1577. The mobile equipment is the telephone or handset the subscriber uses to access the network, and it has a unique identity number known as the IMEI. This has 14 digits and contains information such as the handset’s make and model and a serial number to identify a particular handset. Sometimes the manufacturers add one or two digits.³⁴⁹⁸ The first eight digits signify the ‘Type Allocation Code’ (TAC) describing the mobile’s brand and model. The remaining digits are defined by the manufacturer: six are the serial number and one is a check digit.³⁴⁹⁹

1578. The SIM card is an electronic chip inserted into a handset; the SIM is personalised by associating that handset with a specific user and a particular number.³⁵⁰⁰ It is uniquely identified by an integrated circuit card identifier serial number which may be printed on the SIM card, but is also in the SIM card as a 19 or 20 digit number. The SIM card holds the International Mobile Subscriber Identity (IMSI); this is a unique number that identifies the subscriber over the radio

path and is used elsewhere over the network.³⁵⁰¹ The number associated with the SIM card is distinct from the telephone number assigned to the user.³⁵⁰²

1579. The base station sub-system is the central equipment of the GSM network.³⁵⁰³ It provides the link between the mobile and the switching subsystem. Mr Philips explained that mobiles do not ‘talk to each other directly’, but rather the ‘mobile talks into the network, and it talks into the network via a base station normally known as a cell site’.³⁵⁰⁴

1580. The base station sub-system has two operational parts: a base transceiver station (BTS) and a base station controller (BSC). The base transceiver station has transmitting and receiving antennas and signalling equipment that provide air interface for a cell to route the call. This equipment is collectively termed a ‘cell site’.³⁵⁰⁵

1581. The base transceiver station communicates with the mobile. A single base transceiver station can support one or more cells.³⁵⁰⁶ Urban base stations are typically cell towers with antennas mounted on the top or antennas mounted on roofs or the sides of buildings.³⁵⁰⁷ Cell towers are also called ‘masts’. The base station controller supervises and controls a number of the base transceiver station’s functions, including its cell administration. A base station controller may be located with the mobile switching centre which can control many base station controllers.³⁵⁰⁸

1582. The switching subsystem is the main switching centre of the GSM network and has a number of functional blocks.

1583. First, the mobile switching centre (MSC) handles call setting up, routing and supervising calls between external networks, such as the integrated services digital network (ISDN) and public

switched telephone network (PSTN),³⁵⁰⁹ and the mobile.³⁵¹⁰ The MSC also creates the call data records relating to calls which are subsequently used, for instance, for billing.³⁵¹¹ These records, corresponding to outgoing and incoming calls and text messages, accumulate at the mobile switching centres until the call data records are retrieved from the MSCs at regular intervals by the mediation platform; this is a system used to convert certain data types into other data types.³⁵¹²

1584. Second, the home location register (HLR) is a database which holds subscriber information related to that network. Only one HLR in any network maintains data on the current location of a mobile, identification numbers and various addresses.³⁵¹³

1585. Third, the visitor location register (VLR) is another type of database that supports registration, authentication and call routing to or from a mobile roaming in an area of a mobile switching centre.³⁵¹⁴ 'Roaming' allows a mobile to operate on a cellular network other than the network to which the mobile is subscribed, that is, its home network. Each MSC has a VLR that holds the data relevant for handling calls from or to the mobiles that are currently in its area. The relevant data is downloaded from the HLR when the mobile subscriber switches on the mobile in the area of the visited MSC, in that way initiating the registration process.³⁵¹⁵ Both the VLR and the HLR ensure that calls or messages are sent to the appropriate cell site, as the receiving mobile could be located anywhere on a network which permits roaming.³⁵¹⁶

1586. Fourth, the equipment identity register (EIR) is a type of database, which stores the IMEI of the mobiles that are used on the system, so if, for example, a handset is stolen, it can be blacklisted and hence prevented from accessing the system.³⁵¹⁷

³⁵⁰⁹ The ISDN is a circuit-switched digital telephone network system which provides voice and data over conventional telephone circuits. The PSTN is a normal public telephone system. The gateway mobile services switching centre (GMSC) is a mobile switching centre serving as an interface between the mobile network and other networks such as PSTN and ISDN, exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), pp 19, 169-170.

³⁵¹⁷ John Edward Philips, T. 18 August 2015, pp 85-86.

1587. Fifth, the authentication centre (AUC) is a processing centre that is associated with the HLR. Its main purpose is to provide data security features that authenticate the subscriber.³⁵¹⁸

1588. The image below is extracted from Mr Philips's general report 'An Introduction to Cell Site Analysis as Applied to GSM Networks', exhibit P549, and shows the main components of a GSM network.³⁵¹⁹

3. Configuration of individual markets

1589. Mr Philips explained that after a common GSM system was created in 1990 in Europe, individual markets configured aspects such as the mobile interface, billing and coverage to suit their own needs.³⁵²⁰ However, for the entire system to work, it was crucial that the technology in each country and for each market was compatible with the central GSM system.³⁵²¹

1590. The GSM system's basic operations incorporate variables to accommodate different environments—urban, rural and hotspots where cell sites operate differently—to provide optimal service.³⁵²² Similarly, all systems generate and use the same data for cell site analysis.³⁵²³ Although Mr Philips had no detailed knowledge of the Lebanese networks, he was unaware of anything

³⁵¹⁸ Exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), pp 20, 168.

³⁵¹⁹ Exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), p. 18. For completeness: the public land mobile network (PLMN) is a land mobile network established to provide telecommunication services to the public, exhibit P549, p. 171.

³⁵²³ John Edward Philips, T. 18 August 2015, pp 32-33.

‘unique about Lebanon that would make certain peculiarities that only appear there within the context of the GSM system’.³⁵²⁴

1591. He also explained that base GSM systems are configured for the particularities of individual markets.³⁵²⁵ These may include features such as the area over which a cell site may work and the capacity provided within a network.³⁵²⁶ Although all networks have a common fundamental architecture, no GSM systems are configured identically; each must be configured according to the geography and population density of the area covered.³⁵²⁷ Cell site analysis, Mr Philips explained, does not take into account such individual changes to systems because the system already accounts for those variables.³⁵²⁸

1592. The Lebanese GSM system was installed in 1994.³⁵²⁹ Mr Philips, who is British, stated that because the Lebanese network was installed very soon after the European first network, he ‘would imagine the systems were brought in from Europe’.³⁵³⁰ He expected the technology used in the Lebanese GSM system to be very similar to the UK’s.³⁵³¹

1593. However, he had no knowledge of the Lebanese system ‘in terms of background detail and the exact configuration, but the operation is the same as anywhere in the UK’.³⁵³² Mr Philips noted that while it was common practice in his UK investigations to perform field measurements to ensure the accuracy of the network and best server maps, he was not asked to take any of these steps in this case.³⁵³³ The Prosecution did not suggest that he travel to Lebanon to conduct his cell site analysis, even though Mr Philips thought that this would have been beneficial.³⁵³⁴

4. Sending SMS

1594. Sending an SMS, or text message, follows mainly the same procedure as a voice call. The main difference is that text messages are stored in an SMS message centre—between the switching

³⁵³⁴ John Edward Philips, T. 24 August 2015, p. 20.

centres—until the incoming mobile is switched on, and within coverage, enabling it to receive messages. In a store-and-forward process, the message is stored and then forwarded to the incoming mobile almost immediately. However, if the incoming mobile is switched off or not within coverage, the message will remain at the SMS message centre until the incoming mobile can receive the message. If a mobile remains switched off or out of coverage for some period, messages can get ‘pent-up’, at the SMS message centre, until the mobile is available. The mobile will then receive a succession of messages sent when it was unavailable. The significance of this is that the time when a message is sent may not correspond to when it is received.³⁵³⁵

5. Theft or loss of handset or SIM

1595. Mobile telephones, as noted above, have two parts, namely, the handset and a SIM card.³⁵³⁶ Because a telephone number is assigned to a SIM card, the telecommunications company can provide a new device and reassign the original number to a new SIM card if a mobile is lost or stolen. Losing a mobile means losing a SIM card and IMSI number, but not the telephone number.³⁵³⁷

1596. Mr Philips explained that due to the sophisticated authorisation procedures, it is extremely difficult for someone other than the owner of the telephone number to use that number. When a mobile accesses a mobile network, it goes through an authorisation process where the network sends a number to the mobile. In response, the mobile uses its own personal key that is unique to the SIM to produce a number sequence that the mobile sends back to the network. The mobile can log on and use the network if the network is expecting that number sequence from the mobile. Once logged in, the network assigns the telephone a temporary IMSI (TMSI) for use over a short period. The TMSI can change several times in a day. That is why stealing a telephone number is not as simple as knowing the IMSI number, because the number communicating with the network is often the TMSI number.³⁵³⁸

1597. Additionally, the same telephone number cannot be attributed to two different SIM cards. If a handset is stolen or lost, the SIM card is also lost.³⁵³⁹ Mr Philips explained that the mobile

³⁵³⁵ John Edward Philips, T. 18 August 2015, pp 80-81.

³⁵³⁸ John Edward Philips, T. 18 August 2015, pp 71-72.

³⁵³⁹ John Edward Philips, T. 18 August 2015, pp 90-91.

network can be informed of this directly, but it will most likely become aware of a stolen handset or SIM card when the user comes in to replace it. If the user requests the same telephone number, the network checks to see if the telephone number is available, and may discover that the number is already associated with a different SIM. The network will then deregister the telephone number from the stolen SIM to register it to the newly purchased SIM.³⁵⁴⁰ If someone tries to use the old SIM to make a call, the network will reject the call; this is because the SIM has been dissociated from the number and no longer has access to the network. However, until the mobile company dissociates a telephone number from a SIM, someone may use a stolen handset or SIM card to make and receive calls.³⁵⁴¹

1598. Some handset manufacturers restrict their use to one network.³⁵⁴² However, if a mobile is unlocked and therefore usable on any network, it can accept any SIM without affecting the mobile's functionality. Mr Philips explained that swapping a SIM from one handset to another does not change the IMSI or telephone number, but the IMEI will change to reflect the new handset's make and model.³⁵⁴³

6. Call data used for cell site analysis

1599. Call data records, cell data and location area codes—collectively termed 'raw data'—are used to conduct cell site analysis.³⁵⁴⁴ In his general report, Mr Philips explained that call data refers to call metadata collected by telecommunication providers and the location area code refers to the unique identification number of a cell. To analyse the data, network providers must provide, upon request, call data records for the mobiles of interest.

1600. In his experience, depending on the network, this data will be in different formats and may be in single or multiple files. The cell used may be difficult to identify in call data records because the 'cell identity' or 'cell ID' is represented by a number which provides no information about the cell used.³⁵⁴⁵ In other words, an identifying number rather than the cell's name is used as the cell's identity.

³⁵⁴⁰ John Edward Philips, T. 18 August 2015, pp 91-92.

³⁵⁴⁴ John Edward Philips, T. 18 August 2015, pp 94-95.

³⁵⁴⁵ Exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), p. 108.

1601. For some networks, the cell identity may not be sufficient and the location area code may also be needed. Cell site data is static data, Mr Philips explained, at least compared with dynamic data in which call data records are produced with every voice call or text message.³⁵⁴⁶

(a) Call data records

1602. Call data records, as opposed to the content of the calls, are the call metadata collected by telecommunication providers, such as Alfa and Touch, for customer billing and system management purposes.³⁵⁴⁷ They are digital data of telephone activity automatically generated and retained in the course of the ordinary business activity of these types of companies. The data contains details of the outgoing and incoming numbers, the time, date and duration of each call and the cell mast activated by the call.³⁵⁴⁸

1603. These records are dynamic because they are produced with calls or texts. Two records are created for each call: one for the incoming call and one for the outgoing call. However, Mr Philips explained, no record is created if a call is attempted but does not connect, for example, when a call is made but is cut short before connecting to a system such as a voice message system.³⁵⁴⁹

1604. MSCs generate this data in a raw, unrefined and unprocessed format. The MSC data is read-only; it can be viewed, but not modified.³⁵⁵⁰ The image below—an extract from a slide presentation entitled ‘Cell site analysis’ that Mr Philips used as visual aid during his testimony—shows call data records in their raw format.³⁵⁵¹ This illustrates that when viewed in its raw form, the data is effectively unreadable.

Example of call data records in raw format from Mr Philips's PowerPoint presentation: An introduction to cell site analysis as applied to GSM networks – exhibit P550, slide 43

1605. The Prosecution extracted and arranged the call data records into call sequence tables—analysed below at paragraphs 1624-1636—that allowed the analysis and presentation of this data.

1606. The Prosecution relied on these tables to prove that mobile users, whom it alleges included the four Accused and Mr Badreddine, contacted each other.³⁵⁵² Using these tables in conjunction with cell site evidence, the Prosecution attempted to show where they were geographically when they made the calls.³⁵⁵³ Alfa and Touch, like all mobile networks, created maps that show the predicted best server coverage for the cells in their networks.³⁵⁵⁴ From this information and other cell site evidence, the Prosecution analysed and approximated, using cell site analysis, the location of a mobile connecting to a network.³⁵⁵⁵

1607. The Prosecution filed 20 motions and supplementary applications seeking the admission into evidence, under Rules 154 and 155, of call sequence tables derived from call data records and the related witness statements.³⁵⁵⁶ The Trial Chamber declined to admit the call data records

themselves into evidence—as opposed to call sequence tables—as they are voluminous and unreadable in their raw format.³⁵⁵⁷

1608. Before deciding on whether to admit the call data records or only the call sequence tables, the Trial Chamber heard evidence on the creation, storage and retrieval of the call data records and on the provenance, accuracy, integrity and authenticity of both the call data records and the call sequence tables.³⁵⁵⁸

1609. The Trial Chamber determined that no practical utility could exist in admitting into evidence all the call data records from which the call sequence tables are derived. A Prosecution analyst testified that the raw data received from Alfa and Touch consisted of billions of records and terabytes of data, and without uploading them into a database they would be illegible and not searchable.³⁵⁵⁹ Without extraction of the relevant data into a readable format, it is meaningless, as the extract above from Mr Philips’s slide shows.³⁵⁶⁰ In four decisions, the Trial Chamber explained at length that admitting the underlying raw call data records into evidence would have made no

Prosecution Motion for the Admission of Call Sequence Tables Related to the Movements of Rafik Hariri and Related Events, 10 October 2016; F2124, Public Redacted Version Prosecution Motion for the Admission of Call Sequence Tables Related to the Accused Merhi, 11 October 2016; F2125, Public Redacted Version of Prosecution Motion for the Admission of CSTs and SMS CSTs Related to the Accused Assad Hassan Sabra, 7 October 2016; F2126, Public Redacted Version of Prosecution Motion for the Admission of Call Sequence Tables Related to the False Claim of Responsibility, 11 October 2016; F2127, Public Version of Prosecution Motion for the Admission of Call Sequence Tables Relevant to the Purchase of the Mitsubishi Canter and the Sale of Red Network Handsets, 11 October 2016; F3010, Prosecution Application for the Admission into Evidence of Nine Exhibits Previously “Marked for Identification”, 22 February 2017; F2996, Public Redacted Version of Prosecution Motion for the Admission of 10 Call Sequence Tables Related to the Accused Ayyash and the Accused Merhi pursuant to Rule 154 and one related witness statement pursuant to Rule 155, 7 March 2017; F3454, Prosecution Motion for the Admission of a Supplementary Call Sequence Table Related to P01340 pursuant to Rule 154 and a Related Witness Statement pursuant to Rule 155, 4 December 2017; F3084, Public Redacted Version of Prosecution Motion to Admit 27 Documentary Exhibits and 1 Witness Statement Relating to the Attribution of Telephone Numbers to Hassan Habib Merhi, 31 July 2019; F3412, Public Redacted Version of Prosecution Motion for the Admission of a Call Sequence Table Related to the Accused Merhi Pursuant to Rule 154 and a Related Witness Statement Pursuant to Rule 155, 2 August 2019.

³⁵⁶⁰ Exhibit P550 (PowerPoint presentation, John Edward Philips), slide 43.

difference in any practical sense because only the call sequence tables could make this raw data meaningful and legible.³⁵⁶¹

1610. The Badreddine and Oneissi Defence, in response to the Prosecution's application to admit call sequence tables into evidence, moved the Trial Chamber under Rule 162 (B)³⁵⁶² to exclude the call sequence tables from the evidence on the basis that the data used to produce the tables was gathered in breach of international standards on human rights, including the right to privacy, and the applicable Lebanese law governing the collection of such evidence.³⁵⁶³ The Ayyash, Badreddine and Merhi Defence alleged an irregularity by arguing that the Prosecution did not tender into evidence the call data records from which the call sequence tables were produced.³⁵⁶⁴

1611. The Trial Chamber held that the transfer of the call data records from Lebanon to the UNIIIC and the Prosecution was neither unlawful nor arbitrary and that there had been no violation of international standards on human rights. Additionally, two Security Council Resolutions, numbers 1595 and 1757; the Agreement on the establishment of the Special Tribunal for Lebanon; the Statute; the Special Tribunal's Rules; and a Memorandum of Understanding between the UNIIIC or the Special Tribunal and the relevant Lebanese authorities, provided the necessary legal authorisation of the transfer of the call data records.³⁵⁶⁵

1612. The Trial Chamber held, however, that the admission of the cell site evidence and call data records into evidence was conditional upon the Prosecution providing contextual evidence on its provenance.³⁵⁶⁶ Specifically, the Trial Chamber ordered the Prosecution to call at least one witness who could testify to the creation of the call sequence tables and to the collection and storage of

³⁵⁶¹ Corrected version of decision on Prosecution motion to admit Witness PRH707's statements; Decision on admission of Witness PRH705's statements and annexes into evidence; Decision on admission of Witness PRH707's statements and annexes into evidence; Decision on admission of Prosecution's cell site evidence.

³⁵⁶² Under Rule 162 'Exclusion of certain evidence', (A) 'No evidence shall be admissible if obtained by methods which cast substantial doubt on its reliability or if its admission is antithetical to, or would seriously damage, the integrity of the proceedings' and (B) 'In particular, evidence shall be excluded if it has been obtained in violation of international standards on human rights, including the prohibition of torture'.

³⁵⁶³ Decision on five Prosecution motions on call sequence tables and witness statements, paras 61-65, 75-110.

³⁵⁶⁵ Decision on five Prosecution motions on call sequence tables and witness statements, paras 108-110.

³⁵⁶⁶ Decision on five Prosecution motions on call sequence tables and witness statements, para. 113; Decision on admission of Witness PRH707's statements and annexes into evidence. In addition, the administrator of the Prosecution 'SQL' database, Mr Spartak Mkrtchyan, testified (T. 14-15 September 2015) regarding the design, implementation, maintenance and repair of the database that enables call record analysis.

their underlying call data records.³⁵⁶⁷ The Appeals Chamber upheld this decision in an interlocutory appeal that the Trial Chamber had certified on the Oneissi Defence's application.³⁵⁶⁸

1613. Consequently, five Prosecution analysts and investigators, Ms Kei Kamei, Mr Andrew Donaldson, Ms Helena Habraken, Mr Lachlan Christie and Mr Christian Carnus, testified on the creation of the call sequence tables.³⁵⁶⁹ Witness 705, from Touch, and Witness 707, from Alfa, testified on the collection and storage of their underlying call data records and contextual evidence on their provenance.

(b) Format and use of call data records

1614. The Prosecution obtained call data records from Alfa and Touch in different raw formats. In 2004 and 2005, Alfa and Touch saved call data records on magnetic tapes; only later were they saved on DVDs and computer hard drives.³⁵⁷⁰ In relation to Alfa's and Touch's records, the Trial Chamber found that call data records in their raw form constitute business records produced in the normal course of business.³⁵⁷¹ These records were automatically generated by different departments and officials from Alfa and Touch. A limited number of Alfa's and Touch's records were prepared for the possible purposes of litigation, specifically, by being provided to the UNHCR and then the Prosecution for use in court.³⁵⁷²

1615. The Defence had full access to the relevant raw call data records and databases and could reproduce each Prosecution call sequence table from the call data records. Defence counsel also cross-examined the Prosecution analysts and investigators on the creation of tables.³⁵⁷³

³⁵⁷¹ Corrected version of decision on Prosecution motion to admit Witness PRH707's statements, para. 55; Decision on admission of Witness PRH705's statements and annexes into evidence, para. 25; Decision on Prosecution motion to admit Witness PRH705's statements, para. 24.

³⁵⁷² Corrected version of decision on Prosecution motion to admit Witness PRH707's statements, para. 66; Decision on admission of Witness PRH705's statements and annexes into evidence, paras 25, 27.

³⁵⁷³ Decision on admission of call sequence tables related to Mr Hariri's movements, paras 32, 69-70. *See also* Appeal decision regarding inspection room and call data records, paras 2-3, 15.

1616. Defence counsel also produced and tendered into evidence their own call sequence tables derived from the same call data records.³⁵⁷⁴ In the same way as the Prosecution, they relied on call sequence tables but without seeking to admit the underlying call data records into evidence. Further, during pre-trial, and in a Rule 53 meeting, the Trial Chamber, in the presence of Defence counsel and their assistants, visited the Prosecution's inspection room where the Prosecution briefed it on the call data records database.³⁵⁷⁵ During the meeting, the Prosecution performed demonstrations of search queries and answered questions from the Trial Chamber and Defence counsel and their assistants, including on how the call data records were stored and how the call sequence tables were created.³⁵⁷⁶

(c) Cell site data

1617. According to Mr Philips's general report, network operators, including Alfa and Touch, produce and maintain a database containing cell site information.³⁵⁷⁷ Cell site data includes: the date of its production; who produced it; a record reference; the cell ID; the cell site's name and full address including postal code; its grid co-ordinates, sector number or code; the number of sectors and azimuths of each sector; the orientation, azimuth or bearing in degrees from north of each sector; the antenna height; and the date when a cell site first came in service.³⁵⁷⁸

1618. The cell ID is a unique number within the call data records identifying the cell used at the start and end of a call or a text message.³⁵⁷⁹ In its complete form it consists of four elements: the mobile country code; the mobile network code; the location area code; and the cell's identity.³⁵⁸⁰

³⁵⁷⁴ For example, exhibits 5D352, 5D353, 5D354, 5D522, 5D523, 5D524, 5D525, 5D526, 5D527, 5D528, 5D529, 5D530, 5D531 (Thirteen call sequence tables: six call sequence tables underlying exhibit 5D348 and seven call sequence tables underlying exhibit 5D356); exhibit 5D348 (PowerPoint presentation 'Phone numbers with cell site activities similar to Purple 018'); exhibit 5D356 (PowerPoint presentation 'Use of "Cola Area" Cells by Contacts of Mobile *018'); Call sequence table decision (Ayyash and Merhi Defence); Decision denying admission of two call sequence tables; Reasons for admission of 22 Sabra Defence documents; Decision on admission of Sabra Defence documents of 28 March 2018.

³⁵⁷⁵ Held on 26 November 2013. Rule 53 provides: 'The Registrar, or Registry staff designated by the Registrar, shall, as appropriate, take minutes of the plenary meetings of the Tribunal and of the proceedings of a Judge or Chamber, other than private deliberations.'

³⁵⁷⁶ Order regarding Rule 53 meeting minutes, annex A; F3772, Registrar's Submission Pursuant to Rule 48 (C) in Response to the Trial Chamber's Order of 21 June 2019, 11 July 2019, annex A.

³⁵⁸⁰ Exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), p. 101.

1619. Mr Philips's general report explained that network operators constantly update their database containing cell site information, as new cell sites are brought on line, or taken out of service, or modified. They can extract details of each call from their database, using the cell ID as the search term.³⁵⁸¹ However, network operators do not have all of this data readily available, especially when the cell site data is not recent.³⁵⁸²

1620. The Prosecution used the cell tower to which mobiles connected—identified in the call data records by its cell ID and the cell coverage maps—to show the approximate location of a mobile making or receiving a call/SMS. The Prosecution, in its final trial brief, argued that reading cell site data in conjunction with a relevant call sequence table provides an approximate location where the respective mobile was used for each call.³⁵⁸³

1621. Mr Philips explained that, at a minimum, the cell site data shows the address and or coordinates of the cell site and the azimuth.³⁵⁸⁴ The azimuth, or bearing, is the direction in which the sector antenna is pointing and shows the direction in which the cell projects.³⁵⁸⁵ The terms 'centreline', 'azimuth' and 'bearing' are interchangeable.³⁵⁸⁶ A 'sector' of a cell site provides radio signal coverage over one part, an arc of approximately 120 degrees, of the entire area of coverage provided by the site.³⁵⁸⁷

1622. The image below, from Mr Philips's general report, shows an azimuth 'tilt', a technique used to give more extensive coverage for a cell site location by directing the antenna on the horizontal plane—if pointed downwards, it is called 'downtilt', and where upwards, 'uptilt'.³⁵⁸⁸

³⁵⁸¹ Exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), p. 101.

1623. The image below, also from Mr Philips's general report, is an 'idealised' view of a cell 'sectorisation'. This shows three equal sectors, each of 120 degrees, directed on azimuths of 60, 180 and 300 degrees. The three-sectored cell site is the most common cell configuration. The azimuth is the centre line of the bearing of the antenna. Each sector is associated with a discrete cell which itself has its own base transceiver system—as noted above at paragraph 1581.³⁵⁸⁹

(d) Call sequence tables

1624. Prosecution analysts created call sequence tables from source material that the UNIIC and the Prosecution had obtained from Alfa and Touch in response to their requests for assistance.³⁵⁹⁰ The analysts explained that Alfa and Touch provided call data records either in the form of individual text files for individual mobile numbers, or in the form of larger files for multiple numbers.³⁵⁹¹

1625. They also described how they opened the text files directly within Excel spreadsheets and that for larger files, the Prosecution designed and created its own database by using Microsoft's

³⁵⁹⁰ Kei Kamei, T. 20 July 2015, pp 17-18, 23, 29-31; exhibit P516 (Witness Statement of Kei Kamei, 14 January 2015), para. 16; exhibit P528 (Witness Statement of Helena Habraken, 18 December 2014), para. 16.

³⁵⁹¹ Exhibit P516 (Witness Statement of Kei Kamei, 14 January 2015), para. 17; exhibit P528 (Witness Statement of Helena Habraken, 18 December 2014), para. 17.

Structured Query Language (SQL).³⁵⁹² The Prosecution analysts, Ms Kamei, Mr Donaldson, Ms Habraken, Mr Christie and Mr Carnus testified about how they created the call sequence tables.³⁵⁹³

1626. Ms Kamei explained that the SQL software converted the raw call data records into a searchable database from which call record patterns could be analysed. A specific search query of a mobile number, a cell tower or various combinations permits searching across folders and databases, and then analysis of the information retrieved.³⁵⁹⁴ Ms Habraken stated that each analyst:

extracted call data records and cell site information—collected by Alfa and Touch in connection with mobile telephones using their services, for customer billing and systems management—and entered it into call sequence tables to allow presentation and analysis, but without altering the data.³⁵⁹⁵

1627. The analysts produced call sequence tables in a ‘standardised’ and ‘mechanical’ manner by copying and pasting the relevant data from the underlying material.³⁵⁹⁶ To produce call sequence tables, analysts searched the database for calls made and received by a particular number, or—combining those two searches—all calls involving a number.³⁵⁹⁷

1628. Alfa and Touch also provided the Prosecution with cell site information that permits the conversion of the numerical cell ID codes included in the call data records into cell tower names.³⁵⁹⁸ The cell tower name is the name the telecommunication service provider gives a specific cell tower, referencing its location,³⁵⁹⁹ for example, in Aabdeh—which is north of Tripoli, Lebanon—there is an Alfa cell tower named AABDEH2.³⁶⁰⁰

³⁵⁹² Kei Kamei, T. 20 July 2015, pp 34, 65; exhibit P516 (Witness Statement of Kei Kamei, 14 January 2015), para. 17; exhibit P528 (Witness Statement of Helena Habraken, 18 December 2014), para. 17. SQL is a special programming language for databases. The Prosecution’s SQL database enables call data record analysis. The Prosecution’s database administrator, Mr Spartak Mkrtchyan, testified on 14-15 September 2015 regarding the design, implementation, maintenance and repair of this database. This is a Microsoft Asset product.

³⁶⁰⁰ Witness PRH707, T. 16 February 2016, pp 35-36.

1629. The Prosecution produced different types of call sequence tables, including standard call sequence tables containing only Lebanese mobile calls, landline call sequence tables, roaming call sequence tables and SMS call sequence tables. All contain the basic ‘call’ types: namely, outgoing call, incoming call, outgoing SMS and incoming SMS.³⁶⁰¹ The Prosecution analysts explained that for some numbers, call sequence tables included emergency calls, outgoing calls while roaming and incoming calls while roaming.³⁶⁰²

1630. For each voice call or SMS, Mr Philips and the Prosecution analysts explained, a call sequence table includes the date and time of the call; the other telephone number involved; the direction of the call; its duration; the IMEI used by the target number; and the cell tower used by the target number at the start of the call.³⁶⁰³ When data was available and the Prosecution determined it to be relevant to the charges in the amended consolidated indictment, the call sequence table also included information on the cell sector that was used at the end of the call, the ‘end cell’ data.³⁶⁰⁴

1631. Prosecution analysts also created combined or composite call sequence tables from multiple call sequence tables by merging and sorting a number of individual call sequence tables by time and date. A combined call sequence table will show two mobiles of interest that are in contact with one another, and there are two entries for each call.³⁶⁰⁵ Below is an excerpt from Mr Philips’s general report, exhibit P549, showing an extract from a ‘combined call sequence table’. It shows a call between two mobiles: the outgoing ‘Calling party’ (in blue) on the left, and the incoming ‘Called party’ (in orange) on the right. Each ‘half’ of the call comes from separate call data records for each mobile; and both are from different networks.³⁶⁰⁶

Call no	Date	Time	Calling party	Called party	Message type	IMEI	Duration	First cell id	Last cell id
15	12.05.11	13:05:13	07950.323XXX	07853.666XXX	Outgoing	35078120142XXXX	00:00:12	52341	52341
16	12.05.11	13:05:17	07950.323XXX	07853.666XXX	Incoming	35896804943XXXX	00:00:12	2456	2456

Excerpt from a combined call sequence table with cell detail removed, extracted from Mr Philips's report 'An introduction to cell site analysis as applied to GSM networks' – exhibit P549, p. 111, figure 058

1632. These two call data records refer to the same call between the mobiles, so the start time of both calls should be the same, without the four-second difference shown.³⁶⁰⁷ Mr Philips explained that the call times are generated at each MSC within a network. However, they are normally not synchronised across any network and certainly not between networks. As a result, there can be time differences between the start times of calls on the same network, and between calls on different networks. These should normally be approximately a few seconds but can be greater.³⁶⁰⁸

1633. To show a call between two mobiles in a single line, Prosecution analysts also produced simplified call sequence tables. The two lines from the excerpt above can be presented as a single line, as shown in the image below, also extracted from Mr Philips's report. The Prosecution used these types of call sequence tables for mapping calls from the cell site name and cell ID.³⁶⁰⁹

Call no	Date	Time	Call type	Phone calling	Cell site name	Cell id Start	Cell id End	Duration	Phone Called	Cell site name	Cell id Start	Cell id End
12	12.05.11	13:05:13	Voice	07950.323XXX	Brown Farm	52341	52341	00:00:12	07853.666XXX	Dew House	2456	2456

Excerpt from a single line combined call sequence table extracted from Mr Philips's report 'An introduction to cell site analysis as applied to GSM networks' – exhibit P549, p. 112, figure 059

1634. Ms Kamei explained that after completing a call sequence table, the analyst who created it checked it for inconsistencies, such as missing data, and the analysts then shared the completed call sequence tables among themselves for peer review.³⁶¹⁰ For peer review, another analyst would check a completed call sequence table, going back to the raw data for one to five calls on each

³⁶⁰⁷ Exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), p. 111.

³⁶¹⁰ Kei Kamei, T. 20 July 2015, pp 58-60.

page.³⁶¹¹ Ms Kamei and Ms Habraken explained that when new data was made available to the Prosecution, revised versions of the tables were created, and in cases of identified errors, corrected tables were produced.³⁶¹²

1635. The Defence initially challenged the Prosecution's call sequence tables—and most specifically how they were produced—and Defence counsel cross-examined the Prosecution analysts and investigators as to their methodology. Ultimately, however, there was little resistance to the resulting tables being received into evidence. The Prosecution submitted in its final trial brief that the call sequence tables should receive the same weight as the call data records, which it described as 'the underlying business records'.³⁶¹³

1636. Defence counsel also created call sequence tables relevant to challenges to the Prosecution case and asked the Trial Chamber to admit them into evidence.³⁶¹⁴ For example, the Trial Chamber admitted into evidence 13 call sequence tables prepared by the Sabra Defence.³⁶¹⁵ In its applications, Defence counsel relevantly explained the methodology for the creation of the call sequence tables, including on the methods used for extracting the records from the SQL database, selecting records of interest, identifying fields of relevance, the process of copying the data, the process of the transfer of the spreadsheet and the formatting.³⁶¹⁶

B. Cellular networks, signal coverage and cell allocation

1. Cellular networks and cellular signal coverage

(a) Best serving cell and types of cells

1637. A cellular network is a radio network distributed over land through cells where each cell includes a fixed location transceiver known as a base station. These cells together provide radio coverage over large geographic areas. Understanding how a mobile's geographic location may be determined from the cellular network coverage data and the cell used to make or receive a call is essential to appreciating how the Prosecution used attribution and co-location in its case.

1638. Mr Philips, in his general report, explained that the radio coverage area is the area over which a 'usable signal' can be received, and includes 'blackspots' where no radio coverage is provided.³⁶¹⁷ Cells are configured to provide overlapping signal coverage, especially in urban areas.³⁶¹⁸ The image below, from Mr Philips's general report, shows that tall buildings supporting a cell site may provide little or no coverage around the base of the building on which the antenna is mounted. Otherwise, a distant cell site—*i.e.* 'Cell site b' in the example below—may provide coverage.³⁶¹⁹

Image extracted from Mr Philips's report 'An introduction to cell site analysis as applied to GSM networks' – exhibit P549, p. 52, figure 030

³⁶¹⁷ Exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), p. 13.

³⁶¹⁸ John Edward Philips, T. 20 August 2015, p. 51.

³⁶¹⁹ Exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), p. 52.

1639. Radio waves are electromagnetic waves, which travel at the speed of light and have many of the characteristics of light; thus, particularly in an urban environment, radio waves can be reflected, scattered and diffracted. The image extracted below, from Mr Philips's general report, shows two signals arriving at the vehicle from 'Cell a'—the top one from a scattered/reflected path and the bottom one from a diffracted path.³⁶²⁰

Image extracted from Mr Philips's report 'An introduction to cell site analysis as applied to GSM networks' – exhibit P549, p. 56, figure 032

1640. Within an operational cellular system, the mobile normally uses the cell providing the strongest signal in comparison with the neighbouring cells.³⁶²¹ In this sense, each cell provides, over a certain geographic area, the strongest signal compared to its neighbouring cells. This cell is referred to as the 'best serving cell'; the area over which it provides best server coverage is called the 'best server coverage area'.³⁶²²

1641. The image below, extracted from Mr Philips's general report, shows the 'idealised' shapes of the best server coverage of three cells. In practice, however, the best server coverage of cells is not in a uniform shape.³⁶²³ Therefore, his report explains, there is no defined boundary between 'competing' cells. In the extract below, 'Cell b' may provide best server coverage in certain locations within the solid area of 'Cell a'.³⁶²⁴ Further, best server coverage boundaries normally

³⁶²⁰ Exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), pp 55-56.

³⁶²¹ Exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), p. 57.

³⁶²⁴ Exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), pp 32, 73.

change on an ongoing basis. This means that coverage boundaries are normally in a constant state of flux and are dynamic.³⁶²⁵

*'Idealised' shapes of the best server coverage of three cells extracted from Mr Philips's report
'An introduction to cell site analysis as applied to GSM networks' – exhibit P549, p. 32,
figure 018*

1642. Mr Philips, in his general report, explained the five main cell categories that provide different cell 'sizes' in a network. There are macro, micro, pico, femto and umbrella cells. The coverage area of each cell varies according to the environment where the base station antennas are installed.³⁶²⁶

1643. Macro cells are those where the base station antenna is installed on a mast or a building above the average roof top level; they need elevation to provide extensive coverage.³⁶²⁷ They are designed to provide coverage over large rural, urban or suburban areas.³⁶²⁸ Higher buildings in the surrounding area, however, could affect the coverage by blocking the signal.³⁶²⁹

³⁶²⁵ John Edward Philips, T. 19 August 2015, pp 46-47; exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), pp 32, 73.

³⁶²⁶ Exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), pp 46-55.

³⁶²⁹ John Edward Philips, T. 19 August 2015, p. 51.

1644. Micro cells have an antenna height under the average roof top level and are typically used in urban areas to provide limited coverage to specific areas.³⁶³⁰ The best server coverage of micro cells is over an area immediately around the cell and may be no more than 100 or 200 metres.³⁶³¹

1645. Pico cells are small cells whose coverage diameter is typically less than 50 metres and are mainly used indoors, such as in an office building for use by a company.³⁶³²

1646. Femto cells are designed for use in residential or small business environments and connect to the service provider's network through a broadband internet connection.³⁶³³

1647. Umbrella cells are an application of a cell, rather than a distinct type of cell. Typically they are macro cells that cover a relatively wide area of smaller macro or micro cells; they fill in the gaps in coverage between those cells.³⁶³⁴ Mr Philips explained that typically 'it consists of a macro cell, covering a relatively wide area, overlaid onto several microcells'.³⁶³⁵

1648. Mr Philips's general report explained that umbrella cells work in two main ways. First, a mobile initially uses the umbrella cell. It is then 'handed over' to the most appropriate micro cell within the 'umbrella', as a local mobile. Second, a mobile moves quickly within the 'umbrella' cell. Rather than being handed over from one micro cell to another, it remains on the umbrella cell. An example of this is on a motorway through a built-up area where mobiles in vehicles remain on the umbrella cell while mobiles operating in the built-up area use the local micro cells.³⁶³⁶

1649. The network itself classifies a cell; a cell may be classified as macro yet still cover only a small area. The cell in that example originally serviced a much broader area, but with an increase in demand, additional cells were added in the surrounding areas, thereby restricting the best server coverage of the original cell.³⁶³⁷

³⁶³⁷ John Edward Philips, T. 20 August 2015, pp 11-12, 19.

1650. Mr Philips explained that cells are smaller in urban areas and larger in rural areas; they tend to be much more heavily concentrated in urban areas and more spread out in rural areas.³⁶³⁸ For example, a two squared kilometre area of Beirut contains approximately 50 cells, whereas one of 30 by 40 kilometres in rural Lebanon only contains 14 cells.³⁶³⁹ The more tightly packed the cells, the smaller the best server coverage area. Cell site analysis can therefore determine a mobile's location with more accuracy in urban cells than in rural areas, where the cells cover much larger stretches.³⁶⁴⁰

(b) Coverage prediction

1651. Mr Philips, in his general report, explained that a coverage prediction is made to determine the area over which a signal from a cell can provide a 'usable signal'.³⁶⁴¹ Witness 707 explained, from his experience, that most network providers, including Alfa and Touch, plan their networks' coverage using computer-based modelling tools, such as Aircom's Asset.³⁶⁴²

1652. Aircom, according to that witness, is a company that provides network design, optimisation and management software and consultancy for mobile networks. It created Asset, a radio planning and optimisation software tool, providing coverage, capacity, cell parameter and neighbour planning for mobile cellular networks.³⁶⁴³ Witnesses 705 and 707 stated that commercial software programs like this allow network providers to plan and target the coverage of each cell in their networks to maximise the coverage and thus profitability. These tools produce predicted server coverage maps for each cell.³⁶⁴⁴

1653. To produce what is termed a 'prediction package', engineers upload—into a modelling tool—information stored in network operators' databases. It is grouped into four categories,

namely, first, a propagation model; second, a terrain model; third a clutter model; and fourth, transmission parameters.³⁶⁴⁵

1654. A propagation model, according to Mr Philips, estimates the signal loss from the transmitter to areas of interest, which is called the path loss.³⁶⁴⁶ Witnesses 705 and 707 explained that it generally applies the ‘clutter’ model, which is the ground area type over which radio waves propagate that takes into account topography and clutter ‘categories’ such as water, forest, urban and suburban terrain.³⁶⁴⁷ According to Mr Philips, depending on which propagation model is used, it may contain the terrain component. It can also be introduced from a separate source as a terrain profile, which provides the contour elements of the ground over which the coverage is to be estimated.³⁶⁴⁸

1655. A terrain model is a digitised terrain profile which provides the contour elements of the ground over the estimated coverage area.³⁶⁴⁹ The transmission parameters typically include the antenna details, the azimuth, its tilt, the height of the antenna above the ground and the antenna’s frequency.³⁶⁵⁰

1656. Mr Philips’s general report uses a coverage prediction map to illustrate the product created by the modelling tool. The parameters are entered into the modelling tool and the results are shown in the form of signal level ranges. These are superimposed onto a map in coloured bands; they represent the strength of a radio signal over an area. This is also known as a predicted coverage map. Knowing the extent of usable coverage informs the network of where the cell is likely to provide a signal, and its estimated strength beyond the required best server coverage area.³⁶⁵¹

1657. Mr Philips used a coverage prediction map of Cornwall in the UK, below, to illustrate signal strengths. The strongest is closest to the cell site, marked in red in the centre. The further

away from the cell site, the weaker the signal—here it is in yellow. The weakest predicted level, coloured green, is on the outer edge.³⁶⁵²

Coverage prediction map of three cells in the UK showing the signal strength level, extracted from Mr Philips's report 'An introduction to cell site analysis as applied to GSM networks' – exhibit P549, p. 64, figure 042

1658. Coverage predictions, according to Mr Philips, inherently contain a degree of inaccuracy. Despite this, they are deemed sufficiently accurate for radio coverage planning, are used throughout the industry and are more than adequate to indicate the area over which a certain level of coverage is expected.³⁶⁵³

(c) Best server coverage prediction

1659. Witness 705 explained that in an area with several radio signals, the strongest signal provides the best server coverage; the cell providing the signal is therefore the 'best serving

³⁶⁵² Exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), p. 64.

³⁶⁵³ Exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), p. 66.

coverage cell’.³⁶⁵⁴ Every cellular network contains many areas of best server coverage, each relating to a different cell.³⁶⁵⁵ ‘Predicted best server coverage’, which is represented in map form, shows the area over which each cell site is predicted to emit the strongest signal.³⁶⁵⁶ It does not necessarily, Witness 705 explained, reflect the *actual* coverage, because the landscape of the area may change, and propagation tools and maps used to predict coverage do not take into account certain types of ‘blockage’, such as trees or newly built buildings.³⁶⁵⁷

1660. Alfa and Touch provided this data to the Prosecution in the form of shape files. Shape files are sets of data which may be uploaded into software used for creating coverage maps, such as ArcGIS. When projected onto a map of Lebanon, for example, they show the predicted best server coverage for respective cell sectors, and include mast locations and azimuths.³⁶⁵⁸ Witness 707 testified that engineers at Alfa used shape files to calculate and obtain estimates of the best cell provided by a specific station.³⁶⁵⁹ These were generated by Asset to show the best cell serving a certain location on a digital map.³⁶⁶⁰

1661. Mr Philips explained the difference between best server coverage maps and ‘plots’. Plots show the best server coverage for each individual cell on each network and can be loaded into software and superimposed on a map. Best server coverage maps, on the other hand, are static images of the plots superimposed on a map, in this case of Lebanon, from February 2005. Maps are merely a picture, so beyond simply enlarging the image a single cell cannot be selected and inspected.³⁶⁶¹

1662. Best server plots are used by network planners and operators to show the likely best server coverage from multiple cells for network cell planning.³⁶⁶² The image below of a map of an area in south-west London, extracted from Mr Philips’s report, shows the best server plot from a cell site, denoted by the large red dot at the top right. The line from the red dot pointing down to the

left, or south-west, is the azimuth of the cell of interest. The blue patched area is the predicted best server coverage.³⁶⁶³

A best server plot from a cell site marked with the red dot, extracted from Mr Philips's report 'An introduction to cell site analysis as applied to GSM networks' – exhibit P549, p. 70, figure 043

1663. Mr Philips's general report explains that best server plots were not intended for forensic applications. Rather, as with call data records, they were adopted for this purpose. However, unlike call data records, best server coverage plots in most instances are the 'fallback position'. If absolute confirmation of best server coverage of a location is required, then a field survey is usually the best option, although for many reasons this may not be possible, practical or affordable.³⁶⁶⁴

1664. The Prosecution prepared and used as a visual aid an atlas that identified 432 Alfa and Touch cell sites relevant to its case, including their azimuths and predicted coverage areas throughout Lebanon.³⁶⁶⁵ For illustration purposes, the image below, extracted from that atlas,

³⁶⁶³ Exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), pp 70-71.

1665. Shape files illustrate the surface area over which each cell is predicted to emit the strongest signal compared with neighbouring cells. Various factors influence coverage, including the location in a cell sector from which a call is made, the antenna height, topography and surrounding buildings. According to Witness 707, the Alfa shape files are approximations that are 60 to 70 per cent accurate.³⁶⁶⁸ Mr Philips, while not providing a comparable figure, testified that the prediction maps cannot be one hundred per cent accurate and inherently contain a margin of error.³⁶⁶⁹

³⁶⁶⁸ Witness PRH707, T. 16 February 2016, pp 78-81, T. 21 April 2016, pp 32, 35, 37-38, 42, T. 3 May 2016, pp 91-92. See para. 1746.

³⁶⁶⁹ John Edward Philips, T. 19 August 2015, p. 100; see also Gary Platt, T. 19 April 2017, pp 20-21.

1666. The Prosecution entered the call data records and cell site data, including shape files, coverage maps and other mapping data, into its electronic presentation of evidence software. This allows different pieces of evidence to be shown together. It can effectively and efficiently illustrate and visually represent places and events, such as the locations and movements of the mobiles allegedly used to plan the attack against Mr Hariri.³⁶⁷⁰ For instance, the software can identify when two call data records form two sides of a single call—namely, the dialling and receiving of a call—so that the program only displays one call.³⁶⁷¹

(d) Best server coverage measurements and limitations

1667. In his general report, Mr Philips explained that the cell designated to provide best server coverage is the dominant best serving cell over most of that area. Its accuracy is higher the closer it is to the cell mast. A person within the area of predicted best server coverage can normally use that cell to make a call. That does not preclude a mobile from connecting to other cells from within the same area, but it is less likely. A best server coverage plot does not show the extent that other cells are likely to provide best server coverage within the predicted best server coverage area of the cell of interest. The cell of interest also likely provides some best server coverage out of the predicted area. For planning purposes, however, network providers consider a best server coverage plot sufficiently reliable.³⁶⁷²

1668. Individual buildings also present limitations to best server coverage plots, as they are not often defined on clutter maps and can cause localised anomalies. The image below, extracted from Mr Philips's general report, shows 'building A', which should receive a stronger signal from 'Cell a', as it is closer than 'Cell b'. However, according to Mr Philips, 'Cell b' will most likely provide a stronger signal than 'Cell a' due to signal blocking or shadowing of the signal from 'Cell a' on that side of the building, thus causing anomalous best server coverage. This shows that even within an area of strong best server coverage from one cell, pockets of best server coverage will be present from other cells.³⁶⁷³

³⁶⁷⁰ See further sub-section (H) 'Electronic presentation of evidence (EPE)'.

1669. To fine-tune and to improve existing network coverage—and as a more accurate alternative to using prediction maps and shape files—network providers, including Alfa and Touch, use manual drive testing. This technique is also referred to as a field survey or as field measurements. Witnesses 705 and 707 explained that this involves engineers walking or driving around with a mobile testing device that physically measures and records the strength of the signal and the coverage by a particular cell.³⁶⁷⁴

1670. Witness 707, for Alfa, explained that they used a 'TEMS' device, which takes automatic measurements, that are then transferred into a digital map. This device measures the signal every few seconds and records the values regardless of the speed of the device, whether it is in a vehicle or the engineers are walking around with it.³⁶⁷⁵ He stated of its accuracy:

So I think that the test drive is the best way to confirm and to verify the coverage of a specific area. It is better than the shape files that we have seen previously, because in this case, the device is replacing or is taking -- is using or is putting itself in the shoes of a subscriber or a user, a phone user. And this is why these types of test drives reflect accurately the situation on the ground.³⁶⁷⁶

1671. Witness 705, for Touch, described the same process of driving around using the TEMS device. He explained that where the area was far away or they did not have the resources for drive testing, they relied more on predictions. But, 'if we can rely on drive test, it's definitely better to

³⁶⁷⁴ Witness PRH707, T. 16 February 2016, pp 71-72; Witness PRH705, T. 5 May 2016, pp 65, 86, 92-93.

³⁶⁷⁶ Witness PRH707, T. 16 February 2016, pp 69-71.

plan the network.’ Touch also tended to rely a lot on customer complaints to spark the drive testing. ‘Based on the drive test, we decide if we can optimize the surrounding cell site to cover the specific complaint or to solve a specific complaint or if we need to install a new site’.³⁶⁷⁷

1672. Mr Philips explained that ‘the networks have a very defined area over which to survey and may concentrate on areas closer to the cell boundaries’. This is because ‘the areas closer to the cell site should be far more predictable in terms of relative signal strength.’³⁶⁷⁸

1673. Both Mr Philips in his general report, and Witnesses 705 and 707 in their testimony, explained that based on the measurements from drive testing—which are not 100 per cent accurate but are more accurate than the shape files—network providers adjust the cell coverage. They do this either by changing the azimuth tilt or the height of the cell tower antennas, or by installing an additional station, or by setting up a mobile temporary base transceiver station.³⁶⁷⁹

2. Cell allocation

1674. Mr Philips explained how cell allocation works. When a call is made, the network normally allocates the call into the cell providing the best server coverage where the mobile is; as explained above at paragraph 1640, it is termed the best serving cell.³⁶⁸⁰ To allocate a call into a cell, an exchange of information occurs between the mobile and the network.³⁶⁸¹

1675. Mr Philips explained that networks do not track mobiles and that they ‘don’t know where each mobile is at any one given time, and they don’t need to.’³⁶⁸²

1676. Networks only need to know where a mobile is when the network needs to connect a call to it. When a mobile wants to make a call, it tells the network where it is.³⁶⁸³ To do this, Mr Philips explained that the mobile first scans and tunes into the best serving cell; when ‘a mobile first

³⁶⁸³ John Edward Philips, T. 20 August 2015, p. 28.

registers onto the network it ‘camps’ onto the strongest signal, which relates to a particular cell, by measuring the levels of all the channels on the network’.³⁶⁸⁴

1677. Through this cell, the mobile sends the network a measurement report whereby it informs the network of which cell is providing the strongest signal. It lists, in order of signal strength, the next six cells providing the strongest signal after the best serving cell.³⁶⁸⁵ The list consists of ‘neighbouring cells’, also known as ‘halo cells’, that are in the general vicinity of the best serving cell broadcast to the mobile to monitor.³⁶⁸⁶ These six neighbouring cells most likely also constitute ‘adjacent cells’, that are cells physically next to the best serving cell.³⁶⁸⁷

1678. The strongest signal or signals are normally from the cells that are physically closest to the mobile. However, the strongest signal or one of the strongest signals reported to the network may be outside this inner ring and not an adjacent cell but rather a neighbouring cell. Importantly, not all neighbouring cells are adjacent cells. But all adjacent cells are neighbouring cells.³⁶⁸⁸

1679. To produce the measurement report, the mobile tunes into each neighbouring cell and in approximately half a second measures the cells’ signal levels. It selects the top six cells and sends them to the network.³⁶⁸⁹ The mobile continuously monitors and measures the signal level of more than six neighbouring cells. However, it only reports back to the network the best serving cell and the top six cells which provide the next strongest signal.³⁶⁹⁰

1680. Mr Philips explained that the neighbouring cells are then designated as the next cells the mobile could use if it moves.³⁶⁹¹ A mobile constantly monitors and measures the best serving cell and its neighbouring cells even when it is in idle mode, that is, not on a call.³⁶⁹² In a call, however,

the mobile sends measurement reports to the network every half a second to allow the network to determine into which cell the call should be allocated.³⁶⁹³

1681. When the mobile moves, the best serving cell changes and the mobile connects to the new best serving cell and receives a new set of eligible neighbouring cells.³⁶⁹⁴ By this method, the mobile can stay connected, while travelling over large distances, by continually switching from one best serving cell to another.³⁶⁹⁵

1682. Below is an extract from Mr Philips's general report showing the best serving cell, in green with the arrow, and the neighbouring cells, in yellow, surrounding the best serving cell:³⁶⁹⁶

Diagram showing a best serving cell (in green) and the eligible neighbour cells (in yellow), extracted from Mr Philips's report 'An introduction to cell site analysis as applied to GSM networks' – exhibit P549, p. 33, figure 019

1683. As the next diagram below shows—as Mr Philips's general report states—when the mobile moves in the direction of the arrow, the best serving cell changes and the mobile tunes into the new best serving cell, in light green.³⁶⁹⁷ Once the mobile tunes into the new best serving cell, it receives a new set of neighbouring cells with respect to the new best serving cell, which include

many of the old neighbouring cells, in yellow, plus a complement of new neighbouring cells, in pink.³⁶⁹⁸ This successively occurs when the mobile is in constant movement.³⁶⁹⁹

Diagram showing a changing best serving cell (in light green) and the new additional neighbour cells (in pink), extracted from Mr Philips's report 'An introduction to cell site analysis as applied to GSM networks' – exhibit P549, p. 33, figure 020

1684. Mr Philips also explained the technical procedure after the network receives the measurement report from the mobile. It then conducts its own assessment and based on the signal strength from the mobile, the quality of the signal and the 'timing advance', determines the best serving cell into which the call should be allocated.³⁷⁰⁰

1685. 'Timing advance', Mr Philips and Witness 707 explained, is the approximate distance of the mobile from a particular cell and is calculated using the time a signal from a mobile takes to connect to a particular cell.³⁷⁰¹ This parameter sets a maximum distance from which a mobile can use this particular cell.³⁷⁰² The timing advance parameter is optional and may be set in the GSM system to avoid switching into a distant cell.³⁷⁰³ Engineers may therefore decide whether to install it in the GSM system and with regard to all or selected cells.³⁷⁰⁴

³⁶⁹⁸ John Edward Philips, T. 20 August 2015, p. 32; exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), pp 33-34.

³⁷⁰³ John Edward Philips, T. 20 August 2015, pp 35-36.

³⁷⁰⁴ John Edward Philips, T. 20 August 2015, pp 35, 44.

1686. To allocate a call into a cell, the network considers not one but the average of a succession of measurement reports received from the mobile. The network determines this over approximately 11 cycles, which takes around five seconds. This prevents the call from constantly switching between different cells when one cell's signal level is momentarily stronger than that of another.³⁷⁰⁵

(a) Exceptional circumstances in cell allocation

1687. Mr Philips, in his general report and his testimony, explained that the network normally and ideally allocates a call to the best serving cell.³⁷⁰⁶ However, in exceptional circumstances the network allocates a call into a different cell.³⁷⁰⁷ These circumstances can relate to cell performance, or cell overloading.³⁷⁰⁸ Cell performance-based allocation occurs when the cell recommended and reported as the best serving cell by the mobile fails to meet the acceptable performance parameters set by the network.³⁷⁰⁹ In this sense, the network can measure not only the strength but also the quality of the signal.³⁷¹⁰ In exceptional circumstances, the cell providing the strongest signal and recommended by the mobile might not have a good quality.³⁷¹¹

1688. When a cell has the strongest signal—and thus is the best serving cell—but has poor quality, the network allocates the call into another cell.³⁷¹² Factors that may contribute to a strong signal having bad quality include interference or distortion on the channel, or the 'timing advance'.³⁷¹³

1689. Both Mr Philips and Witness 707 explained that cell overloading is caused by the heavy use of the best serving cell, which reaches its maximum capacity and therefore cannot support another voice call.³⁷¹⁴ This may occur, for instance, when there is unexpected road traffic due to

an accident or the mass exit of crowds from major sports events or concerts.³⁷¹⁵ The Trial Chamber received evidence of network congestion in the afternoon on 14 February 2005.³⁷¹⁶

1690. When the overloading or congestion of the best serving cell is a recurrent problem for a long period, network engineers will solve the problem either by upgrading the capacity of the respective cell, or, if the overloaded cell has already reached its maximum capacity, by installing a new cell next to it to mitigate the load of the calls.³⁷¹⁷ According to Mr Philips, networks are therefore dynamic, as changes are made throughout time to the network to meet varying demands.³⁷¹⁸

1691. When the congestion of the best serving cell occurs for short periods of time, the problem is solved in two ways. Either by redirecting the call into one of the six cells reported in the measurement report, that is a neighbouring cell,³⁷¹⁹ and most likely the one providing the second strongest signal after the best serving cell,³⁷²⁰ or to the strongest cell, irrespective of its location.³⁷²¹ Or, alternatively, by deciding not to allocate the call into another cell with a lesser signal quality so as not to compromise the quality of the call.³⁷²²

1692. In sum, according to Mr Philips's evidence, when the best serving cell is momentarily overloaded, the network can allocate the call into one of the six reported neighbouring cells or send a busy response to the caller and not allocate the call into any cell until the best serving cell is available again.³⁷²³ The allocation of a call to a cell different from the best serving cell due to

³⁷²³ John Edward Philips, T. 20 August 2015, p. 86; exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), p. 35.

overloading is called, according to Mr Philips and Witness 707, a ‘directed retry’.³⁷²⁴ Deciding whether to redirect a call or to send a busy response depends on the network’s policy.³⁷²⁵

1693. When a directed retry occurs, the call data records do not normally record the best serving cell, from which the call is redirected. That cell remains unknown. It is unknown—on the basis of the call data records—even *whether* a directed retry occurred as there is nothing in the call data records that shows this.³⁷²⁶ This does not mean that the location of the mobile has changed, but rather that the mobile is using the signal of a neighbouring cell while being located in the geographic area covered by the best serving cell.³⁷²⁷

1694. Although the call data records do not show the first choice cell and when a call has been redirected, telecommunication providers have information, including general statistics, on the number of redirected calls.³⁷²⁸ Witness 707 stated that in 2004 and 2005, the Alfa network had activated the ‘directed retry’ feature.³⁷²⁹

1695. Mr Philips and Witness 707 explained that the cell into which a call is redirected is one in the same general area as the best serving cell. The two are likely to share areas of common best server coverage.³⁷³⁰ The call must be directed to one of the six reported cells, because those are the only cells the mobile is reporting to the network as available.³⁷³¹ The cells into which the call is allocated at the beginning and the end of a call are recorded in the call data records as the ‘start cell ID’ and the ‘end cell ID’. Any interim, or other cells used on the call would not be recorded in the call data records.³⁷³²

³⁷²⁴ John Edward Philips, T. 20 August 2015, pp 51-53, 58, 64-65; Witness PRH707, T. 12 February 2016, pp 59, 62, 64; exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), p. 35.

1696. Finally, Mr Philips explained how propagation anomalies can occur.³⁷³³ This is especially across water or due to elevation.³⁷³⁴ These anomalies usually occur when someone is trying to make a call, but loses the signal before the call is connected.³⁷³⁵

1697. When a mobile loses signal, it will search for the best server coverage signal again. If the mobile has increased its elevation after losing signal, it may connect to a cell that is at a greater distance but nonetheless provides a strong signal.³⁷³⁶ In this instance, when the call does finally connect, it may connect to what Mr Philips described as a ‘remote and obviously wrong cell site’ for where the mobile actually is.³⁷³⁷

1698. However, safeguards are built into the systems. Mr Philips outlined these as, first, if a distant cell does not appear within the neighbouring cells, it cannot be used. Second, timing advance can put a distance limitation on the available cells. These safeguards are available within the GSM system, but each network must be configured to utilise them.³⁷³⁸

1699. In his testimony, Mr Philips used a slide presentation entitled ‘Cell site analysis’.³⁷³⁹ The graphic below, extracted from it and to which Mr Philips referred as ‘a simulation of a mobile moving through an area of East London’, illustrates a mobile in a vehicle moving from the best server coverage area of one cell to another cell, including the ‘start cell’ and the ‘end cell’. This was plotted on the route the mobile was travelling to show the succession of cells that provided best server coverage of the route.³⁷⁴⁰

(b) Anomalies in cell allocation

1700. Different forms of disruption may change the cell to which a mobile connects. This may affect determining the accuracy of determining the location of the mobile for cell site analysis.

1701. Directed retry, referred to above, is one.³⁷⁴¹ Further, Mr Philips described the 'fading' that can occur when cellular signals are changing, even with little or no movement.³⁷⁴² Fast fading occurs when there is an instantaneous change of signal due to normal reflections from a building. These events typically occur in an urban environment, but can also occur with vehicles where there is a reflection and the mobile uses a cell different to that in the network's prediction model.³⁷⁴³

1702. Call data records only show the start and end cell for each call. Thus, no record is made of a call change due to fast fading mid-call, unless the new cell was that used at the end of the call.³⁷⁴⁴

³⁷⁴¹ See para. 1692-1694.

³⁷⁴² John Edward Philips, T. 25 August 2015, p. 63.

³⁷⁴³ John Edward Philips, T. 25 August 2015, pp 66-67.

³⁷⁴⁴ John Edward Philips, T. 25 August 2015, p. 69.

Slow fading, on the other hand, occurs when signals are so similar in strength that the best server coverage may switch between two different cells.³⁷⁴⁵

1703. Repeaters, explained Mr Philips, which are designed to amplify an existing signal, can also affect cell allocation.³⁷⁴⁶ These typically control a link in the cell service where there is no coverage, or the optimal signal is inadequate. They are generally outside the network's control and can cause problems to the service by creating interference.³⁷⁴⁷

1704. Finally, co-channel interference is where an adjacent channel bleeds into another; it means that the two frequencies are on the same channel which creates interference.³⁷⁴⁸

C. Alfa network and generation of call data records and cell site data

1. Introduction

1705. The Mobile Interim Company No. 1 S.A.L. (MIC1) is a joint stock company registered at Baabda, Lebanon, trading as 'Alfa'.³⁷⁴⁹ Alfa has managed Lebanon's first mobile network, owned by the Lebanese State, since 2004.³⁷⁵⁰ Initially it was called 'Cellis'.³⁷⁵¹ Alfa's officially designated representative to the Special Tribunal, Witness 707, who joined Alfa in 2012,³⁷⁵² gave evidence in witness statements and courtroom testimony about Alfa's mobile telephone network, business practices and records.

1706. Alfa provided records to the UNIIIC in July 2005, including coverage maps, maps with drive tests, coordinates of Alfa cell sites, cover letters and responses to requests for assistance.³⁷⁵³

³⁷⁵² Witness PRH707, T. 29 January 2016, p. 65, T. 20 April 2016, p. 31; exhibit P768 (Witness 707's *curriculum vitae*), p. 1; exhibit P1192 (Statement of Witness PRH707, 11 November 2015), para. 11. The Trial Chamber also notes that Witness 707 has over two decades of professional experience in telecommunications, Witness PRH707, T. 29 January 2016, p. 64; exhibit P768.

³⁷⁵³ Witness PRH707, T. 16 February 2016, pp 52, 58-64, 75.

In 2010, Alfa provided the Prosecution with predicted best server coverage plots in the form of ArcGIS shape files for 718 Alfa cell sectors on air in 2005, 2007 and 2010.³⁷⁵⁴

1707. Regarding mapping information for 2005, Alfa informed the Prosecution that, due to the lack of a digital site database, the mapping information was created by approximation. Witness 707—and another Alfa employee whose statement was annexed to the witness's—stated of information provided to the Prosecution in 2010, that:

In respect of mapping information for 2005 and as Alfa does not possess a digital site database dating to 2005, the mapping information was created by way of best approximation through the following method. The oldest working site database we have dates back to 29 January 2007. It contains all Alfa sites/cells that were put on air until 29 January 2007. In order to produce the coverage array for 2005, only the cells which were on air until the end of the 2005 year were considered whereas cells from beginning 2006 until 29 January 2007 were ignored. The obtained array was converted into TAB (MapInfo compatible) and then shape (ArcView compatible) files.³⁷⁵⁵

1708. The cell site data provided to UNIIIC and the Prosecution, respectively, in 2007 and 2010, therefore consisted of estimates.³⁷⁵⁶

1709. In 2013, Alfa provided the Prosecution with 192 shape files for Alfa cell sectors.³⁷⁵⁷ According to Witness 707, Alfa produced the files using values for the coordinates of the stations from 2004 and 2005 and azimuth and vertical tilt values from 2013.³⁷⁵⁸ In 2015, Alfa provided the Prosecution with 938 shape files for 2005.³⁷⁵⁹

1710. Witness 707 explained that when Alfa provided information to the Prosecution, it originated from its relevant specialised departments.³⁷⁶⁰ For some requests for assistance, especially relating to information from 2004 and 2005, Alfa used past company records and

verified the information through new searches and analyses.³⁷⁶¹ In his evidence, Witness 707 also relied on the expertise of other company departments.³⁷⁶²

2. Alfa's network architecture

1711. The diagram below is extracted from an annex to Witness 707's statement showing the structure and components of Alfa's network architecture in 2004 and 2005.³⁷⁶³

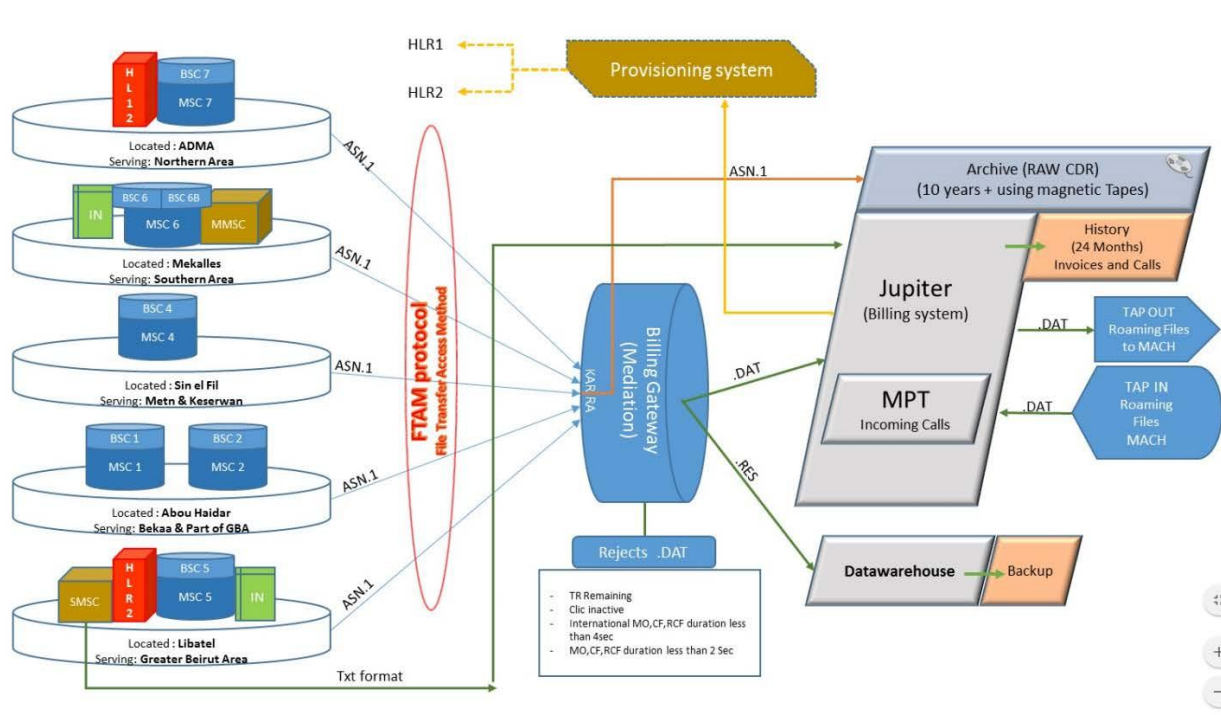

Diagram showing the structure and the components of Alfa's network architecture in 2004 and 2005 – exhibit P773 (Annex 4, 'Logical schematic of the network in 2004 and 2005' to Witness 707's witness statement of 11 November 2015)

1712. These components are:

- a. The 'Base Transceiver Station' (BTS), which is the base station or cell tower and contains an antenna system and radios that communicate with mobiles;

³⁷⁶¹ Witness PRH707, T. 29 January 2016, pp 82-83, 89, 93.

³⁷⁶² Witness PRH707, T. 29 January 2016, pp 91, 97, 100, 107, T. 9 February 2016, p. 30.

³⁷⁶³ Witness PRH707, T. 9 February 2016, pp 39-41; exhibit P773 ('Logical schematic of the network in 2004 and 2005', annex 4 to Witness PRH707's statement of 11 November 2015), p. 1.

- b. The 'Base Station Controller' (BSC), which controls a number of BTSs;
- c. The 'Mobile Switching Centre' (MSC), which is the heart of the network's infrastructure, making connections to establish calls, linking the mobile network to the landline network (or Public Switched Telephone Network (PSTN)) and billing;
- d. The 'Short Message Service Centre' (SMSC), which generates and stores text message related records;
- e. The 'Gateway Mobile Switching Centre' (GMSC), which is responsible for making connections between other networks, such as other cellular providers, PSTN and the international network;
- f. The 'Home Location Register' (HLR), which provides a permanent record of the technical information for all subscribers of the home network;
- g. The 'Visitor Location Register' (VLR), which provides a temporary record of subscriber information (from home and other networks) while a user is in a specific geographic area;
- h. The 'Pre-pay Intelligent Network' (PPIN), which manages pre-paid subscriptions;
- i. The 'Mediation Device' (MD), which is the interface between MSC and the billing system, receiving data from the MSC and translating it for the billing system;
- j. The billing system, which decides which call data record fields to use and generates and calculates the costs of calls; and
- k. The data warehouse, which is a database used for statistical and marketing purposes.³⁷⁶⁴

³⁷⁶⁴ Witness PRH707, T. 9 February 2016, pp 44, 65, 73-75, 77-78, T. 10 February 2016, p. 38, T. 11 February 2016, p. 49, T. 17 February 2016, p. 64; exhibit P769; exhibit P1192 (Statement of Witness PRH707, 11 November 2015), paras 22, 42; exhibit P1192.11 (Alfa response to request for assistance), p. 1.

3. Call data records and related issues

1713. Witness 707 explained that Alfa's call data records are generated automatically from the MSC.³⁷⁶⁵ In some cases, the MSC information can only be read through decoding systems.³⁷⁶⁶ Their main purpose is billing for the post-paid lines.³⁷⁶⁷ According to its contractual obligations with the Lebanese government, Alfa had to retain call data records for ten years.³⁷⁶⁸ The azimuth, the tilt, the height of a particular cell tower and its geographic coordinates were stored in Alfa's business records.³⁷⁶⁹ As these records are automatically generated without human input, such documents, according to Witness 707, are highly accurate.³⁷⁷⁰

1714. The witness also described how the network architecture's components identify subscribers by the mobiles' IMSI.³⁷⁷¹ IMSI information is kept in the SIM.³⁷⁷² The IMSI is unique and used in any network to which it connects and is usually a 15-digit number.³⁷⁷³ The first three digits are the 'Mobile Country Code' (MCC), followed by the 'Mobile Network Code' (MNC).³⁷⁷⁴ The remaining digits are the 'Mobile Subscription Identification Number' (MSIN).³⁷⁷⁵ Lebanon's MCC is '415'; Alfa's MNC is '01'.³⁷⁷⁶

1715. The 'Mobile Station International Subscriber Directory Number' (MSISDN) is the technical term for the mobile telephone number.³⁷⁷⁷ A network assigns an IMSI to an MSISDN.³⁷⁷⁸ The MSISDN is made up of the country code ('961' for Lebanon), the 'National Destination Code'

³⁷⁶⁹ Witness PRH707, T. 15 February 2016, pp 60-62, T. 16 February 2016, pp 29-30.

³⁷⁷⁰ Witness PRH707, T. 19 April 2016, pp 38, 68.

³⁷⁷¹ Exhibit P769, p. 2; exhibit P1192 (Statement of Witness PRH707, 11 November 2015), para. 29.

³⁷⁷² Witness PRH707, T. 9 February 2016, pp 28, 38; exhibit P769, p. 3; exhibit P1192 (Statement of Witness PRH707, 11 November 2015), paras 29, 36.

³⁷⁷³ Exhibit P1192 (Statement of Witness PRH707, 11 November 2015), para. 30.

³⁷⁷⁴ Witness PRH707, T. 18 February 2016, p. 30; exhibit P769, pp 2-3; exhibit P1192 (Statement of Witness PRH707, 11 November 2015), para. 30.

³⁷⁷⁵ Exhibit P1192 (Statement of Witness PRH707, 11 November 2015), para. 30.

³⁷⁷⁶ Witness PRH707, T. 16 February 2016, p. 35, T. 18 February 2016, p. 30; exhibit P1192 (Statement of Witness PRH707, 11 November 2015), para. 31.

³⁷⁷⁷ Witness PRH707, T. 17 February 2016, p. 48; exhibit P1192 (Statement of Witness PRH707, 11 November 2015), para. 32; exhibit P769, p. 3. Exhibit P769 (*Aide-mémoire* for Witness PRH707's evidence: list of acronyms) refers to 'MSISDN' as a 'Mobile Station Integrated Services Digital Network', while Witness 707's statement, exhibit P1192, refers to it as 'Mobile Station International Subscriber Directory Number'.

³⁷⁷⁸ Exhibit P1192 (Statement of Witness PRH707, 11 November 2015), para. 32.

and the subscriber number.³⁷⁷⁹ The prefix ‘3’ in a Lebanese MSISDN signified that it is a mobile number.³⁷⁸⁰ IMSI and MSISDN are both fields in call data records.³⁷⁸¹

1716. The IMEI unique to each handset is automatically transmitted when connected to the network and appears in call data records.³⁷⁸² IMEI data is not ‘generated’ by Alfa, but by the handset when making or receiving a call.³⁷⁸³ The MD filters out IMEI data from call data records sent to the billing system and this data is retained by the data warehouse as a separate field.³⁷⁸⁴

1717. Witness 707 explained, as had Mr Philips, that when a SIM card is inserted into a handset, the mobile searches for the nearest mobile cell tower or BTS.³⁷⁸⁵ Once a call request is made by the BSC, the MSC checks the subscriber details of the caller with the HLR.³⁷⁸⁶ If the caller is identified as an Alfa subscriber, the MSC is notified and connects the call.³⁷⁸⁷ For Alfa, if the subscriber is on a pre-paid service, an additional check is made to see whether it has enough credit to proceed.³⁷⁸⁸

1718. When an Alfa subscriber makes a call request to a roaming subscriber, not in Alfa’s geographic area, the same procedure applies, with the additional step of the VLR contacting the HLR to obtain the caller’s details. If an agreement exists between Alfa and the network where the roaming mobile is, the call will be approved and connected by the MSC.³⁷⁸⁹ However, there was no national roaming in Lebanon in 2005.³⁷⁹⁰

³⁷⁷⁹ Witness PRH707, T. 18 April 2016, p. 37; exhibit P1192 (Statement of Witness PRH707, 11 November 2015), paras 32-33.

³⁷⁸⁰ Witness PRH707, T. 18 February 2016, p. 17.

³⁷⁸¹ Exhibit P1192 (Statement of Witness PRH707, 11 November 2015), para. 34.

³⁷⁸² Exhibit P1192 (Statement of Witness PRH707, 11 November 2015), para. 36.

³⁷⁸³ Witness PRH707, T. 29 January 2016, pp 117-118; exhibit P1192 (Statement of Witness PRH707, 11 November 2015), para. 94.

³⁷⁸⁴ Exhibit P1192 (Statement of Witness PRH707, 11 November 2015), para. 95.

³⁷⁸⁷ Exhibit P1192 (Statement of Witness PRH707, 11 November 2015), paras 40, 48.

³⁷⁸⁸ Witness PRH707, T. 9 February 2016, p. 75; exhibit P1192 (Statement of Witness PRH707, 11 November 2015), para. 49.

³⁷⁸⁹ Exhibit P1192 (Statement of Witness PRH707, 11 November 2015), paras 50-51.

³⁷⁹⁰ Witness PRH707, T. 29 January 2016, p. 109; exhibit P1192 (Statement of Witness PRH707, 11 November 2015), para. 229.

1719. The witness described that when an Alfa subscriber initiates a call to another network, for example Touch, an international number or a landline, the same procedure applies, however, a gateway is required. The gateway acts as the entrance of non-Alfa subscribers to Alfa's network.³⁷⁹¹

1720. In 2004 and 2005, call data records were stored, in different forms and for different periods, in the billing system, the data warehouse and the archive.³⁷⁹²

1721. The transfer of call data records from the MSC to the Mediation Device (MD) is automatic.³⁷⁹³ Witness 707 stated that no one had write access before reaching the mediation device and the access to raw call data files was limited at this stage.³⁷⁹⁴

1722. When responding to the Prosecution's requests for call data records with end cell data, Alfa, according to Witness 707, had to retrieve archived call data records and decode them through the MD.³⁷⁹⁵ During this process, at least one corrupted backup file, for July 2004, was discovered; this may have resulted in incomplete records.³⁷⁹⁶ Call data records started to be archived in Alfa's data warehouse as of 1 August 2004.³⁷⁹⁷ Before that, they were archived on magnetic tapes and, in a more limited fashion, in back-up systems of the billing department.³⁷⁹⁸

1723. The prefix '101' in the telephone number field of call data records signifies that the call was made by a pre-paid mobile with 'Call Line Identification Restriction', meaning that the caller withheld their number.³⁷⁹⁹ Pre-paid services at Alfa were called 'Clic' before 2004 and 'Active' afterwards.³⁸⁰⁰ Post-paid services were called 'Basic', then 'Classic'.³⁸⁰¹

³⁸⁰¹ Witness PRH707, T. 29 January 2016, p. 108.

1724. Witness 707 described the process of creating coverage maps at Alfa. Alfa uploaded into mapping software the cell site shape files, corresponding azimuth values and geographic coordinates which created ‘projected’ values and images onto maps of Lebanon.³⁸⁰² He explained that Alfa had no unified or centralised database in 2004 and 2005, and that this prevented the Prosecution, in 2016, from verifying the accuracy of the records that Alfa provided to the UNIIIC in July 2005. Specifically, of the azimuths, the height of cell tower antennas and their vertical tilt as they existed in 2004 and 2005.³⁸⁰³

1725. The witness explained that, even though Alfa could not verify the type and frequency of the changes to its cell sites from the period of 2004 to 2005, values of a cell site, such as azimuth, vertical tilt and antenna position, do not change significantly over time and are minimal because the cell site itself remains in place. Changes would only occur in specific instances, such as when a new station is built.³⁸⁰⁴

1726. As a consequence, he said, the contemporaneous values that Alfa used in 2010, 2013 and 2015 to produce the coverage maps provided to the Special Tribunal were ‘not far’ from those used in 2004 and 2005.³⁸⁰⁵

1727. Moreover, technological developments since 2005—such as the introduction of the third and fourth generations mobile systems, ‘3G’ and ‘4G’, the availability of clutter models³⁸⁰⁶ with increased accuracy and updates of the Asset software—allowed Alfa in later years to produce more accurate coverage maps than those from 2004 or 2005.³⁸⁰⁷

³⁸⁰² *For example*, exhibit P779 (Maps showing Alfa Cell Sites February 2005); exhibit 2D73 (Alfa Coverage maps of various areas in Beirut). *See also, for example*, exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine); exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash); exhibit P1112 (Expert report of John Edward Philips – Single user analysis, Suspects 4, 5, 6, 7 and 8).

³⁸⁰⁴ Witness PRH707, T. 15 February 2016, pp 35-36, 64-69, T. 16 February 2016, p. 8, T. 18 April 2016, pp 5, 23, T. 20 April 2016, pp 24-25.

³⁸⁰⁵ Witness PRH707, T. 18 April 2016, p. 23.

³⁸⁰⁶ ‘Clutter’, as described above, at paragraph 1654, refers to data relating to defined categories such as water, forest, urban and suburban terrain, which affect radio signals. Network operators upload this data into computer-based modelling tools to determine the area over which a signal from a cell can provide a ‘usable signal’, Witness PRH707, T. 15 February 2016, p. 6; Witness PRH705, T. 6 May 2016, pp 7, 77, T. 5 May 2016, p. 88, T. 22 April 2016, pp 24-28; exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), pp 57-61.

³⁸⁰⁷ Witness PRH707, T. 15 February 2016, pp 62, 64, T. 16 February 2016, pp 24-25, T. 21 April 2016, pp 35-40.

1728. The witness explained, from his experience in the industry, that Aircom's Asset is used by nearly all mobile network operators; they rely upon them despite a margin of error of 20 to 30 per cent.³⁸⁰⁸ Witness 707 clarified that this is an acceptable level of accuracy for planning and marketing purposes, and that the coverage maps of Asset cannot be one hundred per cent accurate.³⁸⁰⁹ The Alfa radio planning department considered this 'minor margin of error' of 20 to 30 per cent in its coverage maps a level of accuracy sufficient to routinely decide whether to install a new cell site.³⁸¹⁰

1729. As Alfa was not required to maintain a centralised database before 2015, the azimuth values of the cell sites in Alfa's network were not contemporaneously registered in 2004 and 2005.³⁸¹¹ In the absence of a digital site database from 2004 or 2005, Alfa generated shape files based on data from 2007 and 2010. Alfa's records, created in 2010, contained data on which cell sites were operational in 2005 and the coordinates of their geographic location.³⁸¹² If the database for a year was not available, Alfa used that closest in time and then filtered out the stations put in place after the relevant period. This explains why Alfa had to use cell data from 2007 and azimuth and tilt values from 2010.³⁸¹³

1730. Witness 707 said that from 2004 to 2007, however, Alfa did not add many new stations, and its network was stable.³⁸¹⁴ Complaints from consumers regarding coverage causing Alfa to change the direction of an antenna were slight and did not radically change the coverage of cell sectors.³⁸¹⁵

1731. Both Mr Philips and Witness 707 explained that network operators, including Alfa, ensure that their networks are stable over time in terms of the number and capacity of the operating cells,

³⁸⁰⁸ Witness PRH707, T. 16 February 2016, pp 80-81. *See also* Witness PRH707, T. 17 February 2016, pp 8-9, 11-12, T. 21 April 2016, pp 46-47.

³⁸¹⁵ Witness PRH707, T. 15 February 2016, pp 65, 68-69.

including antennas' azimuths.³⁸¹⁶ For instance, during Israel's attacks on Lebanon in July 2006, only four cell sites were completely destroyed and eight sites were partly damaged. Three of the four in south Lebanon were rebuilt in the same locations, and the eight damaged sites were repaired.³⁸¹⁷ Witness 707 testified that only two sites, Baidar and Naqoura, in the south of Lebanon, had their cell IDs changed as a result of war damage.³⁸¹⁸

1732. As for the accuracy of Alfa's clutter model, Witness 707 explained that erecting a tall building or the presence of a high tree would not require completely relocating an antenna, but rather it would be moved higher.³⁸¹⁹ When buildings are demolished, as in July 2006, an existing cell site would provide a larger coverage.³⁸²⁰

1733. The witness explained that the call data records allow the identification of the number of cell sites in use in 2004 and 2005. Alfa's call data records also record the cell number, its Cell Global Identity (CGI), but not the cell name; this was why the CGI had to be connected to the relevant cell names for the call sequence tables.

1734. Moreover, the CGI identifies the call ID connected to a base station controller and from this, which mobile switching centre/mobile station control was connected to the base station controller.³⁸²¹

4. Cell site related issues

1735. In 2010, Alfa, according to Witness 707, produced the 2005 shape files by approximating the mapping information.³⁸²²

1736. As Alfa did not have all the information requested by the Prosecution relating to its 2005 coverage, it used the call data records from 2005 to establish which cells were then on air.³⁸²³ Specifically, its oldest site database, of 29 January 2007, was taken as a starting point and the cells

that only came on air from 2006 were removed.³⁸²⁴ This meant that cells coming on air between March and December 2005 were included in the maps and cells that were dismantled between March and December 2005 were not.³⁸²⁵

1737. The Sabra Defence suggested to the witness that the coverage maps would have been more accurate had Alfa provided mapping information depicting the situation up to 14 February 2005.³⁸²⁶ Witness 707 explained that Alfa used the 2010 digital map for the underlying map.³⁸²⁷ In 2010, Alfa had generated the shape files by including in Asset the stations working in 2004 and 2005, and added the 2010 tilts and the azimuths.³⁸²⁸ Alfa could not take into account geographic changes to the area in this period, such as construction or destruction of buildings.³⁸²⁹

1738. Witness 707 explained that the 2004 and 2005 digital maps had a less sophisticated resolution than those dating from 2010. The accuracy was based on 20 square metre boxes in urban areas and 50 square metre boxes in rural areas.³⁸³⁰ The 2010 digital map of Lebanon, that Alfa used to produce the shape files, was more accurate than those of 2004 and 2005, given Asset's improvements.³⁸³¹

1739. The propagation model used to create the coverage maps in 2010 and 2013 represented the situation in those years.³⁸³² Witness 707 compared the clutter model used in 2010 to create coverage maps with that of 2004 and explained that, 'in general terms, the maps generated in 2010 should be more accurate than if we had generated them in 2004, 2005. The reason for that is the improvement in the Aircom tool'.³⁸³³

³⁸²⁴ Witness PRH707, T. 15 February 2016, pp 41, 50, 82-83, T. 20 April 2016, pp 59-61, 63-67; exhibit P1192 (Statement of Witness PRH707, 11 November 2015), para. 164. *See also* exhibit P1192.8, para. 12; Witness PRH707, T. 21 April 2016, p. 11.

³⁸³³ Witness PRH707, T. 15 February 2016, pp 64, 72-76.

1740. He also explained that Alfa did not delete updates to the digital map of Lebanon, or the clutter model in 2004 and 2005, until 2010. When producing the shape files for the Prosecution, Alfa used some values—antenna azimuth, tilt and height—from the 2010 maps to create the maps for 2004 and 2005.³⁸³⁴ In June 2015, Alfa used the 2012 clutter and propagation models to produce the shape files for the Prosecution.³⁸³⁵

1741. As to the impact of the radical geographic changes between 2004 and 2016, including the demolished and newly-erected buildings in Beirut, on Alfa's clutter model and respectively coverage maps of areas relevant to the Prosecution case, Witness 707 described them as 'some change, simple change'.³⁸³⁶ The 2010 clutter model was more accurate than those from 2004 and 2005, and Alfa's radio department most likely made the necessary adjustments in Asset to reflect the changes in clutter caused by Israel's attacks on Lebanon in 2006.³⁸³⁷

1742. When asked about Alfa's use of the 2010 clutter model to reconstitute the 2005 clutter,³⁸³⁸ Mr Philips explained that for identifying the cells that continued to operate in an area, after changes in the clutter:

of more relevance would be how many of the cell sites that were existing in 2005 were still existing in 2010, and how many did they need to change because the building no longer existed. I think that would be more of a significant factor and that would not be speculative. It would be a figure provided by the network. The clutter model, how it does or doesn't change, is -- and the extent over which it does, is speculative.³⁸³⁹

1743. He also stated that such changes did not significantly affect the core of the best server coverage in the vicinity of the cell site.³⁸⁴⁰

1744. Witness 707 testified that past azimuths and tilts and, to some extent antenna heights, were of little importance to Alfa and were not stored in a centralised database which is why it could not

³⁸³⁸ In cross-examination, counsel for Mr Merhi asked Mr Philips to comment on the clutter model that Alfa used in 2010 to reconstitute the predicted coverage for Alfa's BRAJNE2 cell site, John Edward Philips, T. 26 April 2017, pp 109-110; exhibit P1803 (Prosecution electronic presentation of evidence snapshot 62 in relation to slide 236 of P1793 showing an enlarged coverage of BRAJNE2).

³⁸³⁹ John Edward Philips, T. 26 April 2017, pp 109-110.

³⁸⁴⁰ John Edward Philips, T. 26 April 2017, p. 116.

specifically confirm all such past details.³⁸⁴¹ Antenna feeder type and length is a further factor that Alfa could not specifically confirm.³⁸⁴² These values are only changed in specific cases, and only slightly, mostly following a complaint about weak coverage in an area.³⁸⁴³ A change of up to 15 degrees in the azimuth does not radically change the coverage area.³⁸⁴⁴

1745. Alfa had around 900 cells on air in 2004 and 2005.³⁸⁴⁵ According to Witness 707, the best server coverage estimates produced using Asset as a prediction tool, which took into account as much as possible the topography, such as buildings, matched reality by ‘a high percentage’.³⁸⁴⁶ While important for coverage purposes, the clutter model and the prediction tool did not account for details of buildings, such as height, shape or material.³⁸⁴⁷ The digital map of this prediction tool was updated once or twice a year.³⁸⁴⁸

1746. In Witness 707’s view, overall, the predicted best server coverage maps of 2004 and 2005 matched the real coverage on the ground by 60 to 70 per cent.³⁸⁴⁹ The witness considered this a slight margin of error.³⁸⁵⁰ He explained that he based this estimate on his own experience and that no real standard existed to compare the prediction maps and the real coverage on the ground. If a telecommunication engineer was able to achieve at least a 70 per cent match between the predicted coverage and the real coverage, this was considered a good result.³⁸⁵¹

1747. The margin of error would, however, be greater at the outer edges of the shape files.³⁸⁵² The factors limiting accuracy of the maps were: the resolution of the digital map of Lebanon, the

³⁸⁴¹ Witness PRH707, T. 29 January 2016, pp 124-126, T. 11 February 2016, pp 54-57, 70-71, 85-87, T. 12 February 2016, p. 17, T. 15 February 2016, pp 29-30, 35, 42, T. 16 February 2016, p. 42, T. 20 April 2016, pp 23, 38, T. 22 April 2016, pp 32-33, T. 3 May 2016, pp 50-51, 80-81, 83-85, T. 25 July 2016, pp 7-8, 22.

margin of error of the algorithm used in the prediction tool, the accuracy of the underlying digital map, using certain values from later years and the human factor in using the prediction tool.³⁸⁵³

1748. The predicted best coverage from some cell sectors shows ‘patches of coverage’, also known as ‘scattered coverage’, which are located at a large distance from the cell tower. This occurs, for example, for cell sites near the sea where the signal is reflected on the water.³⁸⁵⁴ Calls can be made or received but their quality could be affected. Witness 707 explained in his statement that:

These distinct patches of coverage are the output of the prediction tool and it may be theoretically possible that this part of the cell could be used to actually make or receive a call, but the quality of the call could be bad. In essence the coverage is polluted, so when a person was in the area where the remote patch of coverage is, they would be using a nearby cell rather than the cell with patchy scattered coverage.³⁸⁵⁵

1749. In most cases, a mobile will use the best serving signal for a call.³⁸⁵⁶ In general, the closer a mobile is to a station, the stronger the signal.³⁸⁵⁷ Witness 707 explained that some low-quality handsets interact with the network signal in an unusual way leading to other signals being used.³⁸⁵⁸ When a handset is behind a building or when the station is above capacity, other signals may be picked up.³⁸⁵⁹ When a station has reached its capacity, the BSC transfers a call to a nearby station, usually an adjacent one, in a directed retry.³⁸⁶⁰

1750. Witness 707 stated that these exceptions occur in no more than two per cent of cases.³⁸⁶¹ He explained that in situations of network congestion, as was the case in the aftermath of Mr Hariri’s assassination, such cases would be more numerous.³⁸⁶² Alfa did not collect data of such anomalies from 2004 and 2005.³⁸⁶³ Consistent with Mr Philips’s general evidence, Witness 707

noted that call data records do not show whether cell tower connections result from a directed retry.³⁸⁶⁴

1751. He also stated that predicted best server coverage maps neither take into account the signal strengths of cell towers, nor represent actual coverage maps.³⁸⁶⁵ A cell tower's signal, albeit weak, may therefore be picked up by a mobile outside the borders of a shape file.³⁸⁶⁶ In Witness 707's view, it is difficult to use predicted best server coverage maps to determine *actual* coverage.³⁸⁶⁷

5. Witness 707's clarifications

1752. Defence counsel, on many occasions, challenged Witness 707's ability to testify on matters that were not within his direct personal knowledge, of which there are numerous examples in his statements. The witness made it clear that he had obtained much of the information on which he was testifying from other Alfa employees and departments. In several instances, he stated that he would have to consult colleagues before he could provide further specific information. Consequently, during a break in his evidence, the Trial Chamber sought clarification from the Prosecution on several matters arising from Witness 707's testimony and witness statements, and gave the witness permission to consult colleagues in a protocol to be agreed with Defence counsel.³⁸⁶⁸

1753. As a result of this consultation, when Witness 707 reappeared in court, he was then asked to comment, for example, on how the azimuth and coordinate values of Alfa cell site data were found on the computer of an engineer from Alfa's radio department.³⁸⁶⁹

³⁸⁶⁴ Witness PRH707, T. 12 February 2016, p. 64, T. 22 April 2016, p. 35.

³⁸⁶⁵ Witness PRH707, T. 21 April 2016, pp 83-84, 92-93, 95-96, T. 22 April 2016, p. 23, T. 4 May 2016, pp 41-42, T. 25 July 2016, pp 66, 68.

³⁸⁶⁶ Witness PRH707, T. 21 April 2016, pp 80-81, 92-94, T. 22 April 2016, p. 23, T. 4 May 2016, p. 42; exhibit 5D245 (PowerPoint presentation: 'Alfa drive test and theoretical coverage').

³⁸⁶⁷ Witness PRH707, T. 25 July 2016, pp 66-68.

³⁸⁶⁸ For instance, the Trial Chamber held that Witness 707 had relied on records that he did not produce himself and upon information given to him by other Alfa employees or departments and that the witness was testifying as a corporate witness giving mixed evidence as to matters within his own personal knowledge and matters of which he was informed. The Trial Chamber permitted him to obtain further information from Alfa personnel and departments in relation to multiple paragraphs from his statements that were contested by Defence counsel. *See for example*, Corrected version of decision on Prosecution motion to admit Witness PRH707's statements, paras 65, 71-72; Witness PRH707, T. 18 February 2016, pp 3, 22-23, 27, 30-31, T. 19 April 2016, pp 7-9, 19-20, 23-24, 41-47.

³⁸⁶⁹ Witness PRH707, T. 20 April 2016, p. 6.

1754. He explained that before Alfa started organising a centralised cell site database in 2014, it had multiple databases and it was common practice that each department had its own database.³⁸⁷⁰ He clarified that the engineer could have saved the database only on an Alfa workstation computer and the company policy did not allow Alfa employees to use personal computers at work.³⁸⁷¹ He added that despite the merging of the various databases in 2014, the values in the new centralised database were the same as those before the merger of the databases.³⁸⁷²

D. Touch network and generation of call data records and cell site data

1. Introduction

1755. The Mobile Interim Company No. 2 S.A.L. is a joint stock company registered in Beirut, a ‘Mobile Telecommunications Company’ trading as ‘Touch’.³⁸⁷³ The company’s officially designated representative to the Special Tribunal³⁸⁷⁴ was Witness 705, an engineer specialising in wireless telecommunications. He testified on Touch’s mobile telephone network, its business practices and records.³⁸⁷⁵ He had worked in radio network planning and optimisation and joined Touch in 2012.³⁸⁷⁶ Like Witness 707, in providing his evidence, Witness 705 relied on the expertise of other company departments.³⁸⁷⁷

1756. In 2010, Touch provided the Prosecution with a CD containing the 2004 Touch coverage maps and the locations of its cell masts and cell sectors, in the form of shape files.³⁸⁷⁸ It also

³⁸⁷⁷ *See for example*, Witness PRH705, T. 5 May 2016, pp 29-33.

³⁸⁷⁸ Witness PRH705, T. 9 May 2016, pp 14-15.

provided cell data from 2004 and 2005.³⁸⁷⁹ The 2004 shape files, unlike those provided by Alfa, were generated contemporaneously.³⁸⁸⁰ The files were produced on 16 February 2004 and provided to the Prosecution on 22 September 2010.³⁸⁸¹ By 2004, the clutter data and the propagation model were both outdated.³⁸⁸²

1757. Touch also provided the UNIIC, on 8 October 2007, with two worksheets showing the azimuth values for all cells on air at the end of February 2005 and in September 2007.³⁸⁸³

1758. Additionally, in response to a request for assistance, Touch provided the Prosecution with seven worksheets containing Touch's cell site data saved on seven dates; 15 February 2005, 1 April 2005, 12 August 2006, 17 September 2008, 21 November 2009, 3 May 2010 and 7 July 2010.³⁸⁸⁴ Touch's radio planning unit, from its archive, also provided the Prosecution a radio frequency plan for Monday 14 February 2005, which sets out the distribution of channels assigned with the radios at each cell.³⁸⁸⁵

2. Touch network architecture

1759. The diagram below is extracted from a diagram of Touch's network architecture in June 2006.

³⁸⁷⁹ See sub-sections (4) 'Cell site related issues' and (5) 'Clarification of discrepancies', below.

³⁸⁸⁴ Witness PRH705, T. 5 May 2016, p. 84, T. 6 May 2016, pp 22-23, 38-48, T. 21 July 2016, p. 40; exhibit P812 (Prosecution's request for assistance, 12 July 2010); exhibit P813; exhibit P815, p. 1; exhibit P1181 (CD containing exhibit P813 and cell coverage maps dated 5 November 2007).

³⁸⁸⁵ Witness PRH705, T. 9 May 2016, pp 61, 67-71, T. 20 July 2016, pp 58-59, T. 21 July 2016, pp 9-12, 40; exhibit P820 (Radio frequency plan, annex 23 (2) to Witness PRH705's statement of 16 November 2015); exhibit P953, p. 1; exhibit P1096 (Witness PRH705's statement of 4 May 2016), para. 13.

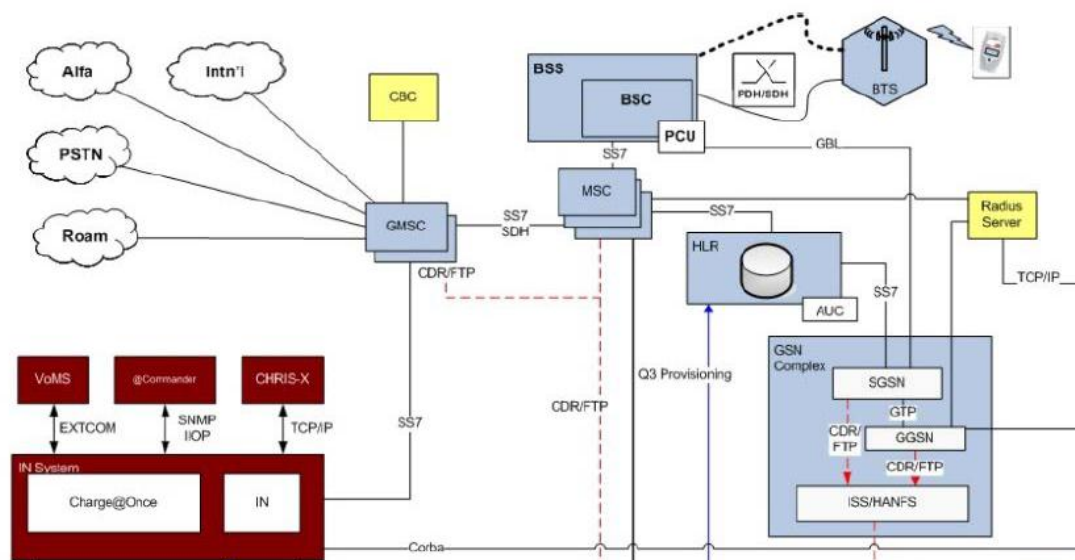

Diagram showing an extract from the structure and components of Touch's network architecture in June 2006 – exhibit P825 (Diagram of Touch's network architecture, annex 4 to Witness PRH705's statement of 16 November 2015)

1760. Witness 705's evidence related to the structure of mobile networks and is very similar to Witness 707's. Like Witness 707, he testified that mobile calls are processed through the GSM network composed of base transceiver stations (BTS or cell sites), base station controllers (BSC), mobile switching centres (MSC), home location registers (HLR),³⁸⁸⁶ visitor location registers (VLR) and gateway mobile switching centres (GMSC).³⁸⁸⁷ The MSCs are responsible for establishing calls, linking the GSM network to the public switched telephone network (PSTN or the landline network) and billing.³⁸⁸⁸

³⁸⁸⁶ In 2004 and 2005, Touch had two HLRs, Witness PRH705, T. 20 July 2016, pp 38-39, 48; exhibit P826 (Witness PRH705's statement of 16 November 2015), para. 24, read together with exhibit P952 (Touch's response to request for assistance clarifying paragraphs in Witness PRH705's statements).

³⁸⁸⁷ Exhibit P826 (Witness PRH705's statement of 16 November 2015), paras 24, 28; exhibit P769 (*Aide-mémoire* for Witness PRH707's evidence: list of acronyms).

³⁸⁸⁸ Exhibit P826 (Witness PRH705's statement of 16 November 2015), paras 24, 45; exhibit P826.2 (Network architecture and call set-up, annex 3 to Witness PRH705's statement of 16 November 2015), p. 1; exhibit P769; exhibit P825 (Diagram of Touch's network architecture, annex 4 to Witness PRH705's statement of 16 November 2015).

1761. In 2004 and 2005, each of the five MSCs, the SMS centre (SMS-C) switch and the landline network had its own internal clock.³⁸⁸⁹ These clocks were set manually and not synchronised.³⁸⁹⁰ Logs of changes on these clocks were no longer available because the old MSCs used in 2004 and 2005 were dismantled and replaced with new switches.³⁸⁹¹ Time differences between the clocks could continue for a number of months.³⁸⁹² Witness 705 did not know the time difference between the MSCs in 2004 and 2005.³⁸⁹³

1762. The BTSs contain radios that communicate with mobiles, an antenna system and supporting hardware and software.³⁸⁹⁴ Each cell site is connected by a BSC which is in control of the radios and the switching function.³⁸⁹⁵ Touch had two GMSCs, responsible for connecting the home network with the network of the other mobile telecommunication service providers, the landline network and the international network.³⁸⁹⁶ The intelligent network (IN) platform manages the prepaid subscriptions while the HLRs are network elements that permanently record the technical information of all subscribers belonging to the home network.³⁸⁹⁷ In almost every MSC, a VLR temporarily records details of home network subscribers and subscribers from other networks visiting the area.³⁸⁹⁸ Finally, Witness 705 outlined the general changes in Touch's network architecture between 2004 and 2016.³⁸⁹⁹

1763. Like Mr Philips and Witness 707, he explained that if a cell reaches a predetermined threshold in its capacity, a subsystem of the cell tower responsible for handling traffic may force

³⁸⁹⁷ Exhibit P826 (Witness PRH705's statement of 16 November 2015), paras 24, 41, 46-47 (para. 24, in relation to the HLR, has to be read together with exhibit P952); exhibit P826.2, p. 1; exhibit P825; exhibit P769.

³⁸⁹⁸ Exhibit P826 (Witness PRH705's statement of 16 November 2015), paras 24, 48; exhibit P826.2, p. 1; exhibit P769.

³⁸⁹⁹ Exhibit P826 (Witness PRH705's statement of 16 November 2015), paras 30, 34; Witness PRH705, T. 5 May 2016, p. 30, T. 10 May 2016, pp 26-28.

another mobile, which is already in the process of a call, to connect to another cell and free up a traffic channel, which meets specific requirements.³⁹⁰⁰

1764. ‘Handover’ occurs if the new signal is between three decibels weaker and 63 decibels stronger than the old signal.³⁹⁰¹ Congestion relief may be triggered during peak hours of the cell traffic or by events occurring on the day.³⁹⁰² A call may also be ‘handed over’ from one cell to another if the caller is moving between cells, or making a call at the boundaries of two neighbouring cells and a truck blocks the signal of the serving cell.³⁹⁰³ Call data records do not capture that a handover occurred.³⁹⁰⁴ The cell used in the beginning of the call is registered in the call data records, and the cell used at the end of the call may also appear.³⁹⁰⁵

3. Call data records and related issues

1765. Witness 705 provided much the same evidence as Witness 707 on call data records and subscriber information. For example, the witness stated that the mobile subscriber integrated services digital network number (MSISDN) is the telephone number associated with the SIM card, which identifies the subscription in the network.³⁹⁰⁶ The IMSI contained in the SIM card is another number the cellular networks use to identify subscribers’ details.³⁹⁰⁷ Further, the IMSI shows when a subscriber moves from one cell to another. During this process, a signal is sent out which is updated in the subscriber’s location.³⁹⁰⁸

1766. Touch stored pre-paid and post-paid subscriber information in its customer relationship management (CRM) database. This included subscribers’ names and personal data, contract numbers (for post-paid subscribers), the MSISDN, the IMSI, the integrated circuit card identity

³⁹⁰⁰ Witness PRH705, T. 6 May 2016, pp 10-13; exhibit P826 (Witness PRH705’s statement of 16 November 2015), paras 55, 57.

number of the SIM card, the point of sale information and all activities related to the subscription.³⁹⁰⁹

1767. In 2004 and 2005, International Turnkey Systems provided Touch's billing system, and used the Telecom Advanced Business Solution (TABS) software.³⁹¹⁰ The information in the TABS CRM database, or subscriber database, was populated manually with the information in subscriber application forms for Touch's pre-paid and post-paid services, such as the 'GSM service contract', the 'post-paid customer info', the 'features & services request', 'request for subscription / prepaid line' and the 'prepaid customer info'.³⁹¹¹

1768. In 2004 and 2005, for a pre-paid line branded as 'MTC Magic', the subscribers had to provide a copy of their identification document and a completed and signed pre-paid customer information sheet.³⁹¹² Subscribers could recharge their credit by purchasing a recharge voucher or scratch card from authorised distributors.³⁹¹³

1769. Touch could deactivate post-paid and pre-paid lines on the subscriber's request, due to loss or defect of the SIM card, transfer of ownership to a new post-paid subscriber, migration from pre-

³⁹⁰⁹ Witness PRH705, T. 10 May 2016, pp 53-54, 56-57, T. 20 July 2016, p. 48; exhibit P826 (Witness PRH705's statement of 16 November 2015), para. 345, read together with exhibit P952. *See also* exhibit P1101 (Touch list of activation and deactivation dates); exhibit P1099 (Touch's response to Prosecution request for information on Witness PRH705's evidence), para. 4 (a)-(b); Witness PRH705, T. 21 July 2016, pp 65-66.

paid to post-paid subscription or blocked SIM card.³⁹¹⁴ For an additional monthly fee, subscribers could request additional services (or cancel them) through the ‘features & services request’ form.³⁹¹⁵

1770. The MSC automatically generated call data records every time a Touch subscriber made or received a call.³⁹¹⁶ In 2004 and 2005, Touch did not generate records for missed calls, end cell data and recharge data.³⁹¹⁷ Archiving SMS contents was not an automatic process.³⁹¹⁸

1771. From February 2004, Touch archived the SMS content written in English, although content from March 2004 and between 16 and 31 August 2004 was unavailable due to missing or corrupted tapes.³⁹¹⁹ The contents of the Arabic script text messages were stored from 7 January 2005 in binary code (ASN.1).³⁹²⁰ Data messages within SMS, such as photographs, could not be decoded into readable text.³⁹²¹ When the SMS-C switch reached its storage limit, the technical department staff manually retrieved the SMS contents and stored them in a readable format on tapes in locked cabinets separately from call data records.³⁹²²

1772. While the subscriber was roaming abroad, only outbound text messages were generated at the SMS-C switch.³⁹²³ Call data records for roaming calls made and received by a Touch subscriber abroad were generated by partner networks and transferred to the subscriber's service provider through the data clearing house.³⁹²⁴ These are known as 'TAP' files, named after the mechanism 'transferred account procedure', through which telecommunication service providers exchange roaming billing information.³⁹²⁵ They were stored separately in a dedicated roaming module.³⁹²⁶

1773. Discrepancies between the call data records generated at the MSC and the SMS content records generated at the SMS-C switch may occur when the sender of a text message sets the mobile handset to receive a delivery status report or sends a message while roaming abroad.³⁹²⁷

1774. Witness 705 explained the transfer of data from the MSC to the billing system.³⁹²⁸ Call data records generated at the MSC were automatically transferred to the billing system.³⁹²⁹ There, the data was translated into text format, readable to the billing system, and filtered by types of calls.³⁹³⁰ The database administrator did not have access to the call data records at the MSC, and, in the absence of an ASN.1 editor, the administrator could not modify the data during the mediation process.³⁹³¹ Touch had editors for TAP files only.³⁹³²

1775. Touch's information technology department regularly saved the call data records, following established procedures, to magnetic tapes, in read-only format.³⁹³³ Backups were kept in a secure area.³⁹³⁴ The database was rebuilt every two months on the test machine from the database backups and Touch then retained the backup files for a predetermined period or indefinitely.³⁹³⁵ Additionally, Touch held approximately two years of live data for quick customer queries.³⁹³⁶ Since 1997, Touch has archived billing-related call data records. As of October 2001, it also archived non-billing information and since January 2005, it archived the raw data from the switch.³⁹³⁷

1776. Witness 705 explained the process of retrieving the call data records from the archives.³⁹³⁸ The database administrator restored the database from the data archived on the tapes with a special tape reader. The analysts with read-only access to the database created a query for the relevant period and the results were sent back to the entity requesting information.³⁹³⁹

1777. The call data record for a call or SMS fits into one or two rows. A single row call data is where a caller, for example, receives an announcement such as having insufficient credit on the account. These calls are considered invalid in the system.³⁹⁴⁰ Another explanation for a single row data record is when a call is not established, meaning a call not made because the network is congested, the call is too short to be considered an actual call or the caller ends the call before it connects.³⁹⁴¹

³⁹⁴¹ Exhibit P826 (Witness PRH705's statement of 16 November 2015), paras 256-257.

1778. In addition to the 2004 shape files and the cell data from 2004 and 2005, Touch also provided the Prosecution with data from drive testing between 2005 and 2007.³⁹⁴² Touch used the prediction tool brand ‘Planet’ until the end of 2004, and from July 2007, it used Asset. It produced best server coverage maps for radio planning and optimisation.³⁹⁴³

1779. Witness 705 explained how Touch generated shape files in 2004, which included the location, azimuth and tilt information centralised in a site database.³⁹⁴⁴ It collected and recorded on a CD the geographic coordinates of cell sites using commercially available GPS receivers and accounted for slight consequential changes in the data as a result of transferring the data from the GPS into another propagation tool, namely Planet or Asset.³⁹⁴⁵ This information was used to generate shape files which illustrate the cell sites and the site and cell parameters.³⁹⁴⁶

4. Cell site related issues

1780. Witness 705 testified about Touch’s practices in recording and storing basic information of its cell sites.³⁹⁴⁷ The technical department’s radio network planning unit had a centralised Microsoft Access database (using SQL language), to store current data about Touch’s cell sites.³⁹⁴⁸ As part of its everyday business practice, Touch recorded in this database the cell name, the cell global identity (CGI) number, the geographic coordinates, the antenna height, the azimuth values, the effective radiated power (ERP) of the antennas and a parameter termed ‘Max_Tx_BTS’, which was used for 2G equipment.³⁹⁴⁹ During Witness 705’s time at Touch, the database was updated daily.³⁹⁵⁰

1781. In 2004 and 2005, changes to the cells across the network occurred only once or twice a month.³⁹⁵¹ By 2016, daily drive tests of the network by the radio network planning unit were necessary to optimise the network by changing the azimuth or tilt of an under-functioning cell site, due to higher demand and more network activities.³⁹⁵²

1782. Witness 705 described the process. Engineers conducted drive tests using a test mobile system with a Touch SIM card inserted and connected to a computer which logged all interactions between the mobile and the network as they drove on Lebanon's roads. Radio engineers then analysed these logs and used their findings to optimise the network.³⁹⁵³

1783. From around 2013 or 2014, Touch kept records of the changes to cell sites.³⁹⁵⁴ Riggers changing the cell site's azimuth or tilt filled out a document recording the changes.³⁹⁵⁵ The database was updated from these documents.³⁹⁵⁶ The witness was sceptical about whether every change in the network had been recorded.³⁹⁵⁷ However, Touch's engineers monitored the 'key performance indicators' of the network, which would have alerted them to a radical change in the cell site's parameters or a dramatic degrading of the system.³⁹⁵⁸

1784. Touch, unlike Alfa, kept the coverage maps for all its cell sites on air in 2004 and 2005 and provided them to the UNIIIC and the Prosecution. Touch's technical department exported its cell site data from the database into Excel documents to save the network's settings at particular points in time.³⁹⁵⁹ Touch provided the Prosecution with seven Excel worksheets containing Touch's cell site data saved on: 15 February 2005, 1 April 2005, 12 August 2006, 17 September 2008, 21

November 2009, 3 May 2010 and 7 July 2010,³⁹⁶⁰ and the radio planning unit provided a radio frequency plan for Monday 14 February 2005.³⁹⁶¹

1785. Touch had changed some of the cell names to make them more consistent with their locations, but it did not mean that the cell's locations had changed.³⁹⁶² The cell global identity (CGI) number includes Touch's network code, the location area code (LAC) and the cell identification number. The first digit of the location area code refers to the MSC that serves the cell.³⁹⁶³

1786. Touch generally recorded and stored the date when a site was put on air.³⁹⁶⁴ It also recorded and stored its geographic coordinates, taken using commercial GPS devices.³⁹⁶⁵ The values, after conversion, were entered in Touch's propagation tool to create coverage maps.³⁹⁶⁶ For remote areas and when lacking resources for drive testing, Touch used a propagation tool to produce coverage maps.³⁹⁶⁷

1787. One cell site may have one to six sectors.³⁹⁶⁸ Before it was put on air, the azimuth values of the directional antenna were taken with a compass and recorded in the SQL database.³⁹⁶⁹ Changes to the azimuth, due to optimisation of the network or physical changes on the cell site, were also recorded.³⁹⁷⁰

1788. The best server coverage map of a cell shows the points where the best signal of the cell is predicted.³⁹⁷¹ Coverage predictions should be used as an ‘indication’ or ‘estimation’ of two-dimensional coverage at ground level.³⁹⁷²

1789. Touch’s best server coverage maps of 2004 could not be reproduced because it did not archive the 2004 terrain and clutter maps, and Planet’s licence had expired at the end of 2004.³⁹⁷³

1790. Touch’s coverage maps had been built on a digital elevation map using a 20 metre resolution.³⁹⁷⁴ The clutter model, an additional map layer entered into the propagation tool, showed vegetation and buildings.³⁹⁷⁵ Site and cell parameters, such as the geographic coordinates of the cell towers, the azimuth and tilt of the cells, the antenna height and the effective radiated power (ERP) of the antenna, were entered in the propagation tool.³⁹⁷⁶ Propagation models were assigned to each cell in the network.³⁹⁷⁷ They were calibrated using drive test results to provide cell coverage values closest to reality and to reach acceptable ‘key performance indicators’.³⁹⁷⁸ Touch outsourced their calibration to another company. Propagation models are calibrated ‘once and then’, unless there are significant changes in the clutter or in the environment.³⁹⁷⁹

1791. Touch, unlike Alfa, provided the Prosecution with two ‘snapshots’ of the database it maintained.³⁹⁸⁰ Specifically, Touch provided a coverage map of its cells in GIS (geographical information system) shape files format produced by its technical department. Additionally, Touch provided data from drive tests for 39 cells that had been put on air after 16 February 2004, determining the approximate coverage of each cell.³⁹⁸¹ It provided also the geographical data of

³⁹⁷¹ Witness PRH705, T. 5 May 2016, pp 91-92, T. 20 July 2016, pp 87-90, 92, T. 21 July 2016, p. 41.

Lebanon and a copy of the software used to display the coverage files, namely, Esri ArcView 3.1.³⁹⁸²

5. Clarification of discrepancies

1792. The Prosecution compared the sets of data included in Touch's cell site data of 15 February 2005³⁹⁸³ and its best server coverage maps of 16 February 2004.³⁹⁸⁴ It noted some discrepancies between the two in relation to the geographic coordinates of 19 cell sectors and the azimuths of five cells (on three cell towers) and sent a request for assistance to Touch seeking clarification.³⁹⁸⁵

1793. In response, Touch copied the two sets of geographic coordinates of the 19 cell sectors into a table and highlighted the correct coordinates. The response stated that the differences in the coordinates were due to inaccuracies of commercial GPS devices and the conversion of the coordinates from decimal to other formats. Touch further explained that the changes in the azimuth values resulted from the continuous optimisation process, including relocation of cell sites.³⁹⁸⁶

E. General submissions in relation to Witnesses 705 and 707 and their evidence

1. Prosecution

1794. The Prosecution, in oral closing submissions, argued that the call data records and the cell site data provided by Alfa and Touch—which constitute business records created in the normal course of business—were sufficiently reliable for the Trial Chamber to use.

1795. Mr Philips, Prosecution counsel explained, used this data to conduct cell site analysis as a reliable technique to determine general locations and the movements of mobiles relevant to the Prosecution case. The non-contemporaneous data received from Alfa and Touch and the inherent margin of error related to the predicted best coverage maps should be assessed on the basis of the

totality of the evidence. This includes the patterns of call activity and the peculiar and exceptional manner in which the network mobiles operated.³⁹⁸⁷

1796. The Defence argued generally that the telecommunication companies did not maintain centralised and contemporaneous databases of cell coordinates, azimuths and tilts. In response to these arguments, the Prosecution submitted that Witness 705 highlighted that Touch's radio planning unit stored information regarding azimuth, tilt and address location of cell masts in its SQL database and that this data could be exported into Excel files.³⁹⁸⁸ The Prosecution added that Touch's radio planning unit prepared the shape files for 2004, which were provided to it in 2010.³⁹⁸⁹

1797. In response to the Ayyash and Oneissi Defence suggesting that Witness 707 referred to a kind of map other than a coverage map, the Prosecution submitted that the witness merely clarified the distinction between the marketing JPEG maps—which were similar to Alfa's coverage maps of various areas in Beirut³⁹⁹⁰—and the shape files that Alfa had provided to the Prosecution.³⁹⁹¹

1798. The Prosecution rejected the Merhi Defence's suggestion that where a mobile cannot connect to the best serving cell in an urban area this means that it is in a larger potential area because of the number of surrounding cells. It argued that this suggestion contradicts Witness 705's and Mr Philips's evidence that, in urban environments, the proximity between the best serving cell and the six surrounding cells would result in a mobile being located in a small geographic area.³⁹⁹²

1799. The Oneissi Defence suggested in its final trial brief that the call data records could have been manipulated and that there was no evidence that the Prosecution had checked them against the original binary source data. In response, the Prosecution stated that this argument had no evidentiary or legal basis. While Mr Philips could not exclude that call data records could be manipulated, his overall testimony was that it would have been impossible in this case and that it

³⁹⁹² Merhi Defence final trial brief, paras 127-128; Prosecution final trial brief, paras 58-59; Prosecution closing submissions, T. 11 September 2018, p. 58, referring to Witness PRH705, T. 6 May 2016, p. 6; John Edward Philips, T. 20 August 2015, pp 4-6.

would have required a ‘reverse cell site analysis’ to review all relevant calls and locations to ensure the consistency in the time and place on both ends of the call and within the larger framework of the mobile’s calls. Further, this would only have been possible at the ‘mediation stage’, meaning when the records were in an unintelligible, binary form.³⁹⁹³ According to Mr Philips, this would have required manipulating both Alfa’s and Touch’s records.³⁹⁹⁴

2. Defence

(a) Common Defence submissions

1800. Counsel for the four Accused argued that Alfa and Touch lacked a standard data collection protocol or storage procedure. This, coupled with the human and environmental errors resulting from manual data recording and the possibility of manipulating the call data records, cast doubt on the entire record making and record keeping process of cell site information for the relevant period. The veracity of Alfa’s and Touch’s data cannot be confirmed.³⁹⁹⁵

1801. Alfa failed to keep records for each specific category of cell site information during the relevant period.³⁹⁹⁶ Neither Alfa nor Touch could confirm when the cell site information used by the Prosecution was recorded or by whom.³⁹⁹⁷ The deficiencies and lack of safeguards in Alfa’s and Touch’s telecommunications data rendered the telecommunications evidence itself unreliable and devoid of any weight. Mr Philips, Mr Donaldson and Mr Platt were therefore unable to provide reliable evidence.³⁹⁹⁸

³⁹⁹³ Prosecution closing submissions, T. 11 September 2018, pp 48-49, referring to John Edward Philips, T. 30 August 2016, pp 71-73. Witness 707 similarly referred to the theoretical possibility of manipulating call data records, exhibit P1192 (Statement of Witness PRH707, 11 November 2015), para. 133.

³⁹⁹⁴ Prosecution closing submissions, T. 11 September 2018, pp 48-49, referring to John Edward Philips, T. 30 August 2016, pp 71-73; exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), pp 98-99.

³⁹⁹⁵ Ayyash Defence final trial brief, paras 236, 239-240; Ayyash Defence closing submissions, T. 17 September 2018, pp 64-65; Merhi Defence final trial brief, paras 103, 106-108, 111; Oneissi Defence final trial brief, para. 132; Sabra Defence final trial brief, paras 132, 146-147, 149-150.

³⁹⁹⁶ Ayyash Defence final trial brief, para. 250.

³⁹⁹⁷ Ayyash Defence final trial brief, para. 236.

³⁹⁹⁸ Ayyash Defence final trial brief, paras 186-187, 263 (with respect to the weight to be assigned to the telecommunications evidence, the Ayyash Defence refers to four of its written submissions where it elaborates this argument: F2471, Public Redacted Version of: Ayyash Defence response to ‘Prosecution Motion for the Admission of Witness Statements Signed by Witness PRH707’, 26 February 2016; F2677, Ayyash Defence Submissions on the Evidence of Prosecution Witness PRH707, 29 July 2016; F2678, Public Redacted Version of Ayyash Defence Submissions on the Evidence of Prosecution Witness PRH705 of 29 July 2016, 3 August 2016; F2683, Ayyash Defence Further Submissions on Prosecution Motions Related to Evidence From Call Service Providers, 8 August

1802. The Defence of each Accused challenged the reliability of the telecommunications evidence provided by Touch and Alfa through Witnesses 705 and 707. The Ayyash, Sabra, and Oneissi Defence also opposed the classification of these records and documents as business records for reasons such as a disregard for the human errors that occur when manually registering cell site values.³⁹⁹⁹

1803. The four sets of Defence counsel had challenged Witnesses 705's and 707's evidence during trial.⁴⁰⁰⁰ The Ayyash and Oneissi Defence argued that the Prosecution made a strategic decision not to call, or was not precluded from calling, multiple witnesses with specific knowledge from Alfa's and Touch's various departments, who could have effectively responded to questions in cross-examination.⁴⁰⁰¹ The lack of personal knowledge and inability to question those with such knowledge not only stripped the telecommunications evidence of any weight, but has denied all of the Accused the right to a fair trial.⁴⁰⁰²

1804. Defence counsel also argued that, in the absence of a standardised, contemporaneous storage procedure or regularly updated database for cell site information in 2004 and 2005, the cell site information that Alfa sent to the Prosecution was recorded on the personal computer attributed to an Alfa engineer.⁴⁰⁰³

2016); Ayyash Defence closing submissions, T. 17 September 2018, pp 64-65; Merhi Defence final trial brief, para. 89; Merhi Defence closing submissions, T. 18 September 2018, p. 112.

³⁹⁹⁹ Ayyash Defence final trial brief, paras 212-221, 236, 239; Sabra Defence final trial brief, paras 107-110, 150; Oneissi Defence final trial brief, paras 54-56, 66.

⁴⁰⁰⁰ See for example, F2471, Public Redacted Version of: Ayyash Defence response to 'Prosecution Motion for the Admission of Witness Statements Signed by Witness PRH707', 26 February 2016; F2472, Public Redacted Version of "Badreddine Defence Response to 'Prosecution Motion for the Admission of Witness Statement signed by Witness PRH707'", 29 February 2016; F2470, Sabra Defence Response to "Prosecution Motion for the Admission of Witness Statement Signed by PRH707", 26 February 2016; F2476, *Adjonction de la défense de Merhi aux réponses des défenses d'Ayyash et Badreddine à la* "Prosecution Motion for the Admission of Witness Statement Signed by Witness PRH707", 29 February 2016; F2474, Defence for Hussein Hassan Oneissi Joinder to "Ayyash Defence Response to 'Prosecution Motion for the Admission of Witness Statements Signed by Witness PRH707'" dated 26 February 2016, 29 February 2016.

⁴⁰⁰¹ Ayyash Defence final trial brief, para. 225; Oneissi Defence final trial brief, para. 48; see also Ayyash Defence closing submissions, T. 17 September 2018, pp 48, 58, 61.

⁴⁰⁰² Ayyash Defence final trial brief, para. 225; Ayyash Defence closing submissions, T. 17 September 2018, pp 51, 57-58.

⁴⁰⁰³ For example, the Oneissi Defence referred specifically to exhibit P775 (Excel spreadsheet with mast and azimuth information, mast locations and azimuth orientations, Annex 14 (2) to Witness 707's statement of 11 November 2015); exhibit P778 (Cell Tower Information as provided by Alfa including Site co-ordinates in Eastings / Northings - Sector Azimuth - Tower type); exhibit P1123 (ArcView shape files Alfa); exhibit P1124 (CD with data for Alfa cell sectors in July 2005), Oneissi Defence final trial brief, para. 58.

1805. Witness 707 testified that the azimuth and coordinate values were found on a computer belonging to an unnamed former employee in Alfa's radio department. Defence counsel submit that this data is personal information maintained by company employees which was not kept through a standard procedure in the normal course of business to ensure its reliability.⁴⁰⁰⁴ Where they had obtained the data, what changes they had made or for what purpose they even had it is not in evidence.⁴⁰⁰⁵

1806. Witness 707 even cautioned that the data that Alfa provided to the UNIIIC in 2007 for 2004 and 2005 would not have been as accurate had the records been collected in 2005.⁴⁰⁰⁶ Based on the procedures Alfa used to record and store its data, it could confirm the values of the primary set of coordinates that existed only in 2010 and the secondary set values relating only to 2007.⁴⁰⁰⁷ Witnesses 705 and 707 were unable to explain how the cell site data was collected and recorded and the methods used to produce shape files; and Witness 707 admitted to not knowing the exact date of the azimuth values given to the Prosecution.⁴⁰⁰⁸

1807. Although the Trial Chamber found that the evidence provided by Witnesses 705 and 707 was *prima facie* reliable for the purpose of admission into evidence because it came from 'qualified personnel', no evidence was led as to the qualifications of anyone who provided information to Witnesses 705 and 707 at the time they provided their statements or who produced or retrieved the documents.⁴⁰⁰⁹ Due to a lack of continuity in the system or employees from 2004 and 2005 to present, it was not only difficult but in some cases impossible for the witnesses to consult the employees who produced the documents at the time or had contemporaneous personal knowledge.⁴⁰¹⁰

⁴⁰⁰⁴ Ayyash Defence final trial brief, paras 236, 244; Merhi Defence final trial brief, para. 103; Merhi Defence closing submissions, T. 19 September 2018, p. 14; Oneissi Defence final trial brief, paras 58-59; Oneissi Defence closing submissions, T. 19 September 2018, p. 66; Sabra Defence final trial brief, para. 149.

⁴⁰⁰⁵ Sabra Defence final trial brief, para. 149.

⁴⁰⁰⁶ Ayyash Defence final trial brief, para. 242.

⁴⁰⁰⁷ Sabra Defence final trial brief, para. 154.

⁴⁰⁰⁸ Merhi Defence final trial brief, paras 101, 109; Ayyash Defence final trial brief, para. 239; Ayyash Defence closing submissions, T. 17 September 2018, p. 65.

⁴⁰⁰⁹ Ayyash Defence final trial brief, para. 223; Ayyash Defence closing submissions, T. 17 September 2018, pp 51, 53-54, 62.

⁴⁰¹⁰ Ayyash Defence final trial brief, para. 224; Ayyash Defence closing submissions, T. 17 September 2018, p. 57.

1808. Changes to a network from factors such as building height, topography and wind velocity can cause radical changes in tilt and by extension reduce a cell's best server coverage.⁴⁰¹¹ As to cell allocation and the impact of directed retry on cell site analysis, directed retry at Alfa did not take into account the proximity of the next most appropriate cell, but only its signal strength. Overlapping usable signals from several cell sites, slow fading and differing start and end cells in the call data records for the same call also negatively affect the cell site analysis.⁴⁰¹²

1809. Based on a specific example on the afternoon of Monday 14 February 2005 where a mobile connected to a cell site while outside its coverage area, the Oneissi Defence argued that the call data records and the theoretic maps alone are insufficient to determine a mobile's location. And, neither Witness 707 nor Mr Philips gave evidence that such cases constitute exceptional circumstances and do not render the cell site analysis unreliable.⁴⁰¹³

(b) Ayyash Defence

1810. The Ayyash Defence additionally submits that the evidence on the recorded azimuth values is not accurate because Witness 707 verified that Alfa could not confirm them.⁴⁰¹⁴ Alfa had no protocol for recording changes to the system, meaning that the changes were either not recorded or the file was merely updated without storing the previous values.⁴⁰¹⁵ Further, as Witness 707 could not provide information on the origin of the files that Alfa sent to the Prosecution, only the contemporaneous data for the cell identity codes from 2005 was reliable.⁴⁰¹⁶

1811. Witnesses 705 and 707 had insufficient knowledge on gathering and storing telecommunications data at Touch and Alfa to provide reliable evidence. Instead, they relied on hearsay information from unnamed colleagues from various Touch and Alfa departments, without affording the Defence the possibility to cross-examine them.⁴⁰¹⁷

⁴⁰¹¹ Merhi Defence final trial brief, para. 125; Oneissi Defence final trial brief, para. 77.

⁴⁰¹² Oneissi Defence final trial brief, paras 145, 147-149.

⁴⁰¹³ Oneissi Defence final trial brief, paras 150-152. In this example, an Al-Jazeera employee, Witness PRH115, went to a tree near his work to collect a video tape containing the claim of responsibility for the attack, *see* paras 5590, 5600, 5671-5672, 5675.

⁴⁰¹⁴ Ayyash Defence final trial brief, para. 248.

⁴⁰¹⁵ Ayyash Defence final trial brief, paras 243.

⁴⁰¹⁶ Ayyash Defence final trial brief, paras 245-246.

⁴⁰¹⁷ Ayyash Defence final trial brief, paras 226-228, 230-232, 234.

1812. The Defence did not know the identities of the Alfa employees who assisted Witness 707 and who were present during meetings with the Prosecution nor what they said. As both the network and its employees have undergone drastic changes since 2004, it cannot be assumed that the employees had first-hand knowledge of the topics to which they spoke.⁴⁰¹⁸ Witness 705 had never worked with call data records before becoming Touch's designated representative to the Special Tribunal.⁴⁰¹⁹ Nor did he have any experience with the production of predicted coverage maps or consult anyone on this.⁴⁰²⁰

1813. Witness 705 also had no personal knowledge of all the evidence about which he testified and took 'for granted' the information provided to him by Touch.⁴⁰²¹ The witness was the second designated Touch representative to provide a statement to the Special Tribunal. He had made a lengthy statement to the Prosecution, and as an example of his lack of personal knowledge, the Ayyash Defence noted that from the 343 paragraphs of his 73-page first statement, only 13 belonged to Witness 705 personally, while 325 paragraphs were 'word for word' what the previously designated representative had stated in his written statement to the Prosecution. The witness had only made 18 changes to the 343 paragraphs.⁴⁰²²

1814. Witness 705 was only made aware of crucial components of Touch's data, such as its centralised database and the 2004 and 2005 snapshots of its database, through his predecessor's written statement and conversations with the Prosecution.⁴⁰²³ The Prosecution did not establish the provenance of the majority of Witness 705's evidence.⁴⁰²⁴

1815. Witness 705 was also unclear on the frequency, practice or purpose of Touch taking snapshots of its database, stating that a snapshot was not taken after each change and therefore a change in azimuth would not have been noted. The Ayyash Defence termed it an occasional 'static

⁴⁰¹⁸ Ayyash Defence final trial brief, para. 229.

⁴⁰¹⁹ Ayyash Defence final trial brief, para. 231; Ayyash Defence closing submissions, T. 17 September 2018, p. 49.

⁴⁰²⁰ Ayyash Defence final trial brief, para. 231; Ayyash Defence closing submissions, T. 17 September 2018, p. 50.

⁴⁰²¹ Ayyash Defence final trial brief, para. 232; Ayyash Defence closing submissions, T. 17 September 2018, pp 55-56.

⁴⁰²² Ayyash Defence final trial brief, paras 232-234; Ayyash Defence closing submissions, T. 17 September 2018, p. 50.

⁴⁰²³ Ayyash Defence final trial brief, para. 237.

⁴⁰²⁴ Ayyash Defence final trial brief, para. 222; Ayyash Defence closing submissions, T. 17 September 2018, p. 54.

representation of the database saved' and argued that this practice made the database an insufficiently reliable source for creating any predicted best server coverage map.⁴⁰²⁵

1816. Moreover, Touch constantly changed its cell site database due to physical adjustments made by its engineers to optimise the quality of the network in response to customer complaints.⁴⁰²⁶ Touch manually recorded tilt and azimuth changes in 2004 and 2005 and Witness 705 confirmed that the Touch cell site data was subject to human and environmental errors. He did not know how changes were recorded in the Touch database in 2004 and 2005. He testified that in 2010, only five to ten people had access to and could change Touch's database, without explaining how or by whom the database was controlled in 2004 and 2005.⁴⁰²⁷

1817. Further, admitting any document provided by a company under the 'business records exception', given the reliability assessment granted in domestic jurisdictions to that category of evidence, risks expanding the definition and thereby eroding any protection it usually affords.⁴⁰²⁸

1818. Specifically, for any weight to be given to such records, the tendering Party must demonstrate some measure of accuracy.⁴⁰²⁹ The absence of contemporaneous information regarding cell sites and predicted best server coverage maps, and Witnesses 705 and 707's lack of contemporaneous knowledge, created 'fatally flawed' and unreliable telecommunications data which lack evidentiary weight. This deprived the Defence of the opportunity to challenge the evidence on the underlying telecommunications records.⁴⁰³⁰

(c) Merhi Defence

1819. The Merhi Defence highlights that Witness 707 only began working at Alfa in 2012 and lacked knowledge of the 2004 and 2005 data. The Alfa employees who would have been best placed to testify on the reliability of the data received were no longer employed there.⁴⁰³¹

⁴⁰²⁵ Ayyash Defence final trial brief, paras 240-241.

⁴⁰²⁶ Ayyash Defence final trial brief, para. 238.

⁴⁰²⁷ Ayyash Defence final trial brief, para. 239.

⁴⁰²⁸ Ayyash Defence final trial brief, para. 217.

⁴⁰²⁹ Ayyash Defence final trial brief, para. 217; Ayyash Defence closing submissions, T. 17 September 2018, p. 62.

⁴⁰³⁰ Ayyash Defence final trial brief, paras 210-211; Ayyash Defence closing submissions, T. 17 September 2018, p. 48.

⁴⁰³¹ Merhi Defence final trial brief, para. 99.

1820. Alfa consistently changed azimuth values without keeping a record of the changes and Witness 707 was unable to confirm the extent of the impact the azimuth changes had on the network and whether the received azimuth values correspond to the date of the site installation.⁴⁰³² Witness 707 could not provide key information about cell sites, tilt and azimuth, including the discrepancies in the provided data.⁴⁰³³ As Alfa did not save data related to antennas' tilt and radius before 2015, the real time azimuth changes from 2004 to 2007 cannot be retrieved.⁴⁰³⁴

1821. Witness 707 could not answer many of the questions posed relating to Alfa, including whether the azimuths provided to the Prosecution corresponded to those of 2004 and 2005.⁴⁰³⁵ And he admitted that Alfa technicians failed to register tilt adjustments in 2004 and 2005.⁴⁰³⁶

(d) Oneissi Defence

1822. The Oneissi Defence additionally submits that Witness 707 had no experience in using Asset, which Alfa used to create the coverage maps on which the Prosecution relied. Further, he did not know whether Alfa used a clutter model in Asset dating from 2004 and 2005.⁴⁰³⁷ The Prosecution also relied on outdated azimuth values of cell sites as a result of unregistered complaints about weak coverage and weather-induced azimuth changes, and the significant addition of new cell sites after 2005.⁴⁰³⁸ Mr Philips stated that relying on theoretical coverage maps for determining the location of a mobile was 'second-guessing'.⁴⁰³⁹

1823. Witness 707 was not an Alfa employee when the vast majority of the Alfa evidence was created. He did not communicate directly with any Alfa technicians who presumably would have been responsible for producing the data, but instead spoke with those whom he had a 'direct hierarchical relationship'. Witness 707 prepared for his testimony by asking questions of

⁴⁰³⁶ Merhi Defence final trial brief, para. 125.

⁴⁰³⁷ Oneissi Defence final trial brief, para. 47.

⁴⁰³⁸ Oneissi Defence final trial brief, paras 62-63.

⁴⁰³⁹ Oneissi Defence final trial brief, paras 130, 159.

colleagues from various departments who themselves may have even consulted other colleagues because the witness did not have personal access to the records.⁴⁰⁴⁰

1824. Witness 707 could only provide remote hearsay evidence in relation to the majority of Alfa's telecommunications data which was used in the electronic presentation of evidence, including Alfa coordinates and azimuth information and the primary source of Alfa theoretical coverage maps. This was because Alfa sent the data when Witness 707 was not employed there.⁴⁰⁴¹ Witness 707's evidence therefore had no probative value.⁴⁰⁴²

1825. The danger of relying upon an anonymous individual's personal database was made clear during Witness 707's cross-examination which showed 39 discrepancies in recorded azimuths found in two Alfa cell site lists received by the Prosecution four months apart.⁴⁰⁴³ Twenty-three of the 39 discrepancies showed differences between 20 and 99 degrees and ten showed a difference greater than 100 degrees.⁴⁰⁴⁴ Witness 707 explained in response that it could have been a result of the 'difference depending on which database the engineer used' when extracting the values.⁴⁰⁴⁵

1826. The Prosecution failed to call any witnesses who could have given direct evidence about Alfa's telecommunications data.⁴⁰⁴⁶ Additionally, Witness 707's evidence should be excluded under Rule 149 (D) because it could not be tested, it is remote hearsay and Witness 707 lacked personal knowledge.⁴⁰⁴⁷ If it is not excluded, the Trial Chamber should exercise caution in assessing the weight of Witness 707's evidence.⁴⁰⁴⁸

1827. Finally, the Oneissi Defence argues that the call data records could have been manipulated, and that there was no evidence that the Prosecution checked them against the original binary source data, which cannot be manipulated.⁴⁰⁴⁹

⁴⁰⁴⁰ Oneissi Defence final trial brief, paras 44, 47, 155; Oneissi Defence closing submissions, T. 19 September 2018, pp 61-62.

⁴⁰⁴¹ Oneissi Defence final trial brief, para. 44.

⁴⁰⁴² Oneissi Defence final trial brief, para. 49.

⁴⁰⁴⁶ Oneissi Defence final trial brief, paras 49, 51.

⁴⁰⁴⁷ Oneissi Defence final trial brief, paras 43, 49-51.

⁴⁰⁴⁸ Oneissi Defence final trial brief, para. 52.

⁴⁰⁴⁹ Oneissi Defence final trial brief, para. 132.

(e) Sabra Defence

1828. The Sabra Defence similarly notes that, even though Alfa could confirm the location of any cell site that is still in the same location as it was in 2004 and 2005, it could not confirm the azimuth and tilt values for those years.⁴⁰⁵⁰

1829. Further, ‘Alfa’s network has changed substantially between 2004 and present day’ although Witness 707 was uncertain of the extent to which azimuths changed from their installation in 2004 and 2005, or from then until 2010. He acknowledged that the data received years after the values have been recorded cannot be as accurate as values that had been collected contemporaneously.⁴⁰⁵¹

1830. Further, the Prosecution did not present the results of the limited drive tests conducted in 2007 and 2010 in specific locations in Beirut because, according to Mr Philips, they were unlikely to yield fruitful results. They would ‘provide ammunition’ to the Defence.⁴⁰⁵²

F. Findings on Witnesses 705 and 707 and their evidence

1. Witnesses 707 and 705 as corporate witnesses and business records

1831. In June 2015, the Lebanese Ministry of Telecommunications designated Witness 707 as the authorised representative for Alfa to testify before the Special Tribunal about its business records and practices.⁴⁰⁵³ In October that year, Touch nominated Witness 705 as the authorised representative for the company, and his nomination was also approved by the Lebanese Minister of Telecommunications.⁴⁰⁵⁴

1832. Both witnesses produced lengthy statements with detailed annexes. Their evidence and the annexes to their statements were the subject of strong Defence challenges.

⁴⁰⁵⁰ Sabra Defence final trial brief, para. 148.

⁴⁰⁵¹ Sabra Defence final trial brief, paras 151-152.

⁴⁰⁵² Sabra Defence final trial brief, para. 145.

⁴⁰⁵³ Corrected version of decision on Prosecution motion to admit Witness PRH707’s statements, para. 4.

⁴⁰⁵⁴ Decision to add Witness PRH705 to the Prosecution’s witness list, para. 3; F2471, Prosecution Motion to add PRH705 to its Witness List, 17 November 2015, para. 3.

1833. The Trial Chamber received parts of their statements and relevant annexes into evidence,⁴⁰⁵⁵ and heard substantial oral testimony, including many days of cross-examination by Defence counsel. These witness statements and accompanying annexes describe in detail Alfa's and Touch's networks and business practices, and the generation, retrieval, storage and business use of Alfa's and Touch's call data records and the cell site data.⁴⁰⁵⁶ The Trial Chamber also permitted the Prosecution to supplement or replace parts of Witnesses 705's and 707's oral evidence with the written statements that they adopted under Rule 156 (iii).⁴⁰⁵⁷

1834. Defence counsel objected to admitting the written statements arguing that to do so would hinder their ability to perform effective cross-examination because the statements may contain hearsay or 'double hearsay'.⁴⁰⁵⁸ In deciding to admit portions of the statements into evidence, the Trial Chamber reiterated that no rule of international criminal law procedural law or of the Special

⁴⁰⁵⁵ In addition to the annexes to Witness 705's written statements analysed above, the Trial Chamber also carefully considered other annexes in terms of their content and in the context of the other evidence relevant to the creation, storage and retrieval of the call data records and cell site data, as well as generally on the provenance, accuracy, integrity and authenticity of the telecommunications evidence. The annexes considered include: exhibits P467 (Annexes 8, 10 and 12 to Witness PRH705's statement of 16 December 2015, Touch and LibanCell application, identification and customer info forms); P826.3 (Copy of post-paid service contract); P826.22 (Purchase orders for SIM cards); P826.24 (Touch's security procedures); P826.25 (Touch's security procedures); P826.26 (Chart with security services provided to Touch by three security companies); P1097 (Information from Touch on the departments consulted to verify information); P1098 (Unicode converter provided by Touch). The Trial Chamber also carefully considered the annexes to Witness 707's written statements in terms of their content and in the context of the other relevant evidence. The considered annexes include: exhibits P770 (Alfa call data records before August 2004); P771 (Alfa call data records after August 2004); P774 (Alfa response to a UNIIIC request for assistance providing call data records for Lebanon between January 2006 and December 2007); P781 (Folder entitled 'Drive Test' containing 5 maps with drive test results); P791 (Extracts of Alfa's services and procedures in 2004 and 2005); P800 (Azimuth values and specific details of Alfa cell sectors SOLIDR1, SOLIDR2 and SOLIDR3); P801 (Clarification and information on cell sector MOVPIK1); P1192.4 (Explanation on timing and clocks for call data records, Annex 9 to Witness PRH707's statement of 11 November 2015).

⁴⁰⁵⁶ Corrected version of decision on Prosecution motion to admit Witness PRH707's statements, paras 9, 75; Decision on Prosecution motion to admit Witness PRH705's statements, paras 5, 21; Decision on admission of Witness PRH705's statements and annexes into evidence, para. 128; Decision on admission of Witness PRH707's statements and annexes into evidence, para. 198.

⁴⁰⁵⁷ Corrected version of decision on Prosecution motion to admit Witness PRH707's statements, para. 42; Decision on Prosecution motion to admit Witness PRH705's statements, para. 14. Rule 156 permits the Trial Chamber to receive into evidence in lieu of oral evidence, a written statement or transcript of evidence, going to proof of the acts or conduct of an accused as charged in the indictment only if the following conditions are satisfied: [...] (iii) the witness attests that the statement accurately reflects his declaration of what he would say if examined. Rule 156 applied to Witnesses 705's and 707's statements insofar as their evidence goes to the acts and conduct of the Accused as charged in the amended consolidated indictment.

⁴⁰⁵⁸ Corrected version of decision on Prosecution motion to admit Witness PRH707's statements, paras 16-17, 22, 48; Decision on Prosecution motion to admit Witness PRH705's statements, paras 10, 18.

Tribunal's Rules prohibited the Trial Chamber from admitting hearsay evidence and that an assessment of hearsay is a matter of evidentiary weight.⁴⁰⁵⁹

1835. The Trial Chamber determined that selected paragraphs of Witness 707's statements were relevant to Alfa's generation, storage and business use of call data records and cell site data, and had probative value as to the reliability of Alfa's records and data.⁴⁰⁶⁰ In the decision admitting these paragraphs into evidence, it held:

The Trial Chamber has carefully noted the objections by Defence counsel based on reliability and in particular as to whether the witness should be permitted to testify about matters that are not strictly within his personal knowledge. The Trial Chamber is well aware of the limitations of Witness 707's knowledge, and in particular of Alfa's business practices before he was employed there, and of technical issues that others have assisted him with.⁴⁰⁶¹

1836. The Trial Chamber similarly held that the relevant portions of Witness 705's statements and annexes were relevant to Touch's generation, storage and business use of call data records and cell site data.⁴⁰⁶² Given the absence of international criminal law procedural law in relation to corporate witnesses, the Trial Chamber reiterated that neither the Trial Chamber nor the Parties were bound by domestic rules of evidence governing this category of witnesses.⁴⁰⁶³

1837. Further, mid-testimony, the Prosecution belatedly proposed admitting Witness 707's three statements into evidence in their entirety. However, as the Prosecution had already led nine days of evidence from the witness, the Trial Chamber refused the Prosecution's late application. Having considered that the witness had already testified on numerous matters already covered in the three statements, the Trial Chamber did not see the need to receive repetitive evidence.⁴⁰⁶⁴ Instead, it

⁴⁰⁵⁹ Corrected version of decision on Prosecution motion to admit Witness PRH707's statements, paras 49-50; Decision on Prosecution motion to admit Witness PRH705's statements, para. 19; Decision on admission of Witness PRH705's statements and annexes into evidence, para. 21; Decision on admission of Witness PRH707's statements and annexes into evidence, paras 44, 48; Decision on admission of Prosecution's cell site evidence, para. 65.

⁴⁰⁶⁰ Corrected version of decision on Prosecution motion to admit Witness PRH707's statements, paras 51, 53.

⁴⁰⁶³ Corrected version of decision on Prosecution motion to admit Witness PRH707's statements, para. 52; Decision on admission of Witness PRH705's statements and annexes into evidence, paras 20-21; Decision on admission of Witness PRH707's statements and annexes into evidence, para. 53; Decision on admission of Prosecution's cell site evidence, para. 71.

⁴⁰⁶⁴ Corrected version of decision on Prosecution motion to admit Witness PRH707's statements, paras 43-45.

held that the paragraphs from Witness 707's statements and annexes selected and proposed by the Prosecution were admissible, but delayed admitting them into evidence until the conclusion of the witness's evidence and after hearing from Defence counsel.⁴⁰⁶⁵

1838. Likewise, the Trial Chamber denied the Prosecution's motion to admit the written statements and annexes of Witness 705 in full, instead holding that select paragraphs appeared to be relevant. It deferred admitting them into evidence until the Prosecution had provided further evidence as to their provenance.⁴⁰⁶⁶

1839. The Trial Chamber recognises the limitations of Witness 707's knowledge and that he relied upon records that he did not produce, and upon the knowledge of other Alfa employees to provide him with information.

1840. The Trial Chamber nevertheless considers that the larger the company and the more complex the issues, the greater the likelihood that records will come from a range of sources. Finding the creator of each record or document in these circumstances is impractical and sometimes even impossible, especially years after the events in question. Businesses, by nature, are dynamic and over time practices and procedures including record-creation and maintenance evolve. Companies merge and expand. Employees come and go. Technology advances.

1841. The Trial Chamber is of the view that identifying and hearing evidence from the Alfa employee who created each of the records and documents received into evidence would have been a meaningless and unfeasible exercise. The fact that a witness testifying for a large corporation does not have full personal knowledge of all the matters to which they are testifying—but can provide evidence based upon reviewing company records and practices and obtaining information from other company personnel—does not prevent that person from giving that evidence. The Trial Chamber may still give the evidence the appropriate weight.⁴⁰⁶⁷

⁴⁰⁶⁵ Corrected version of decision on Prosecution motion to admit Witness PRH707's statements, paras 18, 75.

⁴⁰⁶⁶ Decision on Prosecution motion to admit Witness PRH705's statements, para. 33.

1842. In domestic civil and criminal proceedings, companies typically designate corporate representatives to testify in court as to internal corporate matters, including company records and their creation. There is no reason, either in practice or in principle, why this should be different in proceedings conducted under international criminal law procedural law. It is the only practical solution in the circumstances described above. However, this must of course be carefully balanced with the rights of Accused persons to a fair trial in confronting the evidence against them. In assessing the weight that it can give to evidence falling into this category, the Trial Chamber has factored this in.

1843. Some of the information in the witnesses' written statements and some documents admitted into evidence concerns information that Witnesses 707 and 705 obtained from other Alfa and Touch employees or departments. This, of itself, does not make these statements and documents inherently less reliable, or otherwise affect the weight to be given to them.

1844. In addition, Witnesses 707 and 705 explained that Alfa and Touch lacked continuity in both their systems, and—as would be expected in large corporations—their employees from 2004 and 2005 onwards. Witness 705 also stated that it was difficult to find employees remaining from that period and that not every unit or staff member he consulted was there in 2004 and 2005. In the Trial Chamber's experience this is not at all unusual in any large workplace with frequent personnel turnover.

1845. The Trial Chamber is not persuaded by the Ayyash and Oneissi Defence's argument that the Prosecution made a strategic decision not to call, or was not precluded from calling, multiple witnesses with specific knowledge from Alfa's and Touch's various departments. The Trial Chamber highlights that Alfa's and Touch's suitably qualified personnel using a range of data from relevant sources provided both witnesses with the information in their statements that was outside their personal knowledge. Indeed, it is difficult to envisage how in the circumstances, it could have been otherwise. Not only judicial economy but practicality precluded Alfa and Touch from attempting to find multiple witnesses to testify to record-keeping practices from over a decade earlier.

1846. The Trial Chamber considers that a witness testifying for large corporations such as Alfa or Touch can provide evidence based upon a combination of personal knowledge, reviewing

company records, documents and practices and communicating with other company personnel. A witness testifying as the representative of such corporation can provide evidence even where they do not have personal knowledge, provided that this witness can attest that the testimony represents and is based on business record information. The role of a company representative is not confined to producing records and it is not unusual that such witnesses have a limited capacity to answer questions outside of their direct knowledge.

1847. During their testimony both witnesses were able to consult their colleagues, departments and business records for information that they could not themselves directly provide. Minimal irregularities and inconsistencies in corporate business records or record-keeping practices should not cast doubt on the reliability of Witnesses 705's and 707's evidence, and Alfa's and Touch's records and documents. The role of the company representatives in this case—who in both cases gave mixed evidence as to matters within their own personal knowledge and matters of which they were informed by other employees or departments—is not confined to producing records.

1848. It is not unusual that such witnesses have a limited capacity to answer questions outside of their direct knowledge. Moreover, as explained above, the Trial Chamber for this reason permitted Witness 707 to obtain further information from Alfa personnel and departments in relation to multiple paragraphs from his statements contested by Defence counsel. In the Trial Chamber's view—for the purpose of assessing the reliability and giving weight to the best available evidence it received from Alfa and Touch—Witnesses 705 and 707, by virtue of their positions in and experience with the companies, and their expertise in the industry, were appropriate corporate representatives.

1849. The Trial Chamber has carefully reviewed Witness 705's evidence, and rejects the Ayyash and Oneissi Defence's suggestion that he had no personal knowledge of all the evidence, and that he merely took 'for granted' the information Touch gave him. The Ayyash Defence argued that he made minimal changes to his predecessor's written statements showing that he lacked personal knowledge of Touch's business practices, and hence that the Prosecution could not establish the provenance of most of his evidence. However, in the Trial Chamber's view this does not necessarily undermine the reliability of his evidence. The witness had substantial experience both at Touch and in the telecommunications industry, and had sufficient general and specific knowledge of most of the areas of his testimony to give it probative value.

1850. The Trial Chamber has also considered the Ayyash Defence's submissions that Witness 705 had no knowledge of how changes were recorded in Touch's cell site database in 2004 and 2005, and how or by whom this database was then controlled. However, these submissions are unconvincing in light of Witness 705's extensive account about the maintenance of Touch's cell site database over the years.

1851. Based on the totality of Witnesses 705's and 707's oral and written evidence, the Trial Chamber is satisfied that both witnesses had adequate personal knowledge and experience as corporate witnesses to provide their evidence. Moreover, they consulted suitably qualified personnel at Alfa and Touch on things outside their personal knowledge. Combined, these two factors give sufficient weight to these witnesses' evidence in relation to Alfa's and Touch's documents, records and practices to make their evidence probative.

2. Witnesses 707's and 705's substantive evidence

1852. The evidence as to Alfa's business practices, record making and record keeping practices is extensive, technical and complex. Witness 707's evidence was based on his lengthy and varied experience which included four years at Alfa and approximately 25 years in telecommunications. The Trial Chamber considered his training and areas of expertise; his experience at Alfa's predecessor company, Cellis; and his appointment as the representative witness for Alfa.

1853. The witness referred extensively to his statements and provided additional evidence on the sources of his information and the process by which he informed himself of matters outside his realm of expertise or personal experience. The Trial Chamber highlights that the witness repeatedly said that while different staff may have prepared the original responses to the Prosecution's requests for assistance and confirmed the responses, the source of the information was always Alfa's business records.

1854. In determining that Witness 707's evidence was sound, the Trial Chamber took into account Alfa's procedures in responding to requests for assistance. In his testimony, he explained, for instance, the retrieval of call data from the billing system or the archived call data records depending on the fields requested. He explained how he had prepared for his testimony, including reviewing previous responses to requests for assistance sent by Alfa. He gave extensive evidence

on Alfa's business practices based on his experience with the company. He explained Alfa's practices in 2004 and 2005 and those that had not changed.

1855. Witness 705 was the designated representative responsible for collecting responses to requests for assistance on behalf of Touch's Technical Department, and he provided evidence on the procedure from personal experience.

1856. Regarding his evidence generally, the Trial Chamber is satisfied that he demonstrated how his experience as a telecommunication engineer, his work experience at Touch and knowledge of the company practices in his area qualified him to provide evidence for Touch. The Trial Chamber considered the substantial evidence on Touch's records relating to cell sites including the responsible teams and company records related to location of sites and physical changes made to sites. The witness provided information not only in his capacity as Touch's representative, but also from his personal knowledge. For areas beyond his expertise, he consistently identified the Touch department that provided the information. When uncertain of the source, he sought assistance from the relevant department or unit.

1857. The Trial Chamber has carefully considered the Ayyash Defence's submissions that Witness 705 had not worked with call data records before becoming Touch's representative to the Special Tribunal and that he had no experience with producing predicted coverage maps. However, having heard his testimony and having examined his witness statements, and considered his lengthy work experience both at Touch and in the field of radio network planning and optimisation, the Trial Chamber does not accept that Witness 705 is an unreliable witness.

1858. Witness 705 conceded that he had not directly worked with call data records before becoming Touch's representative, but he demonstrated a comprehensive understanding of the essentials of how call data records and coverage maps are generated. He was extensively involved in drive tests and provided the sources of his information and explained how he had informed himself of matters outside his personal experience.

1859. As to the Oneissi Defence's argument that Witness 707's hearsay evidence should be excluded from evidence under Rule 149 (D), the Trial Chamber concludes that none of the conditions for exclusion of evidence under this Rule were met. In addition, the Trial Chamber has

considered with additional caution those aspects of Witness 707's evidence where he did not have direct personal knowledge.

1860. The Trial Chamber is not persuaded by the suggestion by counsel for the four Accused that the reliability and evidential weight of the azimuth and coordinate values received from Alfa is diminished because these values were found on the computer of an unknown Alfa engineer. Witness 707's testimony—namely that before the merger of the various databases into a centralised database in 2014, it was common practice for Alfa engineers to have various databases of azimuth and coordinate values on their company-owned computers and that values entered into the 2014 database were the same as those before the merger—supports the alternative view.

1861. The Trial Chamber rejects as speculative the Oneissi Defence's suggestion that Alfa's and Touch's call data records might have been manipulated. Mr Philips testified that, contrary to this suggestion, the manipulator would have had to have conducted 'reverse cell site analysis' and 'reverse cell siting'. This would have been highly difficult and complex, if not impossible, to achieve, and would have left a trail, of which there is no evidence. There is nothing in the trial record supporting this suggestion.

1862. In the Trial Chamber's view, Witnesses 705's and 707's accounts as a whole were credible, reliable and internally consistent, despite their lack of contemporaneous personal knowledge relating to discrete parts of Alfa's and Touch's record making practices. The Trial Chamber assessed the quality of their evidence, including the accuracy of their memory, in order to assess its reliability and credibility. The Trial Chamber finds that Witnesses 705 and 707 had sufficient personal knowledge, and consulted suitably qualified personnel at Alfa and Touch as to matters outside of their personal knowledge, such as to allow it to assess and give appropriate weight to the specific telecommunications evidence on which the Prosecution relied to determine mobile users' approximate locations or movements.

G. Call data records and cell site data received from Alfa and Touch

1. Summary of evidence

1863. The Trial Chamber received into evidence 15 items of cell site evidence on which the Prosecution relied to prove the reliability of the network's coverage maps, the call data records and call sequence tables. Witnesses 705 and 707 provided evidence on these.

1864. This evidence can be grouped into three categories. The first is the basic cell information from Touch and Alfa, such as the names and the geographic coordinates of relevant cell towers, cell sector names, Cell Global Identity (CGI) or cell ID, azimuths and the installation and removal dates for specific cells and the type of cell.

1865. The second is the shape files from Touch and Alfa that spatially describe vector features such as points, lines and polygons, and can plot geographical features such as water, vegetation and urban features such as roads. The third is the predicted best server coverage for cell sites in the Alfa network.⁴⁰⁶⁸

1866. With eight exceptions,⁴⁰⁶⁹ Witnesses 705 and 707 were questioned about these items during the admission of the Prosecution's cell site evidence and their evidence in court.

1867. Each category is assessed below. The submissions and the Trial Chamber's findings on each are set out in the following 15 sub-sections. The more general Defence submissions on the call data records and cell site data received from Alfa and Touch, some of which concern these 15 items, follow at paragraphs 1949-1980.

⁴⁰⁶⁸ Decision on admission of Prosecution's cell site evidence, para. 26.

⁴⁰⁶⁹ Exhibits P1122 (ArcView shape files Touch), P1123 (ArcView shape files Alfa), P1124 (CD with data for Alfa cell sectors in July 2005), P1125 (CD with shape files for three Alfa cell sectors in Tripoli), P1126 (Two spreadsheets with Alfa cell site information), P1181 (CD containing exhibit P813 and cell coverage maps dated 5 November 2007), P1182 (Touch cell information and azimuths values in February 2005 and September 2007), P1184 (Excel spreadsheet 'On Air-Off Air' with information on Alfa cell sites in 2013).

(a) CD containing the data for Touch's 2004 coverage maps⁴⁰⁷⁰

1868. This CD contains data relating to the locations of Touch cell masts and cell sectors, their orientation and best server coverage for 2004, which are required to prove the locations and movements of the relevant mobiles.

1869. Witness 705 gave detailed explanations about the files on the CD. A radio engineer from Touch's radio planning unit in its technical department produced a note describing its contents and how the data can be viewed using ArcGIS.⁴⁰⁷¹ Witness 705 also explained, based on this note, how Touch produced shape files in 2004 and how it recorded in a database the azimuth, location and tilt data using the available GPS receivers.⁴⁰⁷²

1870. The Ayyash Defence submitted that Witness 705 became aware of the existence of Touch's centralised database and the snapshots only through his predecessor's statement and conversations with the Prosecution.⁴⁰⁷³ During cross-examination, the witness conceded that he did not know what GPS devices Touch had used in 2004 and 2005 or their level of accuracy.⁴⁰⁷⁴

1871. The Trial Chamber is, however, satisfied that Witness 705 went further in his testimony than simply rehearsing the contents of the CD and provided context to the shape files and clarified its more technical aspects. The Ayyash Defence submissions that Touch was not using accurate GPS systems, or that Witness 705 was not qualified to testify about the CD and the note, are not supported by any evidence.

1872. The Trial Chamber has reviewed the CD of data for Touch's 2004 coverage maps and considered Witness 705's testimony. Witness 705 was questioned about the data recorded on the CD—that was extracted from Touch's business records—and the content of this CD, including the note explaining its content. He outlined how Touch produced the 2004 shape files and how it recorded the azimuth, location and tilt values in the company's database. The Trial Chamber thus finds that these coverage maps are accurate and sufficiently reliable to be probative. The Trial

⁴⁰⁷⁰ Exhibit P1122.

⁴⁰⁷¹ Witness PRH705, T. 6 May 2016, pp 62-63, 85, T. 9 May 2016, pp 4-34; exhibit P826 (Witness PRH705's statement of 16 November 2015), para. 230. The Touch engineer's note was referred to in court as a document entitled 'Request.doc', exhibit P816 (Annex 20 to Witness PRH705's statement of 16 November 2015).

⁴⁰⁷² Witness PRH705, T. 5 May 2016, pp 79-80, T. 9 May 2016, pp 6-12.

⁴⁰⁷³ Ayyash Defence final trial brief, para. 237.

⁴⁰⁷⁴ Witness PRH705, T. 21 July 2016, p. 22.

Chamber has carefully considered Witness 705's evidence related to these maps and more generally his experience and position in the company, and his general expertise in the industry. It is of the view that the maps are probative of the Touch network structure in 2004.

(b) CD containing data from Touch between 2005 and 2010⁴⁰⁷⁵

1873. The first file on the CD is an Excel spreadsheet titled 'Sites' containing what Witness 705 described as a 'snapshot' of basic Touch cell information on seven specific dates between 2005 and 2010.⁴⁰⁷⁶ The second category of files is Touch shape files for 2007 and 2010. The last category of files is written answers from Touch to a Prosecution request for assistance which included, for instance, a note explaining the contents of other files on the CD. This included an explanation that Touch did not have best server prediction maps for 2005 because, from late 2004 to 2007, it did not have a planning tool such as Asset to generate these maps, and instead used drive testing.⁴⁰⁷⁷

1874. The Prosecution put the data on the CD into the electronic presentation of evidence to determine, at relevant times, the approximate locations of the mobiles it attributes to the Accused and Mr Badreddine, based upon cell activations.

1875. Witness 705 explained that the data on this CD came from Touch's business records. The Prosecution used the data to demonstrate the Touch cells activated by relevant mobiles. The Trial Chamber has reviewed the files on the CD, and especially the note explaining the contents of other files on the CD, and Witness 705's testimony about the CD and the explanatory note.⁴⁰⁷⁸ It is satisfied that all are reliable and probative. The data's extraction from Touch's business records is sufficient to satisfy the Trial Chamber of this.

⁴⁰⁷⁵ Exhibit P1181.

⁴⁰⁷⁶ Exhibit P813 (Touch's cell site data exported on 15 February 2005, 1 April 2005, 12 August 2006, 17 September 2008, 21 November 2009, 3 May 2010 and 7 July 2010); Witness PRH705, T. 6 May 2016, pp 47-49.

⁴⁰⁷⁷ Exhibit P815 (Annex 19 to Witness PRH705's statement of 16 December 2015); Witness PRH705, T. 6 May 2016, p. 85.

⁴⁰⁷⁸ Witness PRH705, T. 6 May 2016, pp 48-50, 75-76, 84-85, T. 9 May 2016, pp 37-45.

(c) Excel spreadsheet with cell tower information for Touch for 2005 and 2007⁴⁰⁷⁹

1876. This spreadsheet that Touch provided to the UNIIIC in October 2007 is accompanied by a letter signed by a Touch representative. The letter explains that the spreadsheet lists the antenna azimuths for all Touch cells that were on air at the end of February 2005 and in September 2007. The spreadsheet has three columns for each of those years listing the cell ID with the corresponding cell name and azimuth.⁴⁰⁸⁰

1877. Witness 705 testified that Touch records the location, azimuth, height and tilt of cell sites and stores it in the Radio Planning Unit's database.⁴⁰⁸¹ He conveyed the importance of recording this information and its accuracy, since coverage can be improved only by changing the azimuth of an antenna.⁴⁰⁸² Touch entered the data from this database into the propagation tool to generate coverage maps.⁴⁰⁸³ In cross-examination, the Defence did not ask the witness any specific question about the document.

1878. Based on the cover letter from Touch to the UNIIIC and Witness 705's evidence on how and why Touch gathered this information, the Trial Chamber considers the spreadsheet to contain data extracted from the database Touch maintained in the ordinary course of its business.

1879. The spreadsheet provides orientation data for relevant Touch cell masts and cell sectors activated by mobiles alleged to have been used in the planning and preparation of the attack on Mr Hariri. This data is also useful in verifying the cell ID, cell sector names and azimuth that Touch provided to the Prosecution. The Trial Chamber therefore considers this spreadsheet to be probative of the locations of the used mobiles and, in light of the factors discussed above, accurate and sufficiently reliable to be probative.

⁴⁰⁷⁹ Exhibit P1182.

⁴⁰⁸⁰ Exhibit P1182. *See also* Decision on admission of Prosecution's cell site evidence, paras 110-114.

⁴⁰⁸² Witness PRH705, T. 5 May 2016, p. 81.

⁴⁰⁸³ Witness PRH705, T. 5 May 2016, p. 83.

(d) List of data on 737 Alfa cell sectors (Annexes 14 (2) and 15)⁴⁰⁸⁴

1880. Annex 14 (2) to Witness 707's statement of 11 November 2015 is a list of 737 Alfa cell sectors with details of the cell site ID, longitude, latitude, tower type, sector, splitter and azimuth.⁴⁰⁸⁵ The Prosecution obtained this document from Alfa in 2010. The Prosecution used it to verify the coordinates, azimuth and type of individual cell sectors in its cell site analysis.⁴⁰⁸⁶ The information was extracted from the working site database of Alfa's radio department, as in 2004 and 2005, Alfa did not have a complete site database.⁴⁰⁸⁷

1881. The Oneissi Defence argued that the data in this list cannot be considered as a business record, that it was produced before Alfa established a centralised database of cell site information and that Alfa could not provide cell site data from 2004 and 2005.⁴⁰⁸⁸ The Merhi and Oneissi Defence objected to this document, arguing that Witness 707 could not confirm its provenance and accuracy.⁴⁰⁸⁹

1882. The Badreddine Defence also opposed its admission into evidence, arguing that it refers to a witness statement from someone who did not appear in court.⁴⁰⁹⁰ The Sabra and Ayyash Defence similarly argued at the time that as Alfa lacked a complete cell site database for 2004 and 2005, the data in this list was produced at the 2010 Prosecution's request and therefore is not a business record. The data was not reliable because the Prosecution did not demonstrate how it was

⁴⁰⁸⁴ Exhibit P775 (Excel spreadsheet with mast and azimuth information, mast locations and azimuth orientations, Annex 14 (2) to Witness 707's statement of 11 November 2015); Witness PRH707, T. 11 February 2016, pp 58-59. *See also* exhibit P1192.9 (Cover letter accompanying Excel spreadsheet with mast and azimuth information, mast locations and azimuth orientations, Annex 15 to Witness PRH707's statement of 11 November 2015).

⁴⁰⁸⁷ Witness PRH707, T. 20 April 2016, p. 59.

⁴⁰⁸⁸ Oneissi Defence final trial brief, paras 55-56, 58, 60-62, 64, 66.

⁴⁰⁸⁹ F2676, The Defence for Hussein Hassan Oneissi Supplemental Submissions in relation to the Admissibility of Call Sequence Tables, Cell Site Data and Annexes to PRH707's Witness Statement, 29 July 2016, paras 30, 35; F2682, Merhi Defence Joinder to "The Defence for Hussein Hassan Oneissi Supplemental Submissions in relation to the Admissibility of Call Sequence Tables, Cell Site Data and Annexes to PRH707's Witness Statement", 5 August 2016, paras 1-2.

⁴⁰⁹⁰ Badreddine Defence submission, T. 16 February 2016, p. 4.

produced, by whom and where the database was maintained and how the geographic coordinates of cell sites were validated.⁴⁰⁹¹

1883. Witness 707 clarified that in preparing the list, the Alfa engineer must have used only the stations on air in 2005.⁴⁰⁹² He conceded some of the azimuths in the list may have been from after 2005 or that some or all of them were from 1995, 1997 or 1999.⁴⁰⁹³ The Sabra Defence submitted that 13 Alfa cells in northern Beirut, such as MOVNPK, CLMNSO, BHSQAR and TRIBUN, were incorrectly added to this list and that the list contained 17 errors.⁴⁰⁹⁴ Witness 707 explained that errors may be due to the approximation or ‘reverse engineering’ that Alfa used to produce the predicted best coverage for 2005.⁴⁰⁹⁵

1884. In the Trial Chamber’s opinion, the reliability of this list rests on Witness 707’s testimony. He gave general evidence on how Alfa stored its basic cell information, including on its storage methods and that some values from 2004 and 2005 could be reconfirmed because they still existed.⁴⁰⁹⁶ The Trial Chamber is satisfied, as noted above at paragraph 1862, that the witness was credible and his evidence was generally reliable. When he could not answer a question or provide information, he stated so and that he would need to consult someone else in the company or its records. The Trial Chamber has also carefully considered that Witness 707’s evidence related to this list is based on his extensive experience in the company and his expertise in the telecommunications sector. This adds to the weight that the Trial Chamber has given to it.

1885. The Trial Chamber, however, carefully considered the Defence challenges to this document and the discrepancies it identified, and that the original Alfa representative witness who signed and provided the documents⁴⁰⁹⁷ was not called to testify. The reliability of this data is also undermined by Alfa having used an approximation to produce this data. In the absence of any other corroboration of the list, the Trial Chamber considers it appropriate to give this document more

limited weight. Considering that the data was not contemporaneously collected and generated, the Trial Chamber applied caution in assessing the conclusions based on this evidence.

1886. An official letter signed by Alfa's CEO accompanied the CD; it is an inseparable part of Witness 707's evidence as Alfa's representative, the Trial Chamber considers this document to be authentic and reliable.

(e) 938 Alfa shape files (Annex 16 (a) (1))⁴⁰⁹⁸

1887. This annex to Witness 707's statement of 11 November 2015 is Alfa's response to a Prosecution request for assistance which includes a CD with 938 Alfa shape files for 2005. The Ayyash and Sabra Defence submit that, although the shape files in this annex derive partially from data kept as part of Alfa's everyday business practices, they are not business records. The shape files in this annex are unreliable because the underlying data the Prosecution relied on to reconstruct coverage maps was extracted from different periods.⁴⁰⁹⁹ Also, Witness 707 could not confirm the source of information or the specific values Alfa used to generate these specific shape files.⁴¹⁰⁰

1888. Even though Witness 707 did not generate these shape files, he gave detailed evidence on how they were produced. He clarified that the data for each station was verified and all the information that could potentially impact the radio waves was considered to ensure the highest level of accuracy of the data.⁴¹⁰¹

1889. The Trial Chamber considers that this set of shape files derives from and was extracted from Alfa's business records analysed above. These were created by the approximation method that Alfa used to produce the predicted best coverage for 2004 and 2005 when it did not have a centralised, complete database. That Alfa extracted this data from multiple company databases

⁴⁰⁹⁸ Exhibit P1192.10 (938 Alfa shape files, Annex 16 (a) (1) to Witness PRH707's statement of 11 November 2015). Annex 16 (a) (2) is a response to a request for assistance and includes explanations and clarifications related to annex 16 (a) (1), exhibit P1192.11 (Alfa response to request for assistance).

⁴¹⁰⁰ F2677, Ayyash Defence Submissions on the Evidence of Prosecution Witness PRH707, 29 July 2016, para. 47 (referring to Witness PRH707, T. 29 January 2016, p. 122).

⁴¹⁰¹ Witness PRH707, T. 15 February 2016, p. 7.

from different periods does not weaken its status as a record created in the ordinary course of business.

1890. Concerning the reliability of the information, Witness 707 stated that he had been informed:

by the Radio Department and so believe that the basic methodology used to generate the shape files contained in 2010/RFA0447 (dated 12 July 2010) is identical to the basic methodology used to generate those shape files contained in 2013/RFA0006 (09 January 2013) and in 2015/RFA0103 (dated 16 June 2015). *As far as I am aware, the same cell site data (coordinates and azimuth values), namely those as recorded in our working site database were used to generate this coverage.*⁴¹⁰² (emphasis added)

1891. The Trial Chamber is satisfied that Witness 707 was sufficiently qualified and was duly informed by suitably qualified personnel using data from relevant sources—in this case the radio department—enabling him to provide evidence on the reliability of the data; the Defence did not undermine the general reliability of the approximation method used to create the shape files. Moreover, the witness's evidence was that there were only minimal changes to the network in the relevant time period. This general network stability must mean that the approximation method is sufficiently reliable for the Trial Chamber to use without too much qualification. In this sense, the shape files are probative. However, in the absence of the original values from 2004 and 2005, the Trial Chamber will give them slightly reduced weight.

1892. The Trial Chamber has found that the cover letter accompanying the shape files provided context to the files and was reliable.

- (f) List of cell tower information for Alfa cell sectors based on information from 2007⁴¹⁰³

1893. This is a 29-page list of cell site information that the UNIIIC obtained from Alfa in 2007 that includes geographic coordinates, azimuth values and cell types that, as explained by Witness

⁴¹⁰² Exhibit P1192 (Statement of Witness PRH707, 11 November 2015), para. 169.

⁴¹⁰³ Exhibit P778 (Cell Tower Information as provided by Alfa including Site co-ordinates in Eastings / Northings - Sector Azimuth - Tower type). This is annex 13 to Witness 707's witness statement of 11 November 2015 (exhibit P1192) and was saved on the DVD admitted as exhibit P1123.

707, originated from Alfa's radio planning department. It shows the location of Alfa cell sites and their coverage at the relevant times.⁴¹⁰⁴

1894. The document is divided into three parts. The first is the geographic coordinates of each cell site under the headings 'SITE, Easting, Northing'. The second is each cell site broken down into cell sectors with information in sub-headings under the heading, 'Sectors', 'CELLULE, Splitter, Type, Azimuth 1, Split Azimuth', setting out whether a cell has been split in two,⁴¹⁰⁵ and if so, the azimuth of the split cell. Coverage type spells out whether the cell is macro, micro, indoor or maxite. The third is a list of repeaters and it specifies whether they are indoor or outdoor, with the headings, 'Repeaters, Easting, Northing, Coverage Type, Azimuth'.⁴¹⁰⁶

1895. Witness 707 lacked first-hand knowledge of the information obtained in 2007 because he was not then employed at Alfa.⁴¹⁰⁷ However, he gave detailed evidence as to how Alfa recorded and used these types of values.⁴¹⁰⁸

1896. Of who provided the information, the witness stated that 'it is normal or natural that such values and such files come from the radio planning department'.⁴¹⁰⁹ Of its origin, he said, 'these values were taken after the station had been installed and is operational, and they should coincide with the values set during the planning phase'.⁴¹¹⁰ However, he had no better information as to how the three parts of this list were compiled, stating that 'we do not have the records that prove the main source or origin of these values'.⁴¹¹¹ And, further, during questioning in evidence in chief:

Q. Mr. Witness, can you tell from looking at the document how it was put together?

A. Unfortunately, I have no information about the drafting of the document. The information was sent based on responses to RFAs sent by the STL. We do not have the annexes of that specific response.⁴¹¹²

⁴¹⁰⁴ Witness PRH707, T. 12 February 2016, pp 7-10.

⁴¹⁰⁵ A 'splitter' is when the sector is split into two antennas to cover more ground, Witness PRH707, T. 9 May 2016, pp 19-20.

⁴¹⁰⁷ Witness PRH707, T. 12 February 2016, pp 12-13.

⁴¹⁰⁸ Witness PRH707, T. 12 February 2016, pp 8-21, T. 3 May 2016, pp 53-54.

⁴¹⁰⁹ Witness PRH707, T. 12 February 2016, p. 15.

⁴¹¹⁰ Witness PRH707, T. 3 May 2016, pp 53-54.

⁴¹¹¹ Witness PRH707, T. 12 February 2016, p. 15.

⁴¹¹² Witness PRH707, T. 12 February 2016, p. 13.

1897. In challenging the admission into evidence of the list, the Oneissi and Merhi Defence argued that Witness 707 could not confirm its accuracy or describe how it was produced and that Alfa did not keep records of the origin of data included in the list.⁴¹¹³ The Ayyash and Sabra Defence similarly objected to it because the witness had no information as to its source or how it was produced except that it was usual for these values to come from Alfa's radio planning department.⁴¹¹⁴ The Oneissi Defence also argued that the data in this list cannot be considered as business records, that it was produced before Alfa established a centralised database of cell site information and that Alfa could not provide cell site data from 2004 and 2005.⁴¹¹⁵

1898. The Trial Chamber has reviewed the list and carefully considered Witness 707's evidence. Considering that Alfa did not collect and register these values in 2004 and 2005 and did not keep records of the data's origin, and that Witness 707 had no specific information as to the source of these records other than that they came from the radio planning department, the Trial Chamber has cautiously evaluated it.

1899. The data in the list had to have been extracted from Alfa's business records. The values are essential for the operation of a mobile telecommunications network. A provider such as Alfa must of necessity maintain records of this type of information. And the Trial Chamber has no reason to doubt that Alfa in 2007, acting in good faith, provided to the UNIIC this list of values relating to its cells. There is nothing before the Trial Chamber that casts doubt on the origin and source of the information in the lists, namely, that it directly derived from the values of the cell sites, at least in 2007.

1900. That Alfa was no longer able in 2016 to confirm values from 2007 does not necessarily diminish their reliability since they had to have been extracted and provided to the UNIIC from Alfa's 2007 contemporaneous business records.

⁴¹¹³ F2676, The Defence for Hussein Hassan Oneissi Supplemental Submissions in relation to the Admissibility of Call Sequence Tables, Cell Site Data and Annexes to PRH707's Witness Statement, 29 July 2016, para. 32; F2682, Merhi Defence Joinder to "The Defence for Hussein Hassan Oneissi Supplemental Submissions in relation to the Admissibility of Call Sequence Tables, Cell Site Data and Annexes to PRH707's Witness Statement", 5 August 2016, paras 1-2.

⁴¹¹⁵ Oneissi Defence final trial brief, paras 55-56, 58, 60-62, 64, 67-68.

1901. Witness 707's evidence was that the information came from Alfa's radio planning department and matched the values of the cells on air. His general evidence was to the effect that any changes in the cells between 2004 to 2005 and 2007 and 2010 would have been minimal and occasional. Based on the combination of Witness 707's general evidence and that relating specifically to this document, the Trial Chamber is satisfied of the general accuracy of the three lists, and therefore their reliability. The Trial Chamber also carefully considered that Witness 707's evidence related to these lists derives from his lengthy experience in the company and his expertise in the industry. This further supports their reliability.

1902. The lack of direct evidence as to the provenance of the lists does however raise an issue with regard to the quality of some of the UNIIC's investigatory work on what was obviously a crucial angle of inquiry, namely, obtaining the underlying cell site data. In the Trial Chamber's view, rather than relying on Alfa sending it the requested information, the UNIIC should also have obtained a contemporaneous statement from whoever compiled the information, setting out clearly how it was put together, including precisely when the information was current. The failure to do this, while regrettable, does not damage the reliability of the information to the point that it loses its weight.

(g) Two coverage maps of Beirut and Lebanon showing Alfa cell sites in February 2005⁴¹¹⁶

1903. In May 2007—over two years after the UNIIC's establishment—Alfa, using Asset software, and at the UNIIC's request, created coverage maps of Lebanon and the greater Beirut area for February 2005.⁴¹¹⁷

1904. The Prosecution relied on these maps to compare various predictive shape files.⁴¹¹⁸ Witness 707 testified that the Alfa employee who had produced the maps in 2007 had left the company, 'but these types of maps are not of great use for us at the technical level'.⁴¹¹⁹ The maps, he explained, were produced using Asset Aircom which was the only software that could do this.⁴¹²⁰

⁴¹¹⁶ Exhibit P779 (Maps showing Alfa Cell Sites February 2005). Exhibit P779 is annex 16 (b) to Witness PRH707's statement of 11 November 2015.

⁴¹¹⁷ Exhibit P1192 (Statement of Witness PRH707, 11 November 2015), para. 171.

⁴¹¹⁸ Witness PRH707, T. 16 February 2016, pp 13-14, 21-26.

⁴¹¹⁹ Witness PRH707, T. 16 February 2016, p. 13.

⁴¹²⁰ Witness PRH707, T. 16 February 2016, pp 13-14.

Such maps were not produced ‘on a daily basis’ but rather on request. The reasons could be for marketing purposes or to show areas of Lebanon that did not have mobile coverage.⁴¹²¹ To make the map Asset has to recalculate the map based upon the propagation model.⁴¹²²

1905. He described the maps as ‘a series of samples that were requested from the Asset Aircom in order to exhibit the coverage of all the cell sites in Lebanon or for this map in Beirut’.⁴¹²³ Further, if ‘we go back to 2004, 2005, we can reproduce these types of maps based on the stations that we had in 2004, 2005 and based on the azimuths, the tilts, and elevations that we have.’⁴¹²⁴ Of the process that must have been used to create the maps he said:

We also have one person who used to work with us in 2007 but who is no longer an employee. Unfortunately, we cannot verify the information he input in the software, but it should be accurate. He has no other source for inputting the information other than the one available to everyone else. If we are talking about the azimuth and the vertical tilt, the engineer cannot just input any information into the software to produce such maps, no. He should use specific information, and most probably he used the 2007 information that also applied to the period of 2004, 2005.⁴¹²⁵

1906. The Defence attacked the reliability of the maps. The Oneissi and Merhi Defence argued that Witness 707 was unable to confirm who at Alfa produced the maps and how they were generated.⁴¹²⁶ The Ayyash and Sabra Defence similarly submitted that the witness could not confirm the accuracy of the maps, including who created them and on what values the maps were

⁴¹²¹ Witness PRH707, T. 16 February 2016, pp 20-21.

⁴¹²⁴ Witness PRH707, T. 16 February 2016, p. 24.

⁴¹²⁵ Witness PRH707, T. 16 February 2016, p. 29.

⁴¹²⁶ F2676, The Defence for Hussein Hassan Oneissi Supplemental Submissions in relation to the Admissibility of Call Sequence Tables, Cell Site Data and Annexes to PRH707’s Witness Statement, 29 July 2016, paras 33-35; F2682, Merhi Defence Joinder to “The Defence for Hussein Hassan Oneissi Supplemental Submissions in relation to the Admissibility of Call Sequence Tables, Cell Site Data and Annexes to PRH707’s Witness Statement”, 5 August 2016, paras 1-2.

based.⁴¹²⁷ Witness 707 was neither able to explain how and when the maps were produced, nor could he testify to the competence of those who produced them when they worked at Alfa.⁴¹²⁸

1907. During Witness 707's evidence, counsel for Mr Ayyash had objected to the admission of the maps, submitting that the employee who produced this map no longer works at Alfa and that Witness 707 could not testify regarding the competence of who produced the maps, how they were produced and when they were produced.⁴¹²⁹

1908. In the Trial Chamber's view, the reliability of the maps depends not on who specifically created them but rather on the process, including how and when they were produced and what Alfa department produced them. Witness 707 as Alfa's corporate representative, and especially given his relevant experience in the industry, did not need to have first-hand knowledge of the maps nor of who created them.

1909. The Trial Chamber has carefully examined the maps in light of Witness 707's general evidence as to how material was produced at the UNIIIC's and the Prosecution's request, and also his specific evidence on how these particular maps had to have been created. The fact that the employees who produced the maps no longer work at Alfa does not of itself undermine their accuracy, particularly given that the witness explained in some detail the purpose of such maps, and how they would have been produced. Witness 707 testified that the maps could only have been produced by Asset, using the available values that were already in the system. Crucially, he stated that the engineer who produced the maps in 2007, 'has no other source for inputting the information other than the one available to everyone else'.⁴¹³⁰

1910. The only real point of uncertainty here is whether the information used was from 2007 or 2005. Witness 707 said that the engineer 'most probably ... used the 2007 information that also applied to the period of 2004, 2005'.⁴¹³¹ This evidence can be taken no further.

⁴¹²⁷ F2677, Ayyash Defence Submissions on the Evidence of Prosecution Witness PRH707, 29 July 2016, paras 34, 53; F2680, Sabra Joinder to "Ayyash Defence Submissions on the Evidence of Prosecution Witness PRH707" and "Ayyash Defence Submissions on the Evidence of Prosecution Witness PRH705", 1 August 2016, para. 1.

⁴¹²⁸ Ayyash Defence final trial brief, para. 246; Sabra Defence final trial brief, paras 109-110; *see also* Witness PRH707, T. 12 February 2016, pp 12-13, T. 16 February 2016, pp 13-15.

⁴¹²⁹ Witness PRH707, T. 16 February 2016, pp 14-19, including submissions by counsel for Mr Badreddine, T. 16 February 2016, pp 18-19.

⁴¹³⁰ Witness PRH707, T. 16 February 2016, p. 29.

⁴¹³¹ Witness PRH707, T. 16 February 2016, p. 29.

1911. While the Prosecution bears the evidentiary onus of persuading a chamber of the reliability of its proposed evidence, nothing in the Defence challenge has convinced the Trial Chamber to doubt the accuracy of these maps. Witness 707's evidence was that there would have been very few changes to the network between 2004 and 2007. He testified that between those years, Alfa's network was stable and it did not add many new stations,⁴¹³² and azimuth changes are only occasional and minimal.⁴¹³³

1912. In light of the witness's evidence of minimal changes to the network in those years, the Trial Chamber is satisfied that even if the engineer only used the 2007 information, the effect on the reliability of the maps would be slight.

1913. The Trial Chamber, having carefully considered the evidence, thus has no reason to consider that the maps generated by Alfa of cell sites on air in February 2005 was not accurate. The Defence challenge to its accuracy is based upon a lack of specific information as to how the 2005 maps were produced in 2007. In the Trial Chamber's view, no doubt has been cast on the general accuracy of these maps.

1914. Notwithstanding this and apart from obtaining the maps late, it also highlights a deficit in the UNHCR's record keeping practices; proper records should have been generated in 2007 concerning the provenance of the material provided by Alfa (and anyone else). The UNHCR should have obtained better information from Alfa, including witness statements, about how the maps were produced. These shortfalls do not, however, adversely impact the weight to be given to the exhibit.

- (h) Excel spreadsheet titled 'Security Main' containing basic cell information for Alfa⁴¹³⁴

1915. This spreadsheet, which is recorded on the DVD that Alfa provided to the Prosecution in July 2010,⁴¹³⁵ contains the name, type, region, Cell Global Identity (CGI), service dates, sector

⁴¹³² Witness PRH707, T. 15 February 2016, p. 41.

⁴¹³³ Witness PRH707, T. 15 February 2016, pp 35-36, 64-69, T. 20 April 2016, pp 24-25.

⁴¹³⁴ Exhibit P780.

⁴¹³⁵ Exhibit P1123.

splitter, coordinates and azimuth direction for 794 Alfa cell sectors still on air in 2010, and 37 cell sectors taken off air between 2005 and 2010.⁴¹³⁶

1916. The Prosecution relied on this data to verify the CGI code and service dates for relevant Alfa cell sectors for 2004 and 2005. The Prosecution then used the information from the spreadsheet to create the call sequence tables that match cell codes from call data records with cell names. Witness 707 described the contents of the spreadsheet and explained the meaning of the columns.⁴¹³⁷

1917. He explained that the data in the spreadsheet was extracted from Alfa's business records and could be checked against its archives.⁴¹³⁸ He also explained some of the discrepancies in the CGIs identified in the spreadsheet.⁴¹³⁹ For instance, the witness clarified that whereas some of the CGIs in the document had 12 digits, the CGIs should have 13 digits⁴¹⁴⁰ and that an 'on air' date for a specific cell site could be explained by a possible formatting error.⁴¹⁴¹

1918. Witness 707 clarified that for seven of 16 cells, the correct CGI was provided in the file entitled 'sites_Req49.txt' and that 'simply a digit was missing in the Cell ID segment of the CGI in the corresponding entries' in the 'Security Main' spreadsheet. There were also other discrepancies in the CGIs in this spreadsheet.⁴¹⁴² Nevertheless, the witness made it clear that none of the discrepancies implied a significant change in the relevant cell stations' locations.⁴¹⁴³

1919. The last two pages list the 37 stations that were taken off air between 7 January 2005 and 25 January 2010, including for most, the 'on air' and 'dismantling' dates. Witness 707 explained Alfa's practice in taking stations off air, that as with all operators:

The number of stations that are put off air is very limited because the objective of the company, as I said, is to use as much as possible the investment which was put in a specific

⁴¹³⁶ Witness PRH707, T. 16 February 2016, pp 34-36, 51. *See also* Decision on admission of Prosecution's cell site evidence, para. 126.

⁴¹⁴⁰ Witness PRH707, T. 16 February 2016, pp 46-47.

⁴¹⁴¹ Witness PRH707, T. 20 April 2016, pp 68-69.

⁴¹⁴² This is addressed in paragraphs 1932-1933 below dealing with the file 'sites_Req49.txt' (exhibit P799 (Alfa cell ID codes)).

⁴¹⁴³ Exhibit P1192 (Statement of Witness PRH707, 11 November 2015), para. 179.

station knowing that the investment at the financial level is really very big. So we invest highly in these cell sites. And consequently, the companies try to avoid, to the maximum, the dismantling of a site unless, of course, there are some legal reasons behind it or some technical reasons behind it. Let's say that this cell site is not anymore giving the result that was expected of it. Consequently, it is removed from the network and they transfer it to another cell site. While the fact of removing cell sites in general on a daily basis is not an objective and is not something that is done.⁴¹⁴⁴

1920. The Parties agreed on the spreadsheet's provenance.⁴¹⁴⁵ The Trial Chamber is satisfied of its reliability as a document extracted from Alfa's business records. There is no other reasonable explanation for its provenance. Having considered Witness 707's testimony on the spreadsheet, including his explanation of the discrepancies in the CGIs identified in the spreadsheet, the Trial Chamber is satisfied that the spreadsheet containing basic cell information for Alfa in essence is accurate and sufficiently reliable to be probative.

(i) DVD containing Alfa cell tower information for 2005, 2007 and 2010⁴¹⁴⁶

1921. This DVD, provided to the Prosecution by an Alfa representative in July 2010, contains the shape files for the predicted best server coverage for Alfa cell sectors in 2005, 2007 and 2010. In particular, the four files on the DVD provide cell tower best server coverage predictions in 2005 for 733 Alfa cell sites, and cell tower map coordinates and azimuth direction for 750 Alfa cell sites.⁴¹⁴⁷

1922. To create the 2005 shape files saved on this DVD, Alfa used the data from the 2010 Excel spreadsheet with 737 Alfa cell sectors (exhibit P775).⁴¹⁴⁸ Witness 707 gave detailed evidence on how the shape files were generated.⁴¹⁴⁹ Specifically, he explained that Alfa's records in 2010 contained data, including coordinates of their geographic location, related to the cell sites that were on air in 2005.⁴¹⁵⁰ If for a particular year Alfa lacked the required data, such as the azimuth and tilt values, it used the closest in time available data and excluded the cell sites deactivated after the

⁴¹⁴⁴ Witness PRH707, T. 16 February 2016, pp 48-49.

⁴¹⁴⁵ Witness PRH707, T. 21 April 2016, pp 2-4.

⁴¹⁴⁶ Exhibit P1123.

⁴¹⁴⁷ Witness PRH707, T. 25 July 2016, pp 88-89; exhibit P1192 (Statement of Witness PRH707, 11 November 2015), para. 164. *See also* Decision on admission of Prosecution's cell site evidence, para. 116.

⁴¹⁴⁸ Witness PRH707, T. 15 February 2016, pp 24-25.

⁴¹⁴⁹ Witness PRH707, T. 9 February 2016, pp 24-25, T. 15 February 2016, pp 3-4, 40-43, 83-84.

⁴¹⁵⁰ Witness PRH707, T. 15 February 2016, p. 60.

material date. This led Alfa to use tilt values from 2010 and cell data from 2007 to produce the 2005 shape files.⁴¹⁵¹

1923. The Sabra Defence, in cross-examination, relied on the Excel spreadsheet titled 'Security Main' recorded on this DVD listing Alfa basic cell information⁴¹⁵² to highlight 17 errors in the 2005 shape files. The Sabra Defence suggested to the witness that the respective shape files included cells that must have been removed because they had been deactivated at the material time. Witness 707 clarified that these 17 cells amount to a level of error of no more than three or four per cent out of 1,400 cells included in this document. The spreadsheet contains the data for only 831 activated and deactivated cell sectors rather than 1,400.⁴¹⁵³

1924. As to the shape files for 2005, the Trial Chamber considers Witness 707's written statement and testimony on how these files were produced and the use of the data from the 2010 Excel spreadsheet with 737 Alfa cell sectors⁴¹⁵⁴ sufficient to confirm their reliability and probative value.⁴¹⁵⁵ The inconsistencies identified by the Sabra Defence by relying on the spreadsheet listing Alfa basic cell information⁴¹⁵⁶ do not render the 2005 shape files unreliable. The identified errors are statistically insignificant.

1925. According to Witness 707, between 2004 and 2007, Alfa's network was stable and it did not add many new stations.⁴¹⁵⁷ Regarding the azimuths, he stressed that changes to an antenna's orientation over time would be occasional and minimal and would occur only in specific cases. Such instances included installing a new station in the vicinity of an existing one, the aftermath of extreme weather conditions and the service provider receiving complaints from customers about the coverage quality.⁴¹⁵⁸ Adjustments to the direction of an antenna, resulting for instance from complaints about the coverage, would be 'slight' and the changes would not significantly alter the coverage of a cell sector.⁴¹⁵⁹ The Trial Chamber is therefore satisfied that between 2005 and 2010

⁴¹⁵¹ Witness PRH707, T. 15 February 2016, pp 24-25, 44-54; exhibit P1192 (Statement of Witness PRH707, 11 November 2015), para. 164.

⁴¹⁵² Exhibit P780 (Excel spreadsheet titled 'Security Main' containing basic cell information for Alfa).

⁴¹⁵³ Witness PRH707, T. 21 April 2016, pp 32-33.

⁴¹⁵⁴ Exhibit P775.

⁴¹⁵⁵ See para. 1884. See also for example, Witness PRH707, T. 17 February 2016, pp 9-12.

⁴¹⁵⁶ Exhibit P780.

⁴¹⁵⁸ Witness PRH707, 15 February 2016, pp 35-36, 64-69, T. 20 April 2016, pp 24-25.

⁴¹⁵⁹ Witness PRH707, T. 15 February 2016, pp 65, 69.

Alfa's network integrity and configuration did not change in such a manner as to render unreliable the shape files produced for 2005.

1926. With regard to the shape files for 2007 and 2010, even though Alfa used azimuth and tilt values from 2010 for both sets of shape files on the DVD, the telecommunication company had provided contemporaneous azimuth values to the UNIIIC in 2007.⁴¹⁶⁰ The Trial Chamber is of the view that, although Alfa in 2016 was no longer able to confirm the values from 2007,⁴¹⁶¹ this does not diminish their reliability since they were extracted and provided from Alfa's contemporaneous business records that were created in 2007.

1927. The Trial Chamber considers that Witness 707's extensive evidence on Alfa's record keeping practices for those years in relation to these shape files further supports their reliability.

1928. However, considering the approximation or 'reverse engineering' method that Alfa used in 2010 to produce these predicted coverage maps for 2004 and 2005—years for which Alfa had no centralised database—the Trial Chamber has applied caution in reaching the conclusions based on this evidence.

1929. Again, although it is a matter of concern that the UNIIIC apparently did not obtain better information from Alfa in 2007—nor more vitally two years earlier—as to how this information was produced, this omission has not adversely impacted the weight to be given to the exhibit.

- (j) Excel spreadsheet 'On Air-Off Air' with information on Alfa cell sites in 2013⁴¹⁶²

1930. Alfa provided the Prosecution with an Excel spreadsheet listing information related to 319 Alfa cell sites operating in 2013. The column headers are site, cell, type, region, CGI (HEX), put on air date, put off air date, sector, splitter, long(itude), lat(itude) and azimuth. The spreadsheet also contains the same information for 69 Alfa cells deactivated before 2013. The Prosecution used this basic cell information to produce call sequence tables and the conversion of numerical cell

⁴¹⁶⁰ Exhibit P778.

⁴¹⁶¹ Witness PRH707, T. 25 July 2016, pp 7-8.

⁴¹⁶² Exhibit P1184.

IDs into cell tower names. The Alfa cell sites are related to the cells activated by mobiles that the Prosecution alleges were involved in the attack on Mr Hariri.

1931. The Trial Chamber finds the information in the spreadsheet to be reliable as, like the spreadsheet titled ‘Security Main’ containing similar information, it was extracted from Alfa’s business records.⁴¹⁶³ The Trial Chamber has no reason to doubt the accuracy of the information, and for the same reasons set out in assessing the reliability of the ‘Security Main’ spreadsheet, this basic cell information for Alfa cells is reliable.

(k) Cell ID codes for Alfa⁴¹⁶⁴

1932. This file, which Alfa provided to the UNHCR in December 2005, contains a number of Alfa cell ID codes.⁴¹⁶⁵ The Prosecution relied on it to explain the discrepancies identified in the CGIs included in the ‘Security Main’ spreadsheet, referred to directly above. Witness 707 explained that other discrepancies between the file ‘sites_Req49.txt’ and the ‘Security Main’ spreadsheet were the consequence of minor configuration changes made by Alfa between 2005 and 2010 to cell sites.⁴¹⁶⁶

1933. The Trial Chamber considers that the discrepancies identified in this document are relatively minor, and do not undermine the reliability of this document as a whole. As the cell ID codes for Alfa were extracted from Alfa business records, and applying the same reasoning as that used to assess the reliability of the ‘Security Main’ spreadsheet to which the ID codes for Alfa cells relate, these ID codes are, in the Trial Chamber’s view, accurate and sufficiently reliable to be probative.

⁴¹⁶³ Exhibit P780.

⁴¹⁶⁴ Exhibit P799.

⁴¹⁶⁵ This file is annex 16 (c) to Witness PRH707’s statement of 11 November 2015 (exhibit P1192). *See also* exhibit P799 (Annex 16 (C) (2) to Witness PRH707’s statement of 11 November 2015), ERN D0484151; Procedural matters, T. 19 April 2016, pp 59-61.

⁴¹⁶⁶ Exhibit P1192 (Statement of Witness PRH707, 11 November 2015), para. 179.

(l) CD with Alfa call data records and cell site data⁴¹⁶⁷

1934. The only folder on this CD admitted into evidence is titled '3a\cell-coverage-July-2005' and contains shape files for 369 Alfa cell sectors for July 2005.⁴¹⁶⁸ The Prosecution used the shape files to create maps showing coverage for specific Alfa cell sectors to which relevant mobiles connected. In addition, the Prosecution analyst Ms Kei Kamei testified that she had used a text file from a different folder on this CD that contains call data records.⁴¹⁶⁹

1935. As with the DVD containing Alfa cell tower information for 2005, 2007 and 2010,⁴¹⁷⁰ the Trial Chamber is satisfied that the data contained on this CD is reliable, despite Alfa not preserving respective contemporaneous values from 2005 in its records.

1936. Witness 707 gave extensive testimony that these values would not have fundamentally changed in later years to a degree that would significantly invalidate the accuracy of the shape files. Based on the witness's position in the company and his lengthy experience in the telecommunications industry, and on his evidence about Alfa's record keeping, the Trial Chamber accepts this evidence. It is satisfied of the general accuracy of the data on this CD, which shows the coverage areas of relevant Alfa cell sites in 2005. It is sufficiently reliable to be probative.

1937. Just as it has with exhibit P1123, in considering the approximation method that Alfa used to produce in 2013 these predicted coverage maps for 2004 and 2005—years for which Alfa had no centralised database—the Trial Chamber has applied caution in assessing any conclusions based on this evidence.

(m) CD containing shape files for three Alfa cell sectors in Tripoli⁴¹⁷¹

1938. The CD contains shape files for three cell sectors in northern Lebanon, in Tripoli—MAARAD1, MAARAD2 and MAARAD3. According to the Prosecution, mobiles involved in the

⁴¹⁶⁷ Exhibit P1124.

⁴¹⁶⁸ Exhibit P1192 (Statement of Witness PRH707, 11 November 2015), para. 164. *See also* F2004, Corrected Annex A to "Prosecution Motion for the Admission of Cell Site Evidence", 23 June 2015, row 10; Procedural matters, T. 8 September 2016, p. 46; Decision on admission of Prosecution's cell site evidence, paras 134-136, 138-139.

⁴¹⁶⁹ Kei Kamei, T. 20 July 2015, pp 86-87. One of the files on this CD, saved in a folder other than folder 3a, was attached as Annex B to Witness 707's statement of 25 January 2016 (exhibit P1194) and is exhibit P784 (Annex B to Witness 707's statement of 25 January 2016), Witness PRH707, T. 17 February 2016, p. 81; Decision on admission of Witness PRH707's statements and annexes into evidence, paras 63, 189-190.

⁴¹⁷⁰ Exhibit P1123.

⁴¹⁷¹ Exhibit P1125.

attack on Mr Hariri connected to these cells in 2004 and 2005. Witness 707 testified about these sectors' geographic coordinates, types of antenna, the location of the antennas, their azimuth and vertical tilt and how Alfa's radio planning team measured those values.⁴¹⁷²

1939. This CD is linked to the chart⁴¹⁷³ comparing changes in azimuth values between those provided by Alfa to the UNIIIC in 2007⁴¹⁷⁴ and those provided to the Prosecution in 2010,⁴¹⁷⁵ and showing that the azimuths of only 20 Alfa cell sectors had changed.⁴¹⁷⁶ The absence of the azimuths of MAARAD1, MAARAD2 and MAARAD3 from the chart allowed the Trial Chamber to infer that they may not have changed either in 2007 or 2010.

1940. Additionally, Witness 707 was clear in his evidence that changes to an antenna orientation over time, including the values of azimuth and tilt, are insignificant and infrequent and would only occur in specific instances.⁴¹⁷⁷ Further, the shape values were extracted from the Alfa business records. Therefore, applying the same reasoning used to assess the reliability of the chart comparing the 2007 and 2010 values, in the Trial Chamber's view, the shape files for the three Alfa cell sectors are accurate and reliable and probative. It has no reason to doubt the accuracy of these business records.

(n) Two spreadsheets with Alfa cell site information⁴¹⁷⁸

1941. In September 2007, Alfa provided the UNIIIC with two spreadsheets, 'Alfa cell list 19-09-2007' and 'Cellpart3', accompanied by a letter signed by Alfa's Managing Director and Chief Executive Officer. The first spreadsheet contains the CGI of 1,090 Alfa cells and the second contains original coordinates, azimuth direction and service dates of three specific cell sectors in Beirut: PHENMB1, MOVPIK1 and BHVOUT1/2. The Prosecution relied on the first spreadsheet to produce call sequence tables by finding cell tower names corresponding to cell ID codes and

⁴¹⁷² Witness PRH707, T. 29 January 2016, pp 120-121.

⁴¹⁷³ Exhibit P776 (List of discrepancies in azimuth directions and locations for data provided re Alfa cell sites, Annex 19 to Witness PRH707's statement of 11 November 2015).

⁴¹⁷⁶ Witness PRH707, T. 11 February 2016, pp 69-71, 88, T. 15 February, p. 32.

⁴¹⁷⁷ Witness PRH707, T. 15 February 2016, pp 35-36, 64-69, T. 20 April 2016, pp 24-25.

⁴¹⁷⁸ Exhibit P1126.

used the information from the second spreadsheet to verify and ascertain the accuracy of the azimuths of PHENMB1 and MOVPIK1.⁴¹⁷⁹

1942. Witness 707 explained that Alfa produced spreadsheets, such as these, in 2007 based on the available records and clarified generally that it was not possible to confirm mechanical values such as an azimuth of an antenna for 2004 and 2005.⁴¹⁸⁰ Nevertheless, the coordinates will not have changed if the respective cell sites still exist.⁴¹⁸¹ The Defence neither contested the spreadsheets nor cross-examined Witness 707 on either document.

1943. The spreadsheets are probative of the cell tower names in the Prosecution's call sequence tables and the azimuths for PHENMB1 and MOVPIK1. The Prosecution in turn relied on this and other data to determine the location of mobiles used to prepare and plan the attack of 14 February 2005. As the data included in the spreadsheets was extracted from Alfa business records, and in light of the lack of contest by the Defence, the Trial Chamber is satisfied that these spreadsheets are authentic and reliable and are probative. It has no reason to doubt the accuracy of this information.

(o) Spreadsheet 'CellID' containing details of Alfa cell sectors⁴¹⁸²

1944. This spreadsheet, which was provided to the Prosecution on DVD by Alfa representatives in March 2010, contains generic data produced in the usual course of Alfa's business, including details of 1,749 Alfa cell sectors on air on 19 March 2010, such as their type, region, CGI, installation date, sectors, splitter, original longitude and latitude and azimuth.

1945. Similar details were provided for 83 cell sectors that were off air in 2010. The Prosecution relied on this information to verify the CGI, coordinates, azimuth and cell type of some cell sectors and to find cell tower names corresponding to cell ID codes for the purpose of creating call sequence tables.⁴¹⁸³

⁴¹⁷⁹ Exhibit P1126; *see also* Decision on admission of Prosecution's cell site evidence, paras 148-149.

⁴¹⁸⁰ Witness PRH707, T. 9 February 2016, pp 48-49, T. 11 February 2016, pp 55-56.

⁴¹⁸¹ Witness PRH707, T. 16 February 2016, p. 8.

⁴¹⁸² Exhibit P1183 (Data for Alfa cell sectors on air on 19 March 2010 and off air in 2010).

⁴¹⁸³ Exhibit P1183; *see also* Decision on admission of Prosecution's cell site evidence, paras 156-157.

1946. Counsel for Mr Oneissi questioned Witness 707 on the differences between the azimuth values in this spreadsheet and those in the spreadsheet titled ‘Security Main’.⁴¹⁸⁴ The witness provided specific answers only after seeing the details of the requests for assistance from the Prosecution that generated the two documents. In relation to both this and the list of Alfa azimuths and locations⁴¹⁸⁵—comparing discrepancies between the 2010 Excel spreadsheet with 737 Alfa cell sectors⁴¹⁸⁶ and the lists with information for Alfa cell sectors based on 2007 data⁴¹⁸⁷—Witness 707 explained that the changes in azimuth values were reasonable considering that the spreadsheets covered a number of years.⁴¹⁸⁸

1947. Alfa contemporaneously provided this type of cell data, including that contained in this spreadsheet, to the Prosecution; Defence counsel did not specifically challenge the reliability of the data. Moreover, Witness 707 testified about a spreadsheet containing similar information and confirmed that it was extracted from Alfa’s business records.⁴¹⁸⁹ The spreadsheet is probative of the cell ID codes and cell tower names the Prosecution used to produce call sequence tables. In light of the comprehensive evidence given by Witness 707 regarding this and related documents, the Trial Chamber finds the spreadsheet ‘Cell ID’ to be accurate and sufficiently reliable to be probative.

2. Submissions on the Alfa and Touch cell site evidence generally

1948. The specific submissions on the individual 15 items of cell site evidence the Prosecution relied on to prove the reliability of the coverage maps, call data records and call sequence tables are detailed directly above. A summary of the general submissions on the call data records and cell site data received from Alfa and Touch follows; some of these also relate to the 15 items.

⁴¹⁸⁴ Exhibit P780.

⁴¹⁸⁹ Exhibit P780.

(a) Defence

i. Common submissions

1949. The Ayyash, Merhi, Oneissi and Sabra Defence reiterate that the theoretical coverage maps provided by Alfa represent only a prediction and reflect only 60 to 70 per cent of the actual coverage in 2004 and 2005.⁴¹⁹⁰ The Ayyash Defence submitted that this level of accuracy was a ‘killer blow’ to the Prosecution case, but did not suggest an acceptable percentage of coverage.⁴¹⁹¹

1950. The Sabra Defence submits that Alfa used underlying data to create coverage maps which is incomplete, unverifiable, based on unreliable information, and is not representative of the indictment period.⁴¹⁹² The Ayyash Defence similarly argues that the Trial Chamber cannot give any weight and rely on Alfa’s and Touch’s data and records for the following reasons. First, because they are not suited for the forensic purposes. Second, Alfa and Touch lacked sufficient record-keeping safeguards. Third, they are not contemporaneous records. And fourth, Witnesses 705’s and 707’s evidence is untested hearsay.⁴¹⁹³

1951. Alfa’s coverage maps depict fragments of theoretical coverage. In reality, the coverage may be located elsewhere or not even exist.⁴¹⁹⁴ These maps do not reflect the in-building, in-car or above ground coverage, which is particularly important in Beirut.⁴¹⁹⁵ As Alfa and Touch did not use these ‘more or less’ accurate maps for forensic purposes but as marketing tools, they must be regarded as the ‘fall back’ option. As confirmed by Witness 707, the coverage maps were produced on request and for marketing purposes, and were not used to estimate specific

⁴¹⁹⁰ Ayyash Defence final trial brief, para. 197; Oneissi Defence final trial brief, paras 133, 139; Sabra Defence final trial brief, para. 140; Merhi Defence final trial brief, paras 130-134; Ayyash Defence closing submissions, T. 17 September 2018, p. 66; Oneissi Defence closing submissions, T. 19 September 2018, p. 55; *see also* Sabra Defence closing submissions, T. 21 September 2018, p. 33.

⁴¹⁹¹ Ayyash Defence final trial brief, para. 197; Ayyash Defence closing submissions, T. 17 September 2018, pp 66-67: ‘PRESIDING JUDGE RE: And you’re saying 60 to 70 per cent isn’t enough. 100 per cent you’ll never get. Is there a figure which you would say is one which we could accept is reliable enough? Like 80, 85, 90, 95? 75?’

MR. HANNIS: 90 starts to sound good, Your Honour. I can’t put a number on it because I think you have to link it to other factors, and I’m going to talk about that for a little bit. But to make that claim I think goes too far. And, again, you know, I’m a little wise-cracker sometimes, but in effect, they say 60 to 70 per cent is no problem. In what world is the Prosecution living in where 100 per cent is not better than 60 to 70 per cent? If that’s the case, I’d like to borrow 100.000 from Mr. Povoas and he’ll be fine if I pay back only 60.000’.

⁴¹⁹² Sabra Defence final trial brief, para. 158.

⁴¹⁹³ Ayyash Defence final trial brief, para. 263; Ayyash Defence closing submissions, T. 17 September 2018, p. 65.

⁴¹⁹⁵ Oneissi Defence final trial brief, para. 141; Ayyash Defence final trial brief, para. 198; Merhi Defence final trial brief, para. 147.

weaknesses in the network.⁴¹⁹⁶ From the end of 2004 until 2007, Touch did not even produce predicted coverage maps.⁴¹⁹⁷

1952. The Ayyash, Oneissi and Sabra Defence submitted that for Alfa's and Touch's records to have any weight, they must have been created at or near the time of the events in question.⁴¹⁹⁸ Business documents created for litigation lack the same indicia of reliability as the business records created in the course of ordinary business.⁴¹⁹⁹ The fact that the documents were produced in 2010 and not created contemporaneously lessens their reliability because the person who created the document may not have been present at the pertinent time or may not have a good memory as to processes employed at that time.⁴²⁰⁰

1953. The Ayyash, Merhi, Oneissi and Sabra Defence argue that the accuracy of the prediction coverage maps is affected by the clutter model and azimuth values, which are not accurate, complete or known for 2004 and 2005, and which did not take into consideration the changes that resulted from Israel's attacks on Lebanon in 2006.⁴²⁰¹ For instance, the Prosecution used the 2010 clutter model to reconstitute the clutter in 2005 despite the fact that the clutter around Mr Merhi's alleged residence in south Beirut was affected by the topographical changes caused by Israel's attacks on Lebanon in 2006.⁴²⁰² Moreover, Mr Philips stated that in his UK cases, he considered local clutter to better understand the cell coverage, while the Prosecution did not inform him that Alfa used the clutter model from 2010 rather than 2005.⁴²⁰³

ii. Ayyash Defence

1954. The Ayyash Defence further submits that hearing from corporate witnesses does not relieve the Prosecution of its burden to establish the provenance or reliability of business records and the

⁴¹⁹⁶ Ayyash Defence final trial brief, para. 252; Sabra Defence final trial brief, paras 128, 138; Oneissi Defence final trial brief, paras 82, 129, 156; Oneissi Defence closing submissions, T. 19 September 2018, pp 55-56.

⁴²⁰¹ Ayyash Defence closing submissions, T. 17 September 2018, pp 64, 66; Oneissi Defence final trial brief, paras 47, 74, 78-79, 156, 665; Sabra Defence final trial brief, para. 159; Merhi Defence final trial brief, paras 130, 133; Merhi Defence closing submissions, T. 19 September 2018, pp 3, 54.

⁴²⁰² Merhi Defence final trial brief, paras 342-349.

⁴²⁰³ Ayyash Defence final trial brief, paras 271-272, 304; Oneissi Defence final trial brief, paras 122, 124. The Prosecution did not make any submissions relating to clutter in its final trial brief or closing submissions.

processes used to gather, store and retrieve them.⁴²⁰⁴ The lack of a centralised database combined with no protocols or systems in place to ensure the reliable recording and maintenance of data is no reason ‘to trust’ the data related to 2004 and 2005.⁴²⁰⁵

1955. The Trial Chamber should not rely on the data produced in 2007 and 2010 to recreate a picture of Alfa’s network in 2004 and 2005. It is not possible to confirm who produced the Alfa coverage maps provided to the Special Tribunal nor the veracity of the information relied upon to create them. Any analysis based on Alfa’s cell site information is unreliable.⁴²⁰⁶

1956. According to the Ayyash Defence, the changes in Touch’s database and the resulting changes of the network’s predicted coverage would only be reflected in a predicted best server coverage map if the software program was re-run. The February 2004 predicted coverage files thus have little relevance to February 2005 because of the changes in the intervening period.⁴²⁰⁷

1957. The changes made during the year between the two snapshots—February 2004 and February 2005—would have affected these coverage maps based on the data from the ‘snapshots’, and there is no reliable information from Witness 705 or from Touch documents on how many changes occurred.⁴²⁰⁸ Touch’s database is insufficiently reliable because it was constantly changing through regular network optimisation or fine-tuning.⁴²⁰⁹

1958. With respect to the maps received from both Alfa and Touch, the Ayyash Defence highlighted that, as a mobile does not need to move to use multiple cells within a short amount of time, predicted coverage maps cannot reflect reality and only show an average of dynamic changes in signal strength.⁴²¹⁰

⁴²⁰⁴ Ayyash Defence final trial brief, para. 222.

⁴²¹⁰ Ayyash Defence final trial brief, para. 200.

iii. Merhi Defence

1959. The Merhi Defence submits that Witness 707 confirmed that, as Alfa's azimuth and tilt values changed over time without Alfa recording them in a database, the values from 2004 and 2005 have been lost.⁴²¹¹ Any inference based on the call data provided by Alfa is therefore invalid.⁴²¹² With respect to the spreadsheet listing details of Alfa cell sectors based on information from 2007, Witness 707 could not confirm the date corresponding to the azimuth values provided to the Prosecution or the frequency of the changes made by Alfa.⁴²¹³ The same spreadsheet contained outdated and obsolete information regarding the slant of antennas, incline and azimuth values.⁴²¹⁴ The manually recorded information for some stations dates back to 1995.⁴²¹⁵

1960. Additional factors that make the azimuth values provided by Alfa not representative of the situation in 2004 and 2005 include the addition of new cell sites and the dismantling of the old ones, which had an impact on the coverage of the adjacent cells.⁴²¹⁶ Further, comparing the 'Security Main' spreadsheet⁴²¹⁷ and the 'CellID' spreadsheet⁴²¹⁸ revealed 39 differences in azimuth values.⁴²¹⁹ Also, the Prosecution was not able to reconcile the inconsistencies between the 'Security Main' spreadsheet⁴²²⁰ and the list of Alfa azimuths and locations.⁴²²¹ In addition, the 2010 Excel spreadsheet with 737 Alfa cell sectors⁴²²² contains 285 fewer cells than the list with information for Alfa's cell sectors based on information from 2007.⁴²²³

1961. The Prosecution oversimplified the data received from Alfa and Touch, in effect presenting it in a way not reflecting reality.⁴²²⁴ The data derived from nine different sources and was generated

⁴²²⁰ Exhibit P780.

⁴²²¹ Merhi Defence final trial brief, paras 119-120. The list of correct Alfa azimuths and locations (exhibit P776) compares the discrepancies between the spreadsheet listing the names, coordinates and azimuth of 737 Alfa cell sectors based on information from 2010 (exhibit P775) and the lists with information for Alfa cell sectors based on information from 2007 (exhibit P778).

⁴²²² Exhibit P775.

⁴²²³ Merhi Defence final trial brief, paras 119-120.

⁴²²⁴ Merhi Defence final trial brief, para. 83.

in various years.⁴²²⁵ Alfa's use of its data as well as the 2010 propagation model resulted in the coverage maps being 'skewed'.⁴²²⁶ The maps are an estimate and they represent only a coverage prediction.⁴²²⁷ Further, the coverage maps provided by Alfa were distorted by the impact of the destruction during the 2006 war in Lebanon and the new buildings which altered the coordinates and the height of some antennas.⁴²²⁸

iv. Oneissi Defence

1962. The Oneissi Defence submits that no weight should be placed on the Alfa evidence as it lacks reliability and any probative value is substantially outweighed by the prejudice the Oneissi Defence suffered by not being able to cross-examine the Alfa employees who produced and provided this evidence.⁴²²⁹ Further, the Trial Chamber should reconsider under Rule 140 its erroneous decision to admit the 2010 and 2007 azimuth and coordinate information (exhibits P775 and P778) as business records.⁴²³⁰ The prejudice to Mr Oneissi by this decision lies in the admission of, and possible reliance on, unreliable evidence of fundamental importance.⁴²³¹

1963. The Oneissi Defence notes that the spreadsheet with details of Alfa cell sectors and the two sets of Alfa coverage maps relied upon in the electronic presentation of evidence were produced and provided to the Prosecution before Alfa established, in 2014, a central database of cell site information.⁴²³² Specifically, these are: first, the spreadsheet with details of Alfa cell sectors based on information from 2010;⁴²³³ second, the spreadsheet with details of Alfa cell sectors based on information from 2007;⁴²³⁴ third, the shape files received in 2010 for the predicted best server

⁴²³⁴ Exhibit P778.

coverage for Alfa cell sectors;⁴²³⁵ and fourth, the shape files received in 2013 for the predicted best server coverage for Alfa cell sectors.⁴²³⁶

1964. The underlying data, including azimuth and tilt values, in the shape files the Prosecution received in 2010⁴²³⁷ and 2013⁴²³⁸ for the predicted best server coverage for Alfa cell sectors were not created using contemporaneous values from 2004 and 2005, and therefore negatively impact the reliability of the shape files.⁴²³⁹ Moreover, these 2010⁴²⁴⁰ and 2013⁴²⁴¹ shape files were not subjected to second-level review through drive tests or field reviews to confirm their accuracy.⁴²⁴²

1965. The lack of a centralised database negatively affects the reliability of the spreadsheet with details of Alfa cell sectors based on information from 2010⁴²⁴³ and the spreadsheet with details of Alfa cell sectors based on information from 2007.⁴²⁴⁴ The data in these documents was extracted from an individual database for which the Prosecution has led no evidence and could have been mismanaged, outdated or out of use. Furthermore, the Prosecution led no evidence about Alfa's employees who were responsible for updating these databases.⁴²⁴⁵

1966. Alfa had no records of any changes in azimuth values over time. Thus, the spreadsheet with details of Alfa cell sectors based on information from 2010,⁴²⁴⁶ and the spreadsheet with details of Alfa cell sectors based on information from 2007,⁴²⁴⁷ do not show azimuth values of the cell sites in 2004 and 2005. Rather they are for 2007 and 2010, when they were produced and provided to the UNIIIC and the Prosecution.⁴²⁴⁸

⁴²³⁷ Exhibit P1123.

⁴²³⁸ Exhibit P1124.

⁴²³⁹ Oneissi Defence final trial brief, paras 74-75.

⁴²⁴⁰ Exhibit P1123.

⁴²⁴¹ Exhibit P1124.

⁴²⁴² Oneissi Defence final trial brief, para. 81.

⁴²⁴³ Exhibit P775.

⁴²⁴⁴ Exhibit P778.

⁴²⁴⁵ Oneissi Defence final trial brief, para. 60.

⁴²⁴⁶ Exhibit P775

⁴²⁴⁷ Exhibit P778.

⁴²⁴⁸ Oneissi Defence final trial brief, para. 61; Oneissi Defence closing submission, T. 19 September 2018, pp 69-70.

1967. The Oneissi Defence notes that Witness 707 testified that, ‘the farther we go from 2005 and 2007, the preciseness of the information would be less’, meaning the older the values the less accurate they are.⁴²⁴⁹

1968. The Prosecution has not established the provenance of the spreadsheet with details of Alfa cell sectors based on information from 2007.⁴²⁵⁰ Witness 707 testified that Alfa’s radio planning department was able to provide the information contained in the 2007 Alfa cell sectors data and was usually the department which ‘uses these values the most’, but the witness could only speculate as to the origin of the values. When shown the spreadsheet with the 2007 Alfa cell sectors data, the witness stated that he ‘had no information about the drafting of this document’ and that Alfa did not ‘have the records that prove the main source of origin of these values’ and that Alfa could not identify the source of the values in this spreadsheet.⁴²⁵¹

1969. The accuracy of the azimuth values in the spreadsheet with details of Alfa cell sectors based on information from 2007 could not be confirmed. It was ‘normal’ at Alfa that the geographic coordinates were inaccurate by up to 50 metres, and that there may be another 40 metres between the geographic coordinates and the antenna itself. Also, the spreadsheet with details of Alfa cell sectors based on information from 2007 cannot be considered as a business record as it was produced in 2007 for litigation purposes and it has not been established that Alfa used the specific values contained in this spreadsheet in the ordinary course of business.⁴²⁵²

1970. The Oneissi Defence also argues that the shape files received in 2010 for the predicted best server coverage for Alfa cell sectors, and the shape files received in 2013 for the predicted best server coverage for Alfa cell sectors in July 2005, namely exhibits P1123 and P1124, are unreliable. They suffer from an ‘important margin of error’ due to the general limitations of the maps.⁴²⁵³

1971. The maps were created in 2010 and 2013, respectively, and are the product of ‘reverse engineering’.⁴²⁵⁴ Additionally, Alfa did not synchronise information relating to the installation and

dismantling dates of cells in a centralised database⁴²⁵⁵ and this information was used to create the shape files.⁴²⁵⁶ Further, Witness 707 was unable to determine where this information came from but suggested it was most probably from the spreadsheet titled ‘Security Main’ containing basic cell information for Alfa,⁴²⁵⁷ and there were a number of discrepancies between the spreadsheet and the shape files received in 2010 for the predicted best server coverage for Alfa cell sectors.⁴²⁵⁸

1972. Even though, according to Witness 707, ‘some of the information’ from the spreadsheet with details of Alfa cell sectors based on information from 2010 was relied upon to create the 2010 shape files for the predicted best server coverage for Alfa cell sectors, the deficiencies in the spreadsheet have negatively affected those 2010 shape files.⁴²⁵⁹

1973. The spreadsheet with details of Alfa cell sectors does not contain all of the information needed to create those files, such as the antenna height or tilt values. The source of the data used to create the shape files received in 2013 for the predicted best server coverage for Alfa cell sectors was similarly unknown. It was impossible to confirm the accuracy of the antenna height values from 2004 and 2005 which needed to be fed into Asset to produce an acceptable coverage map. The vertical orientation of an antenna was also needed as it significantly affects the coverage of a cell site.⁴²⁶⁰

1974. Witness 707 stated that tilt values change over time but that they do not undergo major changes, and a change of five to seven degrees does not really affect the coverage. This is, however, in direct contradiction to Mr Philips’s statement in his report that ‘the extent and strength of coverage is reduced considerably simply by the application of 7 degree of downtilt.’⁴²⁶¹

1975. The Oneissi Defence stresses that coverage maps, such as exhibits P1123 and P1124, were created and generated according to requests for assistance or for marketing purposes, not for technical reasons.⁴²⁶² Witness 707 confirmed that Alfa did not use the coverage maps that the

Prosecution used in the electronic presentation of evidence, and the specific maps on which he was asked to comment during his cross-examination were incomplete and insufficient to determine the location of a mobile.⁴²⁶³

1976. In addition, these coverage maps cannot depict overlapping coverage since cell site signals are constantly ‘varying’ and ‘moving in level’. The boundaries of cell sites are therefore constantly changing and it is unlikely that the boundaries in reality would exist in the form of straight lines as sometimes depicted in the electronic presentation of evidence for Alfa’s theoretical coverage.⁴²⁶⁴

v. Sabra Defence

1977. The Sabra Defence submits that Alfa provided only an estimate of the total number of cells that were in use in 2004 and 2005 and, as with cell site values, this cannot be verified.⁴²⁶⁵ Due to the lack of properly recorded contemporaneous data, the Prosecution erroneously relied on the 2010 Excel spreadsheet with 737 Alfa cell sectors and the lists with information for Alfa cell sectors based on information from 2007.⁴²⁶⁶ The measurements of the azimuth values are also likely to be affected by the fluctuations in the recording equipment caused by the materials in the cell masts.⁴²⁶⁷

1978. The Prosecution described the data on which it relied as the ‘best available’, falling far below the absolute requirement for data to be contemporaneous to the time of the incident if used for forensic purposes. The Sabra Defence argued that ‘best available evidence’ should not be confused with the ‘best evidence rule’, according to which secondary evidence is admissible if the original document does not exist and or cannot be obtained. For accurate cell site analysis, the values as they existed at the time of the incident must be replicated, while outdated and unverified evidence is insufficient.⁴²⁶⁸

1979. The comparison of data between 2007 and 2010 does not relate to the indictment period, thus is irrelevant for the purpose of supporting an analysis of the network at that time. The Sabra

⁴²⁶³ Oneissi Defence final trial brief, paras 84-86.

⁴²⁶⁴ Oneissi Defence final trial brief, para. 140.

⁴²⁶⁵ Sabra Defence final trial brief, para. 150.

⁴²⁶⁶ Sabra Defence final trial brief, paras 153-154.

⁴²⁶⁷ Sabra Defence final trial brief, para. 149.

⁴²⁶⁸ Sabra Defence final trial brief, para. 155.

Defence submits that the list of correct Alfa azimuths and locations suffers from the same issues of reliability regarding confirmation of accuracy.⁴²⁶⁹

1980. The Prosecution's reliance on Alfa's coordinates for the locations of their cell masts in operation in Lebanon during the relevant period and the cell IDs for cell sectors on their network is largely irrelevant because it is the information regarding the cells, specifically their azimuth and tilt at the relevant time that is required. The file containing cell ID codes for Alfa similarly merely lists the names and region of cells on the network and are not used to produce predicted best server coverage.⁴²⁷⁰

(b) Prosecution

1981. In response to the Defence arguments concerning Alfa lacking a centralised database, the Prosecution submits that the evidence shows that the cell site data and coverage maps originated from Alfa and Touch and that Alfa's cell site data was stored in databases retained by the radio planning department. Centralised storage means data is accessible beyond the department that used the data. In any case, the Defence did not explain why centralised storage is necessary to ensure its reliability.⁴²⁷¹

1982. The Prosecution responded to the Oneissi Defence's submission regarding the 20 differences in azimuths between the 2007 and 2010 data received from Alfa in the spreadsheets with details of Alfa cell sectors based on information from 2007 and from 2010. The Prosecution submits that Defence counsel omitted to mention that 707 azimuth values were common to both lists.⁴²⁷²

⁴²⁶⁹ Sabra Defence final trial brief, para. 156. The list of correct Alfa azimuths and locations (Exhibit P776) compares the discrepancies between the spreadsheet listing the names, coordinates and azimuth of 737 Alfa cell sectors based on information from 2010 (exhibit P775) and the lists with information for Alfa cell sectors based on information from 2007 (exhibit P778).

⁴²⁷⁰ Sabra Defence final trial brief, para. 157.

⁴²⁷¹ Prosecution closing submissions, T. 11 September 2018, pp 78-79; *see also* Prosecution final trial brief, para. 56.

⁴²⁷² Prosecution closing submissions, T. 11 September 2018, p. 63 (referring to exhibits P778 and P775); *see also* Prosecution final trial brief, para. 66.

1983. The 20 differences thus represent changes to a mere 3.3 per cent of the azimuths over three years. The remaining 96.7 per cent of the azimuths remained unchanged over that period.⁴²⁷³ The Prosecution highlighted that none of these compared cells are relevant to the case.⁴²⁷⁴

1984. The Oneissi Defence's argument that the azimuth values in the spreadsheet of Alfa cell sectors based on 2010 information,⁴²⁷⁵ and the spreadsheet of Alfa cell sectors based on 2007 information,⁴²⁷⁶ do not constitute business records, comes from the common law principle prohibiting hearsay evidence and its definition of business records. However, neither concept is applicable or relevant.⁴²⁷⁷

1985. Instead, the high reliability of Alfa's azimuth values and cell site locations rests on their provenance from Alfa's data, and that Alfa had a business purpose to retain this data.⁴²⁷⁸ In addition, the requests for assistance were formulated in a neutral manner and the responses from Alfa pre-dated the indictment.⁴²⁷⁹

1986. In response to the Oneissi Defence's submission on the discrepancies between the 'Security Main' spreadsheet⁴²⁸⁰ and 'CellID' spreadsheet,⁴²⁸¹ the Prosecution submits that the Defence omitted to mention that 39 differences in azimuth values of the 831 cell sectors amount to less than five per cent of the cell sectors common on both lists.⁴²⁸² Further, the Alfa network was stable throughout the relevant period and the cell sectors existing in 2005 were still in place in 2010 and can be confirmed through their geographic coordinates, cell IDs and the call data records.⁴²⁸³

1987. The Prosecution responded to judicial questions in relation to the estimated 60 to 70 per cent accuracy of the prediction maps for 2004 and 2005, submitting that this estimate was based on Witness 707's own experience, and that the Prosecution case does not require the predicted

coverage maps to be of any higher accuracy.⁴²⁸⁴ The Prosecution added that the impact of the prediction maps' estimated accuracy on cell site analysis was that a mobile was placed in a larger geographic area.⁴²⁸⁵

1988. The Prosecution highlighted that it was not necessary for the Trial Chamber to determine that a 'mobile phone user was within the precise area shown by a coverage map. Rather ... the Chamber should make such determinations on the basis of the totality of the evidence'.⁴²⁸⁶ The Trial Chamber must determine, based on the totality of the evidence, whether the Accused took part in actions that demonstrate their participation in the crimes charged in the amended consolidated indictment.⁴²⁸⁷

3. Findings on Alfa's and Touch's call data records and cell site data

(a) Alfa's and Touch's call data records and cell site data as business records

1989. Before permitting Witness 707 to testify about the contents of Alfa records that he did not personally prepare, the Trial Chamber thoroughly researched the issue.⁴²⁸⁸ It was unable to identify any case law or provision of international criminal law procedural law in relation to the admission into evidence or reliability assessment of corporate business records.⁴²⁸⁹

1990. The approaches taken in national jurisdictions on which the Defence relies, such as the US case law cited by the Ayyash Defence in its final trial brief, confirms only that domestic criminal case law lacks consistent precedent with respect to the principles that underlie the assessment of corporate business records. The Trial Chamber reiterates that it is not bound by domestic legislation or case law.⁴²⁹⁰

⁴²⁸⁴ Prosecution final trial brief, paras 52-53, 62; Prosecution closing submissions, T. 11 September 2018, pp 56, 86-93.

⁴²⁸⁵ Prosecution closing submissions, T. 11 September 2018, pp 56, 59.

⁴²⁸⁶ Prosecution final trial brief, para. 53.

⁴²⁸⁷ Prosecution final trial brief, para. 70.

⁴²⁸⁸ Corrected version of decision on Prosecution motion to admit Witness PRH707's statements, para. 52.

⁴²⁸⁹ The case law related to 'letters, minutes, transcripts of parliamentary speeches, maps, decrees, situation reports, internal and external communications of international organizations, and NGOs, films, videotapes, written and audio records of intercepted conversations, media reports, contemporaneous diaries and forensic, medical and autopsy reports', Sluiter 2013, p. 1081; Corrected version of decision on Prosecution motion to admit Witness PRH707's statements, paras 54-59.

⁴²⁹⁰ Corrected version of decision on Prosecution motion to admit Witness PRH707's statements, para. 52.

1991. However, the Trial Chamber, without attempting to provide a comprehensive definition of and identify all the features of corporate business records, observes that in many domestic legal systems business records are those produced by an organisation in the ordinary course of business. These records are automatically generated, like call data records, and by their nature, are recorded and stored by various company personnel and officials in differing capacities and different departments and units. The size and complexity of the organisation exponentially heightens the potential for records to come from a diversity of internal sources.

1992. Common law jurisdictions that generally prohibit hearsay exempt business records from the prohibition.⁴²⁹¹ This is because business records created in the usual course of business are deemed to have the necessary indicia of reliability and as these records are considered an exception, courts do not require the original record maker to testify as to the document's authenticity.

1993. The Trial Chamber recognises that records produced for the purpose of litigation may be extracted in response to an investigation and that it may be appropriate in some circumstances to treat the two differently. It is true that, if records are created for the purpose of litigation, the record maker is more likely to be available to testify about the provenance of information within the record and its reliability. Here, however, the evidence to which the Parties refer as records produced for the purpose of litigation is not substantively different from the underlying call data records and cell site data from which they were derived or extracted. Rather it is merely re-formatted for ease of presentation in court.

1994. The Trial Chamber was presented with sufficient evidence to conclude that most of the evidence contained in the telecommunication witnesses' statements and accompanying annexes derives from Alfa's and Touch's business records that were produced in the normal course of business, and had not been created for the purpose of litigation. Even if prepared for the purpose of litigation in the widest sense, namely, being extracted from their databases and provided to investigatory authorities such as the UNHCR and the Office of the Prosecutor, the Trial Chamber

⁴²⁹¹ For example, in Canada: *Canada Evidence Act* (R.S.C., 1985, c. C-5), s. 30. In Australia: *Evidence Act 1995*, s. 69. In the UK: *Criminal Justice Act 2003*, s. 117. In the US: *Federal Rules of Evidence 2015*, Rule 803 (6). See also for example, *Wilcox and others* Nova Scotia Court of Appeal reasons for judgment, para. 53; *Forbes* Federal Court of Australia reasons for judgment, paras 100, 102; *Horncastle and others* UK Supreme Court judgment, para. 35.

still considers that the call data records and cell site evidence provided by Alfa and Touch constitute a form of corporate business records.

1995. Alfa and Touch employees extracted and prepared this information and data. Their only ostensible interest was to record as accurately as possible matters relating to the business. This diminishes the potential for misrepresentation and fabrication and for third parties to manufacture the data so that it contains a ‘favourable’ version.

1996. Regarding the call sequence tables, the Trial Chamber received extensive evidence from Prosecution analysts and investigators who produced the call sequence tables of the methodology and the built-in internal checks and balances; this included reviewing every call sequence table. The Trial Chamber is satisfied of the reliability of the tables as derivative evidence representing the underlying data. The Defence cast no real doubt on any of the call sequence tables, and, of significance, Defence counsel also produced their own call sequence tables—using the same underlying call data records—and tendered them into evidence in support of their own cases.

1997. The Trial Chamber is accordingly satisfied that the call sequence tables produced by both Prosecution and Defence are reliable representations of the data in the underlying call data records. The Trial Chamber may therefore rely upon these tables as accurate extracts of the call data records.

1998. In light of this and based on the totality of the evidence and having considered the Defence challenges, the Trial Chamber is satisfied that the call data records and cell site data provided by Alfa and Touch essentially constitute business records created in the normal course of business. They therefore possess the necessary reliability and are probative. The Trial Chamber accordingly may rely on them in analysing the relevant mobiles’ locations and movements.

(b) Alfa’s call data records and cell site data

1999. Witness 707 gave thorough and detailed testimony on the generation of Alfa’s call data records. The Trial Chamber highlights his evidence that call data records are automatically generated at the MSCs, and that up to and including the mediation process, there is no human input or any other possibility to alter these records.

2000. In a schematic, the witness clarified how call data records are processed for use in billing.⁴²⁹² He confirmed that Alfa's MSCs were the only source for the call data records provided to the Prosecution. He gave detailed evidence on Alfa's storage of call data records, including its storage of magnetic tapes, the archiving in the billing system.

2001. The Trial Chamber has carefully reviewed the Alfa coverage maps provided to the UNIIIC in 2005 and the other in 2007, the two sets of Alfa predictive coverage shape files provided to the Prosecution in 2010 and 2013 and the several lists of basic cell information.

2002. Witness 707 gave extensive and detailed evidence on the cell site data provided by Alfa to the UNIIIC and the Prosecution, including on how the materials are used in Alfa's business operations, the procedure and inputs used to generate the shape files, the planning tool used and the company's personnel tasked to produce shape files. The Trial Chamber considered his evidence on the recording of basic cell information and which values can still be verified, as well as on the evolution of the storage methods of basic cell information at Alfa. The witness reiterated that, within the period relevant to the case, the changes to an antenna orientation over time, including the values of azimuth and tilt, were insignificant and infrequent and would only occur in specific instances.

2003. Alfa started to organise and centralise record keeping in 2014 because, as Witness 707 explained, no practice for centrally storing cell site data existed in 2004 and 2005. Nor was Alfa legally required to do so.

2004. Apparently, the approximation or 'reverse engineering' method that Alfa used to produce the predicted best coverage for the years for which it had no database was the only method it could use to replicate and provide the requested cell site data to the Prosecution. As opposed to Alfa's replicated cell site data, its drive tests conducted for network optimisation are by their nature irregular and fragmented. The Trial Chamber therefore rejects the Sabra Defence suggestion that the Prosecution failed to rely on the available, though limited, results of Alfa drive tests.

2005. The Trial Chamber also rejects the Oneissi Defence and the Merhi Defence arguments that Witness 707 could not confirm the accuracy of the two sets of cell site data that Alfa provided to

⁴²⁹² Exhibit P773.

the Prosecution in 2010 and 2013, or describe how they were produced, and that Alfa did not keep records on the origin of that data.

2006. In assessing the weight to be given to these sources for the Alfa coverage maps, the Trial Chamber has taken into account the reliability of the approximation method Alfa used to create this data in the absence of contemporaneous data for 2004 and 2005. The Trial Chamber is of the view that these sets of data have evidential weight and merit consideration where relevant; however, it has exercised caution in attributing weight. In addition, in its findings on mobiles' general locations and movements, the Trial Chamber has borne in mind the Defence challenges to both the credibility and reliability of this data.

2007. As for the Oneissi Defence's argument on reconsideration—that the Trial Chamber should reconsider its 'erroneous' decision to admit the 2010 and 2007 azimuth and coordinate information in exhibits P775 and P778 as business records⁴²⁹³—counsel did not submit a discrete application for reconsideration. This of itself would be sufficient reason to dismiss the 'application'. However, it also fails because the Trial Chamber could not find any substantiated reasons demonstrating a clear error of reasoning or the need to reconsider its decision to prevent an injustice.

(c) Accuracy of maps

2008. A major question is to what extent the Trial Chamber can rely on the theoretical coverage maps provided by Alfa and Touch considering that they reflect, based on Witness 707's estimation, only 60 to 70 per cent of the actual coverage in 2004 and 2005. According to the Prosecution, the impact of the inherent inaccuracy of these maps is that a mobile at the time of a communication is placed in a larger geographic area. Furthermore, the Prosecution case does not require the predicted coverage maps to be of any higher accuracy for the Trial Chamber to determine the approximate, general location or movement of a mobile.

2009. The Trial Chamber accepts that the 60 to 70 per cent accuracy of the Alfa prediction maps affects the reliability of the cell site analysis and the electronic presentation of evidence on which the Trial Chamber relied to determine the approximate location and movements of the mobiles relevant to the Prosecution case. The Trial Chamber, however, notes Mr Philips's evidence that

⁴²⁹³ Oneissi Defence final trial brief, paras 54-56.

this margin of error affects the borders or edges of a cell sector and not the central part of the coverage. Additionally, Witness 707's evidence was that, if the edges are removed from the predicted coverage plot—amounting to the outer ten per cent of the shape file—the accuracy for the remaining plot increases and largely reflects the real coverage on the ground.

2010. Nevertheless, considering the importance of Alfa's prediction coverage maps as a key element of the Prosecution's telecommunications evidence, for each finding relating to a mobile's approximate, general location or movement, the Trial Chamber has applied caution by considering the inherent 60 to 70 per cent accuracy of the Alfa prediction maps, the non-contemporaneous nature of some of the basic cell data and the approximation method used to reconstruct it.

2011. At the same time, however, the Trial Chamber has also considered Mr Philips's evidence that to determine a mobile's location and movements, a cell site analyst does not require more than cell site coordinates, alone or combined with azimuth values. As an expert in cell site analysis, he characterised Alfa's and Touch's best server plots as an additional tool that a cell site analyst could use to supplement the available cell site coordinates, to determine a mobile's approximate location and movements.

2012. As to the clutter model used to create Alfa's coverage maps, the Trial Chamber has borne in mind that, according to Mr Philips and Witness 707, while Aircom's Asset clutter model was not contemporaneous with the period relevant to the Prosecution case, the changes in topography over the years—including those resulting from Israel's attacks on Lebanon in 2006—can affect the coverage maps but not in a significant or radical way. This is equally applicable to the clutter model used to create Touch's coverage maps.

(d) Touch call data records and cell site data

2013. The Trial Chamber highlights the varying weight it gave the cell site evidence from Alfa and Touch based on the sources and methods used to generate this data. Namely, the Trial Chamber has given more weight to the data from the 2004 and 2005 snapshots that Touch made of its contemporaneous database and the coverage maps based on this data. This is in contrast to the diminished weight it has given to Alfa's equivalent evidence, such as the 2007 and 2010 azimuth and coordinate data, in exhibits P775 and P778.

2014. The Trial Chamber has carefully reviewed the two sets of 2004 predictive coverage shape files and basic cell information Touch provided to the Prosecution in 2010, accompanied by detailed explanatory documents. It has also considered that Witness 705 confirmed and commented on this data. As to the reliability of Touch shape files, unlike Alfa, Touch kept the contemporaneous coverage maps for all its cell sites on air in 2004 and 2005 and provided them to the UNIIIC and the Prosecution. The Trial Chamber has also reviewed the contemporaneous cell site data for 2004 and 2005 and the results of the drive testing Touch carried out between 2005 and 2007.

2015. The Trial Chamber has also carefully considered Witness 705's evidence on Touch automatically generating call data records as its business records. The Touch records were similarly created inside the MSC in a format that cannot be altered. The flow of call data records to mediation from the MSC is also fully automated. Of relevance is Witness 705's explanation that, throughout the mediation process, the company does not add or delete any MSC-generated records and fields of the call data records.

2016. Witness 705 testified on the production of the Touch predictive coverage maps and the generation of the shape files, including the inputs required and the procedure of calibrating a propagation model. The Trial Chamber has carefully considered his evidence on the accuracy of shape files and Touch's practice of exporting the site database on a regular basis.

2017. The Trial Chamber is not convinced by the Ayyash Defence's submission that Witness 705's lack of personal knowledge about the procedure and devices Touch used in 2004 and 2005 to generate the data it provided to the Prosecution impacts the reliability of the evidence. In the Trial Chamber's view, the witness had sufficient corporate and industry experience to testify as to the accuracy of the data, based on the information that he had.

2018. The telecommunications data consists of contemporaneous business records produced by Touch in the normal course of business. In the Trial Chamber's view, after carefully considering the totality of the evidence and the submissions, it has the necessary probative value required to be used to determine the general locations and movements of the mobiles relevant to the Prosecution case.

H. Electronic presentation of evidence (EPE)

1. Summary of evidence

2019. The electronic presentation of evidence is a tool developed by the Prosecution to visually represent telecommunications and geographic evidence from a desktop computer.⁴²⁹⁴ It displays particular locations and routes, in addition to the approximate locations from which various calls were made at specific times.⁴²⁹⁵ Its main function is to bring together mobile call information and geographic evidence and to visually display it in an accessible, reliable and efficient manner.⁴²⁹⁶

2020. The electronic presentation of evidence was built by professional software developers at the Prosecution's request.⁴²⁹⁷ A Prosecution analyst, Mr Andrew Fahey, was in charge of its development. From 2012, he managed the project team that developed this software.⁴²⁹⁸

2021. Mr Fahey testified to its development and demonstrated its functionalities.⁴²⁹⁹ He used telecommunications data provided to the Prosecution by Alfa and Touch;⁴³⁰⁰ maps from, for example, the 2010 edition of the Zawarib Beirut Atlas;⁴³⁰¹ and information from witness testimonies to plot that evidence on the electronic maps used with the software.⁴³⁰² For instance, he referred to the testimony of an officer in Mr Hariri's security team, who described the convoy's route from Quraitem Palace to the Sacred Heart Church on the morning of 14 February 2005.⁴³⁰³

⁴²⁹⁴ Exhibit P595 (Witness Statement of Andrew Fahey of 14 August 2015), para. 8; Andrew Fahey, T. 16 September 2015, pp 23-24.

⁴²⁹⁵ Andrew Fahey, T. 16 September 2015, pp 30-31.

⁴²⁹⁶ Exhibit P595 (Witness Statement of Andrew Fahey of 14 August 2015), para. 12.

⁴²⁹⁷ Andrew Fahey, T. 17 September 2015, p. 38. The electronic presentation of evidence itself was received into evidence as exhibit P592.1.

⁴²⁹⁸ Andrew Fahey, T. 16 September 2015, p. 23.

⁴²⁹⁹ Andrew Fahey, T. 16 September 2015, T. 17 September 2015, T. 27 October 2015.

⁴³⁰⁰ Andrew Fahey, T. 8 September 2016, p. 7.

⁴³⁰¹ Exhibit P298 (Zawarib Greater Beirut Atlas).

⁴³⁰² Andrew Fahey, T. 14 September 2016, p. 90, T. 15 September 2016, p. 7, T. 16 September 2015, p. 30; exhibit P663 (Witness Statement of Andrew Fahey), para. 18.

⁴³⁰³ Witness PRH101, T. 5 October 2016; Andrew Fahey, T. 16 September 2015, p. 30.

2022. Mr Fahey described how he combined the maps from the Lebanese Land Registry and the GeoVision⁴³⁰⁴ street map. He explained how he converted geographic coordinates from the Lebanese Land Registry system to GeoVision to enable comparison of the geographic data.⁴³⁰⁵

2023. The database uploaded into the electronic presentation of evidence has five categories of evidence stored on the Special Tribunal's Registry's server.⁴³⁰⁶ The first category is the mapping information, the map of Lebanon from GeoVision data.⁴³⁰⁷ The second is the landmark information described by Mr Fahey as 'points of interest and routes that exist within the country'. The third is locations and orientations of cell masts and cell sites.⁴³⁰⁸ The fourth is mobile call information retrieved from call sequence tables, and the fifth is attribution-related information—linking the mobile numbers to certain names, as in the amended consolidated indictment.⁴³⁰⁹ Below is an excerpt from exhibit P1120⁴³¹⁰ showing the primary and secondary sources of Touch's and Alfa's cell site data, referred to above at paragraphs 1863-1947, used in the electronic presentation of evidence:

	Coordinates	Azimuths	Coverage	Cell Identity Codes
Primary source	Feb 2004 MTC Touch coverage maps with tower locations and azimuths	Feb 2004 MTC Touch coverage maps with tower locations and azimuths	Feb 2004 MTC Touch coverage maps with tower locations and azimuths	Feb 2004 MTC Touch coverage maps with tower locations and azimuths

Summary of cell site evidence from Alfa and Touch used in the electronic presentation of evidence - exhibit P1120, pp 1-2

2024. Mr Fahey demonstrated how different parameters of the evidence can be chosen and shown in the electronic presentation of evidence. For example, the location of the cell site masts can be shown on the map.⁴³¹¹ In another example, he demonstrated how different routes, such as those taken by Mr Hariiri's security convoy, may be highlighted on the map.⁴³¹² The uploaded information can be displayed with long or short labels, where the long labels include, for instance, a full name of a geographic location and a short label displays only an acronym.⁴³¹³ The electronic presentation of evidence also features editing and adding new information functions.⁴³¹⁴

2025. Mr Fahey used an 'EPE demonstration call list' to elaborate on the telecommunications data uploaded and used in the electronic presentation of evidence.⁴³¹⁵ The list consists of the dialing number, replaced in the electronic presentation of evidence with the name of the person to whom the Prosecution attributed the mobile; the date and time of the call; the dialing cell site; the call type; and the call's duration. The same type of information is provided for the recipient and the number is substituted with the name of the person receiving the call.⁴³¹⁶

2026. An additional function allows snapshots of what was shown on the screen during testimony. Each snapshot used during witnesses' testimonies was given an exhibit number and

⁴³¹¹ Andrew Fahey, T. 16 September 2015, p. 33; exhibit P595 (Witness Statement of Andrew Fahey of 14 August 2015), para. 24.

⁴³¹⁵ Exhibit P593 ('EPE demonstration call list' dated 12 February 2005).

⁴³¹⁶ Andrew Fahey, T. 16 September 2015, pp 43-44.

saved on the Registry's server to allow the Parties' access to them.⁴³¹⁷ Each Party had access to the electronic presentation of evidence and could conduct checks before or after it was used in the courtroom.⁴³¹⁸

2027. Additional information about every snapshot was also made available in the database. For instance, the date and time of taking it, as well as the name of the person who was operating the electronic presentation of evidence when the snapshot was taken.⁴³¹⁹ For illustration purposes, Mr Fahey used snapshots—including the two shown below—to demonstrate the database's features and functions.⁴³²⁰ He used them to illustrate a 'demonstration call list' for mobile Red 652 dated 12 February 2005.⁴³²¹

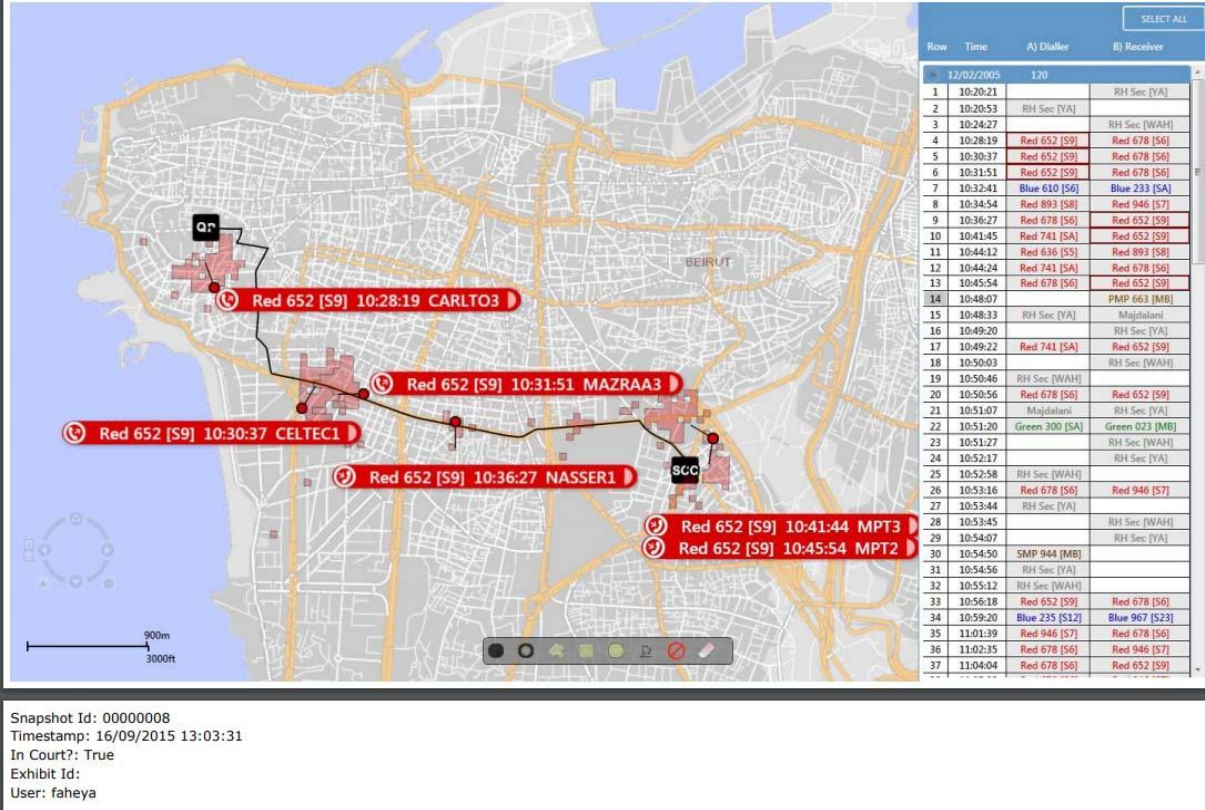

⁴³¹⁷ Andrew Fahey, T. 16 September 2015, pp 25, 103; exhibit P595 (Witness Statement of Andrew Fahey of 14 August 2015), para. 36. *See also* examples of electronic presentation of evidence snapshots at exhibits P593.1 (Snapshots 1st session 16 Sep 2015: ID 1 to 4 - Call List for 12 February 2004: EPE Demonstration), P593.2 (Snapshots 2nd session 16 September 2015: ID 5 to 10 – Call list for 12 February 2005: Electronic presentation of evidence Demonstration) and P593.3 (Snapshots 3rd session 16 Sep 2015: ID 11 to 16 - Call List for 12 February 2004: EPE Demonstration).

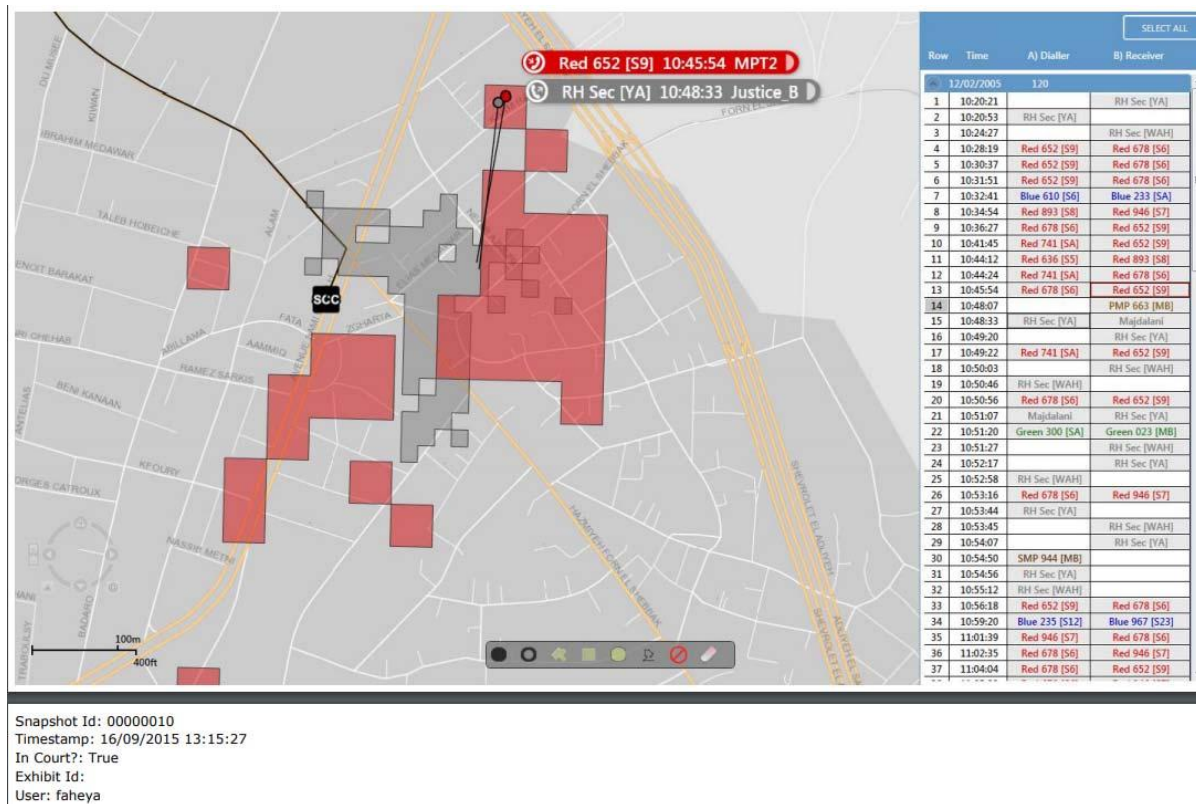

⁴³¹⁸ Andrew Fahey, T. 17 September 2015, pp 3-4.

⁴³¹⁹ Exhibit P595 (Witness Statement of Andrew Fahey of 14 August 2015), para. 36.

⁴³²⁰ Exhibit P593.2.

⁴³²¹ Andrew Fahey, T. 16 September 2015, pp 55-58, 65-68.

Two snapshots used by Mr Fahey to demonstrate in court the electronic presentation of evidence's functions, namely a 'demonstration call list' for Red 652 on 12 February 2005 – exhibit P593.2 (Snapshots 2nd session 16 September 2015: ID 5 to 10 – Call list for 12 February 2005: Electronic presentation of evidence Demonstration)

2028. Mr Fahey also outlined the steps taken to ensure quality control.⁴³²² He elaborated on what was done to ensure that the software correctly represented the proposed evidence stored in the databases. He was continually testing the software with his colleague from the Prosecution's electronic presentation of evidence development team. Further, a core group of users familiar with the information used in the electronic presentation of evidence checked the underlying information against what was displayed on the screen. Additionally, Mr Fahey anticipated that the witnesses would also use the electronic presentation of evidence maps and verify them.⁴³²³

⁴³²² Andrew Fahey, T. 17 September 2015, pp 2-8.

⁴³²³ Andrew Fahey, T. 17 September 2015, p. 3.

2029. Prosecution analyst Mr Andrew Donaldson testified that he ‘manually went through and paired over 40,000 rows of data from different sources’⁴³²⁴ in the early stages of the work on the system.⁴³²⁵ To create coverage maps, Prosecution investigator Mr Gary Platt also used the mapping system later used for the electronic presentation of evidence ‘on a daily basis’.⁴³²⁶

2. Submissions

(a) Prosecution

2030. The Prosecution submits that the data related to the cell mast locations and cell mast operations used in the electronic presentation of evidence was contemporaneous to the indictment period.⁴³²⁷

2031. The Prosecution underlines that the maps used in the system come from Alfa’s and Touch’s shape files.⁴³²⁸ Although they are not entirely contemporaneous with the time of the attack, they are a reliable representation of the period as both networks were stable over the relevant time. Hence, there were no significant alterations in the predicted best server coverage. Further, the comparison of Alfa’s and Touch’s data demonstrates a ‘high degree of consistency’.⁴³²⁹

(b) Defence

i. Common submissions

2032. The Ayyash, Oneissi and Sabra Defence submit that Mr Fahey lacked the required experience, expertise and qualifications, and he did not consult with any cell site analyst or cellular network employee to confirm the method he used to combine sources of information from different years or the feasibility of doing so. Mr Fahey’s testimony should not be given any weight because his analysis is inconclusive due to his inability to conduct a comparative analysis on the information provided by Alfa and Touch.⁴³³⁰

⁴³²⁴ Andrew Donaldson, T. 21 July 2015, p. 93.

⁴³³⁰ Ayyash Defence final trial brief, paras 254-255; Sabra Defence final trial brief, para. 160; Oneissi Defence final trial brief, para. 105. The Ayyash Defence refers to its cross-examination of Mr Fahey and the various percentages of

ii. Ayyash Defence

2033. The Ayyash Defence argues that the cell site analysis using the electronic presentation of evidence cannot determine whether a mobile is close to the cell site, at the outside edge of a predicted coverage plot or even outside the predicted best server coverage areas due to congestion and interferences, but still within usable coverage. The discussions on the ‘core’ of a predicted coverage area as opposed to its boundaries, which do not exist in reality, are therefore irrelevant.⁴³³¹

2034. Mr Fahey created composite coverage maps for Touch and Alfa combining a number of materials into a single file. The maps are insufficiently accurate representations of coverage at any time and especially in 2004 and 2005.⁴³³²

2035. The Prosecution compounded the companies’ errors by combining data from different sources without confirming the accuracy of the data and without taking into consideration ‘knock-on effects that changes to the data would have on surrounding cells’.⁴³³³ The Prosecution atlas showing 432 Alfa and Touch cell sites relevant to its case⁴³³⁴ and the index of Alfa and Touch cell details used in the electronic presentation of evidence,⁴³³⁵ are manifestly inadequate to depict the knock-on effects that changes to a site will have on the network.⁴³³⁶ There is no way of reconstructing the coverage as it was at the relevant time.⁴³³⁷ Hence, if the underlying evidence is already unreliable, additional work conducted on the telecommunications evidence does not change its unreliability.⁴³³⁸

2036. The Ayyash Defence submits that the Prosecution relied on predicted coverage maps and cell site information applicable in February 2005, while the mobile activity in the Prosecution case covers 2002 to 2006. The new buildings and destruction during the 2006 war, which would have

overlap that could be found depending on different counting methodologies, Andrew Fahey, T. 14 September 2016, pp 47-67.

⁴³³¹ Ayyash Defence final trial brief, para. 199.

⁴³³⁴ Exhibit P1152 (Atlas of relevant cell sectors). The source materials on which the Prosecution relied to produce the atlas are dated 2004, 2005, 2007 and 2010. *See also* exhibit P1152 (annex B), p. 35.

⁴³³⁵ Exhibit P1121 (Index of cell details used in the electronic presentation of evidence).

⁴³³⁶ Ayyash Defence final trial brief, paras 261-262.

⁴³³⁷ Ayyash Defence final trial brief, para. 254.

⁴³³⁸ Ayyash Defence final trial brief, para. 257.

altered the predicted coverage, were not taken into account.⁴³³⁹ Mr Philips, Mr Platt and Mr Donaldson used the map for the period outside of February 2005 and the Trial Chamber received into evidence slides using this map.⁴³⁴⁰ The Prosecution's maps and the index of Alfa's and Touch's cell details used in the electronic presentation of evidence should not be given any weight.⁴³⁴¹

2037. Finally, the Ayyash Defence submits that in his testimony Mr Fahey presented no standard of methodology for his work. Mr Fahey, when assessing one of the plots, found that it 'coincided well', but conceded that there was no standard against which this was being measured beyond a visual examination and approximately 50 per cent overlap indication was a 'good match'.⁴³⁴² As this shows Mr Fahey's lack of experience, the Trial Chamber should not give his work any evidentiary weight.⁴³⁴³

iii. Merhi Defence

2038. The Merhi Defence states that as the data underlying the maps is 'incomplete or totally unknown' for 2004 and 2005, the electronic presentation of evidence relies on imprecise data.⁴³⁴⁴ Mr Fahey disregarded the inconsistencies between the azimuths received in 2007 and those received in 2010 when the data was integrated into the database.⁴³⁴⁵ Hence, no weight should be given to the electronic presentation of evidence maps and Mr Platt's slides on which he relied in his testimony.⁴³⁴⁶

2039. The Merhi Defence submits that as Alfa did not provide all of the 2010 coverage maps, the electronic presentation of evidence contains only about 78 per cent of Alfa's cell sectors. Further, out of the coverage maps provided by Alfa, Mr Fahey compared less than six per cent of the maps. The results of the comparison are therefore not sufficient to state that the coverage maps reflect

⁴³³⁹ Ayyash Defence final trial brief, para. 259.

⁴³⁴⁶ Merhi Defence final trial brief, paras 87, 92.

the situation in 2005. Consequently, they cannot be probative for drawing inferences regarding the Accused's movements.⁴³⁴⁷

2040. The Prosecution intentionally did not discuss in its final trial brief the evidential weight of the database-generated maps or attempt to defend the electronic presentation of evidence program itself.⁴³⁴⁸

iv. Oneissi Defence

2041. The Oneissi Defence submits that even if the Trial Chamber finds that the underlying Alfa data is sufficiently reliable, the depiction in the electronic presentation of evidence 'cannot reasonably be found to reflect the Alfa network as it was in 2004-2005'. The electronic presentation of evidence demonstrated a product of 'no less than ten sources of data'. Further, 'for all four types of cell site information, the primary sources of data were either incomplete or inconsistent with the secondary source'.⁴³⁴⁹

2042. Mr Fahey suggested in his testimony that there was partial overlap between the coverage of specific cell sites when the depiction in the exhibit titled 'Alfa coverage maps of various areas in Beirut'⁴³⁵⁰ and the exhibit titled 'DVD containing Alfa cell tower information for 2005, 2007 and 2010'⁴³⁵¹ were compared. In fact, the coverage was significantly different and coincided only slightly.⁴³⁵² Also, he used the Alfa coverage maps received in July 2015⁴³⁵³ for the purposes for which they were not meant, namely because they were lower in quality than those Mr Platt used in the UK and did not show signal strength, and few cell sites on the map were labeled.⁴³⁵⁴

2043. The Oneissi Defence argues that Mr Fahey lacked the expertise to comment 'on the quality or the level of agreement as regards coverage plots' while comparing what was shown in the electronic presentation of evidence and in the exhibit 'Alfa coverage maps of various areas in Beirut'.⁴³⁵⁵ It further argues that the choice of the 63 cells for comparison was too small to draw

⁴³⁵⁵ Oneissi Defence final trial brief, para. 112.

conclusions.⁴³⁵⁶ Also, the sample was supposed to involve cells relevant to the case, while in fact some were omitted.⁴³⁵⁷

2044. With respect to the cell site BNPI3—located south of Parliament, adjacent and very close to the tree near the Al-Jazeera office with the video tape containing the claim of responsibility for the attack—Mr Fahey was unable to compare the theoretical coverage in the electronic presentation of evidence with that in the exhibit ‘Alfa coverage maps of various areas in Beirut’. He chose the 2010 azimuth values for use in the electronic presentation of evidence, despite the 2005 data being more contemporaneous.⁴³⁵⁸ The Oneissi Defence submits that the choice was made because that value would possibly offer coverage more suiting the Prosecution’s submissions.⁴³⁵⁹

2045. Mr Fahey also reached conclusions that actually fall within the Trial Chamber’s fact-finding function in stating that the electronic presentation of evidence represented ‘to a very large degree’ the 2004 and 2005 Alfa network.⁴³⁶⁰ Also, his work was ‘arbitrary and unscientific’.⁴³⁶¹ Additionally, the Oneissi Defence submitted that Mr Fahey does not have experience in analysing call data records and other cell site evidence.⁴³⁶² Yet, despite this, he also discussed issues such as the installation or removal of cell sites on neighboring cell sites.⁴³⁶³ Mr Fahey’s opinions regarding the Alfa cell site information should be ‘disregarded’.⁴³⁶⁴

2046. Mr Fahey demonstrated ‘subjective interpretation of coincidence’ between coverage plots and ‘allowed for arbitrary margins of error’.⁴³⁶⁵

2047. Further, Mr Fahey is ‘professionally invested in the success of the EPE’. The Oneissi Defence highlights that the Trial Chamber must exercise caution as the ‘conflict of interest is manifest’.⁴³⁶⁶ The electronic presentation of evidence was designed by the Prosecution and hence

⁴³⁵⁶ Oneissi Defence final trial brief, para. 112; Oneissi Defence closing submissions, T. 19 September 2018, p. 95.

⁴³⁶⁵ Oneissi Defence final trial brief, paras 114, 116.

⁴³⁶⁶ Oneissi Defence final trial brief, para. 94.

the witnesses testifying on it were prejudiced.⁴³⁶⁷ Moreover, the GeoVision maps used in the electronic presentation of evidence were imprecise and they reflect only ‘medium precision’ with regard to geographic coordinates.⁴³⁶⁸

2048. Mr Fahey analysed a document which compared the coverage maps of Lebanon obtained from Alfa in 2005 with the corresponding azimuths and cell site coordinates received in 2007 and 2010⁴³⁶⁹ and confirmed that it showed a consistency of 99 per cent for mast locations and 97 per cent for azimuth directions.⁴³⁷⁰

2049. As the almost complete lack of labeling of the cell sites on the electronic presentation of evidence maps made it impossible to know which cell sites correspond to those in exhibit 2D73, Mr Fahey merely assumed that because a cell site appeared to be in the same location it was the same cell site.⁴³⁷¹

2050. The Prosecution did not know the azimuth, height and tilt of the antennas in 2005 and Mr Fahey used software, which corresponded to the urbanisation of Beirut in 2010.⁴³⁷²

v. Sabra Defence

2051. The Sabra Defence argued that Mr Fahey is not a cell site engineer or analyst and that he does not have experience in the production of coverage maps. Further, he could not assess and consider the knock-on impact that his theoretical combining of different sets of data would have in terms of signal across the network in reality.⁴³⁷³ Mr Fahey’s methodology was ‘flawed, incomplete and poorly explained’ and the maps he produced should be given no weight.⁴³⁷⁴

⁴³⁶⁷ Oneissi Defence final trial brief, para. 94; Oneissi Defence closing submissions, T. 19 September 2018, p. 34.

⁴³⁶⁸ Oneissi Defence final trial brief, para. 104.

⁴³⁶⁹ Exhibit 2D73. This document was prepared for demonstrative purposes and was not used in the electronic presentation of evidence, Witness PRH707, T. 16 February 2016, pp 53-68; Andrew Fahey, T. 8 September 2016, pp 48-61. *See also* exhibit P775 (Excel spreadsheet with mast and azimuth information, mast locations and azimuth orientations, Annex 14 (2) to Witness PRH707’s statement of 11 November 2015); exhibit P778 (Cell Tower Information as provided by Alfa including Site co-ordinates in Eastings / Northings - Sector Azimuth - Tower type); exhibit P779 (Maps showing Alfa Cell Sites February 2005); exhibit P1127 (Examples of Coordinates and Azimuth Comparisons undertaken by Andrew Fahey); exhibit 1128 (Maps illustrating possible differences between records regarding location of masts).

3. Findings on the electronic presentation of evidence

2052. In international criminal law jurisdictions, the electronic presentation of evidence is usually conducted through some type of ‘eCourt’ system, which publishes exhibits electronically in the courtroom. Electronically presented evidence is generally considered to be a significant enhancement to the efficiency of the trial and understanding of a large body of evidence.⁴³⁷⁵ Evidence presentation packages, including eCourt and slide presentations, are favourably received in international courts as visual aids. Domestic courts have also increasingly used electronic presentation of evidence software.⁴³⁷⁶

2053. Courts do not consider the use of the electronic presentation of cell site evidence prejudicial if an expert can attest to the methodology used to create the presentation.⁴³⁷⁷ In addition, courts generally allow the use of electronic presentations of evidence that are based on cell site information already admitted into evidence.⁴³⁷⁸ The factors assessed by courts in determining whether evidence presentations may be admitted into evidence include whether: the primary evidence used to construct the presentation is available to the other party to test the correctness of the summary; and the person who prepared the presentation is available for cross-examination.⁴³⁷⁹

2054. Moreover, domestic courts rely on electronic presentation of evidence software as a visual aid in document intensive and complex criminal trials.⁴³⁸⁰ A Canadian superior court has stated that not allowing such a presentation of evidence risks an unfair trial, noting that if the jury cannot comprehend the evidence, then the trial may be unfair. The presentation of cell site evidence was not a ‘stand-alone’ document but rather a tool to facilitate the understanding of the evidence.⁴³⁸¹

⁴³⁷⁵ Lubanga decision on the E-Court Protocol, para. 19.

⁴³⁷⁶ For example, *Sanchez and others* US Court of Appeals opinion, p. 20; *Mack and others* US District Court ruling, pp 10-11; *Pan and others* Ontario Superior Court ruling, paras 118-119, 122-123; Brereton 2007, p. 9; UK protocol for the management of complex criminal cases 2005, section vi: Electronic presentation of evidence; see also *McCree* US Court of Appeals opinion, p. 2.

⁴³⁷⁷ *Mack and others* US District Court ruling, pp 10-11.

⁴³⁷⁸ For example, *Sanchez and others* US Court of Appeals opinion, pp 16-20; *Mack and others* US District Court ruling, pp 10-11; *Pan and others* Ontario Superior Court ruling, paras 15-16; see also *McCree* US Court of Appeals opinion, p. 2.

⁴³⁷⁹ For example, *Palazzo* US Court of Appeals decision, pp 7-8; *Winn* US Court of Appeals opinion, p. 17; see also *Mack and others* US District Court ruling, p. 11.

⁴³⁸⁰ For example, *Pan and others* Ontario Superior Court ruling, paras 27, 29-32, 119, 122; Brereton 2007, p. 10; Protocol for the management of complex criminal cases 2005, section vi: Electronic presentation of evidence; see also UK Serious Fraud Office Operational Handbook 2019, Electronic Presentation of Evidence.

⁴³⁸¹ *Pan and others* Ontario Superior Court ruling, paras 97, 99, 104.

Furthermore, a court may be more willing to accept the electronic presentation of evidence if the defence has adequate notice and the ability to address any deficiencies.⁴³⁸²

2055. Here, due to the technical complexity of the evidence, the use of an electronic visual aid such as the electronic presentation of evidence was essential to the presentation and understanding of the case.

2056. Contrary to the Oneissi Defence's submission that Mr Fahey's conclusions substituted the Trial Chamber's fact-finding function, the Trial Chamber concludes that the electronic presentation of evidence is a sufficiently reliable tool for its purpose. It is not completely precise but is sufficiently accurate to assist in assessing the cell site evidence. The Trial Chamber is aware of its limitations and has factored them in when using the tool, including in using the software to produce its own maps. In this respect, the Trial Chamber emphasises that the Defence also used the electronic presentation of evidence as demonstrative evidence in court.⁴³⁸³

2057. It significantly enhanced the Trial Chamber's understanding of the lengthy and complex evidence, thus ensuring a fair trial. Without it, the Trial Chamber would have had difficulties to understand the masses of technical detail without visual context; this includes the presentation of both Prosecution and Defence cases. And in this respect, the visual aids used by Defence counsel in court, were as useful as the Prosecution's. The Trial Chamber remained the trier of fact, assessing every piece of analysis and conclusion. Mr Fahey has not usurped its statutory function.

2058. Furthermore, the Defence had adequate notice of the software and could challenge any of its shortcomings during the trial. The Trial Chamber is satisfied that Defence counsel had the opportunity to challenge its reliability during Mr Fahey's testimony, and that the Parties could conduct checks before or after the electronic presentation of evidence was used in the courtroom, as each snapshot was saved and made accessible to the Parties.

⁴³⁸² *Pan and others* Ontario Superior Court ruling, para. 107.

⁴³⁸³ *For example*, exhibits 3D309 (Electronic presentation of evidence snapshot showing the location of mobiles), 3D374 (Electronic presentation of evidence snapshot showing the distance measurements between the cell mast of SYBNAY2 and selected areas within ANQOUN2), 4D319 (Electronic presentation of evidence snapshot of BNPI3).

I. Elements of cell site analysis

2059. The Prosecution relies on Mr Philips's cell site analysis of Alfa's and Touch's telecommunications data to identify the approximate geographic location of a mobile's user at the time of making or receiving a call or SMS, and to track the movements of a mobile over time. To place a mobile in a general geographic location, Mr Philips relied on both call data records relating to a particular mobile and cell site data relating to the mast to which that mobile connected.⁴³⁸⁴

2060. Based on Mr Philips's view that the absolute accuracy of the best server plots is insignificant, the Prosecution submitted that the coverage maps it used were reliable tools that may be used to assess the evidence.⁴³⁸⁵ The analysed call data records relate to a mobile, not directly to a person, and attribution techniques are needed to attribute the mobile to a person.⁴³⁸⁶

2061. The Trial Chamber has explained above the methodology in putting call data records and cell site data into call sequence tables.⁴³⁸⁷ In his general report, Mr Philips explained that, as contact between mobiles of interest is not immediately obvious from the call sequence tables, cell site analysis uses simple contact tables. These show an association between the mobiles of interest; they may also show contact in periods before key events, which may form part of a call pattern analysis.⁴³⁸⁸ Below is an excerpt from his general report showing a contact table for five mobiles. The column on the left shows the mobiles making a call and the other columns show each mobile receiving a call.⁴³⁸⁹ The appropriate square is marked with an (x) where any contact occurs between two mobiles.⁴³⁹⁰

⁴³⁸⁴ Prosecution final trial brief, para. 54; Prosecution closing submissions, T. 11 September 2018, pp 46-47.

⁴³⁸⁵ Prosecution final trial brief, paras 62-70; Prosecution closing submissions, T. 11 September 2018, pp 56, 59-61.

Mobile b	X				
Mobile c	X				
Mobile d	X				
Mobile e	X				

A contact table showing association between five mobiles – exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), p. 113, figure 060

2062. Combined tables are created when the pattern of contact is of particular interest. In the table below—extracted from the same report—calls between two mobiles are presented on a single line, showing common data relating to both mobiles. This table focuses on the call contact over the period of particular interest, in terms of the number, duration and when they occurred, both in isolation and relative to other calls.⁴³⁹¹

Date	Time	Calling Party	Called Party	Message Type	Duration
10.05.10	10:05:12	Mobile blue	Mobile red	Outgoing	00:01:15
10.05.10	10:15:23	Mobile red	Mobile orange	Incoming	00:00:45
10.05.10	10:32:45	Mobile green	Mobile blue	Outgoing	00:00:13
10.05.10	11:10:45	Mobile blue	Mobile red	Outgoing	00:00:01
10.05.10	11:27:56	Mobile blue	Mobile red	Incoming	00:00:45
10.05.10	11:44:16	Mobile red	Mobile green	Incoming	00:00:23
10.05.10	11:58:25	Mobile orange	Mobile green	Outgoing	00:02:45

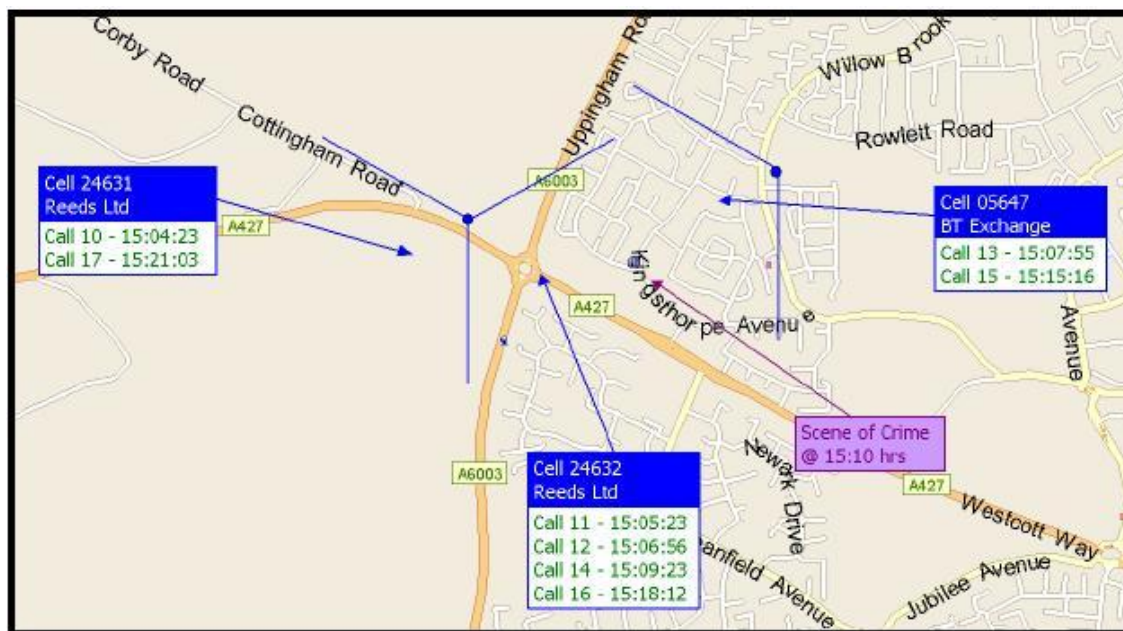

A combined table showing the date, time, duration and the details of the calling parties – exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), p. 114, figure 061

2063. The visual representation of the call data, which shows the mobiles' movement and location, or the combination of both, involves mapping the cell sites to which mobiles connected and the time of use. The information required for mapping is mainly extracted from call sequence tables.⁴³⁹²

⁴³⁹¹ Exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), pp 114-115.

⁴³⁹² Exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), p. 115.

2064. For illustration purposes only, the map below—extracted from the same report—relates to a ‘murder’ that occurred at 15:10 at the location marked on the map as ‘scene of crime’.⁴³⁹³ The scale of the map shows the cells used, with sectors of all calls, and includes the cell and call labels. The calls were mapped before, during and after the incident. The map shows the mobile arriving probably from the west, around 15:04, spending time in an area, including the ‘scene of crime’ between 15:05 and 15:18 and then leaving the area by 15:21.⁴³⁹⁴

Map showing call mapping related to a ‘murder’ which occurred at the location marked as ‘scene of crime’ – exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), p. 118, figure 064

2065. The cell and call labels that appear in the map above can contain far more comprehensive cell and call data, including the network, the cell name, the cell ID, the call number, the call start time, the call designation and the mobile’s identity.⁴³⁹⁵

1. Impact of time on cell configuration in Lebanon

(a) Summary of evidence

2066. Before Mr Philips testified on this topic, the Prosecution and Defence agreed that when he spoke about changes to the network over the indictment period, he would not testify about whether any changes occurred, but rather only on the impact that any such changes would have on his cell site analysis.⁴³⁹⁶

2067. Mr Philips explained that networks are initially rolled out to provide coverage, and subsequently supplementary cells are added to provide capacity. In Lebanon, both Alfa and Touch had been in operation for around ten years by the time of the attack.⁴³⁹⁷

2068. Systems of that age, he explained, tend to be pretty stable and not be in a constant state of flux, because those managing the network are aware of the vagaries of the network and have effectively tailored it to the customers' requirements.⁴³⁹⁸ That does not mean that the networks become static. Changes are still necessary to provide additional coverage for a new housing development or to close gaps. There will therefore be changes to the network, but they will be fairly limited in nature.⁴³⁹⁹

2069. When networks change, it is usually due to the addition of cells, and not because cells have been removed. The addition of a cell likely only impacts adjacent cells, making them smaller. Mr Philips was unaware of the number of cells added between when the attack occurred and when Alfa and Touch sent their data to the Special Tribunal. He assumed that cells were added rather than taken away.⁴⁴⁰⁰

2070. Mr Philips stated that changes in an existing network will not alter the general area the mobile is located in or the location of the existing cell sites, but instead will increase or decrease the size of the best server plot. The effect of a change in best server plot size is a variation in the precision of the predicted location of the mobile.⁴⁴⁰¹

⁴⁴⁰⁰ John Edward Philips, T. 20 August 2015, p. 93.

⁴⁴⁰¹ John Edward Philips, T. 20 August 2015, pp 96-97.

2071. Since the best server coverage plots provided by Touch were from February 2004 and the period of interest is between September 2004 and February 2005, the plots are likely to be marginally larger in the February 2004 file than they were in the period of interest, due to the addition of cells.⁴⁴⁰² The effect on Alfa's plots would likely be the opposite, because the plots were from December 2005.⁴⁴⁰³ Its best server coverage areas therefore would most likely have been larger in the period of interest than their representation in the December 2005 data. The exact changes depend on the number and location of new cells added.⁴⁴⁰⁴

2072. Mr Philips stated that, under ideal conditions, the mobile networks would provide plots for analysis corresponding to the period of interest, namely from September 2004 to February 2005.⁴⁴⁰⁵ Touch provided plots from February 2004, which Mr Philips confirmed to be a 'pretty comprehensive complement of the best server coverage plots', as opposed to Alfa's plots from December 2005, which Mr Philips described as an 'incomplete best server coverage complement'.⁴⁴⁰⁶ Mr Philips supplemented the plots he received from Alfa with 'not ideal' extracts from the fixed best server coverage maps from February 2005.⁴⁴⁰⁷

2073. Mr Philips was able to compare the fixed map image from February 2005 to the best server plots provided by Alfa, to inspect any variability in best server coverage between the two. If only the map of Lebanon was used, he explained, this task would be difficult, as the detail is lost when zooming in on a particular area. However, Alfa also provided maps specifically of Beirut, in which each cell is much more discernible.⁴⁴⁰⁸ During this exercise, Mr Philips compared the peripheral coverage of the Alfa cells, as opposed to the coverage near the cell sites themselves, because the periphery is the portion most likely to be affected by the addition of an adjacent cell.⁴⁴⁰⁹ The comparison of the map and plots provided by Alfa showed high correlation.⁴⁴¹⁰

⁴⁴⁰⁷ John Edward Philips, T. 20 August 2015, pp 90-91, 108.

⁴⁴⁰⁸ John Edward Philips, T. 20 August 2015, pp 97-98.

⁴⁴⁰⁹ John Edward Philips, T. 20 August 2015, pp 102, 108.

⁴⁴¹⁰ John Edward Philips, T. 20 August 2015, pp 107-108.

2074. When questioned by Defence counsel, Mr Philips admitted that he did not know how the predictive coverage maps were created, but stated that he could understand how the telecommunication companies may have created them.⁴⁴¹¹

2075. Despite their shortcomings, Mr Philips explained that best server coverage predictions are a reliable tool for placing a mobile in an area. He added, ‘I keep using this term, “an area,” you can never pinpoint where a mobile is unless you have GPS’. These predictions serve as an enhancement to cell site analysis, which is usually performed using only cell coordinates and azimuths.⁴⁴¹²

(b) Submissions

2076. The Prosecution argues that while Alfa could not confirm the azimuth values contemporaneous to the relevant period, the key aspects of its network have been stable between the time of the events alleged in the amended consolidated indictment and when Alfa provided the relevant shape files and cell site data.⁴⁴¹³

2077. The relevant cell sectors remained in operation and were in the same locations throughout the period relevant to the amended consolidated indictment.⁴⁴¹⁴ Cell sites remained in the same locations and the changes to azimuth values were infrequent and minor, whereas the impact of using non-contemporaneous shape files and data on cell site analysis would be minimal.⁴⁴¹⁵ Touch’s radio planning department similarly confirmed that the network was stable and that changes to cell sites in 2004 and 2005 were less frequent than in 2016.⁴⁴¹⁶

2078. Further, Witness 705 estimated that the changes made to the cell site were once or twice a month in 2004 and 2005, as opposed to once or twice a day.⁴⁴¹⁷

⁴⁴¹¹ John Edward Philips, T. 25 August 2015, pp 12-13.

⁴⁴¹⁷ Prosecution closing submissions, T. 11 September 2018, p. 72; Witness PRH705, T. 5 May 2016, pp 86-87.

2079. The Ayyash, Oneissi and Sabra Defence contested this, submitting that the ‘networks are in a constant state of flux’.⁴⁴¹⁸ The Oneissi Defence also questioned the networks’ consistency and stability due to changes in Beirut over the span of a decade, namely the addition of new buildings and the destruction of south Beirut caused by Israel’s attacks on Lebanon in 2006.⁴⁴¹⁹ Further, Mr Philips’s testimony was that ‘cells will be added and removed on an ongoing basis’ and would have to have an impact on the network.⁴⁴²⁰

2. Best server coverage characteristics

2080. Mr Philips explained that best server coverage predictions are based, in part, on the height of the aerial antenna. Height is taken into account regardless of whether the cell is macro or micro, because it determines the propagation characteristics of that aerial.⁴⁴²¹ This is why hilly terrain can cause fragmented best server coverage, as a hill far away from the cell itself may pick up a signal from that cell as the strongest one, whereas a valley closer to the cell may not.⁴⁴²² The shape of the best server coverage area for each cell is also influenced by the coverage of the adjacent cells.⁴⁴²³ Further, best server coverage is not uniform and ‘sometimes it’s not structured around the cell site itself’.⁴⁴²⁴

2081. Although installations of cell site networks are usually subcontracted out following the initial roll-out, Mr Philips considered that usually, neither the weather, the time nor the people installing or maintaining it would affect its physical state, specifically the antenna. This is because the companies that own them have a stake in the antenna being securely placed and maintained.⁴⁴²⁵ He had never seen any site maintenance records for the antennas.⁴⁴²⁶

2082. Mr Philips agreed that the calibration of the software used for the propagation software/algorithm is dependent on the type of data pertaining to the terrain and the clutter that is

fed into it.⁴⁴²⁷ In putting together his generic report on the operation of mobile networks, he did not compose a cell site analysis report that was ‘Beirut-centric’, but rather used examples from rural areas in the UK to illustrate the effects of terrain models.⁴⁴²⁸

2083. Moreover, when asked about the quality of particular predictive coverage maps, he was unable to respond and stated that he could offer no comment on whether the prediction maps provided by the networks were more appropriate in a rural environment than in an urban environment.⁴⁴²⁹

2084. Best server coverage, he explained, cannot be predicted on a continuum, but instead is predicted over a series of small areas. The size of the squares on the maps depicting predicted best coverage varies between Touch and Alfa and is based on the resolution of the prediction system the networks use. Touch’s had a 20 metre resolution whereas Alfa’s was a 50 metre resolution, thereby providing theoretically better resolution and predictions for the Touch network.⁴⁴³⁰

3. Impact of propagation anomalies, exceptional circumstances in cell allocation and other factors on cell site analysis

(a) Summary of evidence

2085. Mr Philips, in his report, explained that areas of best server coverage from one cell are sometimes distributed within the notional best server coverage area of another cell. This means that each cell does not have a simply defined area of best server coverage, but has fragmented best server coverage areas.⁴⁴³¹

2086. When asked about the effects on cell site analysis, Mr Philips responded: ‘We know there are shortcomings. We know it’s not a perfect representation of the actual best server coverage area on the ground.’ As to fragments within the coverage area, he accepted that they are only ascertainable if a survey is conducted on the ground, and that there is no other way of knowing

⁴⁴²⁷ John Edward Philips, T. 24 August 2015, p. 34.

⁴⁴³¹ Exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), p. 71.

where these fragments are located; this means that when a mobile makes a call, it could trigger the cell within whose coverage it is on the predictive map, or it could trigger another cell.⁴⁴³²

2087. He further explained that ‘there is some variability in that of cell boundaries, where the best server coverage area can increase or decrease. Not massively but it does that and it does that all the time.’⁴⁴³³ He added that the factors that affect the cell boundaries do not really affect the analysis of travelling mobiles, especially over long distances.⁴⁴³⁴

2088. These forms of disruptions, anomalies and exceptional circumstances in cell allocation, such as congestion,⁴⁴³⁵ can affect the accuracy of the location of the mobile for the purpose of cell site analysis. Therefore, Mr Philips stated, to determine the location of the mobile, the range of its approximate location was expanded to encompass all seven cells—the best serving cell and the six neighbouring cells surrounding it.⁴⁴³⁶

2089. To illustrate this, in the image below—extracted from Mr Philips’s court presentation slides—the inner dotted circle shows the best serving cell and the area for which that cell provides best server coverage.⁴⁴³⁷ Normally, the mobile would be expected to be in the inner circle. The outer dotted circle shows the enlarged range of the approximate location of the mobile to be considered for the purpose of cell site analysis when the best serving cell is unavailable.⁴⁴³⁸

2090. In this scenario, the call has been redirected to one of the adjacent cells, but there is no certainty from where. The approximate location of the mobile is diluted to encompass all the adjacent cells. It does not change the general area the mobile is likely to be in.⁴⁴³⁹ Instead, it only reduces the precision of its predicted location.⁴⁴⁴⁰ The image shows that, even when the predicted location of the mobile is enlarged, the neighbouring cells are contained within a relatively small area—within one kilometre in this example.⁴⁴⁴¹

⁴⁴³² John Edward Philips, T. 20 August 2015, p. 58, T. 25 August 2015, p. 37.

⁴⁴⁴¹ John Edward Philips, T. 20 August 2015, p. 69.

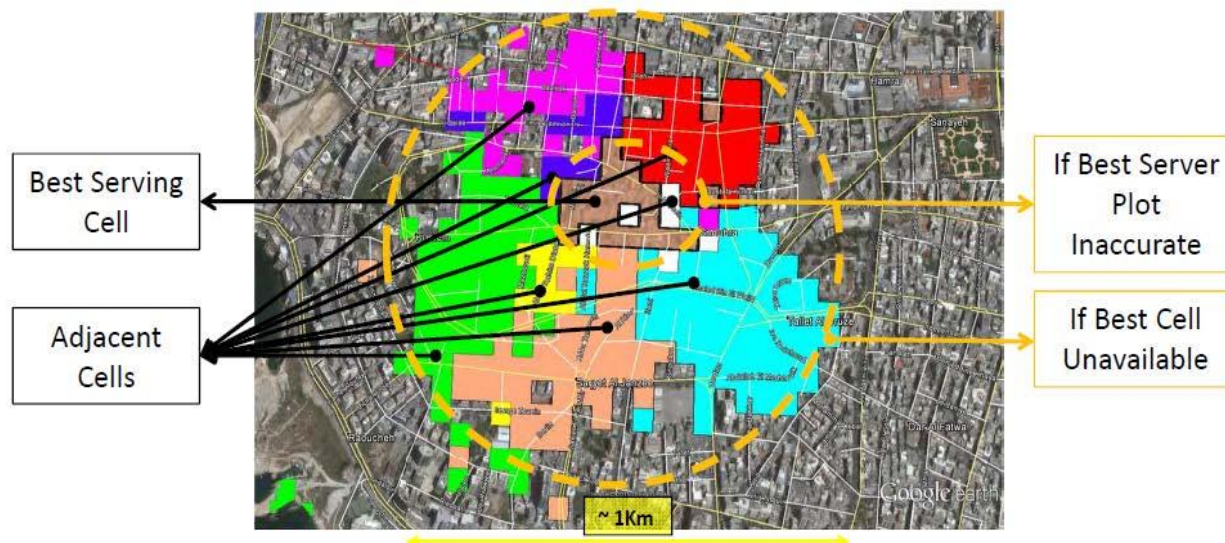

Image showing the enlarged predicted location of a mobile – exhibit P550 (PowerPoint presentation, John Edward Philips), slide 150

2091. The image below, from the same set of slides, shows how any inaccuracy in the predicted area of best server coverage or the unavailability of the best serving cell is generally likely to expand the potential area in which the mobile is located.⁴⁴⁴² It means the degree of uncertainty of the area is expanded, reducing the precision of the predicted location.⁴⁴⁴³

2092. On the left hand map, the blue hexagons show the predicted location of a moving mobile when using the best serving cell. On the map on the right, the pink hexagons show the predicted location of a moving mobile when the call is redirected to a neighbouring cell.⁴⁴⁴⁴

2093. Mr Philips explained that this image shows that the redirection of a call has limited impact on the prediction of the mobile's location. The impact on cell site analysis is that the precision of the mobile's location at the moment of the call decreases as the predicted best server coverage area is enlarged.⁴⁴⁴⁵ However, such anomalies in cell allocation are infrequent exceptions.⁴⁴⁴⁶

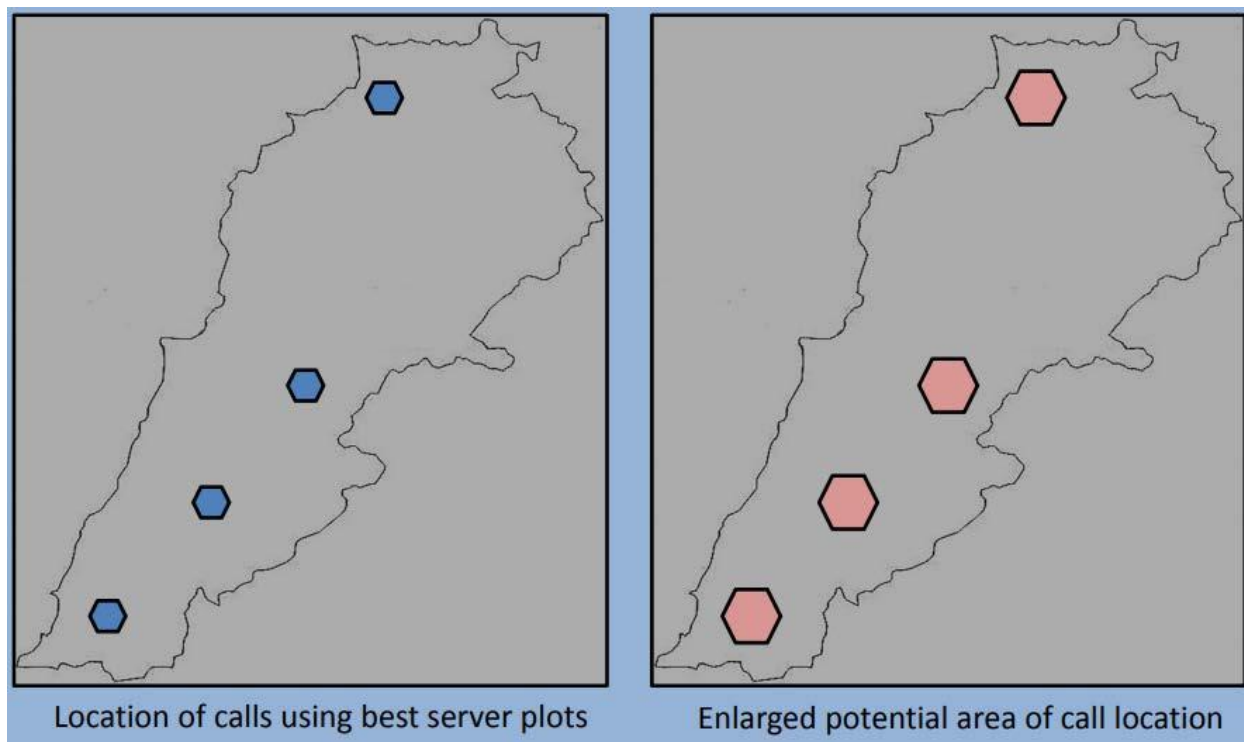

⁴⁴⁴² John Edward Philips, T. 20 August 2015, pp 56-59; exhibit P550, slide 147.

⁴⁴⁴³ John Edward Philips, T. 20 August 2015, pp 56-57.

⁴⁴⁴⁶ John Edward Philips, T. 20 August 2015, pp 62-63.

Two maps showing the predicted location of a moving mobile – exhibit P550 (PowerPoint presentation, John Edward Philips), slide 147

2094. The relevance and practical application of this is illustrated in the following example, showing that it can be positively determined precisely where a witness was when using his mobile. On Monday 14 February 2005, an Al-Jazeera employee, Witness PRH115, went to a tree near his work to collect a video tape containing the claim of responsibility for the attack. The witness stated that he was ‘under the tree’ or ‘by the tree’ when he sent two text messages at 15:52 and 15:53, and stated generally that he sent these messages and received two messages—at 15:54 and 15:55—during the period when he was collecting the video tape from the tree.⁴⁴⁴⁷

2095. He sent his first text message at 15:52 and his mobile activated Bashoura_A on the Touch network, which according to Touch’s coverage maps, did not provide the predicted best server coverage to the tree, but rather to an area around 300 metres south-west of it. A minute later, at 15:53, he sent his second text message and his mobile activated Riad_El_Soloh_B, which provided

⁴⁴⁴⁷ Witness PRH115, T. 7 July 2015, pp 62-63; exhibit P492 (Statements of Witness PRH115, dated 8 February 2007, 3 October 2008 and 13 March 2015), para. 11 (ERN 60305508); exhibit P493 (Call sequence table of Witness PRH115’s mobile, 14 February 2005), p. 1. *See also* chapter XII ‘Claim of responsibility for the attack on Rafik Hariri’, (B) (1) (d) ‘Collection of the videoed claim of responsibility and the letter at 15:53’.

the predicted best coverage to the tree. The witness then received two text messages, at 15:54 and 15:55, again activating Riad_El_Soloh_B and then Bashoura_A.⁴⁴⁴⁸

2096. Thus, within three minutes, while the witness was physically next to the tree, his mobile twice activated Riad_El_Soloh_B—that provided best coverage for the tree—and twice connected to Bashoura_A, which was around 300 metres away.⁴⁴⁴⁹ He was never in the area theoretically covered by Bashoura_A.

(b) Submissions

2097. The Ayyash Defence reiterates that Alfa's maps, on which the Prosecution relies, cannot be used for forensic purposes as they are approximate, provide only estimations and are not based on drive testing.⁴⁴⁵⁰ The accuracy of the Alfa cell coordinates—and in particular those included in the list of 192 Alfa cell towers, in exhibit P775⁴⁴⁵¹—have not been confirmed manually by measuring the coordinates of each cell.⁴⁴⁵²

2098. The Sabra Defence notes that the Prosecution did not rely on the results of limited drive tests it carried out in Beirut in 2007 and 2010. As explained by Mr Philips, drive tests would be accurate only if carried out contemporaneously with the incident being investigated.⁴⁴⁵³ To determine the location of a mobile, a cell site analyst would normally carry out a field survey to establish the actual coverage as opposed to the theoretical coverage of that location.⁴⁴⁵⁴ Neither Mr Philips nor Mr Platt surveyed the cells relevant to the Prosecution case, as they would have routinely done in their national jurisdictions.⁴⁴⁵⁵

2099. As for the impact of network congestion on cell site analysis, the Oneissi Defence argues that network congestion has an impact on cell site analysis. It points to, first, Witness 707's account on the network congestion resulting from the explosion on 14 February 2005 and Alfa's incidents

⁴⁴⁴⁸ Exhibit P493, p. 1; exhibit 4D360 (Purple activity amongst Al-Jazeera SMS exchanges re collecting the tape from the tree: 15:53-15:55), ERNs 1DT41889-1DT41894.

log from the same day,⁴⁴⁵⁶ and second, Witness 115's account on connecting on the same day to a cell 300 metres away from where he used his mobile. It argues that they demonstrate inconsistencies between the theoretical coverage and the actual coverage, specifically relating to the afternoon of the attack.⁴⁴⁵⁷

2100. The Merhi Defence submits that due to the lack of information about the frequency of congestion on mobile networks in Lebanon in 2005, it was impossible to determine how often a mobile activated another cell due to congestion. This includes by analysing call data records, which did not register cases of directed retry.⁴⁴⁵⁸ It contradicted the Prosecution submission that in the event of congestion a call will be redirected to only one of six neighbouring cells, but submits rather that the directed retry function can consider up to 20 cells before selecting a cell with the strongest signal, even if farther away. A mobile connecting to neighbouring cells was likely to be closer to the congested best serving cell because best server coverage extends over smaller areas in urban environments.⁴⁴⁵⁹

2101. The Prosecution in its closing submissions rejected the Merhi Defence's argument that, in case of congestion, where a mobile cannot connect to the best serving cell in an urban area, the mobile must be in a larger potential area because of the number of surrounding cells. It responded that this contradicts Witness 705's and Mr Philips's evidence⁴⁴⁶⁰ that when the cells are next to each other they provide coverage for smaller geographic areas.⁴⁴⁶¹ The Prosecution argues that, based on Witness 705's evidence, this would be highly exceptional and there is no evidence that this occurred in any calls.⁴⁴⁶²

⁴⁴⁵⁶ Exhibit 4D263 (Extract from an Alfa business record which is a log of incidents that occurred across the Alfa network on 14 February 2005).

4. Mobiles' locations and movements

(a) Summary of evidence

2102. Mr Philips explained that there are multiple ways for a cell site analyst to plot the location and movements of a mobile. The most basic uses only cell site coordinates, or the cell site coordinates and the azimuths.⁴⁴⁶³ Alternatively, an analyst can use azimuth and best server plots to track a mobile's movement and location.⁴⁴⁶⁴ Mr Philips described using the best server plots in addition to the cell site coordinates and the azimuths for each cell as 'an additional tool above and beyond the basic cell site and sector' or a 'luxury'.⁴⁴⁶⁵ He relied in his analysis on call sequence tables, best server coverage maps and cell data.⁴⁴⁶⁶

2103. To determine a mobile's movements using only cell site coordinates, Mr Philips explained that the movement must be tracked and observed over a succession of calls.⁴⁴⁶⁷ Plotting cell sites in this way over time can denote movement of a mobile and therefore the mobile's attributed user.⁴⁴⁶⁸ He further stated that:

What may be indicative from these is the fact that when you get several calls over a period using ... the same cell, that might mean the mobile has stopped at that location. Equally, lack of that doesn't mean a mobile could have stopped at any other location. But if you're looking at travel and there is a big interval between calls, then it's probably consistent with discontinuous travel.⁴⁴⁶⁹

2104. With regard to determining a mobile's location with cell site coordinates and azimuths, Mr Philips testified that best server coverage can only be approximated by using this method. Adding the estimated signal strength for each cell gives 'a pretty good idea of where a mobile is likely to be selected'.⁴⁴⁷⁰ However, this is only a 2D model which does not take into account topography, such as rivers, or large buildings. Mr Philips normally used this method in the UK.⁴⁴⁷¹

⁴⁴⁶³ John Edward Philips, T. 20 August 2015, pp 111-114.

⁴⁴⁶⁷ John Edward Philips, T. 20 August 2015, p. 112.

⁴⁴⁶⁸ John Edward Philips, T. 20 August 2015, p. 113.

⁴⁴⁶⁹ John Edward Philips, T. 20 August 2015, pp 112-113.

⁴⁴⁷⁰ John Edward Philips, T. 20 August 2015, p. 113.

⁴⁴⁷¹ John Edward Philips, T. 20 August 2015, pp 113-114.

He agreed that cell site coordinates and azimuths are ‘the essential ingredients’ for cell site analysis.⁴⁴⁷²

2105. As for determining locations with azimuths and best server plots, Mr Philips testified that networks have the advantage of adding building clutter and terrain/topography to their predictions.⁴⁴⁷³ However, azimuth spacing is ‘by no means uniform’. For this type of analysis, the sector arms and azimuths are overlaid over the best server coverage plots. This shows that ‘the cell site and sector is a reasonable representation of where the best server plot should be contained within’.⁴⁴⁷⁴

2106. This also illustrates the non-uniformity of best server coverage, by indicating holes in the best server coverage and coverage that is provided outside of the sector arms. Those holes could be either areas of no coverage or areas of coverage provided by unplotted cells.⁴⁴⁷⁵

(b) Submissions

2107. The Ayyash Defence argues that examining the methodology of Mr Philips’s analysis reveals that it is unreliable; the Trial Chamber should give no weight to Mr Philips’s analysis.⁴⁴⁷⁶

2108. The Oneissi Defence notes that Mr Philips expressly refused to give an accuracy estimation of cell site analysis and that it is not possible to determine to any reliable degree the location of a mobile based only on the call data records and the theoretical coverage. Mr Philips testified that he could do *much* of his cell site analysis work only based on the cell coordinates and azimuths, without however specifying which elements.⁴⁴⁷⁷

5. Mr Philips’s access to information

(a) Summary of evidence

2109. Mr Philips described how his work for the Prosecution was virtually isolated from everyone else’s. He was not informed about the work others were doing, nor was he allowed to access it,

⁴⁴⁷² John Edward Philips, T. 20 August 2015, pp 116-117.

⁴⁴⁷³ John Edward Philips, T. 20 August 2015, p. 114.

⁴⁴⁷⁴ John Edward Philips, T. 20 August 2015, pp 115-116.

⁴⁴⁷⁶ Ayyash Defence final trial brief, para. 187.

⁴⁴⁷⁷ Oneissi Defence final trial brief, paras 129-131, 133-134.

and he did not review any technical reports.⁴⁴⁷⁸ Moreover, Mr Philips explained that the work he was assigned was ‘fragmented’. He was given very selected pieces of data and asked to analyse them.⁴⁴⁷⁹

2110. For example, he did not receive the information regarding the propagation model. He had no knowledge regarding the software the telecommunication companies used, how they would have used it, whether they would have had any other modelling within it, or the appropriateness of that.⁴⁴⁸⁰

(b) Submissions

2111. The Ayyash Defence submits that Mr Philips’s reports should be assessed considering his filtered knowledge about the case and the situation in Lebanon in 2004 and 2005.⁴⁴⁸¹

2112. The Merhi Defence argues that the Prosecution, in effect, cherry picked the information provided to their experts. On multiple occasions, Mr Philips admitted that he did not receive case-specific, applicable information.⁴⁴⁸² He could not consider how weather, traffic, season, day of the week or time of the day affected his analysis, and did not account for routes of travel or traffic patterns in Beirut or Lebanon.⁴⁴⁸³

2113. The Merhi Defence submits that Mr Philips was not provided with Mr Merhi’s residential address and did not take into account traffic density, duration of travel or the extent of damage caused by Israel’s attacks on Lebanon in 2006, when he analysed the telecommunication data.⁴⁴⁸⁴ Mr Philips worked ‘in a vacuum’, was ‘very compartmentalised’ in the way he did his work and received insufficient information.⁴⁴⁸⁵ The information he received was filtered, so he did not have the overall picture. As a consequence, his analysis is ‘purely objective and abstract’.⁴⁴⁸⁶

⁴⁴⁷⁸ John Edward Philips, T. 24 August 2015, pp 18-19.

⁴⁴⁷⁹ John Edward Philips, T. 24 August 2015, p. 85.

⁴⁴⁸⁶ Ayyash Defence final trial brief, para. 269; Merhi Defence final trial brief, para. 205; Merhi Defence closing submissions, T. 18 September 2018, p. 120.

2114. Further, the Prosecution only brought Mr Philips in to verify a theory, but it failed to give him crucial information to do so.⁴⁴⁸⁷ Had Mr Philips been given all of the appropriate information, his responses to the Merhi Defence's questions would have varied depending on the various aspects affecting cell coverage.⁴⁴⁸⁸

2115. The Oneissi Defence argues that the Prosecution deliberately isolated Mr Philips and his work, stating that the information with which he was provided was 'extremely restricted'. Mr Philips was neither told what other people, including Mr Donaldson, were doing nor was he allowed to access their work, and while he asked questions, 'the answers aren't forthcoming'. Mr Philips himself noted that his meetings with the Prosecution were 'quite limited' and 'very much controlled'.⁴⁴⁸⁹

2116. It also highlights how extensively the Prosecution restricted Mr Philips, by comparing his time with the Special Tribunal to Mr Philips's work with the UK prosecution services, where he would be 'fully incorporated within the investigation team' and 'given a total view of the case'. For example, Mr Philips would meet with the officers involved and would be aware of the suspects and crime scenes.⁴⁴⁹⁰ Additionally, Mr Philips found 'quite strange', based on his previous experience, that he was not asked to revise or conduct peer review of technical reports, such as Mr Fahey's work comparing Alfa data, Mr Donaldson's attribution report or Mr Platt's chronology report.⁴⁴⁹¹

2117. Mr Philips stated that he found it 'very difficult' to make professional suggestions, such as visiting Lebanon. Mr Philips never visited Lebanon in his capacity as a Prosecution expert, though he 'would have liked to have gone'. According to the Oneissi Defence, as Mr Philips had 'no real knowledge of what happened in Lebanon', he relied on examples specific to the UK in his cell site analysis report.⁴⁴⁹² Mr Philips's restricted access resulted in denying him the 'full perspective' of the Prosecution's relevant work.⁴⁴⁹³

⁴⁴⁹² Oneissi Defence final trial brief, para. 121; Ayyash Defence final trial brief, paras 266-268.

⁴⁴⁹³ Oneissi Defence final trial brief, para. 120.

2118. In addition, Mr Philips was not aware of, or was misinformed as to, the basic information in relation to Alfa's data and its deficiencies. He was not provided with information regarding the software Alfa used to create the non-contemporaneous theoretical coverage maps, the accuracy of the information input by Alfa or the models used within those maps.⁴⁴⁹⁴

2119. He was not informed that Alfa could not confirm azimuth and tilt values from 2005, nor the altitude of cells; Alfa's use of a clutter model from 2010 rather than 2005; network congestion figures; or the cultural use of mobiles in Lebanon in 2004 and 2005.⁴⁴⁹⁵ The weight of Mr Philips's evidence was negatively affected by the Prosecution's 'deliberate strategy of isolation'.⁴⁴⁹⁶

2120. The Oneissi Defence further submits that the Prosecution failed to correct Mr Philips's multiple misapprehensions about the reliability of Alfa's data. When the Defence pointed these out to him, his reaction was that had he known, he 'would have asked questions'. Further, Mr Philips's belief that the theoretical coverage maps created by Mr Fahey 'indicated that in the majority of the cases the same cell sites were retained' was incorrect because Mr Fahey only compared 63 of the 1,100 Alfa cell sites in 2005 and never stated 'the same cell sites were retained'.⁴⁴⁹⁷

2121. Of these omissions, the Oneissi Defence submits that:

This strategy speaks volumes about the Prosecution's confidence in its case. From it, the Chamber should infer that the Prosecution did not want an independent cell site analysis expert to scrutinize the Prosecution telecommunications case in its full context. It is evidence of the Prosecution's concern that, should PHILIPS have become aware of the deficiencies, he would inevitably have been asked his opinion on it in the witness box by the Chamber and Defence Counsel. This strategy must not be rewarded or endorsed by the Chamber – which must ask itself, yet again, whether such a strategy is concomitant with the Prosecution's duty to assist the Tribunal in establishing the truth.⁴⁴⁹⁸

⁴⁴⁹⁴ Oneissi Defence final trial brief, paras 122, 124; Ayyash Defence final trial brief, para. 271.

⁴⁴⁹⁵ Ayyash Defence final trial brief, paras 271, 273.

⁴⁴⁹⁶ Oneissi Defence final trial brief, para. 127.

⁴⁴⁹⁷ Oneissi Defence final trial brief, paras 125-126.

⁴⁴⁹⁸ Oneissi Defence final trial brief, para. 128, citing Rule 55 (C).

And further:

the Chamber cannot rely on evidence led from PHILIPS, the Prosecution's only cell site analysis expert, who was 'deliberately' segregated from Prosecution staff, strategy and work product; 'chaperoned' when he visited the Prosecution at the Tribunal; and from whom the Prosecution strategically hid the myriad shortcomings of the data with which he worked.⁴⁴⁹⁹

6. Findings on cell site analysis

2122. The Trial Chamber heard Mr Philips's detailed account of how—relying on the combination of call data records related to a particular mobile, cell site data relating to the mast to which the respective mobile connected and predictive coverage maps—he used cell site analysis to determine the approximate location of a mobile and track its movements.

2123. The Defence raised no challenge or any significant doubt as to whether cell site analysis itself is a sufficiently reliable method or technique to determine mobiles' approximate locations and movements. Rather, the Defence challenges relate to the underlying telecommunications evidence—that the Trial Chamber has already addressed above—on which Mr Philips and other experts and Prosecution analysts based their analysis. The Defence has also attacked whether Mr Philips had sufficient knowledge of the Lebanese telecommunications networks in 2004 and 2005 to conduct his analysis. A further challenge is to the quality of the information that the Prosecution gave him, while segregating him from the work of Prosecution officials.

2124. After carefully considering the totality of the relevant evidence, the Trial Chamber finds that cell site analysis, which also takes into consideration the enlarged range of a mobile's approximate location, is a technique capable of providing sufficiently reliable assessments and results on which the Trial Chamber can rely in reaching a conclusion regarding the relevant mobiles' general locations and movements. Any limitations in the evidence of relevant mobiles' general location and movement are factors that the Trial Chamber must carefully consider in assessing the evidence and determining its weight.

⁴⁴⁹⁹ Oneissi Defence final trial brief, para. 158.

2125. As to the issue of network congestion, based on Witness 705's and Witness 707's evidence, a call from a congested cell will be redirected, or 'handed over', into one of the six normally neighbouring cells regardless of whether it is in an urban or rural environment. Mr Philips further explained that, in cases of congestion, the network can redirect a call to the strongest cell irrespective of its location.

2126. However, Alfa or Touch did not provide any statistics on congestion frequency. Nevertheless, a careful review of this evidence leads to the conclusion that, in cases of large scale congestion, such as on the afternoon of the attack on Monday 14 February 2005,⁴⁵⁰⁰ it could be expected that, as a result of all six neighbouring cells also being congested, the next best serving cell to which a redirected call would connect would be further away than the six neighbouring cells.

2127. The example referred to above of Witness 115's mobile connecting to an adjacent cell with a predicted best server coverage that was at least 200 to 300 metres away from him—based on how it is measured—supports the Prosecution's argument that, even in exceptional circumstances, where a mobile user is not physically within the predicted best server coverage area of a cell, the mobile could be in a somewhat enlarged area. Namely, in the predicted best server coverage area of the six surrounding neighbour cells, as opposed to being in a completely different area.⁴⁵⁰¹ Conversely, this example also supports Defence submissions attacking the accuracy of the predicted best coverage maps, arguing that they are too unreliable to prove a mobile's actual location.

2128. The Trial Chamber has carefully distinguished, in terms of reliability of the telecommunications evidence, two distinct scenarios. One is comparing specific locations and cell activations—as in cases of determining the location of a mobile connecting to a cell in relation to a specific geographic location.⁴⁵⁰² The other is comparing two cell activations—as in cases of dynamic surveillance and co-location.

⁴⁵⁰⁰ See para. 5546.

⁴⁵⁰¹ Prosecution final trial brief, paras 60-61.

⁴⁵⁰² For example, network mobiles' cell activations in the area of Quraitem Palace or Purple mobiles' cell activations in the area of the Arab University Mosque.

2129. In the first situation, determining a mobile's actual location is undermined by the diminished reliability of the telecommunications evidence, namely the accuracy of the predicted best coverage maps. Conversely, in the second situation, the reliability of the telecommunications evidence increases due to reliance on patterns of call activity and joint movements.⁴⁵⁰³ That was the gist of Mr Philips's evidence on this issue.

2130. In addition to the specific factors affecting the cell site analysis, such as propagation anomalies and exceptional circumstances in cell allocation, the Trial Chamber has borne in mind further general factors that affect the cell site analysis. These are the slow and fast fading, the differing start and end cells in the call data records for the same call, the in-car and in-building coverage and weather-induced changes to the coverage, the gaps in the coverage maps and the underlying data and the effects of inclusion of new cells on the surrounding cells. It must factor these in when considering the Prosecution's conclusions or inferences based on the cell site analysis. It must and has exercised due caution.

2131. The Merhi Defence's argument that the Trial Chamber should render a 'not guilty' verdict solely on the basis of challenges to the reliability of the telecommunications evidence analysed above, and that no trier of fact could make findings on the Accused's guilt beyond reasonable doubt due to these challenges, is not persuasive. The Trial Chamber must examine the evidence in its totality, and in doing so it has thoroughly factored in the limitations of the telecommunications evidence underlying Mr Philips's cell site analysis. As noted above, the reliability issue is more acute when the Prosecution is using the cell site evidence to precisely place an Accused person at a relevant location at a specific time. This is most particularly in relation to the case against Mr Oneissi and Mr Sabra, insofar as they are alleged to have been present near the Arab University Mosque in December 2004 and January 2005, involved in Mr Abu Adass's disappearance, and near payphones and a tree on the afternoon of Monday 14 February 2005.

2132. The Trial Chamber has assessed the calls relevant to the material facts pleaded in the amended consolidated indictment, in the context of the totality of the evidence, which contains a number of essential elements. In addition to the mobiles' general location, which is determined using cell site analysis, this assessment includes how the mobiles were used, including call patterns

⁴⁵⁰³ See paras 4673-4677.

and movement, such as when a mobile consistently returned to a particular location. In some circumstances, this could be considered a home location.

2133. The Trial Chamber also considered the connections between the Accused through their mobile communications along with otherwise inexplicable links between these calls and events related to the preparation and perpetration of the attack and or the conspiracy to assassinate Mr Hariri.

2134. The Trial Chamber rejects the Oneissi Defence and Merhi Defence suggestion that Mr Philips's work was too 'compartmentalised', 'restricted', 'isolated' or 'controlled'.

2135. In terms of access to the Prosecution's information, the Trial Chamber has distinguished between the roles of Mr Philips as an external expert, and those of in-house analysts and experts, such as Mr Donaldson and Mr Platt. The comparison with Mr Philips's investigative experience in the UK is also misleading, as in this case the Prosecution engaged him as an external expert to whom it would provide only limited information.

2136. The Trial Chamber is satisfied that the Prosecution provided Mr Philips with as much information as it considered necessary for him to produce his reports, but to also preserve and demonstrate his independence and impartiality, and to enable him to testify with neutrality and scientific objectivity. The extent of Mr Philips's access to the Prosecution's information was determined by the need to bring a proper focus to his analysis and to avoid any unnecessary work not strictly required for adequate analysis and conclusions.

2137. When analysing Mr Philips's expert reports and rejecting or adopting his conclusions, the Trial Chamber has carefully considered a number of features. These include his field of professional expertise, the material made available to him, his methodology and the extent of his impartiality.

2138. The Defence did not explain how Mr Philips's alleged lack of access to information available to the Prosecution impacted his ability to fulfil his general duties as an external expert or the specific task of conducting cell site analysis in a way that negatively affected the weight of his evidence or prejudiced the Defence. Defence counsel questioned Mr Philips in court and drew to

the Trial Chamber's attention—both at the time, and in final trial submissions—any perceived methodological deficiencies in his work.

2139. In the Trial Chamber's view his work was properly segregated from that of the Prosecution's in-house analysts. This segregation has added to the credibility and reliability of his analysis. Had the Prosecution provided him with more information, or had had him working closely with its analysts, lawyers and investigators, or briefed him on who the suspects were, the Defence would undoubtedly have attacked and attempted to undermine his independence.

2140. The Trial Chamber is also mindful that there is more than one model under which a Prosecution service—or even a Defence team—may engage an external expert. Depending on the circumstances, it could keep the expert at arm's length, or alternatively, integrate the person to an extent into its work, as Mr Philips testified had been his experience in the UK. In the circumstances of this case, the Trial Chamber is satisfied that the Prosecution acted correctly in engaging Mr Philips in the manner described.

2141. The Trial Chamber, however, is also of the view that the Prosecution should have provided Mr Philips with more information on the shortcomings in some of the material given to him, and in particular that Alfa had not contemporaneously produced its maps and shape files. Doing so would have permitted him to have sought further information before writing his reports, asked follow-up questions and to have, if he considered it necessary, modified or qualified his opinions.

2142. However, considering the totality of Mr Philips's evidence together with his extensive expertise in telecommunications, cell site analysis and the workings of GSM generally as applied to cell site analysis, the Trial Chamber is ultimately unconvinced by the Oneissi Defence's argument that Mr Philips's initial lack of awareness on these shortcomings impacted the reliability of the evidence. Despite his being informed of these things only in court during Defence cross-examination, ultimately this did not cause Mr Philips to alter or withdraw his general opinions. The Trial Chamber therefore cannot find that Mr Philips's work was to any significant degree negatively affected by how he was given access to the Prosecution's information in general, and how he was provided with case-specific information in particular.

2143. The Trial Chamber's overall conclusion is that Alfa's and Touch's cell site records are sufficiently reliable to be used for cell site analysis in *generally* determining the approximate

location, movement and call patterns of mobiles. They thus have the necessary probative value for this purpose.

2144. Importantly, in assessing the conclusions based on these records, the Trial Chamber thoroughly considered the inherent 60 to 70 per cent accuracy of the Alfa prediction maps, the non-contemporaneous nature of some of the cell data and the approximation method used to reconstruct it. Some specific issues of reliability, including of network congestion after the attack on Mr Hariri on 14 February 2005, are examined in detail in relation to some pleaded mobiles.

2145. The Trial Chamber is also satisfied of the general reliability of Mr Philips's evidence. Hence, it can safely use his expertise and conclusions to analyse the Prosecution's evidence of the four pleaded Red, Yellow, Blue and Green networks, and the attribution of personal mobiles to the four Accused and Mr Badreddine, and therefore any potential pleaded co-location with network mobiles.

VIII. NATURE AND PURPOSE OF COLOUR-CODED MOBILE NETWORKS AND PURPLE GROUP OF MOBILES

A. Introduction

2146. The Prosecutor alleges that the Accused carried out Mr Hariri's assassination by using groups of mobiles that operated as networks, namely mobile groups with a high frequency of contacts within the group.⁴⁵⁰⁴ The Green network of three mobiles, allegedly monitored and coordinated the attack and the false claim of responsibility.⁴⁵⁰⁵ The Red network of eight mobiles, carried out the assassination of Mr Hariri.⁴⁵⁰⁶ The Blue network of 15 mobiles and the Yellow network of 13 mobiles, were used to prepare for the attack, including the surveillance of Mr Hariri.⁴⁵⁰⁷ The three mobiles in the fifth group, the Purple mobiles, were used to communicate with each other and others outside the group to coordinate the false claim of responsibility.⁴⁵⁰⁸ The Purple mobiles' call patterns are analysed below at paragraphs 2427-2489, under the heading 'Purple group of mobiles'.⁴⁵⁰⁹

2147. The major areas of dispute between the Parties are whether the mobile users in each group operated together as a network, whether they used the mobiles covertly and whether the various mobile groups were interconnected and engaged in a common mission.

2148. The Trial Chamber has received evidence as to mobile networks in general, each color-coded mobile group and possible connections between the various mobile groups. The evidence included call sequence tables, mobile subscription forms, mobile and SIM card payment receipts and witness evidence on topics such as the purchase of the mobiles.

2149. The Trial Chamber also received evidence on the investigation of the mobile groups, in particular how the Lebanese military intelligence and the Lebanese ISF discovered the mobiles in

the Red, Green, Blue and Yellow networks between 2005 and 2007.⁴⁵¹⁰ Their starting point was a cell dump analysis,⁴⁵¹¹ when the investigators requested the identities of all mobiles on all networks that provide best server coverage at the crime scene, and then requested a list of calls using these mobiles over a fixed period, to identify possible suspects.⁴⁵¹²

2150. The Trial Chamber also received extensive and detailed evidence from two Prosecution expert witnesses: Mr John Edward Philips and Mr Gary Platt.

2151. Mr John Edward Philips has more than 30 years of experience as a chartered engineer and many years experience with cell site analysis. The Trial Chamber declared him an expert in mobile networks and their various aspects, such as hierarchies among users of the networks, users' roles and possible missions of the network.⁴⁵¹³ He testified at length regarding mobile networks and produced four expert reports on mobile networks.⁴⁵¹⁴

2152. Mr Gary Platt is a Prosecution investigator.⁴⁵¹⁵ Before joining the Prosecution, Mr Platt worked for 15 years in police forces in the UK. He dealt with covert mobile networks in investigations concerning different types of crime: kidnapping, jewellery robberies, drug dealing, human trafficking and the terrorist attacks in London on 7 July 2005.⁴⁵¹⁶ He has experience with investigations of more than 100 covert networks.⁴⁵¹⁷ The Trial Chamber declared Mr Platt qualified to give an expert opinion on the identification and organisation of covert communication

networks.⁴⁵¹⁸ He testified at length regarding mobile networks and drafted an expert report on network analysis.⁴⁵¹⁹

B. Mobile networks in general

2153. A mobile network is a group of mobiles that form a communication network.⁴⁵²⁰ A ‘mission phone’ is a special type of mobile network. Mr Philips defined a ‘mission phone’ as a mobile obtained and dedicated to a specific objective or mission, which is covert and almost always ‘nefarious’.⁴⁵²¹ Those involved in the mission do not want to be associated with it, so anonymity in all areas is key⁴⁵²² and an essential characteristic.⁴⁵²³ These mobiles differ from personal mobiles, which are non-covert mobiles used to call family and friends and are for everyday usage.⁴⁵²⁴

1. Characteristics of a mobile network

2154. Mr Platt and Mr Philips both gave evidence outlining the main characteristics of a covert mobile network. Although their emphasis and terminology varied somewhat, they concurred on the most important factors.

2155. Mr Platt testified that there were organisational factors and also those demonstrating covertness.⁴⁵²⁵ However, he testified that ‘covert’ and ‘organised’ factors worked in tandem with each other, for example a group of mobiles that communicated only with other mobiles in the same group demonstrated both organisation and a desire for secrecy.⁴⁵²⁶

⁴⁵¹⁸ Oral decision on Mr Platt’s expertise; Decision on expertise (Mr Platt), disposition. The Trial Chamber declared him qualified to give an expert opinion also on matters connected with the surveillance of criminal networks. *See* para. 331.

2. Organisational factors

2156. A wide range of factors can establish that a group of mobiles are operating as a network. They can be broadly grouped into: (a) setting up the network; (b) the equipment used by the mobiles; (c) the mobiles' usage and activity; and (d) the end of the network.

(a) Setting up the network

2157. Mr Philips and Mr Platt stated that, based on their experience, a network is often set up through coordinated actions. For example, the handsets and SIM cards for the mobiles in a group may be purchased at the same time and from the same location.⁴⁵²⁷ Similarly, the mobiles within the group may be initialised on the provider network and used for the first time at the same time and place.⁴⁵²⁸

2158. Sequencing patterns at the time of setup can show group management. Each mobile handset has an IMEI number,⁴⁵²⁹ while every SIM card has a unique IMSI number⁴⁵³⁰ and MSISDN number (the calling number).⁴⁵³¹ According to Mr Philips, if one or more of these numbers are close in sequence for a group of mobiles, this can show that they were purchased together.⁴⁵³²

2159. After the initial setup, the group's expansion can show that they form a network, if the additional mobiles are added in a systematic and simultaneous manner.⁴⁵³³

(b) Equipment

2160. Mr Philips and Mr Platt explained that analysis of the equipment used by a group of mobiles can help show they form a network. Typically users will choose a basic, cheap handset model, which will be used throughout the network of mobiles.⁴⁵³⁴

2161. Users within the mobile group may also swap handsets. Mr Platt testified that mobiles may be collected each day—after disconnecting handsets and SIM cards—to redistribute them on the next operational day. Handset sharing thus tends to show an organisational process.⁴⁵³⁵

(c) Usage

2162. How the mobiles are used is a critical indicator of whether they are operating as a network, according to Mr Philips and Mr Platt. In particular, mobile networks require a closed user group,⁴⁵³⁶ which is an essential characteristic.⁴⁵³⁷ A closed group means that all calls, incoming and outgoing, take place within the group.⁴⁵³⁸ These closed groups are kept relatively small. The in-group communications relate to the mission in which the mobile users are involved.⁴⁵³⁹

2163. The days and times when the mobiles are used can also show that they are part of a network. According to Mr Philips, a group of mobiles being used together more frequently can also show organisation, such as in the lead-up to an important activity.⁴⁵⁴⁰

2164. Where the mobiles are used is also relevant. When various mobiles operate from the same location repeatedly, this shows that they are working together.⁴⁵⁴¹ Similarly, a group of mobiles suddenly appearing together in an exceptional location—away from the mobile user's typical area—can show they are focused on a particular mission.⁴⁵⁴²

⁴⁵³⁴ Exhibit P1114 (Expert report of John Edward Philips – Red mission phones), p. 3.

⁴⁵⁴¹ Exhibit P1114 (Expert report of John Edward Philips – Red mission phones), p. 4, para. 6.3.16.

⁴⁵⁴² John Edward Philips, T. 31 August 2016, pp 36-37; exhibit P1118, slide 12.

2165. The length of calls can also be a significant factor. Mr Platt testified that, for mobile networks dealing with crimes such as armed robbery or kidnapping, calls tend to be shorter because they are merely for information passing. In other types of covert networks—such as for drugs—calls tend to take longer because orders are being placed.⁴⁵⁴³

2166. According to Mr Philips, a hierarchical call flow can reflect an organised structure, whereby one mobile acting as a leader communicates down a hierarchy chain to its subordinates.⁴⁵⁴⁴ Other calls made in a sequential order, namely one mobile calling another which then calls another, can show the passing of information in an organised manner throughout the group.⁴⁵⁴⁵

2167. The existence of a mobile network can be inferred from coordinated top-ups, during which several mobiles within the group receive additional prepaid credit at the same time. Also, the numbers on the mobile recharge cards may be in a sequential order, demonstrating that the mobiles are linked.⁴⁵⁴⁶ Of particular note is that only Alfa provided the Prosecution with information on recharge cards for adding credit to their pre-paid mobiles;⁴⁵⁴⁷ Touch could not provide information on top-up payments for its pre-paid mobiles.⁴⁵⁴⁸

2168. Other indicators of organised usage can include the mobiles all using the same provider network and mobiles within the group sharing common contacts.⁴⁵⁴⁹

(d) Closure of the network

2169. Based on Mr Philips's and Mr Platt's experience, all the mobiles in a group ceasing operation around the same time can demonstrate that they are operating as a network.⁴⁵⁵⁰ A mobile's final calls ordinarily signal the execution of the crime itself. When the mobiles are no

⁴⁵⁵⁰ Exhibit P1114 (Expert report of John Edward Philips – Red mission phones), p. 4; Gary Platt, T. 5 April 2016, p. 49.

longer needed for that crime, their users discard them.⁴⁵⁵¹ Giving up the mobiles lowers the likelihood that an investigation team can subsequently identify the mobile users.⁴⁵⁵²

2170. Not all mobiles in a network are necessarily discarded upon mission completion. Mr Philips testified that the closer a mobile is to the crime, the higher its forensic visibility, namely the risk that its call activity will be associated with the crime, and thus the greater the need to discard it. Conversely, a mobile with low forensic visibility might not be discarded. For example, a mobile with a high volume of calls that was active near the crime scene would be highly visible.⁴⁵⁵³

2171. A large amount of credit remaining on the mobiles in a group after they are discarded could also show that they are part of a network,⁴⁵⁵⁴ given that the organisers are well-funded and willing to sacrifice thousands of dollars.⁴⁵⁵⁵

3. Covert factors

2172. Mr Philips and Mr Platt further identified, based on their experience, characteristics of a mobile network showing that it is covert.

2173. Mr Platt testified that a key method for preserving anonymity is to provide no details about the subscriber or a fake identity when setting up a mobile, such as purchasing the handset and starting a SIM card subscription.⁴⁵⁵⁶ However, the Trial Chamber also heard testimony that, in Lebanon during 2004 and 2005, people who purchased prepaid mobile subscriptions typically did not provide identification cards. Mobile dealers would routinely use other people's identification cards instead. As a result, the named subscriber on a prepaid subscription form often did not match the buyer's identity.⁴⁵⁵⁷

2174. Users in a covert network will also avoid certain common mobile features that are more likely to reveal their identity. For example, they will not send or receive text messages, because

⁴⁵⁵¹ John Edward Philips, T. 31 August 2016, pp 43-44, T. 2 September 2016, p. 49; exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), para. 10.4.13.1.1.9; Gary Platt, T. 26 July 2016, pp 31-32.

⁴⁵⁵⁷ Witness PRH553, T. 8 September 2015, pp 47-53.

these messages may contain incriminating content. They will avoid using voicemail, because voicemails could contain incriminating information or identify the speaker by their voice. Users will not activate call forwarding, because it may transfer to a landline associated with the user, thereby revealing their identity.⁴⁵⁵⁸

2175. Mr Platt testified that, to help keep the network covert, users will rely on untraceable payment methods.⁴⁵⁵⁹ They will use cash and avoid credit card transactions when buying handsets or recharge cards for prepaid mobiles, to avoid leaving a financial trail.⁴⁵⁶⁰ Also, simultaneous cash payments for a group of mobiles can help show their organisation and coordination.⁴⁵⁶¹

2176. Similarly, pre-paid mobiles, which require a top-up—or recharging—process, are more anonymous than post-paid mobiles, which usually require personal and banking details from the subscriber.⁴⁵⁶²

2177. Mr Platt testified that handset swapping can also hide usage and the mobile's user. Detaching the SIM card from the handset ensures that there are no accidental incoming calls and the criminals cannot be traced. Criminals may also change handsets to confuse investigators trying to attribute the mobiles, given that two sources can be used for tracking: the SIM card's IMSI and the handset's IMEI. Swapping also helps prevent mobiles from being used for personal reasons, which threatens secrecy.⁴⁵⁶³

2178. Finally, users can help preserve anonymity by purchasing the mobile and adding credit—if it is a pre-paid mobile—in a different place from where the user normally uses the mobile.⁴⁵⁶⁴

⁴⁵⁶⁴ Exhibit P1114 (Expert report of John Edward Philips – Red mission phones), p. 5.

4. Weighing the factors

2179. According to Mr Philips, the essential characteristics of a covert network are a closed user group, anonymity and involvement in a mission.⁴⁵⁶⁵ However, a mobile does not have to display every other characteristic noted above to be regarded as belonging to a network.⁴⁵⁶⁶ The presence and degree of these characteristics will differ among different networks, depending on how close the mobile is to the planning and execution of the crime. The closer a mobile is associated to the crime, the more these characteristics should be present.⁴⁵⁶⁷

2180. Mr Platt gave evidence that some factors can be common across various mobile networks, such as exclusive communications within the mobile group and anonymous subscribers,⁴⁵⁶⁸ while other factors may only apply to certain networks, such as the mobiles' limited period of activity, which he analysed for the Red mobile network.⁴⁵⁶⁹

5. Submissions

2181. The Ayyash Defence submits that Mr Philips had only encountered mission mobiles rarely, testified about them even less and had never written a report on them before. As such, his work in this novel area has not been subject to peer review.⁴⁵⁷⁰ With regard to the characteristics of mission mobiles, Mr Philips failed to indicate whether there are essential characteristics and did not provide a hierarchy of the characteristics.⁴⁵⁷¹ In some parts of his analysis, Mr Philips dropped certain characteristics when they did not suit the outcome, thus tailoring them to best fit the evidence. The Ayyash Defence submits that this renders Mr Philips's opinions unreliable and urges the Trial Chamber not to place any weight on his evidence on mission mobiles.⁴⁵⁷²

⁴⁵⁶⁵ John Edward Philips, T. 31 August 2016, pp 13-16; exhibit P1118 (PowerPoint presentation on common mission phones, John Edward Philips), slide 9.

⁴⁵⁷⁰ Ayyash Defence final trial brief, para. 277; Ayyash Defence closing submissions, T. 17 September 2018, pp 73-75.

⁴⁵⁷¹ Ayyash Defence final trial brief, paras 280-282.

⁴⁵⁷² Ayyash Defence final trial brief, paras 282-283, 285; Ayyash Defence closing submissions, T. 17 September 2018, pp 75, 78.

2182. It further submits that Mr Platt's expert report on the mobile networks is in large part his summary of network mobile call sequence tables and documents, and does not contain any methodology. In his report, Mr Platt found only that the Red mobiles were 'covert'—without explaining the basis for this conclusion—and did not address the 'covertness' of the other networks. Mr Platt's testimony provided little more as to methodology. He only covered the manner in which mobiles were subscribed, their exclusive use among group members, a lack of text messages and payment methods. As a result, Mr Platt's report and testimony are summary evidence and the Trial Chamber should therefore give them no weight and instead rely on the underlying evidence.⁴⁵⁷³

2183. According to the Sabra Defence, Mr Platt lacks independence and impartiality. The alleged users of the mobile telephone networks had already been suggested to him as being the perpetrators when he joined the Prosecution and his role was to compile the evidence necessary to confirm this ostensibly established fact.⁴⁵⁷⁴

6. Findings

2184. Mr Philips and Mr Platt gave clear and detailed evidence as to what constitutes a covert mobile network. Mr Philips noted that some characteristics were 'essential' while others were not required in every situation. This is appropriate given the different contexts in which a mobile network might operate. The Trial Chamber does not accept the Ayyash Defence's submission that he tailored his list of characteristics for a covert network to match the evidence. As Mr Philips explained, he prioritised characteristics based on their importance, and he sometimes used different terminology to describe the same factor.⁴⁵⁷⁵

2185. Further, the characteristics outlined by Mr Philips—and Mr Platt—are straightforward, logical and based on common sense. The absence of peer review for these factors and Mr Philips's relative lack of experience with covert networks thus does not undermine his evidence, particularly

⁴⁵⁷³ Ayyash Defence final trial brief, para. 332.

⁴⁵⁷⁴ Sabra Defence final trial brief, para. 91. Similar Defence challenges regarding Mr Platt's evidence on the 'Chronology of Events' are addressed in chapter III 'Assessment of evidence', (D) (1) (b) (ii) 'Witness independence and association with Parties'.

⁴⁵⁷⁵ John Edward Philips, T. 25 April 2017, pp 86-89, 92, 95-96.

when Mr Platt, who concurred on most of these factors, has had experience with more than 100 covert networks.

2186. The Trial Chamber does not agree with the Ayyash Defence's arguments that Mr Platt did not address the 'covertness' of the Green, Blue and Yellow networks, thereby undermining his expert report on mobile networks. In his report, he concluded that each of these mobile groups shared several common features that reflected covertness and prevented identification of the mobile users.⁴⁵⁷⁶ The validity of his conclusions are addressed below in regard to each network.

2187. The Trial Chamber is also satisfied that Mr Platt sufficiently explained the factors he relied on to conclude that the mobile groups were organised and covert networks. He explicitly cited various characteristics—such as a closed user group, simultaneous payments for subscriptions or recharge cards, lack of details or false information regarding the mobile users' identities, SIM cards and handsets not being used after the crime was completed and cash payments—when examining the various networks, as analysed in the following sections for each network. Mr Platt therefore did not provide merely summary evidence or unsubstantiated opinions.

2188. The fact that both the UNHCR and the Prosecution had already identified the mobile networks before Mr Platt joined the Prosecution does not necessarily demonstrate bias in his analysis. As an expert, he assessed whether, based on objective factors, the mobiles in each group belonged to a covert network. In his analysis, he relied on call data records converted into call sequence tables, witness statements and related documentation pertaining to: subscriber details, purchase history and financial records. To prepare his report, he reviewed and analysed all evidence from the investigation and, where there was a gap, he requested the missing material from the investigation team.

2189. In other areas of his evidence, for example, the chronology of events, Mr Platt candidly noted his disagreement with the Prosecution lawyers' decision not to produce an updated version

⁴⁵⁷⁶ Exhibit P796.1 (Network analysis report – updated 8 February 2018), paras 688, 691, 706-709, 723-726, 740-743 in relation to the Green network or its three mobiles, paras 780, 791, 813, 832, 852, 871, 899, 907, 926, 947, 967, 989, 1009, 1029, 1048, 1067, 1088 in relation to the Blue network or the 15 Blue mobiles in it, and paras 1113, 1125, 1134-1135, 1156-1157, 1176-1177, 1198-1199 in relation to the Yellow network or its four Yellow mobiles.

of his report and frankly described as ‘a bit misleading’ slides prepared by others in an in-court slide presentation⁴⁵⁷⁷—thus showing the independence of his analysis and opinions.

2190. For these reasons, the Trial Chamber finds that Mr Platt was sufficiently independent in conducting this analysis. Even so, the Trial Chamber recognises that, as a Prosecution employee, Mr Platt was close to the investigation and may have shared the Prosecution’s common goal, namely, convincing the Trial Chamber of the Accused’s culpability. As set out in paragraphs 317-318, the Trial Chamber has kept this in mind when evaluating his evidence, and considered it in light of the sources he had relied upon and other relevant evidence.

2191. Finally, in regard to which and how many of the characteristics must be satisfied for a group of mobiles to be classified as a network, the Trial Chamber has assessed the totality of the evidence, including the underlying evidence relied on by Mr Philips and Mr Platt, and reached its own conclusions for each alleged network.

C. Green network

2192. The Prosecutor alleges that the Green network mobiles—Green 023, Green 071 and Green 300—were used to monitor and coordinate the preparations for the attack, including the preparation of the false claim of responsibility. Further, the Green network was used to monitor the physical perpetration of the attack. The Green network mobiles were used from at least 30 September 2004 to 14 February 2005. From 13 October 2004 until they ceased all activity on 14 February 2005 about one hour before the attack on Mr Hariri, the Green network mobiles communicated exclusively with each other and had no outgoing text messages.⁴⁵⁷⁸

2193. Mr Philips and Mr Platt analysed Green 023, Green 071 and Green 300 to determine whether they formed a covert network. They also looked at 15 other mobiles—Green 026, Green 029, Green 030, Green 032, Green 034, Green 046, Green 048, Green 049, Green 050, Green 064, Green 065, Green 260, Green 280, Green 290 and Green 992—because Green 023, Green 071 and

⁴⁵⁷⁷ Gary Platt, T. 25 January 2017, p. 52, T. 27 January 2017, pp 2-3, T. 6 February 2017, pp 55, 94-95, T. 7 February 2017, p. 17, T. 9 February 2017, p. 6.

⁴⁵⁷⁸ Amended consolidated indictment, paras 15(b), 19(a), 39(a); Prosecution pre-trial brief, paras 25-26.

Green 300 started as part of this larger group of 18 mobiles in July and August 2004 before forming their own closed network.⁴⁵⁷⁹

2194. Mr Philips, in his ‘Green mission phones’ report, concluded that:

Comparison of these mobile phones with the generally accepted characteristics of mission phones leave little doubt that these are Mission Phones though the focus of Green 071 may be different from that of the other 2 Green Phones.⁴⁵⁸⁰

2195. Specific activity by the Green mobiles is set out below.⁴⁵⁸¹

1. Setting up the network

2196. The Green mobiles all operated on the Alfa network.⁴⁵⁸²

2197. The SIM card for Green 071 was purchased on 9 July 2004,⁴⁵⁸³ the SIM card for Green 023 was bought from a different dealer on 12 August 2004⁴⁵⁸⁴ and the SIM card for Green 300 was purchased from the same dealer as Green 023’s on 13 August 2004.⁴⁵⁸⁵ All of these cards were purchased together with SIM cards for other mobiles within the larger group of 18 Green mobiles.⁴⁵⁸⁶ In particular, the IMSI numbers from the SIM cards for Green 023, Green 300 and Green 071 showed a pattern. Each mobile’s IMSI directly preceded or followed the IMSI number of another mobile from the larger group of 18 Green mobiles—Green 023 followed Green 026,

⁴⁵⁷⁹ Exhibit P796.1 (Network analysis report – updated 8 February 2018), paras 673-676; exhibit P1116 (Expert report of John Edward Philips – Green mission phones), paras 5.1.1.3-5.1.1.8, 7.5.7.

Green 026	89823	B
Green 023	89824	B
Green 029	89818	B
Green 032	89819	B
Green 300	89820	B
Green 992	89821	B

Table 1 with Green mobiles' IMSI numbers from John Edward Philips's Green Mission Phones report—exhibit P1116, p. 22

2198. Green 071 was activated on 15 July 2004 and first used on 26 July 2004.⁴⁵⁸⁸ Green 300 and Green 023 were both activated on the same day—13 August 2004—and first used on consecutive days, 17 and 18 August 2004, respectively.⁴⁵⁸⁹ These mobiles, and the other mobiles from the

⁴⁵⁸⁸ Exhibit P405 (Subscription contract for Green 071), ERN 60105006; exhibit P796.1 (Network analysis report – updated 8 February 2018), para. 734.

⁴⁵⁸⁹ Exhibit P405, ERNs 60105118, 60105090; exhibit P796.1 (Network analysis report – updated 8 February 2018), para. 718; exhibit P792; exhibit P1116 (Expert report of John Edward Philips – Green mission phones), pp 22-23 (tables 1 and 2), paras 7.4.3.1, 7.4.4.1; exhibit P1207, p. 1.

larger group of 18 Green mobiles, were all activated in the same area, albeit at different times, which, according to Mr Platt, demonstrated an organisational process.⁴⁵⁹⁰

2199. The Trial Chamber did not receive evidence on the purchase of the Green mobiles' handsets.⁴⁵⁹¹

2. Equipment

2200. Green 023, Green 300 and Green 071 all used the same make and model of handset, a Nokia model 1100. The other 15 Green mobiles also used this same basic handset model.⁴⁵⁹²

2201. Green 023 and Green 300 continuously used their handsets from September 2004 through 14 February 2005.⁴⁵⁹³ Green 071 used the same handset from 24 September 2004 to 7 February 2005.⁴⁵⁹⁴ Before that, Green 071's handset was also used by another Green mobile (Green 290) for a single call on 4 August 2004.⁴⁵⁹⁵

3. Usage

2202. Mr Philips and Mr Platt focused on the same period of use for Green 023, Green 300 and Green 071, namely 13 October 2004 through 14 February 2005.⁴⁵⁹⁶

2203. According to Mr Philips, the three Green mobiles were operational for 42 days during this period.⁴⁵⁹⁷ Mr Platt stated that these mobiles were in communication on 39 days and were active on 41 days of this period.⁴⁵⁹⁸ Based on the underlying evidence, the Trial Chamber has calculated that the three Green mobiles were in communication on 39 days. They were operational on 41 days

in total, which includes two days—9 November and 29 December 2004—when Green 071, Green 300 and Green 023 did not make or receive calls, but each received a service text message.⁴⁵⁹⁹

2204. During this period, Green 071, Green 023 and Green 300 operated within an absolute closed user group. They communicated only within this closed user group, with no contact with any other mobile.⁴⁶⁰⁰ There were no misdials and no calls to third parties.⁴⁶⁰¹ They did not send text messages between themselves or to others.⁴⁶⁰² According to Mr Philips, during this period, there were only ten incoming text messages from the Alfa network, representing five percent of the total of 206 voice and text communications.⁴⁶⁰³

⁴⁶⁰³ Exhibit P1116 (Expert report of John Edward Philips – Green mission phones), p. 3, paras 7.5.1.17-7.5.1.20. Given that all calls were between the Green mobiles, there were 98 calls, not double the amount as Mr Philips appears to suggest.

2205. Mr Platt testified that there were 108 calls in total, of which 98 were between the three Green mobiles, and 10 were incoming service text messages.⁴⁶⁰⁴

Slide 49 of Gary Platt's Network analysis presentation – exhibit P795

2206. Before 13 October 2004, Green 023, Green 071 and Green 300 communicated with other Green mobiles from the initial group of 18 Green mobiles. Green 023 and Green 300 also had contacts with external numbers before 13 October 2004.⁴⁶⁰⁵

2207. Mr Philips and Mr Platt both gave evidence—based on the relevant call sequence tables—that the Green mobiles made no calls from 11 November through 19 December 2004.⁴⁶⁰⁶ Mr Platt explained that this 40-day inactivity was due to the Green mobiles being switched off. According to him, there was no operational need for them to be active during this period, which demonstrates that the Green mobiles were used for an operational purpose. If the mobiles were switched on, the

⁴⁶⁰⁶ Exhibit P1116 (Expert report of John Edward Philips – Green mission phones), paras 7.5.1.1-7.5.1.2; exhibit P1205, p. 8; exhibit P1207, p. 3; exhibit P1211, p. 3; Gary Platt, T. 6 April 2016, p. 57, T. 14 April 2016, p. 37.

users could be identified, because of the increased chance that an incoming text message or a misdial would locate them.⁴⁶⁰⁷

2208. The activity of the three Green mobiles was concentrated in Beirut. From 13 October 2004 to 14 February 2005, 85 per cent of their calls came from the Beirut area, 3.4 per cent were made from the Nabatiyeh and Saida area and one per cent came from the Tripoli area.⁴⁶⁰⁸ Sixty-five per cent of all Green calls used cells in the southern suburbs of Beirut.⁴⁶⁰⁹

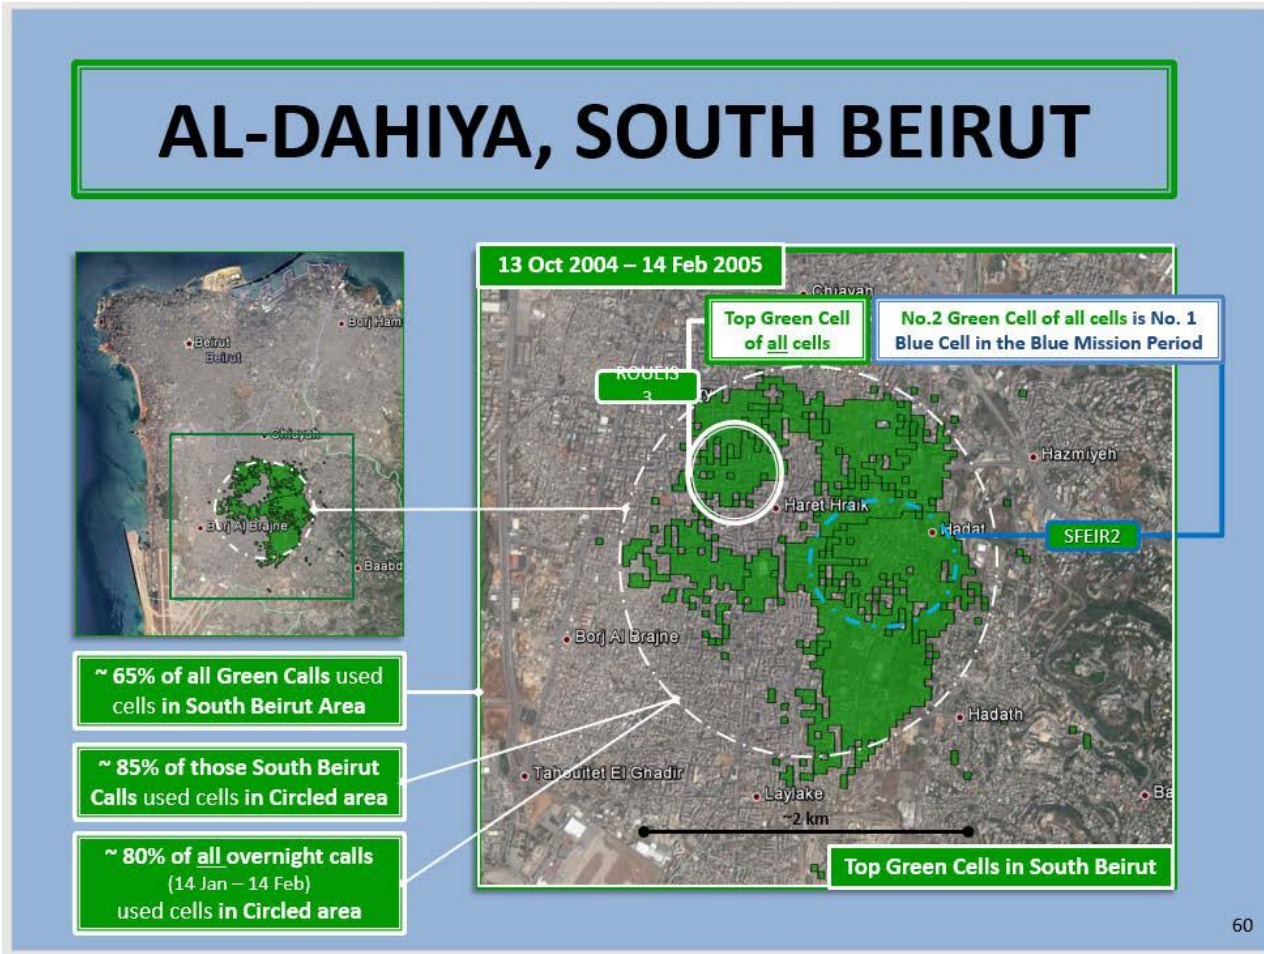

2209. For Green 023, Green 300 and Green 071, ROUEIS3 was the most used cell, the focal point for their activity. The second most used cell by the three Green mobiles was SFEIR2. This cell was also the top cell used by the Blue mobiles.⁴⁶¹⁰ Both cells were in the southern suburbs of Beirut.

⁴⁶¹⁰ John Edward Philips, T. 1 September 2016, pp 55-56; exhibit P1118, slide 60.

Slide 60 of John Edward Philips's PowerPoint presentation – exhibit P1118

2210. According to Mr Philips, the calls made by the three Green mobiles followed a pattern he described as follows:

This is a typical 'open-triangle' arrangement which normally illustrates some sort of hierarchy which, in this case, would be with Green 023 at the top and Green 071 and Green 300 'in the lower ranks'.⁴⁶¹¹

⁴⁶¹¹ Exhibit P1116 (Expert report of John Edward Philips – Green mission phones), p. 32, para. 7.5.1.13.

Figure 1 from John Edward Philips's Green Mission Phones report - exhibit P1116, p. 32

2211. Mr Philips and Mr Platt both emphasised the structured nature of the calls. There were no calls between Green 071 and Green 300. There were only communications between Green 071 and Green 023, and between Green 300 and Green 023.⁴⁶¹² The calls were mainly between Green 023 and Green 300 and to a lesser extent between Green 023 and Green 071.⁴⁶¹³ Mr Philips explained in his report that because Green 071 was a mission mobile and was in contact with Green 023, it can be inferred that its user was involved in a common mission with Green 023.⁴⁶¹⁴

2212. According to Mr Platt, the lack of calls between Green 300 and Green 071 suggested a 'command' structure for the network with Green 023 as the focal point.⁴⁶¹⁵ Mr Platt acknowledged that Green 071 and Green 300's users might not be friends and therefore did not communicate with each other. However, he added that friends normally would not use covert mobiles that connected with only one other mobile.⁴⁶¹⁶ In response to the Ayyash Defence's suggestion of another scenario, whereby Green 023 is subordinate to both Green 300 and Green 071 or a 'management consultant' with the other Green mobiles as its clients, Mr Platt stated that this could be a possibility when considering the facts in isolation.⁴⁶¹⁷

⁴⁶¹² Gary Platt, T. 14 April 2016, p. 34; exhibit P795, slide 50; John Edward Philips, T. 1 September 2016, p. 13, T. 2 September 2016, pp 7, 46; exhibit P1116 (Expert report of John Edward Philips – Green mission phones), paras 7.5.1.9-7.5.1.12; exhibits P1205, P1207 and P1211; exhibit P796.1 (Network analysis report – updated 8 February 2018), paras 680, 689, 698, 715, 732.

⁴⁶¹³ Gary Platt, T. 14 April 2016, p. 34; exhibit P795, slide 50. Of the 98 calls made between 13 October 2004 and 14 February 2005, only 18 were between Green 071 and Green 023. The other 80 were between Green 023 and Green 300.

⁴⁶¹⁴ Exhibit P1117 (Expert report of John Edward Philips – Common Mission Phones), para. 5.5.3.11.

⁴⁶¹⁷ Gary Platt, T. 4 April 2017, p. 40; exhibit 1D346 (Green network diagrams).

2213. The monthly invoices for Green 023, Green 071 and Green 300 were paid each month, along with the invoices for the other mobiles from the larger group of 18 Green mobiles. Mr Platt testified that all subscriptions were paid at the same place—the Alfa Customer Centre in Furn El Chebbac, Beirut—on the same dates, usually within a period of minutes.⁴⁶¹⁸ The payments were in sequential order and probably made by the same person.⁴⁶¹⁹

⁴⁶²⁰ Gary Platt, T. 4 April 2017, p. 50, T. 6 April 2016, p. 93.

4. Closure of the network

2215. Green 071 ceased activity on 7 February 2005, after which its handset and SIM card were not used again.⁴⁶²¹

2216. On 14 February 2005, at 11:58, just about one hour before the explosion that killed Mr Hariri, Green 300 called Green 023 from near the marina area in Beirut. This marked the final Green call.⁴⁶²² According to Mr Platt, this final call is consistent with a coordination and command structure and with the fact that the operation succeeded.⁴⁶²³

2217. After 14 February 2005, Green 023 and Green 300's SIM cards and handsets were not used again.⁴⁶²⁴

2218. The final invoice payment for Green 023, Green 071 and Green 300—and the other mobiles from the larger group of 18 Green mobiles—was on 28 May 2005.⁴⁶²⁵ All Green mobiles were deactivated by the Alfa mobile network on 23 August 2005.⁴⁶²⁶

2219. Mr Platt testified that all the Green mobiles continued to be paid—and some mobiles from the larger group of 18 Green mobiles continued to be used—for several months after the attack because in his view the Green network mobile users were confident that they would not be discovered. It was also possible that whoever provided the Green mobiles to their users was oblivious to their actual use in the attack.⁴⁶²⁷ According to him, something scared the Green mobile users because they ceased payment in May 2005 rather than pay until July 2005, when their contracts ended.⁴⁶²⁸ It was also possible that whoever paid for the Green mobiles suddenly died, got sick or moved away.⁴⁶²⁹ Mr Platt agreed that the continued usage of the Green mobiles after

⁴⁶²⁹ Gary Platt, T. 4 April 2017, p. 36.

the attack risked exposing their users; therefore, it did not make sense to leave a trail by further using them.⁴⁶³⁰

2220. The total costs for all 18 Green mobiles was at least USD 7,683.35, including the initial purchase and monthly invoices.⁴⁶³¹

5. Anonymity

2221. Mr Platt's report states that the users of Green 023, Green 071 and Green 300 relied on false identities for their subscriptions.⁴⁶³² Specifically, the Lebanese Civil Status Directorate and Directorate General for Political and Refugees Affairs had no records for those listed on the subscription contracts for these three mobiles.⁴⁶³³

2222. The users of Green 023, Green 071 and Green 300 also avoided using common mobile features. They did not send text messages between themselves or to others and only received text messages from service numbers.⁴⁶³⁴ They did not use voice mail or call forwarding.⁴⁶³⁵

2223. The monthly invoices for all 18 Green mobiles,⁴⁶³⁶ including Green 023, Green 071 and Green 300, were paid in cash each time.⁴⁶³⁷ On the other hand, the main area of use for the three Green mobiles was the same as where their SIM cards were purchased: the southern suburbs of Beirut.⁴⁶³⁸

2224. According to Mr Philips, the Green mobiles provided very little evidence as to who their users were.⁴⁶³⁹ They made few calls and those calls were not concentrated around the crime

⁴⁶³⁰ Gary Platt, T. 4 April 2017, p. 86.

⁴⁶³⁹ Exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), para. 10.4.13.1.1.3.

scene.⁴⁶⁴⁰ Similarly, Mr Platt testified that the Green mobiles' use was more disciplined than the other networks. The Green network was the most covert because almost all of the calls were made between Green mobiles.⁴⁶⁴¹

2225. According to Mr Wissam Al-Hassan, Mr Hariri's chief of security in 2005,⁴⁶⁴² the Secretary-General of Hezbollah, Mr Hassan Nasrallah, told him during a meeting, between September and mid-October 2005,⁴⁶⁴³ that 'Network 2' was a Hezbollah network and that it was used to track Lebanese agents suspected of dealing with Israeli Mossad agents.⁴⁶⁴⁴ The Trial Chamber admitted Mr Al-Hassan's evidence under Rule 158, namely as an unavailable witness, and he was not cross-examined.⁴⁶⁴⁵ Also, Mr Nasrallah stated at a press conference on 9 August 2010 that he submitted data to Mr Al-Hassan in late 2005 or early 2006 that Hezbollah was tracking an Israeli agent.⁴⁶⁴⁶

6. Submissions

2226. The Prosecution submits that the Green network was the 'communication hub' used to command and oversee the preparation of each limb of the plot, including the attack, and the delivery and dissemination of the false claim. Despite their very limited direct association with the attack itself—namely, only one call on 14 February 2005 an hour before it occurred—the three Green mobiles' users adopted a high degree of covertness, discipline and focus to ensure that their anonymity was protected. This included fictitious subscriber information, cash payments, exclusive communications within the group and coordinated disposal of the SIMs and handsets.⁴⁶⁴⁷

⁴⁶⁴⁰ John Edward Philips, T. 6 September 2016, p. 13.

⁴⁶⁴¹ Gary Platt, T. 14 April 2016, pp 20-21, 34.

⁴⁶⁴² Mr Al-Hassan was a former Lebanese ISF official. He had resigned from the ISF on 4 February 2005 and was not working on 14 February 2005. Later the same year, in late July, Mr Al-Hassan returned to the ISF. In early 2006, he became the head of the ISF's Information Branch and was assigned to lead the investigation into Mr Hariri's death. On 19 October 2012, Mr Al-Hassan died in a car bombing in Beirut, for which no one has been charged to date. Decision on admission of Mr Al-Hassan's interview, paras 1-2.

⁴⁶⁴³ Exhibit P2122 (Interview of Wissam Al-Hassan, 17 June 2012), pp 61, 80-98, 105, 110, 114-117, 120.

⁴⁶⁴⁴ Mr Al-Hassan described 'Network 2' as a 'senior officials' network, discovered by Captain Wissam Eid—the head of the Technical Division of the ISF's Information Branch—in September 2005'. Exhibit P2122, pp 34-36, 39, 41-51, 79, 86-89, 94, 104, 108-109, 114-125.

⁴⁶⁴⁶ Exhibit P2098 (Press conference on 9 August 2010), p. 2.

⁴⁶⁴⁷ Prosecution final trial brief, paras 354-355.

2227. The Prosecution submits that a number of elements in the behaviour of the Green network reflected a strong degree of co-ordination, cohesion and focus demonstrating an organised, well-resourced entity. Evidence of its organisation includes the open triangle formation of contact and the call flow, the restricted number of short and sometimes co-ordinated calls and the collective monthly payments for all 18 mobiles at the same time.⁴⁶⁴⁸

2228. The Ayyash Defence challenges Mr Philips's assertion that the Green network was an open triangle with Green 023 at the top and Green 071 and Green 300 in the 'lower ranks'. Such a pattern of calls may also be consistent with other configurations, such as an inverted triangle or a straight horizontal line with all users on equal level. The Prosecution's assertion that one user is giving orders to another could equally be a subordinate reporting to a superior, assuming there is a hierarchical relationship between the users.⁴⁶⁴⁹

2229. The Merhi Defence submits that the Prosecution did not explain the purpose of the Green network mobiles and did not prove that the Green network was a mission network or that its mission was to coordinate Mr Hariri's assassination.⁴⁶⁵⁰ Mr Philips stated that Green 071's mission could not be established from its call sequence table and that its mission was different from that of Green 023 and Green 300. Furthermore, Green 071 ceased use a week before the attack and therefore can hardly be linked to the explosion.⁴⁶⁵¹ To the contrary, this was not in a coordinated manner with the other Green mobiles and at the time of the attack, but several days before.⁴⁶⁵²

2230. It also submits that Mr Philips failed to link Green 071 to the explosion on 14 February 2005. Mr Philips connected Green 071 to the common mission through its contact with Green 023, but this is a speculative link as neither the activity nor the location of calls involving Green 071 was exceptional.⁴⁶⁵³ Green 071 was isolated from the alleged surveillance activities in both the alleged preparation and execution phases. It was also isolated from call flows between the Red, Blue and Green networks. Furthermore, this mobile had neither exceptional activity nor movements.⁴⁶⁵⁴ Contrary to the Prosecution's assertion that the Green network ceased activities in

⁴⁶⁴⁸ Prosecution final trial brief, para. 356.

⁴⁶⁵¹ Merhi Defence final trial brief, paras 372-373.

⁴⁶⁵² Merhi Defence final trial brief, paras 395-400.

⁴⁶⁵³ Merhi Defence final trial brief, paras 372-378.

⁴⁶⁵⁴ Merhi Defence final trial brief, paras 374-383.

a coordinated manner, Green 071 ceased activity one week before the other Green mobiles.⁴⁶⁵⁵ Also, the Prosecution fails to explain the serious breaches in anonymity of the Green network, such as contacting numbers outside the group, using monthly invoices instead of pre-paid credit and Mr Nasrallah's attribution of the Green network to Hezbollah.⁴⁶⁵⁶

2231. The Prosecution failed to prove that the Green network was a criminal network belonging to Hezbollah whose mission was to assassinate Mr Hariri. The only evidence that the Green network belonged to Hezbollah was Mr Wissam Al-Hassan's interview, on which the Trial Chamber should not place any weight due to its unreliability, uncorroborated hearsay nature and Mr Al-Hassan's unavailability to testify and be cross-examined.⁴⁶⁵⁷

7. Findings

2232. The Trial Chamber finds that there was a covert Green network composed of the three Green mobiles—Green 023, Green 300 and Green 071—operating from 13 October 2004 until 14 February 2005.

2233. The evidence of the expert witnesses Mr Philips and Mr Platt, assessed in light of the underlying documentary evidence such as the call sequence tables, demonstrates that Green 023, Green 300 and Green 071 formed a closed user group. Communications within the three Green mobiles were exclusive as of 13 October 2004 until their final activity in February 2005. They had no contact with any other mobile or landline, including text messages.

2234. The exclusive communication within the Green network was intentional. The calling activity of the three Green mobiles reveals that initially—before 13 October 2004—their users communicated with other mobiles from the larger group of 18 Green mobiles and external numbers. The communication between Green 023, Green 300 and Green 071 became exclusive subsequently and thus purposefully.

⁴⁶⁵⁵ Merhi Defence final trial brief, paras 395-400.

⁴⁶⁵⁶ Merhi Defence final trial brief, paras 384-394.

⁴⁶⁵⁷ Merhi Defence final trial brief, paras 363-369.

2235. Also, most of Green 023's calls were incoming from Green 300 and Green 071. This shows that the communication between the Green mobiles followed a strict discipline—with Green 300 never calling Green 071 and vice versa—and an organisational structure.

2236. The time and place of use also show an organising hand behind the three Green mobiles. They were only used for around 40 days over four months. They were all silent at the same time, from 11 November through 19 December 2004. Their primary area of use was in the southern suburbs of Beirut. Green 071 ceased activity on Monday 7 February 2005, and Green 023 and Green 300's final call was on 14 February 2005, just before the attack. None of these mobiles were ever used again. All of this is strong evidence of coordinated action by these mobiles' users.

2237. The Trial Chamber also relies on the organised setup and financing of the Green mobiles to find that they were part of a network. The SIM cards for Green 023 and Green 300 were purchased from the same dealer on the same date, they were both activated on the same date, and they were first used within a day of each other. All three mobiles were activated in the same location, along with the other mobiles from the larger group of 18 Green mobiles. The monthly invoices for all three mobiles, as well as the larger group of 18 Green mobiles, were all paid in cash at the same time and place.

2238. The SIM card numbers provide some additional support for an organisational process, in that the IMSI numbers for Green 023, Green 071 and Green 300 immediately precede or follow the IMSI numbers of another mobile from the larger group of 18 Green mobiles. Similarly, the use of the same basic handset make and model for all three mobiles, and the fact that they were all on the Alfa network, provides further limited evidence of coordination among the users.

2239. The Trial Chamber finds that the Green network was a covert network due to the anonymity of its users. The evidence shows that the three Green mobiles were purchased using fake identification documents, and the bills were simultaneously paid in cash every month. They avoided sending any text messages and did not use voice mail or call forwarding.

2240. Of note, the Green mobiles engaged in almost no handset swapping and did not travel outside of their main area of use to purchase their SIM cards, unlike other networks analysed

below.⁴⁶⁵⁸ The absence of these characteristics, however, does not outweigh the many examples noted above as to this mobile group's organisation and secrecy.

2241. The Merhi Defence submitted that the 'Green Network's anonymity was partly flawed' and that some of the Green mobiles had contacts with known individuals, but this concerns other mobiles within the larger group of 18 Green mobiles. These arguments do not refer to Green 023, Green 300 or Green 071. To be clear, the 'Green Network' as found by the Trial Chamber applies only to these three mobiles, and not the larger group of 18 Green mobiles.

2242. The Trial Chamber also does not agree with the Merhi Defence's contention that the Green mobiles breached anonymity by using post-paid accounts. This ignores that the mobile users ensured their anonymity through fake identification documents and cash payments.

2243. As for Mr Al-Hassan's statement that Mr Nasrallah allegedly admitted that the Green network belonged to Hezbollah, the Trial Chamber is not satisfied as to its reliability. It is not clear that the Green network—and particularly Green 023, Green 071 and Green 300—as alleged by the Prosecution is the same as 'Network 2' which Mr Al-Hassan and Mr Nasrallah allegedly discussed. Also, Mr Al-Hassan's evidence is hearsay—his out-of-court statement of what Mr Nasrallah allegedly told him—and thus of limited reliability. Mr Nasrallah's statement at a press conference that he provided Mr Al-Hassan data that Hezbollah was tracking an Israeli agent similarly does not specify what, if any, mobiles Hezbollah used during the tracking.

2244. Given the exclusive communications between the three mobiles and the call flow structure among them, the Trial Chamber finds that Green 071 was one of the mobiles within the Green network, contrary to the Merhi Defence's suggestion.

2245. As for the fact that other mobiles from the larger group of 18 Green mobiles—apart from Green 023, Green 300 or Green 071—continued to be used after Monday 14 February 2005, this does not undermine the Trial Chamber's findings, given that its conclusions only relate to these three Green mobiles.

2246. In light of the secrecy regarding the Green mobiles, the deliberate exclusivity of their communications and the organisation and structure of their calls, the Trial Chamber concludes that

⁴⁶⁵⁸ See sub-sections (D) 'Red network', (E) 'Blue network' and (F) 'Yellow network'.

Green 023, Green 071 and Green 300 operated as a covert network. Their possible connection and common mission with the other networks is addressed at the end of this chapter.⁴⁶⁵⁹

D. Red network

2247. The Prosecutor alleges that the Red network of eight mobiles was used to observe Mr Hariri and locations connected to him and to carry out his assassination. The mobiles communicated almost exclusively with each other and had no outgoing text messages.⁴⁶⁶⁰ They were all pre-paid, purchased without supplying subscriber information and all activated within 30 minutes of each other on 4 January 2005.⁴⁶⁶¹ They were all topped up during a 45-minute period on 2 February 2005.⁴⁶⁶² The final call within the network took place at 12:53 on 14 February 2005. After that, the Red mobiles were never used again.⁴⁶⁶³

2248. Mr Platt analysed the following mobiles to determine whether they were part of a network: Red 572, Red 636, Red 652, Red 662, Red 678, Red 741, Red 893 and Red 946.⁴⁶⁶⁴ Mr Philips analysed six of these mobiles; he did not include Red 572 and Red 662.⁴⁶⁶⁵ According to Mr Philips, these two were sparsely used, and he considered them ‘spare’ mobiles.⁴⁶⁶⁶ Because the Prosecution alleges that the Red network consisted of all eight Red mobiles, including the ‘spare’ mobiles,⁴⁶⁶⁷ the Trial Chamber has examined all eight, and not just the six analysed by Mr Philips.

2249. Specific activity by the Red mobiles is set out below in analysing the wider chronology of events leading to Mr Hariri’s assassination.⁴⁶⁶⁸

⁴⁶⁶⁷ Prosecution final trial brief, para. 346.

⁴⁶⁶⁸ See chapter X ‘Chronology of network mobile activity before Mr Hariri’s assassination on Monday 14 February 2005’.

1. Setting up the network

2250. All Red mobiles operated on the Alfa network.⁴⁶⁶⁹

2251. Five handsets for the Red mobiles were purchased from a mobile store in Tripoli on 30 December 2004.⁴⁶⁷⁰ Two more handsets were bought around 23 November 2004,⁴⁶⁷¹ and the remaining one was purchased between November 2004 and January 2005.⁴⁶⁷²

2252. The SIM cards for the Red mobiles were bought from one or more retail outlets within the Tripoli area sometime between 24 December 2004 and 4 January 2005.⁴⁶⁷³ Witness PRH553, who owned a mobile store in Tripoli, purchased 20 SIM cards from the 'Power Group', an authorised Alfa distributor, on 24 December 2004.⁴⁶⁷⁴ This group of 20 cards included the SIM cards for the eight Red mobiles.⁴⁶⁷⁵ The witness did not keep good records, so it is unclear when the eight Red SIM cards were sold, or if the witness sold them to another local store first, or directly to the Red mobile users.⁴⁶⁷⁶ As noted in more detail below,⁴⁶⁷⁷ the application forms for the Red mobile SIM cards were dated 12 January 2005, but this is likely not the actual date of sale.⁴⁶⁷⁸

⁴⁶⁶⁹ Exhibit P1114 (Expert report of John Edward Philips – Red mission phones), p. 3.

⁴⁶⁷⁰ Gary Platt, T. 15 April 2016, pp 56, 68-69; exhibit P465 (Statement of Nowar Dona), ERN 40005829, where Mr Dona stated that, according to the daily sales book, he sold the mobiles on 30 December 2004; exhibit P465, paras 15-38, ERNs 302284-302285, where Mr Dona first stated that, based on his sales book, he sold five mobiles—four Alcatel and one Siemens—in December 2004. He then stated that it was discovered that the sale took place on 30 December 2004. Exhibit P465, ERN 40005820.

⁴⁶⁷¹ Exhibit P557 (Statement of Haisam Jamal), paras 5, 7, 22-23.

⁴⁶⁷² Exhibit P559 (Statement of Ahmad Moghrabi), paras 5-7, 9-10, 14, 16; exhibit P403 (Packing list for import of mobile handsets), p. 2.

⁴⁶⁷³ Gary Platt, T. 15 April 2016, pp 57, 66, 67; exhibit P796.1 (Network analysis report – updated 8 February 2018), para. 509; exhibit P575 (Photographs of a mobile shop in Tripoli); exhibit P484 (Power group invoices SIM cards). *See also* exhibit P795 (Network analysis presentation), slide 102.

⁴⁶⁷⁴ Gary Platt, T. 15 April 2016, p. 57; exhibit P796.1 (Network analysis report – updated 8 February 2018), para. 509; Witness PRH553, T. 8 September 2015, pp 79-92; exhibit P484, ERN 60048383. The English translation contains a typographical error in the bar code number.

⁴⁶⁷⁵ Exhibit P404 (Alfa identification forms – eight Red mobiles).

⁴⁶⁷⁶ Gary Platt, T. 15 April 2016, pp 57, 67-68; Witness PRH553, T. 8 September 2015, pp 70-75, T. 9 September 2015, pp 16-17.

⁴⁶⁷⁷ *See* sub-section (D) (5) 'Anonymity'.

⁴⁶⁷⁸ Witness PRH553, T. 8 September 2015, p. 67, 70, 74-75, T. 9 September 2015, pp 16-17.

2253. The Red mobiles were all first used and initialised on the provider network on 4 January 2005.⁴⁶⁷⁹ This occurred north-east of Tripoli.⁴⁶⁸⁰ The initialisations occurred within a minute or two of each other, except for a seven-minute gap for Red 572.⁴⁶⁸¹ According to Mr Platt, this demonstrated group management and was consistent with one person or one group doing the initialisations. Also, during these initialisations, Red 572 used a handset which Red 946 had previously used.⁴⁶⁸²

2254. On 5 January 2005, the person who bought the five Red handsets returned to the shop complaining that one did not work.⁴⁶⁸³ Mr Nowar Dona—of the mobile shop—inserted his personal SIM card into the handset, confirmed that it was working and returned it to the purchaser.⁴⁶⁸⁴

2255. Mr Philips examined whether the IMEI numbers for the six Red mobiles revealed any patterns. For two handsets, the IMEI numbers were close (ending in 590027 and 590058).⁴⁶⁸⁵ The SIM card barcodes for all the mobiles were in close sequential order—all within a range of

⁴⁶⁷⁹ Exhibit P792 (Alfa SIM cards' activation and deactivation dates), p. 1; exhibit P1114 (Expert report of John Edward Philips - Red mission phones), p. 10, paras 6.2.6, 6.3.2.1, 6.3.16; John Edward Philips, T. 31 August 2016, p. 47. Mr Platt described them as service-related calls. Gary Platt, T. 15 April 2016, p. 58. *See also* exhibit P795, slide 103 (which compiles information on these service-related calls on 4 January 2005, as extracted from the call sequence tables of the eight mobile numbers: exhibits P1197-P1204). According to Mr Platt's evidence, the SIM cards were 'initiated' on 4 January 2005, Gary Platt, T. 15 April 2016, p. 57; exhibit P796.1 (Network analysis report – updated 8 February 2018), para. 514 (emphasis added). The Trial Chamber notes, however, that Alfa had already activated the SIM cards on the GSM network on 21 December 2004, exhibit P796.1 (Network analysis report – updated 8 February 2018), para. 509. The Trial Chamber heard other evidence that the SIM cards were already activated when coming from Alfa to the distributor: 'The phone or the SIM card was ready to be used', Saadeddine El-Ajouz, T. 31 August 2015, pp 69-71. The Trial Chamber therefore understands that what occurred on 4 January 2005 was the mobiles' first usage to call Alfa service code 1456, exhibit P796.1 (Network analysis report – updated 8 February 2018), para. 485.

⁴⁶⁸⁰ Gary Platt, T. 15 April 2016, p. 64. *See also* exhibit P1114 (Expert report of John Edward Philips – Red mission phones), para. 6.3.2.6; exhibit P795, slide 104 (a map depicting the cell masts associated with the initialization calls of the Red mobiles).

⁴⁶⁸¹ Gary Platt, T. 15 April 2016, p. 64. *See also* exhibit P795, slide 103. There is another 12-minute gap before Red 946 makes a third voice call to number 1456, after two previous calls to the same number.

⁴⁶⁸² Gary Platt, T. 15 April 2016, pp 58-64. *See also* exhibit P795, slide 103.

⁴⁶⁸³ Mr Platt testified that the person returned to the shop on 5 January 2005. Gary Platt, T. 15 April 2016, pp 68-69. Mr Dona, however, did not state with precision the date when the person returned to the shop. In different statements, he stated that this person returned to the shop '2 or 3', 'four' and 'four or five' days later, exhibit P465 (Statement of Nawar Dona), ERNs 302285, 40005822, 40005829. However, the exact date results from the call sequence table of Mr Dona's mobile, exhibit P1282 (Call sequence table for mobile ending in 859).

⁴⁶⁸⁴ Gary Platt, T. 15 April 2016, pp 68-69; exhibit P796.1 (Network analysis report – updated 8 February 2018), para. 513; exhibit P1282 (Call sequence table for mobile ending in 859). *See also* exhibit P795, slide 105; exhibit P465 (Statement of Nawar Dona), ERNs 302285, 40005829.

⁴⁶⁸⁵ Exhibit P1114 (Expert report of John Edward Philips – Red mission phones), paras 6.2.4.1, 6.2.6.

numbers ending between 057 and 067. For the MSISDN numbers, only Red 652 and Red 678 were close (3129652 and 3129678).⁴⁶⁸⁶

2. Equipment

2256. Eight handsets were used for the eight Red mobiles between 4 January and 14 February 2005.⁴⁶⁸⁷ Seven handsets were used for the six Red mobiles analysed by Mr Philips, involving four different models, all of which were basic handsets.⁴⁶⁸⁸

2257. There was extensive handset swapping among the Red mobiles. Seven mobiles—all but Red 662—used either two or three handsets,⁴⁶⁸⁹ as shown by the following table:

IMEI (Handset)	Red 572	Red 636	Red 652	Red 662	Red 678	Red 741	Red 893	Red 946
354184000078100	X	X						X
355047005900580		X				X	X	
355047005900270			X		X			
354184000062520	X		X			X	X	
350019353695030						X	X	
351262006708680	X		X		X			
354184000059470								X
354184000067270				X	X			

Table regarding handset use from Gary Platt's Network Analysis report - exhibit P796.1, p. 63

2258. The swapping occurred on five days, including the initialisation and top-up days.⁴⁶⁹⁰ The handsets were used only with Red SIM cards with the exception of two handsets on two dates.⁴⁶⁹¹

⁴⁶⁸⁶ Exhibit P792, p. 1.

⁴⁶⁸⁷ Exhibit P796.1 (Network analysis report – updated 8 February 2018), para. 512; exhibits P1197-P1204.

⁴⁶⁸⁸ Exhibit P1114 (Expert report of John Edward Philips - Red mission phones), paras 6.2.2.1, 6.2.2.3, 6.2.6.

⁴⁶⁸⁹ Gary Platt, T. 15 April 2016, p. 79; exhibit P796.1 (Network analysis report – updated 8 February 2018), paras 512-516. *See also* exhibit P795 (Network analysis presentation), slide 113. The IMEIs used are identified in the call sequence tables. On five days—4, 14 and 20 January 2005, 2 and 14 February 2005—the call sequence tables of the relevant seven Red mobiles show a change in the IMEIs used. The same IMEIs were used by more Red mobiles. *See also* exhibit P790 (IMEI information for Alfa numbers).

⁴⁶⁹⁰ Gary Platt, T. 15 April 2016, p. 79; exhibit P796.1 (Network analysis report – updated 8 February 2018), para. 515. *See also* exhibit P795, slide 113; exhibits P1197-P1200 and P1202-P1204.

⁴⁶⁹¹ One of these two handsets (IMEI 354184000059470) was used on 5 January 2005 with the SIM card of Mr Dona—the operator of a mobile shop who sold it and was asked to repair it. The other was used with the SIM card of Ms Razan Awayda—the sales representative of the authorised dealer of Siemens and Alcatel handsets (Kettaneh) which sold this handset along with the other four handsets used with the Red mobiles to Mr Dona's shop. Ms Awayda used to install her own SIM card into new handsets to show them to customers or did so upon Mr Dona's request for him

2259. Mr Philips also noted handset swapping among the Red mobiles that he analysed.⁴⁶⁹²

3. Usage

2260. After the initialisation process on 4 January 2005, all Red mobiles were inactive until Friday, 14 January 2005. According to Mr Platt, they were probably switched off to avoid being detected.⁴⁶⁹³

2261. The Red mobiles then made and received calls between Friday, 14 January and Monday, 14 February 2005. They made calls on 11 days during this period⁴⁶⁹⁴ and were active on one more day just to add credit.⁴⁶⁹⁵ According to Mr Platt, on the other days, the mobiles were probably switched off and this limited usage was for a certain purpose and that it was a disciplined usage, to avoid identification.⁴⁶⁹⁶

2262. Peak usage time was from 10:00 to 18:00—80 per cent of all calls—with no calls between 22:00 and 07:00.⁴⁶⁹⁷ As a result, the Red mobiles users' homes could not be identified through a traditional cell site analysis method of analysing the first and last call of each day to pinpoint a user's likely residence.⁴⁶⁹⁸

to be sure that a handset he bought was ready and active. Exhibit P796.1 (Network analysis report – updated 8 February 2018), para. 513; exhibit P561 (Statement of Razan Awayda); exhibit P1285 (Call sequence table of mobile 508); exhibit P465 (Statement of Nawar Dona); exhibit P1282 (Call sequence table for mobile ending in 859); exhibit P1967 (Witness statement of Christian Carnus regarding examination of Red and Green handset usage), paras 9, 15.

These days were: 14, 20, 28 and 31 January 2005 and 3, 8, 9, 10, 11, 12 and 14 February 2005, when Red 636, Red 946, Red, 652, Red 679 and Red 893 were active. Red 741 was active on ten days: all those noted above except 10 February 2005. Red 662 and Red 572 were active—apart from the 'initialisation' and re-crediting days, on two days—20 January 2005 and 3 February 2005—and one day—14 January 2005—respectively (Red 572 was also active on 3 February 2005, but only to receive a text message from Alfa number 1456). Exhibits P1197 (Call sequence table for Red 741), P1198 (Call sequence table for Red 893), P1199 (Call sequence table for Red 652), P1200 (Call sequence table for Red 572), P1201 (Call sequence table for Red 662), P1202 (Call sequence table for Red 946), P1203 (Call sequence table for Red 636) and P1204 (Call sequence table for Red 678).

⁴⁶⁹⁸ Exhibit P1117 (Expert report of John Edward Philips – Common Mission Phones), paras 6.1.3.11-6.1.3.12.

Slide 19 of John Edward Philips's PowerPoint presentation – exhibit P1118

2263. The eight Red mobiles were involved in 448 calls.⁴⁶⁹⁹ Three hundred and ninety-six calls were between the Red mobiles themselves.⁴⁷⁰⁰ Of these, 388 involved the six principal Red mobiles.⁴⁷⁰¹ Another 47 calls were 'service calls', to or from the service provider Alfa.⁴⁷⁰² Mr Platt explained that the remaining five calls were probably misdials.⁴⁷⁰³ Excluding communications with service numbers, 99 per cent of all communications of Red mobiles were with each other.⁴⁷⁰⁴

⁴⁶⁹⁹ Gary Platt, T. 26 July 2016, p. 8; exhibits P1197-P1204.

⁴⁷⁰⁰ Gary Platt, T. 15 April 2016, p. 55, T. 26 July 2016, p. 8; *see also* exhibit P796.1 (Network analysis report – updated 8 February 2018), paras 496-501; exhibit P795 (Network analysis presentation), slide 116; exhibits P1197-P1204.

⁴⁷⁰¹ Gary Platt, T. 15 April 2016, pp 55-56.

⁴⁷⁰² These are calls to or text messages from number 1456, an Alfa customer number to activate mobile credit. Gary Platt, T. 26 July 2016, pp 8-9; exhibit P796.1 (Network analysis report – updated 8 February 2018), paras 502-505; *see also* exhibit P795, slide 116.

⁴⁷⁰³ Gary Platt, T. 26 July 2016, p. 9; exhibit P796.1 (Network analysis report – updated 8 February 2018), paras 506-508; *see also* exhibit P795, slide 116.

⁴⁷⁰⁴ Exhibit P796.1 (Network analysis report – updated 8 February 2018), para. 496.

According to Mr Platt, the occurrence of only five misdials—out of 448 calls—showed a very high level of covertness and discipline by the mobiles' users.⁴⁷⁰⁵

Slide 116 from Gary Platt's Network analysis presentation - exhibit P795

2264. Mr Philips found similar results for the six Red mobiles he analysed. Of the total number of calls, 94 per cent (390 calls) were among the six Red mobiles, five per cent were to or from the Alfa network service provider, 0.7 per cent involved the two other Red mobiles and 0.3 per cent were 'misdials'.⁴⁷⁰⁶

⁴⁷⁰⁵ Gary Platt, T. 26 July 2016, pp 11-12.

⁴⁷⁰⁶ Exhibit P1114 (Expert report of John Edward Philips – Red mission phones), pp 4, 53; exhibit P1118, slide 16; John Edward Philips, T. 31 August 2016, pp 48-50, 66-67.

Slide 16 of John Edward Philips's PowerPoint presentation – exhibit P1118

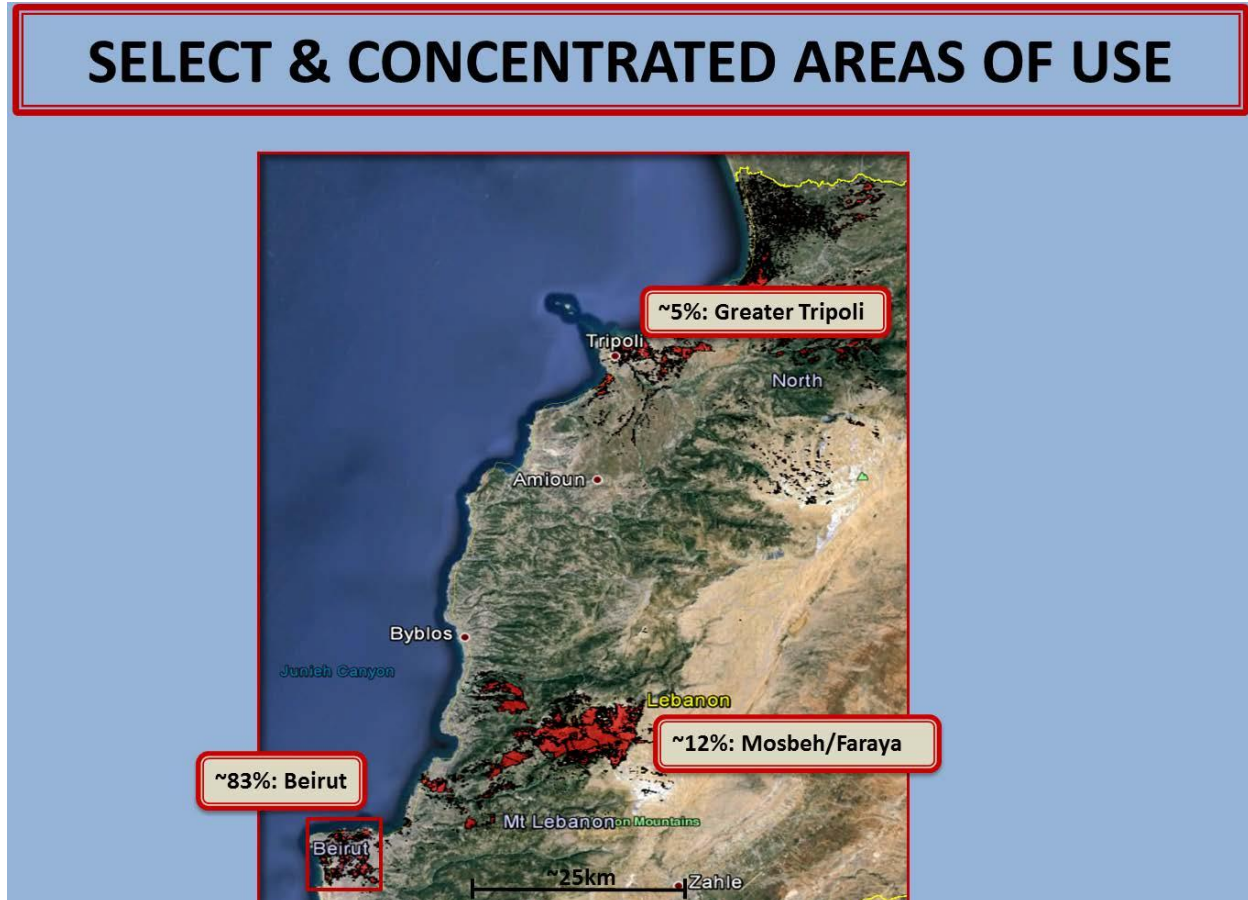

2265. Mr Platt testified that a very high number of the calls between the Red network mobiles were of a quite short duration.⁴⁷⁰⁷ Also, a lot of calls ‘were made in sequential order’. One Red mobile was calling another which in turn called another Red mobile. He testified that, in his view, it was ‘for information passing’.⁴⁷⁰⁸ Therefore, ‘there wasn’t ... much conversations’ between Red mobile users.⁴⁷⁰⁹

⁴⁷⁰⁷ Gary Platt, T. 26 July 2016, p. 16. *See also* exhibit P795, slide 119 (showing that 80 per cent of the Red network calls were shorter than one minute, and 18 per cent lasted between one and two minutes).

⁴⁷⁰⁸ Gary Platt, T. 26 July 2016, p. 17.

⁴⁷⁰⁹ Gary Platt, T. 26 July 2016, p. 18.

2266. Most of the Red network's call activity (83 per cent) occurred in the Beirut area, 12 per cent of the calls in the area between Zouk-Mosbeh and Faraya and five per cent in the Tripoli area.⁴⁷¹⁰ Peak usage area was the Beirut coastal area.⁴⁷¹¹

SELECT & CONCENTRATED AREAS OF USE

Focused Mainly in West & Central Beirut Area

Slide 21 of John Edward Philips's PowerPoint presentation – exhibit P1118

2267. The top ten cells used by the Red mobiles were in west Beirut.⁴⁷¹² Five were clustered around Quraitem Palace—Mr Hariri's residence in 2004 and 2005⁴⁷¹³—while the other five were clustered around the crime scene and Parliament.⁴⁷¹⁴ Nearly 50 per cent of the Red mobiles' activity was concentrated in these areas.⁴⁷¹⁵

⁴⁷¹² Gary Platt, T. 26 July 2016, p. 26; *see also* exhibit P795, slides 121-122.

⁴⁷¹³ Alfa cells MOVPIK1, CONCOR2, CARLTO3, RAOUCH3 and CARACA3. *See also* exhibit P1783 (Expert report of Gary Platt - Chronology), pp 436-437, where the first four cells are listed among those providing coverage within a 500-metre radius of Quraitem Palace, and the fifth cell is listed among those providing coverage within a 500-1000 metre radius of it.

⁴⁷¹⁴ MRAICI2, PHENMB1, ZOUKAK1, ETOILE1 and PORT2. Gary Platt, T. 26 July 2016, p. 26; exhibit P795, slides 121-122. *See also* exhibit P1783, pp 438, 440, where the first three cells above are listed among those providing coverage within a 500-metre radius of the crime scene, and the last two cells are listed among those providing coverage within a 500-metre radius of the Parliament.

⁴⁷¹⁵ Gary Platt, T. 26 July 2016, p. 27.

2268. The Red mobiles were also active in ‘South Beirut’.⁴⁷¹⁶ Most of this activity occurred on one day—Monday, 31 January 2005.⁴⁷¹⁷ Therefore, Red mobiles were not used as frequently in the southern suburbs of Beirut as the other networks—Green, Blue and Yellow.⁴⁷¹⁸ Red mobiles also were active in the Zouk-Mosbeh and Faraya areas, on three days: Friday 14 January, Friday 28 January and Saturday 12 February 2005.⁴⁷¹⁹ Most of the cells activated by the Red mobiles were along the road from Beirut to Faqra Villa—one of Mr Hariri’s residences.⁴⁷²⁰ This specific mobile activity is analysed below in the overall chronology leading to the attack.⁴⁷²¹

2269. Meanwhile, according to Mr Platt, Red mobiles were active in the Tripoli area only on four days,⁴⁷²² two of which were for initialisation and re-crediting purposes.⁴⁷²³ The topping up took place in Tripoli on Wednesday 2 February 2005, between 18:41 and 19:25, in a sequential manner.⁴⁷²⁴ According to Mr Platt, this was consistent with a single person or group topping up the mobiles.⁴⁷²⁵ For two pairs of Red mobiles (Red 636 and Red 741, Red 893 and Red 946), their recharge cards were in sequential order and sold by the same dealer.⁴⁷²⁶

⁴⁷¹⁶ Gary Platt, T. 26 July 2016, pp 27-29; *see also* exhibit P795, slide 123; exhibit P795.1 (Slide 123 from exhibit P795, annotated by Mr Platt).

Table regarding 2 February 2005 topping up from Gary Platt's Network Analysis report – exhibit P796.1, p. 58

2270. Red 893 received a text message from Alfa on 2 February 2005, while the other Red mobiles received a message the following day. According to Mr Platt, this was consistent with the other mobiles being switched off after being topped up, which supports the existence of a 'covert organizational management process'.⁴⁷²⁷

4. Closure of the network

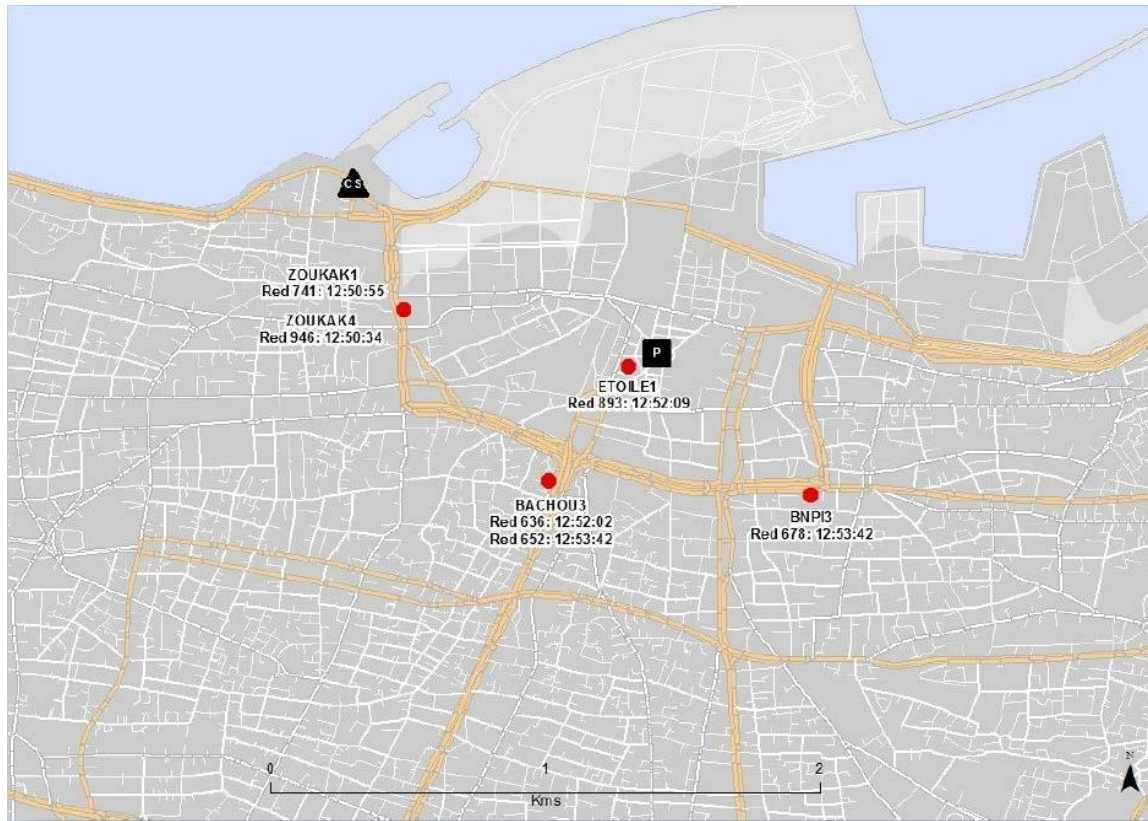

2271. Two Red mobiles—Red 572 and Red 662, the 'spare mobiles'—were shut down on Thursday 3 February 2005.⁴⁷²⁸ The remaining six mobiles all ceased activity between 12:50 and 12:54 on Monday 14 February 2005, immediately before the attack.⁴⁷²⁹ Their final calls activated cells close to the crime scene and Parliament.⁴⁷³⁰

⁴⁷²⁷ Gary Platt, T. 15 April 2016, pp 72, 75, T. 26 July 2016, p. 15; exhibit P1198 (Call sequence table for Red 893), p. 2. Having reviewed the call sequence tables for the other seven Red mobiles (exhibits P1197 and P1199-P1204), the Trial Chamber notes that six of them received a text message from Alfa service code 1456 the day after, on 3 February 2005. Based on the relevant call sequence table (exhibit P1199), Red 652 did not receive any text messages from 1456 the day after or on any other date. On 3 February, Red 652 made a second call to number 1456, exhibit P1199 (Call sequence table for Red 652), p. 3.

⁴⁷²⁸ Gary Platt, T. 15 April 2016, pp 70-71; exhibit P796.1 (Network analysis report – updated 8 February 2018), para. 484; exhibits P1197 (Call sequence table for Red 741), P1198 (Call sequence table for Red 893), P1199 (Call sequence table for Red 652), P1200 (Call sequence table for Red 572), P1201 (Call sequence table for Red 662), P1202 (Call sequence table for Red 946), P1203 (Call sequence table for Red 636), P1204 (Call sequence table for Red 678); exhibit P795 (Network analysis presentation), slide 106.

⁴⁷²⁹ Exhibit P1114 (Expert report of John Edward Philips - Red mission phones), pp 2, 10, para. 6.2.6; John Edward Philips, T. 31 August 2016, p. 47, T. 2 September 2016, p. 56, T. 25 April 2017, p. 85.

⁴⁷³⁰ Gary Platt, T. 26 July 2016, p. 32. The relevant five cells for the last six calls were: ZOUKAK1, ZOUKAK4, ETOILE1, BACHOU3 and BNPI3. Gary Platt, T. 26 July 2016, p. 32; exhibit P795, slide 126.

Slide 126 with Red mobiles' final calls on 14 February 2005 from Gary Platt's Network analysis presentation – exhibit P795

2272. The Red mobiles' SIM cards and handsets were not used after 14 February 2005.⁴⁷³¹ According to Mr Platt, this shows that their reason for being active ceased on that day. Also, not being used again prevented the mobiles from being traced.⁴⁷³²

2273. All Red Network mobiles were deactivated from operation on the Alfa network on 17 March 2005.⁴⁷³³ The costs associated with the Red SIM cards and handsets were at least USD

⁴⁷³¹ Gary Platt, T. 26 July 2016, pp 8, 32, T. 15 April 2016, pp 56, 70-71.

⁴⁷³² Gary Platt, T. 26 July 2016, p. 8.

with information from previous customers of his shop or from customers of nearby mobile shops in Tripoli.⁴⁷³⁸ He testified that very rarely were valid identity documents used to purchase SIM cards.⁴⁷³⁹ Shops, including his, illegally used the same documents, attaching them to multiple application forms.⁴⁷⁴⁰ They did so because Alfa provided an incentive of two or three USD to pre-paid SIM card wholesalers for every completed subscriber application form submitted with an identification document.⁴⁷⁴¹ The date on the eight Red mobile application forms—Wednesday 12 January 2005—was when Witness 553 completed the forms, but was not necessarily the date that he sold the SIM cards.⁴⁷⁴² He did not know who bought the eight SIM cards used in the Red mobiles,⁴⁷⁴³ and it was possible that the SIM cards were bought by the same person or by different people.⁴⁷⁴⁴

2275. The users of the Red mobiles did not use several common mobile features. No text messages were sent from any Red mobile.⁴⁷⁴⁵ The only text messages they received were Alfa service messages, except for one text message that Mr Platt described as a misdial.⁴⁷⁴⁶ There were also no voicemails, and call forwarding was not used.⁴⁷⁴⁷

For Red 741, *compare* chapter IX ‘Attribution of mobile telephones to the Accused and Mustafa Amine Badreddine’, (B) (2) (f) ‘Red 741’.

⁴⁷⁴⁷ Exhibit P1114 (Expert report of John Edward Philips – Red mission phones), paras 6.3.15.33, 6.3.15.37, 6.3.16; exhibit P1118, slide 17.

2276. All transactions that the investigators could identify for the Red mobiles were cash only,⁴⁷⁴⁸ for example, the purchase of handsets for the Red mobiles. Therefore, no financial trail—such as bank or credit card details—was left.⁴⁷⁴⁹ Also, all Red mobiles were pre-paid.⁴⁷⁵⁰

2277. The Red mobiles were active in Beirut and the Zouk-Mosbeh and Faraya areas, while their purchase, initialisation and re-crediting occurred in Tripoli. According to Mr Platt, this was done to create a false trail.⁴⁷⁵¹

2278. Mr Platt considered that the covert nature of the Red mobiles is evidenced by the volume of calls between them, the lack of calls to third parties and the lack of text messages sent by Red mobiles. Together with the limited time the network was used, ‘it’s a clear indication of network phones operating in the covert fashion during that operational period for an operational purpose which clearly ceased on the 14th of February’.⁴⁷⁵²

6. Submissions

2279. The Prosecution submits that the complexity of the attack, the gravity of the objective and the inevitability that the use of the Red mobiles would be forensically associated with the crime rendered the use of a ‘mission phone’ imperative. It required nothing less than a dedicated mobile telephone network adopting extreme measures to ensure its provenance and complete anonymity of its users. The Red network operated as a classic, paradigmatic ‘mission phone’ network adopting extreme measures of covertness. It is a compelling fit for the exceptional profile required to execute the crime.⁴⁷⁵³

2280. A series of elements in the Red network’s behaviour reflect a strong degree of coordination and cohesion and show that it was overseen and operated by an organised and well-resourced entity. These include: that the eight mobiles were purchased, set-up and topped up together; the handsets were swapped in the first days of use, showing that SIMs and handsets were gathered, separated and redistributed after use; the principal six mobiles only contacted each other on 11

⁴⁷⁴⁸ Mr Platt explained that they could not identify, for example, the point of sale of the top-up recharge cards. Gary Platt, T. 26 July 2016, p. 6; *see also* exhibit P1118, slide 17.

⁴⁷⁵³ Prosecution final trial brief, paras 366, 449-451.

days; USD 1,150-1,334 were spent for this limited use and a call credit of USD 495.18 remained when they were disposed. They operated as a group with a specific focus in limited areas, namely West or Central Beirut and Faraya or Mosbeh area. The calls were frequent, short, coordinated and focused into limited blocks of time. The final day of use on 14 February 2005 shows a high degree of synchronicity and a coordinated shut down.⁴⁷⁵⁴

2281. The Red network was the most covert of the four networks. A series of measures requiring a high degree of discipline and focus were adopted to ensure their users' anonymity. They included: pre-paid subscriptions with no (or incorrect) subscriber details and untraceable cash-only transactions. The mobile administration (purchase, set-up, repair and top-up) occurred in Tripoli, a location remote from the mobiles' areas of use and their users' base area in Dahyieh; no text messages were sent. No call forwarding or voice mail was used; all calls were made within the network. Calls were principally restricted to daytime hours. Calls were prohibited from use in the vicinity of the users' base area in the heart of Dahyieh, except when following Mr Hariri to that location on 31 January and 12 February 2005. Mobiles were switched off when not required. And there was a coordinated disposal of SIMs and handsets following the execution of their purpose.⁴⁷⁵⁵

2282. The Ayyash Defence submits that Mr Platt found that the Red mobiles were 'covert' without explaining the basis for this conclusion.⁴⁷⁵⁶

2283. The Sabra Defence submits that Mr El-Ajouz, the owner and general manager of Power Group, was linked to the sale of the Red mobile SIM cards and was a member of Al-Ahbash.⁴⁷⁵⁷ The issue of Al-Ahbash's possible role in the attack on Mr Hariri is addressed in analysing the false claim of responsibility.⁴⁷⁵⁸

2284. In an in-court mid-trial summary, the Sabra Defence submitted that the Red mobiles were bought to create a false lead.⁴⁷⁵⁹ According to the Sabra Defence, there is no evidence that they did surveillance and there was no need to do it as Mr Hariri was killed on a road he 'would use

literally all the time’.⁴⁷⁶⁰ The only explanation for their use was to leave a trace of their ‘presence around Mr Hariri in the weeks leading up to the assassination to be discovered after the attack’.⁴⁷⁶¹

2285. In particular, according to the Sabra Defence, the Red mobiles were activated and or recredited near the village of Minieh to set up a group of six Australian pilgrims who resided there during part of January and February 2005.⁴⁷⁶² The six pilgrims were in fact suspected for Mr Hariri’s assassination ‘within no time’ after the attack.⁴⁷⁶³ The Sabra Defence also submitted that the Red mobiles were bought—on Thursday 30 December 2004—by Mr Raed Fakhreddine on behalf of his uncle Tareq, who was linked to ‘an entire group of persons of interest’.⁴⁷⁶⁴ The Sabra Defence did not reiterate these submissions in its final trial brief.

2286. The Defence of the four Accused otherwise did not challenge the Prosecution’s argument that the Red mobiles formed a covert network or the facts presented in support of this conclusion.

7. Findings

2287. Based on Mr Philips’s and Mr Platt’s evidence, the Trial Chamber finds that the Red mobiles formed a covert network from Tuesday 4 January 2005 to Monday 14 February 2005.

2288. The evidence that all eight Red mobiles operated in a highly organised manner. Ninety-nine percent of communications by the Red mobiles—excluding service numbers—were with each other is compelling. They called one another on only 11 days between Friday 14 January and Monday 14 February 2005. Their periods of inactivity coincided, such as between Tuesday 4 and Friday 14 January 2005. Their primary areas of use were West and Central Beirut. Five handsets used by Red mobiles were purchased from the same store on the same date, 30 December 2004. All their SIM cards were close in sequence and likely bought in the same area. Users swapped handsets within the group of mobiles regularly and multiple times.

2289. The Red mobiles were all initialised on the provider network at the same time and place, in the Tripoli area on Tuesday 4 January 2005, within minutes of each other. Similarly, all the mobiles were topped up with additional credit in the Tripoli area on Wednesday 2 February 2005,

⁴⁷⁶³ Submissions, T. 10 November 2016, p. 42.

⁴⁷⁶⁴ Submissions, T. 10 November 2016, pp 41-42; Gary Platt, T. 26 July 2016, p. 79.

within a 45-minute period. The principal six Red mobiles all made their last calls at the same time, on Monday 14 February 2005, just before Mr Hariri's assassination. All the Red mobiles were deactivated from operation on the Alfa network on 17 March 2005. Their handsets and SIM cards were never used again.

2290. The Trial Chamber notes further evidence—that some Red mobiles displayed sequential patterns for their IMEI numbers, their handsets were basic models, the voice calls between Red mobiles were of short duration and they all operated on the Alfa network—that may be less compelling but nevertheless provides additional support that the Red mobiles were part of a network.

2291. Further, the Red mobile users consistently acted in ways designed to preserve their anonymity. The SIM card subscribers for the Red mobiles did not provide their actual identities. The SIM card subscriptions were pre-paid, and only cash was used for transactions where the payment methods could be identified. The Red mobiles sent no text messages to each other and did not use voice mail or call forwarding. Users engaged in various transactions—purchasing handsets and SIM cards, initialising and topping up the mobiles—in the Tripoli area, far from their regular area of use in Beirut. Users also avoided night-time calls that could reveal where they lived. The total remaining credit of approximately USD 500 when the Red mobiles were deactivated is of lesser weight in comparison, but nevertheless provides some additional evidence of covertness.

2292. The Trial Chamber therefore concludes that the eight Red mobiles operated together as a covert network. Their possible connection and common mission with the other networks is addressed below.⁴⁷⁶⁵

E. Blue network

2293. The Prosecutor pleaded that the Blue network of 15 mobiles was used to prepare for the attack, including surveillance of Mr Hariri between 18 October 2004 and Monday 14 February 2005. These Blue mobiles communicated almost exclusively with each other and sent almost no text messages.⁴⁷⁶⁶

⁴⁷⁶⁵ See sub-section (G) 'The networks' common mission'.

⁴⁷⁶⁶ Amended consolidated indictment, paras 15 (c), 19 (b).

2294. The Blue mobiles were almost equally divided between the Alfa (seven) and the Touch (eight) provider networks.⁴⁷⁶⁷

2295. Mr Philips and Mr Platt analysed 15 mobiles to determine whether they could be classified as a network for purposes of the attack: Blue 233, Blue 235, Blue 322, Blue 324, Blue 428, Blue 501, Blue 585, Blue 610, Blue 742, Blue 813, Blue 817, Blue 864, Blue 940, Blue 965 and Blue 967.⁴⁷⁶⁸ Three other Blue mobiles—Blue 338, Blue 349 and Blue 354—were activated in March 2005, after the assassination, and are not linked to the attack.⁴⁷⁶⁹

2296. The role of the Blue mobiles in the attack on Mr Hariri is analysed in detail in the chronology of surveillance leading to the attack in chapter X ‘Chronology of network mobile activity before Mr Hariri’s assassination on Monday 14 February 2005’.

1. Setting up the network

2297. The Prosecution acknowledged that there is no evidence regarding the purchase of the handsets of the Blue mobiles.⁴⁷⁷⁰

2298. As to the purchase of the SIM cards, the card for Blue 428 was sold on 16 December 2003, while the cards for both Blue 742 and Blue 940 were bought on 25 December 2003.⁴⁷⁷¹ The SIM card subscription forms for Blue 610, Blue 585, Blue 233 and Blue 965 were dated, respectively, 17 December 2003, 17 October 2004, 21 December 2004 and 11 January 2005.⁴⁷⁷² The date fields in the SIM card forms for Blue 235, Blue 322 and Blue 324 were blank.⁴⁷⁷³ There was no information on the points of sale or dates of purchase for the SIM cards for Blue 501, Blue 813, Blue 817, Blue 864 and Blue 967.⁴⁷⁷⁴

Table regarding handset use from Gary Platt's Network Analysis Report – exhibit P796.1, p. 128

3. Usage

2305. The seven Alfa Blue mobiles activated in December 2003 were effectively inactive until December 2004, except for regular top-ups and limited calls between the Blue mobiles, the Yellow

⁴⁷⁸³ Exhibit P790 (IMEI information for Alfa numbers); Gary Platt, T. 26 July 2016, p. 47. Mr Platt actually identified nine Blue mobiles that swapped handsets, but one (Blue 349) was only activated in March 2005, after the attack. Exhibit P796.1 (Network analysis report – updated 8 February 2018), paras 787, 789.

⁴⁷⁸⁴ Exhibit P796.1 (Network analysis report – updated 8 February 2018), paras 788-789, 935, 956, 1097.

mobiles and unattributed numbers.⁴⁷⁸⁵ According to Mr Platt, these mobiles being kept active through monthly topping up was evidence of organisational structure.⁴⁷⁸⁶

2306. According to Mr Platt, during the initial phase of the network from 18 October until 22 December 2004, Blue 322, Blue 324 and Blue 585 only called each other. They operated as an open-ended triangle, namely Blue 322 was in contact with Blue 585, and Blue 585 was in contact with Blue 324 only. There were no calls between Blue 322 and Blue 324 until 22 December 2004.⁴⁷⁸⁷ The network then expanded with three more mobiles—Blue 610, Blue 817 and Blue 864—in December 2004.⁴⁷⁸⁸ By Saturday 15 January 2005, the nine other Blue mobiles had joined.⁴⁷⁸⁹

2307. Mr Philips, however, provided a different account of the network's expansion. On 23 December 2004, the seven Alfa Blue mobiles started calling each other as well as the three Touch Blue mobiles.⁴⁷⁹⁰ The remaining five Blue mobiles started making calls in January 2005 and contacted the other Blue mobiles.⁴⁷⁹¹

2308. According to Mr Philips, all 15 Blue mobiles formed part of a closed-user group over the period between Wednesday 12 January 2005 and Tuesday 15 February 2005.⁴⁷⁹² His report stated that, from 21 December 2004 until 15 February 2005, there were 1,450 calls between the

15 mobiles.⁴⁷⁹³ Blue mobiles called each other 94 per cent of the time, network calls amounted to five per cent and all other calls totalled one per cent.⁴⁷⁹⁴

Slide 29 of John Edward Philips's PowerPoint presentation – exhibit P1118

2309. In his network report, Mr Platt's analysis of the Blue mobiles' activity focused on a larger period: from when the first group of three Blue mobiles were consistently used in October 2004 until the Blue mobiles' final activity in September 2005.⁴⁷⁹⁵ Not taking into account contacts with service numbers, Mr Platt found that approximately 97 per cent of communications within the Blue mobile group was with other Blue mobiles during this period.⁴⁷⁹⁶

2310. In his testimony, Mr Platt focused instead on the period from 18 October 2004 to Monday 14 February 2005. During this period, the Blue mobiles were involved in 1,799 calls: 86 per cent (1,549 calls) were Blue-to-Blue network calls; one per cent (21 calls) were Blue network calls

⁴⁷⁹³ Exhibit P1115 (Expert report of John Edward Philips – 15 Blue mission phones), para. 6.9.62.58, p. 286 (table 173), *see also* pp 8, 289.

⁴⁷⁹⁶ In the report, Mr Platt does not specify the total number of calls analysed. Exhibit P796.1 (Network analysis report – updated 8 February 2018), para. 780.

which did not connect with the intended Blue mobile users; 11 per cent (196 calls) were calls or text messages from communication service providers or from the internet—such as advertisements;⁴⁷⁹⁷ and two per cent (33 calls) were contacts with third party numbers.⁴⁷⁹⁸ Mr Platt testified that 79 per cent of calls involving the Blue mobiles between 18 October 2004 and 14 February 2005 occurred after 7 January 2005.⁴⁷⁹⁹ According to Mr Platt, the Blue Network was ‘largely closed’.⁴⁸⁰⁰

Slide 85 from Gary Platt’s Network analysis presentation – exhibit P795

2311. Almost all, 91 per cent, of the Blue mobile activations occurred in the Beirut area.⁴⁸⁰¹ Similarly, the list of top ten cells activated by Blue mobiles included eight locations in the southern suburbs of Beirut and two in western Beirut.⁴⁸⁰² The top three cells were the same, and in the same

⁴⁷⁹⁷ Gary Platt, T. 15 April 2016, pp 38-39. *See also* Gary Platt, T. 6 April 2016, pp 39-41.

⁴⁸⁰² These were MOVPIK1 and CARACA3; *see also* exhibit P795, slides 91-92.

order, as those of the Yellow mobiles, namely Alfa's SFEIR2, and Touch's Sfeir_B and Sfeir_A.⁴⁸⁰³

2312. Nearly four per cent of Blue mobile activations occurred in the Zouk-Mosbeh and Faraya areas, where some mobiles activated the cell masts 'which congregated around the main routes to the Faqra villa'.⁴⁸⁰⁴ Activity in this location was limited to between 25 December 2004 and 28 January 2005.⁴⁸⁰⁵ Mr Platt testified that the Yellow mobiles were also active in these areas in December 2004.⁴⁸⁰⁶

2313. One per cent of usage occurred in the area between Jounieh and Tripoli over a few days between Tuesday 28 December 2004 and Wednesday 2 February 2005.⁴⁸⁰⁷ This percentage and period are similar to the Yellow mobile activations in the same area.⁴⁸⁰⁸ Mr Platt commented that the activity in the Tripoli and Faraya areas for a limited time in late December was unusual, given their prior areas of use in the southern suburbs of Beirut or south Lebanon.⁴⁸⁰⁹

2314. Finally, almost four per cent of Blue mobile activations occurred in south Lebanon and less than one per cent were in the Baalbek and in the Bekaa valley areas.⁴⁸¹⁰ Similar activity by Yellow mobiles in Baalbek is analysed below.⁴⁸¹¹

2315. From January 2004 through January 2005, the seven Alfa Blue mobiles had credit added on a group basis, meaning they were topped up together—in groups of five and two—from the same distributor on the same date, time and location in the southern suburbs of Beirut, using

⁴⁸⁰⁸ Gary Platt, T. 15 April 2016, pp 46-47.

⁴⁸⁰⁹ Gary Platt, T. 15 April 2016, p. 54.

⁴⁸¹⁰ Gary Platt, T. 15 April 2016, pp 47-49, 51-52; *see also* exhibit P795, slide 90. In his network report, when describing the Blue network's area of operation, Mr Platt mentioned 'a significant usage in the Baalbek area', without explaining this further, exhibit P796.1 (Network analysis report – updated 8 February 2018), para. 792. As noted above, in the report, Mr Platt's analysis of the Blue mobiles' activity focused on the larger period between October 2004 and September 2005. The different period of consideration explains the difference in Mr Platt's evidence about the Blue mobiles' usage in the Baalbek area. This is consistent with Mr Philips's evidence that 'movement in the latter half of 2005, particularly from June onwards, by many Blue phones, also includes an area ~ 67 kilometres north-east around Baalbek, an area only seemingly visited during the *period of specific interest* by [Blue 864] on 18th January 2005', exhibit P1115 (Expert report of John Edward Philips – 15 Blue mission phones), p. 5. *See also* exhibit P795, slides 90, 94.

⁴⁸¹¹ *See* sub-section (F) (3) 'Usage'.

sequentially numbered top-up vouchers.⁴⁸¹² These Blue mobiles' recharge cards were also in sequential order with those used by some Yellow mobiles. According to Mr Platt, this showed connectivity between the Blue and Yellow mobiles⁴⁸¹³ and was evidence of group management and organisation.⁴⁸¹⁴

2316. After January 2005, the process changed to single user top-ups.⁴⁸¹⁵ Some mobiles continued to recharge on the same days, but the times and locations changed. This coincided with the seven Alfa Blue mobiles joining the network over December 2004 and January 2005, which Mr Platt interpreted to mean that they were given to a user after being maintained for almost 12 months.⁴⁸¹⁶

2317. One mobile—Blue 610—was dominant in terms of call volume and usage areas.⁴⁸¹⁷ There were also five other 'core' mobiles: Blue 817, Blue 864, Blue 585, Blue 324 and Blue 233.⁴⁸¹⁸ These six mobiles were involved in 75 per cent of all Blue mobile calls from 21 December 2004 to Tuesday 15 February 2005,⁴⁸¹⁹ and over 90 per cent of their calls were among themselves.⁴⁸²⁰ Between Thursday 27 January and Monday 14 February 2005, their call activity increased

⁴⁸¹² Gary Platt, 15 April 2016, pp 2-6; exhibit P795, slides 79-80; exhibit P796.1 (Network analysis report – updated 8 February 2018), paras 772-775; exhibit P1115 (Expert report of John Edward Philips – 15 Blue mission phones), p. 6, paras 6.6.8.1, 7.1. Alfa provided the Prosecution with information on the recharge cards and recharge dates for the seven Blue mobiles, whereas in 2004 and 2005, Touch did not retain recharge data. Exhibit P796.1 (Network analysis report – updated 8 February 2018), paras 763, 777; exhibit P826 (Witness PRH705's statement of 16 November 2015), para. 312.

⁴⁸¹⁸ Exhibit P1115 (Expert report of John Edward Philips – 15 Blue mission phones), pp 3-4, 9; John Edward Philips, T. 31 August 2016, p. 84; Gary Platt, T. 14 April 2016, p. 91; *see also* exhibit P795, slide 75.

⁴⁸¹⁹ Exhibit P1115 (Expert report of John Edward Philips – 15 Blue mission phones), p. 4; John Edward Philips, T. 31 August 2016, pp 88-89; *see also* exhibit P795, slide 75. According to Mr Platt, in the slightly different period, 14 January to 14 February 2005, these six mobiles made 'approximately 73 per cent of all Blue-to-Blue calls'. Gary Platt, T. 14 April 2016, pp 81, 91.

⁴⁸²⁰ Exhibit P1115 (Expert report of John Edward Philips – 15 Blue mission phones), p. 4. According to Mr Platt, 99.57 per cent of all the communications on Blue 233 from 10 January 2005 to 21 September 2005—the period in which Mr Ayyash allegedly used Blue 233—were with other Blue mobiles. Blue 233's most common contact was Blue 610. Further, between 18 October 2004 and 15 September 2005, the percentages of the Blue-to-Blue contact of the other five Blue mobiles of the 'Principal Six', varied from 97 to 99.74 per cent. Exhibit P796.1 (Network analysis report – updated 8 February 2018), paras 805, 814, 833, 853, 872, 890, 908; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 393.

substantially, while that of the remaining nine Blue mobiles decreased to a minimum.⁴⁸²¹ Mr Platt stated that these six ‘core’ mobiles were not only the most active in terms of call volume, but also the most mobile, in terms of locations.⁴⁸²² The six ‘core’ Blue mobiles’ top cell site activations shifted towards western Beirut from 27 January through 14 February 2005.⁴⁸²³ After 14 February 2005, the group of six mobiles merged back into the larger group in terms of call activity and cell site activations.⁴⁸²⁴

2318. Mr Platt noted that 96 per cent of all Blue-to-Blue calls were shorter than two minutes, even though the mobiles had plenty of credit and could have made longer calls.⁴⁸²⁵ He added that five contacts were common to two or more Blue mobiles.⁴⁸²⁶ Also, some Blue mobiles had common contacts with some Yellow mobiles, the Protel Company and the Great Prophet Hospital in Beirut.⁴⁸²⁷

4. Closure of the network

2319. After Monday 14 February 2005, the level of activity of Blue-to-Blue calls dropped extensively.⁴⁸²⁸ The Blue mobiles stayed in operation until October 2005, when all except two—Blue 813 and Blue 742⁴⁸²⁹—were deactivated by the provider networks.

⁴⁸²¹ John Edward Philips, T. 31 August 2016, pp 103-104.

⁴⁸²² Gary Platt, T. 14 April 2016, pp 91-92.

⁴⁸²³ John Edward Philips, T. 31 August 2016, pp 106-107; exhibit P1118 (PowerPoint presentation on common mission phones, John Edward Philips), slide 38.

⁴⁸²⁶ Exhibit P796.1 (Network analysis report – updated 8 February 2018), para. 782.

⁴⁸²⁷ Gary Platt, T. 15 April 2016, p. 41. *See also* exhibit P796.1 (Network analysis report – updated 8 February 2018), paras 784-785, 980.

⁴⁸²⁸ Gary Platt, T. 15 April 2016, pp 43-44. The graph of the Blue network activity in exhibit P795 (Network analysis presentation), slide 88, only covers the period between 18 October 2004 and 14 February 2005. Mr Platt’s report shows the monthly ‘average percentage of contact between Blue mobiles and the average number of all calls/SMS of Blue mobiles between October 2004 and September 2005’. According to the report, the average number of calls decreased in March and April 2005 to increase again, however, in the months of May to July 2005. The average percentage of Blue contacts did not decrease significantly in the months following February 2005. Exhibit P796.1 (Network analysis report – updated 8 February 2018), paras 780-781.

⁴⁸²⁹ Mr Platt testified that only one Blue mobile, Blue 742, was still active after the Blue network ceased to exist, in 2010. However, his report states that ‘the majority of the Blue Phones were deactivated by Alfa and Touch between 30 September and 14 November 2005’. Blue 813 was the only mobile deactivated after October 2005, on 14 November 2005. Mr Platt also noted that a SIM card replacement was requested for this mobile in the name of Ghamlouch—the named subscriber of the line—whom the Prosecution was unable to locate or interview. Mr Platt underlined that this person was also the named subscriber of Yellow 294. According to Mr Platt, while the Lebanese Ministry of Interior stated that this ‘is a real person’, they have not been located since 2005, and ‘disappeared essentially’. Gary Platt,

2320. Mr Platt commented that the shutdown in ‘this sort of uniform fashion’—as it occurred over a couple of weeks—reflected an organised process.⁴⁸³⁰ Mr Philips’s report stated that the credit balance was more than USD 4,000.⁴⁸³¹ In his report, Mr Platt stated that the approximate amount left over on the Blue mobiles was USD 4,703.10.⁴⁸³²

⁴⁸³⁰ Gary Platt, T. 15 April 2016, p. 25. According to Mr Platt’s report, however, for the Blue mobiles the Alfa records did not contain the reasons for deactivation and Touch records provided the reason as ‘expiry date’, exhibit P796.1 (Network analysis report – updated 8 February 2018), paras 798, 811, 846, 866, 885, 903, 921, 943, 963, 983, 1025, 1043, 1062, 1083; exhibit P792 (Alfa SIM cards’ activation and deactivation dates); exhibit P1101 (Touch list of activation and deactivation dates); exhibit P2137 (Metadata about Blue 428).

⁴⁸³¹ Exhibit P1115 (Expert report of John Edward Philips – 15 Blue mission phones), pp 5-6, 8, paras 6.12.1.5-6.12.1.6; *see also* exhibit P1101, p. 1; exhibit P792; exhibit P2137.

⁴⁸³² In another passage of the report, Mr Platt stated that the total amount left was USD 5,160. Mr Platt testified that the Blue mobiles had approximately USD 5,000 credit remaining on the mobiles, Gary Platt, T. 15 April 2016, pp 21-24; exhibit P796.1 (Network analysis report – updated 8 February 2018), paras 799-803, 1213; *see also* exhibit P795, slide 81. Mr Platt also testified that there was no Alfa or Touch record of any attempt to be refunded or to have the money transferred to another mobile. Having noted this apparent inconsistency in remaining credit, the Trial Chamber has calculated the amount of credit left on the Blue mobiles based on the information received from Alfa and Touch (on the amount of credits, either in USD or on the number of units. Based on Alfa information, there was a slight, non-significant variation in the value of each unit depending on the value of the relevant Alfa scratch card). The Trial Chamber has found that the amount left was of approximately USD 4,702 without including the amount of credit on Blue 742 at that time, as that mobile was not deactivated by 2005, exhibit P789 (Credit balance at time of deactivation for 14 mobiles); exhibit P787 (Alfa explanation of USD value for unit of credit); exhibit P788 (Credit balance for Blue 742); exhibit P1093.7 (Annex 13 to Witness PRH705’s statement of 16 December 2015); exhibit P1194 (Statement of Witness PRH707, 25 January 2016), para. 18, p. 5; exhibit P826 (Witness PRH705’s statement of 16 November

2321. Mr Philips surmised that continued use of the Blue mobiles after 14 February 2005 could be explained because another mission had to be undertaken.⁴⁸³³ According to Mr Platt, ‘whoever was organizing and managing the Blue network’ was fairly satisfied that they ‘were still covert enough to be used as an organizational set of phones’. But, in his view, by October 2005, it was decided they could no longer be used. They were not covert enough for whatever reason.⁴⁸³⁴

2322. Mr Philips noted in his report that the Blue mobiles’ long period of operation was unusual in the context of ‘mission’ mobiles.⁴⁸³⁵

5. Anonymity

2323. Mr Platt commented that it was impossible to trace the subscriber of any of the Blue mobiles as being the true user.⁴⁸³⁶ No subscriber details were provided for four Blue mobiles—Blue 817, Blue 864, Blue 501 and Blue 967.⁴⁸³⁷ For six mobiles—Blue 233, Blue 324, Blue 322, Blue 742, Blue 940 and Blue 965—those whose names were on the subscriber forms provided evidence that they never purchased these SIM cards.⁴⁸³⁸ In three cases—Blue 585, Blue 235 and Blue 813—the subscriber could not be located,⁴⁸³⁹ yet for one of these, the person was not in Lebanon at the time of purchase.⁴⁸⁴⁰ Two mobiles were subscribed under the same name, and a counterfeit document was provided with the applications.⁴⁸⁴¹

2015), para. 313, stating that, in 2004 and 2005, it was not possible to transfer pre-paid credit from one Touch Magic line to another.

For Blue 233 and Blue 322, *compare* chapter IX ‘Attribution of mobile telephones to the Accused and Mustafa Amine Badreddine’, (B) (2) (c) ‘Blue 322’ and (d) ‘Blue 233’.

⁴⁸³⁹ Exhibit P796.1 (Network analysis report – updated 8 February 2018), paras 791, 828, 922, 1044; exhibit P467 (Subscriber documentation for Blue network mobiles), ERN SI-0001704; exhibit P797.

⁴⁸⁴⁰ The named subscriber of Blue 585. Exhibit P796.1 (Network analysis report – updated 8 February 2018), paras 791, 826, 828; exhibit P467, ERN SI-0001711; exhibit P399 (Ministry of Interior information about travel of individuals); exhibit P400 (Entry/exit records), p. 2.

⁴⁸⁴¹ Mr Platt’s report states that ‘In two cases, the identification card was determined to be counterfeit (Blue 610 and Blue 428)’. Exhibit P796.1 (Network analysis report – updated 8 February 2018), para. 791. It appears from the

2324. There were only two text messages between the Blue mobiles between 21 December 2004 and 15 February 2005 and no voice mails.⁴⁸⁴² Outside of this period, the Blue mobiles engaged in more SMS activity.⁴⁸⁴³

2325. The mobiles were all pre-paid.⁴⁸⁴⁴ All traceable transactions were made in cash.⁴⁸⁴⁵

2326. According to Mr Platt, the set-up, formation, cessation, financing and maintenance of the Blue mobiles were evidence of their organisation as a network, whereas the nature of the mobiles' subscriber details, their financing and activity demonstrated that this network was covert.⁴⁸⁴⁶

6. Submissions

2327. The Prosecution submits that the Blue network was used to coordinate preparations for the attack, including surveillance.⁴⁸⁴⁷ The Blue network's cohesion is demonstrated by the following: purchases of SIM cards was coordinated. The network was setup around the same time in the same area. Top-ups were coordinated in same areas using sequential recharge cards; the coordinated shut down of the network; coordinated patterns of call intensity with an increase in call frequency leading up to 14 February 2005 with an immediate decrease thereafter; and regular top-ups despite very limited use with unusually high credit balance at time of the network's shutdown.⁴⁸⁴⁸ The Blue mobiles' 'low forensic visibility' enabled the adoption of less rigorous operating

sections on Blue 610 and Blue 428—subscribed under the same name—that a driver's licence and a civil status extract were provided with the respective applications (the dates of purchase appearing on them are, respectively, 17 and 16 December 2003). The Lebanese Ministry of Interior and Municipalities stated that the driver's licence was counterfeit, exhibit P796.1 (Network analysis report – updated 8 February 2018), paras 848, 985; exhibit P467, ERNs 60131626-60131631, 60131819-60131823; exhibit P398 (Authenticity of driver's license number), pp 5, 19; exhibit P397 (Document from civil status directorate and letter from Directorate General for Political and Refugees Affairs), ERN 60144933.

⁴⁸⁴² Exhibit P1115 (Expert report of John Edward Philips – 15 Blue mission phones), p. 9, para. 6.10.17.19; John Edward Philips, T. 31 August 2016, pp 91-92; Gary Platt, T. 15 April 2016, p. 38. Mr Platt stated that the content of both text messages—which Blue 967 sent to Blue 235—was '9000301'. Exhibit P796.1 (Network analysis report – updated 8 February 2018), paras 926, 1029, fn. 244. Mr Platt stated that he has reviewed available SMS content from Touch. However, no document containing the content of these SMSs has been admitted into evidence.

⁴⁸⁴³ Exhibit P1115 (Expert report of John Edward Philips – 15 Blue mission phones), p. 339 (table 190).

⁴⁸⁴⁴ Exhibit P1115 (Expert report of John Edward Philips – 15 Blue mission phones), pp 2-3, 5, 7-8, paras 6.1.1.1-6.1.1.2; *see also* John Edward Philips, T. 31 August 2016, p. 83.

⁴⁸⁴⁷ Prosecution final trial brief, para. 359.

⁴⁸⁴⁸ Prosecution final trial brief, para. 361.

measures.⁴⁸⁴⁹ Nonetheless, the Blue network adopted a high degree of covertness and discipline to ensure their users' anonymity. Measures that were adopted were: pre-paid subscriptions; false or no subscriber details; virtually complete closed-user group activity; and almost no use of text messaging.⁴⁸⁵⁰

2328. It can be inferred from the fact that false or misleading documents were used that mobile subscribers provided no documents. If they had supplied them, the mobile dealers would have used them to obtain their incentives from the network providers. However, because the providers offered an incentive program to the mobile dealers, the fact that incorrect documents were sent to the providers is not an act that the Prosecution attributed to the Accused themselves.⁴⁸⁵¹

2329. According to the Sabra Defence, the practice of providing incorrect subscription forms in the purchase of lines was sweeping and broad and was not limited to any alleged criminal activity. There was no evidence that the forms linked to the Blue mobiles were provided by the buyers of the lines themselves, as they may have been kept by the relevant shops—as Witness 553 did for the Red mobiles—and then attached to the lines when the seller filled out the relevant forms.⁴⁸⁵²

7. Findings

2330. The Trial Chamber finds that at least the six 'core' Blue mobiles formed a network and that they operated covertly from some time in December 2004 until Monday 14 February 2005.

2331. The timing as to the Blue mobiles' registration and first use on the provider networks helps to show that there was an organised set up of a Blue network. The seven Alfa Blue mobiles were activated and first used in December 2003. Blue 322, Blue 324 and Blue 585 were activated in September or October 2004, and then all first used in October 2004. Five Blue mobiles registered on the provider network on various dates in December 2004 and were first used in January 2005. All the mobiles were first used in the same area in the southern suburbs of Beirut. These various sub-groups reflect to some degree an organisational hand behind them.

⁴⁸⁴⁹ Prosecution final trial brief, para. 359.

⁴⁸⁵⁰ Prosecution final trial brief, para. 360.

⁴⁸⁵¹ Prosecution submissions, T. 15 April 2016, pp 33-35.

⁴⁸⁵² Sabra Defence submissions, T. 15 April 2016, pp 35-36.

2332. The levels of inactivity and activity also corresponded among the Blue mobiles. The mobiles were effectively inactive until December 2004, with the exception of three mobiles calling each other as an open-ended triangle from 18 October until 22 December 2004. They had a heightened burst of activity with almost 80 per cent of all calls taking place between Friday 7 January and Monday 14 February 2005 with activity then dropping off precipitously. This is strong evidence that the various mobiles coordinated with each other.

2333. The most compelling evidence of their organisation is the closed user group among the Blue mobiles. Excluding service communications, the Blue mobiles communicated exclusively with each other 97 or 99 per cent of the time, according to Mr Platt's and Mr Philips's respective calculations. The Trial Chamber finds that the percentages of Blue-to-Blue contacts reflect near exclusive communications among the Blue mobiles.

2334. The recharging process for the seven Alfa Blue mobiles between January 2004 and January 2005—involving the mobiles being topped up together at the same time and location, using sequential charge cards—also weighs in favour of an organisational process. So too does the handset swapping among eight Blue mobiles and the fact that the Blue mobiles were almost always used in Beirut.

2335. Another strong indicator is the activity of the six 'core' Blue mobiles—Blue 233, Blue 324, Blue 585, Blue 610, Blue 817 and Blue 864. These six mobiles accounted for 75 per cent of all Blue mobile activity between December 2004 and February 2005, moved together as a group to activate cells in western Beirut and had exclusive communications with each other, apart from service calls.

2336. Other evidence—including sequential patterns for some Blue mobiles' IMEI and MSISDN numbers, the use of basic handset models and nearly all Blue mobile voice calls lasting less than two minutes—also weighs in favour of the Blue mobiles being part of a network.

2337. The Trial Chamber has considered that—unlike the Red and Green networks—the Blue mobiles did not cease activity around the time of the attack. Instead, they stayed in operation until October 2005. Three new Blue mobiles even joined the network after the attack, in March and April 2005. Mr Philips and Mr Platt gave evidence on the possible existence of multiple missions

or operational purposes. Nevertheless, the mobiles' failure to cease operations after the attack may weigh against a finding of a network connected to the 14 February 2005 attack.

2338. Similarly, the purchase of the Blue mobiles' handsets and SIM cards provides little support that they formed part of a network. It is true that two pairs of Blue mobiles—Blue 428 with Blue 610, and Blue 742 with Blue 940—were subscribed under the same names, at the same shop. But for the other Blue mobiles, the purchases ranged from December 2003 to January 2005, or there was no information available. This evidence therefore is insufficient to conclude that the purchase of the Blue mobiles was coordinated.

2339. In terms of covertness, no correct subscriber details were provided for any of the Blue mobiles. Cash was used to make mobile-related payments. There was virtually no text messaging and no voice mails. Thousands of dollars of credit remained when the Blue mobiles were deactivated in October and November 2005.

2340. The Trial Chamber received evidence that mobile dealers submitted incorrect subscriber information to a network provider to qualify for the provider's incentive program. However, it also received evidence of a counterfeit document being submitted for two Blue mobile subscription applications and of named subscribers in six Blue mobile applications never having purchased the SIM cards. This adds to the other evidence, such as the closed user group, demonstrating the Blue mobile users' commitment to secrecy.

2341. In conclusion, the Trial Chamber finds that the virtually exclusive communications within the mobile group, the coordinated activities of the six 'core' mobiles and the lack of subscriber details all point to the existence of a covert Blue network of 15 mobiles, or, at the very least, six 'core' mobiles. Their possible connection and common mission with the other networks is addressed below.⁴⁸⁵³

F. Yellow network

2342. The Prosecutor pleads in the amended consolidated indictment that the Yellow network consisted of 13 mobiles used between 1 September 2004 and Friday 7 January 2005. Four of these mobiles were used by members of the assassination team for preparation of the attack, including

⁴⁸⁵³ See sub-section (G) 'The networks' common mission'.

for surveillance of Mr Hariri. The call activity of these four mobiles involved contact almost exclusively with other Yellow mobiles.⁴⁸⁵⁴

2343. While the Yellow network originally had 18 mobiles, only 13⁴⁸⁵⁵ operated within the network by 18 October 2004.⁴⁸⁵⁶ Mr Platt therefore examined the following 13 mobiles: Yellow 024, Yellow 078, Yellow 120, Yellow 170, Yellow 294, Yellow 425, Yellow 457, Yellow 513, Yellow 618, Yellow 669, Yellow 763, Yellow 932 and Yellow 933. He focused particularly on Yellow 024, Yellow 294, Yellow 457 and Yellow 933, because, in his view, the users of these mobiles were involved in most of the surveillance and contacts.⁴⁸⁵⁷

2344. The activity of the Yellow mobiles as it concerns the attack on Mr Hariri is detailed in the analysis of the chronology of events leading to his assassination in chapter X ‘Chronology of network mobile activity before Mr Hariri’s assassination on Monday 14 February 2005’.

1. Setting up the network

2345. The Yellow mobiles were activated by the service providers over a period of several years, from 1999 to 2003.⁴⁸⁵⁸ Specifically, Yellow 024 was subscribed on 20 June 2002, Yellow 457 in July or August 2002 and Yellow 294 on 15 January 2003.⁴⁸⁵⁹ Mr Platt also gave evidence that

⁴⁸⁵⁴ Amended consolidated indictment, para. 15 (d); Prosecution pre-trial brief, paras 6, 29.

⁴⁸⁵⁵ Gary Platt, T. 6 April 2016, pp 27, 29; exhibit P796.1 (Network analysis report – updated 8 February 2018), paras 1100-1101. Mr Platt explained that, when he says Yellow ‘phones’ (which are referred to here as ‘mobiles’), he means to refer to ‘the SIM cards and the handsets combined’. During the period considered, in fact, none of the Yellow handsets changed. Gary Platt, T. 6 April 2016, pp 26-27, 29. The Trial Chamber notes, however, that Mr Platt testified that several Yellow mobile users swapped handsets with each other and with other mobiles, *see* para. 2348, below.

⁴⁸⁵⁶ Yellow 920, Yellow 488, Yellow 576 and Yellow 960 had ceased communications with other Yellow mobiles by 1 February 2004 and Yellow 809 by June 2004. In his report, Mr Platt stated that 13 Yellow mobiles were used between 1 September 2004 and 7 January 2005. Mr Platt’s testimony, for the reasons noted above (para. 2), focused on the period starting on 18 October 2004. Gary Platt, T. 6 April 2016, p. 29; exhibit P796.1 (Network analysis report – updated 8 February 2018), paras 1100-1101, 1111-1112.

⁴⁸⁵⁷ Gary Platt, T. 25 January 2017, p. 47, T. 26 January 2017, pp 14-15; exhibit P796.1 (Network analysis report – updated 8 February 2018), para. 1103.

⁴⁸⁵⁸ Gary Platt, T. 6 April 2016, p. 26; exhibit P796.1 (Network analysis report – updated 8 February 2018), para. 1107.

⁴⁸⁵⁹ Exhibit P796.1 (Network analysis report – updated 8 February 2018), paras 1131, 1151, 1193; exhibit P467 (Alfa active identification form for Yellow 457), ERN 60138225; exhibit P562 (Statement of Rania Keserwany); exhibit P797 (Extract from Alfa subscriber database), p. 5, ERN D0472168.

Yellow 933 was activated on 26 July 2002;⁴⁸⁶⁰ however, the cited evidence refers to a different mobile.⁴⁸⁶¹

2346. The 13 Yellow mobiles were a mixture of Alfa (seven) and Touch (six) mobiles.⁴⁸⁶²

2347. The Prosecution acknowledged that there was no evidence on the location or timing of the purchase of the Yellow mobile handsets, and that the SIM card purchases did not demonstrate an organisational process.⁴⁸⁶³

2. Equipment

2348. According to Mr Platt, several Yellow mobile users swapped handsets with each other, with Blue mobiles and with personal mobiles 170 and 165.⁴⁸⁶⁴ Also, handsets used by Yellow 294 and Yellow 933 were later used by former Yellow mobiles, namely Yellow mobiles that continued contact with each other after the Yellow network ended.⁴⁸⁶⁵ The following table shows how handsets were swapped:

⁴⁸⁶⁰ Exhibit P796.1 (Network analysis report – updated 8 February 2018), para. 1171.

⁴⁸⁶¹ Exhibit P1101 (Touch list of activation and deactivation dates), citing number ‘3871933’ and not Yellow 933’s MSISDN ‘3971933’.

⁴⁸⁶² Mr Platt explained that lines beginning with digits 31 to 35 were from the Alfa network, and those beginning with 30 and 36 to 39 were from the Touch network. The Alfa mobiles were Yellow 078, Yellow 120, Yellow 294, Yellow 513, Yellow 457, Yellow 669 and Yellow 763, and the Touch mobiles were Yellow 024, Yellow 170, Yellow 425, Yellow 618, Yellow 932 and Yellow 933. Gary Platt, T. 6 April 2016, pp 16, 30, 37; *see also* exhibit P796.1 (Network analysis report – updated 8 February 2018), paras 1131, 1171, 1193.

⁴⁸⁶³ Prosecution submissions, T. 4 April 2016, pp 7, 11.

⁴⁸⁶⁴ Exhibit P796.1 (Network analysis report – updated 8 February 2018), paras 1122-1124; exhibit P790 (IMEI information for Alfa numbers).

⁴⁸⁶⁵ Exhibit P796.1 (Network analysis report – updated 8 February 2018), paras 1128, 1143-1144, 1187. Mr Platt also cited examples of handset swapping within the network during periods of use preceding those that he focused on in his oral testimony (18 October 2004 - 7 January 2005). Exhibit P796.1 (Network analysis report – updated 8 February 2018), paras 1186, 1208.

Table with handset use from Gary Platt's Network Analysis Report – exhibit P796.1, p. 197

3. Usage

2349. The Yellow mobiles started operating as a network from 2002 onwards—when they started communicating with each other—until January 2005.⁴⁸⁶⁶ Mr Platt's testimony focused on their activity during the period 18 October 2004 to Friday 7 January 2005, while his report focused on

⁴⁸⁶⁶ Gary Platt, T. 6 April 2016, pp 26-27, 29; exhibit P796.1 (Network analysis report – updated 8 February 2018), paras 1108-1109.

a different starting date, Tuesday 1 February 2004.⁴⁸⁶⁷ He testified that this was relevant to the chronology of events and coincided with the evolution of the Blue network, with which the Yellow network had strong connectivity.⁴⁸⁶⁸

2350. Mr Platt commented that the Yellow network was ‘pretty active’, with two peaks in activity—on 13 November 2004 and around 19 to 21 December 2004. According to Mr Platt, the Yellow network calls then gradually decreased, consistent with the network ending by Friday 7 January 2005.⁴⁸⁶⁹

2351. Between 18 October 2004 and Wednesday 12 January 2005, the Yellow mobiles were involved in 2,296 calls. Of these, 63 per cent (1,436 calls) were Yellow-to-Yellow calls. Fifteen per cent (342 calls) were service calls to or from the network and messages generated from the internet—such as advertisements.⁴⁸⁷⁰ Twenty-two per cent (513 calls) were calls with third parties.⁴⁸⁷¹ Finally, four calls were described as ‘transition Yellow’, as they occurred between 7 January 2005—when the last Yellow call occurred—and 12 January 2005—when all the users of the Yellow mobiles changed.⁴⁸⁷² These calls were service calls and calls to third parties.⁴⁸⁷³

⁴⁸⁶⁷ Or 12 January 2005, as including the period between 7 January 2005—when the last Yellow call occurred—and 12 January 2005—when all the users of the Yellow mobiles changed. Gary Platt, T. 6 April 2016, pp 26, 28, 34, 36, 43; exhibit P796.1 (Network analysis report – updated 8 February 2018), paras 1099, 1109; *see also* exhibit P795, slides 6, 13, 16. Mr Platt, in a passage of his testimony, mistakenly indicated the period as between October 2004 and February 2005. From the rest of his evidence, it is clear that the period considered was up to 12 January 2005 only. Gary Platt, T. 6 April 2016, pp 37-43.

⁴⁸⁶⁸ Exhibit P796.1 (Network analysis report – updated 8 February 2018), paras 777-778, 1218-1219. Mr Platt identified 14 mobiles as being part of the network in that period, noting however that Yellow 809 was last used in June 2004 (exhibit P1251 (Call sequence table for Yellow 809)). It is not clear whether, in Mr Platt’s network report, the ‘transition’ period between 7 and 12 January 2005—also discussed in his testimony—is taken into account for calculating the monthly average percentage of Yellow contacts for January 2005. Exhibit P796.1 (Network analysis report – updated 8 February 2018), paras 1099, 1109-1110, 1113-1114.

⁴⁸⁶⁹ Gary Platt, T. 6 April 2016, p. 46; *see also* exhibit P795, slide 18.

⁴⁸⁷⁰ Gary Platt, T. 6 April 2016, pp 39-41; *see also* exhibit P795, slide 16.

⁴⁸⁷¹ Gary Platt, T. 6 April 2016, p. 42; *see also* exhibit P795, slide 16.

⁴⁸⁷² *See* sub-section (F) (4) ‘Closure of the network’, below.

⁴⁸⁷³ Gary Platt, T. 6 April 2016, p. 43; *see also* exhibit P795, slide 16.

Slide 16 of Gary Platt's Network analysis presentation - exhibit P795

2352. Mr Platt also examined the activity of four Yellow mobiles more closely. Yellow 294 was involved in 552 calls from 29 May 2004 to 7 January 2005.⁴⁸⁷⁴ Of these, 88 per cent were with other Yellow mobiles and more than 82 per cent of Yellow 457's calls, from 1 February 2004 to 10 January 2005, were with Yellow mobiles.⁴⁸⁷⁵ Over 95 and 90 per cent, respectively, of Yellow 933's and Yellow 024's calls from 1 February 2004 to 6 January 2005 were also with other Yellow mobiles.⁴⁸⁷⁶

2353. According to Mr Platt, the 'quite high' percentage of calls between Yellow mobiles shows the organisational process behind the network.⁴⁸⁷⁷

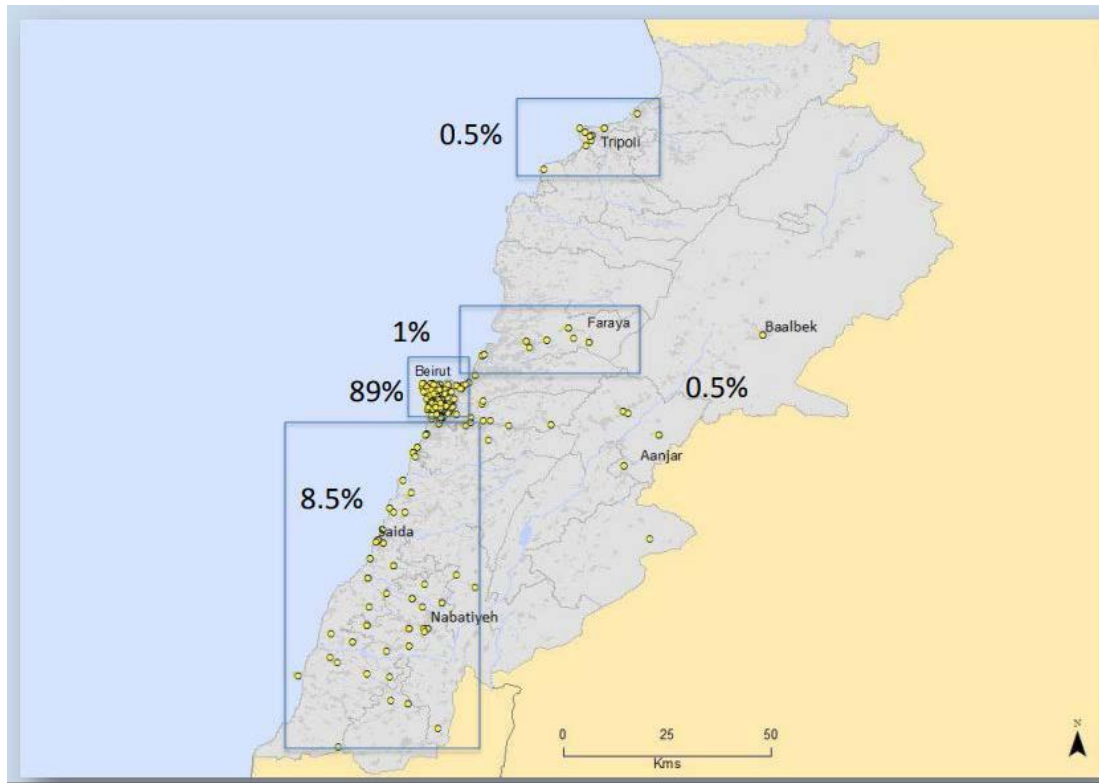

⁴⁸⁷⁴ This is the attribution period for Yellow 294. Exhibit P796.1 (Network analysis report – updated 8 February 2018), para. 1135; *see also* exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 369.

⁴⁸⁷⁵ Exhibit P796.1 (Network analysis report – updated 8 February 2018), paras 1135, 1157.

⁴⁸⁷⁶ Exhibit P796.1 (Network analysis report – updated 8 February 2018), paras 1178, 1199.

⁴⁸⁷⁷ Gary Platt, T. 6 April 2016, pp 44, 54-55.

2354. Between October 2004 and February 2005, the Yellow mobiles primarily operated in Beirut. Eighty-nine per cent of the calls activated cell towers located there.⁴⁸⁷⁸

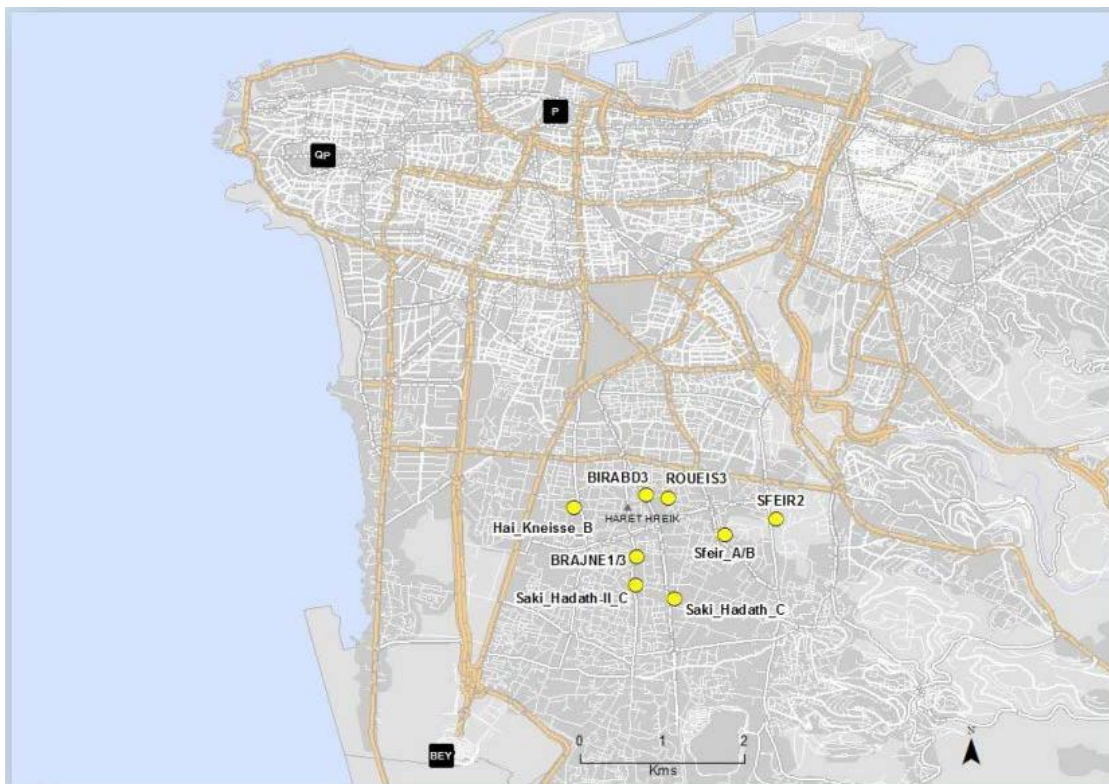

Slide 20 with Yellow mobiles' activity from Gary Platt's Network analysis presentation – exhibit P795

2355. The top ten cells—which represented about 56 per cent of all activity—were located in the southern suburbs of Beirut.⁴⁸⁷⁹ The top three cells were SFEIR2, Sfeir_B and Sfeir_A.⁴⁸⁸⁰

⁴⁸⁷⁸ Gary Platt, T. 6 April 2016, pp 49-50; *see also* exhibit P795, slides 20-21.

⁴⁸⁷⁹ Gary Platt, T. 6 April 2016, pp 51-52; *see also* exhibit P795, slide 25.

⁴⁸⁸⁰ Gary Platt, T. 6 April 2016, pp 50-51.

Slide 22 with top Yellow mobiles' cells from Gary Platt's Network analysis presentation – exhibit P795

2356. The second highest level of activity—8.5 per cent—was in South Lebanon. The majority took place on weekends. Call activity occurred also in the Tripoli (0.5 per cent), Faraya (one per cent) and Baalbek and Anjar (0.5 per cent) areas, where it was limited to a few days.⁴⁸⁸¹ The activity in Anjar took place on 28 and 29 September 2004.⁴⁸⁸²

2357. Mr Platt commented that 'the normal lifestyle' of these mobiles reflected spending time in Beirut and going to the countryside or south Lebanon in the weekends—as a lot of people in Lebanon do.⁴⁸⁸³ This pattern of lifestyle changed around late December 2004 into early January 2005, when a few Yellow mobiles—only on a certain number of days—frequented the Zouk-

⁴⁸⁸¹ Gary Platt, T. 6 April 2016, pp 49-54; *see also* exhibit P795, slide 24.

⁴⁸⁸² Gary Platt, T. 17 January 2017, pp 103-110, T. 18 January 2017, pp 6-15; exhibit P1784, pp 68-74, 88-98.

⁴⁸⁸³ Gary Platt, T. 6 April 2016, p. 55.

Mosbeh and Faraya areas. This was unusual, however, it linked with mobile activity on the other networks, and it coincided with the Yellow network coming to an end around 7 January 2005.⁴⁸⁸⁴

2358. On seven occasions between January 2004 and October 2004, the top-up cards used to add credit to various Yellow mobiles displayed a sequential order. For example, in August and September 2004, recharge cards with serial numbers ending in 070 and then 075 through 078 were used to top up five Yellow mobiles.⁴⁸⁸⁵

Scratch Card Serial Number	Date Used	Time Used	Phone	Distributor Name
33206049 <u>070</u>	08/09/2004	12:14:48	Yellow 294	OMTS
33206049 <u>075</u>	21/08/2004	08:32:16	Yellow 513	OMTS
33206049 <u>076</u>	04/09/2004	13:41:18	Yellow 669	OMTS
33206049 <u>077</u>	18/08/2004	08:34:35	Yellow 120	OMTS
33206049 <u>078</u>	10/08/2004	12:00:16	Yellow 669	OMTS

Slide 11 with recharge card numbers from Gary Platt's Network analysis presentation – exhibit P795

2359. According to Mr Platt, this showed that the mobiles had an 'organizational process behind them in their financing'.⁴⁸⁸⁶ Also, Yellow mobiles on some occasions used top-up cards that were in sequential orders with those used by Blue mobiles.⁴⁸⁸⁷ The Prosecution was unable to obtain details of the shops where the recharging cards were purchased.⁴⁸⁸⁸

2360. According to Mr Platt, in addition to contacting each other, users of the Yellow mobiles also shared other contacts.⁴⁸⁸⁹ Every Yellow mobile was in contact with Yellow 294.⁴⁸⁹⁰ Twelve

⁴⁸⁸⁴ Gary Platt, T. 6 April 2016, pp 55-56.

of them were also in contact with Protel,⁴⁸⁹¹ a Beirut communications company,⁴⁸⁹² and eight with the Al-Rassoul Al-Aazam or ‘Great Prophet’ Hospital.⁴⁸⁹³ These contacts only were in one direction: the Yellow mobiles called them and not vice versa.⁴⁸⁹⁴ Some Blue mobiles also had contacts with Protel and the Great Prophet Hospital.⁴⁸⁹⁵

2361. Two Yellow mobiles—Yellow 457 and Yellow 120—were also in contact with Blue 428 in May 2004, before the Blue network was operative.⁴⁸⁹⁶ Yellow 425 and Yellow 809 were in contact with Purple 018,⁴⁸⁹⁷ and Yellow 425 was also in contact with personal mobile 165.⁴⁸⁹⁸

4. Closure of the network

2362. The Yellow network ceased operations in a staggered period from 30 December 2004 to Wednesday 12 January 2005.⁴⁸⁹⁹ The last Yellow-to-Yellow call occurred on Friday 7 January 2005.⁴⁹⁰⁰ Some Yellow mobiles continued to be used after that day, but primarily for service or third party calls.⁴⁹⁰¹

2363. According to Mr Platt, after 7 January 2005, ‘handset and contact patterns changed significantly’.⁴⁹⁰² Instead of not being used—like mobiles in other networks—many Yellow

mobiles appeared to be redistributed among new users.⁴⁹⁰³ By 12 January 2005, the 13 users of the Yellow mobiles had changed.⁴⁹⁰⁴ Three of the Yellow mobiles continued contact with each other after the shutdown of the Yellow network: Yellow 933, Yellow 078 and Yellow 170—the latter becoming personal mobile 170 attributed to Mr Ayyash.⁴⁹⁰⁵

5. Anonymity

2364. Mr Platt only addressed the subscriber history of four Yellow mobiles. For Yellow 024 and Yellow 933, no subscriber details were supplied.⁴⁹⁰⁶ Where they were supplied (Yellow 294 and Yellow 457), the Prosecution was unable to locate and interview the relevant individuals.⁴⁹⁰⁷ According to Mr Platt, ‘the lack of subscriber information’⁴⁹⁰⁸ and ‘the fact that we are unable to locate or confirm the identity of the subscribers’ is ‘characteristic of an attempt to be a covert network’.⁴⁹⁰⁹

2365. The Trial Chamber also received evidence that Witness PRH107, whose identification card was submitted to Alfa for the subscription of Yellow 763,⁴⁹¹⁰ never owned a mobile and had no idea why Alfa possessed their identification as a subscriber for that line.⁴⁹¹¹

⁴⁹⁰³ Gary Platt, T. 6 April 2016, p. 35; exhibit P796.1 (Network analysis report – updated 8 February 2018), paras 1166, 1189, 1210.

⁴⁹⁰⁸ Gary Platt, T. 6 April 2016, p. 44.

⁴⁹⁰⁹ Gary Platt, T. 6 April 2016, p. 54.

⁴⁹¹⁰ Exhibit P797, p. 6, ERN D0472169.

⁴⁹¹¹ The witness stated that ‘the only place’ where he used a copy of his identification was ‘social security’. Exhibit P564 (Witness PRH107’s statement), paras 6-11, ERN 60302658. The Trial Chamber also admitted into evidence the subscriber notes for Yellow 170 and Yellow 669, exhibits P1471 and P886.

2366. Only two text messages were sent among the Yellow mobiles.⁴⁹¹² Mr Platt testified that this showed ‘some form of discipline of usage’.⁴⁹¹³ Also, all 13 Yellow mobiles used pre-paid billing.⁴⁹¹⁴

2367. Mr Platt classified the Yellow network as ‘semi covert’, meaning that there were ‘elements of covertness’ but not the same high level of covertness as displayed by, for instance, the Green network.⁴⁹¹⁵ A semi-covert network like the Yellow mobiles would be chosen for surveillance tasks because there was an operational need at the time.⁴⁹¹⁶ He testified that, on 21 December 2004, Yellow mobiles were used probably because it was decided that the risk of being detected was minimal, given that it was almost two months before the attack.⁴⁹¹⁷

6. Submissions

2368. The Prosecution submits that, while not characterised as a ‘mission phone’ network, the behaviour of the Yellow network conveys unusual elements of co-ordination, cohesion and focus indicative of an organised entity. These were the co-ordinated addition of Alfa credit using sequential or near sequential recharge cards over a ten-month period until October 2004; the network was shut down in a coordinated manner in the first week of January 2005. There was a cohesive pattern of call locations, including a high concentration of network calls in the same specific area of Dahyieh until the network’s disbandment on 7 January 2005, thereby mirroring the concentration of Blue network calls. There was a high concentration of calls amongst the four members of the ‘Principal Six’ using the Yellow network: Mr Ayyash, S6, S8 and S9. The focus of call activity in the Anjar area and then west Beirut between the Yellow mobiles of Mr Ayyash, S8 and S9 on 28 and 29 September 2004 was unusual. Finally there was an unusual focus of

⁴⁹¹² Yellow 294 received two text messages from Yellow 513 on 12 November 2004. The Prosecution does not have the content of these text messages. Yellow mobiles also received text messages from service numbers. Gary Platt, T. 6 April 2016, p. 37; exhibit P796.1 (Network analysis report – updated 8 February 2018), paras 1134, 1156, 1176, 1198; exhibit P1240 (Call sequence table for Yellow 294), p. 47; exhibit P1249 (Call sequence table for Yellow 513), p. 65.

⁴⁹¹³ Gary Platt, T. 6 April 2016, p. 37.

⁴⁹¹⁴ Gary Platt, T. 6 April 2016, pp 16, 37, T. 14 April 2016, p. 95; *see also* exhibit P796.1 (Network analysis report – updated 8 February 2018), paras 1131, 1171, 1193.

⁴⁹¹⁵ Gary Platt, T. 6 April 2016, pp 38, 55.

⁴⁹¹⁶ Gary Platt, T. 25 January 2017, pp 66-67.

⁴⁹¹⁷ Gary Platt, T. 25 January 2017, p. 67. Mr Platt described the call activity that took place on 21 December 2004. Exhibit P1793 (Chronology PowerPoint presentation – 20 December 2004 to 31 December 2004), slides 9-75.

network call activity in the Zouk-Mosbeh and Faraya area over the last week of December 2004.⁴⁹¹⁸

2369. The Prosecution argues that, given the Yellow network's limited role and the fact that it shut down in early January 2005, any forensic association with the attack was very remote, and consequently the need for high coactiveness was correspondingly low.⁴⁹¹⁹ Nevertheless, the Yellow network retained significant elements of coactiveness, albeit not to the same level as the three other networks and was therefore classified as 'semi-covert'. The following features ensured that users remained unidentifiable. First, the mobiles retained pre-paid subscriptions whose subscribers were either unrecorded, false or untraceable. Second, approximately 80 per cent of the calls were made within the network,⁴⁹²⁰ and the remainder did not risk identifying the users. Third, only two text messages were sent out of 1,437 communications. Fourth, the users left no identifiable financial trail.⁴⁹²¹

2370. The Prosecution also submitted that the shutdown of the Yellow network significantly coincided with the first important period of the false claim preparation: the so-called COLA phase, of activations of Mr Oneissi's and Mr Sabra's attributed Purple mobiles near the Arab University mosque in Beirut, which ran from Wednesday 29 December 2004 to Friday 7 January 2005. According to the Prosecution, the shutdown occurred because operational security was tightened in anticipation of preparation for the assassination.⁴⁹²²

2371. No Defence counsel specifically addressed the Prosecution's arguments on the Yellow network's features nor contested that the Yellow mobiles formed a covert network.

⁴⁹¹⁸ Prosecution final trial brief, para. 365.

⁴⁹¹⁹ Prosecution final trial brief, para. 363.

⁴⁹²⁰ The Prosecution relies on the percentages calculated in Mr Platt's report for the period 1 February 2004 to 12 January 2005. Prosecution final trial brief, para. 364, referring to exhibit P796.1 (Network analysis report – updated 8 February 2018), paras 1110, 1113, which state that the average rate of Yellow-to-Yellow contact ranged from 77.5 to 86.38 per cent per month, excluding service numbers. The Prosecution final trial brief refers to the Network Analysis Presentation (exhibit P795, slide 16), where a shorter period between 18 October and 12 January 2005 is analysed and the contacts with service numbers are also considered. The percentage identified there for Yellow-to-Yellow calls is 63 (the percentage of calls with service numbers and internet is 15 per cent).

⁴⁹²¹ Prosecution final trial brief, para. 364.

⁴⁹²² Prosecution final trial brief, para. 611.

7. Findings

2372. The Trial Chamber finds that at least four Yellow mobiles—Yellow 024, Yellow 294, Yellow 457 and Yellow 933—operated as a network and that they did so in a covert manner from October 2004 until Friday 7 January 2005.

2373. During the period considered by Mr Platt—18 October 2004 to Wednesday 12 January 2005—Yellow-to-Yellow mobile contact represented 63 per cent of the communications. This is a relatively high percentage that shows an organisational process behind the mobiles. The call activity of four Yellow mobiles in particular—Yellow 294, Yellow 457, Yellow 933 and Yellow 024—involved nearly exclusive contact with other Yellow mobiles, further demonstrating their coordination.

2374. The Yellow mobiles had similar patterns in their areas of use, primarily in Beirut and then in other locations for just a few days, like Tripoli and Faraya. Even in these more distant locations, a few Yellow mobiles activated cells around the same time, showing a level of coordination. Further evidence of their coordination is the use of top-up cards in sequential order for Yellow Alfa mobiles on several occasions between January 2004 and October 2004. However, the Trial Chamber did not receive evidence of sequential topping up during the period Mr Platt focused on, namely 18 October 2004 to 7 January 2005.

2375. The Trial Chamber has considered that—unlike the mobiles in the three other networks⁴⁹²³—the Yellow mobiles may have changed users. Further, three mobiles continued contact with each other after the end of the Yellow network on 12 January 2005. The shutdown of the network is therefore of limited significance in establishing whether the mobiles were part of a network.

2376. The Trial Chamber has also taken into consideration that the Yellow network did not display many of the features of the other networks.⁴⁹²⁴ For example, the Yellow mobiles were not activated over a short period but rather over several years, from 1999 to 2003. Similarly, there is no evidence that the handsets or SIM cards were purchased in a coordinated manner. It is not clear

⁴⁹²³ Green, Red and Blue.

⁴⁹²⁴ See sub-sections (C) ‘Green network’, (D) ‘Red network’ and (E) ‘Blue network’.

whether the Yellow mobiles shared the same make and model of handsets or whether they used a basic model.

2377. Mr Platt classified the Yellow network as ‘semi covert’, because it was ‘on the lower end of the scale’ of covertness. However, the Trial Chamber considers that a network either is or is not covert, based on Mr Philips’s and Mr Platt’s evidence as to the general characteristics of a mobile network. A label of ‘semi-covert’ therefore does not assist the Trial Chamber in its analysis of the Yellow mobiles.

2378. Instead, the Trial Chamber has focused on the relevant covert factors of the Yellow mobiles. They used pre-paid subscriptions, only two text messages were sent by Yellow mobiles and no actual subscribers were identified, at least for the four Yellow mobiles highlighted by Mr Platt.

2379. The Prosecution also argued that the Yellow mobile users left no identifiable financial trail. However, the evidence referred to only shows that the Prosecution could not obtain details of the shops that sold the Yellow mobile recharging cards. So this factor does not weigh in favour of the network’s covertness.

2380. As with the organisational factors, the Trial Chamber notes the absence of several covert factors that were present for the other networks.⁴⁹²⁵ The Trial Chamber received no evidence that the Yellow mobiles’ area of main use was geographically remote from where they were purchased and topped up. It is unclear whether the Yellow mobiles used voice mails and call forwarding.

2381. The Yellow network therefore presents the weakest case as a covert network among the four networks, as the Prosecution acknowledges. Nevertheless, given the large percentage of Yellow-to-Yellow calls, the similarity in the locations where they were used, the avoidance of text messages and the lack of subscriber details for some mobiles, the Trial Chamber concludes that at least the four ‘core’ Yellow mobiles operated as a form of covert network between October 2004 and Friday 7 January 2005. Their possible connection and common mission with the other networks is addressed immediately below.⁴⁹²⁶

⁴⁹²⁵ See sub-sections (C) ‘Green network’, (D) ‘Red network’ and (E) ‘Blue network’.

⁴⁹²⁶ See sub-section (G) ‘The networks’ common mission’.

G. The networks' common mission

2382. The Prosecutor pleaded in the amended consolidated indictment that the mobile groups were interconnected. The assassination team used six Blue and Red mobiles, including on the day of the attack.⁴⁹²⁷ Further, the networks were all operated by the same entity.⁴⁹²⁸

2383. Mr Philips examined only the Green, Red and Blue networks and analysed whether they had a common mission.⁴⁹²⁹ Mr Platt analysed all four networks to see if they were interconnected.⁴⁹³⁰

1. Common characteristics among the networks

2384. Mr Philips and Mr Platt pointed out several commonalities between the networks to demonstrate that they were interconnected and engaged in a common mission.

2385. According to Mr Philips, the first is that the Green, Red and Blue networks shared common periods of use.⁴⁹³¹ Between 18 October and 10 November 2004, the Blue and Green network mobiles made a small number of calls followed by a period of inactivity for both networks which lasted until 20 December 2004.⁴⁹³² From Tuesday 21 December 2004 until the beginning of January 2005 the Blue and Green mobiles were again active.⁴⁹³³ From Monday 3 January to Monday 10 January 2005, the calling rate among the Blue mobiles dropped and this was accompanied by an absence of Green mobile calls.⁴⁹³⁴

2386. During the following period—until Monday 17 January 2005—Green mobile activity resumed, Blue 233 and Blue 501 were first used, and the Red mobiles were first used in Beirut.⁴⁹³⁵ Between Tuesday 18 and Wednesday 26 January 2005, Blue mobile activity increased, the Green mobiles continued their low level of activity and the Red mobiles were active on a single day.⁴⁹³⁶

⁴⁹²⁷ Amended consolidated indictment, paras 14, 15 (c), 19, 39.

⁴⁹³⁵ John Edward Philips, T. 1 September 2016, p. 35; exhibit P1118, slide 52.

⁴⁹³⁶ John Edward Philips, T. 1 September 2016, pp 36-37; exhibit P1118, slide 52.

Finally, from Thursday 27 January until Monday 14 February 2005, the use of Red, Green and Blue mobiles peaked.⁴⁹³⁷ Indeed, the peaks of the Green mobiles in the first part of February 2005 correlate with the top five peaks of the Red mobiles' activity. The calling rate of the Green mobiles doubled as an average over this period, as shown in the following table:⁴⁹³⁸

Slide 52 with Green, Red and Blue networks' activity from John Edward Philips's PowerPoint presentation – exhibit P1118

2387. Second, the days of use between the Green, Blue and Red networks largely overlapped. Between Friday 14 January and Monday 14 February 2005, the Red mobiles were active on 11 days, the Green mobiles on 21 days and the Blue mobiles on all 31 days.⁴⁹³⁹ The Green mobiles were in use on ten of the 11 days when the Red mobiles were used.⁴⁹⁴⁰

⁴⁹³⁷ Exhibit P1117 (Expert report of John Edward Philips – Common Mission Phones), paras 5.3.1.1-5.3.1.8, 5.3.5.2; John Edward Philips, T. 1 September 2016, p. 24; exhibit P1118, slides 50-52.

⁴⁹³⁹ Exhibit P1117 (Expert report of John Edward Philips – Common Mission Phones), paras 5.4.1.1, 5.2.7.1, 5.2.18.5, 5.4.8.4, 5.4.8.16-5.4.8.17; exhibit P1118, slide 49.

⁴⁹⁴⁰ Exhibit P1117 (Expert report of John Edward Philips – Common Mission Phones), para. 5.3.1.8; John Edward Philips, T. 1 September 2016, p. 8; exhibit P1118, slide 49.

2388. Also, all calls between Green 300 and Green 023 on days when Red mobiles were active took place during the Red mobiles' operational periods.⁴⁹⁴¹ Eighty per cent of these Green calls occurred during periods of high call intensity between Red mobiles.⁴⁹⁴² From Friday 28 January until Monday 14 February 2005, the only day of Red mobile activity that was not accompanied by Green mobile activity was on Thursday 10 February 2005, when Red 741 was also inactive.⁴⁹⁴³ This overlap is shown in the following table:

Slide 137 of John Edward Philips's PowerPoint presentation – exhibit P1118

⁴⁹⁴¹ Exhibit P1117 (Expert report of John Edward Philips – Common Mission Phones), paras 6.9.2.11-6.9.2.12; John Edward Philips, T. 6 September 2016, pp 24-26; exhibit P1118, slides 136-137.

⁴⁹⁴² Exhibit P1117 (Expert report of John Edward Philips – Common Mission Phones), paras 6.9.2.11-6.9.2.12; John Edward Philips, T. 6 September 2016, pp 25-26; exhibit P1118, slide 137.

⁴⁹⁴³ John Edward Philips, T. 1 September 2016, pp 9, 11, T. 6 September 2016, p. 26; exhibit P1118, slide 49.

2389. By contrast, when the Red mobiles were in use, the six core Blue mobiles were involved in 187 calls, usually at the start and end of the Red mobile call periods. The six core Blue mobiles were rarely used during the Red mobiles' times of use.⁴⁹⁴⁴

2390. Third, Mr Philips gave evidence that, when the Green, Red and Blue networks were in central and west Beirut between Friday 14 January and Monday 14 February 2005, they frequently activated common cells.⁴⁹⁴⁵ The Alfa cells in central Beirut most frequently used by the six core Blue mobiles were also frequently used by the Red mobiles.⁴⁹⁴⁶ The Blue and Green mobiles' most commonly activated cells between 13 October 2004 and Monday 14 February 2005 were in the same area in Dahyieh, in the southern suburbs of Beirut.⁴⁹⁴⁷ The cells in central Beirut most commonly used by Green 023 and Green 300 during this period were among the cells in central Beirut most frequently used by the Red mobiles and the six core Blue mobiles.⁴⁹⁴⁸ This is shown on the map below prepared by Mr Philips:

Map 23A with top cells from 14 January to 14 February 2005 for Green, Red and Blue networks from Expert report of John Edward Philips—Common Mission Phones – exhibit P1117, p. 47

2391. Mr Platt agreed that, over the period of their existence, the networks shared common geographical areas of use.⁴⁹⁴⁹ The Blue and Green mobiles were initialised in the same general area between Hadath and Haret Hreik in southern Beirut.⁴⁹⁵⁰ The Yellow and Blue mobiles were active in Tripoli on five days when Red SIM cards and handsets were purchased, repaired, initialised or recharged.⁴⁹⁵¹ All four networks were active in the Zouk-Mosbeh and Faraya areas between December 2004 and February 2005 with co-location between some network mobiles on some days.⁴⁹⁵²

2392. Further, the top three cells activated by the Blue mobiles were the same, and in the same order, as those of the Yellow mobiles, namely SFEIR2, Sfeir_B and Sfeir_A.⁴⁹⁵³ One per cent of Blue mobile activity occurred in the area near Jounieh and Tripoli over a few days between 28

December 2004 and 2 February 2005;⁴⁹⁵⁴ this percentage and period was similar to the Yellow mobiles' activations in the same area.⁴⁹⁵⁵

2393. The fourth commonality is that the Green, Red and Blue networks were linked through common users. In Mr Philips's view, each user of the six core Blue mobiles also used one of the six Red mobiles,⁴⁹⁵⁶ and the user of Blue 233 and Red 741 also used Green 300.⁴⁹⁵⁷

2394. Mr Philips examined the call data records of the six core Red and Blue mobiles between Tuesday 4 January 2005 and Monday 14 February 2005 to determine whether each pair had a single user. This evidence is summarised below, with the exception of the single user analysis for Red 741 and Blue 233, which is addressed in analysing the attribution of network mobiles to Mr Ayyash.⁴⁹⁵⁸ Mr Philips's methodology in relation to single user analysis is analysed below chapter IX 'Attribution of mobile telephones to the Accused and Mustafa Amine Badreddine', (A) 'Single user analysis'.

2395. Mr Philips testified that he would expect few instances of co-location between the Blue and Red network mobiles because they were used at different times and in different locations.⁴⁹⁵⁹ In addition to co-location, Mr Philips also took into account the movement of the network mobiles.⁴⁹⁶⁰

2396. Mr Philips found:

- For Red 636 and Blue 585 (attributed by the Prosecution to Subject 5): 11 pairs of calls, three of which were activating cells with overlapping coverage, and seven of which were activating cells that were at a distance that, in Mr Philips's opinion, could be travelled in the time between the calls and one instance of dislocation;⁴⁹⁶¹
