- For Red 678 and Blue 610 (attributed by the Prosecution to Subject 6): 44 pairs of calls, 18 of which activated the same cell, and 25 activated cells that were at a distance that, in Mr Philips's opinion, could be travelled in the time between the calls and one instance of dislocation;⁴⁹⁶²
- For Red 946 and Blue 324 (attributed by the Prosecution to Subject 7): there were 13 pairs of calls. One pair activated cells with overlapping coverage. Nine activated cells that were at a distance that, in Mr Philips's opinion, could be travelled in the time between the calls. One activated cells that may preclude co-location and there were two instances of dislocation;⁴⁹⁶³
- For Red 893 and Blue 817 (attributed by the Prosecution to Subject 8): there were 40 pairs of calls. Fourteen activated the same cell. Twenty-five activated cells at a distance that, Mr Philips concluded, could be travelled in the time between the calls, and there was one instance of dislocation;⁴⁹⁶⁴ and
- For Red 652 and Blue 864 (attributed by the Prosecution to Subject 9): there were 21 pairs of calls. Five of these connected to the same cell. Sixteen connected to cells within a distance that, Mr Philips thought, could be travelled in the time between these calls.⁴⁹⁶⁵

2397. Mr Philips identified a number of call pairs that would preclude the respective Red and Blue mobiles from being co-located. All but one involved Red 636, Red 946 and Red 678

⁴⁹⁶² Of the 44 pairs, 20 pairs of calls were within ten minutes of each other. Exhibit P1112 (Expert report of John Edward Philips – Single user analysis, Suspects 4, 5, 6, 7 and 8), paras 7.2.39.1-7.2.63.2; exhibit P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review), paras 6.4.29.1-6.4.30.4, 6.4.51.1-6.4.51.9, 6.4.58.1-6.4.58.5, 6.4.69.1-6.4.71.4; *see also* exhibit P1117 (Expert report of John Edward Philips – Common Mission Phones), paras 6.6.6.6, 6.6.6.8, 6.6.10.1, where Mr Philips counted sequences of calls instead of pairs.

⁴⁹⁶³ Of the 13 calls, five call pairs were within ten minutes of each other. Exhibit P1112 (Expert report of John Edward Philips – Single user analysis, Suspects 4, 5, 6, 7 and 8), paras 7.3.1.1-7.3.11.1. In relation to the instance which may preclude co-location, on 14 January 2005, at 12:25:19, Blue 324 activated Sfeir_B. At 12:27:53, Red 946 activated EE3, which was approximately 5.75 kilometres from Sfeir_B. Blue 324 again activated Sfeir_B at 12:33:23. Exhibit P1112 (Expert report of John Edward Philips – Single user analysis, Suspects 4, 5, 6, 7 and 8), para. 7.3.2.1.

⁴⁹⁶⁴ Of the 40, 22 call pairs were within ten minutes of each other. Exhibit P1112 (Expert report of John Edward Philips – Single user analysis, Suspects 4, 5, 6, 7 and 8), paras 7.4.5.1-7.4.26.2; exhibit P1113, paras 6.4.91.1-6.4.92.5, 6.4.103.1-6.4.104.6; *see also* exhibit P1117 (Expert report of John Edward Philips – Common Mission Phones), paras 6.6.8.6 and 6.6.8.8, where Mr Philips counted sequences of calls instead of pairs.

⁴⁹⁶⁵ Of the 21, seven call pairs were within ten minutes of each other. Exhibit P1112 (Expert report of John Edward Philips – Single user analysis, Suspects 4, 5, 6, 7 and 8), paras 7.5.5.1-7.5.14.2; exhibit P1113, paras 6.4.116.1-6.4.116.7, 6.4.119.1-6.4.120.9; exhibit P1117 (Expert report of John Edward Philips – Common Mission Phones), para. 6.6.9.7.

activating cells in the Tripoli area either on Tuesday 4 January 2005 or on Wednesday 2 February 2005.⁴⁹⁶⁶ Mr Philips noted that these activations occurred either when the Red mobiles were still being set up in the Tripoli area or when they were topped up there and that these ‘dislocations’ were likely deliberate.⁴⁹⁶⁷ One ‘dislocation’—involving Red 893 and Blue 817—occurred in Beirut, on Monday 31 January 2005.⁴⁹⁶⁸ Mr Philips testified that a possible explanation for the ‘dislocation’ is that another user inadvertently took Red 893 from its usual user.⁴⁹⁶⁹

2398. There were no calls between any of the Red and Blue network mobiles, but there was one overlapping call between Red 893 and Blue 817, on 31 January 2005.⁴⁹⁷⁰

2399. The fifth identified common feature is that the Green, Red and Blue networks either ceased operating or significantly altered their calling patterns around the same time. Green 023 and Green 300 made their final call on Monday 14 February 2005 at 11:58.⁴⁹⁷¹ The Red mobiles ceased operating on that same day between 12:50 and 12:54.⁴⁹⁷² As for the six core Blue mobiles, after

⁴⁹⁶⁶ On 4 January 2005, at 14:00, Blue 585 activated Sfeir_B in Beirut’s south. At 14:20, Red 636 activated TOURBO1, which was approximately 77 kilometres from Sfeir_B. Exhibit P1112 (Expert report of John Edward Philips – Single user analysis, Suspects 4, 5, 6, 7 and 8), para. 7.1.1.1. On 4 January 2005, at 14:00:11, Blue 324 activated Raouche_B. At 14:19:02, Red 946 activated TOURBO1, which was approximately 75 kilometres from Raouche_B. At 14:43:59, Red 946 activated MINIEH2. At 15:03:08, Blue 324 activated Sfeir_B, which was approximately 80 kilometres from MINIEH2. Exhibit P1112 (Expert report of John Edward Philips – Single user analysis, Suspects 4, 5, 6, 7 and 8), paras 7.3.1.1-7.3.1.2. On 2 February 2005, at 19:08, Red 678 activated TOURBO3. At 19:35, Blue 610 activated BRAJNE1, which was approximately 73 kilometres from TOURBO3. Exhibit P1112 (Expert report of John Edward Philips – Single user analysis, Suspects 4, 5, 6, 7 and 8), para. 7.2.49.1; exhibit P1113, paras 6.4.60.1-6.4.60.4.

⁴⁹⁶⁷ Exhibit P1117 (Expert report of John Edward Philips – Common Mission Phones), paras 6.6.5.5, 6.6.5.8, 6.6.6.6, 6.6.6.9, 6.6.7.5, 6.6.10.6-6.6.10.8.

⁴⁹⁶⁸ At 09:54:54, Red 893 activated RAOUCH1 and ended the call 92 seconds later on KRAYTM1. At 09:56:14, Blue 817 activated CBOURJ1, which was about 5.25 kilometres from RAOUCH1 and about the same distance from KRAYTM1. Exhibit P1112 (Expert report of John Edward Philips – Single user analysis, Suspects 4, 5, 6, 7 and 8), para. 7.4.6.1; exhibit P1113, paras 6.4.90.1-6.4.90.5; exhibit P1118, slide 73; John Edward Philips, T. 1 September 2016, pp 96-97.

⁴⁹⁶⁹ Mr Philips thought that when S6, using Red 678, called Red 893 at 09:54, S6 realised that Red 893 was in the wrong hands and, using Blue 610, called S8 on its Blue mobile—Blue 817—at 10:10 to alert S8 of this. Blue 610 called Blue 817 again at 10:52, 11:08 and 11:10. At 11:07 and 11:16, Red 893 activated BIRABD1, the same cell that Blue 817 activated at 11:10. This led Mr Philips to conclude that Red 893 and Blue 817 had been ‘reunited’. John Edward Philips, T. 1 September 2016, pp 100-102; exhibit P1118, slide 73.

⁴⁹⁷⁰ The call overlapped by 12 seconds. Mr Philips listed one further overlapping call, which occurred on 12 February 2005. Red 893 had an incoming call that ended at 10:08:20. Blue 817 had an incoming call at 10:08:37. Mr Philips stated that this call overlapped by 17 seconds. The Trial Chamber has reviewed the two calls and determined that there was no overlap. Exhibit P1112 (Expert report of John Edward Philips – Single user analysis, Suspects 4, 5, 6, 7 and 8), paras 7.5.14.9-7.5.14.11, 7.1.12.9-7.1.12.11, 7.2.63.9-7.2.63.11, 7.3.12.9-7.3.12.11, 7.4.26.9, 7.4.26.11.

⁴⁹⁷¹ Exhibit P1117 (Expert report of John Edward Philips – Common Mission Phones), paras 5.3.5.7, 6.10.2.1.

⁴⁹⁷² Exhibit P1117 (Expert report of John Edward Philips – Common Mission Phones), paras 5.3.5.8, 6.10.2.1.

14 February 2005, they were involved in significantly fewer calls and activated fewer cells in central and west Beirut.⁴⁹⁷³

2400. Mr Platt also testified about the networks' coordinated and complementary operating periods. The Yellow network ceased around the same time when the Blue network expanded to 15 mobiles.⁴⁹⁷⁴

2401. According to Mr Platt, the Green, Blue, Red and Yellow networks also shared common features demonstrating that they were connected.⁴⁹⁷⁵ All four networks had an element of covertness 'in varying degrees'. The Green and Red networks were at the higher level, the Yellow one 'at the bottom' and the Blue 'slightly below' the Green and Red networks.⁴⁹⁷⁶ The networks displayed similar covert traits, including false subscriber details, limited use of text messages, limited number of third-party calls and cash payments.⁴⁹⁷⁷

2402. Mr Platt also testified that all four networks were well-financed with recharging in bulk and substantial credit remaining when the mobiles were shut down.⁴⁹⁷⁸ Yellow mobiles on some occasions used top-up cards with numbers that were close in sequence to those used by Blue mobiles.⁴⁹⁷⁹ Also, in some instances, Blue and Yellow mobiles were recharged close in time and location.⁴⁹⁸⁰ Handsets were swapped between Yellow and Blue mobile users,⁴⁹⁸¹ Blue and Yellow mobiles shared some common contacts, like Protel and the Great Prophet Hospital,⁴⁹⁸² and there were two calls between Yellow and Blue mobiles.⁴⁹⁸³

⁴⁹⁷³ Exhibit P1117 (Expert report of John Edward Philips – Common Mission Phones), paras 5.3.4.3, 5.3.5.9, 5.3.4.4-5.3.4.11, 6.10.2.3.

2. The roles of the various networks

2403. Mr Philips concluded that the purpose of the Red mobiles was to insulate the mission from their users' area of residence and therefore the identity of the users.⁴⁹⁸⁴ Given their high forensic profile, the discovery of the Red mobiles by investigators was inevitable. They were used in the area of the crime scene at the time immediately preceding the crime and ceased use after the crime.⁴⁹⁸⁵ Hence, the users of the Red mobiles took extreme care to limit their traceability, which meant that the anonymity of the users of the Red mobiles was protected the most.⁴⁹⁸⁶

2404. For example, the Red mobiles were expected to have the same base area as the corresponding group of six core Blue mobiles, given the common users between the two groups.⁴⁹⁸⁷ Yet the Red mobiles rarely connected to cells in the southern suburbs of Beirut, and never in the areas of main concentration of call activity for the Blue and Green mobiles.⁴⁹⁸⁸ The Red mobiles were also never used in south Lebanon.⁴⁹⁸⁹ According to Mr Philips, the users of the Red mobiles made a deliberate effort to register and top-up the Red mobiles far from the main area of use and base area of the Blue and Green mobiles.⁴⁹⁹⁰ No such attempts to administer the mobiles away from their base area were made for the Blue or Green mobiles.⁴⁹⁹¹ The Red mobiles also left a lesser 'footprint' as they were restricted in times and locations of use; this indicates that they were used for a very specific purpose.⁴⁹⁹²

2405. The limitations on the use of the Red mobiles created a need for the Blue mobiles, which could be used more generally.⁴⁹⁹³ The characteristics of the Blue mobiles suggest that they were at the bottom of the hierarchy.⁴⁹⁹⁴ They provided general support, particularly during the mission

set-up phase between 18 and 26 January 2005,⁴⁹⁹⁵ and their use may have extended to more than one mission.⁴⁹⁹⁶

2406. Also, the six core Blue mobiles, which had fewer anonymity safeguards, were used for a general purpose because the Red mobiles could only be used at limited times and in limited areas, while the Blue mobiles were used for calls to Dahyieh, even during times when the Red mobiles were operational.⁴⁹⁹⁷ Further, the Blue mobiles were not associated with the crime and so there was no need to safeguard their base area.⁴⁹⁹⁸ Thus, the Blue mobiles were also used to conceal the mission base area from association with the mission.⁴⁹⁹⁹

2407. According to Mr Philips, the Green mobiles were ‘the mission command group’, in particular, Green 023 and Green 300.⁵⁰⁰⁰ These two members of the Green group were part of the mission command with a single link, that is, a ‘hotline’ or a dedicated communications link between them.⁵⁰⁰¹

2408. The Green mobiles also provided a communication path between ‘mission command’ and ‘field command’ which was available at all times and locations.⁵⁰⁰² The ‘command element’ used this communication sparingly to leave only a light ‘footprint’ and avoid association with the Red mobiles.⁵⁰⁰³ A ‘single chain of command’ via an ‘exclusive channel’ led to the user of Green 300—the ‘Mission Field Commander’—who also, in Mr Philips’s view, used Blue 233 and Red 741.⁵⁰⁰⁴ In this way, Green 300 formed a ‘common thread’ linking the Blue and Red mobiles with Green 023.⁵⁰⁰⁵ This mobile is attributed to Mr Ayyash.

⁵⁰⁰⁵ John Edward Philips, T. 2 September 2016, pp 46-47, 70, T. 6 September 2016, p. 56.

2409. Green 023⁵⁰⁰⁶ and Green 300 also initiated ‘hierarchical call flows’, namely Green mobile activity that was followed by Blue or Red mobile activity,⁵⁰⁰⁷ during exceptional Blue mobile activity in the mission set-up phase and later during Red mobile activity in the ‘mission execution phase’.⁵⁰⁰⁸ Mr Philips identified examples of these hierarchical call flows between Green and Blue mobiles on 18, 19 and 25 January 2005.⁵⁰⁰⁹ Hierarchical call flows between Green and Red mobiles occurred on Friday 28 January 2005,⁵⁰¹⁰ Monday 31 January 2005,⁵⁰¹¹ Thursday 3 February 2005,⁵⁰¹² Tuesday 8 February 2005,⁵⁰¹³ Friday 11 February 2005,⁵⁰¹⁴ Saturday 12 February 2005⁵⁰¹⁵ and Monday 14 February 2005.⁵⁰¹⁶

2410. Blue 233 also demonstrated a leadership role, because its movement, call patterns and the fact that this user allegedly had a Green mobile indicate that they managed the groups of Blue and Red mobile users.⁵⁰¹⁷ Blue 233 was the dominant mobile during the mission set-up phase. It had contact with 13 of possible 14 Blue mobiles. It was the only mobile that was active every day between Wednesday 12 January and Monday 14 February 2005. Blue 233 had the highest call volume during the mission set-up phase. It was inextricably linked to mobile activity in Baalbek, Anjar, Tripoli and north-east of the airport and had the most contact with the ‘Blue base mobile’ (Blue 501).⁵⁰¹⁸

2411. As set out more fully in analysing the chronology of events in the lead-up to the attack,⁵⁰¹⁹ the Yellow mobiles were active at the same place and around the same time, namely Tripoli on

Absent other evidence, the Trial Chamber was unable to conclude that Blue 501 could be qualified as the ‘Blue base mobile’ and what, if anything, the significance of any limited movement of that mobile was.

⁵⁰¹⁹ See chapter X ‘Chronology of network mobile activity before Mr Hariri’s assassination on Monday 14 February 2005’.

Tuesday 28 December 2004 and Tuesday 4 January 2005, that the Red SIM cards were likely purchased and first registered on the provider network. According to Mr Platt, this demonstrated connectivity among the networks.⁵⁰²⁰ They were also active at times and places close to Mr Hariri and his residences, such as Haret Hreik during Mr Hariri's meeting with Mr Nasrallah on 21 December 2004, the Faqra area in late December 2004 and Quraitem Palace in late December 2004 and January 2005.⁵⁰²¹ Mr Platt testified that the Yellow mobile activity in Faqra at the same time and place as Blue mobile activity there showed connectivity between the networks.⁵⁰²²

3. The common mission

2412. Mr Philips concluded that the common mission was likely a serious incident which occurred on Monday 14 February 2005 around 12:54 in the afternoon, most probably to the north of central Beirut.⁵⁰²³

2413. Mr Philips examined the location and timing of calls for clues about the mission for which the mobiles were used.⁵⁰²⁴ In particular, he considered that the location of the last calls 'would normally be expected to be in the general area of the scene of the crime.'⁵⁰²⁵ That is because mobiles would only be used if, and as long as, they are fundamental to the commission of a crime as they can be traced and lead to the identification of the users.⁵⁰²⁶ Once the mission has been executed, any further use would unnecessarily risk discovery by investigators and the identification of the users.⁵⁰²⁷

2414. Because the Red mobiles had the strongest protections of their users' anonymity, they were the group most likely chosen to conduct the mission.⁵⁰²⁸ Therefore, the area of use of the Red mobiles, in central and west Beirut, was anticipated to be associated with the intended 'target' of

⁵⁰²⁰ Gary Platt, T. 26 July 2016, pp 57, 62-63.

the mission.⁵⁰²⁹ In particular, all of the Red mobiles' last calls were around the same time, and all activated cells were within two kilometres of the St Georges Hotel on *Rue Minet el Hosn* in central Beirut.⁵⁰³⁰

2415. Similarly, almost an hour before the Red mobiles' last call, Green 023 and Green 300 last called each other, when Green 300 activated the MRAICI1 and PHENMB1 cells north-east of central Beirut, close to the crime scene.⁵⁰³¹ The final calls of the Red and Green mobiles are shown on the following map:

⁵⁰²⁹ Exhibit P1117 (Expert report of John Edward Philips – Common Mission Phones), para. 5.4.8.16.

⁵⁰³⁰ Exhibit P1117 (Expert report of John Edward Philips – Common Mission Phones), paras 5.7.1.5, 5.7.1.10; John Edward Philips, T. 2 September 2016, pp 56-57; exhibit P1118, slide 93.

⁵⁰³¹ Exhibit P1117 (Expert report of John Edward Philips – Common Mission Phones), paras 5.7.1.6-5.7.1.7; exhibit P1207 (Call sequence table of Green 300).

Slide 94 with final Green and Red calls from John Edward Philips's PowerPoint presentation – exhibit P1118

2416. Approximately one hour before the explosion, Green 300, Blue 233 and Red 741 activated cells in the Parliament and crime scene area.⁵⁰³² No other Blue mobile activated cells in the same area around this time.⁵⁰³³

4. Submissions

2417. The Prosecution submits that the behavioural features of the Green, Red and Blue networks, as identified through Mr Philips's expert analysis, collectively demonstrate that these networks were engaged in a common purpose.⁵⁰³⁴ These features were: first, the common periods of existence, patterns of use and fluctuations in call intensity; second, the common areas of use in

⁵⁰³² Exhibit P1117 (Expert report of John Edward Philips – Common Mission Phones), paras 5.5.2.6-5.5.2.7.

⁵⁰³³ Exhibit P1117 (Expert report of John Edward Philips – Common Mission Phones), para. 5.7.1.9.

⁵⁰³⁴ Prosecution final trial brief, paras 393-394.

Tripoli, the area around Zouk-Mosbeh and Faraya, the area around Quraitem Palace, the Parliament and the crime scene location and the coastal road connecting these locations; third, a convergence of final calls; fourth, their complementary roles and functions; and fifth, hierarchical call flows between Green 023, Green 300 and Green 071.⁵⁰³⁵ The Prosecution also notes steps taken by the Yellow network users to further the common purpose, such as the presence of Yellow mobiles during the purchase and set-up of the Red mobiles, surveillance of Mr Hariri and his residences in late December 2004 and hierarchical call flows to Yellow mobiles.⁵⁰³⁶

2418. The Red mobiles' primary function was to facilitate the execution of the crime. Their ancillary function was first to insulate the other networks, which were associated with Dahyieh, from discovery by investigators, and second, to create a false association between the covert network and the Tripoli area.⁵⁰³⁷ The Prosecution submits that the Blue mobiles were a freer form of communication used in the preparation of the mission during the mission set-up phase and later as alternative mobiles when the Red mobiles were not or could not be used, as was the case for calls to and from Dahyieh.⁵⁰³⁸ The Green mobiles provided a communication channel between the user of Green 023, who controlled and directed the other covert networks, and the users of Green 300 and Green 071 whose role was to effect and execute the two limbs of the conspiracy, namely, the assassination and the false claim.⁵⁰³⁹

2419. The Prosecution also argues that, in the months preceding the attack, the four mobile networks—Red, Green, Blue and Yellow—shared common characteristics of covertness, organisation, discipline and generous resourcing to a lesser or greater degree.⁵⁰⁴⁰ In addition, several other features among the four networks support the conclusion that they belonged to one and the same entity. These include: common administration like handset swapping, common contacts and inter-contacts, common areas of use and common users.⁵⁰⁴¹

2420. In particular, the expert analysis of the Green, Red and Blue networks demonstrates that, in addition to their coordinated activities, the networks shared a number of exceptional features

⁵⁰³⁵ Prosecution final trial brief, paras 395-499.

⁵⁰³⁸ Prosecution final trial brief, paras 468-490.

⁵⁰³⁹ Prosecution final trial brief, paras 491, 498-499.

⁵⁰⁴⁰ Prosecution final trial brief, para. 343.

⁵⁰⁴¹ Prosecution final trial brief, paras 366-392.

aimed at concealing the identities of their users. These included: pre-paid subscriptions with false, missing, or untraceable subscriber information; further, all, or nearly all, calls being made within each network; also, no, or nearly no, text messages exchanged. Tellingly, the Green and Red networks ceased operation on the day of the attack.⁵⁰⁴² They conveyed such a high degree of covertness, cohesion and focus that they have been classified as ‘mission phone groups’—a rare phenomenon associated with serious, complex and sophisticated criminal activity.⁵⁰⁴³ The characteristics of the ‘mission phone groups’ mirror the qualities required to prepare for, coordinate and execute an attack of the complexity, magnitude and sophistication that took place on Monday 14 February 2005.⁵⁰⁴⁴

2421. The Ayyash Defence submits that Mr Philips’s evidence is unreliable regarding the roles or functions of the networks, the roles and functions of individual mobiles within the networks and the hierarchy between the networks. According to the Ayyash Defence, as Mr Philips based his conclusions on content-less mobile calls and call patterns without any accompanying methodology, they therefore carry limited weight because they are speculative and uncorroborated.⁵⁰⁴⁵

2422. Moreover, the Prosecution presented no methodology for how one could determine the hierarchies and roles of mobiles, or a standard against which one could measure what is normal or unusual behaviour in Lebanon or anywhere else.⁵⁰⁴⁶

5. Findings

2423. The Trial Chamber finds that the Green, Red, Blue and Yellow networks were interconnected and coordinated with each other.

2424. As Mr Philips’s analysis shows, the Green, Red and Blue mobiles shared key characteristics: their peak use coincided in the month before the explosion on 14 February 2005. The Green 023, Green 300 and the Red mobiles ceased operating immediately before the explosion. The core six Blue mobiles significantly changed their use after the explosion. One user

⁵⁰⁴² Prosecution final trial brief, para. 13.

⁵⁰⁴³ Prosecution final trial brief, para. 344.

⁵⁰⁴⁴ Prosecution final trial brief, para. 345.

⁵⁰⁴⁵ Ayyash Defence final trial brief, paras 286-290.

⁵⁰⁴⁶ Ayyash Defence final trial brief, para. 290.

had mobiles of each of the three networks.⁵⁰⁴⁷ At least two users had both Red and Blue mobiles.⁵⁰⁴⁸ The Red and Blue mobiles frequently activated cells in the same area of west Beirut. The Green 023, Green 300 and the Red mobiles frequently activated common cells in the northern part of central Beirut. Green 023 and Green 300 also frequently made calls during periods of Red mobile activity.

2425. Mr Philips and Mr Platt reached similar conclusions. Mr Platt concluded from common features between the Green, Blue, Red and Yellow networks, such as their covertness and method of financing, that they were connected. Yellow and Blue mobiles were especially linked, through coordinated top-ups, exchange of handsets, common contacts and direct calls.

2426. The Trial Chamber accordingly finds that:

- three Green mobiles—Green 023, Green 071 and Green 300—operated as a covert network from 13 October 2004 until Monday 14 February 2005;
- eight Red mobiles—Red 572, Red 636, Red 652, Red 662, Red 678, Red 741, Red 893 and Red 946—operated as a covert network from Tuesday 4 January 2005 until Monday 14 February 2005;
- At least six ‘core’ Blue mobiles—Blue 233, Blue 324, Blue 585, Blue 610, Blue 817 and Blue 864—operated as a covert network from December 2004 until Monday 14 February 2005; and
- At least four ‘core’ Yellow mobiles—Yellow 024, Yellow 294, Yellow 457 and Yellow 933—operated as a type of covert network from October 2004 until Friday 7 January 2005.

⁵⁰⁴⁷ Mr Ayyash, *see* chapter IX ‘Attribution of mobile telephones to the Accused and Mustafa Amine Badreddine’, (B) (2) ‘Network mobiles’.

⁵⁰⁴⁸ Apart from Mr Ayyash, the Trial Chamber is satisfied that Red 678 and Blue 610 were used by the same person, but the co-location evidence is insufficient to establish that the remainder of the pairs of mobiles also had a single user beyond reasonable doubt.

H. Purple group of mobiles

1. Introduction

2427. The three Accused, Mr Merhi, Mr Oneissi and Mr Sabra are alleged to have prepared and carried out the false claim of responsibility for the attack on Mr Hariri. They are alleged to have communicated for this purpose via their personal mobiles. The Prosecution termed the three mobiles as the ‘Purple Phones’. This group of three mobiles is additional to the four colour-coded closed networks—the Blue, Red, Yellow and Green networks—that were allegedly involved in different ways in the attack.

2428. In the amended consolidated indictment, the Prosecutor pleads that ‘from at least 1 January 2003 until 16 February 2005’ these mobiles ‘were used to communicate amongst each other and to communicate with others outside the group. Purple Phones were used to coordinate the false claim of responsibility’.⁵⁰⁴⁹ The three mobiles, Purple 095, Purple 018 and Purple 231 were pre-paid mobiles on the Alfa network.⁵⁰⁵⁰ The Prosecution attributed Purple 231 to Mr Merhi, Purple 095 to Mr Oneissi and Purple 018 to Mr Sabra.⁵⁰⁵¹

2429. The Prosecutor pleads that between 22 December 2004 and 17 January 2005, as part of the preparations to assassinate Mr Hariri, Mr Oneissi and Mr Sabra—using the Purple mobiles and under Mr Merhi’s coordination—were involved in profiling, identifying and selecting Mr Ahmad Abu Adass as the scapegoat for making the false claim of responsibility for the attack.⁵⁰⁵² This included recruiting him for his future role in the videoed false claim of responsibility that was broadcast after the attack on Monday 14 February 2005.⁵⁰⁵³

⁵⁰⁴⁹ Amended consolidated indictment, para. 15 (e); Prosecution’s updated pre-trial brief (Ayyash, Badreddine, Oneissi and Sabra case), paras 6, 31, 33, 38, 66, 113, 115, 118-119, 149; Prosecution pre-trial submissions (Merhi case), annex A, paras 6, 23, 25, 30, 104, 106, 109-110; Prosecutor’s opening statement, T. 16 January 2014, pp 52-53, 101-102; Prosecutor’s opening statement regarding Hassan Habib Merhi, T. 18 June 2014, pp 38-40.

⁵⁰⁵⁰ Exhibit P900 (Subscriber note for Purple 231); exhibit P905 (Subscriber note for Purple 018); exhibit P914 (Subscriber note for Purple 095).

⁵⁰⁵¹ Amended consolidated indictment, para. 18; Prosecution’s updated pre-trial brief (Ayyash, Badreddine, Oneissi and Sabra case), paras 31, 54-58; Prosecution pre-trial submissions (Merhi case), annex A, paras 23, 33; Prosecutor’s opening statement, T. 16 January 2014, p. 77; Prosecutor’s opening statement regarding Hassan Habib Merhi, T. 18 June 2014, p. 27.

⁵⁰⁵² Amended consolidated indictment, paras 23, 48 (c) (i); Prosecutor’s opening statement, T. 16 January 2014, pp 52-53, 100-101, 104-106; Prosecutor’s opening statement regarding Hassan Habib Merhi, T. 18 June 2014, pp 41-47.

⁵⁰⁵³ Amended consolidated indictment, para. 48 (c) (i).

2430. According to the Prosecution, the Purple mobiles' communications during the so-called 'COLA phase'⁵⁰⁵⁴ establish Mr Merhi's, Mr Oneissi's and Mr Sabra's involvement in what the Prosecution termed as the 'Mohammed deceit'. This relates to Mr Oneissi's alleged pleaded role as a person identifying as the 'Mohammed' who approached Mr Abu Adass in the Arab University Mosque in January 2005.⁵⁰⁵⁵

2431. Specifically, calls of the Purple and Green mobiles from Wednesday 12 to Saturday 15 January 2005—the Green mobiles were allegedly used by Mr Merhi and Mr Badreddine—showed the alleged preparation for what the Prosecution's case evolved to describe as the 'abduction' of Mr Abu Adass. The activity of Mr Merhi's and Mr Badreddine's Green mobiles and the inactivity of the Purple mobiles on Sunday 16 January 2005, the day on which Mr Abu Adass left his home for the last time, showed their involvement in his disappearance. In addition, the activity of the three Purple mobiles on Monday 17 January 2005 aligned with calls to the Abu Adass family landline.⁵⁰⁵⁶

2432. Mr Merhi, Mr Oneissi and Mr Sabra are also alleged to have participated in delivering the video to Al-Jazeera for broadcast soon after the attack. The timing and the location of the Purple mobiles following the attack 'corresponded very closely' with the calls to the news agencies delivering the false claim.⁵⁰⁵⁷ After years of continuous use, on Tuesday 15 February 2005, Purple 231, and the following day, Purple 095 and Purple 018 ceased use.⁵⁰⁵⁸

⁵⁰⁵⁴ The Prosecution used this term to refer to the ten days between Wednesday 29 December 2004 and Friday 7 January 2005 when Mr Sabra's attributed Purple 018 and Mr Oneissi's Purple 095 were most active connecting to the three COLA cells and those adjacent to it near the Arab University Mosque. Prosecution final trial brief, paras 727-736. *See also* Prosecution's updated pre-trial brief (Ayyash, Badreddine, Oneissi and Sabra case), paras 118-119; Prosecution pre-trial submissions (Merhi case), annex A, paras 109-110.

⁵⁰⁵⁵ Prosecution final trial brief, paras 509-518; Prosecution's updated pre-trial brief (Ayyash, Badreddine, Oneissi and Sabra case), paras 122, 124-130; Prosecution pre-trial submissions (Merhi case), annex A, paras 113, 115-121.

⁵⁰⁵⁶ Prosecution final trial brief, paras 505, 533-548, 736, 1170, 1183-1184. The Prosecution also relies on: evidence of the pattern of the Purple mobiles' use; Mr Merhi's attributed Green mobile's communications; expert evidence on the Green network mobiles and Mr Merhi's attributed Green mobile's communications with Mr Badreddine; the Purple mobiles' activity during the relevant time, and after the attack on 14 February 2005; the video containing the claim of responsibility; that the claim was false; and the cessation of use of the Green, Red and Purple mobiles, Prosecution final trial brief, paras 1170, 1184; Prosecution's updated pre-trial brief (Ayyash, Badreddine, Oneissi and Sabra case), paras 37-38, 125, 128; Prosecution pre-trial submissions (Merhi case), annex A, paras 29-32; Prosecutor's opening statement, T. 16 January 2014, pp 101-103; Prosecutor's opening statement regarding Hassan Habib Merhi, T. 18 June 2014, pp 27, 50, 53-59, 63, 68-69.

⁵⁰⁵⁷ Amended consolidated indictment, para. 44; Prosecution final trial brief, para. 505 (viii).

⁵⁰⁵⁸ Amended consolidated indictment, paras 46-47; Prosecution's updated pre-trial brief (Ayyash, Badreddine, Oneissi and Sabra case), para. 165; Prosecution pre-trial submissions (Merhi case), annex A, para. 156; Prosecutor's

2433. In contrast to the four colour-coded closed networks, the Purple mobiles are alleged neither to be network mobiles nor covert in nature.⁵⁰⁵⁹ They were used for personal purposes such as to call family and friends and for ‘normal’ non-covert communications.

2434. Purple 231 received its last call on Tuesday 15 February 2005 and was not used again, and Purple 095 and Purple 018 were last used on Wednesday 16 February 2005.⁵⁰⁶⁰

2. Evidence

(a) Purple 231—attributed to Hassan Habib Merhi

2435. Purple 231 and Purple 095 were both subscribed under the name of Ibrahim Imad. Purple 231 was activated on the Alfa network on 14 December 2002.⁵⁰⁶¹ The Prosecutor attributed the mobile to Mr Merhi from 19 December 2002 until 15 February 2005.⁵⁰⁶² It was deactivated on 11 March 2005, after its last use on 15 February 2005.⁵⁰⁶³

2436. During the attribution period of around 26 months it had 3,367 voice calls and SMS.⁵⁰⁶⁴ In the indictment period of 22 December 2004 to 14 February 2005, Purple 231 had 313 calls and texts.⁵⁰⁶⁵ On Monday 14 February 2005, it had nine calls and received one text; seven of the calls—all between 14:03 and 17:24—were with Purple 018.⁵⁰⁶⁶

2437. Purple 231 most frequently used Alfa’s SFEIR3 and BRAJNE2 cells in southern Beirut during the time that the Prosecution attributes it to Mr Merhi.⁵⁰⁶⁷ Of its 314 calls and text messages

opening statement regarding Hassan Habib Merhi, T. 18 June 2014, pp 27, 67; Prosecution final trial brief, paras 505 (ix), 582-584.

⁵⁰⁵⁹ See chapter XII ‘Claim of responsibility for the attack on Rafik Hariri’, (H) ‘The non-covert nature of the use of the Purple mobiles’.

⁵⁰⁶⁰ Exhibit P527 (Call sequence table of Purple 231), p. 117; exhibit P1221 (Call sequence table of Purple 018), p. 292; exhibit P1223 (Call sequence table of Purple 095), p. 281; Prosecution pre-trial submissions (Merhi case), annex A, para. 33; Prosecutor’s opening statement regarding Hassan Habib Merhi, T. 18 June 2014, p. 27.

⁵⁰⁶¹ However, neither the IMEI numbers nor the IMSI numbers of the two Purple mobiles are close in sequence to show that they were purchased together. Exhibit P900; exhibit P914; exhibit P527; exhibit P1221; Prosecution’s updated pre-trial brief (Ayyash, Badreddine, Oneissi and Sabra case), para. 32; Prosecution pre-trial submissions (Merhi case), annex A, para. 24.

⁵⁰⁶² Amended consolidated indictment, para. 18; Prosecution pre-trial submissions (Merhi case), annex A, para. 33.

⁵⁰⁶³ Exhibit P527, p. 117; exhibit P900.

⁵⁰⁶⁴ Exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), para. 360; exhibit P527, which also contains non-sequential entries.

⁵⁰⁶⁵ Exhibit P527, pp 106-117.

⁵⁰⁶⁶ Exhibit P527, pp 116-117.

⁵⁰⁶⁷ From 19 December 2002 to 15 February 2005. This excludes calls for which cell data was not available, namely cell site data for incoming calls or text messages until 1 August 2004, and end cell data until 1 October 2004. Exhibit

between 22 December 2004 and 15 February 2005, Purple 231 activated SFEIR3 178 times and BRAJNE2 82 times either at the start or at the end of the call.⁵⁰⁶⁸ It did not connect to any of the sixteen Alfa cells providing the predicted best server coverage within a 500-metre radius of the Arab University Mosque.⁵⁰⁶⁹ On 14 February 2005, it activated SFEIR3 for all ten contacts, including seven with Purple 018.⁵⁰⁷⁰

2438. Mr Donaldson described Purple 231 as having the characteristics of a ‘work-related mobile’ used for a specific purpose.⁵⁰⁷¹ In his evidence, however, he also used the term ‘cadre mobile’—something that was not in his attribution report on Mr Merhi—to describe Purple 231 and other mobiles that had a contact profile that included Hezbollah officials and MPs, and people subject to INTERPOL red notices.⁵⁰⁷²

2439. He explained that the term ‘cadre’ also distinguished these types of mobiles from, for example, Purple 018 and Purple 095, which did not have these characteristics.⁵⁰⁷³ When asked about the origin of the term he explained that a deceased Lebanese official had introduced it to him.⁵⁰⁷⁴ He described these ‘cadre mobiles’ as having no pattern of family contacts, contacting switchboards and having as their identifiable contacts men aged 20 to 50. Further, these mobiles had little SMS content and the numbers were rarely provided as business contacts.⁵⁰⁷⁵ People

P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), paras 67-71, 144-149; Andrew Donaldson, T. 29 June 2017, pp 26-30; exhibit P527, pp 1-89; exhibit P1961 (PowerPoint presentation regarding Mr Merhi, Andrew Donaldson), slides 48-50. Regarding the missing Alfa cell data, *see also* Gary Platt, T. 7 February 2017, pp 64-65; Prosecution final trial brief, para. 540.

⁵⁰⁶⁸ Exhibit P527, pp 106-117.

⁵⁰⁶⁹ Exhibit P1783 (Expert report of Gary Platt – Chronology), para. 1273; exhibit P527, pp 106-117.

⁵⁰⁷⁰ Exhibit P527, pp 106-117.

⁵⁰⁷¹ Exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), para. 66; Andrew Donaldson, T. 3 July 2017, pp 31-32, T. 4 July 2017, p. 13.

⁵⁰⁷² Andrew Donaldson, T. 3 July 2017, pp 28-29, 31-33.

⁵⁰⁷³ Andrew Donaldson, T. 3 July 2017, p. 23.

⁵⁰⁷⁴ When the Presiding Judge asked who the official was, Prosecution lead counsel intervened and made a claim under Rule 118 against revealing this information. Rule 118 prohibits the disclosure of information without the provider's consent if the information was provided on a confidential basis ‘and which affects the security interests of a State’. When asked how Rule 118 applied, the Prosecution responded, ‘Your Honour, the extent to which we would say 118 applies is that the names of any of the Lebanese officials should remain confidential’. Nothing more was said on this. The Trial Chamber finds it difficult to understand how Lebanese State security interests could be affected by revealing the name of a deceased official who apparently had explained the meaning of a ‘cadre phone’ to Mr Donaldson. T. 3 July 2017, pp 28-30.

⁵⁰⁷⁵ Andrew Donaldson, T. 3 July 2017, pp 28-29.

identified in open sources as ‘cadres of Hezbollah’—including Mr Badreddine and others he examined during the investigation—had the same contact profile.⁵⁰⁷⁶

2440. Mr Donaldson observed that Purple 231 presented some of these characteristics, which suggests that it may have been a ‘non-personal’ mobile.⁵⁰⁷⁷ The majority of its contacts were unattributed and among them were Hezbollah officials or MPs. Family contacts were absent, and the contacts were ‘generally men of a similar generation’.⁵⁰⁷⁸

(b) Purple 018—attributed to Assad Hassan Sabra

2441. Purple 018 was activated on the Alfa network on 8 November 2001 without any subscriber details.⁵⁰⁷⁹ It ceased use on Wednesday 16 February 2005 and was deactivated on 8 March 2005. This mobile had 8,379 contacts over the period that the Prosecution attributed it to Mr Sabra, namely, from 22 November 2001 to 16 February 2005.⁵⁰⁸⁰

2442. Between 1 August 2004 and 16 February 2005, Purple 018 most frequently activated SFEIR2, HARA2 and BRAJNE3, in south Beirut.⁵⁰⁸¹ Between 22 December 2004 and 14 February 2005, Purple 018 made 438 calls, of which it connected to SFEIR2 for 88, HARA2 for 78, SFEIR3 for 60, ROUEIS3 for 29 and BRAJNE3 for 27.⁵⁰⁸²

2443. From Wednesday 22 December 2004 to Friday 7 January 2005, it activated one of the sixteen adjacent cells within a 500-metre radius of the Arab University Mosque either at the start or at the end of a call 70 times. This included 54 activations of the three COLA cells.⁵⁰⁸³

⁵⁰⁷⁶ Andrew Donaldson, T. 3 July 2017, pp 23, 31-32.

⁵⁰⁷⁷ Andrew Donaldson, T. 3 July 2017, p. 36.

⁵⁰⁷⁸ Andrew Donaldson, T. 3 July 2017, p. 22. Mr Donaldson also acknowledged that ‘he clearly cannot say that this was a work phone for Mr Merhi’ and that he could not be specific about the nature of Purple 231 as he did not have enough information on Mr Merhi. Andrew Donaldson, T. 3 July 2017, p. 23.

⁵⁰⁷⁹ Exhibit P905.

⁵⁰⁸⁰ Exhibit P1221; Amended consolidated indictment, para. 18; Prosecution’s updated pre-trial brief (Ayyash, Badreddine, Oneissi and Sabra case), para. 55.

⁵⁰⁸¹ Exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), para. 52.

⁵⁰⁸² Exhibit P1221, pp 277-292.

⁵⁰⁸³ It activated CBOURJ3 for seven calls, CHATIL1 for three calls, CHATIL3 for one call, COLA1 for four calls, COLA2 for eleven calls, COLA3 for 39 calls, MAKASS2 for two calls, MAZRAA2 for one call, NASSER1 for one call and OUZAI4 for one call. Purple 018 had 182 calls in this period. Exhibit P1221, pp 277-283.

2444. On Monday 14 February 2005, Purple 018 connected to various cells in Beirut including SFEIR3, SPEARS3, BNPI3, GHOBAl3, ETOILE2 and MARTYR1.⁵⁰⁸⁴ ETOILE2, MARTYR1 and BNPI3 were adjacent to BACHOU3, the cell that provided the predicted best server coverage to the tree where the false claim video was placed.⁵⁰⁸⁵ On Monday 14 February 2005, it had 18 calls and received one text. Seven of the calls were with Purple 231, and five with Purple 095.⁵⁰⁸⁶

(c) Purple 095—attributed to Hussein Hassan Oneissi

2445. Purple 095, like Purple 231, and as noted above, was subscribed under the name of Ibrahim Imad. It was activated on the Alfa network on 28 December 2002. It was not used after Wednesday 16 February 2005 and was deactivated on 17 March 2005.⁵⁰⁸⁷

2446. The Prosecutor attributed it to Mr Oneissi from 9 January 2003 until Wednesday 16 February 2005.⁵⁰⁸⁸ During this period, it had 8,140 contacts, voice calls and SMS.⁵⁰⁸⁹ In the indictment period, from Wednesday 22 December 2004 to Monday 14 February 2005, it had 803 contacts—voice calls and texts.⁵⁰⁹⁰ On Monday 14 February 2005, it had 11 calls, and received seven SMS, of which five calls, between 15:54 and 16:02, were with Purple 018.⁵⁰⁹¹

2447. From 1 August 2004 until 16 February 2005, SFEIR3, BRAJNE2 and SFEIR3 in southern Beirut were Purple 095's most frequently activated cells.⁵⁰⁹² For its contacts from 22 December 2004 to 16 February 2005, it connected to BRAJNE2 for 223 calls, SFEIR3 for 165 calls, and SFEIR3 for 116 calls at the start or at the end of the call.⁵⁰⁹³

2448. From Wednesday 22 December 2004 to Friday 7 January 2005, it used one of the sixteen adjacent Alfa cells within a 500-metre radius of the Arab University Mosque for 35 calls. This was

⁵⁰⁸⁴ It activated SFEIR3 for four calls, SPEARS3 for four calls, BNPI3 for three calls, GHOBAl3, ETOILE2 and MARTYR1 each for two calls. Exhibit P1221, pp 291-292.

out of 238 calls and SMS in that period. It activated COLA2 for seven calls and COLA3 for fourteen calls.⁵⁰⁹⁴

2449. On Monday 14 February 2005, for more than half of its calls Purple 095 activated BNPI3, which provided best server coverage close to the tree where the false claim video was lodged.⁵⁰⁹⁵

(d) Characteristics of the group of Purple mobiles

2450. Apart from contacting each other, the Purple mobiles' most frequently contacted numbers included their respective user's family members and associates.

2451. Specifically, Purple 231's most frequent contact was Mr Merhi's brother-in-law, Mr Yahya Beydoun.⁵⁰⁹⁶ Purple 095 had the most calls with Mr Oneissi's mother, Ms Fatima Darwish.⁵⁰⁹⁷ Purple 018's most frequent contacts included Mr Sabra's father, and his wife, Ms Hala Salloum's, aunt's and grandfather's numbers.⁵⁰⁹⁸ Unlike the users of the network mobiles, Purple mobile users sent and received text messages.⁵⁰⁹⁹ No texts between the users of the three mobiles were in evidence.

2452. The Prosecution, in its opening statements, submitted that the three Purple mobiles—while not forming a closed network—conformed to a calling pattern similar to the Green network. This meant that Mr Merhi was in contact with both Mr Sabra and Mr Oneissi but there were 'virtually no calls between Mr. Sabra and Mr. Oneissi using the Purple Phones'.⁵¹⁰⁰ The call patterns, however, changed significantly in late December 2004. Prosecution counsel explained: 'Why? I expect the evidence to show the answer to be Ahmad Abu Adass'.⁵¹⁰¹ The Prosecution, at the close

⁵⁰⁹⁴ It activated CBOURJ3 for four calls, CHATIL1 for two calls, COLA2 for seven calls, COLA3 for 14 calls, MAZRAA2 for two calls, OUZAI1 for five calls and RAMLET1 for one call. Exhibit P1223, pp 253-261.

⁵⁰⁹⁵ On 14 February 2005, Purple 095 had 18 calls; for ten, including to receive service text messages, it connected to BNPI3. Exhibit P1223, pp 280-281.

⁵⁰⁹⁶ See para. 3462. See also Prosecution's updated pre-trial brief (Ayyash, Badreddine, Oneissi and Sabra case), para. 58; Prosecution pre-trial submissions (Merhi case), annex A, para. 33.

⁵¹⁰¹ Prosecutor's opening statement, T. 16 January 2014, pp 77, 102-103; Prosecutor's opening statement regarding Hassan Habib Merhi, T. 18 June 2014, pp 39-40, 44-47, 67-68.

of the case, however, did not repeat this argument from the opening submissions, nor submit that this had been established.

2453. The Prosecution's cell site expert, Mr Philips, did not analyse the characteristics of the Purple mobiles. The Trial Chamber allowed the Prosecution investigator, Mr Platt, to provide expert opinion evidence—within the defined area of his expertise—on their role.⁵¹⁰² Prosecution analyst Mr Andrew Donaldson also provided overview evidence regarding their subscription, contact and geographic profiles and usage. He attributed them to Mr Merhi, Mr Oneissi and Mr Sabra. He wrote three reports in which he positively concluded that each of the three was using the mobile attributed to them, describing it as single use attribution.⁵¹⁰³

2454. Mr Platt explained that the Purple mobiles did not present the characteristics of 'mission' mobiles. They were not used in a covert fashion or for any covert work such as surveillance.⁵¹⁰⁴ In his view, the Purple mobiles' activity around the Arab University Mosque was quite limited and static, coinciding with the 'cultivation of the Subjects at the mosque' and they were used there on an 'irregular basis'.⁵¹⁰⁵ This distinguishes their activity from Mr Hariri's surveillance, which occurred in 'unique locations, operating in close proximity of him ... and following him'.⁵¹⁰⁶

2455. According to Mr Platt, this was not coincidental. Rather it was consistent with the users' involvement in the crime, as the three Accused simultaneously and abruptly discarded their Purple mobiles, which they had been using for years, in the days after the attack.⁵¹⁰⁷

⁵¹⁰² As the Prosecution did not ask its cell site expert, Mr Philips, to analyse Purple 018 and Purple 095, it mainly relied upon Mr Platt's analysis and opinion evidence. The Trial Chamber declared Mr Platt qualified to provide expert opinion on matters connected with the surveillance of criminal networks, and the identification and organisation of covert communication networks, including evidence on Purple mobiles. Decision on expertise (Mr Platt); Decision clarifying Mr Platt's area of expertise.

(e) Discovery of Purple mobiles

2456. The alleged role of the Purple mobiles in Mr Hariri's assassination was apparently not discovered until 2008. The UNIIIC only found the Purple mobiles when it obtained new relevant information in November 2008, long after the ISF and UNIIIC had discovered the roles of the colour-coded network mobiles. Mr Donaldson explained that this was because of 'the extremely low forensic visibility' of their use.⁵¹⁰⁸

3. Submissions

2457. The submissions of the Parties regarding the Purple mobiles' activities are considered in detail below in the analysis of the claim of responsibility for the attack on Mr Hariri on 14 February 2005. A brief summary suffices here.

2458. The Prosecution argues that the Purple mobiles used the COLA and some adjacent cells, which provided coverage to the area near the Arab University Mosque area, in an 'extraordinary' fashion over the ten-day period from 29 December 2004 until 7 January 2005. This was when 'Mohammed' in the mosque approached candidates for making the false claim of responsibility.⁵¹⁰⁹

2459. During this so-called 'COLA phase', there was an exceptional increase in contact between Purple 095 and Purple 018.⁵¹¹⁰ The Prosecution final trial brief states that their 'use of the COLA cells over this period was an exceptional activity for each of these two phones and not part of their regular usage patterns'.⁵¹¹¹ The mobiles using the COLA cells, Purple 018 and 095, also had contact on each day with Mr Merhi's Purple 231 while they were in the mosque area, or shortly before or afterwards.⁵¹¹²

2460. The evidence of their presence around the mosque, according to the Prosecution, must be taken with the Purple mobiles connecting to cells near the payphones used to make the calls to

⁵¹⁰⁸ Andrew Donaldson, T. 19 September 2017, pp 16-22, T. 29 September 2017, p. 57; exhibit 5D418 (Investigator notes – Finding the Communication Networks), para. 44 (b); exhibit P2122 (Interview of Wissam Al-Hassan, 16 June 2012), pp 125-126, 146.

⁵¹¹¹ Prosecution final trial brief, para. 535.

⁵¹¹² Prosecution final trial brief, para. 534; Prosecution closing submissions, T. 21 September 2018, pp 82-83.

Reuters and Al-Jazeera, and the tree where the video was placed, on the afternoon of Monday 14 February 2005.⁵¹¹³

2461. The Prosecution argues that the contact profile of Purple 231, which included men of similar age to Mr Merhi, people affiliated with Hezbollah, including Mr Ayyash, Mr Oneissi, Mr Sabra and Mr Ali Ammar, suggests that it may be a ‘non-personal phone’ and ‘was used by a cadre of Hezbollah’.⁵¹¹⁴

2462. The Merhi Defence responded that the Prosecution cannot determine the nature of Purple 231 and there is no evidence that Mr Merhi was a Hezbollah ‘cadre’.⁵¹¹⁵ Purple 231’s contact profile is not probative of its ‘specific purpose’ and Mr Donaldson did not offer any evidence to support this claim.⁵¹¹⁶ Mr Donaldson’s evidence and the Prosecution case are inconsistent in this regard.⁵¹¹⁷

2463. The Merhi Defence submits that no reliable inferences can be drawn from the behaviour of the Purple mobiles during the ‘COLA phase’, as the cell data from before 1 October 2004 is incomplete. It is therefore impossible to establish that the activity of the Purple mobiles was exceptional during a ‘COLA phase’ period, when the data for the remainder of their attribution period is incomplete.⁵¹¹⁸ Further, throughout the amended consolidated indictment period, neither Purple 231 nor Green 071 activated cells near the mosque. The activity of the other two Purple mobiles around the mosque was not exceptional.⁵¹¹⁹

2464. Pointing to the general limitation of the expressed accuracy of sixty to seventy per cent of Alfa’s predicted best server coverage area maps, the Oneissi and Sabra Defence argue that the cell site data is incomplete, and that therefore the Prosecution’s inferences that the Purple mobiles’ activity was exceptional are speculative.⁵¹²⁰

⁵¹¹³ See more detailed submissions set out in chapter XII ‘Claim of responsibility for the attack on Rafik Hariri’.

⁵¹²⁰ Oneissi Defence final trial brief, paras 181-188, 191-195; Sabra Defence final trial brief, paras 588-589, 600-601.

2465. The Oneissi Defence submits that even had Mr Oneissi been in the mosque area, this could have been for ‘non-criminal purposes’, and the Prosecution failed to conduct adequate investigations into whether Mr Oneissi had any link to the Tariq-El-Jdideh area, the mosque’s locality.⁵¹²¹ Further, the presence of Purple 095 in the area was not ‘exceptional’, as the Prosecution claims.⁵¹²² In its final trial brief, the Oneissi Defence summarised:

The Prosecution allegation amounts to the following: because (on the available data) 095 activated the COLA cells on five days before 22 December 2004, Mr. Oneissi was only ever in Tariq-el-Jdideh on five days before 22 December 2004. This assertion is clearly invalid; it is impossible to ascertain how often Mr. Oneissi was present in Tariq-el-Jdideh. Clearly it is possible that Mr. Oneissi was present in Tariq-el-Jdideh without using a mobile phone; people do not use their mobile in every neighbourhood they visit.⁵¹²³

2466. The Sabra Defence submits that the ‘sudden and unusual use’—on the Prosecution’s case—of the COLA cells by the Purple mobiles during the ‘COLA phase’ cannot conclusively establish that their presence in the area was directly connected with the preparation of Mr Abu Adass’s abduction.⁵¹²⁴ Additionally, the Prosecution failed to consider reasonable alternatives for the elevated contact frequency between Purple 018 and Purple 095 during the ‘COLA phase’ and to consider reasonable alternatives for the presence of Purple mobiles in Tariq-El-Jdideh.⁵¹²⁵

4. Findings

2467. The Prosecution pleaded that the Purple mobiles, by virtue of their usage, were personal and non-closed user group mobiles. The Trial Chamber received extensive evidence that the Purple mobiles were everyday non-covert mobiles. This was in contrast to evidence concerning the colour-coded ‘network mobiles’ which formed communication networks and ‘mission phones’. As a part of a special type of mobile network these mobiles are dedicated to a specific objective or mission that is covert and almost always ‘nefarious’.⁵¹²⁶

⁵¹²¹ Oneissi Defence final trial brief, paras 207-209.

⁵¹²² Oneissi Defence final trial brief, paras 189-195.

⁵¹²⁵ Sabra Defence final trial brief, paras 600-606, 616-618.

⁵¹²⁶ Gary Platt, T. 4 April 2017, p. 25.

2468. The Purple mobiles, by contrast, were used for personal purposes such as to call family and friends and for ‘normal’ non-covert communications. They did not have the characteristics of ‘mission phones’ and were not used covertly.⁵¹²⁷

2469. This is uncontested. The Defence challenges relate to the attribution of the Purple mobiles to Mr Merhi, Mr Oneissi and Mr Sabra, the roles of the Purple mobiles in the conspiracy and other crimes charged and the Prosecution’s allegations that the Accused used their personal mobiles to participate in it.⁵¹²⁸ The Defence also attacked the underlying reliability of the Prosecution’s cell site evidence, and particularly Mr Donaldson’s analysis. There were also no text messages in evidence between the three mobiles that could have shed some light on the nature of their communications.

2470. The evidence establishes that the users of the three Purple mobiles knew each other. The call data records, as extracted into call sequence tables, show 397 contacts between the three Purple mobiles between 26 December 2002 and 22 December 2004. The latter date is that pleaded for the entry of Mr Merhi, Mr Oneissi and Mr Sabra into the conspiracy charged in count one of the amended consolidated indictment and from which their pleaded role in counts six to nine commences.

2471. In the overall period, there were 170 contacts between Mr Oneissi’s Purple 095 and Mr Merhi’s Purple 231, 190 between Mr Sabra’s attributed Purple 018 and Mr Merhi’s Purple 231 and 36 between Mr Oneissi’s Purple 095 and Mr Sabra’s attributed Purple 018.

2472. Between 22 December 2004 and 14 February 2005, however, there were 93 contacts between the three mobiles, which represents a statistical increase over the period. This is broken down into:

- one call between Purple 231 and Purple 095 on 22 December 2004;⁵¹²⁹

⁵¹²⁷ Gary Platt, T. 7 February 2017, pp 60, 62.

⁵¹²⁹ Exhibit P527, p. 106; exhibit P1223, p. 253.

- ten calls between the three between 23 and 28 December 2004;⁵¹³⁰
- 52 calls between 29 December 2004 and 7 January 2005;⁵¹³¹
- 18 calls between 8 January and 13 February 2005;⁵¹³² and
- 12 calls in the afternoon of 14 February 2005. Seven were between Purple 018 and Purple 231, and five were between Purple 018 and Purple 095.⁵¹³³

2473. These communications were concentrated between Wednesday 29 December 2004 and Friday 7 January 2005, and then again on Monday 14 February 2005.

2474. The cell site and call data records show Purple 018's and Purple 095's areas of usage during the so-called 'COLA phase', namely, between 29 December 2004 and 7 January 2005 and the seven preceding days.

2475. In this period, Purple 018 connected to one of the sixteen cells near the Arab University Mosque, including the three COLA cells, for about 38.5 per cent of its calls.⁵¹³⁴ For Purple 095 this ratio was less, around 14.7 per cent.⁵¹³⁵ The connections to the cells near the mosque coincided with an increased frequency in the contacts between the three mobiles.

2476. The Trial Chamber, however, underlines that the call data records before August 2004 are incomplete. Until that date there were no records of where Alfa mobiles were when they received calls, meaning that it is impossible to know if or how many times these mobiles connected to the COLA and adjacent cells before then.

2477. There were also no end cell records available until 1 October 2004, which signifies that only the cells to which a mobile connected at the start of a call was recorded. Thus, if a Purple mobile had connected to a cell near enough to a COLA or adjacent cell and in a call of sufficient

⁵¹³⁰ Exhibit P527, pp 106-107; exhibit P1223, pp 254-256; exhibit P1221, p. 278.

⁵¹³¹ Exhibit P527, pp 107-109; exhibit P1223, pp 257-261; exhibit P1221, pp 279-283.

⁵¹³² Exhibit P527, pp 109-112, 114; exhibit P1223, pp 262, 264-265, 267-270; exhibit P1221, pp 284-285, 287-288.

⁵¹³³ Exhibit P527, pp 116-117; exhibit P1223, pp 280-281; exhibit P1221, pp 291-292. The last contact of Purple 231 and Purple 095 occurred on 26 January 2004. Exhibit P527, p. 112; exhibit P1223, p. 270.

⁵¹³⁴ Purple 018 connected to one of these cells for 70 of its 182 calls.

⁵¹³⁵ Purple 095 connected to these cells for 35 of its 238 calls.

length to travel there during the call, whether it connected to a COLA or adjacent cell as the call's end cell is unknowable.

2478. Further, and similarly, SMS cell site records are only available for Alfa mobiles from 1 August 2004. This means that there is no record before that date of where the mobile was when it sent or received text messages. A mobile could have received or sent a text from any of the COLA or adjacent cells without a record of this cell activation.

2479. In this respect, the Oneissi Defence submission extracted above at paragraph 2465 has some strength and applies equally to Purple 018, attributed to Mr Sabra. Purple 018 had 8,379 contacts (calls and SMS) between 22 November 2001 and 16 February 2005, a period of 1,184 days, at an average of just over seven per day. Purple 095's equivalent figure, between 9 January 2003 and 16 February 2005 is of 8,139 calls and texts over 770 days, making an average of around 10.5 per day.

2480. There is no evidence of whether the users of these mobiles always carried them, and even if they did, they could pass daily through the Tariq-El-Jdideh area without activating the COLA or adjacent cells. Or they could pass through and send and receive texts, before 1 August 2004, without a recorded cell activation.

2481. During the so-called 'COLA phase', the two Purple mobiles were also frequently in contact with Mr Merhi's Purple 231, which was always away from the mosque area, and was mostly connecting to SFEIR3 in southern Beirut. The cells that Purple 018 and 095 activated during the twelve calls between the Purple mobiles over the afternoon of 14 February 2005, relatively close in time to the calls from payphones to Reuters and Al-Jazeera and the video collection, are described and examined in more detail below in assessing the evidence related to the claim of responsibility for the attack on Mr Hariri.⁵¹³⁶

2482. Whether these contacts between the three Purple mobiles were 'unusual' or 'highly concentrated and exceptional' or represented a 'dramatic increase', or 'dramatic fall' in their communications, as the Prosecution contends,⁵¹³⁷ depends on the context of the calls and connecting them to some pleaded events for which there is positive evidence. The evidence of the

⁵¹³⁶ See chapter XII 'Claim of responsibility for the attack on Rafik Hariri'.

⁵¹³⁷ Prosecution final trial brief, paras 543-548, 732-736.

Purple mobiles' attribution to Mr Merhi, Mr Oneissi and Mr Sabra, the mobiles' contact profiles, call patterns and the specific pleaded roles of the three men in the preparation and the delivery of the claim of responsibility for the attack on 14 February 2005, and the Parties' related submissions are analysed below.⁵¹³⁸

2483. The Trial Chamber has found regarding the Accused's and Mr Badreddine's alleged associations with Hezbollah that it received insufficient evidence about Mr Merhi to conclude that he was a Hezbollah supporter.⁵¹³⁹ It follows, that the Prosecution's submission that Purple 231 'may be a "non-personal phone"' and 'was used by a cadre of Hezbollah' has not been established.

2484. The simultaneous discarding of the Purple mobiles over the two days after the attack has similarities to what expert evidence described as 'the closure of a network' for covert reasons. The Trial Chamber is satisfied that, at least on first impression, the Purple mobiles share this characteristic with network or 'mission' mobiles. As Mr Platt stated, after a crime, and to lower the likelihood of an investigation identifying their users, such mobiles may simultaneously cease operations.⁵¹⁴⁰

2485. However, while simultaneously ceasing activity is an organisational characteristic of a covert network, the Purple mobiles were otherwise not used covertly. This is unlike covert users who distance themselves from their mobiles to prevent their identification. The Trial Chamber has therefore examined the evidence in its totality to reach its conclusions as to whether discarding the three personal Purple mobiles is an inference available from the evidence that is only consistent with the guilt of any of the three Accused.⁵¹⁴¹

2486. The Trial Chamber finds that the users of Purple 018, Purple 095 and Purple 231 knew each other and communicated regularly between 26 December 2002 and 14 February 2005. The 397 contacts between the three mobiles between 26 December 2002 and 21 December 2004, and

⁵¹³⁸ See chapter IX 'Attribution of mobile telephones to the Accused and Mustafa Amine Badreddine', (C) 'Hassan Habib Merhi', (D) 'Hussein Hassan Oneissi—Purple 095' and (E) 'Assad Hassan Sabra—Purple 018', and chapter XII 'Claim of responsibility for the attack on Rafik Hariri'.

⁵¹³⁹ See para. 762.

⁵¹⁴⁰ Gary Platt, T. 7 February 2017, pp 60-63, T. 9 February 2017, pp 66-67.

⁵¹⁴¹ See chapter XII 'Claim of responsibility for the attack on Rafik Hariri', (H) 'The non-covert nature of the use of the Purple mobiles'.

the 93 in the relevant indictment period, namely, from 22 December 2004 to 14 February 2005, demonstrate this. Twelve of these were on Monday 14 February 2005.

2487. It is statistically correct that the concentration of calls between the three increased during the relevant indictment period. In this 55-day period, there were 93 calls, as opposed to 397 over the preceding period of just under two years, or 726 days. Statistically, over the period, and just taking the base figures, the calls increased from an average of around one every two days to around 1.6 per day. Or, using another calculation, it increased from around three and a half contacts a week to around 13 a week over a seven-week period. In raw terms, this represented a more than threefold increase in contacts.

2488. The Prosecution's primary submission, noted above, that the activations of the COLA cells 'was not part of their regular usage patterns' is only partially accurate. While the incomplete cell site records show that there were more activations in the relevant indictment period by Purple 018 and Purple 095 than before, the Prosecution did not present an analysis of the mobile users' typical use patterns and how their usage differed during the relevant indictment period. There was no evidence of Mr Merhi's, Mr Oneissi's and Mr Sabra's occupations, social or family activities, or their typical daily routines from which call patterns could be discerned, and thus whether there were significant deviations from these. The Prosecution in this respect did not produce a unique geographical signature for any of the three Accused. Without this, 'regular usage patterns' are difficult to discern.

2489. Thus to interpret the raw data showing an increase in activations of the COLA and adjacent cells in the relevant indictment period, the calls must be seen in the overall context and connected to provable events. These include whether the Prosecution has proved that Mr Oneissi was 'Mohammed', that Mr Oneissi and Mr Sabra participated in Mr Abu Adass's disappearance and preparing the false claim video and that they made the four calls to Reuters and Al-Jazeera on the afternoon of Monday 14 February 2005. The findings on each of these are set out separately.

IX. ATtribution OF MOBILE TELEPHONES TO THE ACCUSED AND MUSTAFA AMINE BADREDDINE

A. Single user analysis

1. Introduction

2490. The case against the four Accused—and proving Mr Badreddine’s pleaded role in the conspiracy charged—depends upon the Prosecution successfully proving that they were using specified mobiles. The result of this is termed ‘attribution’. Proving this attribution of specified personal mobiles is the first step towards cell site co-location analysis, which attempts to determine whether they were also simultaneously using certain colour-coded network mobiles and their attributed personal mobiles. If they were, the next step is determining whether they participated in committing the crimes charged.

2491. The Prosecutor in the amended consolidated indictment defines ‘attribution’ and ‘co-location’ as:

Attribution is evidence that supports the assertion that a SIM card (telephone number) was used by a specific person (the phone user) during a particular time period. Attribution evidence may include, but is not limited to: subscriber information, witness statements, other forms of documentary evidence and analysis of Call Data Records, including co-location analysis.

Co-location analysis is used as a form of attribution evidence where multiple phones are attributed to a single user. It is an analytical technique designed to determine whether an identified person consistently uses two or more phones, at least one of which is a mobile phone.⁵¹⁴²

2492. This part of the Prosecution case is factually very complicated. Neither the Accused nor Mr Badreddine had mobile subscriptions in their own names, which could have made the attribution analysis easier. It appears that the Lebanese investigating authorities, and then the UNIIIC and the Prosecution, worked ‘backwards’—as they had to—by first identifying the patterns of mobile use in suspected closed networks that appeared to be connected with the

⁵¹⁴² Amended consolidated indictment, para. 14 (b)-(c).

surveillance, and or assassination of Mr Hariri, and then attempting to find mobiles that were co-locating with these identified network mobiles. They then had to identify who was using the mobiles that appeared to be co-locating with the network mobiles.

2493. From there, as none of the co-locating non-network mobiles were registered in either Mr Badreddine's or an Accused person's name, the investigators closely examined the circumstances surrounding their use to attempt to find their users. The UNIIIC and the Prosecution engaged in a complex and time-consuming inquiry checking for everything that could be gleaned from the 'associations' of a targeted mobile, attempting to determine who was using it, to connect it with a suspect, or to identify a potential new suspect.

2494. This inquiry included analysing each mobile's pattern of use—such as where it was used, who it was in contact with and how often and who its contacts contacted. This included examining SMS content and anything else connecting it with its user, such as whether it was used as a contact number in official and commercial dealings. In its vast investigation, the Prosecution used a combination of sources for this: checking official records, commercial documents, scrutinising the use patterns of the mobiles of contacts of the suspect mobiles and contacting numerous people who may have had contact with the five suspects—and presumably other suspects who were not charged, such as Subjects 5 to 9.

2495. Describing the efforts expended in this, the Prosecution, in its final trial brief, explained that:

The attribution analysis was captured in five reports authored by Prosecution analyst Andrew DONALDSON, where he attributes the usage of both non-network and network phones to the Accused and to BADREDDINE. Each report analyses thousands of calls between many mobile telephones, SMS content, witness statements and testimonies, extracts from official Lebanese records, and various documents including university, medical and subscriber records.

The Prosecution relies on the co-location analysis of PHILIPS and of DONALDSON, which shows that **AYYASH**, **MERHI** and **BADREDDINE** each used multiple phones, including non-network and network phones.⁵¹⁴³

2496. Apart from Mr Donaldson, the Prosecution's cell site expert, Mr J. E. Philips, analysed the calls and cell use of the personal mobiles attributed to Mr Ayyash, Mr Merhi and Mr Badreddine, as well as the network mobiles, to offer an opinion as to whether, where relevant, a personal and a network mobile had a single user.

2497. The Prosecutor relied upon Mr Donaldson's non-expert cell site opinions in submitting indictments for confirmation. The Prosecutor filed no expert cell site evidence in the supporting materials accompanying his initial indictments in 2011, nor in the amendments filed in 2012. The Prosecution case, however, relied upon cell site evidence and specifically in proving that Mr Ayyash and Mr Badreddine were using the pleaded network mobiles. The attribution was based on proving that these mobiles were co-locating with their personal mobiles, and additionally for Mr Ayyash, with the Red and Blue mobiles.

2498. For Mr Oneissi and Mr Sabra, the case against them relied upon cell site evidence of their personal, Purple colour-coded, mobiles activating cells in places relevant to the indictment in January 2005 and on the afternoon of Monday 14 February 2005.

2499. The Prosecution engaged Mr Philips as a cell site expert in mid-2012, and he produced his first report in September 2012, a general report entitled, 'Cell site analysis as applied to GSM networks'. He produced his first report on an Accused, Mr Ayyash, in October 2012, followed by one on Mr Badreddine in November 2012, and one on 'Suspects 4, 5, 6, 7 & 8' in December 2012. In respect of Mr Merhi, against whom an indictment was submitted in June 2013, Mr Philips produced his first report, mid-trial, in September 2014.

⁵¹⁴³ Prosecution final trial brief, paras 83-84.

2. Mr J. E. Philips's evidence

(a) Single user analysis

2500. Mr Philips, as noted above, came into the case well after it was indicted. He prepared eleven reports and revisions relevant to single user analysis and co-location.⁵¹⁴⁴ He prepared specific reports for Mr Ayyash, Mr Badreddine and Mr Merhi—who he (initially) knew as respectively Suspects 1, 2 and 3—and a combined report for Subjects 4, 5, 6, 7 and 8. He also prepared a revised report that took end cell data into account, for Suspects 1, 2, 4, 5, 6, 7 and 8. Additionally, he used slides in his testimony in court to facilitate understanding of his methodology and reports.⁵¹⁴⁵

2501. He explained that single user analysis is a forensic technique used to determine whether a single person was using two or more mobiles, or alternatively that they were not being used by the same person.⁵¹⁴⁶ The analysis has two components. The first is to demonstrate that use of the mobiles in question is 'consistent with co-location', either together geographically or that the distance that they are apart 'could be travelled in the time between the calls'.⁵¹⁴⁷ The second is that the calling patterns of the mobiles should be consistent with single person use.⁵¹⁴⁸

⁵¹⁴⁴ Exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction); exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash); exhibit P1112 (Expert report of John Edward Philips – Single user analysis, Suspects 4, 5, 6, 7 and 8); exhibit P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review); exhibit P1114 (Expert report of John Edward Philips – Red mission phones); exhibit P1115 (Expert report of John Edward Philips – 15 Blue mission phones); exhibit P1116 (Expert report of John Edward Philips – Green mission phones); exhibit P1117 (Expert report of John Edward Philips – Common Mission Phones); exhibit P1936 (Expert report of John Edward Philips – Single user analysis in relation to Blue 322, Blue 324 and Blue 585); exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine); exhibit P1938 (Expert report of John Edward Philips – Single user analysis with end cell review, Suspect 3, Mr Merhi); exhibit P2120 (Expert report of John Edward Philips – Revised single user analysis, Suspect 3, Mr Merhi).

⁵¹⁴⁵ Exhibit P1935 (PowerPoint presentation on single user analysis, John Edward Philips).

⁵¹⁴⁷ John Edward Philips, T. 19 April 2017, pp 93-94; exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), para. 10.4.9.1.1.7; exhibit P1935, slide 10.

⁵¹⁴⁸ John Edward Philips, T. 19 April 2017, pp 94-97; exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), para. 10.4.9.1.3.2; exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), paras 3.1.2.4-3.1.2.5; exhibit P1112 (Expert report of John Edward Philips – Single user analysis, Suspects 4, 5, 6, 7 and 8), paras 3.1.2.4-3.1.2.5; exhibit P1935, slide 12; exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), paras 3.1.2.4-3.1.2.5; exhibit P1938 (Expert report of John Edward Philips – Single user analysis with end cell review, Suspect 3, Mr Merhi), paras 3.1.2.4-3.1.2.5.

(b) General cell site techniques for attribution and co-location analysis

2502. Mr Philips, in his general report, described the attribution and co-location techniques that are used in cell site analysis to attribute mobile usage to a specific user. He emphasised that associating a mobile with someone and attributing it to that person are different concepts. They are ‘quite different and association of a mobile phone with a person is normally not sufficient to qualify that that mobile phone was being used by the suspect at the time of the incident’.⁵¹⁴⁹

2503. He explained the sources that could be used to attribute a specified mobile to a person. These include mobile number registration details, and this is mainly for post-paid (account) mobiles, as networks maintain subscriber data such as full name, full address, home and work telephone and the mobile’s IMSI and SIM numbers. There are also text messages, payment methods, data stored on the handset and SIM, contacts stored in the mobile, voice memos, personal photographs and videos stored on the mobile, memo pads, music, diaries, contacts with institutions such as doctors, dentists, banks, insurance companies and so on that may record contacts or calls, voicemails and voicemail greetings, credit card usage and swapping two SIMs between a handset. SMS content can also illustrate the mobile user’s activity at the time of the messages.⁵¹⁵⁰

2504. Mr Philips referred to an example of two mobiles that have different SIMs and which the cell siting demonstrates are obviously being used by two separate people. However, ‘when the IMEIs in the two sets of call data records suddenly swap’, it shows that ‘the users of the two mobiles quite likely know one another’. This means that ‘they probably meet up within the timeframe determined by the call data records’ and ‘in a location determined by *Cell Site Analysis*’ of the two mobiles phones.’⁵¹⁵¹ In other words, swapping handsets between SIMs indicates that the previously separate users of the different mobiles likely know each other.

2505. ‘Cell utilisation analysis’ examines the use of cells by mobiles of interest and shows the geographical concentrations of calls.⁵¹⁵² This can associate the user(s) with presence at a location of interest, depending on the time period over which the cell use occurs. Mr Philips explained that:

⁵¹⁴⁹ Exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), p. 134.

⁵¹⁵⁰ Exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), pp 134-141.

⁵¹⁵¹ Exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), pp 140-141.

⁵¹⁵² See generally exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), pp 150-157.

Use of a mobile phone, and the provision of all data records with cell information per call, provides a geographical footprint of the movements of the user of the mobile phone over the period of interest - as long as calls regularly occur.⁵¹⁵³

2506. Patterns of calls, including the absence of calls, correspond to a person's capability to make them. The location and timing of calls reflect the 'locations of common use'. Mr Philips provided the example of the mobile user who 'will typically get up in the morning, having normally slept at the place of abode, may go out to work, meet friends for recreational purposes'. The user's pattern of movement, as shown by the calls made and received during this period, can present a 'unique geographical signature' as long as they occur over a period.⁵¹⁵⁴

2507. Mr Philips's report explained the concept of co-location, including tests to determine whether the mobiles were together or could have been used by one person or two.⁵¹⁵⁵

Co-location is a term attributed to 2 (or more) mobile phones being cell sited in the same area as one another and/or travelling in consonance i.e. travelling over the same route over the same time period such that the users of the mobile phones could be together.

This can be employed to show that either the 2 mobile phones are being used by 2 separate people, and therefore the 2 people are travelling together, or that the 2 mobile phones are being used by a single person.⁵¹⁵⁶

2508. In other words, a single person could be using two or more mobiles if (a) certain calls by the respective mobiles are registered in the same cell coverage area, and (b) other less proximate calls are made within a distance that could be travelled within the time separation between the calls.⁵¹⁵⁷ In his testimony, Mr Philips further defined co-location as a forensic technique—based on analysing call data records and geography—used to prove that a single person was simultaneously using different mobiles.⁵¹⁵⁸

⁵¹⁵³ Exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), p. 151.

⁵¹⁵⁴ Exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), p. 151.

⁵¹⁵⁵ Exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), pp 142-150.

⁵¹⁵⁶ Exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), p. 142, paras 10.4.9.1.1.1-10.4.9.1.1.2.

⁵¹⁵⁷ John Edward Philips, T. 19 April 2017, pp 93-94; exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), p. 143, para. 10.4.9.1.1.7; exhibit P1935, slide 10.

⁵¹⁵⁸ Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), paras 3.1.1.1.3-3.1.1.4; John Edward Philips, T. 19 April 2017, p. 85.

2509. These definitions appear not to be in dispute in the proceedings. The dispute concerns the reliability in general and specific senses of the Prosecution's cell site evidence, and hence whether it can establish beyond reasonable doubt that the Accused and Mr Badreddine were using certain mobiles.

2510. Mr Philips also explained that analysing the mobile numbers in contact with a mobile of interest is not essential to cell siting, meaning the cell to which a mobile is connecting. Rather, it is an attribution technique within cell site reports.⁵¹⁵⁹ 'In order to provide a pattern of significance, the period of analysis has to occur over a selected period'.⁵¹⁶⁰ A period of only a few days is often insufficient to represent a pattern indicative of a particular activity.⁵¹⁶¹

2511. He observed that cell siting may be meaningless unless a specific mobile can be attributed to someone through cell site analysis. Attribution is essential to support the cell site analysis. In this sense, the work of attributing a mobile to a named person is relatively limited in scope and mainly relates to analysing the cells that the mobile is using. Mr Philips noted that although each piece of attribution evidence in isolation may not be conclusive, compounding several of them can provide conclusive evidence.⁵¹⁶²

(c) Mr Philips's methodology

2512. In analysing the call data records, Mr Philips used two 'time criteria'—a set time-period within which a series of calls is analysed—to attempt to determine whether a mobile potentially had a single user.⁵¹⁶³

2513. These were of calls on different mobiles occurring within five minutes of one another, and two calls of interest happening within 60 minutes.⁵¹⁶⁴

2514. He explained that when the call data records show two alleged single user mobiles making successive calls within five minutes, the mobiles should be in the same area, relatively close

⁵¹⁵⁹ Exhibit P549 (Expert report of John Edward Philips – Cell site analysis, p. 157, paras 10.4.11.1.1.1-10.4.11.1.1.6.

together and, therefore, potentially co-locating. The rationale is that if a single user was using both mobiles, they would be in the same location, or one close to it, within that five minute period.⁵¹⁶⁵

2515. In light of Lebanon's geographical size, Mr Philips selected a period of 60 minutes for his comparisons.⁵¹⁶⁶ For the purposes of the analysis, each set of calls—such as between a 'mobile 1' and a 'mobile 2', and a 'mobile 3' and a 'mobile 4'—is described as a 'pair of calls'; both Mr Philips and Mr Donaldson used this term.

2516. Mr Philips explained that a certain distance can be travelled between two places in the time between two successive calls. His analysis, however, does not specify with precision how much time is needed to travel between them. This is because the time of the calls does not necessarily represent the mobile users' time of departure from, and arrival into, the cell registering the calls.⁵¹⁶⁷ He explained why:

So when we have two adjacent calls, one in Beirut, one in Tripoli, the time it takes to travel between the two is most probably less than the difference between the two times of the calls. And that relates to all cell siting. Two adjacent calls are not necessarily the last time it's in one area and the first time it's in the next area.⁵¹⁶⁸

2517. Mr Philips also used a 'distance criterion' for his analysis of cells providing common coverage, contiguous cells and cells apart from one another.⁵¹⁶⁹ The following three slides entitled 'same cell', 'overlapping cell' and 'contiguous cell', from his presentation, exhibit P1935, illustrate this:

⁵¹⁶⁵ John Edward Philips, T. 20 April 2017, pp 8-9; exhibit P1935, slide 22.

i. a) Same Cell

26

i. b) Overlapping Cells

27

*Exhibit P1935 (PowerPoint presentation on single user analysis, John Edward Philips),
slides 26-28*

2518. Mr Philips explained that when two mobiles use the same cell on the same network, or cells on different networks that have overlapping coverage, they are within an area of common coverage.⁵¹⁷⁰ His report states that, 'Over any cellular network, there will be many areas of best server coverage, each relating to a different cell and, hopefully, providing contiguous coverage over an entire area'.⁵¹⁷¹ 'Contiguous' in this context 'means cells that are touching/adjoining such that at certain locations they have a common best server coverage boundary.'⁵¹⁷² He explained that cells apart from one another are cells that are separated in terms of cell coverage.⁵¹⁷³

2519. He also stated that determining whether multiple mobiles had a single user also relies upon them not being dislocated, meaning that the mobiles are a distance apart which could not be travelled in the time between two successive calls.⁵¹⁷⁴

⁵¹⁷⁰ John Edward Philips, T. 20 April 2017, p. 12; exhibit P1935, slides 26-27.

⁵¹⁷¹ Exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), p. 68, para. 6.5.1.1.1.3.

⁵¹⁷² Exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), p. 68, para. 6.5.1.1.1.3, fn. 13.

⁵¹⁷³ John Edward Philips, T. 20 April 2017, p. 13; exhibit P1935, slide 29.

⁵¹⁷⁴ John Edward Philips, T. 20 April 2017, p. 14.

2520. As determining the route taken by the mobile telephone user and the actual distance travelled is impractical, Mr Philips measured the distance between the centres of the best server coverage of the relevant cells in a straight line.⁵¹⁷⁵ To do this, he relied on Alfa's and Touch's predicted best server coverage maps.⁵¹⁷⁶ He used these maps and the measured distance between the cells to perform his geographical analysis, or 'cell utilisation'.

2521. In general, Mr Philips used the cell masts the mobiles connected to upon initially making or receiving a call, the 'first cell ID'.⁵¹⁷⁷ Later, he supplemented his analysis by including the cell mast to which a mobile connected at the end of a call, the 'last cell ID' or 'end cell ID' and explained whether this additional analysis had an impact on the location of the mobile's user.⁵¹⁷⁸

2522. Mr Philips also analysed Alfa's and Touch's call data records to determine whether calls were made between target mobiles, and if calls overlapped in time. He explained the significance of call patterns. As a general proposition, when one person uses two or more mobiles, calls between them, and calls overlapping in time on them, are unlikely.⁵¹⁷⁹ However, overlapping calls do not necessarily exclude that the same person is using the mobiles. When this occurs, the mobiles have to be using the same or an adjacent cell. Or, when on different networks, those that overlap in predicted best coverage.⁵¹⁸⁰

2523. Mr Philips assessed the call data records and combined these with a geographical analysis. He emphasised that cell site analysis alone cannot determine with certainty whether two or more mobiles co-locate; it is merely a possibility.⁵¹⁸¹ He explained this as, the greater the number of examples combining potential co-location and movement in concert, and the lesser the instances of dislocation, the higher the degree of probability that a single person is using two or more mobiles.⁵¹⁸²

(d) Mr Philips's conclusions

2524. From evaluating the call data records of calls on the different mobiles, Mr Philips assigned what he described as 'pairs' of calls into one of the following four categories.

2525. These are: 'could be co-located', 'would not preclude co-location', 'may preclude co-location' and 'would preclude co-location'.⁵¹⁸³ Unlike Mr Donaldson, in his reports, Mr Philips did not positively state that any of the pairs of calls analysed meant that the two mobiles *were* co-locating, or that they had a single user.

2526. The first category is 'could be co-located'. It involves situations where two or more mobiles activate the same cell on the same network or, if they are on different networks, overlapping cells.⁵¹⁸⁴

2527. The second category is 'would not preclude co-location'. This refers to where two different mobiles activate cells which are apart from one another and it is possible to travel the distance between the cells within the time between the calls.⁵¹⁸⁵

2528. Mr Philips's third category was 'may preclude co-location', occurring where a possibility of dislocation exists.⁵¹⁸⁶ In this category, either the mobiles purportedly used by a single person are geographically apart or there are other factors, such as signal behaviour.⁵¹⁸⁷

⁵¹⁸¹ John Edward Philips, T. 20 April 2017, pp 20, 60-61, T. 26 April 2017, pp 75-76.

⁵¹⁸⁶ Exhibit P1935, slide 42.

⁵¹⁸⁷ John Edward Philips, T. 20 April 2017, p. 37.

2529. One example, of different mobiles that the Prosecution attributed to Mr Badreddine, was of two calls on different mobiles occurring eight seconds apart but activating two cells with masts almost five kilometres apart—a distance that is physically impossible to travel on land, but with the possibility of connection depending on the surface area of the actual cell coverage. The two cell masts, however, faced each other across a bay. Mr Philips explained that although it is unlikely that a person travelled that distance in that time, co-location may not be precluded because signals may travel unimpeded across water, and thus may cover an area outside of the network’s predicted best server coverage.⁵¹⁸⁸

2530. This is illustrated in the following in-court extract from the electronic presentation of evidence showing Mr Badreddine’s personal mobiles 944 and 663 connecting to cells across a bay between Beirut and Tripoli:

⁵¹⁸⁸ Exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), paras 7.4, 7.4.1.5, explaining, ‘However, the best server coverage from both these cells is extensive and fragmented away from the main best server coverage areas, some of which can be seen to provide best server coverage areas very close together, and this may not preclude the mobiles from being co-located. The 2 cells also “face” one another across water where there is limited path loss and so the signals from both cells may extend further than anticipated’; *see also* John Edward Philips, T. 20 April 2017, pp 36-37, T. 21 April 2017, pp 17-21; exhibit P1935, slides 42, 206-208; exhibit P1940 (Electronic presentation of evidence snapshot related to exhibit P1935, slides 206-208).

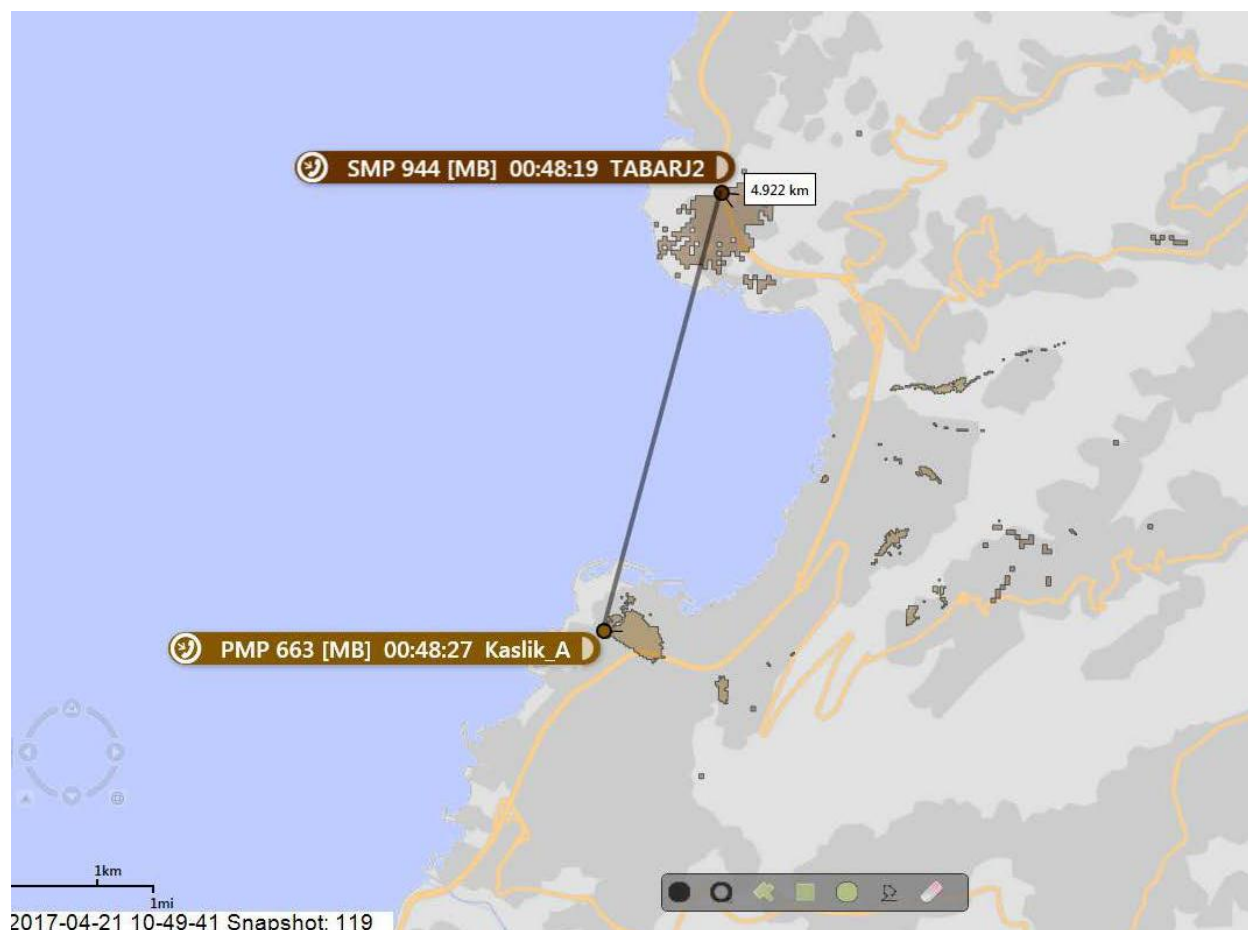

Exhibit P1940 (Electronic presentation of evidence snapshot related to exhibit P1935, slides 206-208)

2531. The fourth category, ‘would preclude co-location’, refers to a geographical separation between the cell masts the mobiles connect to that could not possibly be travelled in the time between the calls.⁵¹⁸⁹ To illustrate, Mr Philips referred to successive calls 23 minutes apart on cells 77 kilometres distant.⁵¹⁹⁰

2532. Determining with precision the location of a mobile can become even more problematic when a mobile is travelling in a vehicle. Mr Philips explained as an example how two vehicles

⁵¹⁸⁹ John Edward Philips, T. 21 April 2017, pp 48-49; exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), para. 10.4.9.5.1.2; *see also* exhibit P1935, slide 42.

⁵¹⁹⁰ As an example, exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), p. 88, referring to mobiles attributed to Mr Ayyash, namely Red 741 and Yellow 294, and two calls that ‘are separated, in time, by ~23 minutes and use cells TOURBO1 and HADATH3, the centres of the main areas of best server coverage of which are ~77 Km apart, and so would preclude the mobiles from being co-located’.

travelling in opposite directions on the same road and approaching the same point ‘could be using cells for calls where, if they were static, do not provide best server coverage and would not be used for calls’,⁵¹⁹¹ meaning ‘that 2 mobile phones, at the same location, will use different cells i.e. the best serving cell for any calls’.⁵¹⁹²

2533. Put simply, someone standing in the street could connect to the cell providing predicted best server coverage for the street. The mobiles in use in two vehicles coming from opposite directions and passing the pedestrian, however, could still be connecting to different, more distant cells that they had connected to before while driving through other areas providing predicted best server coverage to these more distant cells.

2534. Mr Philips identified the factors that could diminish the probability of coincidental patterns, and hence establish a probability of a sufficient degree—for the purpose of criminal proceedings—that the mobiles had a single user.⁵¹⁹³ These are the period of use, the call frequency and the mobile’s movement. In this case, he analysed a long period of mobile use, namely between September 2004 and mid-February 2005, where mobiles could have co-located and have call patterns suggesting single use. The frequency of calls includes having a high number of calls. Finally, there is the extensive movement of the mobiles.⁵¹⁹⁴

2535. Mr Philips also explained that ‘the more people that live in a particular area, the more chance there is of a coincidence of calling’, and:

to remove the element of coincidence, the more calls there should be and the more geographical movement there should be by both users of the phones. Two people using a cell site over a period of days, and only using a cell site, may simply be regarded as coincidence. And if there is 10.000 of those, the chance of coincidence goes up.⁵¹⁹⁵

2536. In his reports and his testimony, Mr Philips did not positively state that mobiles were co-locating and hence had a single user. He was prepared only to offer qualified opinions as to possibilities.

⁵¹⁹¹ Exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), p. 76, para. 6.5.3.2.1.26.

⁵¹⁹⁵ John Edward Philips, T. 25 August 2015, p. 78.

3. Mr Andrew Donaldson's evidence and methodology

2537. Unlike Mr Philips, Mr Donaldson is not an expert in co-location analysis. Mr Donaldson, in anticipation of his testimony, had prepared an 'attribution report' for each Accused and for Mr Badreddine. They were summary reports with an accompanying analytical overview, in which he appeared to reach positive conclusions as to whether specified mobiles were co-locating and, hence, attributable to Mr Ayyash, Mr Merhi or Mr Badreddine.⁵¹⁹⁶

2538. The Prosecutor relied upon Mr Donaldson's evidence to prove his case attributing mobiles to the four Accused and Mr Badreddine when he submitted the indictment and subsequent amendments.

2539. Until 20 June 2016, Mr Donaldson's name was on the Prosecution's witness list as an intended expert witness. The Prosecution then decided not to call him as an expert witness. However, shortly before Mr Donaldson was due to testify—not as an expert, but as a Prosecution in-house analyst who would provide non-expert opinion evidence—the Ayyash and Merhi Defence challenged his expertise and sought the exclusion from evidence of parts of his attribution reports. The Trial Chamber held a *voir dire* hearing, in relation to Mr Donaldson's expertise and methodology, before deciding upon the application.⁵¹⁹⁷

2540. The Defence challenged Mr Donaldson's capacity to provide opinion evidence on co-location and therefore possible attribution. The Trial Chamber, in deciding the Defence challenge, set out the basis for hearing and considering Mr Donaldson's evidence, while permitting him to give some non-expert opinion evidence.

2541. It is convenient to extract the main points in the decision, as these have governed how the Trial Chamber has treated Mr Donaldson's evidence. In the decision, the Trial Chamber noted and held the following:

Mr Donaldson is not testifying as an expert. His five reports provide an overview of the Prosecution's evidence and, in this respect in some places, more resemble a Prosecution final trial brief than an expert report. Much of the content of his five reports evidence is

⁵¹⁹⁶ Decision on opinion evidence (Mr Donaldson), paras 8, 71.

⁵¹⁹⁷ Andrew Donaldson, T. 8 May 2017, pp 20-69.

therefore more in the nature of summary evidence, but with an accompanying analytical overview.⁵¹⁹⁸

Mr Donaldson has performed a comprehensive review of the Prosecution's cell-site and attribution evidence, and has collated and analysed it.⁵¹⁹⁹

It is self-evident that cell site analysis alone—without more—is insufficient to categorically conclude with 100% certainty that one person was using more than one mobile at a given time. Proof beyond reasonable doubt, however—based upon analysing call data records, calling patterns, calling contacts, and the geographical locations of mobiles, in combination with other evidence, in other words, analysing the totality of the evidence against an Accused person—is a different matter.⁵²⁰⁰

Mr Donaldson, in the Trial Chamber's view, is sufficiently qualified by his experience in the area to proffer an opinion on co-location and therefore possible attribution, but that any opinion must be suitably qualified in a manner similar to that of Mr Philips. The Trial Chamber will therefore not accept Mr Donaldson's opinions as unqualified conclusions. It will not allow him to categorically conclude, as he appears to have done in his three reports, that there was co-location, and hence attribution of personal and network mobiles to Mr Ayyash, Mr Merhi or Mr Badreddine.⁵²⁰¹

Mr Donaldson may therefore provide an opinion, based upon his experience in analysing call data records and other cell site evidence, as to whether co-location is possible on the evidence he has reviewed. He is not entitled to conclude that there was co-location and hence single user attribution of personal and network mobiles. Mr Philips, the expert, would not go that far, and that determination is for the Trial Chamber's alone.⁵²⁰²

Using Mr Philips's terminology, Mr Donaldson may therefore provide an opinion as to whether the evidence he has reviewed entitles him to provide an opinion in respect of certain mobiles, for example, as to whether mobiles 'could be co-located', 'would not

⁵¹⁹⁸ Decision on opinion evidence (Mr Donaldson), para. 71.

⁵¹⁹⁹ Decision on opinion evidence (Mr Donaldson), para. 86.

⁵²⁰⁰ Decision on opinion evidence (Mr Donaldson), para. 81.

⁵²⁰¹ Decision on opinion evidence (Mr Donaldson), para. 91.

⁵²⁰² Decision on opinion evidence (Mr Donaldson), para. 93.

preclude co-location’, ‘may preclude co-location’ and ‘would preclude colocation’, and thus whether this is consistent with a mobile having a single user.⁵²⁰³

The probative value of any opinion from Mr Donaldson as to whether co-location is possible is therefore a matter of the weight for the Trial Chamber when it assesses the totality of the evidence. The Trial Chamber is cognisant that Mr Philips is an expert in cell site analysis whereas Mr Donaldson is not, and will take this into account in assessing the opinions of the two witnesses and attributing the necessary weight to the evidence of either. The Trial Chamber will bear in mind the technical limitations of Mr Donaldson’s evidence, and in this respect, he must point out to the Trial Chamber any aspects of his three reports in which he has offered an opinion on co-location, in which he must defer to Mr Philips’ expertise.⁵²⁰⁴

The Trial Chamber will allow the Prosecution to lead the evidence but the witness, Mr Andrew Donaldson, must properly explain his methodology and qualify his opinions. The Trial Chamber will then carefully scrutinise any such opinion and, in evaluating his evidence as a whole, give it the appropriate weight.⁵²⁰⁵

2542. Mr Donaldson’s reports have assisted the Trial Chamber to piece together the evidence on co-location and attribution. However, it is the Trial Chamber’s role—as the trier of fact—to decide upon co-location and attribution and, thus, it has not accepted Mr Donaldson’s unqualified conclusions on these matters.⁵²⁰⁶ The Trial Chamber also held in the decision that:

It is therefore apparent that better legal oversight of the structure and content of the three reports could have been provided. In particular, Mr Donaldson’s reports should not have expressed unqualified conclusions about co-location, and most particularly, the methodology underlying the expression of any opinion should have been properly explained.⁵²⁰⁷

2543. The Trial Chamber has accordingly treated Mr Donaldson’s evidence with the caution expressed in the extracts from the decision quoted above.

⁵²⁰³ Decision on opinion evidence (Mr Donaldson), para. 94.

⁵²⁰⁴ Decision on opinion evidence (Mr Donaldson), para. 96.

⁵²⁰⁵ Decision on opinion evidence (Mr Donaldson), para. 1.

⁵²⁰⁶ Decision on opinion evidence (Mr Donaldson), paras 72, 86, 89-91, 93.

⁵²⁰⁷ Decision on opinion evidence (Mr Donaldson), para. 83.

2544. Mr Donaldson, like Mr Philips, employed a co-location analysis as part of his work of attributing telephone numbers to Mr Ayyash, Mr Merhi and Mr Badreddine. However, his methodology differed in some respects.

2545. In his explanatory report, ‘Co-location Analysis – Methodology’—prepared at the Trial Chamber’s direction before it would receive his testimony—Mr Donaldson explained the technique as one he used when all other means of attribution had been exhausted:⁵²⁰⁸

Co-location analysis, as applied in my attribution reports, is the technique of analysing cell site records of multiple phones at a cell site sector level to establish if they continuously:

- Use the same sector at the same time;
- Use adjacent sectors close in time;
- Move in concert in a logical manner; and
- Are found at the same time in distinctive areas, for example places remote from most frequently used sectors that would indicate common travel. The greater the distance from home, the more distinctive the area may be considered if it is uncommon. Larger time gaps may be afforded more weight in these circumstances due to the coincidence of two phones travelling to unusual areas at the same time.⁵²⁰⁹

2546. He explained that he conducted a call-by-call review of two mobiles of interest, which involved an examination of the times that the mobiles were used ‘to determine whether the data would allow meaningful inferences to be derived from their respective locations.’⁵²¹⁰ His analysis focused ‘upon the points when the use “swaps” from one to the other close in time’,⁵²¹¹ providing the following example:

If, for instance, Phone A is used at 9am and Phone B is only used at 9pm, there would be no way of using this information alone to rule out one or the other of two possibilities: (1) the phones being used by a single user or (2) by separate users.

⁵²⁰⁸ Exhibit P1948.2 (‘Co-location Analysis – Methodology’ report of Andrew Donaldson), paras 1, 3.

⁵²⁰⁹ Exhibit P1948.2, para. 2.

⁵²¹⁰ Exhibit P1948.2, para. 6.

⁵²¹¹ Exhibit P1948.2, para. 6 (b).

Both inferences would be equally valid, all other factors aside. If, however, **Phone A** is used at 9am and **Phone B** is used at 9:10am, the two phones would be suitable for further testing whether **Phone A** and **Phone B** could have been used by a single user. This is because such short time differences impose limits on how far apart these phones could be to be used by a single person. A much longer time difference between calls in a country the size of Lebanon would not normally rule out one user travelling from e.g. one end of the country to the other to make the calls.⁵²¹²

(a) Definitions, terminology and step-by-step process

2547. In his reports, Mr Donaldson interchangeably used the terms ‘co-location analysis’ and ‘single user analysis’.⁵²¹³ He also used the expression ‘anomaly’.⁵²¹⁴ In his evidence, however, he clarified that his reports should be read by replacing ‘co-location’ with ‘positive indicator’, and ‘anomaly’ with ‘negative indicator’.⁵²¹⁵ He explained that his use of ‘anomaly’ may differ from how Mr Philips used it, but neither of them used it as a term of art.⁵²¹⁶ Mr Donaldson used ‘anomaly’ to mean mobile use which is ‘negative’ to testing the theory that a single person had control of an identified mobile.⁵²¹⁷

2548. Mr Donaldson defined ‘co-location analysis’ as the technique of analysing cell site records of multiple mobiles at a cell site sector level to establish if they continuously:

- Use the same sector at the same time;
- Use adjacent sectors close in time;
- Move in concert in a logical manner, or as one would expect. For example, repetitive erratic movements may be considered illogical; and

⁵²¹² Exhibit P1948.2, para. 6 (b), fn. 4 qualifies that the term ‘location is used here to refer to a cell sector, which is as precise a location as can be identified from CDRs alone. “Location” in my analysis does not represent the precise point location of a phone’.

⁵²¹³ Andrew Donaldson, T. 20 June 2017, p. 79.

⁵²¹⁴ Exhibit P1948.1 (PowerPoint presentation on ‘Analysing cell site use: multiple phones’, Andrew Donaldson), slide 14; Andrew Donaldson T. 21 June 2017, p. 9.

⁵²¹⁵ Andrew Donaldson, T. 21 June 2017, p. 9.

⁵²¹⁶ Andrew Donaldson, T. 21 June 2017, pp 38-39.

⁵²¹⁷ Andrew Donaldson, T. 21 June 2017, p. 38.

- Are found at the same time in distinctive areas, such as those remote from the most frequently used sectors that would indicate common travel. The larger the distance, the more distinctive an uncommon area may be considered. The larger the time gaps the more significance they may be afforded.⁵²¹⁸

2549. In explaining his methodology, Mr Donaldson stated that he used ‘a variety of tools and sources’. These included: call data records and call sequence tables; locations of cell towers, their sectoring and predicted best server coverage of cell sectors; and Google Earth for topographical information, such as elevation data and the presence of hilly terrain.⁵²¹⁹

2550. Mr Donaldson explained that as a first step he used cell dumps to identify a ‘candidate mobile’ for co-location analysis with the target mobile.⁵²²⁰ He would identify two or more instances, at disparate locations, where the target mobile consistently used a cell for a protracted period—for example, 30 to 90 minutes.⁵²²¹ He would then look at which other mobiles were also using cell sectors in those locations at those times, to see which mobiles were common to all of them.⁵²²²

2551. Mr Donaldson explained that any candidate mobiles identified through cell dumps would be tested against the target mobile, following a methodical review of *all* calls within the attribution period.⁵²²³

2552. If conducting a co-location analysis on more than two mobiles, Mr Donaldson would first establish co-location for one, then a second, and, if the results were ‘consistently positive with little or no negative indicators over a protracted period’, the records of these two mobiles would be merged and the records of a third, unattributed mobile possibly co-located would be compared with the merged records of the first two mobiles.⁵²²⁴

⁵²²⁴ Exhibit P1948.2, para. 10; Andrew Donaldson, T. 20 June 2017, p. 82.

(b) 'Positive indicators', 'negative indicators' and overall assessment

2553. Mr Donaldson explained that he would consider that two mobiles were held by the same person if there were numerous positive indicators and just one or two negatives ones.⁵²²⁵ Candidate mobiles could usually be quickly ruled out due to a high incidence of negative indicators, and it was very rare to find extensive positive indicators and no negative indicators between analysed mobiles.⁵²²⁶

2554. Positive indicators were successive calls by the two mobiles that demonstrate that they could be in the same location in that single instance.⁵²²⁷ Examples are the use of: the same cell sector within five minutes, adjacent sectors within ten minutes, opposing cell sectors at a similar time and successive cell sectors in a logical sequence.⁵²²⁸ Using the same sector two hours apart would be a neutral indicator, and using one ten kilometres and two minutes apart would be looked at as a possible negative indicator.⁵²²⁹

2555. Negative indicators were instances where, as a matter of logic, two mobiles' use showed that they could not have been held by the same person, such as when the distance between the locations of two successive calls could not have been travelled in the time elapsed between them, or calling behaviour which would be illogical for a single user.⁵²³⁰ Illogical behaviour would be anything that would not make sense, including overlapping contacts between the analysed mobiles, or movements which would be possible but illogical of a single user.⁵²³¹ Seeing such instances consistently would suggest another explanation for any identified positive indicators.⁵²³²

2556. Mr Donaldson sought to list any negative indicators in his reports, providing an explanation for those which he was able and identifying that some examples were without explanation where 'it is clear that the phones could not have been used by the same person'.⁵²³³ He reported instances of negative indicators by giving information about the calls, including the times and the cell towers

⁵²²⁵ Andrew Donaldson, T. 20 June 2017, p. 82; *see also* exhibit P1948.2, para. 6 (c).

⁵²²⁹ Andrew Donaldson, T. 20 June 2017, p. 84.

⁵²³⁰ Exhibit P1948.2, para. 14; Andrew Donaldson, T. 21 June 2017, p. 7; exhibit P1948.1, slide 13.

⁵²³¹ Andrew Donaldson, T. 21 June 2017, p. 7; exhibit P1948.1, slide 13.

⁵²³² Andrew Donaldson, T. 21 June 2017, p. 7.

⁵²³³ Andrew Donaldson, T. 21 June 2017, pp 7, 10-11.

used, often accompanied by a map.⁵²³⁴ If the data permitted, he also provided an explanation.⁵²³⁵ Many could be explained through simple logic.⁵²³⁶

2557. Mr Donaldson referred to what he (confusingly) called ‘swaps’⁵²³⁷ made within ten minutes of one another, or ‘close in time calls’, as ‘the most valuable points to scrutinise in co-location analysis because anomalies are readily apparent, giving the example of unrealistic travel time’.⁵²³⁸

2558. He noted that all ‘swaps’ could offer positive or negative indicators of co-location based on logical inferences, thus the ‘overall assessment is a qualitative summation of each call swap’.⁵²³⁹ While the process could be replicated by anyone using the same data, the overall assessment on co-location may differ between analysts.⁵²⁴⁰

2559. To identify such explanations, he would first look at calls outside the ‘swap’ for ambiguous geographic anomalies, such as a pair of calls using cell towers which were too far apart for the distance to be travelled in the intervening time, but then one minute later one of the mobiles using the same cell as the other.⁵²⁴¹

2560. Mr Donaldson would defer to the telephone company or a cell site expert on how such a situation may have occurred, but in their absence would ‘use any means’ at his disposal to try to reconcile his ‘understanding of the mandated changes in assessment’.⁵²⁴² In the absence of a third call in this scenario, or where he was unsure as to whether something should be characterised as a negative indicator, he would do cell dumps to see if any single mobile had made the same movement in the same amount of time to support a positive assessment of the original pair of calls.⁵²⁴³

⁵²³⁴ Andrew Donaldson, T. 21 June 2017, pp 10-11; exhibit P1948.2, para. 15.

⁵²³⁵ Andrew Donaldson, T. 21 June 2017, p. 32.

⁵²³⁶ Andrew Donaldson, T. 21 June 2017, pp 10-11; exhibit P1948.2, para. 15.

⁵²³⁷ Mr Donaldson used the term ‘swap’ to mean that a single user was using different mobiles, by switching from one to the other, within a specified time period, Andrew Donaldson, T. 20 June 2017, p. 90. Mr Philips, by contrast, in exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), pp 140-142, used the term to denote a user switching a SIM from one handset to another. Mr Donaldson’s use of the term ‘swap’ was confusing, imprecise and counter-intuitive.

⁵²³⁸ Exhibit P1948.2, para. 7.

⁵²³⁹ Exhibit P1948.2, para. 7.

⁵²⁴⁰ Exhibit P1948.2, paras 8, 21.

⁵²⁴¹ Exhibit P1948.2, paras 16-17; Andrew Donaldson, T. 21 June 2017, pp 32-34.

⁵²⁴² Exhibit P1948.2, para. 18; Andrew Donaldson, T. 21 June 2017, p. 33.

⁵²⁴³ Exhibit P1948.2, para. 19; Andrew Donaldson, T. 21 June 2017, p. 33.

2561. Another example of an explanation for a seemingly negative indicator would be a demonstrable change in one of the mobiles' use during and limited to that time—such as calling only one number which was not a contact before or afterwards.⁵²⁴⁴

2562. Mr Donaldson explained that he did not provide subjective commentary on whether a given positive or negative indicator was more significant than another. Instead, he set out what the call data records showed regarding the timing and location of calls.⁵²⁴⁵

2563. After analysing these 'swaps', Mr Donaldson assessed the relationships between the relevant mobiles.⁵²⁴⁶ It was the sum of positive indicators and the absence of negative indicators which led to any assessment on co-location.⁵²⁴⁷ This was in addition to the distribution of positive indicators among different times of day, different days of the week and in different locations.⁵²⁴⁸

2564. Moreover, the more distinctive the geographic pattern of use—such as travelling a long distance away from commonly used cells—the more time could elapse between calls within a 'swap' while remaining relevant to the analysis.⁵²⁴⁹ He would also look at how the mobiles moved. For example, whether in a logical manner, such as along the route to a distinctive area even if the calls were not close in time. Or, conversely, 'illogically', for example repeatedly moving from one side of a city to another. The analysed mobiles should also not be in contact with one another, and have distinct contact profiles.⁵²⁵⁰

2565. Mr Donaldson emphasised 'the importance of the sum of the "swaps" in the overall assessment', stating that he would not assess two mobiles as having a single user if the records only showed negative indicators which he could explain.⁵²⁵¹ He specified that the higher the number and or quality of positive indicators, and the lower the number of negative indicators, the greater his degree of confidence would be in the conclusion. However, he emphasised that, as not all positive indicators are the same, each assessment is made on a case-by-case basis.⁵²⁵²

⁵²⁵¹ Exhibit P1948.2, para. 20.

⁵²⁵² Andrew Donaldson, T. 20 June 2017, pp 87-88.

(c) Mr Donaldson's reporting of results

2566. Mr Donaldson provided two forms of what he described as his 'reporting' the results of his analysis. These were call-by-call and empirical. Mr Donaldson stated that the ideal means of reporting the findings of co-location analysis would be to set out the information in tables, maps and text, which permit the reader to observe the mobiles moving in concert, and form their own view, without undertaking all of the steps and procedures undertaken by the analyst.⁵²⁵³

2567. Mr Donaldson did not map every day of calls relating to mobiles identified as those of Mr Ayyash and Mr Badreddine.⁵²⁵⁴ He therefore prepared an 'empirical' report to demonstrate his observations for both the mapped and unmapped days 'so the reader could look at a neutral measure and see that all days demonstrated the same observable patterns of positive indicators that the sample days did'.⁵²⁵⁵

(d) Weaknesses in the methodology

2568. Mr Donaldson also attempted to show the weaknesses of the methodology of using the distance between cell towers for his co-location analysis.⁵²⁵⁶ Ultimately, he explained why he believed that his methodology regarding the distance between the cell towers—supplemented by his subjective analysis—was the fairest reporting method.⁵²⁵⁷

2569. While it could both under-represent and over-represent the actual distances, Mr Donaldson considered that it was neutral with regard to all parties and produced the most accurate results to describe what he saw when reviewing the information subjectively.⁵²⁵⁸ He chose this method because of the breadth of the undertaking in setting out each call. The veracity of his empirical

reporting method could be tested with reference to examples given in various slide presentations overlaying the call-by-call and empirical methods.⁵²⁵⁹

4. Submissions

(a) Prosecution's general submissions

2570. The Prosecution relies on Mr Philips's and Mr Donaldson's co-location analyses to attribute network mobiles to Mr Ayyash, Mr Merhi and Mr Badreddine. It submits generally that their analyses prove that a single person was simultaneously using two or more specified mobiles.⁵²⁶⁰

2571. On Mr Philips's methodology generally, the Prosecution submits that he 'analysed and mapped each sequence where two or more mobile phones attributed to an Accused were used within one hour' of each other. This was to determine whether a mobile could have travelled the distance between the centres of the predicted best coverage areas in the intervening time.⁵²⁶¹

2572. Mr Philips's co-location findings simply show that mobiles were not used in locations between which a single user could not travel. To conclude that the mobiles had a single user and were not co-locating coincidentally, the co-location findings must be read in conjunction with where and how the mobiles actually moved.⁵²⁶²

2573. For each of Mr Philips's four categories of 'could be co-located', 'would not preclude co-location', 'may preclude co-location' and 'precludes co-location', the Prosecution points out that he provided mapped examples and a statistical overview of his findings. He also provided 'technical explanations in cases of unusual call activity, for example, where radio signals would have been affected by topography or stretches of water'.⁵²⁶³

2574. Mr Philips's categorisations, according to the Prosecution, 'have nothing to do with statistical probability' that two mobiles were used.⁵²⁶⁴ Rather, it 'reflects the statistics for individual pairs of calls over time' and simply shows that mobiles were not used in locations

⁵²⁵⁹ Exhibit P1948.2, paras 36-37.

⁵²⁶⁰ Prosecution final trial brief, paras 82, 84.

⁵²⁶¹ Prosecution final trial brief, para. 85.

⁵²⁶² Prosecution closing submissions, T. 12 September 2018, pp 64-66, 83, 90.

⁵²⁶³ Prosecution final trial brief, para. 85.

⁵²⁶⁴ Prosecution closing submissions, T. 12 September 2018, p. 65.

between which a single user could not travel.⁵²⁶⁵ The Prosecution went on to clarify that in his analysis of any individual pair of calls, when mobiles ‘hit the same cell sector within one hour’, Mr Philips could not conclude that the mobiles were together.⁵²⁶⁶

2575. The Prosecution recognises that co-location analysis ‘is not a scientific measurement to which we can say with a level of scientific certainty a result’.⁵²⁶⁷ Mr Philips had explained that:

the most important elements to consider to remove the possibility of a coincidence of two phones being used by two different people ... are the period of calls, the frequency and the movement of the mobile phones. And the greater these factors, the less likely that the consistency of co-location could be explained by chance. This is how we remove the possibility of a coincidence.⁵²⁶⁸

2576. Accordingly, the Trial Chamber is not asked to make any findings based on the distribution of the categorisations alone, but to consider this in conjunction with evidence of where and how the mobiles moved.⁵²⁶⁹

2577. In closing submissions, Prosecution counsel explained:

And the only thing that this shows is that it shows that phones move in a relative manner and are located in the same areas over a period of time and over various distances in such a way that it cannot be explained by coincidence. But this is not a scientific assessment. This is more, Your Honours, a common-sense assessment, that looking at a repetition of these incidents cannot be explained by coincidence.⁵²⁷⁰

2578. The Prosecution highlighted that according to Mr Philips, the categorisation ‘would not preclude co-location’ is ‘a very positive indicator of co-location’⁵²⁷¹ and further argued that it is the ‘category that we might see the most compelling signs that two phones are actually used by the same person when we consider that they could move together’.⁵²⁷²

⁵²⁷⁰ Prosecution closing submissions, T. 12 September 2018, p. 85.

⁵²⁷¹ Prosecution closing submissions, T. 12 September 2018, p. 65.

⁵²⁷² Prosecution closing submissions, T. 12 September 2018, p. 66.

2579. Of the fact that Mr Philips was essentially ‘shielded’ from the Prosecution’s work—this being the subject of united and strong Defence criticism—the Prosecution submitted that:

the Prosecution saw value in having Philips as an outside expert who could speak to the activity of the phones without having prior knowledge of the Prosecution’s case theory, especially in the light of the pro-Prosecution bias allegations that were made in various Defence briefs against Mr Donaldson.⁵²⁷³

2580. Prosecution counsel also stated that Mr Philips had never before ‘had the opportunity to work with data covering such a wide period’.⁵²⁷⁴

2581. Regarding Mr Donaldson’s methodology, the Prosecution pointed out that he assessed every pair of calls between relevant mobiles attributed to Mr Ayyash, Mr Merhi and Mr Badreddine during the attribution periods. For pairs of calls occurring within ten minutes, he used the distance between the cell towers and the time between the calls to determine whether the calls ‘could have been made by a single user’, and provided mapped examples and a statistical overview of his findings.⁵²⁷⁵

2582. In response to the Defence challenges to Mr Donaldson’s ability to perform co-location analysis, the Prosecution argued that Mr Philips’s work confirmed his analysis, noting that their respective analyses independently reached the same conclusions.⁵²⁷⁶

2583. Further, Mr Philips had stated that for single user analysis, the accuracy of predicted best coverage areas did not matter for determining whether mobiles moved together. This undercut the Defence challenges to the reliability of the underlying data.⁵²⁷⁷

(b) Defence submissions

i. Ayyash Defence

2584. The Ayyash Defence submits that single user analysis has significant limitations.⁵²⁷⁸ According to Mr Philips, it consists of both co-location analysis and call pattern analysis.⁵²⁷⁹ While co-location shows a ‘potential relationship’ between two mobiles, single user analysis takes this analysis further to ‘determine (to the degree possible) that a single person could be using multiple phones’.⁵²⁸⁰

2585. The Trial Chamber should not presume that two mobiles were together just because they co-located.⁵²⁸¹ Mr Philips explained that his analysis could not show that mobiles were actually travelling together, as it only showed ‘the absence of dislocation’.⁵²⁸² Mr Philips used the phrases ‘consistent with’ and ‘every possibility’ in his single user analysis conclusions ‘in recognition of the inability to make absolute conclusions regarding use by a single person’.⁵²⁸³

2586. The Ayyash Defence pointed to Mr Philips’s recognition that mobiles could appear to travel together even if used by business associates who also live at the same location. In this example, therefore, while the evidence might be consistent with the use of multiple mobiles by a single person, that same evidence is ‘also consistent with use by multiple, acquainted persons’.⁵²⁸⁴

2587. It also contrasts the limitations that Mr Philips identified with Mr Donaldson’s failure to recognise these limitations of co-location analysis, pointing to his lack of expertise in telecommunications or cell site analysis.⁵²⁸⁵ The Trial Chamber noted that Mr Donaldson made positive conclusions about co-location, although he had acknowledged that co-location cannot be used to determine that mobiles were physically together.⁵²⁸⁶ Indeed, Mr Donaldson maintained that he was not providing an opinion at all on co-location, instead believing that he could reach

⁵²⁷⁸ Ayyash Defence final trial brief, para. 293.

⁵²⁸² Ayyash Defence final trial brief, paras 295-296.

⁵²⁸³ Ayyash Defence final trial brief, paras 297.

⁵²⁸⁴ Ayyash Defence final trial brief, para. 297.

⁵²⁸⁵ Ayyash Defence final trial brief, paras 298, 301; Ayyash Defence closing submissions, T. 17 September 2018, p. 73.

⁵²⁸⁶ Ayyash Defence final trial brief, para. 298.

conclusions on single user analysis based on common sense and his past experience of working with call data records and looking at mobile movement.⁵²⁸⁷ Given the Trial Chamber's own concerns about his conclusions, it should disregard Mr Donaldson's opinions.⁵²⁸⁸

2588. Both Mr Philips and Mr Donaldson failed to take into account the unreliability of the data underlying their work, which further reduces the weight to be given to their co-location analyses.⁵²⁸⁹ Mr Philips stated that using best server coverage plots is preferable for analysing close-in-time calls, meaning that the 'appropriacy' of the coverage data must be considered. He stated that best server coverage plots are an estimation and should be used as such, and did not know why a passage setting this out was removed from an earlier draft of his report.⁵²⁹⁰

2589. Mr Philips was also not made aware of the full scope of the limitations of the data he worked with, such as the lack of certain contemporaneous data from Alfa and the fact that shape files were constructed using data from multiple years and lacking reliability hallmarks. He was also not given information about Mr Ayyash potentially being outside of Lebanon for the 2005 Hajj.⁵²⁹¹

2590. Mr Philips was therefore unable to address the limitations in the underlying data. Due to his lack of expertise, Mr Donaldson could not even take these limitations into account as part of his analysis. These factors reduce the weight which, the Ayyash Defence argues, should be given to their single user analyses.⁵²⁹²

2591. Mr Philips's and Mr Donaldson's methodologies were also flawed, further reducing the weight to be accorded to their conclusions. Mr Philips was not familiar with Lebanese mobile networks, which potentially renders his assumptions invalid.⁵²⁹³ Mr Donaldson lacked the

⁵²⁹² Ayyash Defence final trial brief, para. 306.

⁵²⁹³ Ayyash Defence final trial brief, para. 308.

knowledge to carry out his analysis, which depended on certain assumptions about how mobile networks operate.⁵²⁹⁴

2592. When assessing co-location, neither accounted for travel routes, Lebanese traffic patterns, weather or time of day.⁵²⁹⁵ Mr Philips measured the distance between the centres of the best server coverage areas—which he determined just by looking at them—whereas Mr Donaldson measured the distance between cell towers.⁵²⁹⁶ While Mr Donaldson used a time interval of ten minutes between calls, Mr Philips opted for five and 60 minute intervals, based on a discussion with Mr Donaldson, but later conceded that the larger interval was ‘probably inappropriate’ while continuing to rely upon it.⁵²⁹⁷

2593. Mr Donaldson’s methodology set no threshold for establishing co-location, and his lack of expertise limits the probative value of his opinions.⁵²⁹⁸ His experience in analysing cell site evidence is limited to his work with the Prosecution.⁵²⁹⁹ The Trial Chamber determined that Mr Donaldson must qualify and explain the basis for his conclusions.⁵³⁰⁰ Despite this, Mr Donaldson repeatedly concluded that mobiles ‘moved in concert’—without qualifying or explaining the term—and based his opinions on whether mobiles behaved as ‘one would expect’ without explaining how he determined what ‘one would expect’.⁵³⁰¹ As he failed to explain the basis for his opinions, the Trial Chamber should give them no weight.⁵³⁰²

2594. Mr Philips’s evidence is also unreliable and entitled to little or no weight.⁵³⁰³ He failed to apply his own principles to his analysis, for example, concluding that mobiles attributed to Subject 7 had a single user even though there were very limited instances of co-location, and claiming, incorrectly, that instances of dislocation have been explained. In court, the relevant dates were changed to exclude the dislocations.⁵³⁰⁴

⁵²⁹⁴ Ayyash Defence final trial brief, para. 309.

⁵²⁹⁵ Ayyash Defence final trial brief, paras 310-311, 317.

⁵²⁹⁶ Ayyash Defence final trial brief, paras 310-311.

⁵²⁹⁷ Ayyash Defence final trial brief, para. 312.

⁵²⁹⁸ Ayyash Defence final trial brief, paras 313-314.

⁵²⁹⁹ Ayyash Defence final trial brief, para. 315.

⁵³⁰³ Ayyash Defence final trial brief, paras 318, 326.

⁵³⁰⁴ Ayyash Defence final trial brief, paras 319-322.

2595. Another example is his speculation on the reason for the dislocation of Subject 8's attributed mobiles, which differed from Mr Platt's speculated reasons for the same incident.⁵³⁰⁵ This shows the unreliability of co-location analysis, as dislocations are merely speculated about and written off, based on little more than mobile activity and a desire to fit the facts to the Prosecution's narrative.⁵³⁰⁶

2596. Mr Philips's and Mr Donaldson's co-location analyses should therefore be given no weight, as they applied poor methodologies to poor data.⁵³⁰⁷

2597. Finally, the Ayyash Defence disagreed with the Prosecution's assertion that single user analysis is an important part of attribution, submitting that single user analysis merely shows a link between personal and network mobiles, and this is only significant if the personal mobiles are attributed first.⁵³⁰⁸ Further, the amended consolidated indictment defined attribution as determining the specific person who used a mobile during a particular time period.⁵³⁰⁹ Mr Philips had underlined the importance of showing use, rather than just association between a person and a mobile, and the Prosecution must prove this beyond reasonable doubt.⁵³¹⁰ The Trial Chamber must first assess evidence in this area individually, before it looks at it holistically.⁵³¹¹

ii. Merhi Defence

2598. The Merhi Defence submits that the flaws in the Prosecution's telecommunications evidence result in reduced reliability in terms of the possible co-locations of mobiles.⁵³¹² It also reiterates that Mr Donaldson lacks the necessary expertise for co-location analysis, meaning that his evidence thereon should be given no weight.⁵³¹³

⁵³⁰⁵ Ayyash Defence final trial brief, paras 323-325.

⁵³¹¹ Ayyash Defence closing submissions, T. 17 September 2018, pp 95, 114.

⁵³¹² Merhi Defence final trial brief, para. 271.

⁵³¹³ Merhi Defence final trial brief, paras 190, 201-204.

2599. Despite the Trial Chamber's finding that Mr Donaldson lacked expertise in this area and must qualify his opinions, Mr Donaldson concluded, based on co-location, that mobiles were used by a single person. The Trial Chamber should give this no weight.⁵³¹⁴

2600. The Prosecution also withheld from Mr Philips necessary contextual information about the case and allegations against the Accused, even when he requested it.⁵³¹⁵ For example, he was only given selected materials regarding the attribution of Green 071 to Purple 231's user (alleged to be Mr Merhi) and was unaware of how the Prosecution selected the two candidate mobiles.⁵³¹⁶ He was unable to test this selection and to perform cell dumps to exclude other candidate mobiles.⁵³¹⁷ This absence of information prevented him from excluding other reasonable possibilities regarding Green 071's attribution; the Trial Chamber should therefore give his opinion no weight.⁵³¹⁸

2601. Mr Philips himself was critical of having to work in a vacuum, with certain information not being provided to him—such as Mr Merhi's address, traffic density on certain roads and travel times—which would have affected his analysis.⁵³¹⁹ The Prosecution also asked Mr Philips to remove certain sections from his report, such as a discussion of the possibility of call data record manipulation.⁵³²⁰

2602. In addition, Mr Donaldson did not properly explain his methodology for selecting Purple 231 as the only candidate mobile for single user analysis with Green 071, as he merely stated that cell dumping was only used to confirm the choice after it was made.⁵³²¹ The Trial Chamber therefore cannot assess the probative value and weight to be given to that attribution, or whether other reasonable possible attributions were 'rigorously excluded' by the Prosecution.⁵³²²

2603. In any event, Mr Donaldson's cell dump methodology is 'deficient and incomplete', requiring 'three cumulative hypotheses'. These are: three calls at different times, two mobiles using the same cells and doing so within a set time, here, of an hour and a half after the call of

⁵³¹⁴ Merhi Defence final trial brief, paras 202-204.

⁵³²¹ Merhi Defence final trial brief, paras 223-224.

⁵³²² Merhi Defence final trial brief, paras 225-226.

interest. This method eliminates many potential candidates from the outset, for example because it excludes calls outside the relevant period, and does not account for use of neighbouring cells.⁵³²³ And it only selects the ‘candidate or candidates who appear in the three dumps’.⁵³²⁴ His chosen methodology thus eliminates many potential candidates from the outset.⁵³²⁵

2604. The Merhi Defence argues that Mr Philips expressed concerns about the accuracy of the cell dumps made by Mr Donaldson.⁵³²⁶ While Mr Philips used a different cell dump methodology, namely looking at calls one hour before and one hour after the call of interest—which he viewed as yielding more complete results than those conducted by Mr Donaldson—this was not applied by the Prosecution in this case.⁵³²⁷

2605. Finally, flaws in the underlying telecommunications evidence, including the lack of contemporaneous cell coverage data and limitations of optimal coverage, rendered inferences about co-locations less reliable.⁵³²⁸ Mr Philips’s evidence on coverage maps was theoretical only, as it did not take certain peculiarities of the Lebanese mobile networks into account, such as changes in building topography, directed retry and congestion levels.⁵³²⁹ He also did not travel to Lebanon for his work on this case.⁵³³⁰

iii. Oneissi Defence

2606. The Prosecution’s case against Mr Oneissi does not rely on co-location analysis. There is only one pleaded mobile attributed to Mr Oneissi, Purple 095. Accordingly, the Oneissi Defence’s submissions focus on the more traditional aspects of attribution and on the weight generally to be given to the evidence of Mr Philips and Mr Donaldson.

2607. The Oneissi Defence disputes that the attribution evidence links Mr Oneissi to Purple 095, with particular criticism of Mr Donaldson’s analysis, arguing that his ‘pro-Prosecution bias – whether conscious or otherwise – negatively affects his credibility and by extension, the reliability

⁵³²⁹ Merhi Defence closing submissions, T. 18 September 2018, pp 113-116, 120, T. 19 September 2018, pp 3-4, 14.

⁵³³⁰ Merhi Defence closing submissions, T. 18 September 2018, p. 114.

of his evidence’.⁵³³¹ Mr Donaldson’s analysis was susceptible to confirmation bias, as the Prosecution’s case depended upon the attribution of mobiles to the Accused persons, thus placing Mr Donaldson under ‘immense pressure’ to attribute mobile 095 in accordance with the Prosecution’s theory of the case.⁵³³² It also criticised his qualifications, submitting that:

DONALDSON’s lack of expertise in cell site analysis – which includes attribution – ‘naturally limits the probative value of any opinion he can express thereon’. DONALDSON had no formal training in attribution techniques. He had never testified in relation to attribution of mobile phones before; nor had he ever written an attribution report that was used as evidence. Virtually all of his experience in attribution comes within the context of the investigation into Hariri’s assassination and this case. His ability to attribute mobile phones is here being tested for the first time.⁵³³³

2608. Whereas the Prosecution was required to prove that Mr Oneissi was using Purple 095 for every call and SMS relied upon, Mr Donaldson had conceded that he could not attribute every call on Purple 095 to Mr Oneissi ‘nor could he determine who actually used 095 at a given point’.⁵³³⁴

2609. The Oneissi Defence points out that Mr Donaldson’s attribution analysis was not peer reviewed by the expert Mr Philips and argues that in light of all of the issues raised, the Trial Chamber should disregard his non-expert evidence and conclusions.⁵³³⁵

2610. The Oneissi Defence further submits that Mr Philips’s evidence should be given little or no weight due to the fact that the Prosecution isolated him from the investigation and did not provide him with sufficient information, including of deficiencies in Alfa’s records, such as that the Prosecution was relying upon a 2010 reconstitution of 2005 values for the cells.⁵³³⁶

iv. Sabra Defence

2611. Similar to the case against Mr Oneissi, the case against Mr Sabra does not rely on co-location analysis. There is only one pleaded mobile attributed to Mr Sabra, Purple 018.

⁵³³¹ Oneissi Defence final trial brief, para. 20; *see also* paras 21-22.

⁵³³² Oneissi Defence final trial brief, paras 19-20.

⁵³³³ Oneissi Defence final trial brief, para. 15 (footnotes omitted).

⁵³³⁴ Oneissi Defence final trial brief, paras 13-14.

⁵³³⁵ Oneissi Defence final trial brief, paras 16-17, 119.

⁵³³⁶ Oneissi Defence final trial brief, paras 118-127.

Accordingly, the Sabra Defence's submissions focus on attribution generally and the weight that can be given to the evidence of Mr Philips and Mr Donaldson.

2612. The Sabra Defence in its final trial brief attacked the Prosecution's attribution evidence, pointing out that it suffers from the fact that it 'cannot be certain that a person to whom a mobile is attributed was actually using it at any specific time'. Mr Donaldson had accepted 'that all that could be done is assess who had control over the phone', and it is not possible 'to attribute every call, without intercepts or testimony of the person to whom the specific phone was in contact' and the Prosecution had produced neither.⁵³³⁷

2613. The Sabra Defence also attacked Mr Donaldson's credibility and methodology, stating that:

Rather than relying on the underlying evidence or engaging a recognised expert, the Prosecution based their entire case in relation to the attribution of **Purple-018** on DONALDSON who displays neither the independence nor the competence to assume this responsibility.⁵³³⁸

Further:

DONALDSON was permitted to provide non-expert opinion evidence, despite his admitted lack of technical expertise in analysing the predicted coverage, because he "comprehensive[ly] review[ed]" the Prosecution's evidence, had analysed each piece of evidence underlying his conclusions and opinions, and has ten-years of experience in working with Lebanese CDRs. However, this does not endow DONALDSON with sufficient knowledge or experience for his conclusions to assist the Chamber.⁵³³⁹

2614. His evidence also 'was selective, incomplete and speculative and, as he confirmed, only focused on evidence that was in support of the Prosecution case'.⁵³⁴⁰ Hence, in assessing the attribution evidence, the Trial Chamber 'is not assisted by expert evidence as there is no specialised

⁵³³⁷ Sabra Defence final trial brief, para. 111.

⁵³³⁸ Sabra Defence final trial brief, para. 192 (footnotes omitted).

⁵³³⁹ Sabra Defence final trial brief, para. 87 (footnotes omitted).

⁵³⁴⁰ Sabra Defence final trial brief, para. 90.

knowledge, skill or training available to a witness who can assist the Chamber to understand or determine an issue in dispute'.⁵³⁴¹

5. The Trial Chamber's approach to single user analysis

(a) General observations

2615. The Trial Chamber has considered and recognised the general limitations of the telecommunications evidence as set out in chapter VII 'Reliability of telecommunications evidence'. As single user analysis and co-location analysis depend on its reliability, underlying deficiencies might affect the results of the analysis. The Trial Chamber has been conscious of this in its co-location and single user analysis.

2616. The Parties do not disagree that co-location analysis provides only a possibility that multiple mobiles were together or that they had a single user, and hence their attribution to someone. Determining the possibility of co-location is only the first step towards concluding that multiple mobiles had a single user (or, alternatively, not).

2617. In this case, the Prosecution's case against the four Accused and its allegations against Mr Badreddine rely solely on circumstantial telecommunications evidence, and connecting these to other provable pleaded events, such as Mr Hariri's movements.⁵³⁴² The only evidence of where a mobile may have been comes from the cell site and call data records, as there was no evidence, such as reliable GPS information, placing their pleaded mobiles in any specific location.

2618. Since the exact location of a mobile cannot be determined from cell site evidence alone, conclusions as to whether a mobile user can travel the necessary distance between cell coverage areas will be based on approximations. How reliable these approximations are is unknowable in the absence of information of the starting and end point of the travel. But this of course depends upon the time between the calls of interest; a lengthy period over which this occurs can make co-location more likely. Another factor is that mobiles may connect to the same cell mast if they are not both within its predicted best server coverage area.⁵³⁴³ An additional consideration is that

⁵³⁴¹ Sabra Defence final trial brief, para. 113.

⁵³⁴² With the possible exception of the pleaded allegations and limited evidence that Mr Oneissi was 'Mohammed', which could be considered as direct identification evidence, at least on the pleading in the amended consolidated indictment.

⁵³⁴³ *For example*, John Edward Philips, T. 20 April 2017, pp 19-20.

determining whether mobiles are co-locating is only possible when they are used, namely, when they make or receive a call or send or receive a text message.

2619. The ultimate issue is whether, from examining the patterns of call use of target mobiles over a period, conclusions may be drawn as to co-location. Whether this has been established beyond reasonable doubt in the case of specific mobiles and Accused persons must be assessed on a call-by-call basis but only when the calls—and viewed in the totality of all calls and texts to and from relevant mobiles—are assessed in the light of the totality of the evidence. This includes linking the calls and the location of the mobile to any pleaded and provable events.

2620. The Trial Chamber is firmly of the view that Mr Donaldson did not have the necessary technical qualifications or experience to provide opinions that it could rely on in finding, based on co-location, that the Accused were using the pleaded network mobiles. This is of course apart from obvious examples for which no specialised technical experience is needed, as is noted below. Mr Donaldson could not explain instances of dislocation and had no experience in this field. He should never have been asked to express these opinions in reports that were to be used in either confirming the indictments or in court proceedings.

2621. It is also difficult to understand why, in the years between the Special Tribunal's establishment on 1 March 2009 and Mr Philips producing the first draft of his general cell site report on 1 August 2012—which was thirteen months after the first four Accused were indicted and almost 19 months after the initial indictment was submitted—the Prosecution had not engaged a cell site expert who could produce a report for the Pre-Trial Judge's use in examining the material supporting the indictments. The Pre-Trial Judge had only Mr Donaldson's reports to guide him in his task.

2622. This fact alone probably explains why Mr Donaldson went much further than he was entitled to in expressing views well outside his area of expertise, and, additionally, encroaching on the Trial Chamber's ultimate fact-finding role. For without it, the Prosecutor would have had no cell site 'analysis' from which the Pre-Trial Judge could form a view that there was a *prima facie* case against the Accused, and thus confirm the indictments against them. Mr Donaldson should never have been placed in such a position, which of course resulted in his attempting to defend it under Defence cross-examination in court.

(b) Methodology and Trial Chamber's approach to evaluating this evidence

2623. The Trial Chamber has carefully examined the methodology of attributing a single user to multiple mobiles through cell site co-location analysis. It has cautiously evaluated the differing methodologies employed by Mr Philips and Mr Donaldson in reaching their conclusions. These are outlined in detail above.

2624. Regarding the Trial Chamber's methodology, in its decision on the scope of Mr Donaldson's evidence, it explained that:

The Prosecution must ... first establish that the personal mobiles can be attributed to Mr Ayyash, Mr Merhi and Mr Badreddine, and then that these mobiles co-located with the network mobiles, and thus that the network mobiles can be attributed to the three. Co-location is not relevant in Mr Oneissi's and Mr Sabra's cases.⁵³⁴⁴

2625. The Trial Chamber has therefore examined separately the existence of the pleaded colour coded networks allegedly used by Mr Ayyash, Mr Merhi and Mr Badreddine, and the evidence attributing other mobiles to these three, and to Mr Oneissi and Mr Sabra. The possibility of co-location and hence whether the network and personal mobiles had a single user, and therefore whether the Trial Chamber can be convinced beyond reasonable doubt of this, follows as the next step.

2626. Both Mr Philips and Mr Donaldson set out in considerable detail what they did. The most significant difference in their approaches, in the Trial Chamber's view, is that Mr Philips, as the Prosecution's cell site expert, declined to positively conclude whether two mobiles were co-locating and whether they had a single user. He stated quite correctly that in the absence of anything other than cell site evidence he could not do so.

2627. By contrast, Mr Donaldson who is a non-expert, positively asserted in his attribution reports that the Accused were using specified mobiles. He also concluded from his examination of the cell site evidence that mobiles he attributed to Mr Ayyash, Mr Merhi and Mr Badreddine were co-locating with pleaded network mobiles.

⁵³⁴⁴ Decision on opinion evidence (Mr Donaldson), para. 6.

2628. Cell site evidence alone, as Mr Philips pointed out, cannot with certainty establish that two mobiles had a single user. The Trial Chamber observed in its decision on the Defence challenge to Mr Donaldson's evidence that in some obvious instances—and using only cell site evidence—no particular technical skills are needed to determine whether two mobiles may or may not be co-locating, and have a single user. Two mobiles that always use the same or adjacent cells, and two mobiles connecting to cells too far apart to have travelled the distance in the time required to have made the calls, are obvious examples. In fact, it fell within the Trial Chamber's functions to assess both co-location and attribution evidence to conclude that multiple mobiles have a single user.

2629. In considering Mr Philips's and Mr Donaldson's co-location analyses, the Trial Chamber has factored in their respective expertise and methodologies. It has considered that some Defence criticisms of their methodologies have merit, and the witnesses themselves conceded this in court during cross-examination.

2630. Generally though, because of the imprecise nature of much of the cell site evidence, the Trial Chamber cannot positively find that there is a 'best' methodology for its evaluation. Much will depend on the specific circumstances of the case. In this case both Mr Philips and Mr Donaldson were relying upon and analysing data from events occurring years before. Both Mr Philips—by virtue of his expertise as a cell site expert—and Mr Donaldson as a result of his years of experience in examining cell site data in the UNHCR and the Office of the Prosecutor, employed methodologies that they believed best-suited the task. Neither approach of course is problem-free, and especially in view of the imprecision of some of the data.

2631. To attribute network mobiles to Mr Ayyash, Mr Merhi and Mr Badreddine, the Prosecution has had to rely on its single user analysis, based on co-location. The Trial Chamber has therefore carefully assessed, for each mobile, the totality of the evidence and the Defence challenges to its reliability.

2632. In relation to the attribution of personal mobiles, the Trial Chamber has considered the evidence in its totality. This includes assessing the combination of the underlying documents used to establish that an Accused or Mr Badreddine was the mobile's user. These are, among other things, registration documents, text messages, handset swapping, geographic profiling, database entries, contacts of the mobiles and when the mobiles were used as contact numbers.

2633. The Trial Chamber has largely accepted Mr Philips's methodology, while factoring in the limitations of the underlying data. In its view, he carefully and as neutrally as he could set out the factors weighing in favour and against two mobiles having a single user. The Trial Chamber has accepted Mr Philips's cell site expertise and relied on him for certain technical explanations but has made its own decisions in relation to what could in the specific circumstances be inferred from instances of possible co-location.

2634. The Trial Chamber has viewed Mr Donaldson's non-expert co-location analysis with considerably more caution than that of Mr Philips.

2635. Mr Donaldson of course had an overview of the evidence that Mr Philips could not have, as the Prosecution had effectively segregated Mr Philips from the case, and even the names of its suspects. So in this sense Mr Donaldson was able to 'join some of the dots' by virtue of his detailed knowledge of all of the pieces of evidence the investigation put together to attempt to prove mobile attribution. For example, the mobile registration details, the contacts of each mobile, SMS content, the use of the numbers as business and official contacts and so on.

2636. The Trial Chamber has carefully assessed each of what Mr Donaldson described as attribution points in determining their relative strengths and weaknesses. In this respect, his evidence was helpful in assisting the Trial Chamber in compiling and considering the underlying evidence in reaching conclusions on attribution. It has used his reports primarily for their useful summary overview of the evidence. The Trial Chamber has noted his opinions as to whether attribution or single use has been established and has used his analysis to guide it to the evidence.

2637. In its decision on Mr Donaldson's evidence, the Trial Chamber held that his lack of formal expertise on co-location or cell site analysis naturally limited the probative value of any opinion he expressed on either and, particularly on co-location. While this of itself did not prevent him—based upon his extensive professional experience in the area—from providing one on either topic,⁵³⁴⁵ the weight to be given to his opinions, rather than its expression, is of more concern to the Trial Chamber's analysis of the evidence.

⁵³⁴⁵ Decision on opinion evidence (Mr Donaldson), para. 70.

2638. The Trial Chamber in fact has rejected Mr Donaldson's conclusions in respect of two critical mobiles, namely Green 071 and Purple 018. The Trial Chamber could not agree with Mr Donaldson's conclusions attributing Green 071 to Mr Merhi based on his opinion that it was co-locating with Purple 231. The Trial Chamber is of the view, as set out in analysing the attribution of Green 071, that the evidence is insufficient to establish this. Similarly, although not based on co-location, and for the reasons set out in analysing whether Purple 018 had Mr Sabra as a single user, the Trial Chamber does not agree with Mr Donaldson's conclusions and has found that both Mr Sabra and his wife were its users.

2639. Overall, the Trial Chamber has no reason to doubt the careful analytical approach of Mr Philips. Mr Donaldson also devoted an enormous amount of time to his analysis. Where both Mr Philips and Mr Donaldson performed a co-location analysis, the Trial Chamber has preferred that of Mr Philips. This is primarily because Mr Philips had superior technical expertise and hence took a more qualified approach to his conclusions. Mr Donaldson's analysis was often a statistical exercise and he did not have the same technical skills as Mr Philips. Where only Mr Donaldson did this co-location analysis the Trial Chamber considered his evidence cautiously in light of its limitations.

2640. In some instances, the Trial Chamber has reached the same ultimate conclusion as Mr Donaldson as to attribution based on single user analysis, but at no point did it simply adopt any of his conclusions. Rather, it used his evidence as a starting point for its own analysis and conclusions.⁵³⁴⁶

(c) Methodology—calculating possible travel times between cells

2641. To calculate distances and therefore possible travel times between cells to which target mobiles connected, Mr Philips used a straight line between the geographical centres of the predicted best coverage areas of the respective cells, while Mr Donaldson measured the distance between the cell towers.

⁵³⁴⁶ *For example*, the Trial Chamber's analysis in relation to Yellow 669 in sub-section B (2) (a) 'Yellow 669'. The Trial Chamber's findings regarding the attribution of Yellow 669 to Mr Ayyash are based on the preponderance of evidence.

2642. There is some merit in the Ayyash Defence's criticisms about distances being measured in straight lines, and that Mr Donaldson and Mr Philips should have considered other factors, such as road travel and traffic. In a sense, Mr Philips's decision to use the distance between the centres of cell areas is arbitrary, as is shown by Mr Donaldson's deliberate rejection of this methodology. In another sense, Mr Donaldson's is likewise just as arbitrary.

2643. Using either method, the actual travel time needed to cover the theoretical distance may have been higher than any average travel calculated on a distance in a straight line. But it also could be lower. Miscalculations of either naturally could distort the statistical results. In this respect, Mr Philips's and Mr Donaldson's analyses might have yielded fewer 'positive' results had they been able to include such factors.

2644. But both had to choose a method to calculate whether travel was possible between cell areas to determine whether co-location was possible. The evidence is clear that almost all cells have fragmented predicted best server coverage areas.⁵³⁴⁷ All urban cells have some areas of overlapping coverage with other cells. Imprecision is therefore inherent in attempting to ascertain co-location—when it involves mobile movement between cells—without knowing precisely where a mobile was, and what the traffic conditions were when the relevant pairs of calls occurred.

2645. It would have been impossible for Mr Philips or Mr Donaldson, working from the cell site data years after the calls were made, to have factored in contemporaneous travel or traffic conditions. But even if they had such information, without more, they could not have known how the targeted mobile user got between the different cells—with all the attendant variables such as the mode of transport, the route taken and whether the travel was direct or included deviations or breaks—and hence how long it took. This applies even if there is only one viable route between two locations.

2646. In these circumstances, the Trial Chamber cannot fault either for choosing their own approximation methods. They both carefully considered how this could best be done. The ultimate issue is how this may have affected the reliability of their methodologies and hence conclusions.

⁵³⁴⁷ Mr Philips explained in his report, exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), pp 71, 76, that it is normal for cells to have fragmented coverage areas.

This can only be resolved on a call-by-call basis, and then only in the context of the totality of the calls and any patterns that emerge from analysing them.

2647. For this reason, the Trial Chamber has closely scrutinised every pair of calls where Mr Philips has concluded of two or more mobiles that they ‘could be co-located’ or the circumstances ‘would not preclude co-location’. It has similarly carefully examined Mr Donaldson’s conclusions.

(d) Mr Philips’s lack of familiarity with Lebanon

2648. The Defence challenged the reliability of Mr Philips’s analysis based in part on his lack of familiarity with Lebanon and its telecommunications system and set-up. The Trial Chamber, having carefully reviewed the relevant evidence, does not share that concern. Mr Philips was using a combination of static telecommunications business records in the form of call data records, and cell site evidence, which is of course subject to interpretation. Hence, the need for an expert witness to assess it. Nothing was put before the Trial Chamber to demonstrate that Mr Philips’s lack of familiarity with a specific location, namely Lebanon, would diminish the reliability of his analysis as a cell site expert of the relevant data.

2649. The Trial Chamber received evidence from the representatives of the two Lebanese telecommunications providers, Touch and Alfa,⁵³⁴⁸ on the network planning tools that configured the predicted server coverage maps on which Mr Philips relied. This evidence has convinced the Trial Chamber that the methodology involved in network planning tools, such as Asset’s Aircom, is essentially the same in the UK—where Mr Philips gained most of his experience. Nothing in the Defence submissions has persuaded the Trial Chamber otherwise. The principles of radio coverage, including its propagation, coverage and measurement are no different in Lebanon than anywhere else. While Lebanon’s topography of course is unique—and he considered this in his analysis—the techniques in cell site analysis are the same as in the UK.

⁵³⁴⁸ Witnesses 705 and 707.

(e) Mr Philips's 'isolation' from the Prosecution and Mr Donaldson's credibility

2650. Regarding the Defence's submissions on the reliability of Mr Philips's and Mr Donaldson's evidence, and specifically Mr Philips's 'isolation' from certain information known to the Prosecution and Mr Donaldson's association with the Prosecution, the Trial Chamber considered and rejected those submissions in chapter III 'Assessment of evidence', D (1) (b) (ii) 'Witness independence and association with Parties' and chapter VII 'Reliability of telecommunications evidence', I (6) 'Findings on cell site analysis'.

2651. The opposite, however, applied to Mr Donaldson, who, conversely, was not just deeply embedded in the Prosecution's work, but his analytical work appears to have been central to its case theory on the attribution of mobiles to the four Accused and Mr Badreddine. Inevitably, his employment in the Office of the Prosecutor will have coloured his objectivity, and here to the point that he offered opinions outside of his expertise.

2652. As the Trial Chamber pointed out in its decision permitting his evidence, Mr Donaldson should not have expressed definitive opinions as to attribution and single use. Moreover, the responsibility was that of the Prosecution to ensure that Mr Donaldson did not go too far in his analysis and especially in his opinions and conclusions. The Trial Chamber has expressly factored this into its considerations.

(f) Conclusion—eliminating coincidence

2653. To positively find beyond reasonable doubt that multiple mobiles had a single user, the Trial Chamber must consider a number of factors relating to call patterns and geographic profiling. In doing this it must negative the reasonable possibility that the patterns of potential co-location, and hence single use, can be explained by mere coincidence.

2654. The Trial Chamber has carefully considered and accepts the factors that Mr Philips identified that could raise patterns of use from mere coincidence to proof beyond reasonable doubt. These are the length of the period of the possible co-location, the frequency of the calls and the extensive movements of the multiple mobiles. These factors must also be analysed on a call-by-call basis and in the totality of all communications involving the target mobiles.

2655. The Trial Chamber has carefully factored in the limitations of the telecommunications evidence and single user analysis when determining whether the network mobiles can be attributed to Mr Ayyash, Mr Merhi or Mr Badreddine. Specifically, it has closely considered the factors Mr Philips identified when determining whether it is the only reasonable conclusion from the evidence that they used the mobiles. Determining whether instances of co-location are coincidental or follow a pattern to the extent that the only reasonable conclusion is that the mobiles have a single user, is call and situation specific.

2656. In this respect, the Trial Chamber has also carefully noted Mr Philips's evidence about eliminating the possibility of coincidence in densely populated urban areas where many thousands of mobile users may consistently use the same cells. This could be contrasted to a sparsely populated rural environment where, for instance, a small number of mobile users are active, and coincidence may therefore be much more easily eliminated.

2657. The Trial Chamber has carefully analysed each alleged instance of co-location before determining what could be concluded with regard to the mobiles' attribution to the Accused and Mr Badreddine.

B. Salim Jamil Ayyash

2658. Salim Jamil Ayyash was born on 10 November 1963 in Nabatiyeh, Lebanon.⁵³⁴⁹ He married Ms Fatimah Hajj, who was born in 1966, and they had three children.⁵³⁵⁰ He bought an apartment in Hadath, Beirut in March 2002. He also used a family residence in Harouf in southern Lebanon, near Nabatiyeh. He worked for the Lebanese Civil Defence at the Al-Doueir station, near Harouf, until February 2002, and then until November 2004, was the Head of the Markaba station, before transferring back to Al-Doueir.

2659. The Prosecutor pleaded in the amended consolidated indictment that Salim Jamil Ayyash, with the other three Accused, Hassan Habib Merhi, Hussein Hassan Oneissi and Assad Hassan Sabra, a named co-conspirator, Mustafa Amine Badreddine, and five other unidentified subjects⁵³⁵¹ participated in a conspiracy aimed at committing a terrorist act to assassinate the

⁵³⁴⁹ Exhibit P1034 (Family personal status extract), p. 3.

⁵³⁵⁰ Exhibit P1034, p. 5.

⁵³⁵¹ Namely Subjects 5, 6, 7, 8 and 9.

former Lebanese Prime Minister, Mr Rafik Hariri.⁵³⁵² Mr Ayyash and Mr Badreddine coordinated the surveillance of Mr Hariri in the preparation for the attack, the purchase of a truck, a Mitsubishi Canter, which concealed a large quantity of explosives, and participated in the carrying out of the assassination.⁵³⁵³

2660. The Prosecution endeavoured to prove Mr Ayyash's participation in the conspiracy, and in the other four counts charged—including committing a terrorist act by means of an explosive device—through his use of network mobiles and linking their location to Mr Hariri's movements. The Prosecutor alleges that Mr Ayyash used the network mobiles, Blue 233 and Yellow 294, in preparing for the attack—including the surveillance of Mr Hariri—and a Red network mobile, Red 741, to observe Mr Hariri's movements and locations linked to him, and to coordinate the attack on 14 February 2005.⁵³⁵⁴ According to the Prosecutor, Mr Ayyash used his Green network mobile, Green 300, to communicate with Mr Badreddine regarding aspects of the preparation and coordination of the assassination.⁵³⁵⁵

2661. Although it was not pleaded in the amended consolidated indictment,⁵³⁵⁶ the Prosecution alleges in its final trial brief that in the early phase of the surveillance, Mr Ayyash used another Blue network mobile, Blue 322.⁵³⁵⁷ As it is not formally pleaded against Mr Ayyash, the Trial Chamber has made no findings against him in relation to his alleged use of this mobile.

2662. There was some contested evidence that Mr Ayyash was performing the Hajj in January 2005 at a time when the Prosecution alleges that he was in Lebanon using his network and personal mobiles. The Prosecution concedes that it has no case against Mr Ayyash if indeed he were in Saudi Arabia at the time. It was uncontested that he performed the Hajj in January 2004.

2663. To prove that he did not leave Lebanon in January 2005, the Prosecution called evidence that Mr Ayyash was using a network mobile, Yellow 669, from 23 December 2003 to 18 April 2004. This was to prove—through comparing calling patterns—that he left Lebanon at the end of January 2004 to perform the Hajj pilgrimage in Saudi Arabia, but stayed in Lebanon in January

⁵³⁵² Amended consolidated indictment, paras 3 (a), (e), 15 (a), 48.

⁵³⁵³ Amended consolidated indictment, paras 20-42.

⁵³⁵⁴ Amended consolidated indictment, paras 15 (a), (c), (d), 18, 19 (a), 22, 30, 32-36, 38-39.

⁵³⁵⁵ Amended consolidated indictment, paras 15 (b), 18, 21, 24, 26, 32 (b), 34, 36 (b), 37-38, 39 (a).

⁵³⁵⁶ It pleads that Subject 14 used Blue 322.

⁵³⁵⁷ Prosecution final trial brief, para. 214.

2005.⁵³⁵⁸ Mr Ayyash's alleged use of Yellow 669 is also not pleaded in the amended consolidated indictment.

2664. The Prosecutor further alleges that Mr Ayyash used his personal mobile 091 to contact Mr Merhi who was responsible for the preparation of the false claim for the attack, and that he was the user of personal mobiles 165, 091, 935 and 170.⁵³⁵⁹

2665. The anonymous nature of network mobiles, such as Yellow 669, Yellow 294, and the covert network mobiles Blue 233, Blue 322, Green 300 and Red 741, makes it harder to identify their user(s) through subscriber records, text messages or other documents.⁵³⁶⁰

2666. To attribute network mobiles to Mr Ayyash by geographic profile and co-location analysis, the Prosecution first sought to establish that he used two landlines, 696 and 851, and four personal mobiles, 165, 935, 170 and 091. This was based on numerous pieces of evidence, including witness statements and testimony, subscriber records, SMS contents, university records, insurance reports, bank records and passport applications.⁵³⁶¹

2667. The Trial Chamber received extensive evidence from the Prosecution analyst, Mr Andrew Donaldson, on the attribution of mobiles to Mr Ayyash. His attribution reports on each Accused and Mr Badreddine—containing the sources he relied upon—assisted the Trial Chamber to better understand how to piece together the evidence relating to the attribution of landlines, personal and network mobiles. The Trial Chamber, however, attached limited probative value to Mr Donaldson's overview summary evidence but used it primarily as a guide to identifying the underlying evidence.

2668. Mr Donaldson also offered his non-expert opinion evidence based on co-location analysis of the network mobiles. The Trial Chamber has assessed its weight in light of the totality of the evidence, and in particular that of Mr J. E. Philips's expert opinion on single user analysis.

⁵³⁵⁸ Prosecution final trial brief, paras 211, 300.

⁵³⁵⁹ Amended consolidated indictment, paras 3 (d), 18, 19 (c), 31, 37.

⁵³⁶⁰ For the Trial Chamber's findings regarding the Green, Red and Blue mobile networks, *see* chapter VIII 'Nature and purpose of colour-coded mobile networks and Purple group of mobiles', paras 2232-2246, 2287-2292, 2330-2341, 2372-2381. *See also* exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 3.

⁵³⁶¹ Andrew Donaldson, T. 18 July 2017, pp 12-13.

1. Personal mobiles and landlines

2669. The Prosecution relies on Mr Ayyash's personal mobiles and the landlines of his two residences to prove that he was using the pleaded network mobiles. The Prosecution led evidence of Mr Ayyash and his family using landlines at an apartment in Hadath in Beirut and at a residence near Nabatiyeh in south Lebanon. The Prosecution has used the contacts of these landlines to argue that they were used by Mr Ayyash.

(a) Mr Ayyash's work for the Lebanese Civil Defence

2670. The Lebanese Civil Defence service falls within the Ministry of Interior and Municipalities. Its responsibility is humanitarian and rescue operations, including firefighting, working with the Fire Brigade or the Army, and responding to medical emergencies like car accidents or cardiac arrests.⁵³⁶²

2671. According to his employment records there, dating from March 1995, Mr Ayyash started working for the Civil Defence on 5 January 1986 after having had two years of education at the American University in Beirut. His education was specified as 'Year 2 Pharmacy', with the speciality of 'Technical Pharmacist'. As of March 1995 his job description was 'First Technical Assistant'.⁵³⁶³

2672. By order of the Director General of the Civil Defence, Brigadier-General Sarwiche Hobeika, on 30 August 2002, Mr Ayyash was transferred, with immediate effect, from the 'Douair Station' to be the 'Chief of Markaba'. Instructions going with the new posting included:

3. Teams are to be formed by the chief of the station. Report on implementation.
4. The chief of the station and the heads of teams are required to train and qualify volunteers from the town and its surroundings for possible assistance. They must be under 25 years old and not exceed 25 persons in total.⁵³⁶⁴

2673. On around 21 July 2004, Mr Ayyash requested permission to resign as the Chief of Markaba Station. The referral of the request stated:

⁵³⁶² T. 6 March 2017, pp 49-50 (closed session); exhibit P1911, pp 18-19; exhibit P1912, p. 13.

⁵³⁶³ Exhibit P1159 (Mr Ayyash's employee record at the Civil Defence), pp 1-3 (ERNs 60178464-60178466).

⁵³⁶⁴ Exhibit P1160 (Memorandum of appointments), p. 1.

Attached herewith the resignation request sent by the Chief of Markaba Station Salim Jamil Ayyash since he is not being able to continue performing his duties. He insisted on his request knowing that he was asked to be patient.⁵³⁶⁵

2674. Three months later, on 29 October 2004, the Director-General approved the request, and transferred Mr Ayyash, as from 1 November 2004, to a new post, with the title of 'El-Doueir/Operations'.⁵³⁶⁶

2675. From these official Lebanese records, the Trial Chamber can conclude that Mr Ayyash worked at the Al-Doueir Station⁵³⁶⁷ until 30 August 2002. He was then the Chief of the Markaba Station from 30 August 2002 until 1 November 2004, when he returned to work at the Al-Doueir Station.

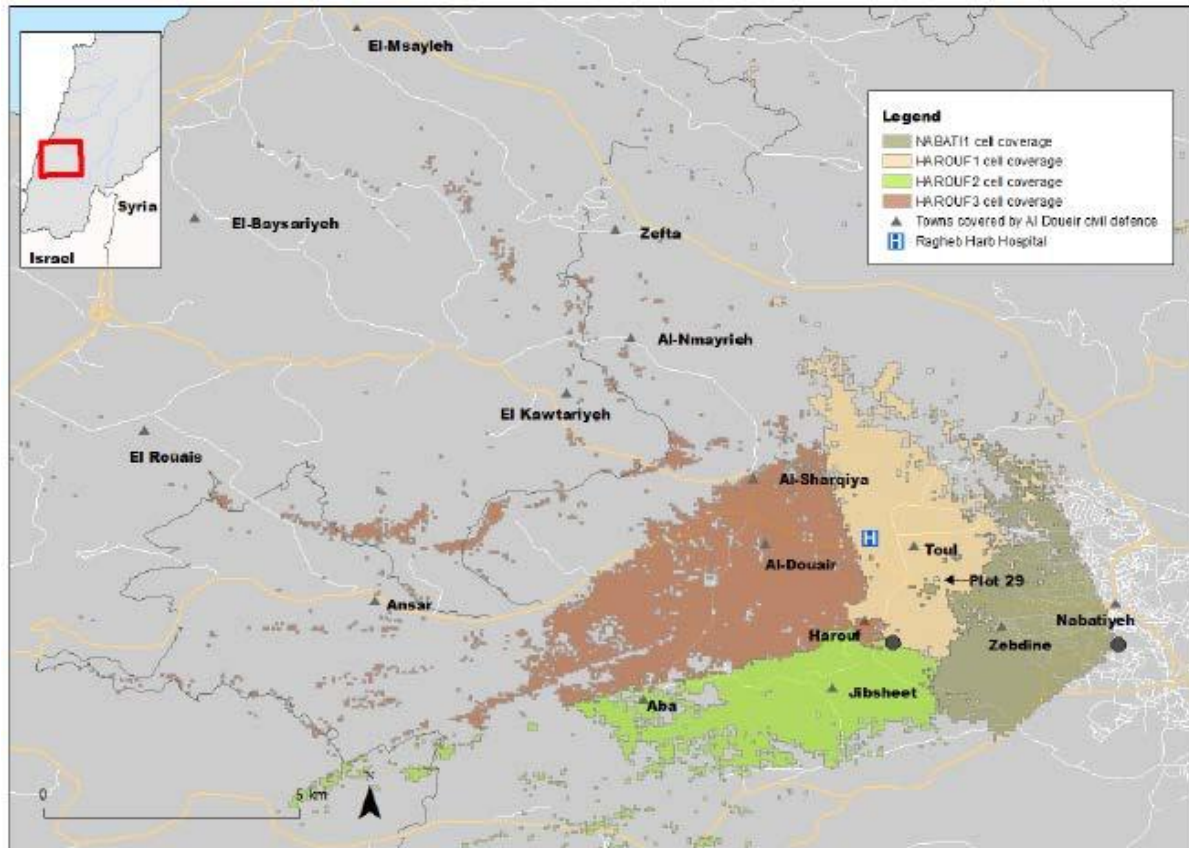

2676. In his report, Prosecution analyst Mr Andrew Donaldson mapped the Alfa and Touch cell sectors which provided predicted best coverage to the village of Al Doueir and the surrounding villages which were served by the Al-Doueir Civil Defence station, namely El-Sharqieh, Harouf, Jibsheel, Toul, Ansar and Aba.⁵³⁶⁸

⁵³⁶⁵ Exhibit P1162 (Civil Defence order transferring Mr Ayyash to the Doueir station), p. 2.

⁵³⁶⁶ Exhibit P1162, p. 1.

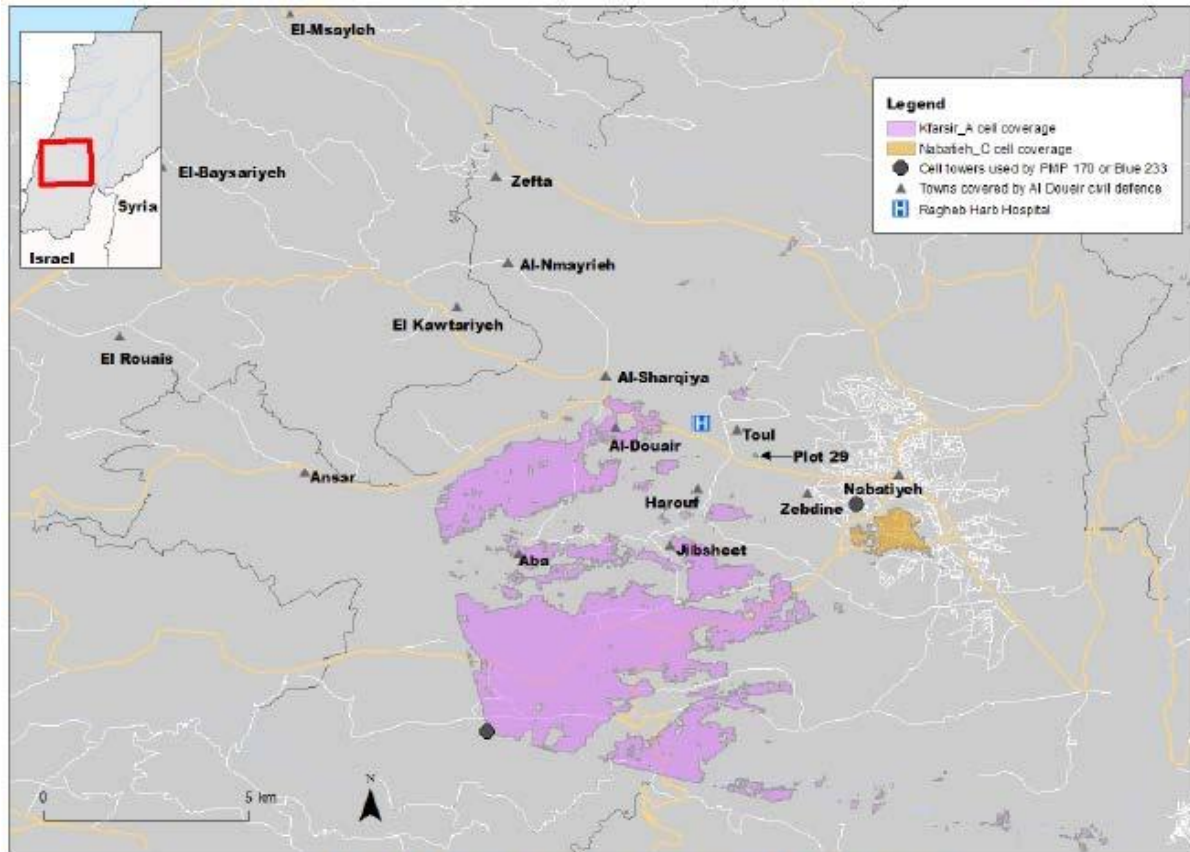

⁵³⁶⁷ The transliteration in English produces different spellings of the name.

⁵³⁶⁸ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 649, pp 258-259; exhibit P1911, p. 18 (ERN 60178535).

Map: Civil Defence Doueir Station and ALFA Cell Towers

Map: Civil Defence Doueir Station and MTC Cell Towers

Attribution report of Andrew Donaldson regarding Mr Ayyash—exhibit P2026.2, p. 258

2677. There was no direct evidence of the precise location of the Markaba Station. The predicted best server coverage area for Markaba village is Markaba_C, with Markaba_A and Markaba_B lying adjacent to it. Alfa cell MHAIBI1 also provides coverage to the area.

(b) Landline 696—Ayyash family residence in Hadath, Beirut

i. Land Registry, telephone and electricity subscription records

2678. On 14 March 2002, Mr Ayyash bought an apartment in Hadath, in south Beirut. It is described in the Lebanese Land Registry documents as ‘Real Estate Zone: Al-Hadath number: 2 Number of the inclusive real estates: 177 Block: B Section: 15’.⁵³⁶⁹

⁵³⁶⁹ Exhibit P637 (Land title certificate), pp 2-3.

2679. Thirteen months later, on 8 April 2003, he arranged for an electricity subscription (connection) for the property.⁵³⁷⁰ The following week, on 14 April 2003, he applied for a landline, number 696, for this apartment.⁵³⁷¹ And on that day the telecommunications company, Ogero, requested Bank Audi S.A.L. to direct debit Mr Ayyash's account for all charges for this landline.⁵³⁷² The landline was activated the following day,⁵³⁷³ and Mr Ayyash had it deactivated on 20 October 2007.⁵³⁷⁴ Mr Ayyash cancelled an automatic payment by Bank Audi for his electricity subscription on 12 March 2005.⁵³⁷⁵

2680. The Land Registry records Mr Ayyash as owning the apartment during the period of the landline subscription, and throughout the period relevant to the amended consolidated indictment, namely from Thursday 11 November 2004 to Monday 14 February 2005.⁵³⁷⁶ Immediately below is a map prepared by a Prosecution analyst, Mr Andrew Fahey, showing the location of the Hadath apartment, referred to on the map as 'Plot 177':⁵³⁷⁷

⁵³⁷⁰ Exhibit P639 (Electricity subscription), pp 1-2.

⁵³⁷¹ Exhibit P637, pp 2-3; exhibit P1636 (Subscription record for landline 696), pp 1-2, 14. The application was made for the address Beirut, El-Hadath, Jammous-Tabaja building-own property, 3rd floor, exhibit P1636, p. 2.

⁵³⁷² Exhibit P2087 (Direct debit documents from Audi Bank S.A.L.), pp 1-3.

⁵³⁷³ Exhibit P1636, p. 14.

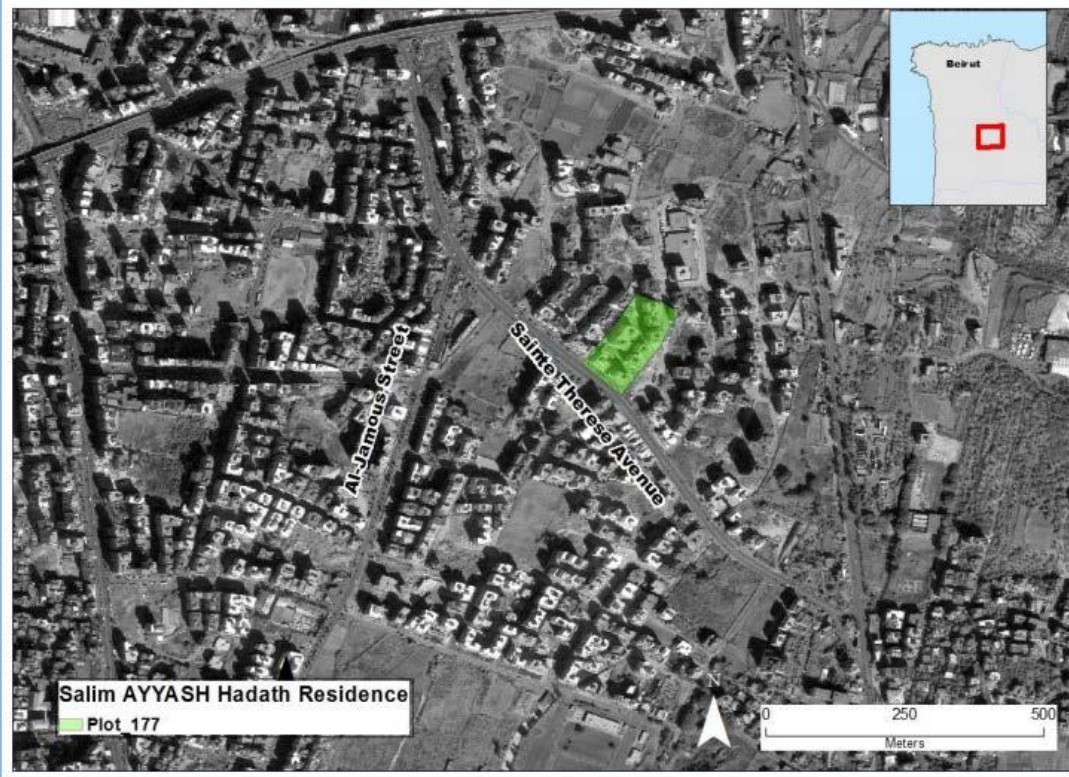

⁵³⁷⁴ Exhibit P1636, pp 9-10, 14.

⁵³⁷⁵ Exhibit P2113 (Automatic payment cancellation form), p. 1. There was no evidence of a date of deactivation.

⁵³⁷⁶ Exhibit P637, pp 2-3.

⁵³⁷⁷ Exhibit P662 (Statement of Andrew Fahey), paras 10-38, pp 33, 37, 40, 43, 46. *See also* exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 23.

Hadath Residence

Slide 6 of Mr Donaldson's PowerPoint presentation—exhibit P2025

ii. Landline 696 as a contact for Mr Ayyash and his family

2681. Mr Ayyash's passport application, submitted on 17 October 2007, lists landline 696 as his contact number.⁵³⁷⁸ Ms Zeinab Ayyash and Ms Fatima Hajj, Mr Ayyash's daughter and wife,⁵³⁷⁹ both listed landline 696 as their telephone number in their passport applications.⁵³⁸⁰ The application for Ms Zeinab Ayyash was lodged on 17 August 2004⁵³⁸¹ and the application for Ms Fatima Hajj on 23 October 2007.⁵³⁸²

⁵³⁷⁸ Exhibit P1532 (Mr Ayyash's Lebanese passport application), pp 2, 4 (ERN 59002775).

⁵³⁷⁹ Exhibit P1034 (Family personal status extract), pp 5-6.

⁵³⁸⁰ Exhibit P1531 (Ms Zeinab Ayyash's Lebanese passport application), p. 2 (ERN 59002801); exhibit P1533 (Ms Fatima Hajj's Lebanese passport application), p. 2 (ERN 59002763).

⁵³⁸¹ Exhibit P1531, p. 2 (ERN 59002801).

⁵³⁸² Exhibit P1533, p. 6 (ERN 59002764).

2682. Witness PRH078, a service provider to the Ayyash family, stated that landline 696 was listed as the telephone contact number for Ms Fatima Hajj in the client database.⁵³⁸³

iii. Contacts of landline 696

2683. Mr Donaldson analysed all mobile and telecard contacts of this landline. The Prosecution created a call sequence table for landline 696⁵³⁸⁴ based on call data records provided by the Lebanese mobile telecommunications service providers, Alfa and Touch, for calls involving a mobile, and relying on call data records received from Ogero in relation to Kalam card and telecard calls.⁵³⁸⁵

2684. No records were kept at the time of landline to landline calls, and Mr Donaldson noted the call sequence table provides only a partial profile of this landline's use.⁵³⁸⁶ The call sequence table records 845 incoming and outgoing calls between 29 August 2004 and 31 December 2005.⁵³⁸⁷

2685. To visualise the contact profile of landline 696 and of other telephone numbers allegedly associated with Mr Ayyash, the Prosecution, based on Lebanese official family status extracts, prepared an extended Ayyash family tree.⁵³⁸⁸

2686. Mr Donaldson analysed the underlying evidence, and in his attribution report, listed that landline 696 had repeated contact with.⁵³⁸⁹

⁵³⁸³ Exhibit P707 (Statement of Witness PRH078), pp 10, 34-42 (ERNs 60305681, 60305705-60305713).

⁵³⁸⁴ Exhibit P1978 (Call sequence table for landline 696). The Trial Chamber admitted into evidence another call sequence table for landline 696 with the same date range which also includes landline-to-landline calls. Although this call sequence table (CST-185) was tendered by the Prosecution, marked for identification as P522 MFI, and then subsequently withdrawn, the Trial Chamber admitted it as exhibit P522 for the Ayyash Defence. The Ayyash Defence used it during Mr Donaldson's cross-examination. The Ayyash Defence submitted that if there is a call data record that was generated and stored by Ogero it was a reliable record of that call taken at that point in time. Relying on the Ogero witnesses' evidence, the Ayyash Defence argued that the call data records Ogero generated for testing landlines meet the *prima facie* reliability test, and the incompleteness of the data is a matter of weight, T. 5 October 2017, pp 59-61.

⁵³⁸⁵ Andrew Donaldson, T. 18 July 2017, pp 15-17; exhibit P1977 (Witness statement of Kei Kamei), paras 8-13, annex A; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 30; exhibit P1777 (Consolidated witness statement on behalf of Ogero with annexes 1-9), paras 14-18, 21, 27-29, 76, 79, 83; Witness PRH709, T. 11 January 2017, pp 22-23, 33-36, 39-45; Toufic Chebaro, T. 12 January 2017, p. 16; Witness PRH711, T. 10 January 2017, pp 48-56, 58-59.

⁵⁴⁰³ Exhibit P2074, pp 1-4, 6-7, 9, 12-13, 16-20, 22-46. Furthermore, the number ending in 777 was listed as the contact number for Mr Badreddine in two commercial customer databases, exhibits P1858, P2046. The number ending in 989 is also noted on a document for the registration of a vehicle by the Middle East Imports and Exports Company, exhibit P1742. Mr Badreddine's son, Mr Mehdi Badreddine, is listed under the telephone number ending in 989 on a telephone subscriber note, exhibit P1036, p. 8; exhibit P1423 (Subscriber note for mobile 946).

- Mr Mehdi Badreddine,⁵⁴⁰⁴ the son of Mr Mohammed Badreddine and Ms Bassima Hajj.⁵⁴⁰⁵ This number (ending in 946) was subscribed in the name of Mehdi Badreddine.⁵⁴⁰⁶ It also appears as the contact number for Mr Mehdi Badreddine and his sister, Ms Fatima Badreddine, in university records.⁵⁴⁰⁷ Landline 696 had four contacts with this number;
- Mr Wassef Qdeih,⁵⁴⁰⁸ the cousin of Mr Ayyash's wife, Ms Fatima Hajj.⁵⁴⁰⁹ This number (ending in 630) was listed on Mr Qdeih's Hajj travel application.⁵⁴¹⁰ It was also listed for his wife, Ms Salam Houmani, on a Hajj travel application.⁵⁴¹¹ Landline 696 had four contacts with this number;
- Mr Mohammed Ayyash,⁵⁴¹² Mr Ayyash's brother.⁵⁴¹³ This number (ending in 913) is attributed to Mr Mohammed Ayyash by two witnesses.⁵⁴¹⁴ The number was subscribed under his name on 11 April 2007, after initially being subscribed for a different user in 1996.⁵⁴¹⁵ Landline 696 had three contacts with this number;
- Mr Hussein Zaarour,⁵⁴¹⁶ the brother of Mr Ayyash's brother-in-law, Mr Ali Zaarour.⁵⁴¹⁷ Mr Hussein Zaarour owned a car showroom frequented by Mr Ayyash for business purposes, as Mr Ayyash sold cars through this showroom.⁵⁴¹⁸ This number (ending in 333)

⁵⁴¹⁸ Exhibit P1863 (Statement of Witness PRH535), paras 12-16.

is subscribed in Mr Hussein Zaarour's name and was used in two of his passport applications.⁵⁴¹⁹ Landline 696 had 55 contacts with this number;

- Mr Ghaleb Jaber,⁵⁴²⁰ who operated a car mechanic shop next to the Ayyash family's former tool shop, and knew Mr Ayyash.⁵⁴²¹ His number (ending in 617) was stored in a customer database under the name Ghaleb Jaber.⁵⁴²² A bill of sale between Mr Jaber and Mr Ayyash for a Toyota Camry contains this number under Mr Jaber's details.⁵⁴²³ Landline 696 had 27 contacts with this number.

Mr Jaber might not have been exclusive user of this number. It was associated with or listed as the contact number for others, including Mr Ayyash, but always in connection with cars, suggesting that Mr Jaber's 'car repair shop' may have been noted as a contact for some vehicle related purposes;⁵⁴²⁴

- Witness PRH697,⁵⁴²⁵ an acquaintance of Mr Ayyash.⁵⁴²⁶ He gave investigators his mobile number.⁵⁴²⁷ Landline 696 had two contacts with this number;
- a mobile number that received two calls from Blue 233.⁵⁴²⁸ This number—ending in 401—was subscribed under the name Faraj Saed Lakkis and also appeared in a company's customer database under this name.⁵⁴²⁹ Landline 696 had one contact with this number;

⁵⁴¹⁹ Exhibit P1462 (Subscriber note for mobile 333); exhibit P1522 (Mr Hussein Zaarour's passport application), p. 2; exhibit P1523 (Mr Hussein Zaarour's Lebanese passport application), p. 2. Other documentary material includes vehicle registrations and the university record of his daughter, Ms Fatima Zaarour, exhibit P976 (List of students from *Université Libanaise*); exhibit P1737 (Vehicle registration for Hussein Zaarour), p. 3; exhibit P1746 (Vehicle registration for Hussein Zaarour), p. 1.

- Mr Ayyash's attributed personal mobile 935.⁵⁴³⁰ Landline 696 had 58 contacts with it; and
- Mr Ayyash's attributed personal mobile 091.⁵⁴³¹ Landline 696 had 13 contacts with it.

2687. The Lebanese General Directorate of General Security stated that the official Lebanese border records show that Ms Fatima Hajj and Ms Zeinab Ayyash travelled to Iran from Lebanon on 1 September 2004 and returned on 12 September 2004.⁵⁴³²

2688. Between 29 August and 6 September 2004 landline 696 called four different Iranian numbers 24 times, eight of which were answered.⁵⁴³³ None of these Iranian numbers have been attributed to anyone.⁵⁴³⁴

iv. Submissions

2689. The Prosecution submits that Mr Ayyash owned an apartment in Hadath where he used landline 696.⁵⁴³⁵ The attribution of landline 696 to Mr Ayyash is supported by a collection of documents, witness statements, travel records and landline 696's contact profile.⁵⁴³⁶ Proving that Mr Ayyash directly used landline 696 would assist the Prosecution in attributing the mobiles to Mr Ayyash.⁵⁴³⁷

2690. The Ayyash Defence submits that the Prosecution's evidence falls short of proving that landline 696 was used by Mr Ayyash.⁵⁴³⁸ Similarly, the Prosecution has not proved that Mr Ayyash lived in Hadath, and—relevantly to the geographical profile of his alleged mobiles—in which of

the several buildings in the land plot he lived.⁵⁴³⁹ At most, the Prosecution's evidence demonstrates that landline 696 was associated with Mr Ayyash and his family.⁵⁴⁴⁰

v. Findings

2691. The Trial Chamber finds that Mr Ayyash owned the Hadath property and had a clear association with landline 696 between 14 April 2003 and 20 October 2007.

2692. The Lebanese Land Registry records prove that Mr Ayyash was the registered owner of the apartment. Thirteen months after its purchase, he arranged for an electricity account, and the following week had a landline installed, and arranged for all periodic payments associated with both to be directly debited from his bank account. He deactivated his landline subscription four and a half years later, in October 2007. These pieces of evidence strongly associate Mr Ayyash with the property.

2693. Additionally, Mr Ayyash, his wife and their daughter used the number as their contact in their passport applications. As did Ms Hajj to a service provider.

2694. The call sequence table for the landline show that it regularly received calls from telecards, and made and received numerous mobile calls, between 29 August 2004 and 31 December 2005, including 71 with mobiles 091 and 935 that are attributed to Mr Ayyash. Even factoring in that landline to landline calls were not recorded, this shows sustained occupation of the apartment in the period.

2695. In the Trial Chamber's experience, owner residents of residential property tend to buy the property and then, in their own names, pay for electricity and telephone subscriptions. This provides strong evidence that Mr Ayyash lived there during the period in which he was paying for the utility subscriptions.

2696. Combined with the use of the number 696 as a contact for the Ayyash family, this satisfies the Trial Chamber that Mr Ayyash lived there from at least April 2003 until at least 2007. The evidence, however, cannot establish exactly when he was in the apartment. This is with the

⁵⁴³⁹ Ayyash Defence final trial brief, paras 481, 483-484; Ayyash Defence closing submissions, T. 17 September 2018, pp 98-99.

⁵⁴⁴⁰ Ayyash Defence final trial brief, para. 505; Ayyash Defence closing submissions, T. 17 September 2018, pp 98-99.

exception that where his attributed personal mobiles are calling the landline or are somewhere else, or he is using a network mobile elsewhere, he will not have been at home.

(c) Landline 851—Ayyash family residence in Harouf, Nabatiyeh

2697. In 1997, Mr Ayyash's father became the registered owner of a property in Harouf. Landline 851 was connected to the property in 1992. Documents, including a landline subscription record, Lebanese Civil Defence documents and bank and insurance documents, link Mr Ayyash to landline 851. Landline 851 was also in contact with members and acquaintances of the Ayyash family.

i. Land Registry, telephone and electricity subscription records

2698. On 8 July 1997, Mr Jamil Dakhil Ayyash, who was Mr Ayyash's father⁵⁴⁴¹ became the owner of a property in Harouf in southern Lebanon.

2699. It is described in Lebanese Land Registry documents as 'Real Estate Zone: Zebdeen, Number: 105', Nabatiyeh, in the Jabal-El-Abed area, 'Number of the Real Estate With Inclusions: 29'. The registry documents describe it as 'a land with two buildings erected on it, one of which comprises a two power rooms and a garage. The second building is composed of four floors.'⁵⁴⁴² Mr Ayyash's father died in 1999.⁵⁴⁴³

2700. On 16 June 1992, before Mr Ayyash senior apparently purchased the property, landline 851 was activated for the 'Nabatiyeh, Nabatiyeh Zebdine/ Qaleet-El-Marj', 'Jamil Ayyash' building.⁵⁴⁴⁴ On 17 or 18 December 1998, there was a 'transfer to the new network'. The applicant for the transfer was Salim Jamil Ayyash.⁵⁴⁴⁵ On 13 September 2003, 'Salim Jamil Ayyash' requested the cancellation of some and the activation of other services for this telephone number and paid the relevant fees.⁵⁴⁴⁶ The invoices for the landline subscription continued to be paid until

Fahey, mapped the property from the real estate records and concluded that Harouf was approximately 1.5 kilometres to the south west of Plot 29, while Zebdine was approximately 1.5 kilometres to its south east.⁵⁴⁵¹

ii. Landline 851 as a contact for Mr Ayyash and his family

2703. Mr Ayyash's contact details are on signed bank documents. The documents are account statements, a request for online banking and a request for opening a credit account with 'Bank Audi S.A.L – Audi Saradar Group'. One document is dated 31 May 2006. Mr Ayyash's contact details are provided as follows: 'Building: Ayyash; Street: Al-Marj; Area: Harouf; City: Nabatiyeh; Telephone: 03/767165, 07/761851'.⁵⁴⁵²

2704. An employee record from the Civil Defence Directorate dated 1 March 1995, similarly lists 'Salim Ayyash' as living in the Toul area of Harouf, El-Nabatiyeh with telephone number 851. The document records the following address details:⁵⁴⁵³

b. Current Address:

Governorate: El-Nabatiyeh	District: El-Nabatiyeh
Town / City: Harouf	Area: Toul
Street: -----	Name of Owner or Building: his father
Floor: First	Phone Number: 761851

2705. The number also appears as the contact number for 'Salim Jamil Ayyash' on a contract dated 23 February 2005 for the purchase of a Toyota Camry and on a 2004 Hajj application.⁵⁴⁵⁴

2706. Further, Witness PRH050 stated that Mr Ayyash had a life insurance policy with 'Alico' as of 2000 and that his policy noted his home telephone number as '07761851'.⁵⁴⁵⁵

⁵⁴⁵¹ Exhibit P662 (Statement of Andrew Fahey), paras 48-49.

⁵⁴⁵² Exhibit P1027 (Mr Ayyash's contract with Audi Bank), pp 1, 14, 16, 22, 24-25, 28-30.

⁵⁴⁵⁴ Exhibit P1749, pp 1, 4; exhibit P1672 (Witness statement of Ibrahim Itani, 16 April 2012), ERN 60255954.

⁵⁴⁵⁵ Exhibit P697 (Statement of Witness PRH050), cover page, paras 8, 20.

iii. Contacts of landline 851

2707. According to Mr Donaldson's analysis,⁵⁴⁵⁶ landline 851 was in contact with:

- a mobile linked to Mr Ayyash's brother Ali 19 times;⁵⁴⁵⁷
- a mobile linked to Mr Ayyash's brother Mohammed six times;⁵⁴⁵⁸
- a mobile linked to Mr Ayyash's brother Loutfi ten times. That number, ending in 852, was subscribed in the name of 'Lotfi Ayach' and a customer database and bill-collecting company recorded him under this number;⁵⁴⁵⁹
- a mobile possibly used by Mr Ayyash's brother-in-law, Mr Hassan Cheaito, four times. The number, ending in 229, is subscribed in the name of 'Hassan Husse Cheayto';⁵⁴⁶⁰
- a mobile linked to Mr Ayyash's relative, Mr Wassef Qdeih, four times;⁵⁴⁶¹
- a mobile linked to Mr Ayyash's nephew, Mr Mehdi Mohammed Badreddine, four times;⁵⁴⁶²
- a mobile associated with Mr Ayyash's son, Ali, three times;⁵⁴⁶³
- a mobile associated with Mr Ayyash's brother, Ali, and brother-in-law, Mr Ali Zaarour, four times. The number, ending in 222, was subscribed to Mr Ali Ayyash's wife. It is listed in a club database as contact for Mr Ali Ayyash and a business partner of Mr Ali Zaarour recognised the number as his, and stated that Mr Zaarour and Mr Ali Ayyash worked together;⁵⁴⁶⁴

⁵⁴⁶⁰ Exhibit P884 (Alfa subscriber note for mobile 229); exhibit P1034, p. 17.

⁵⁴⁶¹ See para. 2686, mobile ending in 630.

⁵⁴⁶² See para. 2686, mobile ending in 946.

⁵⁴⁶³ See para. 2686, mobile ending in 097.

⁵⁴⁶⁴ Exhibits P879 (Alfa subscriber note for mobile 222); exhibit P1832; exhibit P1034, pp 3, 19-20; exhibit P1862 (Statement of Witness PRH511), pp 9-10, 25.

- two mobiles associated with Mr Ayyash's sister-in-law's husband, Mr Mohammed Badreddine, four times;⁵⁴⁶⁵
- a mobile linked to Mr Ayyash's sister-in-law, Ms Bassima Al-Hajj, twice;⁵⁴⁶⁶
- a mobile linked to Mr Ayyash's relative and business associate, Mr Hussein Zaarour, four times;⁵⁴⁶⁷
- a mobile linked to Mr Ayyash's business associate, Mr Ghaleb Jaber, nine times;⁵⁴⁶⁸ and
- Mr Ayyash's attributed personal mobile 935, three times.⁵⁴⁶⁹

2708. The Prosecution created a call sequence table for this landline⁵⁴⁷⁰ based on call data records provided by Alfa and Touch, and relying on call data records received from Ogero in relation to Kalam card and telecard calls.⁵⁴⁷¹ Mr Donaldson analysed this call sequence table, but noted that it provides only a partial profile of this landline's use.⁵⁴⁷² The Trial Chamber received into evidence for the Ayyash Defence another call sequence table for landline 851 with the same date range, as exhibit 1D446, which includes some landline-to-landline calls that Ogero generated for testing landlines. This call sequence table, however, did not include certain calls which are present in the Prosecution's call sequence table, exhibit P1979.⁵⁴⁷³

2709. According to Mr Donaldson, landline 851 is attributable to Mr Ayyash and his family from at least 1 September 2004 to 31 December 2005.⁵⁴⁷⁴ Mr Donaldson concluded this from the

⁵⁴⁶⁵ See para. 2686, mobiles ending in 989 and 777.

⁵⁴⁶⁸ See para. 2686, mobile ending in 617.

⁵⁴⁶⁹ See sub-section (B) (1) (f) 'Personal mobile 935'.

⁵⁴⁷⁰ Exhibit P1979.

⁵⁴⁷¹ Andrew Donaldson, T. 18 July 2017, pp 15-17, 20; exhibit P1977 (Statement of Kei Kamei), paras 8-13, annex A; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 53; exhibit P1777 (Consolidated witness statement on behalf of Ogero with annexes 1-9), paras 14-18, 21, 27-29, 76, 79, 83; Witness PRH709, T. 11 January 2017, pp 22-23, 33-36, 39-45; Toufic Chebaro, T. 12 January 2017, p. 16; Witness PRH711, T. 10 January 2017, pp 48-56, 58-59.

⁵⁴⁷² Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 53; Andrew Donaldson, T. 18 July 2017, p. 22.

⁵⁴⁷³ For example, the following three calls between the landline and a mobile number ending in 888 were not included in exhibit 1D446 but were present in exhibit P1979: on 24 October 2004, at 14:46, on 11 November 2004, at 16:33, and on 15 November 2004 at 16:31, exhibit P1979, pp 7-9, exhibit 1D446 (Call sequence table for landline 851), pp 7, 9.

⁵⁴⁷⁴ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 50, 62.

documents and witness statements above and from landline 851's contacts during the period.⁵⁴⁷⁵ Due to the limited availability of call data records from Ogero, landline-to-landline calls for 2004 and 2005 being excluded, the period of attribution is narrower than the subscription period.⁵⁴⁷⁶

iv. Submissions

2710. The Prosecution submits that attributing landline 851 to Mr Ayyash helps to attribute mobiles to him because the address was in an area covered by the most commonly used cells of Mr Ayyash's mobiles.⁵⁴⁷⁷ Number 851 was subscribed on 19 June 1992 under the name of Salim Jamil Ayyash for the Harouf residence.⁵⁴⁷⁸ Among its most frequent contacts were telephone numbers attributable to Mr Ayyash's family members and associates.⁵⁴⁷⁹

2711. The Ayyash Defence submits that while the evidence demonstrates that the Harouf residence was linked to Mr Ayyash, it does not prove that Mr Ayyash actually lived there.⁵⁴⁸⁰ This is particularly so as there is documentary evidence linking Mr Ayyash to additional addresses.⁵⁴⁸¹

v. Findings

2712. The Trial Chamber received no direct evidence of Mr Ayyash's actual daily residence or his specific whereabouts, apart from through using his attributed personal mobiles, and potentially his attributed network mobiles. Mr Ayyash worked nearby for the Civil Defence in Nabatiyeh at the Al-Doueir station until 30 August 2002. He then transferred to Markaba as the Head of Post, before returning to the Nabatiyeh station in 'Operations', from 1 November 2004.⁵⁴⁸² Nabatiyeh and Markaba are around thirty kilometres apart in southern Lebanon.

⁵⁴⁸¹ Ayyash Defence final trial brief, paras 488-491, 493; Ayyash Defence closing submissions, T. 17 September 2018, pp 99-100; F3746, Ayyash Defence Submission of Material Referenced in Closing Arguments, 8 October 2018, annex A, p. 12.

⁵⁴⁸² Exhibit P1162, p. 1.

2713. Mr Ayyash's late father remained as the registered owner of the property as of May 2010, almost eleven years after his death. The landline had been subscribed in his son Salim Jamil Ayyash's name since 1998. The electricity subscription, since 2002, was also in his son's name.

2714. The same reasoning concerning payment of utility bills set out above in relation to the Hadath apartment also applies here, namely, that common experience is that those owning or using the property pay for the services, such as water, electricity, gas, telephone etc.

2715. Mr Ayyash used the landline number as a contact number for: his work, an insurance policy, his 2004 Hajj application and to buy a vehicle. Both the number and the address were listed at his work as his personal contact details. These documents provide compelling evidence that Mr Ayyash was regularly using the property.

2716. The call sequence table for landline 851, between 1 September 2004 and 31 December 2005, shows 498 calls from telecards, and calls to and from mobile numbers. Notwithstanding that there were no records available for landline to landline calls during that period, its daily use—*for these calling purposes*—was much more irregular than that of landline 696 in Hadath in Beirut. There are some weeks where no calls are recorded. This suggests, but does not prove, that this residence was a secondary one used by Mr Ayyash and his family. Numerous contacts of this landline were with Ayyash family members. There were even two calls to landline 851 from Mr Ayyash's attributed mobile, 935—on 19 and 24 November 2004—and one from it to mobile 935, on 5 September 2004.

2717. The Trial Chamber is therefore satisfied that Mr Ayyash made or received some of the calls involving landline 851. It finds that he used landline 851 from at least 1 September 2004 to 31 December 2005, and therefore—like at Hadath—he was using this property as a residence, and most likely as a second home, during this period.

(d) Personal mobile 165

2718. Various documents, including passport applications, medical records and bank documents, link the Ayyash family to mobile 165. Furthermore, the SIM card of mobile 165 was used on three different occasions in Mr Ayyash's BMW. The mobile was in contact with many of Mr Ayyash's

family members, his employer and his business associates. Moreover, the mobile frequently activated cell masts covering Mr Ayyash's Harouf and Hadath residences and his work place.

i. Evidence

2719. A Touch subscriber note records that number 165 was activated as a pre-paid SIM on 10 February 2000, without any identification of the subscriber.⁵⁴⁸³

2720. Mr Andrew Donaldson attributed mobile number 165 to Mr Ayyash from 23 April 2002 to 18 April 2004.⁵⁴⁸⁴ Call data records for number 165 are only available from 23 April 2002.⁵⁴⁸⁵ The last call to mobile 165 occurred on 18 April 2004.⁵⁴⁸⁶ The number was deactivated the following day.⁵⁴⁸⁷

a. Bank documents

2721. The telephone contact of Mr Ayyash's wife, Fatima, is listed as '03/767165' on two *Banque Libano-Française* documents, dated 6 October 2000 and 26 May 2004.⁵⁴⁸⁸ On three 'Bank Audi' documents, two of which are dated, namely 31 May 2006 and 26 May 2004, Mr Ayyash's telephone number is listed as '03767165'.⁵⁴⁸⁹ The documents include client profiles, requests to open bank accounts and an application to register in a loan program.

b. Landline application

2722. On 14 April 2003, Mr Ayyash applied for a landline subscription for his apartment in Hadath, giving his contact number as mobile number 165.⁵⁴⁹⁰ On 20 October 2007, he sought the

⁵⁴⁹⁰ Andrew Donaldson, T. 18 July 2017, p. 35; exhibit P1636, pp 2-3, 6.

deactivation of the Hadath property landline. Number 165 appeared on the form as the contact number.⁵⁴⁹¹

c. Passport application

2723. On 10 February 2003, Mr Ayyash applied for a passport for his son Ali, then aged 16, providing '767165' as a 'mobile' contact number.⁵⁴⁹²

d. Hajj participation entry

2724. A 2004 Hajj list of applicants records Mr Abdo Mustafa Hariri's mobile number as '03/767165'.⁵⁴⁹³ He is married to Mr Ayyash's niece, Tamara.⁵⁴⁹⁴

e. Service providers and appointments

2725. Mr Ayyash, his wife and his daughter were registered with mobile number 165 at a service provider in Beirut.⁵⁴⁹⁵ Mobile 165 activated a Touch cell providing predicted best server coverage to the service provider's office and an adjacent cell on two days when Mr Ayyash's family had appointments with the service provider.⁵⁴⁹⁶ Number 165 was also in contact with the service provider.⁵⁴⁹⁷ One additional cell activation occurred in the area of the service provider's office on the day when one of the calls took place.⁵⁴⁹⁸ Mobile 165 activated the two cells on other occasions within the attribution period.⁵⁴⁹⁹

2726. Mr Ayyash's wife was a registered client at another service provider, listing mobile 165 and landline 696 as her contact numbers.⁵⁵⁰⁰ Mobile 165 was in contact with the telephone number

of this service provider and activated a cell that provided predicted best server coverage for their office on a day in 2004 when Mr Ayyash's wife had an appointment there.⁵⁵⁰¹ The mobile activated the same cell on a number of other dates.⁵⁵⁰²

f. Handset use

2727. IMEI 44666207202575 is a handset fitted in a BMW model 523i vehicle.⁵⁵⁰³ The BMW was owned by Mr Ayyash between 12 February 2002 and 30 December 2004.⁵⁵⁰⁴ The SIM card used with mobile 165 was used in the BMW's handset on three different dates, namely 23 November 2002, 1 September 2003 and 6 September 2003.⁵⁵⁰⁵

2728. The mobile 165 SIM was used with the following handsets during the attribution period:

- IMEI 35011210115681, its main handset from 23 April 2002 to 20 October 2003;
- IMEI 33216953301219, on 15 February 2003;
- IMEI 35084120223647, on 16 February and 13 August 2003; this handset was also used with Yellow 425, between 1 May 2003 and 21 April 2004, and with Yellow 576, from 17 September 2002 to 3 January 2003;
- IMEI 35111110002249, between 16 February 2003 and 20 February 2003; this handset was also used with the following Yellow network mobile numbers:
 - Yellow 809, from 25 August to 21 September 2003;
 - Yellow 120, on 12 and 13 May 2004;
 - Yellow 576, on 30 January 2003;

⁵⁵⁰³ Exhibit P1405 (Photographs of BMW 523i), pp 6, 23-24; exhibit P1407 (Statement of Toby Smith), paras 11, 14.

⁵⁵⁰⁴ Exhibits P1396, P1398 (Vehicle registration for BMW 523i), P1400 (Vehicle registration for BMW 523i), P1402 (Vehicle inspection report for BMW 523i), P1403 (Bill of sale for BMW 523i). The Ayyash Defence does not dispute this, Ayyash Defence final trial brief, para. 358.

⁵⁵⁰⁵ Exhibit P1102 (Touch list of IMEI numbers), p. 1.

- Yellow 488, between 30 January and 23 December 2003; and
- Yellow 920, from 29 March to 5 May 2003;
- IMEI 35077710149188, from 28 July to 9 August 2003;
- IMEI 35250400115602, its main handset between 21 October 2003 and 13 April 2004;
- IMEI 49051820497471, from 29 January to 7 February 2004; this handset was also used with Yellow 425, between 22 November and 22 December 2004;
- IMEI 35077810830627, on 10 March 2004; and
- IMEI 35251200135371, between 13 and 18 April 2004.⁵⁵⁰⁶

g. Contact profile

2729. According to Mr Donaldson's analysis, during the attribution period number 165 was in contact with 632 other numbers some 5,795 times, including with:⁵⁵⁰⁷

- a mobile linked to Mr Ayyash's brother Loutfi 307 times;⁵⁵⁰⁸
- a mobile associated with Mr Ayyash's sister-in-law, Ms Bassima Al-Hajj, 281 times;⁵⁵⁰⁹
- landline 851 of Mr Ayyash's Harouf residence 271 times;⁵⁵¹⁰
- a landline number linked to Mr Ayyash's father-in-law, Mr Abdel-Hassan Ahmed Moussa Al-Hajj, 173 times. The number, ending in 612, is subscribed to Mr Abdel-Hassan Ahmed Moussa Al-Hajj and was used for passport applications for three of his children;⁵⁵¹¹

- a landline number linked to Mr Ayyash's brother Mohammed 173 times. The number, ending in 584, is subscribed to Mr Ayyash's father's former tool shop, where Mohammed worked. Invoices and family passport applications also link this number to Mohammed or at least the Ayyash family;⁵⁵¹²
- a mobile number linked to Mr Ayyash's brother Mohammed 148 times;⁵⁵¹³
- a landline number subscribed to Mr Ayyash's father and used on a bank document for Mr Ayyash and a patient record for Mr Ayyash's wife 84 times;⁵⁵¹⁴
- a mobile linked to Mr Ayyash's brother Ali 80 times;⁵⁵¹⁵
- a landline number subscribed to Mr Ayyash's sister-in-law's husband, Mr Mohammad Abdallah Jarady, 62 times. The number, ending in 833, was subscribed to Mr Mohammad Abdallah Jarady, appeared on his wife's passport application and on university documents for him and his wife;⁵⁵¹⁶
- landline 696 of Mr Ayyash's Hadath residence 62 times;⁵⁵¹⁷
- a mobile number linked to Mr Ayyash's brother-in-law, Mr Saleh Qassem Harb, 47 times. The number, ending in 700, was subscribed to Mr Harb and used in a Hajj application for him, however the number was also used in Hajj applications for Ms Alia Khalil Sreij and Mr Ali Mohammed Tarhini;⁵⁵¹⁸

⁵⁵¹² Exhibit P697 (Statement of Witness PRH050), para. 12 (p. 9); exhibit P1034, p. 3; exhibit P1517 (Mr Mohammed Jamil Ayyash's Lebanese passport application), p. 2; exhibit P1518 (Ms Fatima Jamil Ayash's Lebanese passport application), p. 2; exhibit P1519 (Mr Hussein Cheaito's Lebanese passport application), p. 2; exhibit P1530, p. 2; exhibit P1623 (Ogero subscriber note for number 584); exhibit P1864 (Witness statement of Pierre Abou-Atmeh), para. 15 (p. 8), pp 15-16, 21, 26-34, 36, 38-40; exhibit P1867 (Statement of Witness PRH520), para. 48 (p. 13).

⁵⁵¹³ See para. 2686, mobile ending in 913.

- a landline number linked to Mr Ayyash's sister Bassima and her husband 47 times. This number, ending in 620, was subscribed to Bassima's husband and was used to register a vehicle for Bassima, used in passport applications for Bassima and her daughter, used in Hajj applications for Bassima and her husband and found in university documentation for Bassima's daughter;⁵⁵¹⁹
- a landline number linked to Mr Ayyash's brother-in-law, Mr Mohammed Abdel Hassan Al-Hajj, 46 times. This number, ending in 504, was subscribed to Mr Mohammed Abdel Hassan Al-Hajj;⁵⁵²⁰
- another mobile number linked to Mr Saleh Qassem Harb, 43 times. The number, ending in 900, appears on four consecutive Hajj applications for Mr Harb;⁵⁵²¹
- a mobile number linked to Mr Ayyash's brother Ali and his brother-in-law, Mr Ali Zaarour, 43 times;⁵⁵²²
- a number subscribed to Mr Ayyash's brother-in-law, Mr Mohammed Amine Badreddine, 41 times;⁵⁵²³
- another number linked to Mr Mohammed Amine Badreddine 27 times;⁵⁵²⁴
- a number linked to Mr Ayyash's relative Mr Wassef Qdeih 21 times;⁵⁵²⁵
- another number associated with Mr Mohammed Amine Badreddine and his family 18 times;⁵⁵²⁶

⁵⁵¹⁹ Exhibits P977-P978, P1621 (Ogero subscriber note for number 620), P1678-P1679; exhibit P1034, pp 3, 15; exhibit P1514 (Ms Bassima Ayyash's Lebanese passport application), p. 2; exhibit P1515, p. 2; exhibit P1741 (Vehicle registration for Bassima Ayyash), pp 1, 3.

⁵⁵³³ Exhibit P697 (Statement of Witness PRH050), para. 7 (p. 9).

⁵⁵³⁴ Exhibit P2126 (Interview of Witness PRH028), p. 17.

- a mobile linked to Mr Ayyash's niece's husband's uncle, Mr Abdallah Ali Safieddine, three times. The number, ending in 894, was used in Mr Safieddine's passport application, insurance documentation and in university documents for his son;⁵⁵³⁵
- a mobile of a service provider for Mr Ayyash's wife eight times. The service provider confirmed that this was her number, ending in 940;⁵⁵³⁶
- a landline of a service provider for the Ayyash family four times. The service provider confirmed that this was his number, ending in 061;⁵⁵³⁷ and
- a mobile ending in 401—that received two calls from Blue 233 and had one contact with landline 696—four times.⁵⁵³⁸

2730. Mr Donaldson could not exclude that Mr Ayyash's family members may have occasionally used mobile 165.⁵⁵³⁹

h. Geographic profile

2731. The top most frequently used cell sectors of mobile 165 were: Bir Abed_C (16.58 per cent), which is south of Ghobeiry, Sfeir_A (11.27 per cent), which is situated between Haret Hreik and Hadath and 'Bir Abed 'A' (10.45 per cent), also south of Ghobeiry.⁵⁵⁴⁰

2732. Until the end of January 2003, the most frequent cell sectors were Bir Abed_C, Bir Abed_A and Nabatieh_C, which is south-east of Sidon. Thereafter, the most frequent cell sectors were

⁵⁵³⁷ Exhibit P2084, p. 2.

⁵⁵³⁸ Mobile 165 had contacts with nine Yellow mobiles (including Yellow 294) with some of which it shared handsets, exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 80, 84-86, 93; Andrew Donaldson, T. 18 July 2017, pp 45-47, 53.

⁵⁵³⁹ Andrew Donaldson, T. 6 October 2017, pp 18-19.

⁵⁵⁴⁰ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 98.

Sfeir_A, Nabatieh_C and Sfeir_B.⁵⁵⁴¹ Touch's Sfeir_A and Sfeir_B cells were in the area of Mr Ayyash's Hadath residence.⁵⁵⁴²

Geographic location of mobile 165's most frequently activated cells from exhibit P592.1

⁵⁵⁴¹ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 99-100.

⁵⁵⁴² Exhibit P662 (Statement of Andrew Fahey), paras 10-38, pp 33, 37, 40, 43, 46; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 102; exhibit P592.1 (Electronic Presentation of Evidence Software).

2733. Plot 29, according to Touch's coverage maps, falls within the predicted best coverage of Nabatieh_D, which is adjacent to Nabatieh_C. Touch's engineers, however, had conducted drive tests in 2006 on the road between Harouf and Nabatiyeh and discovered that Nabatieh_C actually provided the best coverage along that road. Touch provided the test results to the Prosecution.⁵⁵⁴³ Plot 29 lies a few hundred metres from the road. Mr Donaldson explained this in his report.⁵⁵⁴⁴

2734. The drive test result is reproduced on the Touch map below. Plot 29 is to the north of the green line in between Harouf and Zebdine. The green line represents Nabatieh_C's best coverage, while the red line to its right shows Nabatieh_D's best coverage. The drive test map is annexed to the statement of Witness 705, the Touch representative who testified.⁵⁵⁴⁵

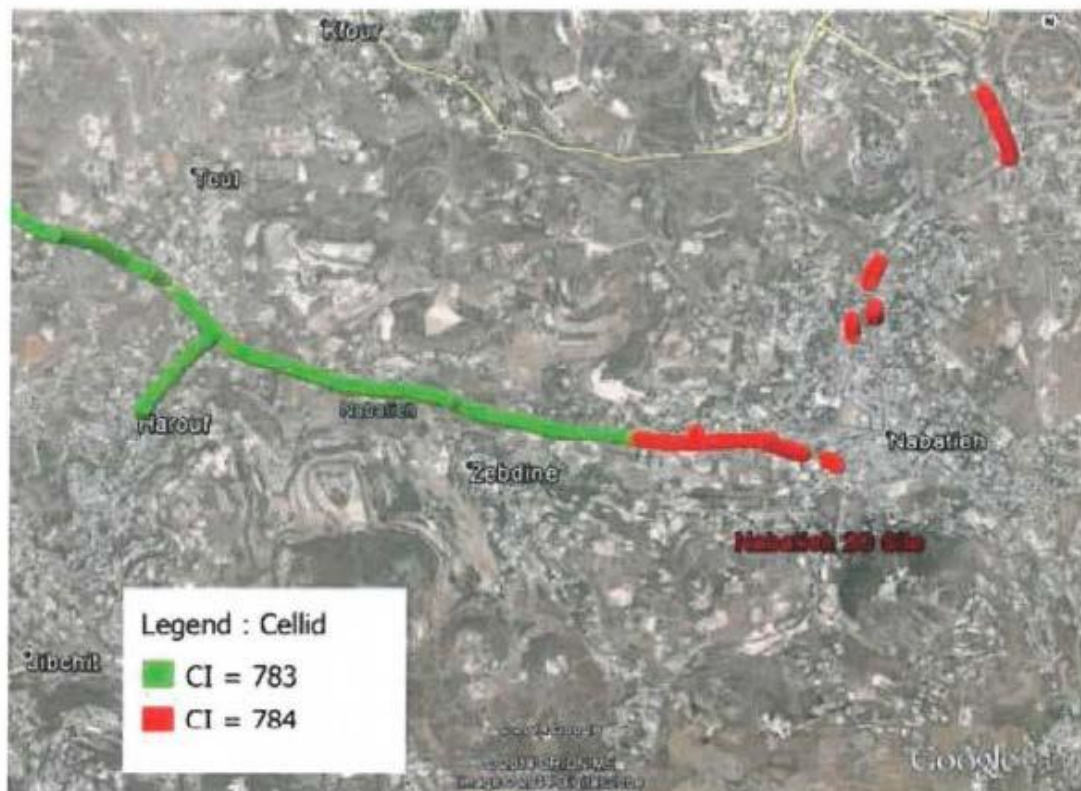

⁵⁵⁴³ Exhibit P826.15 (Annex 25 (2) to Witness PRH705's statement of 16 November 2015).

⁵⁵⁴⁴ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 103-107.

⁵⁵⁴⁵ Exhibit P826.15 (Annex 25 (2) to Witness PRH705's statement of 16 November 2015).

2014/RFA0034/LEB.AnD

- 1- Kindly note that there is a known or identifiable cause. In the below image we have loaded the 2G Best server plot of a 2G drive test conducted in 21/08/2006 into Google earth to show where Nabatieh Sector C (CI=783) and Sector D (CI=784) were observed as the best server. It is clear from the drive test that Nabatieh Sector C (CI=783) was serving near Harouf Area.

In the below image we have loaded the same drive test but showing the best server receive level. It is clear that at that time Harouf was suffering from Bad 2G coverage and even though Nabatieh Sector C was serving near Harouf Area the receive level was relatively low. Moreover, the Area topography shows that Nabatieh Sector C was the best server in that area because of multiple signal reflections and not be direct line of site, since the Nabatieh Sector C Antenna orientation was 180 degrees and was not directed to Harouf Area. This also explains why the Predicted coverage shows that Nabatieh Sector D is the dominant in Harouf Area not Nabatieh Sector C. The predicted coverage model used was not a ray trace model so it does not take into consideration multi-path reflection.

*Exhibit P826.1 (Annex 25 (2) to Witness PRH705's statement of 16 November 2015), p. 1—
Touch's drive tests near Harouf, 21 August 2006*

2735. The Nabatieh_C cell sector provided best server coverage for Mr Ayyash's residence in Harouf.⁵⁵⁴⁶

2736. Based on this pattern, Mr Donaldson suggested that the user of number 165 moved residences in February 2003.⁵⁵⁴⁷ Mobile 165 further activated the Markaba cells (Markaba_A, Markaba_B and Markaba_C) 186 times between January 2003 and April 2004 when Mr Ayyash was employed at the Civil Defence's Markaba station.⁵⁵⁴⁸ The predicted best server coverage area for Markaba village is Markaba_C, with Markaba_A and Markaba_B lying adjacent to it.⁵⁵⁴⁹ Markaba is less than two kilometres from the Syrian border.

ii. Submissions

2737. According to the Prosecution, attributing personal mobiles, including number 165, to Mr Ayyash is necessary to attribute a number of network mobiles to him.⁵⁵⁵⁰

2738. The Prosecution submits that Mr Ayyash was the user of number 165 from 23 April 2002 to 18 April 2004. Its attribution to him is demonstrated by documents, the use of an integrated handset of a BMW 523i registered in Mr Ayyash's name and the mobile's contact profile.⁵⁵⁵¹ It also connected to cells near Mr Ayyash's residences in Hadath and Harouf, and to cells near the two service providers to his family at the relevant times, as well as being in contact with these service providers.⁵⁵⁵²

2739. The Ayyash Defence submits that at best the evidence shows an association of this number with the Ayyash family but falls short of demonstrating any use by Mr Ayyash.⁵⁵⁵³

⁵⁵⁴⁶ Exhibit P662 (Statement of Andrew Fahey), paras 39-53, pp 51, 53, 56; exhibit P826.15 (Annex 25 (2) to Witness PRH705's statement of 16 November 2015; exhibit P1254; exhibit P1867 (Statement of Witness PRH520), para. 20; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 103-107, 233; John Edward Philips, T. 21 April 2017, pp 60-61, T. 25 April 2017, p. 74; Andrew Donaldson, T. 18 July 2017, pp 57-59.

⁵⁵⁴⁷ Andrew Donaldson, T. 18 July 2017, pp 53-56.

⁵⁵⁴⁸ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 639; exhibits P1159-P1160, P1162. The Markaba Civil Defence station is 200-300 metres from a shop on the main road in Markaba, exhibit P1981 (Statement of Witness PRH437), para. 29 (p. 11).

⁵⁵⁴⁹ Exhibit P663 (Statement of Andrew Fahey), annex 1, location no. 88; exhibit P1122.

⁵⁵⁵⁰ Amended consolidated indictment, paras 16, 18-19; Prosecution final trial brief, para. 248.

⁵⁵⁵¹ Prosecution final trial brief, paras 221-224; Prosecution closing submissions, T. 12 September 2018, p. 93.

⁵⁵⁵² Prosecution final trial brief, paras 225-226.

⁵⁵⁵³ Ayyash Defence final trial brief, paras 531, 541, 545-546, 576.

2740. First, many of the documents relied upon by the Prosecution fall outside the attribution period.⁵⁵⁵⁴ Secondly, regarding the BMW's handset, the Prosecution presented no evidence that Mr Ayyash actually used the BMW during the attribution period.⁵⁵⁵⁵ Thirdly, no reliable conclusion can be drawn from the contact profile due to the Prosecution only sparsely presenting evidence from number 165's alleged contacts.⁵⁵⁵⁶ Fourthly, in relation to the cells that number 165 connected to and its call activity, there is no evidence on Mr Ayyash's whereabouts, thus rendering this cell site evidence useless with regard to attributing it to him.⁵⁵⁵⁷

2741. Finally, the Prosecution failed to prove that Nabatieh_C provided the predicted best server coverage for the Harouf residence. Nabatieh_D, not Nabatieh_C, provides coverage to Plot 29, and does not feature within mobile 165's most commonly used cells.⁵⁵⁵⁸

iii. Findings

2742. The evidence associating this mobile with Mr Ayyash is overwhelming. The documents assessed and reviewed incontrovertibly associate mobile number 165 with the Ayyash family.

2743. The service provider evidence, the landline application and the passport application for his son, which he signed, specifically link Mr Ayyash with this mobile. The BMW was registered in Mr Ayyash's name, and the SIM number 165 was used three times in its integrated handset. There is of course no direct evidence that it was Mr Ayyash himself who made or received the three calls. However, when viewed in the context of the totality of the evidence of mobile 165's use, there is a very strong circumstantial case that it was Mr Ayyash.

2744. The 2004 Hajj application also connects the mobile with Mr Ayyash's family, and Mr Ayyash himself travelled to Saudi Arabia for the Hajj that year, as is analysed below.

⁵⁵⁵⁴ Ayyash Defence final trial brief, paras 527, 530.

⁵⁵⁵⁵ Ayyash Defence final trial brief, paras 549-550.

⁵⁵⁵⁶ Ayyash Defence final trial brief, paras 551-558; Ayyash Defence closing submissions, 17 September 2018, pp 106-108.

⁵⁵⁵⁷ Ayyash Defence final trial brief, paras 533-546, 559-572, 575; Ayyash Defence closing submissions, 17 September 2018, p. 98.

⁵⁵⁵⁸ Ayyash Defence final trial brief, paras 567-571; Ayyash Defence closing submissions, 17 September 2018, p. 100.

2745. To attribute mobile 165 to Mr Ayyash, the Prosecution also relies on its geographic profile evidence, 186 cell activations in Markaba at a time when Mr Ayyash was employed there, and that the cells most frequently activated included those near two of Mr Ayyash's residences.

2746. On the Trial Chamber's own calculation based on the mobile's call sequence table,⁵⁵⁵⁹ number 165 activated the cell servicing the Harouf residence 462 times. Of those, 58 per cent occurred on the weekend. Adding early morning, before 09:00, and evening activations, namely, after 18:00, it reaches 71 per cent.

2747. In Hadath, number 165 activated the cells providing coverage to the apartment 692 times. Twenty-seven per cent were activations early morning, before 09:00, or in the evening, after 18:00. Adding weekend activations makes it 44 per cent.

2748. The Trial Chamber is satisfied that the mobile activated cells in the vicinity of Mr Ayyash's Harouf and Hadath residences, as well as in the vicinity of Markaba village while he was stationed at the Markaba Civil Defence station. However, there is no evidence linking these cell activations with his presence at his residence or at his workplace on particular days or times of day.

2749. The Ayyash Defence also challenged which cell provided the best coverage to the Harouf residence, Plot 29. The Touch drive tests in 2006 revealed that Nabatieh_C provided the best coverage on the Nabatiyeh-Harouf road. Plot 29, from its location on the maps in evidence, appears to be several hundred metres from this road where Nabatieh_C was shown to provide the best coverage, as opposed to Nabatieh_D.

2750. The Trial Chamber has carefully examined the cell coverage maps and the drive test map and results. It has put these within the context of Mr Philips's general cell site evidence, and the specific evidence he gave on these particular drive tests and the coverage of the two cells.⁵⁵⁶⁰ Mr Philips explained the potential coverage of the two cells near Harouf, to the Trial Chamber's satisfaction, demonstrating how someone using a mobile at or near the Harouf residence could connect to either Nabatieh_C or Nabatieh_D. This included that this could have been caused by

⁵⁵⁵⁹ Exhibit P1254.

⁵⁵⁶⁰ J. E. Philips, T. 25 April 2017, pp 68-75.

multiple signal reflections from nearby hills that may not have been accounted for in the prediction tools.

2751. Regarding the contact profile, the contacts of mobile 165 could certainly directly link the number to Mr Ayyash. But those the Prosecution interviewed did not. The witnesses the Prosecution contacted in this respect were obviously close to Mr Ayyash, or his family, and could be seen to have good motivation not to recognise the number. Moreover, in these circumstances it is perfectly permissible for the Prosecution to attempt to prove its attribution to Mr Ayyash through other, circumstantial, evidence.

2752. While the Prosecution attributed only 30 out of the 632 contact numbers to Mr Ayyash's family and acquaintances, these 30 are almost half of all its calls. In addition, they rank among its top contacts. As with the documents reviewed above, an association with the Ayyash family is obvious from the contact profile.

2753. The Trial Chamber specifically considered that number 165 could have been Mr Ayyash's wife's mobile number due to her name appearing on documents listing this number and several contacts being from her side of the family. However, it considered that number 165 was in contact with Mr Ayyash's business associates, his insurance agent and the Nabatiyeh Civil Defence station.

2754. While contact with the Nabatiyeh Civil Defence station could also support that number 165 was Mr Ayyash's wife's mobile, in the sense of her calling her husband at work, the call sequence table of number 165 demonstrates that the calls to and from the Nabatiyeh Civil Defence station continued when Mr Ayyash had left Nabatiyeh and worked at Markaba.⁵⁵⁶¹ Mr Ayyash, as the former head of the Nabatiyeh station, would presumably have had greater reason than his wife to call his former Civil Defence station, while still employed by the Civil Defence.

⁵⁵⁶¹ Exhibit P1254, pp 13, 20-21, 24-26, 30-31, 33-36, 40, 42, 50, 52, 60, 63, 67, 75, 78, 80, 83, 86, 88-90, 95, 97, 103-104, 107-111, 113-116, 118-127, 129, 132, 134-138, 140, 142-143, 145, 147-155, 157, 161, 165, 172-176, 178-179, 182-183, 185-187, 189, 191-193, 195. Mr Ayyash was employed by the Civil Defence and worked in Nabatiyeh (the Al-Doueir station) until 30 August 2002 and again as of 1 November 2004. In between, he worked at the Markaba station, exhibits P1159-P1160, P1162.

2755. At the same time, the Trial Chamber cannot exclude that Mr Ayyash's wife or close family members may have occasionally used this mobile. The evidence does not suggest, however, that any such use rose to the level of a common, family mobile.

2756. The Trial Chamber is therefore satisfied that Mr Ayyash was the principal user of mobile 165 during the attribution period from at least 23 April 2002 to 18 April 2004. However, as set out below, during the 2004 Hajj, more specifically from at least 29 January to the morning on 8 February 2004, someone other than Mr Ayyash used it.⁵⁵⁶²

(e) Personal mobile 170

2757. Mobile 170 was used with the same handset throughout its attribution period. It also appeared on documents and made calls after Mr Ayyash's Toyota Camry was involved in an accident.

2758. The number was in contact with a business associate, a family member and an acquaintance of Mr Ayyash. Moreover, the most frequently connected cells of mobile 170 covered Mr Ayyash's Hadath and Harouf residences. Number 170 also connected to a cell covering the location of a service provider on days when Mr Ayyash's wife, Ms Fatima Hajj, had appointments there. Mobile 170 also made calls to Iranian numbers when Ms Hajj and her daughter were in Iran.

i. Evidence

2759. Touch's subscriber note for this mobile show that it was activated as a pre-paid SIM on 17 July 2002, without any identification of the subscriber.⁵⁵⁶³

2760. The Prosecution attributes mobile 170 to Mr Ayyash from 7 January to 26 November 2005.⁵⁵⁶⁴ Mr Donaldson provided evidence that this attribution period rests on a change of handset on 7 January 2005 and a change in the cells the mobile connected to, and frequent contacts on 26 November 2005.⁵⁵⁶⁵

⁵⁵⁶² Sub-section B (2) (g) 'The 2005 Hajj' (iii) 'Findings'.

⁵⁵⁶³ Exhibit P1471 (Subscriber note for mobile 177).

⁵⁵⁶⁴ Prosecution final trial brief, para. 239.

⁵⁵⁶⁵ Andrew Donaldson, T. 22 August 2017, pp 81, 83; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 207, 209-217, 241-242. *See also* exhibit P1262 (Call sequence table of mobile 170).

a. Handset—Yellow 669

2761. Mobile 170 was used with a handset with IMEI 35252200022555⁵⁵⁶⁶ during the attribution period.⁵⁵⁶⁷ This handset had been used by Yellow 669 until 6 January 2005.⁵⁵⁶⁸ Attributing Yellow 669 to Mr Ayyash may assist to attribute mobile 170 to him.

2762. However, Mr Donaldson attributed Yellow 669 to Mr Ayyash from 23 December 2013 until 18 April 2004 only.⁵⁵⁶⁹ The attribution of Yellow 669 to Mr Ayyash is analysed below in sub-section (B) (2) (a) ‘Yellow 669’.

b. Toyota Camry accident

2763. On 25 May 2005, a Toyota Camry owned and insured by Mr Ayyash had a car accident in Beirut.⁵⁵⁷⁰ An insurance claim document has a copy of the car registration attached with number 170 handwritten on the back of it.⁵⁵⁷¹

2764. On 27 May 2005, mobile 170 called number 445—used by the owner of Monaco Garage, which was responsible for repairing the Camry—and number 849, Mr Ayyash’s insurance agent.⁵⁵⁷²

c. Contact profile

2765. According to Mr Donaldson’s analysis, during the attribution period number 170 was in contact with 122 numbers some 1,489 times, including with:

⁵⁵⁶⁶ Mr Philips explained that it is only the first 14 digits which actually constitute an IMEI, with any additional digits representing other features, such as a software version number, exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), paras 5.1.4.1.1.9-5.1.4.1.1.11.

⁵⁵⁶⁷ Andrew Donaldson, T. 22 August 2017, pp 84-85; exhibit P1262; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 219.

⁵⁵⁶⁸ Andrew Donaldson, T. 22 August 2017, pp 84-85; exhibit P889 (IMEI data for four numbers); exhibit P1248 (Call sequence table of Yellow 669), pp 71-92; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 220.

⁵⁵⁶⁹ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 267-280.

⁵⁵⁷⁰ Andrew Donaldson, T. 23 August 2017, pp 26-27; exhibit P689 (Documents related to Toyota Camry accident), pp 3 (ERN 60294964), 10-11 (ERNs 60294971-60294972); exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 226. *See also* exhibit P2025, slides 211-212.

⁵⁵⁷² Exhibit P689, pp 1, 9; exhibit P1262, p. 23. *See also* para. 2729.

- a mobile linked to Mr Ayyash's relative and business associate, Mr Hussein Zaarour, 187 times;⁵⁵⁷³
- a mobile linked to Mr Ayyash's relative, Mr Abdallah Safieddine, 21 times;⁵⁵⁷⁴ and
- a mobile linked to an acquaintance of Mr Ayyash,⁵⁵⁷⁵ twice.⁵⁵⁷⁶

2766. Witnesses whose telephone numbers were in contact with mobile 170 during its attribution period, did not recognise personal mobile 170.⁵⁵⁷⁷

d. Mr Ayyash's daughter's visit to Iran

2767. Mr Ayyash's daughter travelled to Iran from 17 to 24 August 2005.⁵⁵⁷⁸ Mobile 170 made four calls to Iranian numbers on 20 and 21 August 2005.⁵⁵⁷⁹

e. Mr Ayyash's wife's appointments at a service provider

2768. Mr Ayyash's wife is a registered client at a service provider's institution.⁵⁵⁸⁰ She visited it a number of times in 2004 and 2005, including on 13 February 2005 and 29 June 2005.⁵⁵⁸¹ Mobile 170 activated the Touch cell providing predicted best server coverage to the service provider's office when she had appointments there.⁵⁵⁸²

f. Geographic profile

2769. The cells that mobile 170 most frequently connected to were Touch's Sfeir_A (15.04 per cent), Sfeir_B (14.24 per cent) and Nabatiyeh_C (9.6 per cent).⁵⁵⁸³ Touch's Sfeir_A and Sfeir_B cells were in the area of Mr Ayyash's Hadath residence.⁵⁵⁸⁴

2770. The coverage of Nabatiyeh_C, as opposed to Nabatiyeh_D, is analysed in the findings relating to personal mobile 165, immediately above.

ii. Submissions

2771. According to the Prosecution, attributing mobile 170 to Mr Ayyash helps to attribute network mobiles to him.⁵⁵⁸⁵

2772. Mr Ayyash used mobile 170 from 7 January 2005 to 26 November 2005.⁵⁵⁸⁶ Number 170 was used in the same handset⁵⁵⁸⁷ as Yellow 669, also attributed to Mr Ayyash.⁵⁵⁸⁸

2773. During the attribution period, the cells most frequently connected to by this number were near Mr Ayyash's homes in Hadath and Harouf.⁵⁵⁸⁹ Further, its contact profile demonstrates its distinct covert purpose and that Mr Ayyash was its user.⁵⁵⁹⁰ Number 170 is also connected to calls relating to Mr Ayyash's Toyota Camry's accident. The vehicle was insured and owned by Mr Ayyash, and the number handwritten on a copy of the vehicle's registration document.⁵⁵⁹¹ The number was also in contact with Iranian numbers when Mr Ayyash's daughter was in Iran and it activated a cell providing predicted best server coverage to a service provider's office on two days when Mr Ayyash's wife had appointments there.⁵⁵⁹²

⁵⁵⁸³ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 232.

⁵⁵⁸⁴ Exhibit P662 (Statement of Andrew Fahey), paras 10-38, pp 33, 37, 40, 43, 46; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 102, 118; exhibit P592.1.

⁵⁵⁸⁵ Amended consolidated indictment, paras 16, 18-19; Prosecution final trial brief, paras 248-249.

⁵⁵⁸⁶ Prosecution final trial brief, para. 239; Prosecution closing submissions, T. 12 September 2018, p. 79.

⁵⁵⁸⁷ That is, the same actual telephone, as can be seen by the identical IMEI.

⁵⁵⁸⁸ Prosecution final trial brief, paras 241, 304-308.

⁵⁵⁸⁹ Prosecution final trial brief, para. 242.

⁵⁵⁹⁰ Prosecution final trial brief, para. 243.

⁵⁵⁹¹ Prosecution final trial brief, para. 245; Prosecution closing submissions, T. 12 September 2018, pp 96, 99.

⁵⁵⁹² Prosecution final trial brief, paras 246-247; Prosecution closing submissions, T. 12 September 2018, pp 94-95.

2774. The Ayyash Defence submits that the Prosecution's evidence is not persuasive with regard to the contention that Mr Ayyash used number 170 at any point during the relevant period.⁵⁵⁹³

2775. To link this mobile to Mr Ayyash, Mr Donaldson relies on a single document, a copy of the Toyota Camry's car registration document, on which number 170 is handwritten on the back, but there is no evidence that he provided it as his contact number.⁵⁵⁹⁴ Most contacts of this mobile were unattributed, and three contacts did not recognise this number.⁵⁵⁹⁵ Cell activations in the area of the service provider and calls related to the car accident and to Iran do not assist in attributing this number to Mr Ayyash in January and February 2005, as each event occurred months after.⁵⁵⁹⁶

iii. Findings

2776. Mr Ayyash's Toyota Camry was involved in an accident in Beirut on 25 May 2005. Two days later, mobile 170 called the garage where it was repaired, and Mr Ayyash's insurance agent. Given that the Toyota Camry was registered in Mr Ayyash's name and that he was the insurance beneficiary, the Trial Chamber considers this evidence compelling.

2777. With regard to the numbers in contact with mobile 170, the Trial Chamber considers that only a small number of contacts⁵⁵⁹⁷ and calls⁵⁵⁹⁸ out of the total showed some known connection to Mr Ayyash. The majority concern unknown people, in the sense that the Trial Chamber received no evidence as to who they were. Under these circumstances, the contact profile alone provides limited assistance in attributing mobile 170 to Mr Ayyash.

2778. For completeness, based on the mobile's call sequence table, the Trial Chamber has calculated the activations of cells near Mr Ayyash's residences. Mobile 170 activated Sfeir_A and Sfeir_B cells near the Hadath residence 386 times. Of those, around 14 per cent were on the weekend, and around 43 per cent in the mornings, before 09:00, and in the evenings after 18:00.

⁵⁵⁹⁵ Ayyash Defence final trial brief, paras 658-662; Ayyash Defence closing submissions, T. 17 September 2018, pp 110-111.

⁵⁵⁹⁶ Ayyash Defence final trial brief, paras 666-668.

⁵⁵⁹⁷ Namely three out of 122.

⁵⁵⁹⁸ Namely 210 out of 1,489.

2779. In Harouf, mobile number 170 activated the Nabatiyeh_C cell 143 times. Fifty-six per cent of these activations occurred on weekends, and 23 per cent were early morning, before 09:00, or evening activations after 18:00. However, the Trial Chamber received no direct evidence of when Mr Ayyash was at one of his two residences.

2780. Both calls to Iran on 20 and 21 August 2005, when Mr Ayyash's daughter was there, and the activation of cells in the area of a service provider's office when Mr Ayyash's wife had appointments there on 13 February 2005 and 29 June 2005, taken together, are consistent with attributing mobile 170 to Mr Ayyash.

2781. With regard to the handset also used by Yellow 669, this could assist in defining the starting point of any attribution period of number 170 to Mr Ayyash, but, only if Yellow 669 is attributed to Mr Ayyash until 6 January 2005. Mr Donaldson does not suggest this. According to his evidence, Mr Ayyash's use of Yellow 669 stopped in April 2004.

2782. The Trial Chamber has considered this evidence in its totality; in particular, the calls to the garage and to Mr Ayyash's insurance agent in May 2005 shortly after the car accident, cell activations in the area of a service provider when Mr Ayyash's wife had appointments there and calls to Iranian numbers in August 2005 when Mr Ayyash's daughter was in Iran. The Trial Chamber is therefore satisfied that Mr Ayyash used number 170 between 13 February and 21 August 2005.

2783. The Trial Chamber also considered that mobile 170 was used in the same handset throughout the attribution period.⁵⁵⁹⁹ In addition, the contact and geographic profile before, during and after the period of 13 February to 21 August 2005 was consistent. The most frequent contact appears on the call sequence table from 21 January to 14 October 2005. The most frequently used cells appear on the call sequence table from 7 January to 12 November 2005.

2784. Under these circumstances, the Trial Chamber is satisfied that mobile 170 was used by Mr Ayyash throughout the attribution period, namely from 7 January to 26 November 2005. Mr Ayyash's wife or close family members may also have occasionally used mobile 170. The

⁵⁵⁹⁹ See sub-section B (1) (e) 'Personal mobile 170' (i) (f) 'Handset use'.

evidence, however, does not come close to establishing that it was a common, family mobile. The Trial Chamber is satisfied that Mr Ayyash was its principal user.

(f) Personal mobile 935

2785. The attribution of personal mobile 935 to Mr Ayyash between 31 May 2004 and 13 January 2005 comes from documents showing Mr Ayyash's ownership of a BMW vehicle; documentary, witness and telecommunications evidence relating to an accident on 20 November 2004 involving this vehicle; and the mobile number's handset use, contact profile and geographic profile.

i. Evidence

2786. Personal mobile 935 was activated on the Alfa network on 24 April 2004, subscribed in the name of 'Hassan Emile Hodroj',⁵⁶⁰⁰ and was deactivated on 21 October 2005.⁵⁶⁰¹ The Lebanese General Directorate of Personal Status of the Ministry of the Interior and Municipalities found no exact match for 'Hussein (or Hassan) Emile Hadraj' in its records.⁵⁶⁰²

a. BMW bills of sale and related evidence

2787. Most of the evidence underlying the attribution of personal mobile 935 to Mr Ayyash concerns a BMW 523i vehicle with number (licence) plate 132951/N which he owned between 12 February 2002 and 20 December 2004.

2788. A bill of sale dated 12 February 2002 documents its sale to 'Salim Jamil Ayyash'.⁵⁶⁰³ It has the number of mobile 935 hand-written on it below the section containing the personal details of the seller and buyer—approximately mid-way between the two—in different coloured ink to that used for the buyer's and seller's details and signatures.⁵⁶⁰⁴

2789. The form is filled in handwriting and has designated spaces for writing the seller's and buyer's numbers.⁵⁶⁰⁵ A mobile number ending in 617 is hand-written as Mr Ayyash's contact

⁵⁶⁰⁰ Exhibit P877 (Subscription contract for mobile 935), p. 2 (SI-0001722, Part 1).

⁵⁶⁰¹ Exhibit P885 (Alfa subscriber note for mobile 935), p. 1.

⁵⁶⁰² Exhibit P397 (Document from civil status directorate and letter from Directorate General for Political and Refugees Affairs), p. 5 (ERN 60144934).

⁵⁶⁰³ Exhibit P1396, p. 3.

⁵⁶⁰⁴ Exhibit P1396, p. 3; Andrew Donaldson, T. 19 July 2017, pp 5-6, T. 6 October 2017, pp 24-25.

⁵⁶⁰⁵ Exhibit P1396, p. 3.

number in the relevant space, in what appears to be the same colour ink used to fill in the seller's and the buyer's personal details.⁵⁶⁰⁶ This mobile number is linked to Mr Ayyash's business associate.⁵⁶⁰⁷

2790. A second bill of sale, dated 20 December 2004, documents the BMW's sale by Mr Ayyash.⁵⁶⁰⁸ Mobile 935 is hand-written on it, below and slightly to the left of the section containing the seller's details, in slightly darker ink than that used for the seller's and buyer's details and signatures.⁵⁶⁰⁹ The form, which is completed in handwriting, has no designated spaces for writing the seller's and buyer's respective telephone numbers, unlike, for example, the designated spaces for writing their respective residential addresses. No other telephone number appears on the document.⁵⁶¹⁰

2791. Mr Najib Al-Kharrat, who until 2004 was the head of the Lebanese Private Vehicle Registration Department in Dekwaneh, explained that a vehicle was then registered when the owner brought documents proving ownership to one of eight Vehicle Registry Offices.⁵⁶¹¹

2792. Ownership transfer, evidenced by a deed of sale, must also be registered by the buyer and seller, or someone who has a power of attorney to represent them.⁵⁶¹² A deed of sale records the buyer's and seller's personal details and is signed by both and by a Vehicle Registry employee, but it may be filled in by an employee, who also takes a stencil of the vehicle's chassis number.⁵⁶¹³ The registered owner is issued with a registration card proving ownership.⁵⁶¹⁴ A hard-copy file of the documents relevant to each registered vehicle is created and maintained in the area office, and is accessible to that office's employees. The vehicle owner gets access to the file if ownership is

⁵⁶⁰⁶ Exhibit P1396, p. 3; Andrew Donaldson, T. 19 July 2017, pp 5-6, T. 6 October 2017, pp 24-25.

⁵⁶⁰⁷ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 141 (a); *see also* para. 2686.

⁵⁶⁰⁸ Exhibit P1403, p. 1.

⁵⁶⁰⁹ Exhibit P1403, p. 1; Andrew Donaldson, T. 19 July 2017, pp 7-8. In court, Mr Donaldson noted that his attribution report unintentionally mischaracterised the two bills of sale by stating that personal mobile 935 appeared as Mr Ayyash's contact number on them, exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 141 (a), (d); Andrew Donaldson, T. 6 October 2017, pp 24-25, 27. It appears that the signature corresponding to Mr Ayyash's details on this bill of sale does not match the signature corresponding to his details on the 2002 bill of sale; however, the signature on the 2004 bill of sale does appear to match that on the accident declaration form, exhibit P1396, p. 3; exhibit P1403, p. 1; exhibit P604.1 (Car accident declaration), p. 2.

⁵⁶¹⁰ Exhibit P1403, p. 1.

⁵⁶¹² Exhibit P1411 (Statements of Najib Al-Kharrat), p. 8 (ERN 60302437) (para. 8).

⁵⁶¹³ Exhibit P1411 (Statements of Najib Al-Kharrat), pp 8 (ERN 60302437) (paras 8-9), 9 (ERN 60302438) (para. 10).

⁵⁶¹⁴ Exhibit P1411 (Statements of Najib Al-Kharrat), p. 9 (ERN 60302438) (para. 10).

going to be transferred, but the file is returned once the transfer is complete.⁵⁶¹⁵ Since 1998, all registration documents have been computerised at the regional offices, and stored automatically in a centralised database in Dekwaneh.⁵⁶¹⁶

2793. The Prosecution also relies on the following documents, together with the bills of sale obtained from the Directorate General of the Traffic, Truck and Vehicle Management Authority of the Lebanese Ministry of the Interior and Municipalities:

- copies of identification documents of the parties to the 2002 and 2004 bills of sale;⁵⁶¹⁷
- a 12 February 2002 receipt for the payment of the BMW's registration fees by 'Salim Jamil Ayyash';⁵⁶¹⁸
- a vehicle registration certificate for the BMW, owned by 'Salim Jamil Ayyash' as of 12 February 2002;⁵⁶¹⁹
- a vehicle registration card listing 'Salim Jamil Ayyash' as the BMW's owner;⁵⁶²⁰
- a 5 April 2003 receipt for the payment of car inspection fees by 'Salim Jamil Ayyash';⁵⁶²¹ and
- a vehicle inspection report for the BMW, listing 'Salim Jamil Ayyash' as the owner.⁵⁶²²

b. BMW accident of 20 November 2004

2794. Late in the evening of 20 November 2004, the BMW was involved in an accident at Al-Rmeileh—north of Sidon on the main road to Beirut—for which Mr Ayyash made an insurance claim.

2795. This involved the usual required documents, namely an accident declaration, an accident expert report and documents relating to vehicle repairs, some of which list mobile 935 alongside

⁵⁶¹⁵ Exhibit P1411 (Statements of Najib Al-Kharrat), p. 9 (ERN 60302438) (para. 11).

⁵⁶¹⁶ Exhibit P1411 (Statements of Najib Al-Kharrat), p. 3 (ERN 60318030) (para. 9).

⁵⁶¹⁷ Exhibits P1397 (Identity cards of parties to bill of sale), P1404 (Identity cards of parties to bill of sale).

⁵⁶¹⁸ Exhibit P1401 (Registration fees by Mr Ayyash).

⁵⁶¹⁹ Exhibit P1400.

⁵⁶²⁰ Exhibit P1398.

⁵⁶²¹ Exhibit P1399 (Car inspection fees by Mr Ayyash).

⁵⁶²² Exhibit P1402.

Mr Ayyash's name. Mobile 935 also appears next to details of this accident in the database of the tow-truck company called to the scene. Mr Donaldson also highlighted a number of calls made by mobile 935 around the time of the accident, for which it activated cells providing coverage to the accident site's vicinity.

Insurance policy

2796. An insurance policy for the BMW, under the name of 'Ayache Salim Jamil', running from 18 February 2004 has a landline number ending in 584 appearing on it. It was signed on behalf of the insurance company.⁵⁶²³

Accident declaration

2797. A car accident declaration dated 23 November 2004, for the insured 'Salim Ayach', policy number 73349, lists personal mobile 935 as the driver's mobile number. On it, the driver's name is left blank, the driver's relationship to the insured is listed as 'himself' and the insured's telephone number is left blank.⁵⁶²⁴ There is a signature in the space for the driver's signature, but none in the space for the insured's signature. The 'Details of accident' section is filled in using the third person singular—stating that 'as he was trying to overtake, his vehicle skidded'—and lists the site of the accident as 'Al-Rmeileh'.⁵⁶²⁵ The expert's name is listed as 'Mahmoud Assi'.⁵⁶²⁶

2798. According to Mr Assi, ordinarily the insured person goes to the insurance company office to fill in a declaration after an accident, but a relative, friend or broker can also make the declaration on their behalf.⁵⁶²⁷

⁵⁶²³ The insurance policy number is listed as 1/MTR-1/73349, exhibit P604.14 (Motor policy for BMW 523i), p. 1. See also exhibit P604.9 (Motor policy for BMW 523i), whose page 1 is a copy of the same insurance policy, without a signature on behalf of the insurance company, but with additional stamps and hand-writing; moreover, page 2 of this exhibit is an additional page headed 'Underwriting Sheet', listing 'Ayache Salim Jamil' as the holder. See also Mahmoud Assi, T. 1 October 2015, pp 65-68.

⁵⁶²⁴ Exhibit P604.1, p. 1.

⁵⁶²⁵ Exhibit P604.1, p. 2.

⁵⁶²⁶ Exhibit P604.1, p. 1.

⁵⁶²⁷ Mahmoud Assi, T. 1 October 2015, pp 10-12; exhibit P697 (Statement of Witness PRH050), pp 43 (ERN 60302487) (para. 10), 44 (ERN 60302488) (para. 16). Mr Assi furthermore stated that this accident declaration may have been dated three days after the accident as it occurred on a Saturday night and the following Monday was a public holiday in Lebanon, meaning that 23 November 2005 may have been the first day when the insurance company's offices would have been open, Mahmoud Assi, T. 1 October 2015, p. 59.

2799. Witness 50 thought that the client ‘could not have written the car accident declaration’.⁵⁶²⁸ Five people at the relevant insurance company could have made the declaration and one of them must have written it.⁵⁶²⁹ Mr Assi explained that an insurance company employee fills in the declaration based on questions posed to the declarant, who signs it.⁵⁶³⁰ Therefore, the ‘driver’s’ signature on the form could be that of the client, a broker or another person.⁵⁶³¹ Although the form usually remains in the insurance company’s office, it may be given to the garage or broker for the client to complete and send back.⁵⁶³² The telephone number appearing on the declaration is usually that of the insured or driver.⁵⁶³³ Moreover, he explained that, although he had arranged the insurance policy relevant to the accident declaration, his business partner ‘Matta Sakr’ was listed on the accident declaration because he is the broker.⁵⁶³⁴

2800. With regard to Mr Assi’s name appearing on the declaration as the accident expert although the relevant report, described below, was authored by ‘Hussein Ahmad El-Kalash’, Mr Assi explained that the insurance company provides insured people with lists of car accident experts.⁵⁶³⁵ His name appears at the top of the list for the area of the accident, and a client would usually call the expert at the top of the list.⁵⁶³⁶

2801. Moreover, call sequence tables show that, at 22:17 on 20 November 2004, personal mobile 935 called a mobile number that Witness 50 identified as his own.⁵⁶³⁷ Although Witness 50 knew ‘Selim Ayyash’ personally and identified him in a photograph shown to him during his interview,⁵⁶³⁸ he did not remember this accident and, when shown related documents, he stated

⁵⁶²⁸ Exhibit P697 (Statement of Witness PRH050), pp 43 (ERN 60302487) (paras 6, 8, 10), 44 (ERN 60302488) (para. 11).

⁵⁶²⁹ Exhibit P697 (Statement of Witness PRH050), pp 43 (ERN 60302487) (para. 10), 44 (ERN 60302488) (para. 11).

⁵⁶³⁰ Mahmoud Assi, T. 1 October 2015, p. 10.

⁵⁶³¹ Mahmoud Assi, T. 1 October 2015, p. 10.

⁵⁶³² Mahmoud Assi, T. 1 October 2015, p. 22.

⁵⁶³³ Mahmoud Assi, T. 1 October 2015, p. 16.

⁵⁶³⁴ Exhibit P697 (Statement of Witness PRH050), pp 12 (ERN 60302456) (para. 52), 45 (ERN 60302489) (para. 24).

⁵⁶³⁵ Mahmoud Assi, T. 1 October 2015, pp 17, 49.

⁵⁶³⁶ Mahmoud Assi, T. 1 October 2015, pp 17-18, 49.

⁵⁶³⁷ Exhibit P1261 (Call sequence table of mobile 935), p. 80; exhibit P697 (Statement of Witness PRH050), p. 9 (ERN 60302453) (para. 7).

⁵⁶³⁸ Exhibit P697 (Statement of Witness PRH050), pp 9 (ERN 60302453) (paras 3, 8), 12 (ERN 60302456) (para. 57), 27 (ERN 60302471) (para. 5), 28 (ERN 60302472) (paras 15, 17), 43 (ERN 60302487) (paras 5-6), 70 (ERN 60302514) (para. 5). The photograph, originally identified by ERN 60098038, was initially attached to a 2008 UNIIIC investigator’s note about potential persons of interest, but no accompanying information was provided (the provenance of the photograph or the name of the person appearing in it). This was the photograph shown to Witness 50 during his interview. Subsequently, a similar photograph (with differences in colour darkness and aspect ratio) was scanned in 2011 by Prosecution investigator, Witness PRH539, at the Lebanese Ministry of the Interior and

that he had not prepared any of them.⁵⁶³⁹ He also did not remember whether Mr Ayyash ever called him, did not recognise mobile 935, nor had a mobile number for Mr Ayyash saved in his mobile or paperwork.⁵⁶⁴⁰

2802. The witness had hundreds of calls each day and could not remember specific calls, nor all of his clients' names and numbers.⁵⁶⁴¹ Although he had asked Mr Ayyash for a number several times, Mr Ayyash told Witness 50 to contact him by calling his brother, Mohammed.⁵⁶⁴² However, Witness 50 stated that clients may call him at the time of an accident, even late at night, and he would ask them to call an expert to the scene.⁵⁶⁴³ Clients may also call him if they cannot contact an expert.⁵⁶⁴⁴ Witness 50 did not know Mr Kalash, and would not have provided his name to Mr Ayyash if asked, as he would have recommended one of his friends instead.⁵⁶⁴⁵ He would, however, call Mr Assi as an expert for an accident in southern Lebanon.⁵⁶⁴⁶

2803. Call sequence tables also show that, immediately following the call to Witness 50, at 22:21, mobile 935 called a number that Mr Assi identified as his own.⁵⁶⁴⁷ This was the only call between these two mobile numbers.⁵⁶⁴⁸ Mr Assi did not know Mr Ayyash, did not recognise the Prosecution's photograph of Mr Ayyash and did not remember whether he was contacted at the time of the accident.⁵⁶⁴⁹

Municipalities, as part of an undated ID application for 'Salim Ayyash'. When tendering the initial version of the photograph into evidence as a photograph shown to another witness (Mr Mahmoud Assi), Prosecution counsel detailed the process of scanning the ID application in 2011 as an explanation of the provenance of the photograph initially attached to the 2008 UNIIIC investigator's note, exhibit P606 (Photograph shown to Mahmoud Assi), exhibit P691, p. 1, exhibit P686 (Statement of Witness PRH686), pp 16 (ERN 60312033) (para. 26), 17 (ERN 60312033); Prosecution submissions, T. 1 October 2015, pp 73-75. The Trial Chamber is satisfied that the photograph shown to the witness is of Mr Ayyash.

⁵⁶³⁹ Exhibit P697 (Statement of Witness PRH050), p. 43 (ERN 60302487) (paras 7-10).

⁵⁶⁴⁰ Exhibit P697 (Statement of Witness PRH050), pp 10 (ERN 60302454) (paras 16-17), 29 (ERN 60302473) (para. 32), 30 (ERN 60302474) (paras 40, 48), 44 (ERN 60320488) (paras 12, 15).

⁵⁶⁴¹ Exhibit P697 (Statement of Witness PRH050), pp 31 (ERN 60302475) (para. 52), 44 (ERN 60302488) (para. 21), 45 (ERN 60302489) (para. 26).

⁵⁶⁴² Exhibit P697 (Statement of Witness PRH050), pp 10 (ERN 60302454) (para. 14), 29 (ERN 60302473) (para. 33).

⁵⁶⁴³ Exhibit P697 (Statement of Witness PRH050), pp 44 (ERN 60320488) (paras 17, 19, 23), 45 (ERN 60302489) (para. 25).

⁵⁶⁴⁴ Exhibit P697 (Statement of Witness PRH050), p. 44 (ERN 60320488) (paras 17, 19).

⁵⁶⁴⁶ Exhibit P697 (Statement of Witness PRH050), p. 45 (ERN 60302489) (para. 27).

⁵⁶⁴⁷ Exhibit P1261, p. 80; exhibit P605 (Annotated list of numbers used with Mahmoud Assi).

⁵⁶⁴⁸ Exhibit P1262, p. 80.

⁵⁶⁴⁹ Exhibit P606; Mahmoud Assi, T. 1 October 2015, pp 49-50, 72-73, 76.

2804. When contacted about a car accident, he would not ask for the caller's name, but only for insurance and accident details, such as its location.⁵⁶⁵⁰ In the circumstances of the accident of 20 November 2004, namely that it occurred far from his location and late at night, if contacted by a client he would ordinarily call another accident expert—or ask the client to do so—in order to avoid delays.⁵⁶⁵¹ Mr Kalash is an accident expert who lived and worked in the area of the accident, whom Mr Assi would call when accidents were too far for him to attend.⁵⁶⁵²

2805. Call sequence tables also show that, immediately after calling Mr Assi's mobile number, mobile 935 received a call at 22:40 from a mobile number that Mr Assi identified as belonging to Mr Kalash.⁵⁶⁵³

2806. Finally, Mr Donaldson testified that the accident expert report, damage estimate request and tow-truck company database—all three of which are described below—may contain information that was provided once to the insurance company and then replicated on the other three documents.⁵⁶⁵⁴

Accident expert's report

2807. Mr Kalash's accident expert report states that he attended the scene of the BMW accident of 20 November 2004 at El-Ramlieh on the Sidon-Beirut highway, and lists 'Salim Jamil Ayyash' as the vehicle's owner and driver, with mobile 935.⁵⁶⁵⁵

2808. When an accident occurs, the car owner or driver calls an accident expert, who then attends the scene, identifies the driver, determines responsibility for the accident, takes copies of the driver's license, car registration documents and insurance documents, and then drafts a report and sends it to the relevant insurance company with copies of the documents.⁵⁶⁵⁶ The fax number in the header of the expert report dated 3 December 2004 corresponds to Mr Assi's office fax, which

⁵⁶⁵⁰ Mahmoud Assi, T. 1 October 2015, pp 49-50, 76.

⁵⁶⁵¹ Mahmoud Assi, T. 1 October 2015, pp 18-20, 46-47.

⁵⁶⁵³ Exhibit P1261, p. 80; Mahmoud Assi, T. 1 October 2015, p. 52, referring to a mobile number appearing on the accident expert report (exhibit P604.2 (Accident expert report), p. 4).

⁵⁶⁵⁴ Andrew Donaldson, T. 19 July 2017, pp 9, 12, T. 6 October 2017, p. 49.

⁵⁶⁵⁵ Exhibit P604.2, p. 1; exhibits P604.11 (Accident expert report), P604.12 (Insurance expert damage report), P604.13 (Extract from accident expert report), which are faxed copies of the three pages of the expert report found at exhibit P604.2, pp 1-3; Mahmoud Assi, T. 1 October 2015, pp 56-57.

⁵⁶⁵⁶ Mahmoud Assi, T. 1 October 2015, pp 7-9, 20, 45; exhibit P697 (Statement of Witness PRH050), pp 29 (ERN 60302473) (paras 24-25), 44 (ERN 60320488) (paras 18, 20).

Mr Kalash used occasionally.⁵⁶⁵⁷ In Mr Assi's opinion, this expert report did not need to be very detailed as it concerned a minor accident.⁵⁶⁵⁸

Tow-truck company database

2809. Personal mobile 935 also appears in an extract from a tow-truck company's customer database as the telephone number associated with an accident on 20 November 2004 involving the BMW, and listing the name 'Salim Ayach'.⁵⁶⁵⁹ Witness PRH474 stated that the database recorded a car's type and registration plate number, insurance policy number, owner's name, location and place to be transferred to, and the number for communicating with the owner.⁵⁶⁶⁰ It was updated by the company's five customer service employees.⁵⁶⁶¹

2810. Staff would receive a call from a client. They would then take the necessary information, record it on the computer and assign a tow-truck driver to assist. The driver would then call the customer's mobile number without the call being answered, and the customer would call the driver back to communicate his location. The driver would transport the car to the destination specified by the client, and the driver would call the company (without the call being answered) to indicate arrival at the final destination.⁵⁶⁶² Witness 474 identified six telephone numbers used by the company,⁵⁶⁶³ none of which, according to the call sequence tables, were in contact with personal mobile 935 at the time of the accident.⁵⁶⁶⁴

2811. The call sequence tables do, however, show that mobile 935 made four calls, between 22:41 and 23:02 on 20 November 2004, to the mobile number that Witness PRH086, a tow-truck driver, identified as the one he used for work calls.⁵⁶⁶⁵ Further, the company's office staff or owner would allocate work to him by calling this mobile.⁵⁶⁶⁶

⁵⁶⁶⁶ Exhibit P698 (Statements of Witness PRH086), p. 9 (ERN 60308758) (paras 14, 20).

2812. He would occasionally go to its office to collect his salary or repair his vehicle.⁵⁶⁶⁷ In November 2004, he was covering Khalde and South Lebanon 24 hours per day.⁵⁶⁶⁸ In 2004, he would transport between five and 12 vehicles per 24-hour shift.⁵⁶⁶⁹ He did not recall the BMW accident or recognise the vehicle when shown photographs during his interview in 2010.⁵⁶⁷⁰ He did not recognise the name ‘Selim Ayyash’, or the person in an identity card application photograph the Prosecution says is Mr Ayyash.⁵⁶⁷¹ When he would pick up a vehicle involved in a night-time accident, its driver would usually travel in the ‘transporter’ with him to accompany the vehicle, but another person could also accompany the vehicle on behalf of its owner or driver.⁵⁶⁷²

Damage estimate request

2813. Mobile 935 is listed as ‘Mr. Salim Ayyash’s’ number, as the BMW’s owner, on a damage estimate request from the insurer to a garage, dated 23 November 2004. ‘Mahmoud Assi’ is again listed as the accident expert.⁵⁶⁷³ Mr Assi explained that, following an accident, the car is inspected by the insurance company, a damage estimate request is completed by an employee—after the accident declaration is filled in but before the expert report is sent—and then the car is sent to a garage chosen by the owner or insurance company.⁵⁶⁷⁴

2814. Witness 50 stated that a client either takes their car directly to the owner of the garage mentioned in this document, or the client takes the car to the insurance company which then takes it to this or another garage, following which the garage sends the paperwork to the insurance company.⁵⁶⁷⁵

2815. A mobile number for Mr Naim Aoun—who sometime after 2004 took ownership of the garage listed in the damage estimate request—was provided by both Mr Assi and Mr Aoun

⁵⁶⁶⁷ Exhibit P698 (Statements of Witness PRH086), p. 9 (ERN 60308758) (para. 14).

⁵⁶⁶⁸ Exhibit P698 (Statements of Witness PRH086), p. 9 (ERN 60308758) (paras 15-17).

⁵⁶⁶⁹ Exhibit P698 (Statements of Witness PRH086), p. 9 (ERN 60308758) (para. 19).

⁵⁶⁷⁰ Exhibit P698 (Statements of Witness PRH086), pp 9 (ERN 60308758) (para. 23), 10 (ERN 60308759) (para. 24).

⁵⁶⁷¹ Exhibit P698 (Statements of Witness PRH086), ERN 60308759 (paras 26-27).

⁵⁶⁷² Exhibit P698 (Statements of Witness PRH086), ERN 60308759 (para. 29).

⁵⁶⁷³ Exhibit P604.4 (Request for assessment of damage), p. 1.

⁵⁶⁷⁴ Mahmoud Assi, T. 1 October 2015, pp 9, 57-62.

⁵⁶⁷⁵ Exhibit P697 (Statement of Witness PRH050), p. 29 (ERN 60302473) (paras 26-29).

himself.⁵⁶⁷⁶ Mr Aoun did not recognise mobile 935, but remembered a former client of his with the family name Ayyash who imported cars, and whom Witness 50 would send to Mr Aoun's garage for repairs.⁵⁶⁷⁷ Mr Aoun stated of an ID card application photograph the Prosecution states is of Mr Ayyash, that this 'may be someone from the Ayyash family'.⁵⁶⁷⁸ Call sequence tables show that personal mobile 935 was in contact with Mr Aoun's mobile number between 23 November 2004—the date appearing on the accident declaration and on the damage estimate request—and 30 December 2004.⁵⁶⁷⁹

2816. In 2010, Witness 50 was shown records of calls on 23 and 24 November 2004 involving his number, personal mobile 935 and telephone numbers linked to Mr Ayyash's brother and that of Mr Aoun, but could not remember these calls or who was using mobile 935. He also could not remember calls from this mobile to his number on 1 and 3 December 2004.⁵⁶⁸⁰

Calls made by mobile 935 at the time of the accident

2817. The site of the accident was within the predicted best server coverage area of cell BRAMIE1.⁵⁶⁸¹ In his report, Mr Donaldson set out the calls made and received by mobile 935 around the time of the accident, and the cells it activated during these calls.⁵⁶⁸²

2818. At 22:17, mobile 935 called Witness 50, activating cell ZAYNEH2, which is adjacent to BRAMIE1 and, at 22:21, it called the car accident expert, Mr Assi, while activating cell

⁵⁶⁷⁶ Exhibit P605; Mahmoud Assi, T. 1 October 2015, pp 68-69; exhibit P1408 (Statements of Naim Aoun), pp 2 (ERN 60308010) (para. 1), 9 (ERN 60308017) (paras 4, 6).

⁵⁶⁷⁷ Exhibit P1408 (Statements of Naim Aoun), p. 10 (ERN 60308018) (paras 9-10). The witness was initially unsure about knowing a 'Selim Ayyash' specifically and did not have a person 'by the name Ayyash in [his] phone book', exhibit P1408 (Statements of Naim Aoun), p. 10 (ERN 60308018) (para. 12). He then said that he remembers the name 'Selim Ayyash' or 'Ibrahim Ayyash', likely as one of Witness 50's clients, exhibit P1408 (Statements of Naim Aoun), p. 10 (ERN 60308018) (para. 17).

⁵⁶⁷⁸ Exhibit P1408 (Statements of Naim Aoun), p. 11 (ERN 60308019) (para. 18).

⁵⁶⁷⁹ Exhibit P1261, pp 81, 85-87, 89-90, 94. Specifically, the two mobile numbers were in contact on 23 November, and 2, 6, 9, 17, 18 and 30 December 2004.

⁵⁶⁸⁰ Exhibit P697 (Statement of Witness PRH050), p. 31 (ERN 60302475) (paras 51, 53-54, 57, 63), ERN 60302488 (paras 12-14, 21).

⁵⁶⁸¹ Exhibit P663 (Statement of Andrew Fahey), p. 14; exhibit P1123 (ArcView shape files Alfa); exhibit P592.1. In his report, Mr Donaldson stated that the three cell towers activated by personal mobile 935 during these calls are located in the wider area of the accident, providing a map showing the site of the accident and the cell location to the north and north-east of the accident location, without mapping the cell's coverage, exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 617, p. 253 (map).

⁵⁶⁸² Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 151, 617, 627.

ZAYNEH2.⁵⁶⁸³ At 22:40, it received a call from Mr Kalash, activating cell SIBLIN3, which is adjacent to BRAMIE1.⁵⁶⁸⁴

2819. At 22:41 and 22:43, it called Witness 86, activating cell BARJA2—coverage of which is to the north of and not adjacent to that of BRAMIE1—and cell SIBLIN3, respectively.⁵⁶⁸⁵ At 22:44, it received a call from Mr Kalash, activating cell SIBLIN3.⁵⁶⁸⁶ At 22:52 and 23:02, it called Witness 86, activating cell SIBLIN3 both times.⁵⁶⁸⁷ Finally, at 23:06, it called Witness 50, activating cell ZAYNEH2.⁵⁶⁸⁸ Mr Donaldson demonstrated these cells activated by mobile 935 in the following slide:

Slide 129 of Mr Donaldson's PowerPoint presentation—exhibit P2025

Additional evidence concerning the accident

2820. The Trial Chamber also admitted the following documents related to the BMW accident, which the Prosecution had obtained from the insurance company:

- copies of a driver's license in the name of 'Salim Ayyash', which was valid at the time of the accident, and a 2003 vehicle registration document with the number '132951 N',⁵⁶⁸⁹
- a 'disclaimer and waiver' document undersigned by 'Salim Jamil Ayyash' in relation to the accident on 20 November 2004,⁵⁶⁹⁰

⁵⁶⁸⁹ Exhibit P604.10 (Mr Ayyash's driver's license and vehicle registration for BMW 523i). *See also* Mahmoud Assi, T. 1 October 2015, p. 68.

⁵⁶⁹⁰ Exhibit P604.8 (Declaration of waiver by Mr Ayyash). *See also* Mahmoud Assi, T. 1 October 2015, p. 65.

- an invoice dated 20 December 2004 for repair work done by the garage, and two undated invoices for the purchase of car parts;⁵⁶⁹¹
- a payment order from the insurance company to Mr Aoun, noting 30 December 2004 as the payment date and ‘payment to garage’ as the payment type;⁵⁶⁹² and
- photographs of a vehicle and vehicle parts.⁵⁶⁹³

2821. Mr Aoun stated that, once a car is repaired, the records of an accident, including photographs of the car, are sent to the insurance company.⁵⁶⁹⁴ He also remembered and recognised his handwriting and signature on an invoice sent from his garage to the insurance company relevant to the BMW accident.⁵⁶⁹⁵

2822. Mr Mohammed Nassereddine managed Mr Aoun’s garage.⁵⁶⁹⁶ He could not recall mobile 935, but knew a ‘Selim Ayyash’ who had first been sent to him by a broker for a car repair, had car insurance with the insurance company to which the 2004 accident declaration was made and whose Volvo vehicle he had repaired several times.⁵⁶⁹⁷ He identified ‘Selim Ayyash’ in Mr Ayyash’s ID card application photograph.⁵⁶⁹⁸

c. Additional witness evidence regarding mobile 935

2823. Witness PRH028, who is a relative of the Accused, Mr Merhi, recognised Salim Ayyash in an ID card application photograph, had had telephone contact with him, knew him and members of his family and provided evidence about Mr Ayyash’s work as a car dealer and involvement with

⁵⁶⁹⁷ Exhibit P1409 (Statements of Mohammed Nassereddine), pp 9 (ERN 60307140) (paras 8-9, 12-13), 10 (ERN 60307141) (paras 14, 17).

⁵⁶⁹⁸ Exhibit P1409 (Statements of Mohammed Nassereddine), p. 11 (ERN 60307142) (para. 38).

his family's hardware shops.⁵⁶⁹⁹ He did not recognise personal mobile 935, nor was it saved in his own mobile.⁵⁷⁰⁰

2824. He would contact Mr Ayyash through Mr Ayyash's brother Mohammed's shop, by asking Mohammed to tell Mr Ayyash to call him, or by getting a mobile or landline number for Mr Ayyash.⁵⁷⁰¹ He no longer recalled or had a record of these numbers.⁵⁷⁰² The Trial Chamber admitted this statement into evidence under Rule 158, after finding that the witness was 'unavailable'. This was after unsuccessful attempts were made to serve the witness with three summonses to appear for testimony.⁵⁷⁰³

2825. Witness 78, a service provider for members of Mr Ayyash's family, also did not recognise personal mobile 935.⁵⁷⁰⁴ The witness was interviewed in 2010, over four years after the last appointment.⁵⁷⁰⁵

d. Attribution period

2826. Mr Donaldson attributed personal mobile 935 to Mr Ayyash from 31 May 2004 to 13 January 2005, relying on some of the documents set out above, its handset (IMEI) use, its contact and geographic profiles and other points of attribution.⁵⁷⁰⁶ He stated that the most frequent contacts and most frequently activated cells were consistent throughout the attribution period, giving examples of one single contact and one single cell.⁵⁷⁰⁷

2827. Mr Donaldson also stated that, from 15 January 2005, mobile 935 started being used with an IMEI other than IMEI 35250500226958, and its most frequent contacts profile changed.⁵⁷⁰⁸

2828. During the attribution period of 31 May 2004 to 13 January 2005, mobile 935 had contact with 313 different numbers, while from 15 January to 31 March 2005 it had only 128 contacts, and

⁵⁶⁹⁹ Exhibit P2126 (Interview of Witness PRH028), pp 25-37, 74.

⁵⁷⁰⁰ Exhibit P2126 (Interview of Witness PRH028), pp 23-24.

⁵⁷⁰¹ Exhibit P2126 (Interview of Witness PRH028), pp 29-30.

⁵⁷⁰² Exhibit P2126 (Interview of Witness PRH028), p. 30.

⁵⁷⁰³ Rule 158 decision Witness PRH028. The Trial Chamber issued three summonses for the witness to appear in court. None were served on him and the unsuccessful attempts to do so are detailed in the decision.

⁵⁷⁰⁴ Exhibit P707 (Statement of Witness PRH078), pp 27 (ERN 60305692), 40 (ERN 60305705), 74 (ERN 60305739) (para. 8).

⁵⁷⁰⁵ Exhibit P707 (Statement of Witness PRH078), p. 43 (ERN 60305708).

⁵⁷⁰⁶ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 120-121.

⁵⁷⁰⁷ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 126-128.

⁵⁷⁰⁸ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 125, 130.

only 22 contacts, excluding ‘service and platform numbers’, were common between the two periods.⁵⁷⁰⁹

2829. Mr Donaldson, in his attribution report, added that the rankings of the most common contacts changed between two periods, namely, the attribution period of 31 May 2004 to 13 January 2005, and from 15 January to 31 March 2005. He noted that one number went from being the seventh most frequent contact to having just one contact. Further, between 15 January and 31 March 2005, there were no more contacts with six of the top ten most frequent contacts during the attribution period.⁵⁷¹⁰

2830. In addition, Mr Donaldson stated that the cell usage changed in these two different periods. He noted some similarity in cell activations but also some distinct usage, citing the sole example of a cell accounting for 24 per cent of activations during the attribution period but only 0.1 per cent in the subsequent period.⁵⁷¹¹ Mr Donaldson thought that an explanation for these changes within a subscription period would be that mobile 935 was passed on to another user.⁵⁷¹²

e. Handset use

2831. At the end of 2004 or beginning of 2005, a former car dealer, Mr Midian Bou Karroum, purchased a marine blue BMW 523, number plate 132951 N, from someone with the same name as the buyer listed on the 2004 bill of sale.⁵⁷¹³ In 2010, he allowed a Prosecution investigator, Mr Toby Smith, to photograph this vehicle, which contained a non-removable built-in original handset.⁵⁷¹⁴ Mr Smith photographed the vehicle and the handset displaying IMEI 44666207202575; one photograph is immediately below.⁵⁷¹⁵

⁵⁷⁰⁹ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 131.

⁵⁷¹⁰ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 132.

⁵⁷¹⁴ Exhibit P1406 (Statements of Midian Bou Karroum), pp 11 (ERN 60312322) (para. 22), 13 (ERN 60312324) (para. 42); exhibit P1407 (Statement of Toby Smith), p. 3 (ERN 60283399) (para. 12).

⁵⁷¹⁵ Exhibit P1407 (Statement of Toby Smith), pp 3 (ERN 60283399) (paras 11, 13), 4 (ERN 60283400) (para. 16); exhibit P1406 (Statements of Midian Bou Karroum), p. 3 (ERN 60312314) (para. 10); exhibit P1405.

Exhibit P1405 (Photographs of BMW 523i), p. 17

2832. In his report, Mr Donaldson highlighted this handset as one of two used with number 935 during the attribution period, on 16, 28 and 29 September 2004.⁵⁷¹⁶

2833. In addition, he stated that IMEI 35250500226958 was consistently the main handset used with number 935 during the attribution period. The use started on 29 May 2004, or at the latest on 1 August 2004, and ended on 13 January 2005; later that day, the handset started being used with

⁵⁷¹⁶ Exhibit P1261, pp 51, 58; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 136 (b), 138, 152 (a); exhibit P1405, pp 16-21, 23-25.

personal mobile 091.⁵⁷¹⁷ Regarding handset use from 1 August 2004, the Prosecution relies on the IMEI recorded in call data records.⁵⁷¹⁸ Before this date, it relies on Alfa's records.⁵⁷¹⁹ Alfa's representative, Witness 707, explained that before August 2004 IMEI data was filtered out from the call data records and retained in a separate file.⁵⁷²⁰

f. Contact profile

2834. Mr Donaldson's report also sets out mobile 935's contacts, highlighting its top 31 most frequently contacted numbers during the attribution period. He linked thirteen of these to Mr Ayyash's relatives or professional contacts, and one to someone whose relationship with Mr Ayyash is not in evidence, but who was also in contact with Blue 233.

2835. The remaining seventeen numbers on the list were not linked to anyone. Mr Donaldson also set out the dates between which each of the 31 most contacted numbers, both attributed and unattributed, were in contact with personal mobile 935 during the attribution period.⁵⁷²¹ Many of these date ranges span almost the entirety of the attribution period, for example, the top ranked business contact was in touch with mobile 935 from 7 June 2004 to 12 January 2005, while the top ranked family contact was in touch with it from 9 June 2004 to 11 January 2005.⁵⁷²²

2836. Mr Donaldson, moreover, highlighted the following contacts during the attribution period, between mobile 935 and numbers linked to Mr Ayyash's family members:

- 108 contacts (ranked fifth) with landline 696, the number of Mr Ayyash's Hadath residence;⁵⁷²³

⁵⁷¹⁷ Andrew Donaldson, T. 18 July 2017, pp 79-81, T. 22 August 2017, p. 19; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 125, 137, 152 (b); exhibit P1256 (Call sequence table for mobile 091), p.1; exhibit P1261, pp 23-97; exhibit P890 (IMEI data for mobile 935).

⁵⁷¹⁸ *For example*, exhibit P1261, p. 23 and following.

⁵⁷¹⁹ Exhibit P890.

⁵⁷³⁵ See above, at para. 2707; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 143 (m), annex E, p. 403 (ERN D0537562).

⁵⁷³⁶ Exhibit P1034, pp 3, 15, 24, 26; exhibit P880 (Touch subscriber note for mobile 771); exhibit P1529 (Mr Ali Hariri's Lebanese passport application), p. 2 (ERN 59002992); exhibit P1745 (Mr Ali Hariri's vehicle registration record), p. 3 (ERN 60297276); exhibit P959 (Record from *Université Libanaise* related to number 771); exhibits P960 (Record from *Université Libanaise* related to number 771), P961 (Record from *Université Libanaise* related to number 771), P962 (Record from *Université Libanaise* related to number 771), P963 (Record from *Université Libanaise* related to number 771); exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 143 (n), annex E, p. 403 (ERN D0537562).

- seven contacts (ranked joint 77th) with a landline number, ending in 833, linked to Mr Ayyash's sister-in-law, Ms Nidal Abdel-Hassan Al-Hajj, and her husband, Mr Mohammed Abdallah Jaradah;⁵⁷³⁷
- six contacts (ranked joint 78th) with a landline number, ending in 584, linked to the business of Mr Ayyash's brother, Mr Mohammed Ayyash;⁵⁷³⁸
- four contacts (ranked joint 94th) with a mobile number, ending in 900, linked to Mr Ayyash's brother-in-law, Mr Saleh Qassem Harb;⁵⁷³⁹ and
- three contacts (ranked joint 106th) with a landline number, ending in 099, linked to Mr Ayyash's brother, Mr Ali Ayyash.⁵⁷⁴⁰

2837. Mr Donaldson also listed the contacts, during the attribution period, between mobile 935 and numbers he linked to Mr Ayyash's acquaintances and associates, namely:

- 289 contacts (ranked first) with a mobile number, ending in 617, linked to Mr Ayyash's business associate, Mr Ghaleb Jaber;⁵⁷⁴¹
- 219 contacts (ranked second) with a mobile number, ending in 333, linked to Mr Ayyash's relative and business associate, Mr Hussein Zaarour;⁵⁷⁴²
- 43 contacts (ranked 14th) with a mobile number, ending in 894, linked to Mr Ayyash's relative, Mr Abdallah Safieddine;⁵⁷⁴³

⁵⁷³⁷ See above, at para. 2729; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 91 (i), 143 (p), annex E, p. 403 (ERN D0537562).

⁵⁷³⁸ See above, at para. 2729; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 91 (e), 143 (o), annex E, p. 404 (ERN D0537563).

⁵⁷³⁹ See above, at para. 2729; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 91 (n), 143 (q), annex E, p. 404 (ERN D0537563).

⁵⁷⁴⁰ See above, at para. 2729; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 91 (t), 143 (r), annex E, p. 405 (ERN D0537564).

⁵⁷⁴¹ See above, at para. 2686; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 37 (c), 144 (a).

⁵⁷⁴² See above, at para. 2686; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 37 (a), 144 (b).

⁵⁷⁴³ See above, at para. 2729; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 92 (g), 144 (c). This contact is ranked as the '13th' in para. 144 (c) of Mr Donaldson's report, whereas it appears as 14th in annex E of the report, exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), annex E, p. 402 (ERN D0537561).

- 31 contacts (ranked 21st) with a landline number, ending in 125, of the Civil Defence in Nabatiyeh;⁵⁷⁴⁴
- 19 contacts (ranked 29th) with a landline number, ending in 830, subscribed to Mr Ayyash's associate, Mr Ghaleb Jaber;⁵⁷⁴⁵
- 13 contacts (ranked joint 40th) with a mobile number, ending in 445, subscribed to 'Naim Abdo Aoun', at whose garage Mr Ayyash's BMW was repaired following the 20 November 2004 accident; Mr Aoun himself, as well as Witnesses 50, 258 and Mr Mahmoud Assi, also provided it as Mr Aoun's number;⁵⁷⁴⁶
- 12 contacts (ranked joint 44th) with a mobile number, ending in 849, belonging to Mr Ayyash's insurance agent;⁵⁷⁴⁷
- five contacts (ranked joint 88th) with a mobile number, ending in 515, used by an acquaintance of the Ayyash brothers;⁵⁷⁴⁸ and
- two contacts (ranked joint 133rd) with a landline number, ending in 203, belonging to the Civil Defence in Doueir. Mr Ayyash was employed by the Civil Defence in Markaba in early 2004 and was transferred to the Civil Defence in Doueir in October 2004. The landline number was subscribed to 'Civil Defense Centre – Douair' and was given as its telephone number by a witness.⁵⁷⁴⁹

⁵⁷⁴⁴ See above, at para. 2729; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 92 (a), 144 (d), 637.

⁵⁷⁴⁷ See above, at para. 2729; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 92 (d), 144 (h), annex E, p. 403 (ERN D0537562).

⁵⁷⁴⁸ See above, at para. 2729; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 92 (e), 144 (i), annex E, p. 404 (ERN D0537563).

⁵⁷⁴⁹ Exhibit P1622; exhibit P1911, ERN 60178535_TS_D_EN_AR (p. 16); exhibit P1890 (Civil Defence documents relating to Mr Ayyash), pp 1-4; exhibit P1162, pp 1-2; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 144 (j), annex E, p. 405 (ERN D0537564).

2838. Finally, Mr Donaldson highlighted these additional telephone numbers, which personal mobile 935 had contact with during the attribution period:

- six contacts (ranked joint 78th) with Witness 78's mobile number, ending in 940;⁵⁷⁵⁰ and
- one contact (ranked joint 176th) with a landline number, ending in 061, linked to a staff member of the Lebanese American University.⁵⁷⁵¹

g. Geographic profile

2839. Mr Donaldson set out personal mobile 935's geographic profile, consisting of the cells it most frequently activated during the attribution period.⁵⁷⁵²

2840. He mapped the predicted coverage of the five known⁵⁷⁵³ most frequently activated cells during the attribution period against the location of Mr Ayyash's Hadath and Harouf residences. This showed that the top and fourth ranked cells—Alfa's SFEIR2 and HAROUF1, respectively—covered the locations of, and areas surrounding, the Hadath and Harouf residences, respectively, and that the second, third and fifth ranked cells—NABATI1, HADATH1 and SFEIR3, respectively—covered areas adjacent to these two cells.⁵⁷⁵⁴

2841. He mapped Plot 29 and the Alfa cells NABATI1 and the adjacent HAROUF1 on a map showing that both cells potentially provide coverage to the Harouf residence:

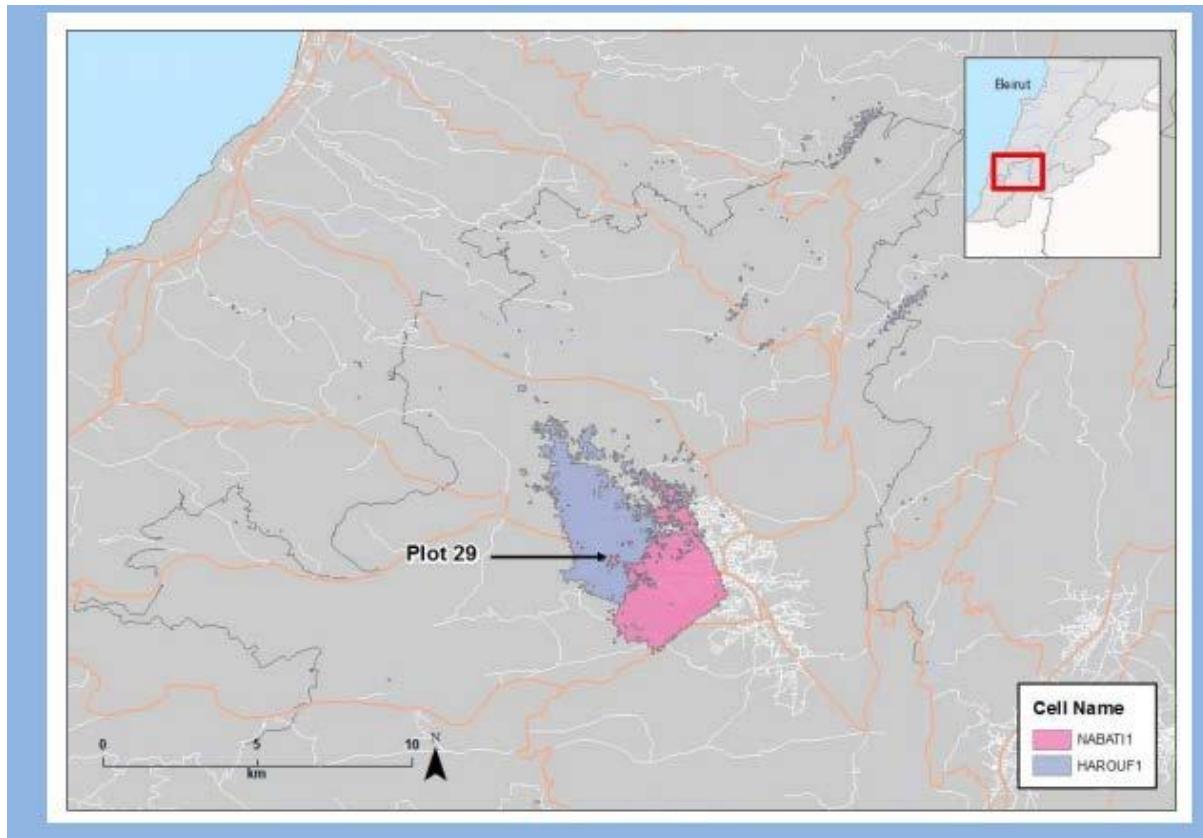

⁵⁷⁵⁰ See above, at para. 2729; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 145 (a), annex E, p. 404 (ERN D0537563).

⁵⁷⁵¹ See above, at para. 2729; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 145 (b), annex E, p. 408 (ERN D0537567); exhibit P2084.

⁵⁷⁵² Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 147.

⁵⁷⁵³ Mr Donaldson noted that before 1 August 2004 cell information for incoming calls was not available, meaning that the category of 'unknown cell' ranks as the second most activated cell during the attribution period; this cell category is therefore not considered as one of the top five known most activated cells during the attribution period, discussed above, Andrew Donaldson, T. 19 July 2017, p. 30; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 147.

⁵⁷⁵⁴ Andrew Donaldson, T. 19 July 2017, pp 30-33; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 147-149, p. 79 (map).

Slide 98 of Mr Donaldson's PowerPoint presentation—exhibit P2025

2842. In addition, Mr Donaldson noted that personal mobile 935 activated MHAIBI1—located near the village of Markaba—during Mr Ayyash's employment at the Markaba Civil Defence station. The last activation was on 30 October 2004, the final day he was stationed there before being transferred to the Doueir station.⁵⁷⁵⁵

2843. According to the evidence, the coordinates of Markaba village do not fall within the predicted best coverage area of any cell, but the cells adjacent to this area are MHAIBI1, MAAROB1 and GHASSA2.⁵⁷⁵⁶

2844. Call data records show that mobile 935 activated MAAROB1 on 29 December 2004, 7 January 2005, 17 January 2005 (three times), 20 February 2005 and 30 March 2005. It activated

⁵⁷⁵⁵ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 153-154, 640-642.

⁵⁷⁵⁶ Exhibit P663 (Statement of Andrew Fahey), annex 1, location no. 88; exhibit P1123 (ArcView shape files Alfa). As there is no evidence showing the location of the Markaba station itself, rather than the coordinates of the village, it is unclear whether the Markaba station fell within the area for which there is no predicted best cell coverage or whether it fell within the predicted best coverage of one of the three cells.

GHASSA2 on 17 June 2004 (three times), 8 September 2004, and on 6 November 2004.⁵⁷⁵⁷ In other words, while one of the three relevant cells was no longer activated after Mr Ayyash was transferred to another station, the remaining two cells continued to be activated after this date. It is therefore unclear why Mr Donaldson relied on the activation pattern of only one of these three cells, and overlooked the remaining two.

h. Single user analysis of personal mobiles 170 and 935

2845. For completeness, the Trial Chamber has reviewed the evidence of the Prosecution cell site expert, Mr Philips, on single user analysis of mobiles 170 and 935.⁵⁷⁵⁸

2846. The two mobiles shared seven days of overlapping attribution period, from Friday 7 to Thursday 13 January 2005.⁵⁷⁵⁹ Mr Philips analysed four shared days of activity, between 10 and 13 January 2005, and identified six pairs of close-in-time calls, made within an hour.⁵⁷⁶⁰ He concluded that mobiles 170 and 935 could be co-located for five pairs,⁵⁷⁶¹ and that co-location was not precluded for one pair.⁵⁷⁶²

2847. The possible co-locations occurred in south Beirut, and the mobiles connected to cells with overlapping predicted best server coverage, such as SFEIR2 and Hadath_C, Hazmiyeh_2_B and HADATH3, Sfeir_A, Sfeir_B and SFEIR2, ROUEIS3 and Hai_El-Kneisseh_B. The time lapse between the call pairs varied from two-and-a-half to 21 minutes.⁵⁷⁶³

⁵⁷⁵⁷ Exhibit P1261, pp 3, 46, 75, 93, 96, 100, 109, 114.

⁵⁷⁵⁸ Mr Philips's single user analysis encompassed a period from 30 September 2004 to 14 February 2005. The attribution period of Mr Ayyash's mobile 165 ended before, on 18 April 2004. *See* sub-section (B) (1) (d) (iii) 'Findings'.

⁵⁷⁵⁹ Mobile 935's attribution period to Mr Ayyash is from 31 May 2004 to 13 January 2005. The attribution period of mobile 170 spans from 7 January to 26 November 2005. *See* sub-sections (B) (1) (e) (iii) 'Findings' and (B) (1) (f) (iii) 'Findings'.

⁵⁷⁶⁰ Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 90, 94-96, 101; exhibit P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review), pp 28-30; exhibit P1259 (Call sequence table of ten numbers—Mr Ayyash), pp 333-334.

⁵⁷⁶¹ On 10, 11 and 13 January 2005.

⁵⁷⁶² Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 90, 94-96, 101; exhibit P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review), pp 28-30; exhibit P1259, pp 333-334.

⁵⁷⁶³ Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 90, 94-96, 101; exhibit P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review), pp 28-30; exhibit P1259, pp 333-334.

2848. The combined call sequence table shows five more close-in-time call pairs of the mobiles, on 7, 8 and 9 January 2005, which Mr Philips did not examine.⁵⁷⁶⁴

2849. On Friday 7 January 2005 at 16:08, mobile 935 activated MIKAEL3 for a 53-second call, and at 16:23 mobile 170 used Hadath_C.⁵⁷⁶⁵ Using the electronic presentation of evidence software, the Trial Chamber measured around 940 metres between the closest and over 2,650 metres between the farthest points of the predicted best server coverage areas of these cells.⁵⁷⁶⁶

Distances between the closest and farthest points of coverage areas of Alfa's MIKAEL3 and Touch's Hadath_C cells

2850. Although Mr Philips did not provide an expert opinion for this call pair, he categorised cell activations with similar parameters as falling within 'would not preclude co-location'. For example, on 28 December 2004 at 12:49, Yellow 294 connected to Alfa's GHOBAl1 cell to

⁵⁷⁶⁴ Exhibit P1259, pp 331-332. Save for four early morning calls on 7 January on Yellow 294, none of the network mobiles had any calls on those three days. This could be a possible explanation for not including these calls in Mr Philips's report.

⁵⁷⁶⁵ Exhibit P1259, p. 331.

⁵⁷⁶⁶ Exhibit P592.1.

receive a 58-second call from another Yellow mobile, and approximately 13 minutes later mobile 935 activated PORT1.⁵⁷⁶⁷ Mr Philips found that the estimated distance between the centres of the two cells' best server coverage areas, 4.25 kilometres 'as the crow flies', could be travelled and would not preclude the mobiles from co-locating.⁵⁷⁶⁸

2851. He expressed the same opinion with respect to a call pair of Blue 233, using Hazmiyeh_2_B, and mobile 170, connecting to BorjBrajneh-II_B that occurred on 2 February 2005 within just over three minutes. He estimated that the distance between the centres of the cells' predicted best server coverage areas was 2.5 kilometres.⁵⁷⁶⁹

2852. The Trial Chamber's analysis using the electronic presentation of evidence software showed that for the remaining four call pairs mobiles 170 and 935 connected to cells with some overlap in their respective predicted best server coverage areas:

- on 7 January 2005 at 20:33 mobile 170 activated Borj_Rahhal_B. At 20:38 mobile 935 used ZRARIE2 north-east to Tyre in south Lebanon;
- on 8 January 2005 at 12:08 mobile 935 used HADATH1 at the end of a call. At 12:24, mobile 170 connected to Hazmiyeh_2_B. At 13:12, mobile 170 activated Ayn_Sikkeh_C, at 13:28 mobile 935 used CBOURJ1; and
- on 9 January 2005 at 15:09 mobile 935 activated HADATH1, and at 15:12 mobile 170 connected to Hadath_C.⁵⁷⁷⁰

2853. As a general approach, Mr Philips considered such cell activations as possible co-locations.⁵⁷⁷¹ Additionally, there were no calls between the two mobiles and no overlapping calls in these seven days.⁵⁷⁷²

⁵⁷⁶⁷ Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), p. 79; exhibit P1259, p. 326.

⁵⁷⁷⁰ Exhibit P1259, pp 331-332; exhibit P592.1.

⁵⁷⁷¹ Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), p. 31.

⁵⁷⁷² Exhibit P1261, pp 96-97; exhibit P1262, p. 1.

ii. Submissions

2854. The Prosecution submits that Mr Ayyash used personal mobile 935 between 31 May 2004 and 13 January 2005 based on the following factors.⁵⁷⁷³ First, the mobile number was listed on documents relating to the purchase and sale of his BMW in 2002 and 2004, and to an accident on 20 November 2004 involving this vehicle.⁵⁷⁷⁴ Second, mobile 935 used the same handset which was then used with mobile 091, and on three days while Mr Ayyash owned the vehicle, personal mobile 935 was used with its integrated handset.⁵⁷⁷⁵ Third, personal mobile 935 was in contact with Mr Ayyash's family, associates, acquaintances, employer and service providers, and landline 696—the number of Mr Ayyash's Hadath residence—was its top landline contact.⁵⁷⁷⁶

2855. Finally, the cells to which mobile 935 most frequently connected were near Mr Ayyash's Hadath and Harouf residences, and mobile 935 activated cells providing coverage to Mr Ayyash's workplace at the Markaba Civil Defence station only while he was stationed there and never thereafter.⁵⁷⁷⁷ Mobile 935 was also used in the area and at the time of the BMW accident on 20 November 2004 to contact those who were relevant to the accident documentation.⁵⁷⁷⁸

2856. The Ayyash Defence argues that the evidence does not show beyond reasonable doubt that Mr Ayyash used mobile 935 during this period.⁵⁷⁷⁹ There is no evidence on how it came to be written on the 2002 BMW bill of sale—dated two years before personal mobile 935 was activated—in a different coloured ink and outside the section containing Mr Ayyash's personal details.

2857. Moreover, Mr Donaldson conceded that he had unintentionally misconstrued mobile 935 as Mr Ayyash's contact number on this document.⁵⁷⁸⁰ There is also no evidence of how the number of mobile 935 came to be handwritten in the middle of the 2004 BMW bill of sale.⁵⁷⁸¹ In particular,

⁵⁷⁷³ Prosecution final trial brief, para. 227; Prosecution closing submissions, T. 12 September 2018, p. 79.

⁵⁷⁷⁴ Prosecution final trial brief, paras 228-229; Prosecution closing submissions, T. 12 September 2018, pp 95-96, 99.

⁵⁷⁷⁵ Prosecution final trial brief, paras 230, 234; Prosecution closing submissions, T. 12 September 2018, pp 93-94.

⁵⁷⁷⁶ Prosecution final trial brief, para. 231; Prosecution closing submissions, T. 12 September 2018, pp 93-94, 99.

⁵⁷⁷⁷ Prosecution final trial brief, para. 232; Prosecution closing submissions, T. 12 September 2018, pp 97-99.

⁵⁷⁷⁸ Prosecution closing submissions, T. 12 September 2018, pp 95, 97-99.

⁵⁷⁷⁹ Ayyash Defence final trial brief, para. 634.

⁵⁷⁸⁰ Ayyash Defence final trial brief, paras 579-580; Ayyash Defence closing submissions, T. 17 September 2018, p. 114.

⁵⁷⁸¹ Ayyash Defence final trial brief, paras 581-583; Ayyash Defence closing submissions, T. 17 September 2018, pp 114-115.

as there is no evidence that Mr Ayyash was present at its signing, it cannot be inferred that he had provided the mobile number.⁵⁷⁸²

2858. The Ayyash Defence also submits that, although the handset used with mobile 935 was subsequently used with mobile 091, this does not assist in attributing either of them to Mr Ayyash, and there is no evidence on the handset's purchase or connection with Mr Ayyash.⁵⁷⁸³ The only other handset used with mobile 935 during this period was the integrated BMW handset, but there is no evidence that Mr Ayyash was in the BMW on those days.⁵⁷⁸⁴

2859. It also challenges the Prosecution's conclusions from mobile 935's contact list, in tendering the evidence of just five people named in the list, one of whom stated that 'possibly' Mr Ayyash or another person called him from that number.⁵⁷⁸⁵ This was while both that witness and the others did not mention the number, did not recognise it, nor had it saved in their telephone and or remembered having contact with it.⁵⁷⁸⁶ Further, its geographic profile does not show that Mr Ayyash used mobile 935, and the cell activations in the Markaba station area while he was employed there do not assist in attributing personal mobile 935 to him in the absence of work attendance records.⁵⁷⁸⁷

2860. The Ayyash Defence also argues that, as there is no evidence of how mobile 935 came to be on the 2004 car accident documents, for several reasons it should not be assumed that Mr Ayyash provided it. First, the authorship of the accident declaration form is in question. Secondly, the reliability of the expert report is also questionable—given the less serious nature of the accident—as is its source of information, which may have come from the insurance company. Thirdly, the damage estimate document may reproduce data from the insurance company. Fourthly, the contents of the towing company database may have come from the insurance company, and the tow-truck driver who assisted at the scene did not recognise Mr Ayyash.⁵⁷⁸⁸

⁵⁷⁸² Ayyash Defence final trial brief, para. 583.

⁵⁷⁸³ Ayyash Defence final trial brief, para. 589.

⁵⁷⁸⁴ Ayyash Defence final trial brief, paras 588, 590.

⁵⁷⁸⁵ Ayyash Defence final trial brief, paras 591-592, 594; Ayyash Defence closing submissions, T. 17 September 2018, pp 108-109.

⁵⁷⁸⁶ Ayyash Defence final trial brief, paras 593-597.

⁵⁷⁸⁷ Ayyash Defence final trial brief, paras 602-604.

⁵⁷⁸⁸ Ayyash Defence final trial brief, paras 605-618.

2861. Furthermore, as none of those who had contact with mobile 935 on the day of the accident could recognise it or connect it to Mr Ayyash personally, and there is no evidence of the calls' contents, it cannot be excluded that another person was using it at the accident scene while riding in the car with Mr Ayyash.⁵⁷⁸⁹

iii. Findings

2862. Mr Ayyash's BMW was involved in an accident late in the evening of 20 November 2004 at Al-Rmeileh, on the highway between Sidon and Beirut. Mr Ayyash, as the insured owner, submitted to his insurer a 'Car Accident Declaration' with his insurance claim. The 'Details of Accident' are hand-written and state that, 'As I was trying to negotiate a bend on Al-Rmeileh Road, my vehicle skidded and hit the pavement'.⁵⁷⁹⁰ The telephone number given was mobile 935. The insurer's accident expert report listed Mr Ayyash as the BMW's owner and driver.

2863. The evidence that Mr Ayyash was driving his own vehicle when it 'skidded and hit the pavement' is overwhelming. The Trial Chamber accordingly finds that he was the driver that night.

2864. Mobile 935 was used in the BMW's fixed handset three times in 2002 and 2003 when Mr Ayyash owned the vehicle. On the night of the accident, mobile 935 called the tow truck driver four times from cells either providing coverage to the scene, or nearby, namely on a tower more than five kilometres away from the scene of the accident, BARJA2. The predicted best coverage of that cell, BARJA2, was not adjacent to that of the cell providing best coverage to the accident scene, BRAMIE1. However, the next call activated a cell, SIBLIN3, adjacent to the one covering the accident site. The general cell site evidence of the cell site expert, Mr Philips, is that this can occur.

2865. Mobile 935 is also in the tow-truck company's data base in connection with the towing of the BMW that night. It is listed on four documents relating to the insurance claim for the accident; the number is linked to Mr Ayyash, as the insurance policy beneficiary. The evidence connecting mobile 935 to the accident, and hence Mr Ayyash and his vehicle, is also overwhelming. The Trial Chamber therefore finds that Mr Ayyash was using mobile 935 that night.

⁵⁷⁸⁹ Ayyash Defence final trial brief, paras 619-626.

⁵⁷⁹⁰ Exhibit P604.1 (Car accident declaration), p. 2.

2866. To explain further, the BMW bills of sale have limitations to their probative value, given where number 935 is on the documents, the different coloured ink in which it is written and the fact that the 2002 document precedes the activation of personal mobile 935. However, the former motor transport official, Mr Al-Kharrat, gave evidence that a bill of sale would be made available to the vehicle owner or a person acting on their behalf at the time of a subsequent sale. Personal mobile 935 may therefore have been added to the 2002 bill of sale in 2004, in the blank space remaining on the document.

2867. Whether Mr Ayyash completed the accident declaration himself is irrelevant. The salient point is that mobile 935 was provided as his contact number on this document. The obvious question is why this mobile number would have been provided as the contact number for the BMW's owner, if it was not in fact the owner's. In addition, the accident expert, Mr Mahmoud Assi, explained why he may have been incorrectly listed on the declaration as the accident expert, and Witness 50 explained that the broker's name is correctly completed on the document.

2868. Moreover, contrary to the Ayyash Defence's contention, Mr Assi's evidence did not undermine the reliability of mobile 935 being provided as Mr Ayyash's contact number in the expert report. Rather, he merely explained that the expert report may lack detail, given the less serious nature of the accident. Mr Assi also explained that an accident expert gathers relevant information from the driver at the scene, undermining the argument that the information may have come from the insurance company.

2869. Further, mobile 935 was provided as the contact number to the insurance company in the accident declaration dated 23 November 2004, whereas Mr Kalash's number had already called mobile 935 at the time of the accident on 20 November 2004, and mobile 935 had called Mr Kalash's number on 22 November 2004. Why would Mr Kalash call this number if the BMW driver was not using it?

2870. Finally, Witness 474 testified that a client calling the towing company at the time of the accident, would provide a contact number, therefore undermining the argument that the information contained in the towing company database originates from the insurance company. On the other hand, the call sequence tables do not show mobile 935 contacting, at the time of the accident, any of the towing company's telephone numbers, but they do show a number of calls

made by mobile 935 to the company's tow truck driver. Again, why would someone using mobile 935 call a tow truck driver to tow a car away after an accident, if it was not their vehicle involved in the accident?

2871. Based on Mr Assi's evidence, the Trial Chamber is persuaded that the information contained in the damage estimate request may duplicate information provided to the insurance company, and therefore that this document cannot additionally corroborate other evidence to attribute personal mobile 935 to Mr Ayyash.

2872. The mobile's subscriber contract alone does not assist in attribution.

2873. The Trial Chamber is also not persuaded that the absence of witness evidence stating that mobile 935 was used by Mr Ayyash precludes its attribution to him, in light of the other strong circumstantial evidence that he was using it. There is no reason, for example, why the service provider Witness 78 would know, let alone remember, such a number that was recorded in the client data base.

2874. Mr Donaldson's report highlights mobile 935's frequent contact with Mr Ayyash's relatives and associates, but also fails to link a considerable proportion of contact telephone numbers, importantly those towards the top of the contact rankings, with anyone. Moreover, while some information is given in Mr Donaldson's report about the date ranges during which the main 31 contacts were in contact with mobile 935 during the attribution period, the consistency or patterns of contact within these date ranges are not set out. The Trial Chamber finds that the contact profile is indicative, but not determinative, of mobile 935 being attributed to Mr Ayyash.

2875. Regarding mobile 935's geographic profile, the Trial Chamber is satisfied that it regularly activated cells in the area of Mr Ayyash's two residences, Harouf and Hadath.⁵⁷⁹¹

2876. The mobile also connected to cells in the area of Markaba village while Mr Ayyash was stationed at the Markaba Civil Defence station. However, there is no direct evidence showing that Mr Ayyash was at his workplace or at one of his two residences on particular days or times of day.

⁵⁷⁹¹ See sub-sections B (1) (b) 'Landline 696—Ayyash family residence in Hadath, Beirut' and (B) (1) (c) 'Landline 851—Ayyash family residence in Harouf, Nabatiyeh'.

In addition, the Prosecution's argument that the mobile ceased to activate cells around the Markaba station after Mr Ayyash's transfer to another station is not supported by the evidence.

2877. Alfa's records on mobile 935's IMEI numbers and call data records show that mobile 935 was used with IMEI 35250500226958 consistently from 29 May 2004 until 13 January 2005. However, the Trial Chamber is not satisfied that Mr Donaldson's report shows a different contact and geographic profile for mobile 935 after the attribution period. There is no evidence about the ownership or use of the handset. In addition, number 935 was used—on three different days—with the Motorola handset in Mr Ayyash's BMW, when he owned this vehicle. This handset use may assist in attributing personal mobile 935 to Mr Ayyash.

2878. Consistent with its approach to assessing the totality of the evidence, the Trial Chamber has carefully considered Mr Philips's evidence regarding the single user analysis of personal mobiles.

2879. The Trial Chamber has found above that Mr Ayyash was mobile 170's principal user from 7 January to 26 November 2005.⁵⁷⁹² It shared seven days of activity with mobile 935, from 7 to 13 January 2005. Mr Philips analysed six pairs of calls on four days, from 10 to 13 January 2005, and concluded that the two mobiles possibly co-located for five pairs and their co-location would not be precluded for another call pair.

2880. Notwithstanding that the Trial Chamber does not have Mr Philips's technical expertise to ascertain further potential co-locations, it is satisfied that the cell activations of mobiles 170 and 935 did not show dislocation in the seven days of common activity, which may have been inconsistent with the two mobiles' having the same user.

2881. Based on the totality of the evidence, in particular the cumulative weight of the consistent IMEI use, and consistent contact and geographic profiles, the Trial Chamber is satisfied that the attribution period spans from 31 May 2004 to 13 January 2005.

2882. The Trial Chamber cannot exclude that Mr Ayyash's wife or close family members may have occasionally used mobile 935. Yet, the evidence shows that any such use did not rise to a level that would make mobile 935 a common, family mobile. The Trial Chamber has examined

⁵⁷⁹² See paras 2776-2784.

the totality of the evidence as to who was using mobile 935 and is satisfied that the only reasonable conclusion is that it was Mr Ayyash. The Trial Chamber therefore finds that Mr Ayyash was its principal user.

(g) Personal mobile 091

2883. The Prosecution attributes personal mobile 091 to Mr Ayyash in early 2005 for just under two months, from 13 January until 6 March 2005. The evidence of its attribution comes from a bill of lading listing it alongside Mr Ayyash's name, and geographic and contact profiles, including contact with a service provider to Mr Ayyash's wife, Ms Hajj.

2884. It also rests on three instances where contacts called mobile 935—used by Mr Ayyash immediately before he started using mobile 091—before going on to call personal mobile 091 later that day. And, further, on personal mobile 091's successive IMEI use with mobile 935, and similarities between mobile 091's contact and geographic profiles and those of mobiles 935 and 165. The Trial Chamber has found that Mr Ayyash previously used these two mobiles.

i. Evidence

a. Documents

2885. Touch's subscriber records show that mobile 091 was activated as a pre-paid mobile number, without a named subscriber, on its network on 18 December 2004 and was not deactivated. By 2010, the subscriber name was recorded as 'Mahmoud Mohamad Hamdan'.⁵⁷⁹³

2886. The Trial Chamber also admitted into evidence a bill of lading, dated 15 March 2005,⁵⁷⁹⁴ for the import of a 1999 Dodge Durango vehicle from the United States.⁵⁷⁹⁵ It lists 'Saleem Ayash' together with a post office box number in a textbox headed 'Consignee (complete name and address)', while the textbox immediately underneath is headed 'Notify party (complete name and

⁵⁷⁹³ Exhibit P829 (Touch subscriber note for mobile 091), ERNs D0375503, D0456604; exhibit P1101, p. 1; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 166, p. 82 (table of subscriber details).

⁵⁷⁹⁴ This is nine days after the attribution period. Andrew Donaldson, T. 22 August 2017, p. 20.

⁵⁷⁹⁵ Exhibit P1395 (Bill of lading related to Mr Ayyash).

address)’ and contains the words ‘same as consignee’ and lists mobile 091 as the contact number.⁵⁷⁹⁶

b. Witness evidence

2887. Witness 78 is a service provider whose number appears on mobile 091’s contact profile.⁵⁷⁹⁷ The witness stated that Mr Ayyash’s wife, ‘Fatima Abdel-Hassan Hajj’, was registered as a client with the business, that mobile 165 and landline 696 were recorded as her contact numbers and that she had an appointment on Sunday 13 February 2005.⁵⁷⁹⁸ However, the witness did not recognise the mobile number.⁵⁷⁹⁹

2888. Witnesses 28, 50 and PRH270, whose telephone numbers were in contact with mobile 091 during its attribution period, also did not recognise personal mobile 091.⁵⁸⁰⁰ As noted above concerning mobile 935, the evidence of Witness 28 was received under Rule 158.

c. Mr Andrew Donaldson’s analysis

2889. Mr Donaldson attributed mobile 091 to Mr Ayyash from 13 January 2005—the date on which it made its first call following its activation on 18 December 2004—until 6 March 2005.⁵⁸⁰¹

2890. The SIM for mobile 091 was used with the handset IMEI 35250500226958 between 13 January and 10 March 2005. This was four days after the end of the attribution period. This IMEI had previously been the main handset used with mobile 935—also attributed by the Prosecution to Mr Ayyash—until earlier on 13 January 2005.⁵⁸⁰² The Trial Chamber, in the subsection immediately above, has found that Mr Ayyash was the principal user of that mobile.

⁵⁷⁹⁶ Exhibit P1395. *See also* exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 187.

⁵⁷⁹⁷ Exhibit P707 (Statement of Witness PRH078), p. 17 (ERN 60305682); exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), annex E, p. 411; exhibit P1256.

⁵⁷⁹⁸ Exhibit P707 (Statement of Witness PRH078), pp 40-42 (ERNs 60305705-60305707), 44 (ERN 60305709); exhibit P707.1 (Statement of Witness PRH078), p. 4 (ERN 60137993).

⁵⁷⁹⁹ Exhibit P707 (Statement of Witness PRH078), pp 27-28 (ERNs 60305692-60305693).

⁵⁸⁰⁰ Exhibit P2126 (Interview of Witness PRH028), pp 17, 24-25 (ERN 60140591_TS_D_AR_EN_02); exhibit P697 (Statement of Witness PRH050), pp 9 (ERN 60302453) (para. 7), 31 (ERN 60302475) (paras 59, 61); exhibit P1860 (Statement of Witness PRH270), pp 22, 45-46 (ERNs 60304225, 60304248-60304249); exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), annex E, pp 410-412; exhibit P1256.

⁵⁸⁰¹ Andrew Donaldson, T. 22 August 2017, p. 19; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 137, 164, 167-168.

⁵⁸⁰² Andrew Donaldson, T. 22 August 2017, p. 19; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 171, 179-181, 196.

2891. During the additional four days of use with the same IMEI after the attribution period, mobile 091 received just one call, on the morning of 7 March 2005, and then exclusively made calls to the Touch service number.⁵⁸⁰³

2892. Mr Donaldson, without explanation, compared the attribution period to a post-attribution period ending on 31 December 2005, but neglecting to clarify whether the beginning of this post-attribution period is 7 or 11 March 2005. He stated that, during this post-attribution period, personal mobile 091 was used with three different IMEIs and displayed different contact and geographic profiles to those of the attribution period. Mr Donaldson stated that one explanation for these changes would be that the mobile number was passed on to another user.⁵⁸⁰⁴

2893. In addition, during the attribution period, nine text messages were sent from mobile 091, all of them on 20 January 2005 to a mobile ending in 888 attributed to Mr Ayyash's brother, Ali.⁵⁸⁰⁵ The text messages' contents do not explicitly identify mobile 091's user.⁵⁸⁰⁶ Mr Donaldson does not address seven text messages *received* by personal mobile 091 during the attribution period, nor were their contents tendered into evidence.⁵⁸⁰⁷

2894. Mr Donaldson relied on the following contacts, during the attribution period of 13 January to 6 March 2005, between personal mobile 091 and mobile and landline numbers which he linked to members of Mr Ayyash's family:

- 26 contacts, ranked fourth, with the same mobile number ending in 888 to which the nine text messages were sent, and which is linked to Mr Ayyash's brother, Mr Ali Ayyash;⁵⁸⁰⁸
- 15 contacts, ranked sixth, with a mobile number ending in 854, linked to Mr Ayyash's sister-in-law, Ms Bassima Al-Hajj;⁵⁸⁰⁹

⁵⁸⁰³ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 172.

⁵⁸¹⁹ See above, at para. 2729; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 189 (i); exhibit P1256. In annex E to his report, Mr Donaldson erroneously stated that this contact was jointly ranked 38th, whereas according to the information provided in the table the correct ranking is joint 36th, exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), annex E, p. 411 (ERN D0537570).

⁵⁸²⁰ See above, at para. 2707; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 189 (j); exhibit P1256. In annex E to his report, Mr Donaldson erroneously stated that this contact was jointly ranked 38th, whereas according to the information provided in the table the correct ranking is joint 36th, exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), annex E, p. 411 (ERN D0537570).

⁵⁸²¹ See above, at para. 2729; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 189 (k); exhibit P1256. In annex E to his report, Mr Donaldson erroneously stated that this contact was jointly ranked 38th, whereas according to the information provided in the table the correct ranking is joint 36th, exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), annex E, p. 411 (ERN D0537570).

⁵⁸²² See above, at para. 2729; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 189 (l); exhibit P1256. In annex E to his report, Mr Donaldson erroneously stated that this contact was jointly ranked

- one contact, jointly ranked 36th, with a landline number ending in 833, linked to Mr Ayyash's sister-in-law, Ms Nidal Abdel-Hassan Al-Haj, and her husband Mr Mohammed Abdallah Jaradah;⁵⁸²³
- one contact, jointly ranked 36th, with a landline number ending in 099, linked to Mr Ayyash's brother, Ali, to whom the above-mentioned mobile number ending in 888 is also linked;⁵⁸²⁴
- one contact, jointly ranked 36th, with a mobile number ending in 222, linked with the Ayyash family;⁵⁸²⁵ and
- one contact, jointly ranked 36th, with a mobile number ending in 894, linked to Mr Ayyash's relative, Mr Abdallah Safieddine.⁵⁸²⁶

2895. Mr Donaldson also relied on the following contacts, during the attribution period, between mobile 091 and mobile numbers he attributed to Mr Ayyash's acquaintances and associates:

- 43 contacts, ranked first, with a mobile number ending in 333, linked to Mr Ayyash's relative and business associate, Mr Hussein Zaarour;⁵⁸²⁷

38th, whereas according to the information provided in the table the correct ranking is joint 36th, exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), annex E, p. 411 (ERN D0537570).

⁵⁸²³ See above, at para. 2729; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 189 (m); exhibit P1256. In annex E to his report, Mr Donaldson erroneously stated that this contact was jointly ranked 38th, whereas according to the information provided in the table the correct ranking is joint 36th, exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), annex E, p. 411 (ERN D0537570).

⁵⁸²⁴ See above, at para. 2729; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 189 (n); exhibit P1256. In annex E to his report, Mr Donaldson erroneously stated that this contact was jointly ranked 38th, whereas according to the information provided in the table the correct ranking is joint 36th, exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), annex E, p. 411 (ERN D0537570).

⁵⁸²⁵ See above, at para. 2707; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 189 (o); exhibit P1256. In annex E to his report, Mr Donaldson erroneously stated that this contact was jointly ranked 38th, whereas according to the information provided in the table the correct ranking is joint 36th, exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), annex E, p. 412 (ERN D0537571).

⁵⁸²⁶ See above, at para. 2729; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 190 (e); exhibit P1256. In annex E to his report, Mr Donaldson erroneously stated that this contact was jointly ranked 38th, whereas according to the information provided in the table the correct ranking is joint 36th, exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), annex E, p. 411 (ERN D0537570).

⁵⁸²⁷ See above, at para. 2686; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 190 (a); exhibit P1256.

- 23 contacts, ranked fifth, with a mobile number ending in 617, linked to Mr Ayyash's business associate, Mr Ghaleb Jaber;⁵⁸²⁸
- one contact, jointly ranked 36th, with a mobile number ending in 515, used by an acquaintance of the Ayyash brothers;⁵⁸²⁹ and
- one contact, jointly ranked 36th, with a mobile number ending in 849, linked to Mr Ayyash's insurance agent.⁵⁸³⁰

2896. In addition, Mr Donaldson highlighted one contact between mobile 091 and a mobile number ending in 940, linked to Witness 78 (jointly ranked 36th).⁵⁸³¹

2897. In total, the contacts Mr Donaldson relied on account for 45.07 per cent of the contacts involving personal mobile 091—namely incoming and outgoing calls and text messages—during the attribution period, that is, 160 out of 355.⁵⁸³²

2898. He also listed mobile 091's top 35 contacts during the attribution period, which additionally highlighted: nine contacts (ranked 11th) with Purple 231, which the Prosecution attributes to Mr Merhi, and three contacts (jointly ranked 21st) with mobile 935, which the Prosecution alleges was no longer used by Mr Ayyash at that time.⁵⁸³³ Finally, he stated that, during the attribution period, the most frequent contacts were 'consistent'.⁵⁸³⁴ Mr Donaldson cited no evidence for this last assertion, and gave just one contact as an example.

⁵⁸²⁸ See above, at para. 2686; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 190 (b); exhibit P1256.

⁵⁸²⁹ See above, at para. 2729; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 190 (c); exhibit P1256. In annex E to his report, Mr Donaldson erroneously stated that this contact was jointly ranked 38th, whereas according to the information provided in the table the correct ranking is joint 36th, exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), annex E, p. 412 (ERN D0537571).

In annex E to his report, Mr Donaldson erroneously stated that this contact was jointly ranked 38th, whereas according to the information provided in the table the correct ranking is joint 36th, exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), annex E, p. 411 (ERN D0537570).

⁵⁸³¹ See above, at para. 2729; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 191 (a); exhibit P1256.

⁵⁸³² Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), annex E, pp 410-412 (ERNS D0537569-D0537571); exhibit P1256.

⁵⁸³³ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 192; exhibit P1256.

⁵⁸³⁴ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 169.

2899. Mr Donaldson additionally compared the contact profile of mobile 091 with those of mobiles 935 and 165, suggesting that these show that the three mobiles had the same user, who moved from one mobile number to another over time.⁵⁸³⁵ He also highlighted mobile 091's contacts with Saudi Arabian numbers and their correlation with when Mr Ayyash's family allegedly travelled there for the 2005 Hajj, and mobile 091's lack of co-location with the other personal and network mobiles on the day of Mr Ayyash's family's return to Lebanon from the Hajj.⁵⁸³⁶

2900. Mr Donaldson also relied on mobile 091's geographic profile during the attribution period, listing the main ten cells, two of which are jointly ranked fifth.⁵⁸³⁷ He stated in his report that the 'top five cell towers are identical to those depicted already for [personal mobile 165]' and 'similar' to those used by mobile 170.⁵⁸³⁸ By citing a paragraph of his report which deals with the second portion of personal mobile 165's attribution period only,⁵⁸³⁹ Mr Donaldson implicitly pointed out that this is only a partial cell tower use comparison between the two personal mobiles.

2901. However, his suggestion that the top five cells are common between the two compared geographic profiles is questionable for two reasons. First, Mr Donaldson does not mention that there are two cells in mobile 091's profile which are jointly ranked fifth, but only one of which also appears in the top five for the second attribution period of mobile 165, while the other, Saki Hadath_C, is ranked seventh in mobile 165's geographic profile. Secondly, by stating that the two top five lists are 'identical', Mr Donaldson fails to specify that the order in which the cells appear in each respective ranking is different.⁵⁸⁴⁰ The Trial Chamber has therefore carefully weighed his comparison between the two geographic profiles.

2902. As highlighted above concerning mobile 165, four of the main five cells cover the area of Mr Ayyash's Hadath residence, while the remaining cell, Nabatieh_C—according to the Touch drive tests—provides coverage of the Harouf area⁵⁸⁴¹ in the vicinity of Mr Ayyash's second

⁵⁸³⁸ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 194, 256-259.

⁵⁸³⁹ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 194.

⁵⁸⁴⁰ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 99, 102, 194.

⁵⁸⁴¹ Exhibit P826.15 (Annex 25 (2) to Witness PRH705's statement of 16 November 2015).

residence at Harouf.⁵⁸⁴² Together, the five cells account for 62.26 per cent of mobile 091's use during the attribution period.⁵⁸⁴³ In addition, Mr Donaldson stated that the most frequently used cells were 'consistent' during the attribution period.⁵⁸⁴⁴

2903. Mr Donaldson also highlighted two additional points of attribution. First, mobile 091 called Witness 78's number at 12:32 on 13 February 2005, the day on which the witness's records show that Mr Ayyash's wife, Ms Fatima Al-Hajj, had an appointment with the witness and the same day when mobile 170, also attributed by the Prosecution to Mr Ayyash, activated, at 17:40, a cell providing coverage to the area of the witness's business premises.⁵⁸⁴⁵ Second, he highlighted three occasions on which different numbers called mobile 935—that the Trial Chamber has found that Mr Ayyash used immediately before he began using mobile 091—and then later called personal mobile 091.

2904. These were on 17 January 2005 at 11:41 and 12:27, on 21 January 2005 at 14:56 and 14:57 and on 25 January 2005 at 14:09 and 14:12.⁵⁸⁴⁶

2905. Mr Donaldson stated that these could be explained by the callers having been unaware that mobile 935's user had changed, and calling personal mobile 091 upon discovering the user's new mobile number.⁵⁸⁴⁷ He also stated that these series of calls may suggest that the user changed from mobile 935 to mobile 091.⁵⁸⁴⁸

d. Single user analysis of personal mobiles 170 and 091

2906. Mr Philips analysed the call activities of mobiles 170 and 091 from Thursday 13 January 2005 to Monday 14 February 2005. He identified 80 pairs of calls between personal mobiles 091 and 170, on a total number of 23 days between 13 January and 11 February 2005.⁵⁸⁴⁹

⁵⁸⁴² See above, at para. 2729; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 204.

⁵⁸⁴⁵ See above, at para. 2729; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 195, 602.

⁵⁸⁴⁶ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 197.

⁵⁸⁴⁷ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 198, 206.

⁵⁸⁴⁸ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 206.

⁵⁸⁴⁹ Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 103, 106, 109-114, 119-120, 132-133, 136, 144-146, 152, 156-160, 164, 167-177, 179-180, 183-185, 187-189, 194-196, 218-220, 222-225, 228-229, 245-246, 249, 258-259; exhibit P1259 (Call sequence table of ten numbers—Mr Ayyash), pp 334-362.

For 31 pairs of calls, Mr Philips found that the two mobiles could have co-located,⁵⁸⁵⁰ and their co-location would not have been precluded for 43 pairs of calls.⁵⁸⁵¹

2907. Fifteen possibly co-locating pairs of calls occurred within five minutes with the mobiles connecting to identical Touch cells, Hadath_C, Airport_B, Airport-II_C, Nabatiyeh_C, Saki Hadath-II_A, Mar Mikhael_C, Sfeir_B and Manara_B.⁵⁸⁵² A further four occurred within ten minutes in south Beirut and at the airport.⁵⁸⁵³

2908. Mr Philips testified that the two personal mobiles and network mobiles moved together.⁵⁸⁵⁴ He demonstrated their common movements on Tuesday 18 January 2005 from south Beirut to the south of Saida, to north Beirut and back to south Beirut; on Monday 24 January 2005 from south Beirut to the Nabatieh area and back; and on Friday 11 February 2005 from south Beirut to the west coast of Beirut and the personal mobiles' possible co-location on the Manara_B cell.⁵⁸⁵⁵

2909. According to Mr Philips's expert report, the two mobiles' activating Touch's Ansar_A and Nabatiyeh_C cells at 12:42 and 12:43 on 24 January 2005 may preclude their co-location, but the cells' fragmented predicted best server coverage may place this call pair in the 'would not preclude co-location' category.⁵⁸⁵⁶ Mr Philips's expert report demonstrates these calls in the map below.

⁵⁸⁵⁰ On 13, 15, 16, 21-22, 24-27 January and 3-4, 8, 11 February 2005. Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 103, 109-110, 112-114, 117, 144-146, 152, 156-160, 167-168, 170, 173-174, 179-180, 218-220, 229, 246; exhibit P1259, pp 335-336, 342-349, 355-356, 358, 361.

⁵⁸⁵¹ Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 103, 106, 111, 119-120, 132-133, 136, 156-160, 164, 169, 172-177, 179-180, 183, 194-196, 218-219, 222-225, 228, 245-246, 258-259.

⁵⁸⁵² Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 109-110, 112-114, 144-146, 156-160, 167-168, 173-174, 179-180, 218-219, 229, 249.

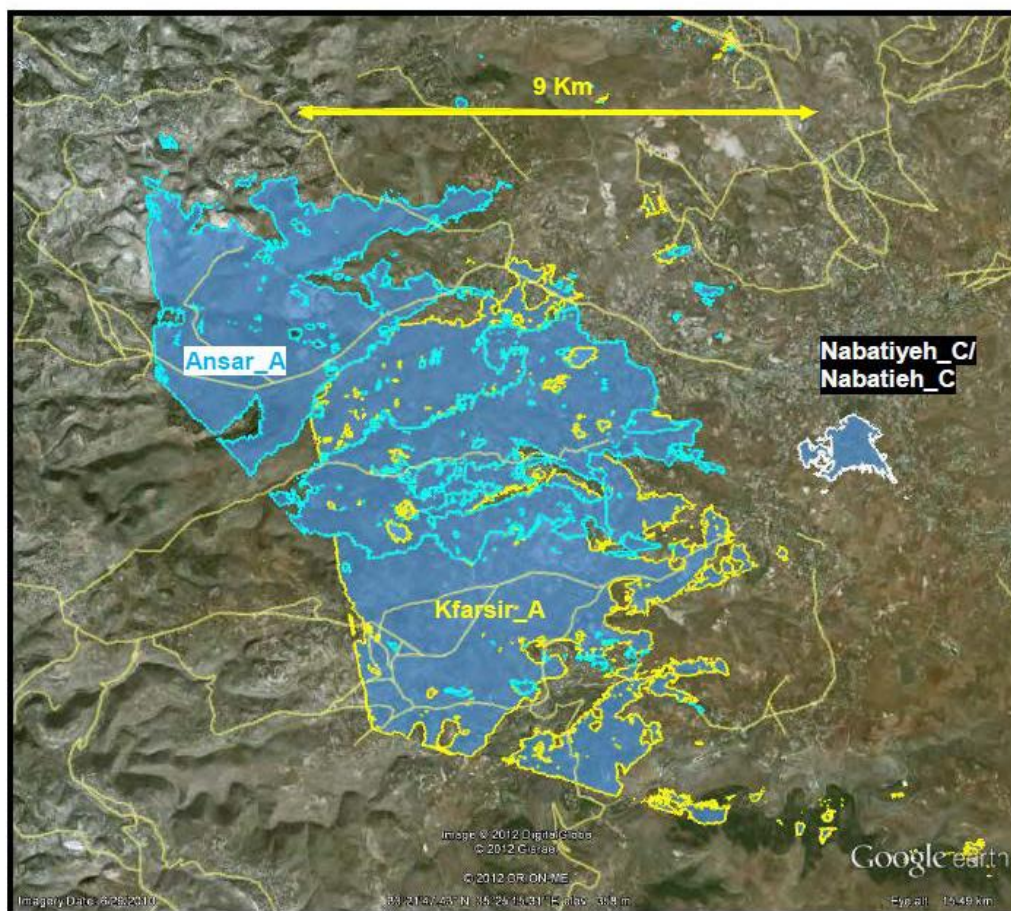

⁵⁸⁵³ Activating Airport_B, Sfeir_A, Sfeir_B and Nabatiyeh_C. Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 113, 117, 156, 220.

⁵⁸⁵⁴ This is summarised in the sub-section (B) (2) (f) e. 'Single user analysis', below.

Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash—exhibit P1111, p. 156

2910. Mr Philips testified that documents received from Touch in response to a Prosecution request for assistance explained that, based on drive tests conducted on 21 August 2006, the predicted best server coverage areas of the cell sectors used during the two calls, Ansar_A and Nabatieh_C, may have both been picked up in the Harouf area, meaning that the two mobiles involved in these calls may not have in fact been dislocated.⁵⁸⁵⁷

⁵⁸⁵⁷ John Edward Philips, T. 21 April 2017, pp 55-61, T. 25 April 2017, pp 64-75; exhibit P826.14 (Annex 25 (1) to Witness PRH705's statement of 16 November 2015); exhibit P826.15.

2911. In the afternoon of Friday 28 January 2005, mobile 091 separated from mobile 170. At 12:24, mobile 091 connected to BorjBrajneh-II_B for an 88-second call and at 12:25 mobile 170 activated Hadat_2_C, which according to Mr Philips may have precluded the two mobiles’ co-location.⁵⁸⁵⁸ Between 13:11 and 14:20, mobile 091, connecting to one of Touch’s airport cells, had four calls with mobile 170, which was moving north in Beirut.⁵⁸⁵⁹ One set of the dislocating cell activations is depicted in Mr Philips’s slide below:

*Exhibit P1935 (PowerPoint presentation on single user analysis, John Edward Philips),
slide 460*

⁵⁸⁵⁸ John Edward Philips, T. 24 April 2017, pp 36-39, 47-53, 56-59; exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 184-185, 187-190, 204. *See also* exhibit P1935, slide 451.

⁵⁸⁵⁹ John Edward Philips, T. 24 April 2017, pp 49-51; exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 184-185, 187-190, 204; exhibit P1259, p. 350. *See also* exhibit P1935, slides 457-470.

2912. Both Mr Philips and Mr Donaldson were of the view that for this period mobile 091 may have been given to someone else who went to the airport.⁵⁸⁶⁰ This is analysed in detail below.⁵⁸⁶¹

ii. Submissions

2913. The Prosecution submits that Mr Ayyash used personal mobile 091 from 13 January to 6 March 2005.⁵⁸⁶² It relies on the following factors. First, personal mobile 091's use of IMEI 35250500226958 from 16:43 on the same day on which personal mobile 935 was last used with that IMEI. Second, the cell towers it most frequently activated were near Mr Ayyash's Hadath and Harouf homes.

2914. Third, landline 696—of Mr Ayyash's Hadath residence—was its top landline contact, and its contacts were also with Mr Ayyash's family members, associates and acquaintances. Fourth, it had contact with the telephone of Witness 78's business number on the day when Ms Hajj, the client, had an appointment there.⁵⁸⁶³ Fifth, it was listed as Mr Ayyash's contact number on the bill of lading, dated 15 March 2005—after the end of the attribution period—to import the Dodge Durango.⁵⁸⁶⁴

2915. The Ayyash Defence submits that the evidence does not show beyond reasonable doubt that Mr Ayyash used mobile 091 during the attribution period.⁵⁸⁶⁵ Although Mr Donaldson had highlighted the importance of dates for attribution, he had no explanation for the bill of lading being dated after the end of this attribution period.⁵⁸⁶⁶ Moreover, personal mobile 091 is not listed under 'Consignee' alongside Mr Ayyash's name and address, but rather under 'Notify Party' and there is no evidence that Mr Ayyash provided the number for this document, especially in light of Mr Donaldson's testimony that vehicle traders in Lebanon used multiple contact numbers.⁵⁸⁶⁷

⁵⁸⁶⁰ John Edward Philips, T. 24 April 2017, pp 61-62; Andrew Donaldson, T. 22 August 2017, pp 25, 31-33, T. 24 August 2017, pp 22-24; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 558-564, 572, annex D, pp 368-369.

⁵⁸⁶¹ See sub-sections (B) (2) (f) e. 'Single user analysis' and (B) (2) (g) 'The 2005 Hajj'.

⁵⁸⁶² Prosecution final trial brief, para. 233.

⁵⁸⁶³ Prosecution final trial brief, paras 233-237; Prosecution closing submissions, T. 12 September 2018, pp 93-94.

⁵⁸⁶⁴ Prosecution final trial brief, para. 238. The Prosecution states that the 15 March 2005 bill of lading is dated '7 days after the end of the attribution period'; however, the attribution period is actually listed as 6 March 2005, meaning that the bill is actually dated nine days after the end of the attribution period.

⁵⁸⁶⁵ Ayyash Defence final trial brief, paras 635, 651.

⁵⁸⁶⁶ Ayyash Defence final trial brief, para. 637; Ayyash Defence closing submissions, T. 17 September 2018, p. 115.

⁵⁸⁶⁷ Ayyash Defence final trial brief, paras 637-638. At the transcript reference given by the Ayyash Defence, Mr Donaldson did not state that a vehicle trader would use a variety of contact telephone numbers; he actually stated

2916. Furthermore, mobile 091's contact profile is of little assistance in attributing the mobile number to Mr Ayyash, as the Prosecution only tendered the evidence of four witnesses who were on this list. Only one was in the top 30 of the most frequent contacts and the remaining three did not recognise mobile 091.⁵⁸⁶⁸

2917. In addition, neither mobile 091's geographic profile nor its comparison to that of mobile 165 demonstrate that Mr Ayyash used mobile 091. This is because, first, mobile 091's main five cell towers only match the top five most frequently used cell towers of the second part of personal mobile 165's attribution period, rather than its entire attribution period, as Mr Donaldson suggested. Secondly, in any event, this comparison only shows a geographic association between the two mobile numbers.⁵⁸⁶⁹

2918. Finally, the Ayyash Defence challenges the three additional attribution points on which Mr Donaldson relied.⁵⁸⁷⁰ It submits that, in the absence of further contextual information, personal mobile 091 calling Witness 78 on the day when Mr Ayyash's wife had an appointment with the witness does not assist in attributing it to Mr Ayyash.⁵⁸⁷¹

2919. In addition, as Mr Donaldson conceded, the IMEI connection between mobiles 091 and 935 does not show that Mr Ayyash used either of them.⁵⁸⁷² Finally, the three instances where a mobile called mobile 935 and then called mobile 091, which Mr Donaldson suggested was because the user of mobile 935 became the user of mobile 091, do not show that Mr Ayyash used either of them.⁵⁸⁷³

iii. Findings

2920. The Trial Chamber has found that Mr Ayyash was the principal user of mobile 935 from Monday 31 May 2004 to Thursday 13 January 2005. Until 14:42 on 13 January 2005, Mr Ayyash

that a vehicle trader may provide his telephone number as a contact number for his clients and that where a multitude of vehicles were registered in the same name using the same telephone number, Mr Donaldson would look at whether that person was a vehicle trader, Andrew Donaldson, T. 5 October 2017, p. 70.

⁵⁸⁶⁸ Ayyash Defence final trial brief, paras 639-645; Ayyash Defence closing submissions, T. 17 September 20108, pp 109-110.

⁵⁸⁶⁹ Ayyash Defence final trial brief, para. 646.

⁵⁸⁷⁰ Ayyash Defence final trial brief, para. 647.

⁵⁸⁷¹ Ayyash Defence final trial brief, para. 648.

⁵⁸⁷² Ayyash Defence final trial brief, para. 649.

⁵⁸⁷³ Ayyash Defence final trial brief, para. 650.

used the SIM for number 935 in a particular mobile handset.⁵⁸⁷⁴ Mobile 935 never used that handset again. From two hours later on the same day, from 16:43, mobile 091 was used with the same handset. And this continued until 22:37 on 6 March 2005.⁵⁸⁷⁵

2921. To state it more clearly, mobile 935 and mobile 091 consecutively used the same handset, from 13 January 2005.

2922. This is highly persuasive evidence that the same handset user had simply put a new SIM in it, namely, number 091. Especially when this user continued to activate more or less the same cells and to have contact with more or less the same numbers.

2923. On 15 March 2005, Mr Ayyash imported a Dodge Durango; he used the number 091 as his contact number for this. This is nine days after the attribution period. Why he would provide this number if it was not his, at around that time, is unexplained. Using this mobile number on the form also clearly associates Mr Ayyash with the number in March 2005.

2924. The mobile's contact profile—45.07 per cent of which were contacts with numbers attributed to Mr Ayyash's relatives and business associates, including the contact with Witness 78 which coincided with Mr Ayyash's wife's appointment—also provides strong evidence that Mr Ayyash was personal mobile 091's user.

2925. Notably, 62.26 per cent of mobile 091's cell activations were to cells in the area of Mr Ayyash's two residences.⁵⁸⁷⁶ This is notwithstanding the lack of direct evidence as to when he was actually at them.

2926. Mr Donaldson's analysis on the mobiles' common most frequently used cells is not inconsistent with their having a single user. However, the comparison is based on partial data, and because most of these cells are in south Beirut, the result is geographically insufficiently distinctive to weigh in favour of attribution to Mr Ayyash.

⁵⁸⁷⁴ With the IMEI number 35250500226958 or 3525050022695827.

⁵⁸⁷⁵ Andrew Donaldson, T. 22 August 2017, p. 19; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 171, 179-181, 196.

⁵⁸⁷⁶ See sub-sections B (1) (b) 'Landline 696—Ayyash family residence in Hadath, Beirut' and B (1) (c) 'Landline 851—Ayyash family residence in Harouf, Nabatiyeh'.

2927. The Trial Chamber finds Mr Philips's evidence on mobile 091's possible co-location and common movement with mobile 170 particularly convincing. Between 13 January and 11 February 2005, mobile 091 had 31 instances of possible co-locations with Mr Ayyash's personal mobile 170,⁵⁸⁷⁷ of which 15 occurred within five minutes, and four within ten minutes. A further 43 pairs of cell activations would not preclude the mobiles from co-locating. The frequency of the two mobiles' possible co-location weighs strongly in favour of finding that at least in this period mobile 170 and mobile 091 had a single user. The mobiles' common movements as demonstrated by Mr Philips support this finding.

2928. Cell activations at 12:42 and 12:43 on Monday 24 January 2005 may have precluded the mobiles' co-location. However, the Trial Chamber is satisfied with Mr Philips's explanation, relying also on Touch's drive tests, that due to the fragmented predicted best server coverage of Touch's Ansar_A and Nabatiyeh_C cells, co-location would in fact not be precluded.

2929. Similar to the other three personal mobiles, the Trial Chamber cannot exclude that at times Mr Ayyash's wife or other family members may have occasionally used mobile 091. Mr Philips's and Mr Donaldson's evidence was that from 12:24 to 15:02 on Friday 28 January 2005 mobile 091 separated from mobile 170, and may have been given to someone other than Mr Ayyash.⁵⁸⁷⁸ This may be so for several hours that day. However, this alone cannot cast doubt on the strong circumstantial evidence that Mr Ayyash was otherwise its principal user.

2930. Based on the totality of the evidence the Trial Chamber is therefore satisfied that personal mobile 091 had the same principal user as personal mobile 170 between 13 January and 6 March 2005, and that user was Mr Ayyash.

2. Network mobiles

2931. To find Mr Ayyash criminally culpable, the Trial Chamber must be satisfied beyond reasonable doubt that he was using the network mobiles that the Prosecutor, in the amended consolidated indictment, alleges that he was using in activities related to the pleaded conspiracy and the other charges.

⁵⁸⁷⁷ See paras 2776-2784.

⁵⁸⁷⁸ The Trial Chamber assessed the evidence further in the sections below and found this explanation reasonable. See sub-sections (B) (2) (f) (iii) 'Findings' and (B) (2) (g) (iii) 'Findings'.

2932. The Trial Chamber has carefully reviewed Mr Philips's expert evidence on single user analysis and has considered Prosecution analyst Mr Andrew Donaldson's opinion evidence on the possible co-location of mobiles.

2933. As a result, it is satisfied beyond reasonable doubt that Mr Ayyash was the user of network mobiles Green 300, Red 741, Blue 233 and Yellow 294 for certain periods between 29 May 2004 and 14 February 2005. As set out above, the Green, Red and six 'core' Blue mobiles, including 233, operated in covert networks. With the exception of the four 'core' Yellow mobiles, such as 294, which also operated as a form of covert network, these mobiles were involved in the assassination of the former Lebanese prime minister, Mr Rafik Hariri, in Beirut, Lebanon on Monday 14 February 2005.⁵⁸⁷⁹

2934. The Trial Chamber is also satisfied that Mr Ayyash used Blue 322 between 18 October 2004 and 27 December 2004, and that, based on the preponderance of evidence, he was the principal user of Yellow 669 from 23 December 2003 to 18 April 2004. However, as his alleged use of Blue 322 was not pleaded as it should have been, the Trial Chamber has made no findings against Mr Ayyash in respect of his use of that mobile.

2935. The Trial Chamber has also found that Mr Ayyash did not leave Lebanon in January 2005 to perform the Hajj pilgrimage. Had he travelled to Saudi Arabia at the time, it would have excluded him as the single user of these mobiles

(a) Yellow 669

2936. The Prosecution attributes Yellow 669 to Mr Ayyash from 23 December 2003 to 18 April 2004. To prove that Mr Ayyash was using it, the Prosecution relies on cell site evidence to prove its co-location with Mr Ayyash's personal mobile 165, and its SIM card's use in the handset of Mr Ayyash's personal mobile 170. The Trial Chamber has found above that Mr Ayyash was the principal user of both of these mobiles.

2937. The significance of Yellow 669 to the case is its relevance to the Prosecution's contention that in 2004 Mr Ayyash travelled to perform the Hajj pilgrimage in Mecca, but remained in

⁵⁸⁷⁹ See chapter VIII 'Nature and purpose of colour-coded mobile networks and Purple group of mobiles'.

Lebanon during the 2005 Hajj. Had he been outside of Lebanon in January 2005, he could not have been the single user of the network mobiles used in Lebanon in that period.

2938. Mr Ayyash's use of that mobile is not pleaded in the amended consolidated indictment. Nor is it mentioned in the Prosecutor's two final pre-trial briefs. In opening the case against the first four Accused, the Prosecution's lead counsel stated of this mobile—in referring to network activity in Tripoli in the area near to where the Mitsubishi Canter was purchased and Beirut on the afternoon of 4 January 2005—only that:

Shortly after that activation at 1500, Yellow subject 6 also connected with a cell site in the area of the dealership, where he called one of his colleagues in South Beirut on Yellow 669. Less than two minutes after that call, Yellow S6 switched to his Blue Phone to call Blue S7 who was in South Beirut.⁵⁸⁸⁰

2939. The Prosecution analyst, Mr Donaldson, in his attribution report on Mr Ayyash, extensively analysed Yellow 669, concluding that it co-located with Mr Ayyash's personal mobile 165.

i. Evidence

a. Subscriber details

2940. Yellow 669 was a pre-paid line on the Alfa network, activated on 16 July 2002; it had no deactivation date and was subscribed in the name of 'Moustapha Akdaniz'.⁵⁸⁸¹

b. Attribution period

2941. Mr Donaldson attributes Yellow 669 to Mr Ayyash from 23 December 2003 to 18 April 2004.⁵⁸⁸² He stated that Yellow 669's use was consistent from its activation date until December 2003.⁵⁸⁸³ It made two calls to a service number, 1456, on 19 December 2003, and was next used on 23 December 2003. From that date its contact and cell tower usage patterns changed, including increased contact with mobiles outside of the Yellow network. This continued until May 2004.⁵⁸⁸⁴

⁵⁸⁸⁰ Prosecutor's opening statement, T. 17 January 2014, p. 8 (Mr G. Cameron).

⁵⁸⁸¹ Exhibit P886 (Alfa subscriber note for Yellow 669), p. 1; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), p. 111 (table of subscriber details); Andrew Donaldson, T. 18 July 2017, p. 60.

⁵⁸⁸² Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 263, 266, 279-280, 314; Andrew Donaldson, T. 18 July 2017, p. 61. *See also* exhibit P2025, slide 54.

⁵⁸⁸³ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 267-268, 270.

⁵⁸⁸⁴ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 267-270; exhibit P1248, p. 33.

Based on these changes, Mr Donaldson attributed this mobile to Mr Ayyash between 23 December 2003 and 18 April 2004.⁵⁸⁸⁵

2942. In particular, Mr Donaldson noted Yellow 669's geographic profile changing from 23 December 2003, while before then its top known activated cells were BRAJNE3 and BRAJNE1. From 23 December 2003 until 18 April 2004 its most commonly activated SFEIR2 and SFEIR3.⁵⁸⁸⁶

2943. Coinciding with this change in its cell activation, Mr Donaldson also observed the appearance of new contacts.⁵⁸⁸⁷ Yellow 669 remained in contact with these mobiles only until May 2004.⁵⁸⁸⁸ As set out below, some of Yellow 669's contacts were common to Mr Ayyash's personal mobiles and landlines, such as mobile 429, which was also in contact with his personal mobiles 165, 935 and 170, and an Iranian number ending in 447, which was also in contact with landline 696.⁵⁸⁸⁹

2944. According to Mr Donaldson, Yellow 669's contact and geographic profile changed again in May 2004.⁵⁸⁹⁰ However, as mobile 165's attribution period ended on 18 April 2004, after this date a co-location analysis between Yellow 669 and mobile 165 was not possible.⁵⁸⁹¹

⁵⁸⁸⁵ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 272; Andrew Donaldson, T. 18 July 2017, p. 61.

⁵⁸⁸⁶ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 271; Andrew Donaldson, T. 18 July 2017, p. 61.

⁵⁸⁸⁹ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 270; exhibit P1248, pp 34-38, 45, 47, 50, 60-62.

⁵⁸⁹⁰ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 273-276.

⁵⁸⁹¹ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 277-280; Andrew Donaldson, T. 18 July 2017, p. 61.

c. Handset and SIM card details

2945. Yellow 669 was used with IMEI 35252200022555 from 25 December 2003 to 6 January 2005—which extends beyond 18 April 2004.⁵⁸⁹² From the following day, the handset with this IMEI was used with Mr Ayyash’s mobile 170.⁵⁸⁹³

d. Contact profile

2946. Mr Donaldson noted that, between 23 December 2003 and 18 April 2004, Yellow 669 had contact with 77 mobile and landline numbers and was involved in 517 calls.⁵⁸⁹⁴ Nine of these contacts were other Yellow network mobiles, four of which were Yellow 669’s top four contacts, comprising 260 of the 517 calls (50.2 per cent).⁵⁸⁹⁵ Mr Donaldson gave evidence that, relative to the network discipline of other covert mobiles, Yellow 669 had many contacts outside of the Yellow network.⁵⁸⁹⁶

2947. The contact numbers of Yellow 669 and Mr Ayyash’s personal mobiles overlapped significantly.⁵⁸⁹⁷ Forty of Yellow 669’s contacts were also contacts of one or more of Mr Ayyash’s four personal mobiles, namely mobiles 165, 170, 935 and 091.⁵⁸⁹⁸

2948. Of Yellow 669’s main 32 contacts, 19 were also contacts of more than one of Mr Ayyash’s personal mobiles.⁵⁸⁹⁹ Nine of its main 11 contacts were common to more than one of these personal

⁵⁸⁹² Exhibit P886, p. 1; exhibit P889; exhibit P1248, p. 92; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 281-283; Andrew Donaldson, T. 18 July 2017, p. 61. From 12 August 2002 until 25 December 2003 (i.e., the first few days of the attribution period), Yellow 669 was used with IMEI 350845809753860, exhibit P889.

⁵⁸⁹³ Exhibit P1262, p. 1; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 219-220, 283; Andrew Donaldson, T. 18 July 2017, p. 61. *See also* exhibit P2025, slides 54-55. Only the first 14 digits of the IMEIs appearing in the call sequence tables of the respective mobiles match each other for the relevant dates; however, in a separate report Mr Philips explained that it is only the first 14 digits which actually constitute an IMEI, with any additional digits representing other features, such as a software version number, exhibit P549 (Expert report of John Edward Philips – Cell site analysis introduction), paras 5.1.4.1.1.9 - 5.1.4.1.1.11.

⁵⁸⁹⁴ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 285; exhibit P1248, pp 33-50.

⁵⁸⁹⁵ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 286-289, 315; exhibit P1248, pp 33-50; Andrew Donaldson, T. 18 July 2017, p. 62. *See also* exhibit P2025, slide 57.

⁵⁸⁹⁶ Andrew Donaldson, T. 18 July 2017, pp 62, 64; exhibit P2028 (Direction of Yellow 669’s calls). *See* chapter VIII ‘Nature and purpose of colour-coded mobile networks and Purple group of mobiles’, (F) ‘Yellow network’.

⁵⁸⁹⁷ Andrew Donaldson, T. 18 July 2017, p. 65.

⁵⁸⁹⁸ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 288; *see also* para. 316, where Mr Donaldson mistakenly stated that there were a total of 76 contacts only. Andrew Donaldson, T. 18 July 2017, p. 65. *See also* exhibit P2025.4 (Corrected slides), slide 1.

⁵⁸⁹⁹ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 289. Mr Donaldson stated in the text of this paragraph that this referred to the top 30 contacts and in the footnote to this paragraph, he explained

mobiles.⁵⁹⁰⁰ Mr Donaldson identified only three of these 32 contacts by name; he described their relationship to Mr Ayyash as ‘unknown’.⁵⁹⁰¹ They are Mr Ahmed Mohammed Badreddine, Mr Wafik Safa⁵⁹⁰² and the Protel Company.⁵⁹⁰³

2949. Mr Donaldson provided the following examples:

- Yellow 669’s sixth most frequent contact, with 23 calls, was also in contact with personal mobile 165 (five calls), mobile 935 (one call) and mobile 170 (five calls);
- Yellow 669’s seventh most frequent contact, with 21 calls, was also in contact with mobile 165 (30 calls), mobile 935 (19 call) and mobile 170 (27 calls); and
- mobiles ending in 515, 222 and 333, which were in contact with Yellow 669 once each, were linked to Mr Ayyash’s family, associates or acquaintances, and were high-ranking contacts of the mobiles attributed to Mr Ayyash.⁵⁹⁰⁴

2950. For Mr Donaldson, a shared contact profile would usually be a ‘negative indicator’ of the mobiles having a single user, as it would raise the question of why someone would carry two mobiles.⁵⁹⁰⁵

that it involves 33 numbers ranking equally. *See also* exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 316, where Mr Donaldson stated that two thirds of Yellow 669’s top 30 contacts were also contacts of personal mobiles attributed to Mr Ayyash. Andrew Donaldson, T. 18 July 2017, p. 65. *See also* exhibit P2025.4, slide 1.

⁵⁹⁰⁰ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 289. *See also* Andrew Donaldson, T. 18 July 2017, pp 65, 68. *See also* exhibit P2025.4, slide 1. Both misstate the proportion of common contacts between the mobiles by referring to a ‘top ten’.

⁵⁹⁰¹ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 290.

⁵⁹⁰² The head of the central unit for liaison and coordination in Hezbollah, exhibit P2091 (Letter from Judge Said Mirza, Public Prosecutor at the Court of Cassation), p. 1.

⁵⁹⁰³ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 290; exhibit P928 (Alfa subscriber note for mobile 100); exhibit P1748 (Vehicle registration documents); exhibit P2102 (Statement of Witness PRH040), para. 61 (p. 17) (ERN 60302958); exhibit P1329 (Call sequence table of mobile 505 with SMS content); exhibit P1635 (Subscriber note for landline 362). *See also* exhibit P1393 (Extract from Mr Jamil El-Sayyed’s handwritten telephone notebook), with respect to Mr Wafik Safa’s mobile number.

⁵⁹⁰⁴ Andrew Donaldson, T. 18 July 2017, pp 66-67, 69-70. *See also* exhibit P2025, slide 59; exhibit P2025.4, slide 2. Specifically, Mr Donaldson stated that mobile 333, linked to Mr Ayyash’s associate, Mr Hussein Zaarour, was the second highest contact for personal mobile 935; and that mobile 222, associated with the Ayyash family, was the 22nd most frequent contact of mobile 935 with 30 calls.

⁵⁹⁰⁵ Andrew Donaldson, T. 18 July 2017, pp 70-71.

e. Geographic profile

2951. Mr Donaldson assessed the geographic profile for Yellow 669 solely on the start cells activated during its outgoing calls, as this information was not available for incoming calls.⁵⁹⁰⁶ There were 200 calls—199 incoming and one outgoing—for which the initially activated cell was not recorded.⁵⁹⁰⁷ This left 317 calls during the attribution period for which the start cell information was available.

2952. Mr Donaldson's report stated that the end cell data, obtained at a later date, did not substantively change Yellow 669's geographic profile.⁵⁹⁰⁸ He compared the 317 known start cells to their respective end cells, finding that in 82.97 per cent of instances they were the same.⁵⁹⁰⁹

2953. Regarding the geographic profile, he used two comparative methodologies, namely looking at the start and end cells cumulatively, or replacing the start cell with the end cell information. Using both methodologies, the top four most used cells remained unchanged. The remaining cells in the top ten also stayed the same but with slight changes in ranking. Mr Donaldson added, however, that cell HAROUF1 entered the top ten using the first methodology and that cells HAROUF1 and MHAIBI1 entered the top ten using the second methodology.⁵⁹¹⁰

2954. Mr Donaldson noted that MHAIBI1 offered predicted best server coverage to the Markaba village area.⁵⁹¹¹ Mr Ayyash was employed at the Markaba Civil Defence station in late 2003 and early 2004 for the entirety of Yellow 669's attribution period.⁵⁹¹² Mr Donaldson used this as an additional point to attribute Yellow 669 to Mr Ayyash.⁵⁹¹³

⁵⁹⁰⁶ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 291, 296; Andrew Donaldson, T. 18 July 2017, p. 71.

⁵⁹⁰⁷ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 293. Mr Donaldson stated that there were 200 incoming calls, however, the 12:41 call on 6 April 2004, for which start cell information is not available, was in fact an outgoing call, exhibit P1248, p. 47.

⁵⁹⁰⁸ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 296, annex C, para. 3.

⁵⁹⁰⁹ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), annex C, para. 21.

⁵⁹¹⁰ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), annex C, para. 22.

⁵⁹¹¹ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 311-312, 320; exhibit P1248, pp 33, 35, 39-40, 43.

⁵⁹¹² See sub-section (B) (1) (f) (iii) 'Findings'.

⁵⁹¹³ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 311-312, 320.

2955. During the 317 outgoing calls, the most used cells were SFEIR2,⁵⁹¹⁴ SFEIR3⁵⁹¹⁵ and HADATH1.⁵⁹¹⁶ These are all near Mr Ayyash's Hadath residence. The seventh most used cell was NABATH1,⁵⁹¹⁷ which is in the area of his Harouf residence.⁵⁹¹⁸

2956. Yellow 669's attribution period of 23 December 2003 to 18 April 2004 coincides with the final 97 days of the attribution period of Mr Ayyash's personal mobile 165, namely 23 April 2002 to 18 April 2004.⁵⁹¹⁹

2957. The five most frequently used cells of his personal mobile 165 between 1 February 2003 and 18 April 2004, were Sfeir_A, Sfeir_B, Hadath_C, Hazmiyeh-II_B and Nabatieh_C. Four of these are near the Hadath residence and one is near the Harouf house.⁵⁹²⁰ This is demonstrated by the following slide which compares Yellow 669 and personal mobile 165:

⁵⁹¹⁴ Activated 85 times, or 26.8 per cent of the 317 calls.

⁵⁹¹⁵ Activated 25 times, or 7.9 per cent of the 317 calls.

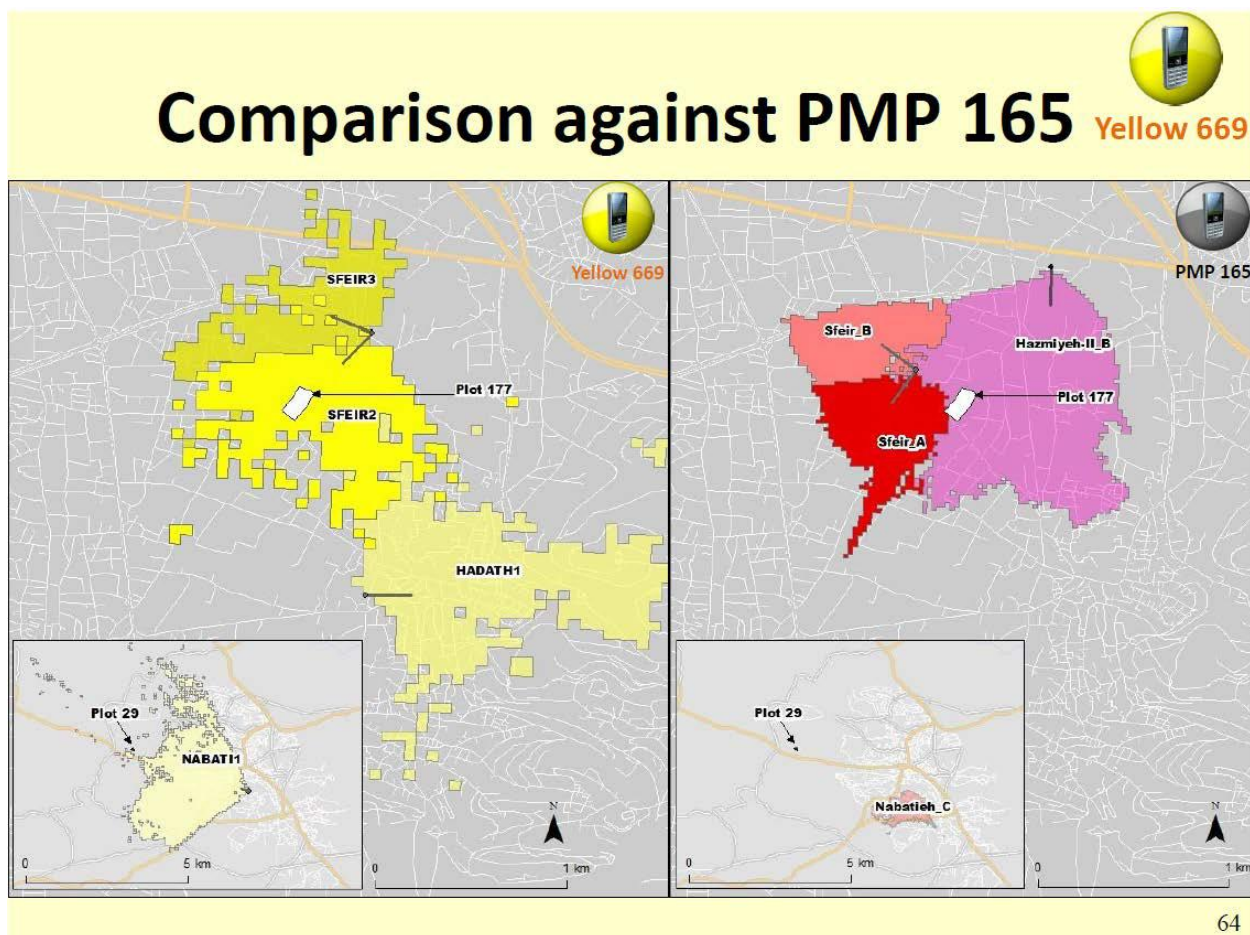

⁵⁹¹⁶ Activated 14 times, or 4.4 per cent of the 317 calls.

⁵⁹¹⁷ Activated ten times, or 3.2 per cent of the 317 calls.

⁵⁹¹⁸ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 293, 317; Andrew Donaldson, T. 18 July 2017, pp 71, 73-74. *See also* exhibit P2025, slides 62-63.

Slide 64 of Mr Donaldson's PowerPoint presentation—exhibit P2025

2958. Mr Donaldson concluded that the two mobiles shared a similar geographic profile. He acknowledged that a day-by-day comparison of their use was needed to confirm that the two mobiles belonged to a person with access to these two homes.⁵⁹²¹ However, the shared geographic profile was, in his view, an initial positive indicator.⁵⁹²²

2959. The NABICH3 cell in eastern Lebanon was Yellow 669's fourth most used cell.⁵⁹²³ But Yellow 669 used it for 20 calls⁵⁹²⁴ on three particular days in February 2004.⁵⁹²⁵ Mr Donaldson

⁵⁹²¹ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 318; Andrew Donaldson, T. 18 July 2017, pp 74-75.

⁵⁹²² Andrew Donaldson, T. 18 July 2017, pp 74-75.

⁵⁹²³ Activated 14 times, or 4.4 per cent of the 317 calls, exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 294.

⁵⁹²⁴ Including when NABICH3 appears as an end cell in the call sequence table, exhibit P1248, pp 39-41.

⁵⁹²⁵ 18, 20 and 26 February 2004.

testified that Mr Ayyash may not have routinely frequented the area of the cell.⁵⁹²⁶ For this reason, this cell is not in Mr Ayyash's other Alfa mobiles', namely mobile 935's and Yellow 294's, ten most used cells.⁵⁹²⁷ In fact, the NABICH3 cell does not appear in these mobiles' call data during the time when they are attributed to Mr Ayyash.⁵⁹²⁸

f. Co-location with personal mobile 165

2960. Mr Donaldson provided evidence that the primary means of attributing Yellow 669 to Mr Ayyash is through its co-location with mobile 165.⁵⁹²⁹

2961. Mr Donaldson performed his own co-location analysis by calculating the distance between the cell towers the two mobiles activated. He did this because the two mobiles were using different networks, Alfa and Touch, and would not have activated the same cell sectors.⁵⁹³⁰

2962. He analysed the combined call sequence table of the two mobiles during the 97 days of their overlapping attribution period. He concluded that when the two mobiles were used close-in-time, they appeared to move in concert throughout the entire period.⁵⁹³¹

2963. Specifically, mobile 165 and Yellow 669 were used within ten minutes of one another 85 times, for only 59 of which was there available start cell information for Yellow 669. All 59 were between 07:00 and midnight.⁵⁹³² Mr Donaldson found that of the 59 call pairs 54 per cent concerned cell towers which were less than one kilometre apart, 31 per cent connected to cell towers which were between one and two kilometres apart, nine per cent which were between two

⁵⁹²⁶ Andrew Donaldson, T. 18 July 2017, p. 72.

⁵⁹³¹ Andrew Donaldson, T. 18 July 2017, p. 75; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 319. *See also* exhibit P2025, slide 65.

⁵⁹³² Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 302-303; Andrew Donaldson, T. 18 July 2017, pp 75-76.

and five kilometres apart, three per cent were between five and ten kilometres apart and three per cent, namely, once, were between ten and 20 kilometres distant.⁵⁹³³

2964. Mr Donaldson incorporated the impact of the end cell information on his co-location analysis in his report where he discussed six examples of possible co-location of the two mobiles.⁵⁹³⁴ However, he did not update the part of his report setting out when the two mobiles were used within ten minutes of one another. Nor the percentages of these calls which were within the various cell tower distance ranges. In other words, neither in his report nor in his testimony did he consider the remaining 26 pairs of calls made within ten minutes for which start cell data was unavailable, which rendered his analysis incomplete.⁵⁹³⁵ The Trial Chamber therefore conducted its own analysis of the admitted cell data including the end cells as is set out below.

2965. Mr Donaldson highlighted the following six days which, in his opinion, show when the mobiles could have co-located:⁵⁹³⁶

12 January 2004

2966. Mr Donaldson stated that the two mobiles were active in south Beirut for the entire day.⁵⁹³⁷ At 12:36, mobile 165 activated Touch's Saki Hadath_C, and Yellow 669 activated Alfa's HARA2 at the end of a call at 12:37.⁵⁹³⁸ This is illustrated on the following map, where plot 177 is Mr Ayyash's Hadath residence:

⁵⁹³³ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 302-303; Andrew Donaldson, T. 18 July 2017, p. 76. *See also* exhibit P2025, slide 66.

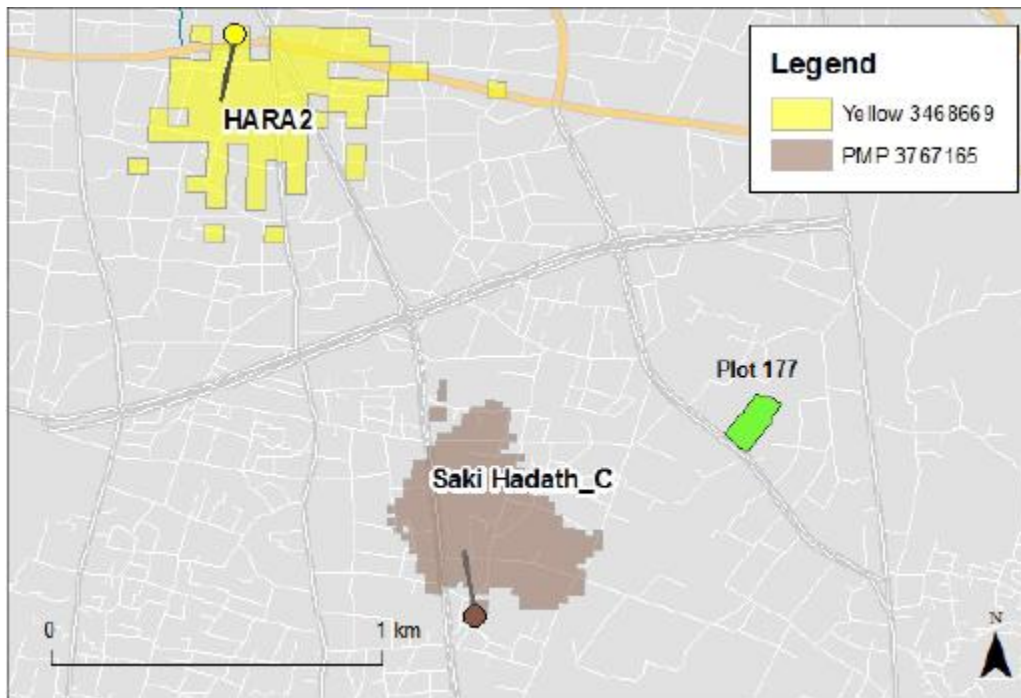

⁵⁹³⁴ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 304-310, annex C, para. 4.

⁵⁹³⁸ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 305; exhibit P1254, p. 173; exhibit P1248, p. 35.

Attribution report of Andrew Donaldson regarding Mr Ayyash—exhibit P2026.2, p. 123

2967. Later, at 14:17, mobile 165 activated Touch's Sfeir_A, and at 14:19 Yellow 669 activated Alfa's SFEIR2, and again at the end of a 14:23 call. At 14:23, mobile 165 also activated cell Sfeir_B, and, at 14:27, Yellow 669 activated SFEIR3 followed by SFEIR2 at the end of that call.⁵⁹³⁹ Mr Donaldson showed this on the following map:

⁵⁹³⁹ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 305; exhibit P1254, p. 173; exhibit P1248, p. 36.

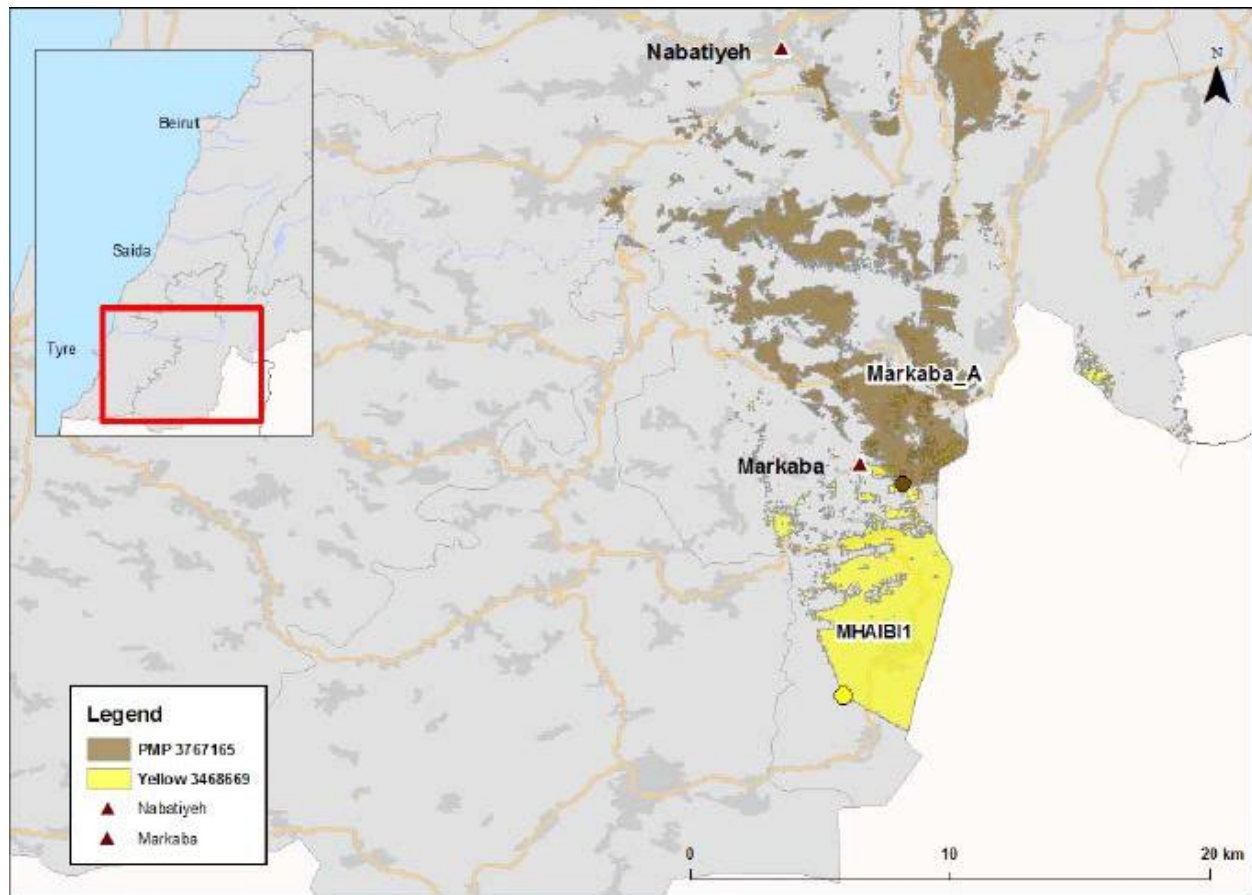

Attribution report of Andrew Donaldson regarding Mr Ayyash—exhibit P2026.2, p. 124

17 February 2004

2968. Mr Donaldson stated that, in the morning, mobile 165 was used in south Beirut, and both mobiles were used in the area of Markaba, south Lebanon, from midday until late afternoon, specifically, at 14:09, mobile 165 activated Touch's Markaba_A, and, at the end of a 14:13 call, Yellow 669 activated Alfa's MHAIBI1.⁵⁹⁴⁰ He provided the following map of these two calls:

⁵⁹⁴⁰ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 306; exhibit P1254, p. 180; exhibit P1248, p. 39.

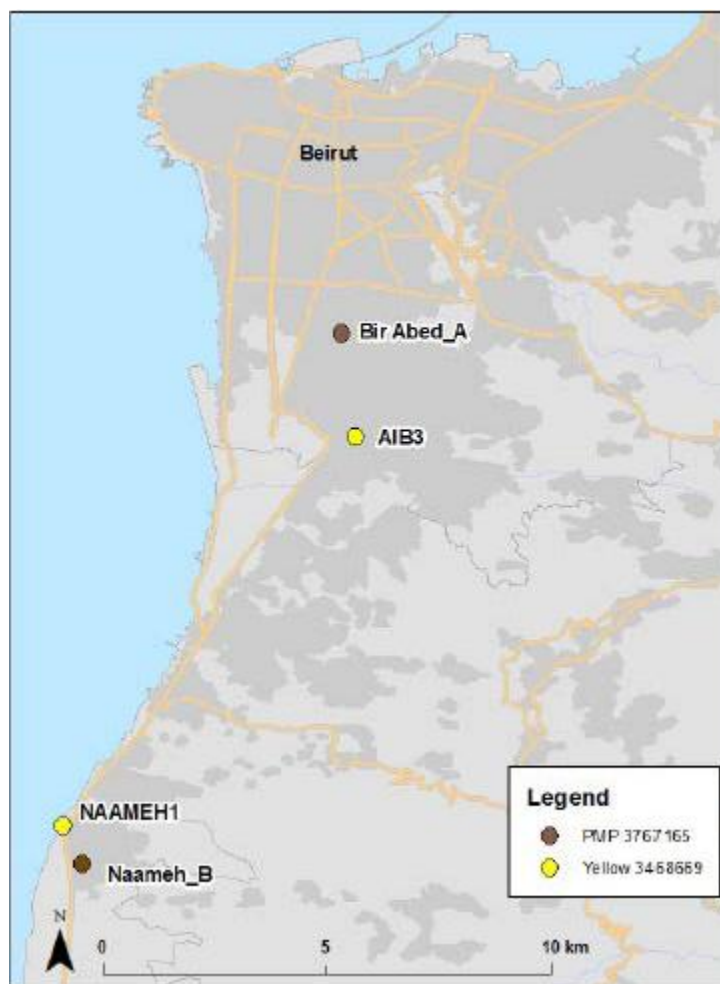

Attribution report of Andrew Donaldson regarding Mr Ayyash—exhibit P2026.2, p. 125

2969. At 16:06, Yellow 669 activated Alfa's NABATI3 and, at 16:43, mobile 165 activated Touch's Naameh_B and Yellow 669 activated Alfa's NAAMEH1, followed by AIB3 at the end of this call, which lasted for five minutes and 38 seconds.⁵⁹⁴¹ At 17:07, mobile 165 activated Touch's Bir Abed_A.⁵⁹⁴² Mr Donaldson showed these three calls on the following map:

⁵⁹⁴¹ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 306; exhibit P1254, p. 180; exhibit P1248, p. 39.

Attribution report of Andrew Donaldson regarding Mr Ayyash—exhibit P2026.2, p. 126

2970. Finally, at 22:38, Yellow 669 activated Alfa's OZAIMB1, and at 22:41, mobile 165 activated Touch's Ouzai_B.⁵⁹⁴³ These calls were depicted on the following diagram in Mr Donaldson's report:

⁵⁹⁴³ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 306; exhibit P1254, p. 180; exhibit P1248, p. 39.

Attribution report of Andrew Donaldson regarding Mr Ayyash—exhibit P2026.2, p. 127

21 February 2004

2971. On 21 February 2004, the two mobiles activated cell towers in the Markaba area.⁵⁹⁴⁴ Mr Donaldson highlighted calls at 12:11, of Yellow 669 activating Alfa's MHAIBI1, and at 12:29, of mobile 165 activating Touch's Markaba_A. He also noted that mobile 165 activated Touch's Sultaniye_A—a cell south of Nabatieh offering some predicted best server coverage around Markaba—at 12:44, and Yellow 669 activated Alfa's HAROUF2 at the end of a 13:12 call. Mobile 165 activated Touch's Saida-4_B at 14:41, and Yellow 669 activated Alfa's HADATH1 at 22:19.⁵⁹⁴⁵

⁵⁹⁴⁴ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 307.

⁵⁹⁴⁵ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 307; exhibit P1254, p. 181; exhibit P1248, p. 40.

26 February 2004

2972. Mr Donaldson stated that, on 26 February 2004, the two mobiles were active in south Beirut in the morning. Then, between 13:42 and 14:07, Yellow 669 activated cell towers along the route from Beirut to east Lebanon. Both mobiles then activated cell towers in the Nabi Chit area of Bekaa for over three hours. In the evening, both mobiles activated cell towers on the route back to Beirut from Bekaa, and ended the day in south Beirut at 23:47.⁵⁹⁴⁶

2973. Regarding cell activations in Bekaa, Mr Donaldson highlighted a 14:48 Yellow 669 call activating Alfa's NABICH3, followed by a 14:52 mobile 165 call activating Touch's Nabi Chiit_A.⁵⁹⁴⁷

2974. Yellow 669 then activated NABICH3 during six calls—at 15:19, 15:38, 16:02, 16:07, 16:19 and 16:22.⁵⁹⁴⁸

2975. At 16:41 and 16:43, mobile 165 activated Nabi Chiit_C, and at 16:45 Yellow 669 activated NABICH3 again.⁵⁹⁴⁹

2976. At 17:17, Yellow 669 activated Alfa's NABICH2, and at 17:25 and 17:27 it activated NABICH3, followed by mobile 165 activating Touch's Nabi Chiit_A at 17:32. Yellow 669 activated NABICH3 again, at the end of a 17:50 call, at 18:27, mobile 165 activated Nabi Chiit_A, and at 18:32 Yellow 669 activated NABICH3.⁵⁹⁵⁰

2977. Finally, Yellow 669 activated NABICH3—at 18:36, 18:44 and at the end of an 18:53 call—and NABICH2 at 18:39.⁵⁹⁵¹ Mr Donaldson mapped Nabi Chiit_A, Nabi Chiit_C and NABICH3 as follows, but did not include NABICH2:

⁵⁹⁴⁶ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 308.

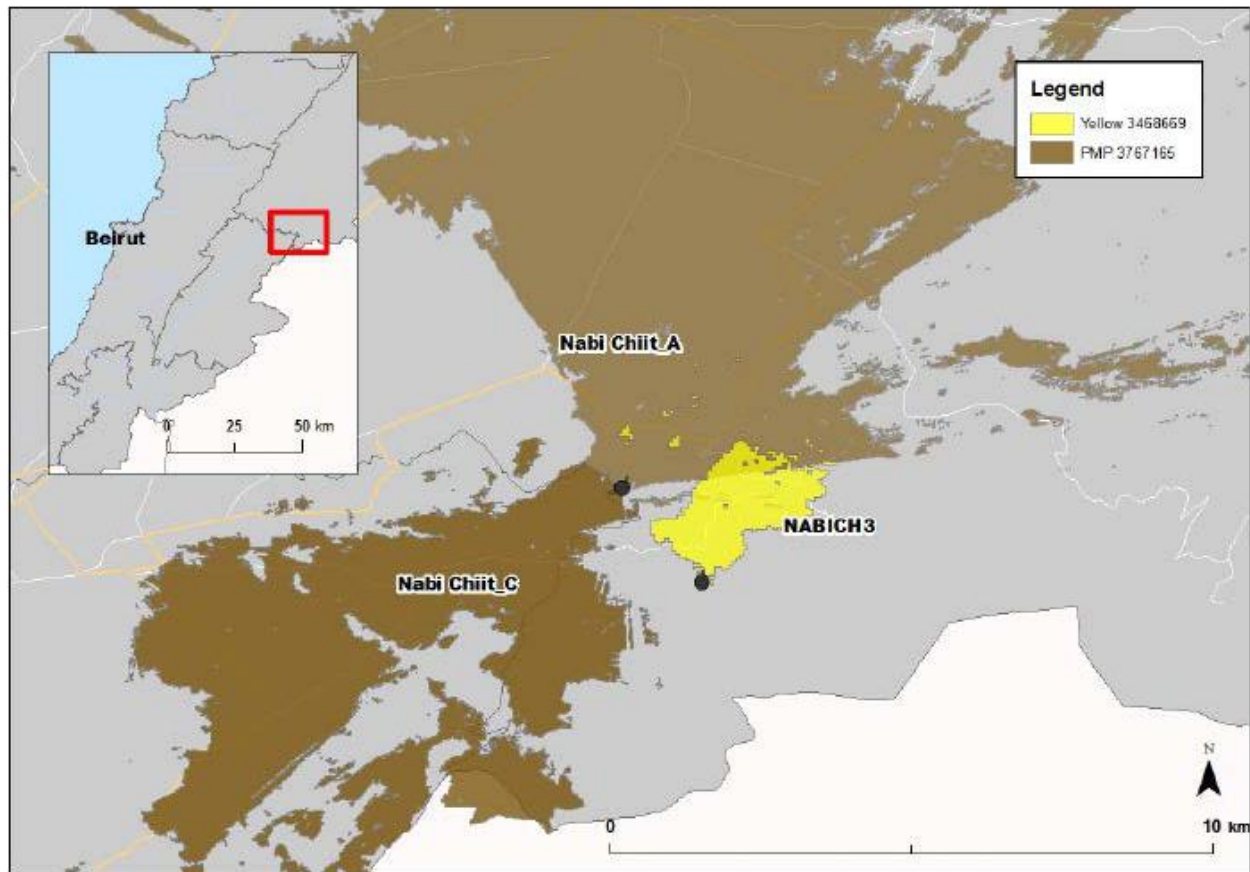

⁵⁹⁴⁷ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 308; exhibit P1254, p. 181; exhibit P1248, p. 41.

⁵⁹⁴⁸ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 308; exhibit P1248, p. 41.

⁵⁹⁴⁹ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 308; exhibit P1254, p. 182; exhibit P1248, p. 41.

⁵⁹⁵⁰ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 308; exhibit P1254, p. 182; exhibit P1248, p. 41.

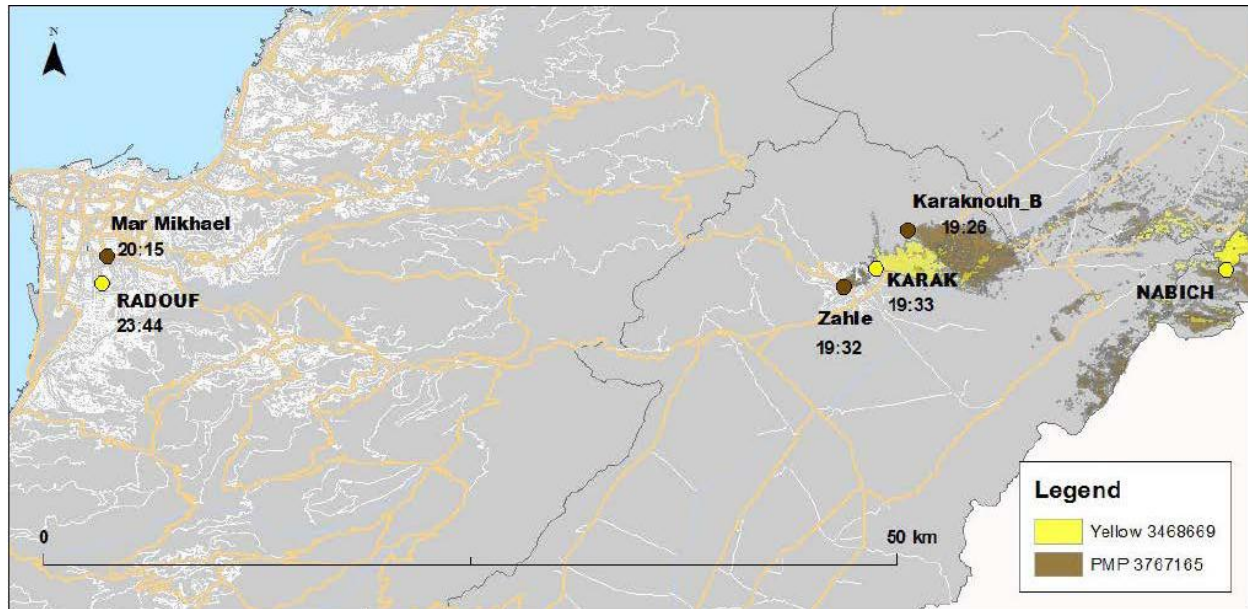

⁵⁹⁵¹ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 308; exhibit P1248, p. 41.

Attribution report of Andrew Donaldson regarding Mr Ayyash—exhibit P2026.2, p. 129

2978. In the evening, as the mobiles were leaving Bekaa, mobile 165's calls at 19:26 and 19:32 activated Touch's Karaknough_B and Zahle_A, respectively, followed by Yellow 669 activating Alfa's KARAK1 at 19:33. Then, at 20:15, mobile 165 activated Touch's Mar Michael_C, and at the end of a 23:44 call Yellow 669 activated Alfa's RADOUF3.⁵⁹⁵² Mr Donaldson demonstrated these in the map below:

⁵⁹⁵² Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 308; exhibit P1254, p. 182; exhibit P1248, p. 41.

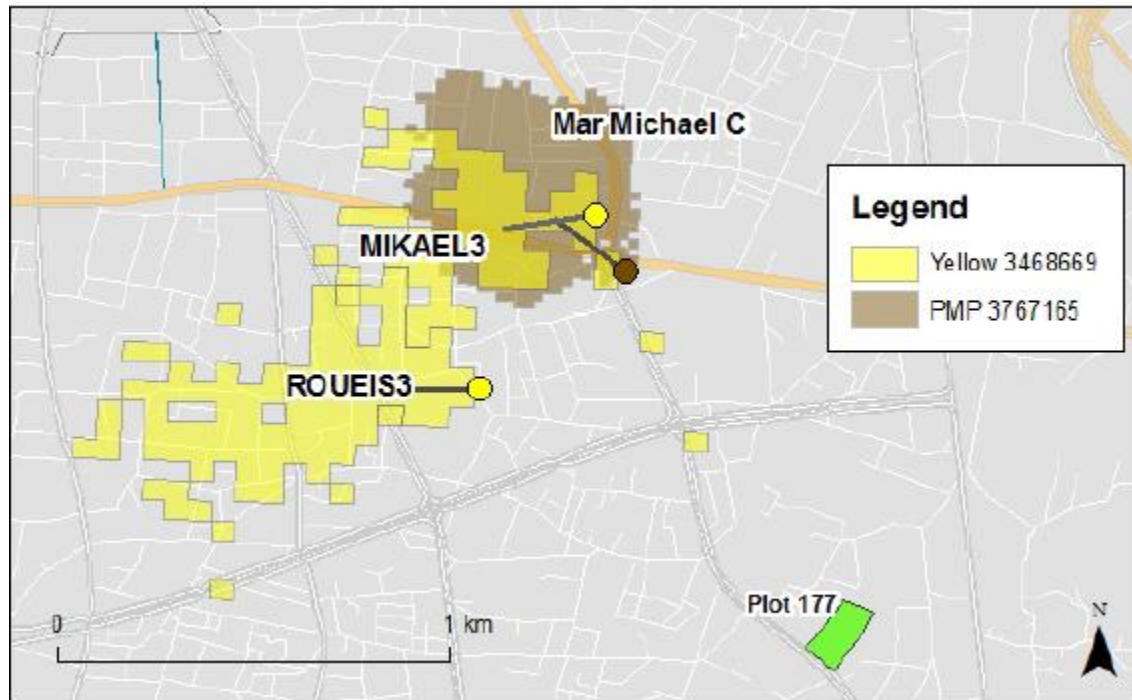

Attribution report of Andrew Donaldson regarding Mr Ayyash—exhibit P2026.2, p. 130

10 April 2004

2979. On 10 April 2004, both mobiles activated cell towers in south Beirut in the morning, and in the afternoon they activated cell towers near Mr Ayyash's home.⁵⁹⁵³ Mr Donaldson highlighted that Yellow 669 activated Alfa's MIKAEL3 at 11:56 and mobile 165 activated Touch's Mar Michael_C at 12:03. Yellow 669 then activated Alfa's ROUEIS3 at the end of a call at 12:09.⁵⁹⁵⁴ The predicted best server coverage of these cells was as follows:

⁵⁹⁵³ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 309.

⁵⁹⁵⁴ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 309; exhibit P1254, p. 194; exhibit P1248, p. 48.

Attribution report of Andrew Donaldson regarding Mr Ayyash—exhibit P2026.2, p. 131

2980. Mobile 165 activated Touch's Sfeir_A at 13:58, and Yellow 669 activated Alfa's SFEIR2 at the end of a call at 14:16.⁵⁹⁵⁵

2981. Finally, Mr Donaldson highlighted the following calls:⁵⁹⁵⁶

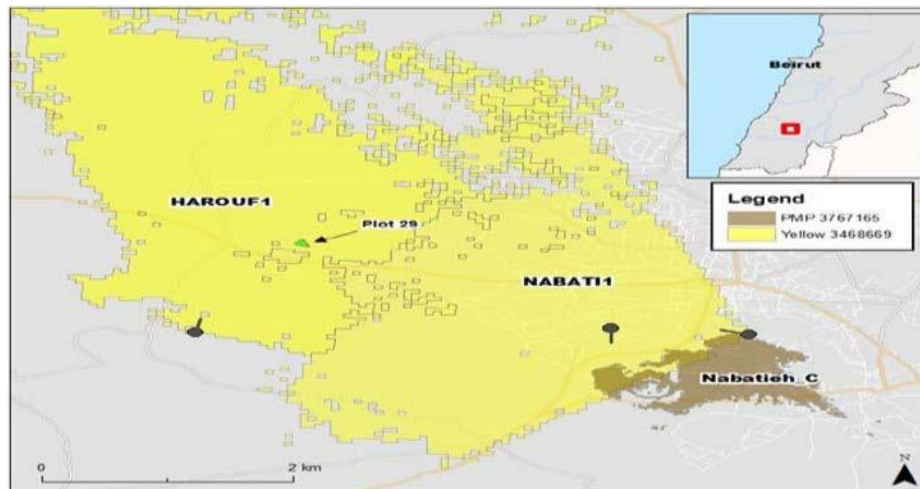

- at 17:08, mobile 165 connected to Touch's Nabatieh_C;
- at 17:11, 17:12 and the end of a call at 17:35, Yellow 669 activated Alfa's HAROUF1;
- at 17:41, mobile 165 activated Nabatieh_C;
- at the end of a call at 17:45 and at 18:27, Yellow 669 activated Alfa's NABATI1;
- at 18:30, mobile 165 activated Nabatieh_C;
- at 19:01, Yellow 669 activated NABATI1;

⁵⁹⁵⁵ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 309; exhibit P1254, p. 194; exhibit P1248, p. 48.

⁵⁹⁵⁶ See also Annex F of the judgment, rows 74-75, 78.

- at 20:04, 20:22 and 20:23, mobile 165 connected to Nabatieh_C; and
- at the end of calls at 20:25 and 20:34, Yellow 669 activated HAROUF1.⁵⁹⁵⁷

2982. The map below shows the predicted best server coverage of these cells:

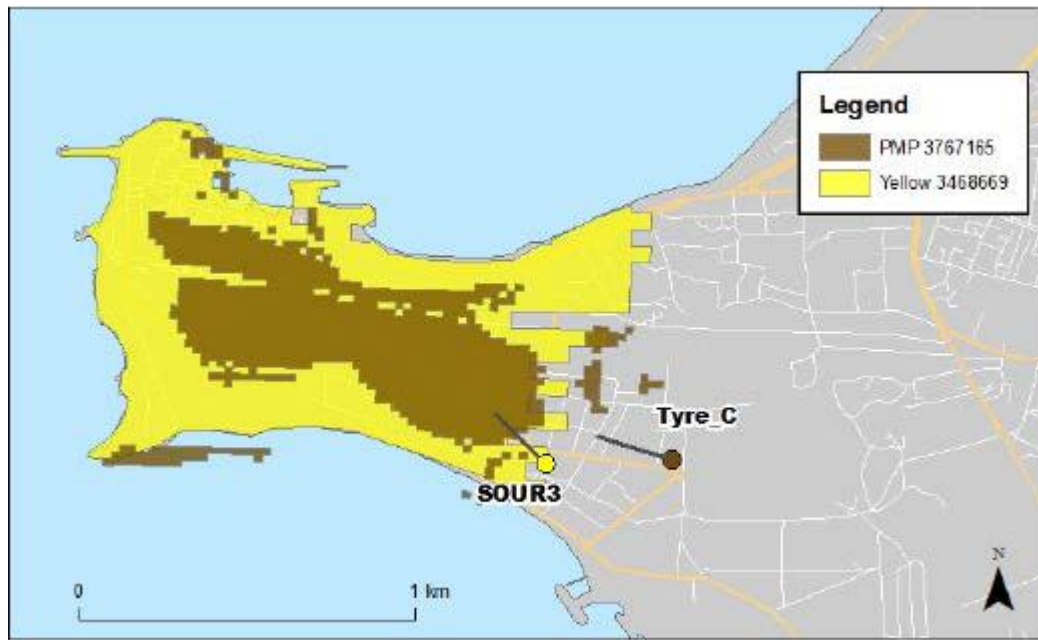

Attribution report of Andrew Donaldson regarding Mr Ayyash—exhibit P2026.2, p. 132

14 April 2004

2983. On 14 April 2004, both mobiles activated cell towers in the Sour area of south Lebanon in the morning, before moving to south Beirut and Mr Donaldson highlighted that, at 09:06, mobile 165 activated Touch's Tyre_C, and, at 09:13, Yellow 669 connected to Alfa's SOUR3.⁵⁹⁵⁸ As demonstrated in the map below, these cells have overlapping predicted best server coverage:

⁵⁹⁵⁷ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 309; exhibit P1254, p. 194; exhibit P1248, pp 48-49.

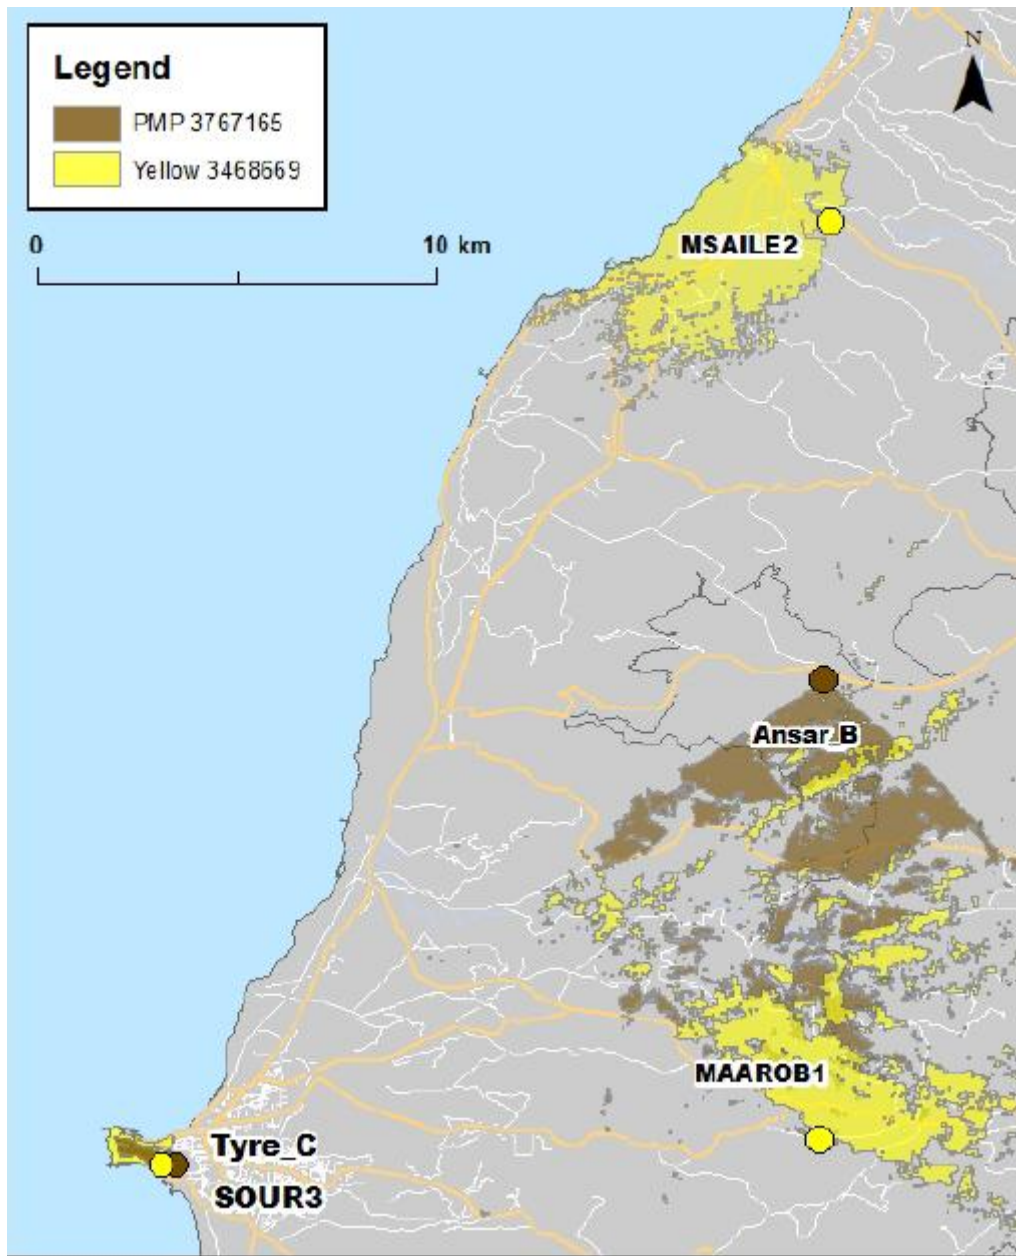

⁵⁹⁵⁸ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 310; exhibit P1254, p. 195; exhibit P1248, p. 49.

Attribution report of Andrew Donaldson regarding Mr Ayyash—exhibit P2026.2, p. 133

2984. A little over an hour later, at 10:16, Yellow 669 connected to Alfa's MAAROB1, in south Lebanon, the tower of which is located around 15 kilometres from Tyre. A few minutes later, at 10:20 and then again at 10:47, mobile 165 connected to Touch's Ansar_B, which is slightly to MAAROB1's north and overlaps with its predicted coverage. In the late afternoon, at the end of a call at 16:14, Yellow 669 activated Alfa's MSAILE2. This cell was on the coast south of Beirut, not far from the MAAROB1's and Ansar_B's coverage areas.⁵⁹⁵⁹ These were mapped in Mr Donaldson's report:

⁵⁹⁵⁹ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 310; exhibit P1254, p. 195; exhibit P1248, p. 49.

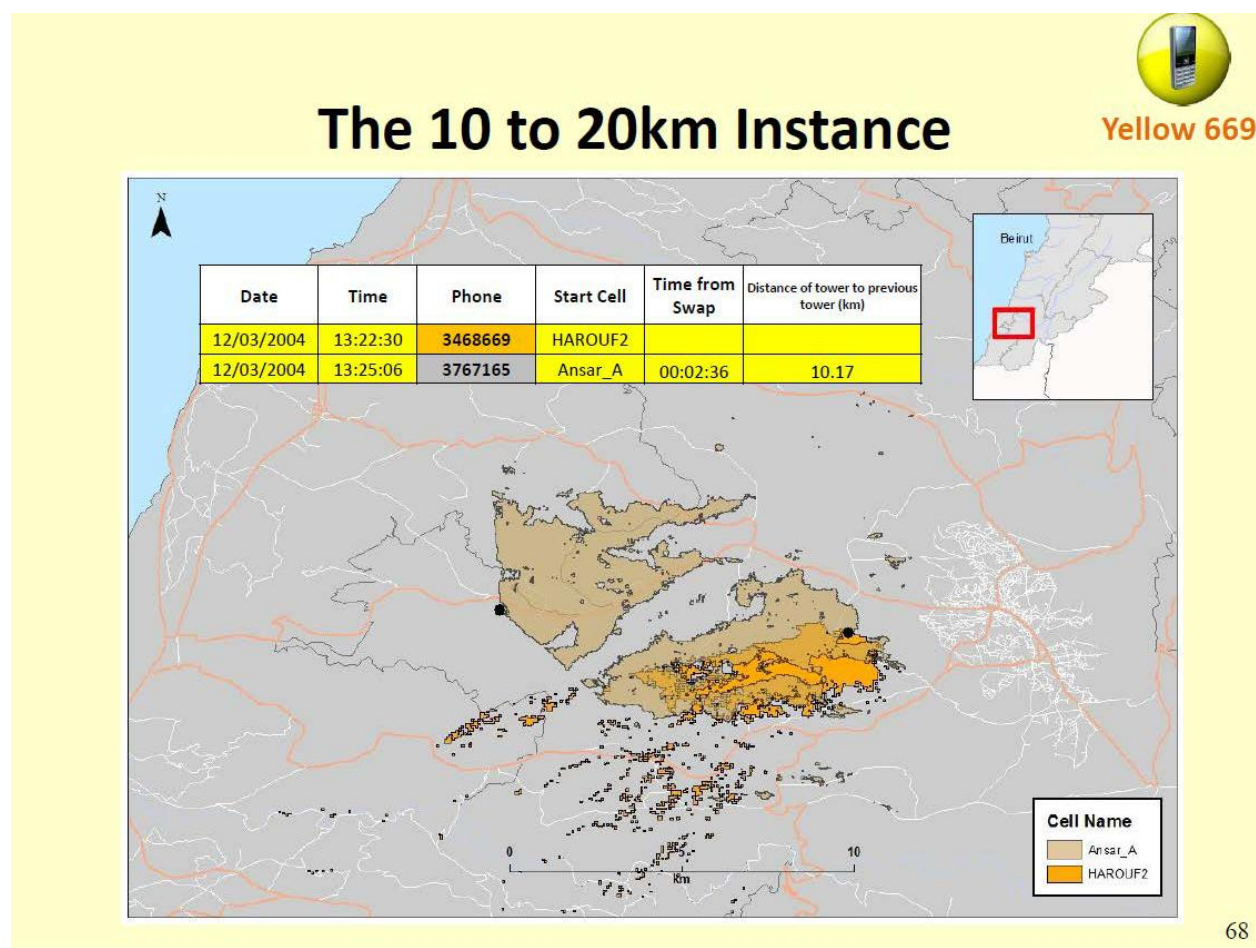

Attribution report of Andrew Donaldson regarding Mr Ayyash—exhibit P2026.2, p. 134

2985. That night, mobile 165 activated Touch's Sfeir_A in southern Beirut at 20:06. Yellow 669 connected to the following three cells in southern Beirut: Alfa's HADATH3 at 21:33, SFEIR2 at the end of a call at 21:45 call and HADATH1 at the end of a call made at 22:32.⁵⁹⁶⁰

⁵⁹⁶⁰ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 310; exhibit P1254, p. 195; exhibit P1248, p. 49.

12 March 2004 – the single instance falling within the 10-20 kilometre category

2986. In his testimony, Mr Donaldson addressed the one time when the two mobiles made calls within ten minutes using cell towers between ten and 20 kilometres apart.⁵⁹⁶¹ On 12 March 2004, at 13:22, Yellow 669 activated Alfa's HAROUF2. Three minutes later, at 13:25, mobile 165 connected to Touch's Ansar_A.⁵⁹⁶² Mr Donaldson explained that, although the cell towers are 10.17 kilometres apart, the predicted best server coverage of the cells overlaps, as the map below shows.⁵⁹⁶³

⁵⁹⁶² Andrew Donaldson, T. 18 July 2017, p. 77; exhibit P1254, p. 185; exhibit P1248, p. 44.

⁵⁹⁶³ Andrew Donaldson, T. 18 July 2017, p. 77.

g. Additional analysis carried out by the Trial Chamber

2987. Using the same principles of analysis that Mr Philips explained in some detail, the Trial Chamber conducted its own analysis to better understand the instances identified in Mr Donaldson's analysis where the two mobiles were involved in calls starting within ten minutes of each other. This included the 26 pairs of calls that Mr Donaldson did not consider. The Trial Chamber examined for itself the start and end cell information, and start and end time for each of the 85 pairs of calls.⁵⁹⁶⁴ These are set out in Annex F to the judgment based on the call sequence tables of the two mobiles.

2988. Although employing Mr Philips's analysis methodology as closely as possible on these 85 pairs of calls, the Trial Chamber did not engage in the much more extensive exercise of analysing all call pairs which were within 60 minutes of one another, as Mr Philips would have done had he been tasked by the Prosecution with analysing the potential co-location of these two mobiles.

2989. As an example of this methodology, on 27 December 2003, Yellow 669 participated in a call lasting from 10:59:48 to 11:01:20, activating Alfa's MIKAEL2 at both the beginning and the end of the call. Mobile 165 had a call five minutes later, from 11:06:44 to 11:07:13, activating Touch's BLF_B at the beginning of the call.⁵⁹⁶⁵ BLF_B is located just outside of Beirut, to the south-east. From the call data available for each pair of calls, the Trial Chamber looked at the cell sector use which occurred closest in time to one another. In this example, this meant considering the use of MIKAEL2 at 11:01:20 and the use of BLF_B at 11:06:44.

2990. The Trial Chamber then considered whether the two relevant cell sector coverage areas overlapped. For those that did not overlap, the Trial Chamber used the electronic presentation of evidence software to plot the approximate distance between the points on the coverage areas of the two cell sectors which were closest together and those which were furthest apart. In other words, the shortest and the longest distance that a single user would have to travel between calls. This was

⁵⁹⁶⁴ These occurred on 25, 27 (twice), 29 (thrice), 30 December 2003; 1, 6, 8, 9 (thrice), 11, 12 (four times), 15, 16, 26 January 2004; 3, 8, 13, 17 (thrice), 18, 20, 24, 25, 26 (six times), 27 February 2004; 2 (twice), 3 (twice), 10, 11 (five times), 12, 13 (twice), 15, 22 (thrice), 23, 26, 27 (twice), 30 (four times), 31 March 2004; and 1, 2 (thrice), 3 (twice), 9, 10 (seven times), 13, 14 (twice), 16 (twice), 17 (twice) April 2004, exhibit P1259 (Call sequence table of ten numbers—Mr Ayyash), pp 169-212.

⁵⁹⁶⁵ Exhibit P1259, p. 171; annex F of the judgment, rows 2-3.

measured in the same manner as the Parties did in tendering their own maps into evidence at trial, namely using a straight line.

2991. The Trial Chamber then calculated the average between these two distances. It used this measurement in place of Mr Philips's use of the distance between the centre points of the coverage areas of two cell sectors. The Trial Chamber considered that it lacked the expertise to determine the centre point of each coverage area simply by looking at it on a map, in the way Mr Philips had done.

2992. For these non-overlapping cell sector coverage areas, the Trial Chamber then calculated the speed of travel which a single user would have had to attain to traverse this average distance in the available time. It did this by dividing the average distance measured in kilometres by the time measured in hours. In the example given above, the average distance was determined to be 1.974 kilometres and the available time was five minutes and 24 seconds. The necessary speed of travel was therefore calculated to be 21.93 kilometres per hour.

2993. Using this methodology, the Trial Chamber found that, of the 85 pairs of calls, 60 involved the two mobiles using cells with overlapping predicted best server coverage areas.⁵⁹⁶⁶ Seven of these involved calls which also overlapped in time.⁵⁹⁶⁷

2994. A further 15 pairs involved distances which could be travelled in the available time at a speed of less than 85 kilometres per hour,⁵⁹⁶⁸ and eight pairs involving distances which could not be travelled in the available time—in other words, requiring a speed of 97.9 kilometres per hour or above.⁵⁹⁶⁹ For the remaining two pairs, there was insufficient cell site coverage information to determine whether they were overlapping, or alternatively to measure and calculate the relevant distances and necessary speeds of travel.⁵⁹⁷⁰

⁵⁹⁶⁶ Annex F of the judgment, rows 1-2, 4-5, 7, 9-14, 16-20, 22-23, 25, 27, 30-31, 33, 35-38, 40-42, 44-55, 57, 60-65, 69, 72, 76-77, 79-85.

⁵⁹⁶⁷ These occurred on 27 December 2003, 12 January 2004 (twice), 3, 11 and 30 March 2004, and 3 April 2004, exhibit P1259, pp 169-212; annex F of the judgment, rows 2, 16-17, 42, 45, 63, 69.

⁵⁹⁶⁸ Annex F of the judgment, rows 3, 6, 8, 15, 21, 29, 32, 39, 43, 56, 58, 66, 70-71, 73.

⁵⁹⁶⁹ Annex F of the judgment, rows 24, 26, 59, 67-68, 74-75, 78.

⁵⁹⁷⁰ Annex F of the judgment, rows 28, 34; exhibit P1248, p. 39; exhibit P1254, p. 182. First, this concerned a pair of calls on 18 February 2004, for which cell sector coverage information for KSARA1, used by Yellow 669 at 16:23, was unavailable from the evidence, Prosecution submissions, T. 16 February 2017, pp 15-16, 48-49, 72-73; exhibit P1893 (Alfa cells with best server coverage, Beirut-Anjar road). Second, for a pair of calls on 26 February 2004 (with calls starting at 16:43 and 16:45), there was no cell coverage information accessible in the Electronic Presentation of

2995. The eight pairs of calls are set out as follows:

- On Friday 13 February 2004, after connecting to Touch's Merwanieh_A, south-east of Sidon, at 13:22,⁵⁹⁷¹ mobile 165 received a text message, at 13:53, activating Barja_C north, north-east of Sidon.⁵⁹⁷² Just under five minutes later, Yellow 669 connected to Alfa's KHALDE3, south of Beirut, while receiving a call from Yellow 618.⁵⁹⁷³ The average distance between the coverage areas of Barja_C and KHALDE3 is about 11.9 kilometres, and the speed to travel that distance would have been 145.7 kilometres per hour 'as the crow flies'.⁵⁹⁷⁴ Both cells provide predicted best server coverage to the coastal highway.⁵⁹⁷⁵ For a subsequent call, at 14:10, Yellow 669 connected to CBOURJ3 in southern Beirut.⁵⁹⁷⁶
- On Thursday 17 February 2004, at 16:06, Yellow 669 activated Alfa's NABATI3 for a call to an US number.⁵⁹⁷⁷ At 16:43, mobile 165 activated Touch's Naameh_B while receiving a call from one of its frequent contacts, mobile 617, linked to Mr Jaber and his car mechanic shop.⁵⁹⁷⁸ Within a minute, Yellow 669 activated Alfa's NAAMEH1, followed by AIB3 at the end of this call, which lasted for five minutes and 38 seconds.⁵⁹⁷⁹

This call was made to mobile 222, which is linked to Mr Ayyash's brother, Ali, and brother-in-law, Mr Ali Zaarour.⁵⁹⁸⁰ At 17:07, mobile 165 activated Touch's Bir Abed_A.⁵⁹⁸¹ The

Evidence software for cell sector Nabi Chiit_C, that mobile 165 used and, although this coverage information was accessible in the ArcView software, the latter's function for measuring distances is not enabled, nor is a scale provided for the maps it displays.

⁵⁹⁷¹ This was a text message from mobile 061, which had twelve contacts with mobile 165 in its attribution period. Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), annex E, p. 388.

⁵⁹⁷² It was a text message from mobile 234, which had fifteen contacts with mobile 165 in its attribution period. Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), annex E, p. 387.

⁵⁹⁷³ Exhibit P1259, p. 184; exhibit P592.1 (Electronic Presentation of Evidence Software).

⁵⁹⁷⁴ Annex F of the judgment, row 24.

⁵⁹⁷⁵ Exhibit P592.1.

⁵⁹⁷⁶ It was a call from Yellow 763 to Yellow 669. Exhibit P1259, p. 184.

⁵⁹⁷⁷ The same number was in contact with Mr Ayyash's personal mobile 935 twice on 20 September 2004. Exhibit P1259, p. 275; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 289.

⁵⁹⁷⁸ See para. 2686.

⁵⁹⁷⁹ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 306; exhibit P1259, p. 186.

⁵⁹⁸⁰ The same number, 222, was also in contact with Mr Ayyash's family landline 851, and personal mobiles 935 and 091. See para. 2707.

⁵⁹⁸¹ This was a call to mobile 197, which is unattributed but a common contact with Mr Ayyash's mobile 935. Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 306; exhibit P1259, p. 186. For contacts between mobile 935 and mobile 197, *for example* exhibit P1259, pp 226, 251; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), annex E, p. 404.

average distance between Touch's Naameh_B and Alfa's NAAMEH1 cells is about 10.8 kilometres and the time lapse between the call pair is 51 seconds.⁵⁹⁸² Mr Donaldson's view was that the mobiles were travelling in concert. This is discussed above in paragraphs 2968-2969.

- On Sunday 27 March 2004, mobile 165 and Yellow 669 activated Nabatieh_C and HAROUF3 around seven minutes apart. At 17:19, mobile 165 received a call from landline 696 attributed to Mr Ayyash's family;⁵⁹⁸³ at 17:26, Yellow 669 called Yellow 425.⁵⁹⁸⁴ The average distance between the two cell sectors' coverage areas, about 17.6 kilometres, would have required an average speed of 149.8 kilometres per hour speed to travel.⁵⁹⁸⁵ However, drive tests conducted in 2006 on the road between Harouf and Nabatiyeh showed that Nabatieh_C actually provided the best coverage along that road.⁵⁹⁸⁶ Mr Philips explained that this could have been caused by multiple signal reflections from nearby hills that may not have been accounted for in the prediction tools.⁵⁹⁸⁷
- On Saturday 2 April 2004, at 09:23, Yellow 669—connecting to MIKAEL2 in southern Beirut—called Yellow 457. At 09:29, mobile 165 activated BorjBrajneh-II_A (south-west of MIKAEL2).⁵⁹⁸⁸ At 09:31, calling Yellow 425, Yellow 669 used MEA1, near the airport. According to the Trial Chamber's additional analysis, the average distance between the BorjBrajneh-II_A and MEA1 cells would have required an average travelling speed of around 97.9 kilometres per hour.⁵⁹⁸⁹
- At 09:34, Yellow 669 called unattributed mobile 093 and connected to MATAR6, south of the airport, at the start, and KHALDE1, further south, at the end of a call. At 09:43, mobile 165 used Barja_C, south of Beirut.⁵⁹⁹⁰ Based on the Trial Chamber's analysis, the average

⁵⁹⁸² Annex F of the judgment, row 26.

⁵⁹⁸³ See paras 2691-2696.

⁵⁹⁸⁴ Exhibit P1259, p. 203.

⁵⁹⁸⁵ Annex F of the judgment, row 59.

⁵⁹⁸⁶ See above, at paras 2731-2734.

⁵⁹⁸⁷ J. E. Philips, T. 25 April 2017, pp 68-75.

⁵⁹⁸⁸ This occurred while receiving a call from an unattributed mobile 496, which had 32 contacts with mobile 165 and one with mobile 935. Exhibit P1259, p. 205; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), annex E, pp 386, 408.

⁵⁹⁸⁹ Annex F of the judgment, row 67.

⁵⁹⁹⁰ The call was from an unattributed mobile, which had no other contact with mobile 165, or with other personal mobiles attributed to Mr Ayyash. Exhibit P1259, p. 205; exhibit P592.1.

distance between KHALDE1 and Barja_C would have required an average travelling speed of about 117.6 kilometres per hour to travel in seven and a half minutes.⁵⁹⁹¹ Both cells provide predicted best server coverage to the coastal highway.⁵⁹⁹²

- On Sunday 10 April 2004, at 17:08, mobile 165 connected to Touch's Nabatieh_C for a call to mobile 333—a common contact of landlines 696 and 851, and mobiles 170, 935 and 091—attributed to Mr Hussein Zaarour.⁵⁹⁹³ At 17:11, Yellow 669 called the same number, activating HAROUF1.⁵⁹⁹⁴
- Within a minute, at 17:12, and then at 17:35, Yellow 669 had two calls with Yellow 457, activating Alfa's HAROUF1 throughout. Receiving a call from Mr Zaarour's mobile at 17:41, mobile 165 activated Nabatieh_C. At 17:45, Yellow 669 received a call from Yellow 457, activating Alfa's NABATI1 at the end of the call.⁵⁹⁹⁵
- In the evening, at 18:27, Yellow 669 used NABATI1.⁵⁹⁹⁶ At 18:30, receiving a call from one of its frequent contacts, mobile 909—attributed to Mr Ayyash's brother-in-law, Mr Mohammed Amine Badreddine⁵⁹⁹⁷—mobile 165 activated Nabatieh_C. At 19:01, Yellow 669 activated NABATI1 for a call to mobile 617 linked to Mr Jaber and his 'car repair shop'.⁵⁹⁹⁸ At 20:04, 20:22 and 20:23, mobile 165 had three incoming calls connecting to Nabatieh_C, one from mobile 333 linked to Mr Hussein Zaarour, and two from mobile 854 linked to Mr Ayyash's sister-in-law, Ms Bassima Al-Hajj.⁵⁹⁹⁹ At 20:25 and 20:34, Yellow 669 received calls from Yellow 763 and mobile 333 linked to Mr Hussein Zaarour, activating HAROUF1 at the end of both calls.⁶⁰⁰⁰

Based on the Trial Chamber's analysis, the average distance between Touch's Nabatiyeh_C and Alfa's HAROUF1 cells between the three pairs of calls at 17:08-17:11, 17:35-17:41,

⁵⁹⁹¹ Annex F of the judgment, row 68.

⁵⁹⁹³ See para. 2686.

⁵⁹⁹⁴ Exhibit P1259, p. 209.

⁵⁹⁹⁵ Exhibit P1259, p. 209.

⁵⁹⁹⁶ It was a call to unattributed mobile 444, which had sixteen contacts with Yellow 669 in its attribution period. Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 290.

⁵⁹⁹⁷ See para. 2729.

⁵⁹⁹⁸ See para. 2686.

⁵⁹⁹⁹ See para. 2686.

⁶⁰⁰⁰ Exhibit P1259, p. 209.

and 20:23-20:25, would have required an average speed of about 402.8, 280.8 and 254.4 kilometres per hour, respectively.⁶⁰⁰¹ However, as discussed above, Mr Philips provided evidence, based on Touch's drive test, that the Nabatiyeh_C cell provided some coverage in the Harouf area.⁶⁰⁰² Additionally, Mr Donaldson demonstrated above, in paragraphs 2979-2982, that the two mobiles were travelling together.

2996. The Trial Chamber, like Mr Donaldson in his report, also considered the distance between the cell towers used by the mobiles during the 85 pairs of calls. The Trial Chamber, however, used both the start and end cell information available and was therefore able to analyse all 85 pairs. Of these:

- 42 pairs involved cell towers up to a kilometre apart;⁶⁰⁰³
- 21 involved cell towers between one and two kilometres apart;⁶⁰⁰⁴
- 12 involved cell towers between two and five kilometres apart;⁶⁰⁰⁵
- five involved cell towers between five and ten kilometres apart;⁶⁰⁰⁶
- four involved cell towers between ten and 20 kilometres apart;⁶⁰⁰⁷ and
- one pair involved cell towers between 20 and 21 kilometres apart.⁶⁰⁰⁸

ii. Submissions

2997. The attribution of Yellow 669 to Mr Ayyash between 23 December 2003 and 18 April 2004 is relevant to the Prosecution's contention that Mr Ayyash left Lebanon in 2004 to perform the Hajj pilgrimage in Mecca, Saudi Arabia, but remained in Lebanon during the 2005 Hajj.

⁶⁰⁰⁸ Annex F of the judgment, row 41.

2998. The Prosecution concedes that if Mr Ayyash had travelled to Saudi Arabia in January 2005, he could not have continued the normal use in Lebanon of mobiles attributed to him.⁶⁰⁰⁹

2999. It attributes Yellow 669 to Mr Ayyash from 23 December 2003 until at least 18 April 2004.⁶⁰¹⁰ A handset used with Yellow 669—IMEI35252200022555—was subsequently used with his personal mobile 170 from 7 January 2005.⁶⁰¹¹

3000. In addition, forty of Yellow 669's 77 contacts, including all of its top ten most frequent contacts, coincided with those of at least one of Mr Ayyash's personal mobiles. Further, some of Yellow 669's contacts were closely linked to Mr Ayyash, such as one of his car trade associates and someone who bought vehicles from him.⁶⁰¹² Yellow 669 most frequently activated cells near Mr Ayyash's homes in Hadath and Harouf.⁶⁰¹³

3001. Finally, Yellow 669 never contacted personal mobile 165. When the two mobiles were used within ten minutes of one another, 54 per cent of those calls activated cell towers less than one kilometre apart. And 31 per cent of those calls activated cell towers less than two kilometres away from each other.⁶⁰¹⁴

3002. The Ayyash Defence made no specific submissions with regard to Yellow 669, but argued generally that the Prosecution failed to attribute the network mobiles to Mr Ayyash, as in attributing them it relied primarily on their unreliable co-location with the personal mobiles, whose attribution to Mr Ayyash had in turn not been proven.⁶⁰¹⁵

iii. Findings

3003. To commence, the Prosecutor did not plead in the amended consolidated indictment, nor in his two final pre-trial briefs, that Mr Ayyash was using Yellow 669.

3004. As a matter of law, and to provide notice to an Accused of the case against them, material facts, not evidence, have to be pleaded. The Trial Chamber considers that Mr Ayyash's potential

⁶⁰⁰⁹ Prosecution final trial brief, para. 282.

⁶⁰¹⁰ Prosecution final trial brief, para. 304.

⁶⁰¹¹ Prosecution final trial brief, para. 305.

⁶⁰¹² Prosecution final trial brief, para. 306.

⁶⁰¹³ Prosecution final trial brief, para. 307.

⁶⁰¹⁴ Prosecution final trial brief, para. 308.

⁶⁰¹⁵ Ayyash Defence final trial brief, paras 670-671.

use of this mobile until April 2004—which is almost seven months before the period pleaded indictment period—which commenced on 11 November that year, was not a material fact that required pleading in an indictment.

3005. However, if the Prosecution was intending to use this fact against Mr Ayyash, even if only to negate that he travelled for the Hajj in January 2005, this should have been set out clearly in the pre-trial briefs and the opening statements. Notwithstanding this, as it is not a material fact and is a matter of evidence, the Ayyash Defence was on notice of it through Mr Donaldson’s analysis of it in his attribution report, and in particular its annex A entitled ‘Telephone usage 28-01-04 to 08-02-04’ which explains the significance of Yellow 669. This is not of course where such an explanation should be. It should be upfront in a pre-trial brief.

3006. For these reasons, the Trial Chamber is satisfied that it can make positive findings in respect of Mr Ayyash’s use of the mobile and that no substantive point about a lack of notice has arisen.

3007. The Trial Chamber has found that Mr Ayyash was the principal user of personal mobile 165 between 23 April 2002 and 18 April 2004, and of personal mobile 170 from 7 January to 26 November 2005.

3008. Yellow 669’s SIM was used with handset IMEI 35252200022555 from 25 December 2003 to Thursday 6 January 2005. From Friday 7 January 2005, Mr Ayyash’s personal mobile 170 used the same handset. This strongly associates Mr Ayyash with Yellow 669.

3009. Yellow 669’s subscription and contact profile reveals little of the identity of its user. Mr Donaldson concluded that Yellow 669’s shared contacts with other mobiles attributed to Mr Ayyash would normally be a negative indicator of a single user of these mobiles. This is because multiple mobiles are not ordinarily needed to contact the same people. However, Yellow 669 shared contacts not only with Mr Ayyash’s personal mobile 165, with which it had an overlapping attribution period, but also with mobiles 935 and 170, of which Mr Ayyash was the principal user at a later stage.

3010. The Trial Chamber is not convinced that Yellow 669’s cell activations in the area of locations relevant to Mr Ayyash support the mobile’s attribution to him, as it has received no reliable evidence as to his presence at his two residences or at the Markaba Civil Defence station.

3011. The comparison of the five most frequently used cells by Yellow 669 and mobile 165, although not inconsistent with the two having the same user, is based on partial cell data. Further, four of these cells are in south Beirut, and are therefore geographically insufficiently distinctive to allow for relevant inferences to be drawn. However, the Trial Chamber considered in favour of attribution the fact that Yellow 669's handset was later used with mobile 170.⁶⁰¹⁶

3012. The Trial Chamber received evidence from Mr Philips that overlapping calls do not necessarily exclude that the mobiles had a single user. Exceptionally this may occur, and it is not inconsistent with a single user if the mobiles activate the same cell or adjacent cells, or—when they are on different networks—cells with overlapping predicted best server coverages.⁶⁰¹⁷ Therefore, the seven instances of calls overlapping in time do not preclude a conclusion that the two mobiles were used by the same person during the 97 days, given that during these calls the mobiles activated cells with overlapping predicted best server coverage areas.⁶⁰¹⁸ Additionally, the mobiles were never in contact with each other.

3013. Mr Donaldson's examples demonstrating the common movements of the two mobiles weigh in favour of a finding that they had a single user. The movements of the mobiles on 12 and 26 February, and 14 April 2004 in the different areas of Lebanon, outside the areas of most frequently used cells in Beirut, are particularly persuasive.

3014. However, the Trial Chamber has considered Mr Donaldson's co-location analysis of Yellow 669 and mobile 165 with caution. It carefully reviewed his evidence and, additionally, it has considered the cell activations of 26 additional examples of close-in-time call pairs that Mr Donaldson did not analyse, and carried out its own further analysis of all 85 pairs of calls.

3015. The Trial Chamber emphasises that it does not have Mr Philips's technical expertise to ascertain potential co-location, but is of course required to determine whether it is satisfied that two or more mobiles had a single user. The Trial Chamber followed Mr Philips's basic methodology and carried out a basic analysis of cell activations and time between pairs of calls. Some rudimentary methods of determining potential co-location do not require any particular advanced technical expertise, such as when two mobiles sequentially make or receive calls which

⁶⁰¹⁶ See paras 2761-2762.

⁶⁰¹⁷ See sub-section (A) 'Single user analysis', above.

⁶⁰¹⁸ See sub-section (A) 'Single user analysis', above.

connect to the same cell or—when the mobiles are from different network providers—to cells with overlapping predicted best server coverages.

3016. By employing this method, the Trial Chamber found that 60 of the 85 pairs involved the use of cell sectors whose predicted best server coverage overlapped. That is straightforward.

3017. For further fifteen pairs, the average distances between the coverage areas of the cells connected each time could be travelled in the time available, in some cases at walking speed, and in some instances at speeds of between 6.4 and 83.3 kilometres per hour in a vehicle.

3018. Although the Trial Chamber does not have the necessary expertise to determine general traffic conditions in Lebanon, at its most basic, and using Mr Philips's terminology, it would appear that this does not preclude co-location of the two mobiles in any of these instances. The Trial Chamber stresses that, on the issue of co-location, it is not substituting its technical expertise for that of Mr Philips, but rather has performed this additional analysis on the evidence it has received to ascertain whether co-location was *possible* for these two mobiles, where this was not exhaustively explored by the Prosecution.

3019. The Trial Chamber has further identified eight pairs of calls involving distances which would have required an average speed exceeding 90 kilometres per hour to travel 'as the crow flies'. For four of these pairs, Mr Donaldson illustrated on maps how the mobiles travelled in tandem from areas located to the south of Beirut to southern Beirut on Thursday 17 February 2004, and in the area of Nabatiyeh on Sunday 10 April 2004. Further, the numbers that mobile 165 and Yellow 669 contacted during these cell activations are linked to Mr Ayyash's family and business associates.

3020. In particular, on 17 February 2004, Yellow 669 called a mobile linked to Mr Ayyash's brother, Ali, and brother-in-law, Mr Ali Zaarour while using NAAMEH1. Mobile 165 connecting to Naameh_B received a call from mobile 617 linked to Mr Jaber's car repair shop. Before and after these calls, the two mobiles had calls with numbers which were also in contact with Mr Ayyash's mobile 935.

3021. On Sunday 10 April 2004, at 17:08 and at 17:11, both mobile 165 and Yellow 669 called mobile 333 linked to Mr Hussein Zaarour, the brother of Mr Ayyash's brother-in-law,

Mr Ali Zaarour. Later, mobile 165 had contacts with Mr Ayyash's brother-in-law, Mr Mohammed Badreddine, a number linked to Mr Jaber and his car workshop, Mr Hussein Zaarour, and received calls from Mr Ayyash's sister-in-law, Ms Bassima Al-Hajj. Yellow 669 had contacts with other Yellow mobiles.

3022. The mobiles' calls with Mr Ayyash's family, including Mr Hussein Zaarour, and Mr Donaldson's evidence on the two mobiles' common movements cumulatively support the inference that—notwithstanding the 10.8 kilometres average distance between the predicted best server coverage areas of NAAMEH1 and Naameh_B, and their activations within 51 seconds—Mr Ayyash was using Yellow 669 for the calls with his family and business associate. Regarding number 617 associated with Mr Jaber, the Trial Chamber received evidence that multiple people may have used this number.

3023. For three pairs of calls on 10 April 2004, analysed above, mobile 165 and Yellow 669 activated Nabatieh_C and HAROUF1 separated by periods of time ranging from around three to five minutes. Similar cell activations occurred on Sunday 27 March 2004, when mobiles 165 and Yellow 669 activated Nabatiyeh_C and HAROUF3 around seven minutes apart. Based on the average distance between the predicted coverage areas of the two cells, this may have been inconsistent with one person using the mobiles.

3024. However, the Trial Chamber received evidence from Mr Philips about the potential coverage of the Nabatiyeh_C and Nabatiyeh_D cells near Harouf. This is based on Touch's drive tests in 2006 on the road between Harouf and Nabatiyeh, which discovered that Nabatieh_C actually provided the best coverage along that road. The Trial Chamber has been satisfied with Mr Philips's explanation as to how someone using a mobile near Harouf could connect to either Nabatieh_C or Nabatieh_D.⁶⁰¹⁹

3025. On Friday 13 February 2004, from 13:22 to 14:10, the cell activation pattern of mobile 165 and Yellow 669 seems to show movement of the mobiles from Sidon to Beirut. On Saturday 2 April 2004, similar travel emerges but in the opposite direction from southern Beirut

⁶⁰¹⁹ See sub-section (B) (1) (d) 'Personal mobile 165'.

(MIKAEL2, BorjBrajneh-II_A) to near the airport (MEA1, MATAR6) and further south (KHALDE1, Barja_C).

3026. Alfa's KHLADE1 and KHLADE3 and Touch's Barja_C provide predicted coverage to a highway on Lebanon's western coast connecting Sidon and Beirut, which may explain the calculated speed to travel the average distance between the KHALDE and the Barja cells within the time between calls (145.7 and 117.6 kilometres per hour). However, the Trial Chamber did not receive any evidence from either Mr Philips or Mr Donaldson, which would allow it to conclude that the two mobiles may have been travelling in concert. Furthermore, Yellow 669 contacted numbers which are either unattributed or anonymous Yellow mobiles.

3027. In conclusion, the Trial Chamber notes that mobile 165 and Yellow 669 connected to overlapping cells within ten minutes between 25 December 2003 and 8 February 2004 eighteen times, between 17 February and 27 March 2004 twenty-five times, between 30 March and 2 April 2004 six times, and between 3 and 17 April 2004 eleven times, which strongly support the inference that the two mobiles had a common user.⁶⁰²⁰ The two mobiles' activations of overlapping cells within ten minutes on 60 occasions in Yellow 669's attribution period from 23 December 2003 to 18 April 2004 weigh in favour of finding that Mr Ayyash was the principle user of that mobile.

3028. However, without Mr Philips's expert opinion regarding cell activations on 13 February and 2 April 2004, the evidence is insufficient to support a finding on single use beyond reasonable doubt. The Trial Chamber finds, based on the preponderance of the evidence, namely the common movement and the number of overlapping cell activations, that it is more likely that Mr Ayyash was Yellow 669's principal user. As set out below, during the 2004 Hajj, more specifically from at least 29 January to the morning of 8 February 2004, for four calls to an Alfa service number someone other than Mr Ayyash used it.⁶⁰²¹

3029. The attribution of Yellow 669 is relevant to Mr Donaldson's comparison of this mobile's dormant state between 28 January and 8 February 2004 to the activities of network mobiles Blue 233, Red 741 and Green 300 between 15 and 28 January 2005, to support the Prosecution's

⁶⁰²⁰ Annex F of the judgment.

⁶⁰²¹ See sub-section (B) (2) (g) (iii) 'Findings', below.

assertion that Mr Ayyash travelled to Mecca to perform the Hajj pilgrimage in 2004, but remained in Lebanon during the Hajj in 2005.

3030. However, even if someone other than Mr Ayyash used Yellow 669, it does not affect the Trial Chamber's findings regarding the attribution of Yellow 294, Blue 233, Green 300 and Red 741 to Mr Ayyash.

(b) Yellow 294

3031. The Prosecution attributes Yellow 294 to Mr Ayyash from 29 May 2004 to 7 January 2005. This mobile is alleged to have been used in preparations for the attack on Mr Hariri, including surveillance of him.⁶⁰²² The Prosecution uses the mobile's contact and geographical profile, and its co-location with Mr Ayyash's personal mobile 935, to prove that he was using it.

i. Evidence

a. Subscriber details

3032. Yellow 294 was a pre-paid Alfa mobile that was activated on 15 January 2003 and deactivated on 5 May 2005.⁶⁰²³ The subscriber's name was 'Ghamlouch Abdel Majid' with the address of Jamous Street, Khalil Building 2nd floor, Beirut.⁶⁰²⁴ According to Mr Gary Platt, the Prosecution could not find and interview Mr Abdel Majid.⁶⁰²⁵

b. Attribution period

3033. Mr Andrew Donaldson attributed Yellow 294 to Mr Ayyash from 29 May 2004 to 7 January 2005. During this period the mobile's contact and geographical profiles were consistent, and it used one handset. Before and after this period, the mobile was used with different handsets, and the most frequently used cells were mostly distinct from those it activated during the

⁶⁰²² Amended consolidated indictment, para. 15 (d).

⁶⁰²⁴ Exhibit P887; exhibit P797, p. 4 (ERN D0472167). *See also* exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 322, p. 136 (table of subscriber details); exhibit P796.1 (Network analysis report – updated 8 February 2018), para. 1131.

⁶⁰²⁵ Exhibit P796.1 (Network analysis report – updated 8 February 2018), para. 1131; Gary Platt, T. 6 April 2016, p. 36.

attribution period. After 7 January 2005, Yellow 294 was no longer in contact with any of the Yellow network mobiles that it had been in contact with during the attribution period.⁶⁰²⁶

c. Contact profile

3034. According to Mr Donaldson, Yellow 294 was in contact with 13 other Yellow network mobiles, which accounted for 85 per cent of its 615 calls.⁶⁰²⁷ Mr Platt also examined Yellow 294's activity and found that, excluding contact with service numbers, it was involved in 552 calls during the attribution period. Eighty-eight per cent or 522 of those calls, were with other Yellow network mobiles.⁶⁰²⁸ Every other Yellow network mobile was in contact with Yellow 294.⁶⁰²⁹

3035. Outside of the contacts with the Yellow network mobiles, Yellow 294 was in contact with two landlines ending in 361 and 362, subscribed to the Protel company.⁶⁰³⁰ According to Mr Donaldson, Yellow 294 called these two landlines 59 times during the attribution period, accounting for 9.6 per cent of all of Yellow 294's calls. These two landlines were also in contact with Mr Ayyash's personal mobiles 935, 165 and 170, and Yellow 669.⁶⁰³¹

3036. Mr Platt noted that Yellow 294 also called Al-Rassoul Al-Aazam Hospital, known in English as the Great Prophet Hospital, twice during the attribution period.⁶⁰³²

3037. Yellow 294 received text messages from service numbers and from Yellow 513 on 12 November 2004; however, according to Mr Platt, the Prosecution does not have the content of these messages.⁶⁰³³

⁶⁰²⁶ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 323-329.

⁶⁰³² Exhibit P796.1 (Network analysis report – updated 8 February 2018), para. 1142; exhibit P1606 (Subscriber note for landline 206).

⁶⁰³³ Exhibit P1240, p. 47; exhibit P796.1 (Network analysis report – updated 8 February 2018), para. 1134.

d. Geographic profile

3038. Mr Donaldson attributed Yellow 294 to Mr Ayyash predominantly through its geographical profile and co-location analysis.⁶⁰³⁴ He considered two additional attribution points, namely that the mobile ceased to use the cells providing the predicted best server coverage for the Civil Defence station in Markaba at the time of Mr Ayyash's transfer to Doueir on 1 November 2004, and the mobile's activity on 20 November 2004, when Mr Ayyash had a car accident.⁶⁰³⁵

3039. Mr Donaldson explained that the cell towers most frequently used by Yellow 294 and personal mobile 935—SFEIR2 and NABATI1—were identical.⁶⁰³⁶ HADATH1 and different cell sectors of HAROUF and SFEIR ranked in the first five most often activated cells for Yellow 294 and mobile 935.⁶⁰³⁷

3040. Yellow 294's most frequently used cell towers were in the area of Mr Ayyash's residences in Hadath and Harouf.⁶⁰³⁸

Slide 105 of Mr Donaldson's PowerPoint presentation—exhibit P2025

3041. Mr Donaldson provided evidence that both mobile 935 and Yellow 294, among other mobiles, were active while Mr Ayyash was employed at the Markaba Civil Defence station between December 2003 and 30 October 2004.⁶⁰³⁹ Yellow 294 and mobile 935 activated MHAIBI1—located in the area of the village of Markaba—with its last activation on 30 October 2004, which was the final day he was stationed there before his transfer to the Doueir station.⁶⁰⁴⁰ During the five months when Mr Ayyash was at the Markaba Civil Defence station and

⁶⁰³⁹ Andrew Donaldson, T. 19 July 2017, pp 59-60; exhibit P1160; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 637-642.

⁶⁰⁴⁰ Andrew Donaldson, T. 19 July 2017, p. 60; exhibit P1162; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 153-154, 640-642.

which coincided with the attribution period, Yellow 294 activated MHAIBI1 12 times while mobile 935 activated MHAIBI1 35 times, primarily between September and October 2004.⁶⁰⁴¹

3042. Mr Donaldson considered that Mr Ayyash's accident involving his BMW served as a further attribution point for Yellow 294. This mobile and mobile 935 were both used on 20 November 2004 after Mr Ayyash had an accident in his BMW.⁶⁰⁴² Further evidence about the accident is above in sub-section (B) (1) (f) 'Personal mobile 935'. Mr Donaldson stated, from analysing the relevant call sequence tables on the day of the accident, that Yellow 294 had a series of calls with Yellow 457 and Yellow 932, interposed in time with calls made to and received from mobile 935, activating cells in the area of the accident.⁶⁰⁴³

3043. Cell activations of Yellow 932 show that after receiving a call from Yellow 294 at 22:20 it moved from south Beirut to the area of the accident, first using Naameh_B then Rmalleh_C. By 00:35, Yellow 294 had moved to Furn al Shebak, near Beirut Airport, where the tow truck company had a depot, and Yellow 932 was back in south Beirut.⁶⁰⁴⁴ Mr Donaldson testified that this is consistent with Mr Ayyash collecting his vehicle from that depot.⁶⁰⁴⁵ He demonstrated these calls in the following map:

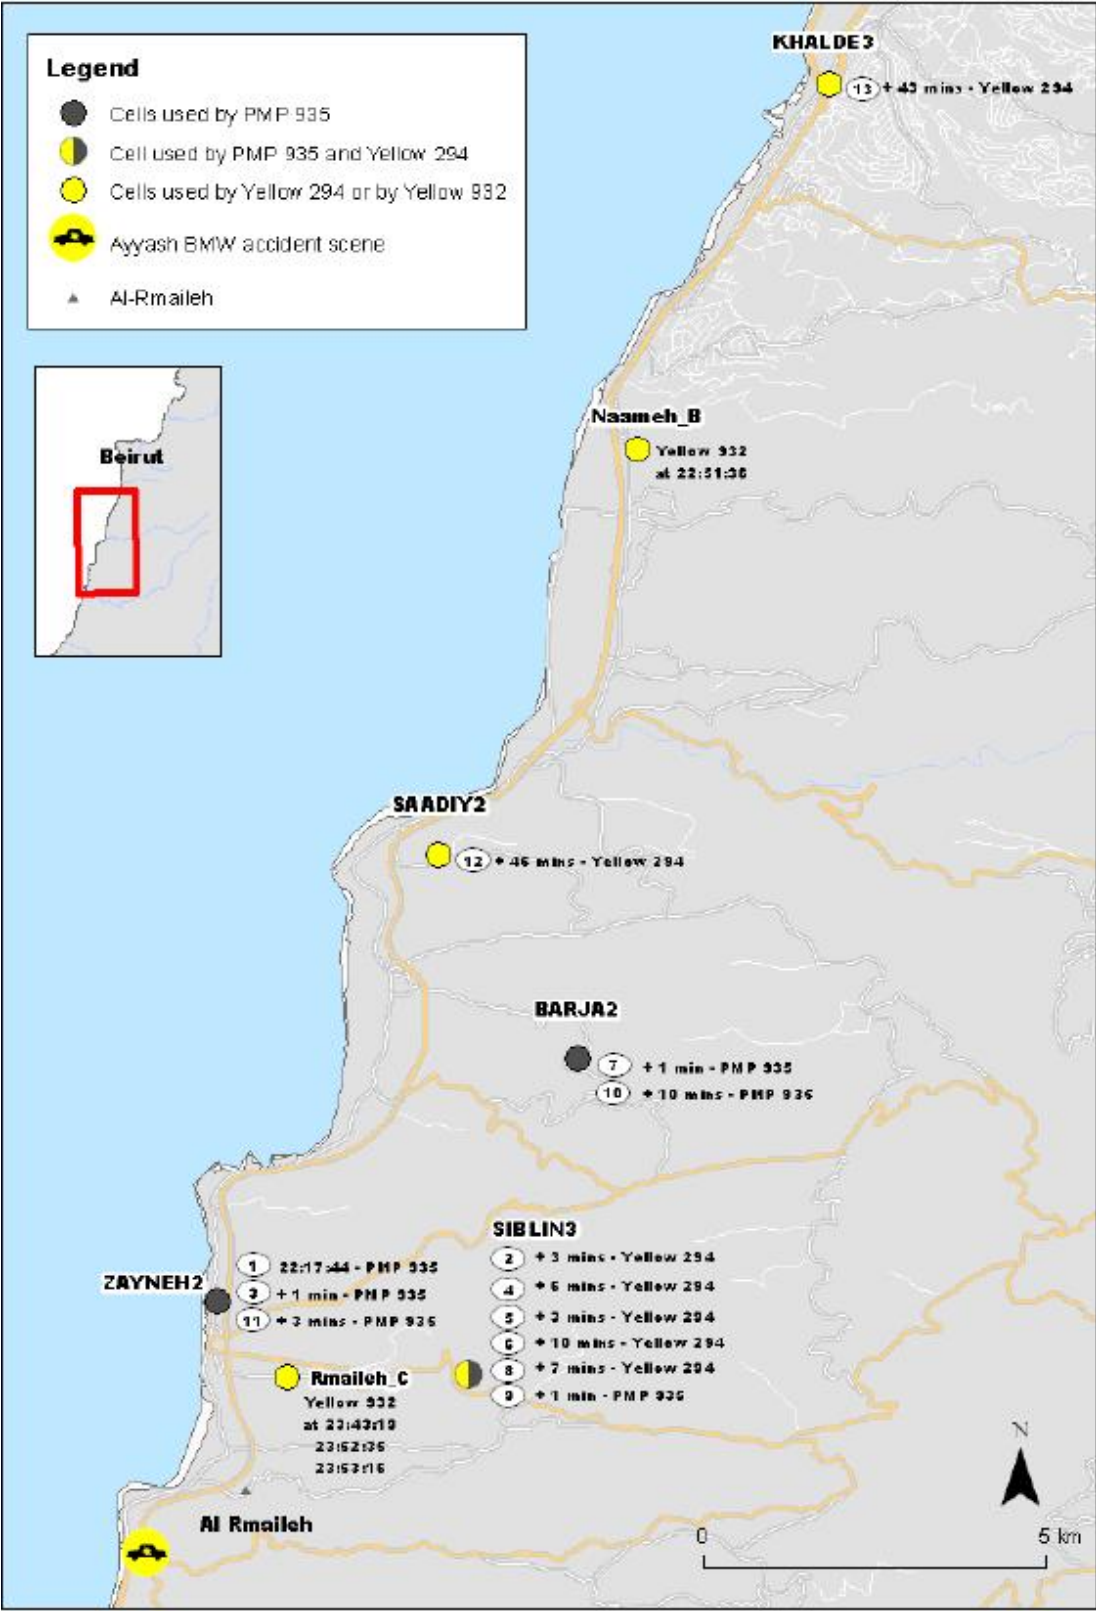

⁶⁰⁴¹ Exhibit P1240, pp 37, 39-40, 43-44; exhibit P1261, pp 4, 9-10, 13, 21, 43, 52, 54, 60, 64, 68, 73.

e. Single user analysis—Yellow 294 and mobile 935

3044. Yellow 294's attribution period to Mr Ayyash of 29 May 2004 to 7 January 2005 overlapped with that of Mr Ayyash's mobile 935, namely of 31 May 2004 to 13 January 2005.⁶⁰⁴⁶

3045. It also partly shared its attribution period with that of Blue 322 (18 October 2004 to 27 December 2004) and Green 300 (30 September 2004 to 14 February 2005).⁶⁰⁴⁷ The single user analysis of Yellow 294 and mobile 935 is set out below. The single user analysis of Yellow 294 with Blue 322 and Green 300 is set out at paragraphs 3084-3096, 3173-3189 below.

3046. Further, Mr Philips analysed one pair of calls of Yellow 294 and Red 741 on 4 January 2005. The Trial Chamber however will not consider this evidence because Red 741's attribution period started on 14 January 2005, and therefore did not overlap with that of Yellow 294.⁶⁰⁴⁸

3047. Yellow 294 was never in contact with personal mobile 935 during the relevant period.⁶⁰⁴⁹ There was one overlapping call involving both mobiles, on 19 October 2004. Yellow 294 called Yellow 932 from 16:01:45 to 16:03:14, while mobile 935 called a mobile number, ending in 617, linked to Mr Ayyash's business associate, Mr Ghaleb Jaber and his car mechanic's shop, at 16:02:26 for 26 seconds.⁶⁰⁵⁰ Both mobiles activated MIKAEL3, which is in the Hadath area.⁶⁰⁵¹

3048. Mr Philips analysed 44 pairs of calls in relation to Yellow 294 and mobile 935 on 14 days between September 2004 and January 2005. These were: 1, 9 and 19 October; 6 and 10 November;⁶⁰⁵² 21-23, 27-29 and 31 December 2004; and 2 and 4 January 2005.⁶⁰⁵³ Mr Philips

⁶⁰⁴⁷ See sub-sections (B) (2) (c) (iii) 'Findings' and (B) (2) (e) (iii) 'Findings'.

⁶⁰⁴⁸ See sub-section (B) (2) (f) (iii) 'Findings'.

⁶⁰⁴⁹ Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 57, 66, 86, 203-206; exhibit P1240, pp 33-53; exhibit P1261, pp 1-97; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 345; Andrew Donaldson, T. 19 July 2017, p. 42.

⁶⁰⁵⁰ Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 52, 57; exhibit P1259 (Call sequence table of ten numbers—Mr Ayyash), p. 294. See above, at para. 2686.

⁶⁰⁵¹ Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), p. 52; exhibit P1259, p. 294.

⁶⁰⁵² In Mr Philips's analysis of the calls involving Yellow 294 and mobile 935 on 10 November 2004, there is one additional pair of calls which occur within one hour of each other where the users activate cells SFEIR2 and HADATH1—which Mr Philips does not comment on. Therefore, the Trial Chamber has not included it in the relevant statistics for the single user analysis for these two mobiles, exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), p. 64.

⁶⁰⁵³ Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 40-41, 46, 48-49, 52-53, 60-64, 68, 71-74, 76, 78-81, 83-84, 87-89; exhibit P1259, pp 282-283, 288-289, 294-295, 301-304, 322-330.

determined that 17 of the analysed pairs were in the category of ‘could be co-located’⁶⁰⁵⁴ and 27 fell in the category of ‘would not preclude co-location’.⁶⁰⁵⁵ On eight occasions, the two mobiles activated the same cells, SFEIR2, NABATI1, MIKAEL3, ROUEIS3, HARA3, MAAROB1, RAHHAL1 and RADOUF3, within less than five minutes, and on an additional five occasions, they used identical cells within ten minutes.⁶⁰⁵⁶

3049. For example, the map and call sequence table extract below show two pairs of calls on 1 October 2004 involving Yellow 294 and mobile 935 (calls 1 and 2 and calls 4 and 5) and the cells activated during the calls by both mobiles. Mr Philips explained that the first pair of calls was separated by approximately 9.75 minutes and used cells HADATH1 and SCHARL2, which had some contiguous best server coverage, and thus ‘would not preclude the mobiles from being co-located’. Mr Philips concluded that calls 4 and 5, made within 8.75 minutes of each other and activating the same cell, SFEIR2, ‘could be co-located’.⁶⁰⁵⁷

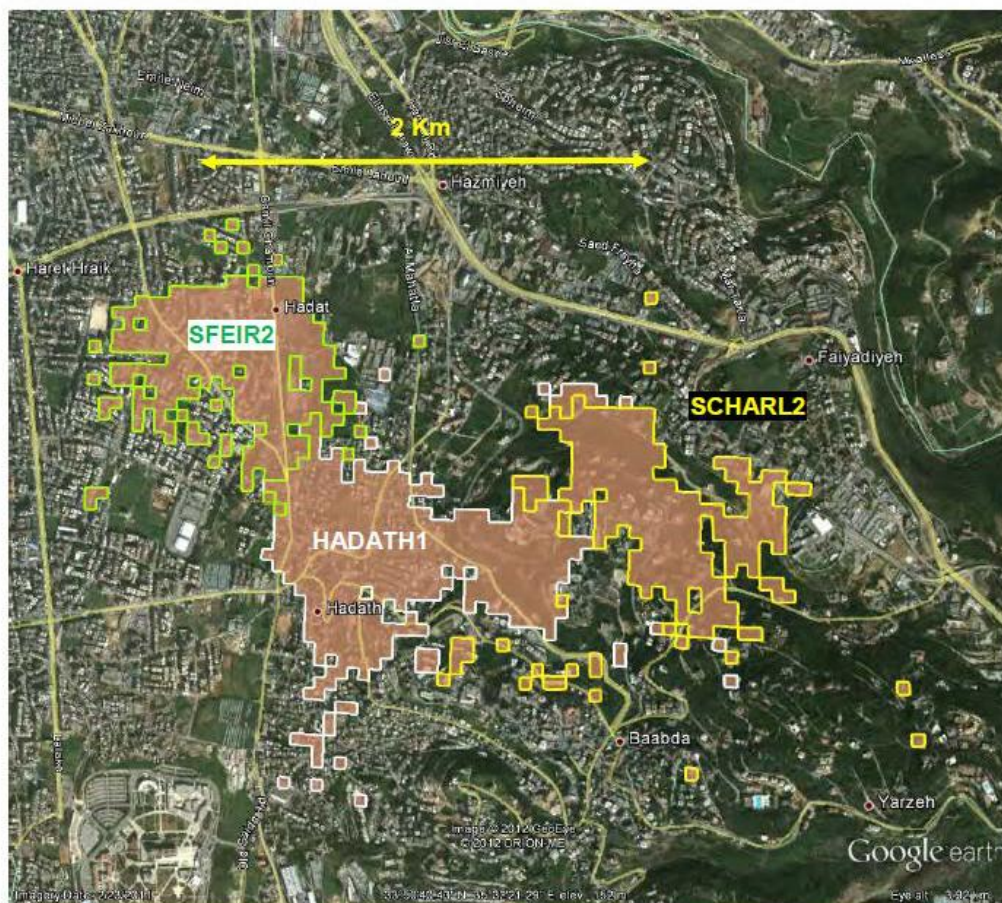

⁶⁰⁵⁴ On 1, 9, 19 October, 10 November, 21, 23, 28-29 December 2004, and 2 January 2005.

⁶⁰⁵⁵ Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 40-41, 46, 48-49, 52-53, 60-64, 68, 71-74, 76, 78-81, 83-84, 87-89; exhibit P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review), pp 21-27; John Edward Philips, T. 21 April 2017, pp 27-28, 33-34, 37-39, T. 24 April 2017, p. 27.

*Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash—
exhibit P1111, p. 40*

3050. Mr Philips analysed another example of possible co-location between Yellow 294 and mobile 935, as well as Green 300, on 29 December 2004. The calls shown in the map below occurred in a period under 59 minutes and all activated the same cell, RAHHAL1, and therefore Mr Philips concluded the mobiles could be co-located over this period.⁶⁰⁵⁸ Mr Donaldson provided evidence that the cells that the three mobiles activated, RAHHAL1 and MAAROB1, were not

⁶⁰⁵⁸ Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), p. 83; John Edward Philips, T. 21 April 2017, pp 38-39; exhibit P1935 (PowerPoint presentation on single user analysis, John Edward Philips), slides 246-249.

among their most frequently used cells, which he considered consistent with the three mobiles carried by the same person on that day.⁶⁰⁵⁹

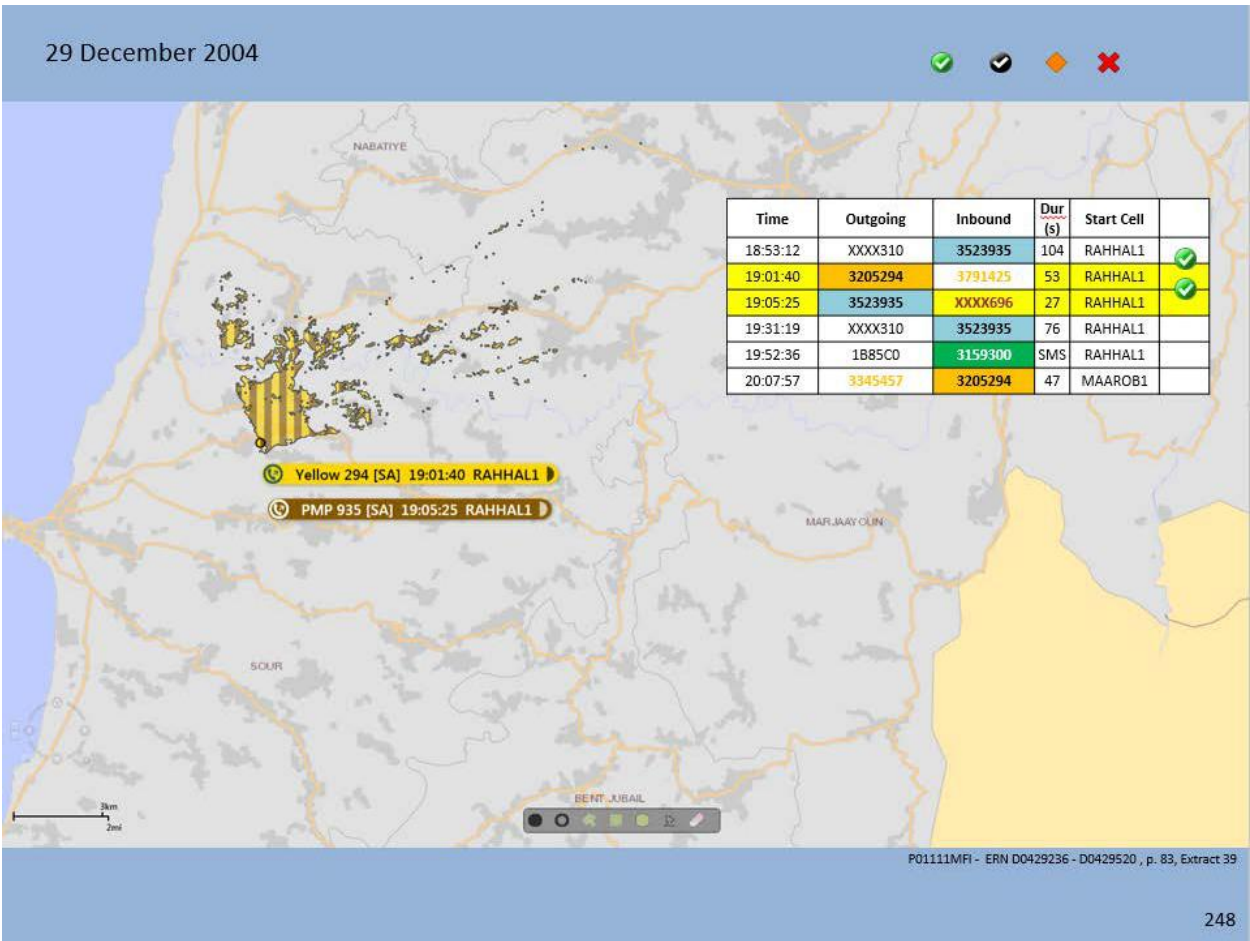

Exhibit P1935 (PowerPoint presentation on single user analysis, John Edward Philips), slide 248

3051. Mr Donaldson analysed a broader period shared between Yellow 294 and mobile 935, namely between 31 May 2004 and 7 January 2005,⁶⁰⁶⁰ whereas Mr Philips’s analysis spans from September 2004 to January 2005.⁶⁰⁶¹ Mr Donaldson gave evidence that there were 137 days on

⁶⁰⁵⁹ Andrew Donaldson, T. 24 August 2017, pp 38-39; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 494, annex D, p. 346. See also exhibit P2025.1 (Additional co-location presentation, Andrew Donaldson), slides 37-39.

⁶⁰⁶⁰ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 343-344, 375.

⁶⁰⁶¹ Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 14-15, 34-89, 203-206.

which the two mobiles were both used.⁶⁰⁶² On 163 occasions where the mobiles were used within ten minutes of each other, 52 per cent of the calls activated the same cell, 16 per cent activated cell towers less than one kilometre apart and another 16 per cent activated cell towers less than two kilometres apart.⁶⁰⁶³

3052. Mr Donaldson concluded that Yellow 294 moved in concert with mobile 935 on at least 135 of the 137 days.⁶⁰⁶⁴ In his report, he highlighted nine days of common movements of Yellow 294 and mobile 935, on 18-19, 25-26, 30 December 2004, 1, 3, and 5-6 January 2005, and illustrated these mobiles' travels from Harouf to Beirut on 19 December 2004, and from Keserwan, to the north of Beirut, to Harouf, in the south, on 26 December 2004.⁶⁰⁶⁵

3053. Mr Donaldson noted two potential inconsistencies.⁶⁰⁶⁶ On 18 August 2004 at 19:15:19 and 19:15:57, Yellow 294 activated AITAT2, south-east of Beirut, and one minute later, at 19:16:58, and then again at 19:18:35, mobile 935 used a cell mast 12.7 kilometres away in west Beirut, more specifically the CARACA2 cell.⁶⁰⁶⁷ However, at 19:21:53, the same mobile used RNAMAN3, which provided predicted best server coverage adjacent to AITAT2. Then, at 19:26:16, mobile 935 connected to MANSOU3.⁶⁰⁶⁸ The following map created in the electronic presentation of evidence software demonstrates these calls:

⁶⁰⁶² Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 348; Andrew Donaldson, T. 19 July 2017, pp 41-42.

⁶⁰⁶⁷ Andrew Donaldson, T. 19 July 2017, p. 51; exhibit P1259 (Call sequence table of ten numbers—Mr Ayyash), p. 251; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 351.

⁶⁰⁶⁸ Andrew Donaldson, T. 19 July 2017, pp 51-52, T. 20 July 2017, pp 62-63, T. 22 August 2017, pp 6-7; exhibit P1259, p. 251; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 351. *See also* exhibits P2108 (Maps of calls on 18 August 2004 by Yellow 294 and mobile 935), P2108.1 (Maps of calls on 18 August 2004 by Yellow 294 and mobile 935), p. 7.

Maps of calls on 18 August 2004 by Yellow 294 and mobile 935—exhibit P2108.1, p. 1

3054. According to Mr Donaldson, the distance between CARACA2 and RNAMAN3 could not be travelled in four minutes.⁶⁰⁶⁹ He could not explain these cell activations, but added that before it occurred, the two mobiles were using the same cell (MIKAEL3), and cells in close proximity (MIKAEL3 and HARA2) for calls made not more than 20 minutes apart.⁶⁰⁷⁰ As the azimuths of MANSOU3 and RNAMAM3 were generally facing each other in a rural and mountainous area, Mr Donaldson did not find these cell activations anomalous, but acknowledged that this determination falls within Mr Philips's expertise. Mr Philips, however, did not provide evidence about this specific occurrence.⁶⁰⁷¹

3055. Call data records of mobile 935 show a similar inconsistency on 13 November 2004, namely that mobile 935 appeared to have travelled 27 kilometres, the distance between two cell

⁶⁰⁶⁹ Andrew Donaldson, T. 19 July 2017, pp 52-53.

⁶⁰⁷⁰ Andrew Donaldson, T. 19 July 2017, pp 52-55, 57-58, T. 20 July 2017, pp 62-63; exhibit P1259, p. 250. *See also* exhibit P2108; exhibit P2108.1, pp 5-6.

⁶⁰⁷¹ Andrew Donaldson, T. 19 July 2017, pp 52-53, T. 22 August 2017, pp 6-7; exhibit P2108.1, p. 7. *See also* exhibit P2109 (Google earth maps including topography). Alfa did not provide the predicted best server coverage of MANSOU3, Andrew Donaldson, T. 22 August 2017, p. 7. As Mr Philips analysed calls between 30 September 2004 and 14 February 2005, he therefore did not testify on this anomaly.

masts, BAYDAR1 and HARA1, that it used for two calls five minutes apart from each other, at 18:57 and 19:02.⁶⁰⁷² Meanwhile, Yellow 294 used the HARA1 cell at 18:59:40.⁶⁰⁷³ Mr Donaldson could not explain these cell activations.⁶⁰⁷⁴ However, he demonstrated that the mobiles were using the same cells for close-in-time calls made some 20 minutes earlier and within minutes after this ostensible anomaly.⁶⁰⁷⁵

ii. Submissions

3056. The Prosecution submits that Mr Ayyash was the user of Yellow 294 from 29 May 2004 to 7 January 2005.⁶⁰⁷⁶ The primary method for attributing Yellow 294 to Mr Ayyash is through co-location analysis with mobile 935.⁶⁰⁷⁷ Other evidence supporting the attribution of the network mobiles to Mr Ayyash includes comparison of geographic profiles with the personal mobiles and handset analyses.⁶⁰⁷⁸

3057. The Prosecution argues that the pattern of use of Yellow 294 and mobile 935 shows a ‘striking correspondence’ to two known events in Mr Ayyash’s life. These are, first, that both mobiles activated cells providing coverage to Mr Ayyash’s workplace at the Markaba Civil Defence station only while he was stationed there and never thereafter.⁶⁰⁷⁹ And, second, that the mobiles were also used in the area and at the time of the BMW accident on 20 November 2004.⁶⁰⁸⁰

⁶⁰⁷² Andrew Donaldson, T. 19 July 2017, pp 53-54, T. 22 August 2017, p. 17; exhibit P1261, p. 76; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 351.

⁶⁰⁷³ Andrew Donaldson, T. 19 July 2017, pp 53-54; exhibit P1240, p. 47; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 351. *See also* exhibit P2110 (Maps of calls on 13 and 14 November 2004 by Yellow 294 and mobile 935), pp 3-4.

⁶⁰⁷⁴ Andrew Donaldson, T. 19 July 2017, p. 54.

⁶⁰⁷⁵ Andrew Donaldson, T. 19 July 2017, pp 55-56, T. 22 August 2017, p. 17; exhibit P1259, p. 305. *See also* exhibit P2110, pp 2-4. These close-in-times calls were made within three minutes and five minutes, respectively.

⁶⁰⁷⁶ Prosecution final trial brief, para. 267.

⁶⁰⁷⁷ Prosecution final trial brief, paras 210, 270-274.

⁶⁰⁷⁸ Prosecution final trial brief, para. 212.

⁶⁰⁷⁹ Prosecution final trial brief, paras 232, 271-274; Prosecution closing submissions, T. 12 September 2018, pp 97-99.

⁶⁰⁸⁰ Prosecution final trial brief, paras 271, 275-280; Prosecution closing submissions, T. 12 September 2018, pp 95, 97-99.

3058. The Ayyash Defence submits that the evidence cannot attribute mobile 935 to Mr Ayyash beyond reasonable doubt.⁶⁰⁸¹ Therefore, it argues, the co-location evidence did not establish that Mr Ayyash was the user of Yellow 294.⁶⁰⁸²

iii. Findings

3059. The subscriber information and the contact profile do not assist in identifying the user of Yellow 294. The mobile operated as part of a network.⁶⁰⁸³

3060. Yellow 294's geographical profile shared common features with that of Mr Ayyash's personal mobile 935. The Trial Chamber has found that he was its principal user between 31 May 2004 and 13 January 2005.

3061. The common geographical features are the most frequently connected cells around Mr Ayyash's registered residences in Hadath and Harouf, cells in Markaba when Mr Ayyash was employed there, and cells activated on 20 November 2004 in an area where Mr Ayyash had a car accident. However, some caution must be exercised here as the similarities shown in the two mobiles' most frequently used cells are based on partially available cell data.

3062. Mr Philips concluded that the two mobiles may have co-located or that the calls would not preclude co-location on 14 days between Friday 1 October 2004 and Tuesday 4 January 2005. The 17 instances of possible co-location on nine days favour, in the Trial Chamber's view, that the two mobiles had a single user. This is also supported by the eight pairs of calls that activated the same cells within five minutes, and the five pairs of calls using identical cells within ten minutes. Furthermore, Mr Donaldson's analysis also supports this conclusion.

3063. The calling patterns are also consistent with a single person using Yellow 294 and mobile 935. In particular, there were no contacts between the two mobiles and only one instance of an overlapping call on Tuesday 19 October 2004—where mobile 935 made an outgoing call while Yellow 294 was still on an ongoing call—for an overlapping period of 26 seconds.

⁶⁰⁸¹ See paras 2856-2861.

⁶⁰⁸² Ayyash Defence final trial brief, paras 670-671; Ayyash Defence closing submissions, T. 17 September 2018, pp 98-103, 116-118.

⁶⁰⁸³ See chapter VIII 'Nature and purpose of colour-coded mobile networks and Purple group of mobiles', (F) (7) 'Findings'.

3064. However, Mr Philips acknowledged that even a few instances of overlapping calls could be consistent with a single person using both mobiles, and the mobiles used the same cells for these calls. The odd cell activations on Wednesday 18 August and Saturday 13 November 2004 that Mr Donaldson noted do not appear as dislocation of the two mobiles. On both days, only one mobile alone, mobile 935, as opposed to two, activated distant cells within a short time. As such, these activations do not impact the single user analysis of Yellow 294 and mobile 935.

3065. The Trial Chamber is therefore satisfied that a single person used Yellow 294 and mobile 935 in their overlapping period of use. Based on the cumulative weight of the consistent handset use and consistent contact and geographic profiles, the Trial Chamber is also satisfied with Mr Donaldson's determination of Yellow 294's attribution period.

3066. The Trial Chamber has found that mobile 935's principal user from Sunday 1 August 2004 to Thursday 13 January 2005 was Mr Ayyash.⁶⁰⁸⁴ The number of possible co-locations, especially those that involved calls made within short periods, and or occurred outside Beirut, eliminates the possibility of any coincidence that someone else other than the principal user of mobile 935 used Yellow 294.

3067. The Trial Chamber therefore finds that the only reasonable inference based on the evidence is that Mr Ayyash was the user of Yellow 294 from Saturday 29 May 2004 to Friday 7 January 2005. It is therefore satisfied of this beyond reasonable doubt.

(c) Blue 322

3068. Blue 322, according to the amended consolidated indictment, was used by Subject 14 for preparations for the attack on Mr Hariri, including some surveillance.⁶⁰⁸⁵ The Prosecution's final trial brief, however, states that while Subject 14 was its user as of Thursday 6 January 2005, Mr Ayyash used it between Monday 18 October 2004 and Monday 27 December 2004.⁶⁰⁸⁶

⁶⁰⁸⁴ See sub-section (B) (1) (f) (iii) 'Findings'.

⁶⁰⁸⁵ Amended consolidated indictment, paras 15 (c), 18.

⁶⁰⁸⁶ Prosecution final trial brief, annex E, p. 2; Prosecution closing submissions, T. 11 September 2018, p. 31. *See also* exhibit P1936 (Expert report of John Edward Philips – Single user analysis in relation to Blue 322, Blue 324 and Blue 585), p. 3; John Edward Philips, T. 21 April 2017, pp 27, 42.

3069. To prove that Mr Ayyash was using it, the Prosecution relied on its co-location with his personal mobile 935 and Yellow 294.

i. Evidence

a. Subscriber details

3070. According to Touch's records, Blue 322 was activated on 4 October 2004 and deactivated on 5 October 2005.⁶⁰⁸⁷ The person whose name and identification documents were used on the subscriber form stated that he never purchased this SIM card.⁶⁰⁸⁸

b. Attribution period

3071. The Prosecution final trial brief states that while Subject 14 was its user as of 6 January 2005, Mr Ayyash used it between 18 October 2004 and 27 December 2004.⁶⁰⁸⁹ The Trial Chamber received evidence that Blue 322 was first used on 18 October 2004.⁶⁰⁹⁰ According to Mr Philips, the mobile became inactive after 27 December 2004, and until that date, it is consistent with having the same user as mobile 935 and Yellow 294.⁶⁰⁹¹

c. Single user analysis

3072. Blue 322 (18 October 2004 to 27 December 2004) shared attribution periods with Mr Ayyash's mobile 935 (31 May 2004 to 13 January 2005) and Yellow 294 (29 May 2004 to 7 January 2005), as well as Green 300 (30 September 2004 to 14 February 2005).⁶⁰⁹² The attribution period of Blue 322 does not overlap with that of Yellow 669, Blue 233 and Red 741.⁶⁰⁹³ The evidence on co-location of Blue 322 and Green 300 is analysed in paragraph 3161 below.⁶⁰⁹⁴

⁶⁰⁸⁷ Exhibit P1101, p. 1.

⁶⁰⁸⁸ Exhibit P467 (Subscriber documentation for Blue mobiles), ERN SI-0001710; exhibit P573 (Statement of Witness PRH090), paras 10-15; Witness PRH090, T. 2 September 2015, pp 80-81.

⁶⁰⁹⁰ *See* chapter VIII 'Nature and purpose of colour-coded mobile networks and Purple group of mobiles', (E) 'Blue network'.

⁶⁰⁹¹ John Edward Philips, T. 21 April 2017, pp 27, 42; exhibit P1936 (Expert report of John Edward Philips – Single user analysis in relation to Blue 322, Blue 324 and Blue 585), p. 3. Mr Philips also found it consistent with sharing a user with Green 300 during this period. This part of the evidence will be addressed below.

⁶⁰⁹² *See* sub-sections (B) (1) (f) (iii) 'Findings' and (B) (2) (b) (iii) 'Findings'.

⁶⁰⁹³ *See* sub-sections (B) (2) (a) (iii) 'Findings', (B) (2) (c) (iii) 'Findings' and (B) (2) (f) (iii) 'Findings'.

⁶⁰⁹⁴ *See* sub-section (B) (2) (e) (iii) 'Findings'.

3073. Mr Philips, after analysing, mid-trial, the possible co-location of Blue 322, Green 300, Yellow 294 and personal mobile 935, concluded:

Over the period 18th October to 27th December 2004, mobile 3067322 was found to be consistent with being used by the same user as mobiles 3159300, 3205294 and 3523935, and no exceptions were found when 3067322, and any other of the 3 aforementioned mobile phones, were precluded from being co-located.⁶⁰⁹⁵

Blue 322 and mobile 935

3074. Mr Philips analysed 36 pairs of calls in relation to Blue 322 and mobile 935 on 22 days. These days were: 18-23, 25, 27 October, 3, 5, 10, 17, 29 November, and 17-18, 21-27 December 2004.

3075. Mr Philips determined that 26 of the analysed pairs fell into the category of ‘could be co-located’ and the remaining ten ‘would not preclude co-location’.⁶⁰⁹⁶ The 26 pairs of calls falling into Mr Philips’s first category were separated by between one and 56 minutes. Five of these were within five minutes,⁶⁰⁹⁷ and six within ten minutes.⁶⁰⁹⁸

3076. As an example, the call sequence table extract and map below represent three pairings—calls 1 and 2, calls 2 and 3 and calls 4 and 5—of mobile 935 and Blue 322 with their cell activations on the afternoon of Wednesday 20 October 2004. In this example, Mr Philips concluded that the first two pairings could co-locate, while the third ‘does not preclude co-location’.

Expert report of John Edward Philips – Single user analysis in relation to Blue 322, Blue 324 and Blue 585—exhibit P1936, p. 83

Blue 322 and Yellow 294

3077. Mr Philips analysed 13 pairs of calls in relation to Blue 322 and Yellow 294 on ten days, namely on 19, 23, 25, 27 October, 3 November, 17, 22-23, 25 and 27 December 2004. He determined that seven of the analysed pairs fell in the category of ‘could be co-located’ and

qualified six as ‘would not preclude co-location’.⁶⁰⁹⁹ Possibly co-locating call pairs occurred one to 36 minutes apart, and the two mobiles connected to Alfa’s SFEIR2, MIKAEL2, ROUEIS2, HARA1 cells, and Touch’s Sfeir_A, Sfeir_B, Hai Kneisse_C cells.⁶¹⁰⁰

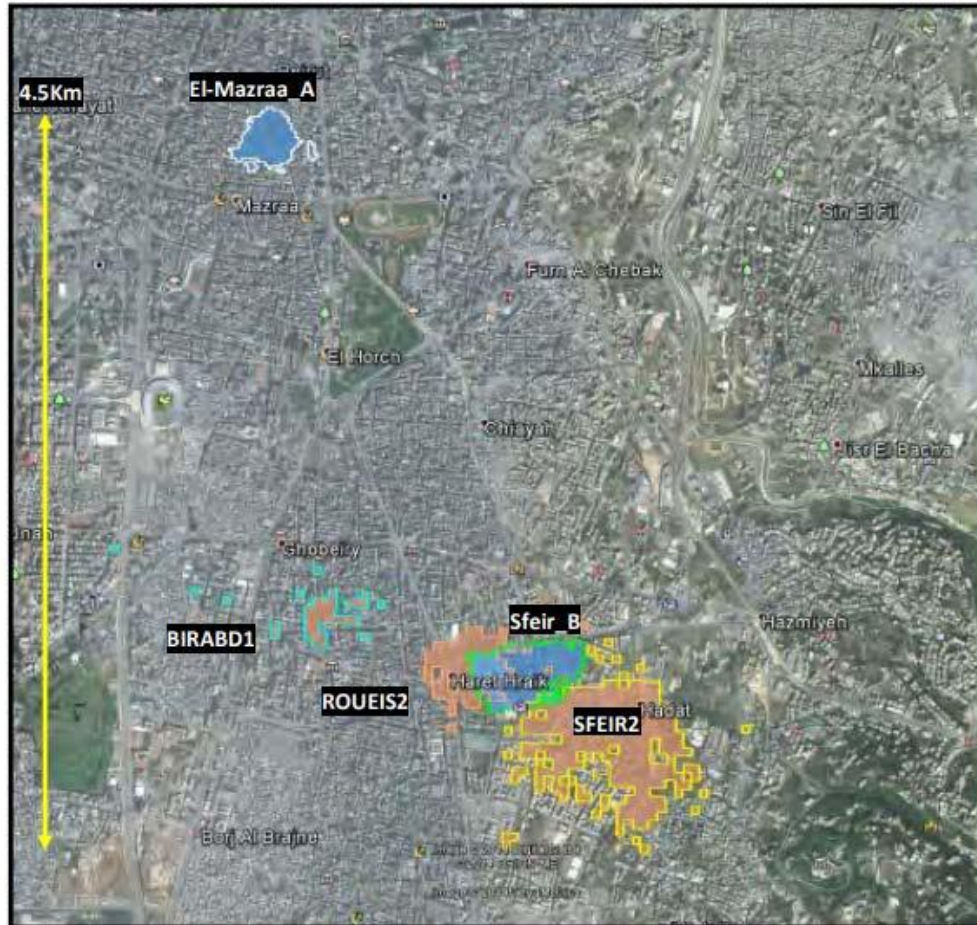

3078. The extract from Mr Philips’s expert report on single user analysis including Blue 322 illustrates four pairs of calls of the two mobiles made within 34 minutes. Mr Philips categorised calls 1 and 2 and calls 2 and 3 as ‘would not preclude co-location’ and calls 3 and 4 and calls 4 and 5 as ‘may be co-located’.⁶¹⁰¹

⁶⁰⁹⁹ Exhibit P1936 (Expert report of John Edward Philips – Single user analysis in relation to Blue 322, Blue 324 and Blue 585), pp 81, 88, 90-91, 95, 102, 106-107, 111, 114, 117.

⁶¹⁰⁰ Exhibit P1936 (Expert report of John Edward Philips – Single user analysis in relation to Blue 322, Blue 324 and Blue 585), pp 89-91, 95, 106-107, 111, 117.

⁶¹⁰¹ Exhibit P1936 (Expert report of John Edward Philips – Single user analysis in relation to Blue 322, Blue 324 and Blue 585), p. 106.

Expert report of John Edward Philips – Single user analysis in relation to Blue 322, Blue 324 and Blue 585—exhibit P1936, p. 106

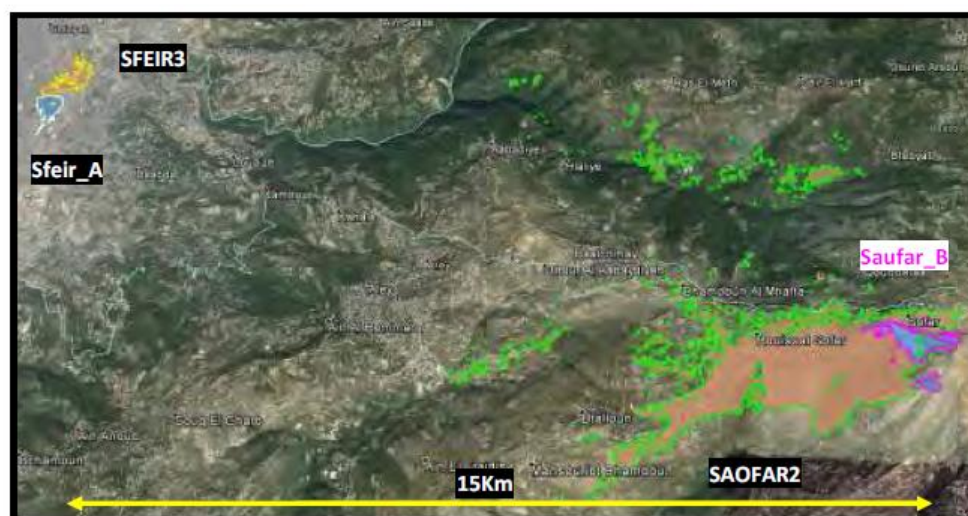

Overall pattern

3079. Blue 322 was never in contact with mobile 935 and Yellow 294 and there were no instances of overlapping calls.⁶¹⁰²

⁶¹⁰² Exhibit P1936 (Expert report of John Edward Philips – Single user analysis in relation to Blue 322, Blue 324 and Blue 585), pp 92-93, 100-101, 119-120.

3080. According to Mr Philips, mobile 935 and Blue 322 possibly co-located in areas of south Beirut and ‘well away from it’, which in his view showed ‘collective movement’.⁶¹⁰³ One example of this ‘collective movement’ is set out below and relates to both mobiles connecting first to SFEIR3/Sfeir_A and then to SAOFAR2/Saufar_B on Wednesday 3 November 2004.

03/11/2004	15:09:47	668	3523935	Voice	37	352505002269580	0411	SFEIR3

Expert report of John Edward Philips – Single user analysis in relation to Blue 322, Blue 324 and Blue 585—exhibit P1936, p. 94

3081. Mr Philips’s overall conclusion was that the instances of possible co-location of the three mobiles, Blue 322, mobile 935 and Yellow 294, were consistent with having the same user from Monday 18 October to Monday 27 December 2004. Following a ten-day gap in its activity, starting from January 2005, it stopped co-locating with mobile 935, and did not co-locate with Mr Ayyash’s two personal mobiles 091 and 170 and then had 18 calls with Blue 233, which is also attributable to Mr Ayyash.⁶¹⁰⁴

⁶¹⁰³ John Edward Philips, T. 21 April 2017, pp 35-37. See also exhibit P1935 (PowerPoint presentation on single user analysis, John Edward Philips), slides 235-238.

⁶¹⁰⁴ John Edward Philips, T. 21 April 2017, pp 27, 42; exhibit P1936 (Expert report of John Edward Philips – Single user analysis in relation to Blue 322, Blue 324 and Blue 585), pp 3-5.

ii. Submissions

3082. The Prosecution submits that Mr Ayyash was the user of Blue 322 from 18 October to 27 December 2004.⁶¹⁰⁵ It is an important mobile for the Prosecution's case regarding the early surveillance of Mr Hariri during this period.⁶¹⁰⁶

3083. As with the other network mobiles, the Ayyash Defence submits that the primary means for attribution of all network mobiles is co-location analysis, which it submits is unreliable. No other evidence links Mr Ayyash to the network mobiles. As such, attribution of the network mobiles is wholly dependent on the attribution of the personal mobiles. As the Prosecution failed in the attribution of personal mobiles, attribution to him of network mobiles also fails.⁶¹⁰⁷

iii. Findings

3084. The amended consolidated indictment does not plead that Mr Ayyash was using mobile Blue 322. It is attributed in the pleading document to Subject 14. Similarly, the Prosecutor's two pre-trial briefs do not connect this network mobile with Mr Ayyash. The Prosecution also did not refer to this mobile in opening the case against the first four Accused, or five months later in opening the case against Mr Merhi. Mr Donaldson's attribution report, however, attributes it, in a table, to Subject 14.⁶¹⁰⁸ He did not attribute it to Mr Ayyash in his report. No indictment was confirmed on the basis that Mr Ayyash was using this mobile at any time.

3085. The lengthy report of Mr Garry Platt, the Prosecution's expert on criminal telecommunications networks, refers throughout to 'S14' as its user, even during the period when the Prosecution's final trial brief asserts that Mr Ayyash was using it, namely, from Monday 18 October to Monday 27 December 2004.⁶¹⁰⁹

3086. Mr Philips did not analyse it in his first report as a mobile that was possibly co-locating with mobiles attributed to 'Suspect 1', namely, Mr Ayyash, that he completed on 19 October 2012, well after the case was indicted.⁶¹¹⁰ However, in a subsequent report that he completed mid-trial,

⁶¹⁰⁵ Prosecution final trial brief, para. 214.

⁶¹⁰⁶ Prosecution closing submissions, T. 12 September 20018, pp 100-101.

⁶¹⁰⁷ Ayyash Defence final trial brief, paras 670-671.

⁶¹⁰⁸ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 393

⁶¹⁰⁹ Exhibit P1783 (Expert report of Gary Platt – Chronology), *for example*, paras 79, 90, 92, 98, 102, 107, 110, 116, 122.

⁶¹¹⁰ Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash).

on 9 July 2014, he analysed possible co-location between mobiles Blue 322, Blue 324 and Blue 585 with those possibly used by Mr Ayyash, as ‘Suspect 1’.⁶¹¹¹ He concluded that the use of Blue 322 with Green 300, Yellow 294 and the personal mobile 935 was consistent with them having the same user, between 18 October and 27 December 2004.

3087. Yet at the end of the trial, despite the lack of formal notice of what is obviously a material fact that must be proved beyond reasonable doubt against an Accused person, the Prosecution submits that Mr Ayyash was using this mobile. Its final trial brief refers eight times to Mr Ayyash using it. It is unclear when, if at all, counsel for Mr Ayyash were put on formal notice of this change in the Prosecution’s case. Clearly they must have known of it from whenever the Prosecution disclosed Mr Philips’s new report to them, sometime mid-trial. They did not take the point of a lack of notice in their final trial brief. No application was made to amend the indictment.

3088. The Trial Chamber will therefore proceed to analyse this mobile only because evidence has been presented of its use and its use is pleaded in the amended consolidated indictment, but by Subject 14.

3089. The Trial Chamber, ultimately, has been unable to find that the conspiracy pleaded in count one of the amended consolidated indictment was in existence at the time when the Prosecution, at the end of the trial, was arguing that Mr Ayyash was using this mobile. The effect of this is that analysing Blue 322 will not affect the result of the case nor prejudice Mr Ayyash’s right to a fair trial through lacking formal notice of a slight, albeit material, change in the Prosecutor’s case against him.

3090. The subscriber information of Blue 322 is inconclusive in determining the mobile’s user. As a result, the only other relevant evidence before the Trial Chamber is its possible co-location with other mobiles.

3091. The attribution period of Blue 322—18 October until 27 December 2004—does not overlap with the attribution periods of six of the other nine mobiles that the Prosecution seeks to attribute to Mr Ayyash. These six mobiles are mobile 091, mobile 165, mobile 170, Blue 233,

⁶¹¹¹ Exhibit P1936 (Expert report of John Edward Philips – Single user analysis in relation to Blue 322, Blue 324 and Blue 585).

Yellow 669 and Red 741. Accordingly, any co-location analysis is limited to mobile 935, Yellow 294 and Green 300.

3092. There were a total of 26 possible co-locations between Blue 322 and mobile 935, and an additional seven with Yellow 294.⁶¹¹²

3093. Blue 322 and mobile 935 had five possibly co-locating call pairs made within five minutes and six made within ten minutes. The high number of possible co-locations weighs in favour of a finding of a single user, especially when considering that a significant number of the paired calls took place within ten minutes of one another and that the possible co-locations occurred both in areas of south Beirut and outside of it. The absence of dislocations during the attribution period also weighs in favour of a finding of a single user. There were no calls between these mobiles and no overlapping calls. This too is consistent with these mobiles having a single user.

3094. The number of instances when Blue 322 and Yellow 294 could have co-located—taken in isolation—does not persuade the Trial Chamber that the two mobiles had one user. However, considering its findings that Yellow 294 and mobile 935 had a single user, and Blue 322 also shared the user with mobile 935, the Trial Chamber can be satisfied that Blue 322 and Yellow 294 shared a user. The Trial Chamber has found that mobile 935's principal user and Yellow 294's user was Mr Ayyash. Accordingly, the user of Blue 322 was also Mr Ayyash.

3095. The evidence reveals that Blue 322 was not used before 18 October 2004, and had a ten-day gap in its activity after 27 December 2004. According to Mr Philips, Blue 322, Yellow 294 and 935 were consistent with having the same user from 18 October to 27 December 2004. From Thursday 6 January 2005 its cell activations were not consistent with that of mobile 935, nor of Mr Ayyash's following personal mobiles, 091 and 170.

3096. For these reasons, the Trial Chamber could be satisfied that Mr Ayyash used Blue 322 from Monday 18 October until Monday 27 December 2004. As noted above, this is outside the period for which the Trial Chamber has found the existence of the pleaded conspiracy. However, as the Prosecutor did not allege in the amended consolidated indictment that Mr Ayyash was using this mobile, the Trial Chamber has not made any findings to this effect against him.

⁶¹¹² There were also three possible co-locations with Green 300.

(d) Blue 233

3097. The Prosecutor pleads in the amended consolidated indictment that Blue 233 was used for preparations in the attack on Mr Hariri, including surveillance.⁶¹¹³ The Prosecution attributes Blue 233 to Mr Ayyash for a period of eight and half months in 2005, from Monday 10 January to Wednesday 21 September 2005.

i. Evidence

a. Subscriber details

3098. Blue 233 was a pre-paid Touch mobile that was activated on Thursday 16 December 2004 and deactivated on Friday 21 October 2005.⁶¹¹⁴ The named subscriber on the subscription form for Blue 233⁶¹¹⁵ stated that they did not use or recognise Blue 233, and that several details on the form were incorrect.⁶¹¹⁶

b. Attribution period

3099. The Prosecution attributes Blue 233 to Mr Ayyash from Monday 10 January to Wednesday 21 September 2005, namely the dates on which Blue 233's first and last calls were made.⁶¹¹⁷ This is based on Blue 233's consistent contact and geographic profiles throughout this period.⁶¹¹⁸

c. Contact profile

3100. Mr Donaldson found that 97 per cent of Blue 233's calls were with all the other Blue mobiles.⁶¹¹⁹ According to Mr Platt, 99 per cent of Blue 233's calls were with other Blue mobiles,

⁶¹¹³ Amended consolidated indictment, para. 15 (c).

⁶¹¹⁴ Andrew Donaldson, T. 23 August 2017, pp 27, 36; exhibit P467 (Subscriber documentation for Blue mobiles), ERN SI-1713, p. 3; exhibit P1101, p. 1; exhibit P1472 (Touch subscriber note for Blue 233); exhibit P2062.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), p. 157 (table of subscriber details).

⁶¹¹⁵ The named subscriber's ID was submitted with the subscription form. Exhibit P467, (ERN SI-1713), pp 3-4. *See also* exhibit P574 (Statement of Witness PRH702), para. 9.

⁶¹¹⁶ The witness recognised their signature on the form, but did not recognise the other handwriting on it. The address listed on the form was where they used to live, but not at the time when the form was signed. The first name listed on the form was not the witness's correct first name. Exhibit P574 (Statement of Witness PRH702), paras 9-10. *See also* exhibit P2062.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 381.

⁶¹¹⁸ Andrew Donaldson, T. 23 August 2017, p. 36; exhibit P2062.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 382-387.

⁶¹¹⁹ Andrew Donaldson, T. 23 August 2017, p. 28; exhibit P2062.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 384, 391, 393, 425. *See also* exhibit P2025, slide 216.

after excluding service communications.⁶¹²⁰ Blue 233 had contacts with two Touch service numbers.⁶¹²¹

3101. Blue 233's other contacts were two calls made to mobile 401⁶¹²² on 30 June 2005 and a call received from the Al-Hayat Hospital on 29 June 2005.⁶¹²³ According to Mr Donaldson, mobile 401 also had contacts with Mr Ayyash's landline 696 and his personal mobiles 165 and 935.⁶¹²⁴

d. Geographic profile

3102. Mr Donaldson explained that the five main cells activated by Blue 233 and mobiles 091 and 165 were the same, Sfeir_A, Nabatiyeh_C, Sfeir_B, Hadath_C and Hazmiyeh-II_B. The top four cells for Blue 233 were those of mobile 170. Blue 233's most frequently used cell towers were near Mr Ayyash's residences in Hadath and Harouf.⁶¹²⁵

⁶¹²⁰ Exhibit 796.1 (Network analysis report – updated 8 February 2018), para. 814.

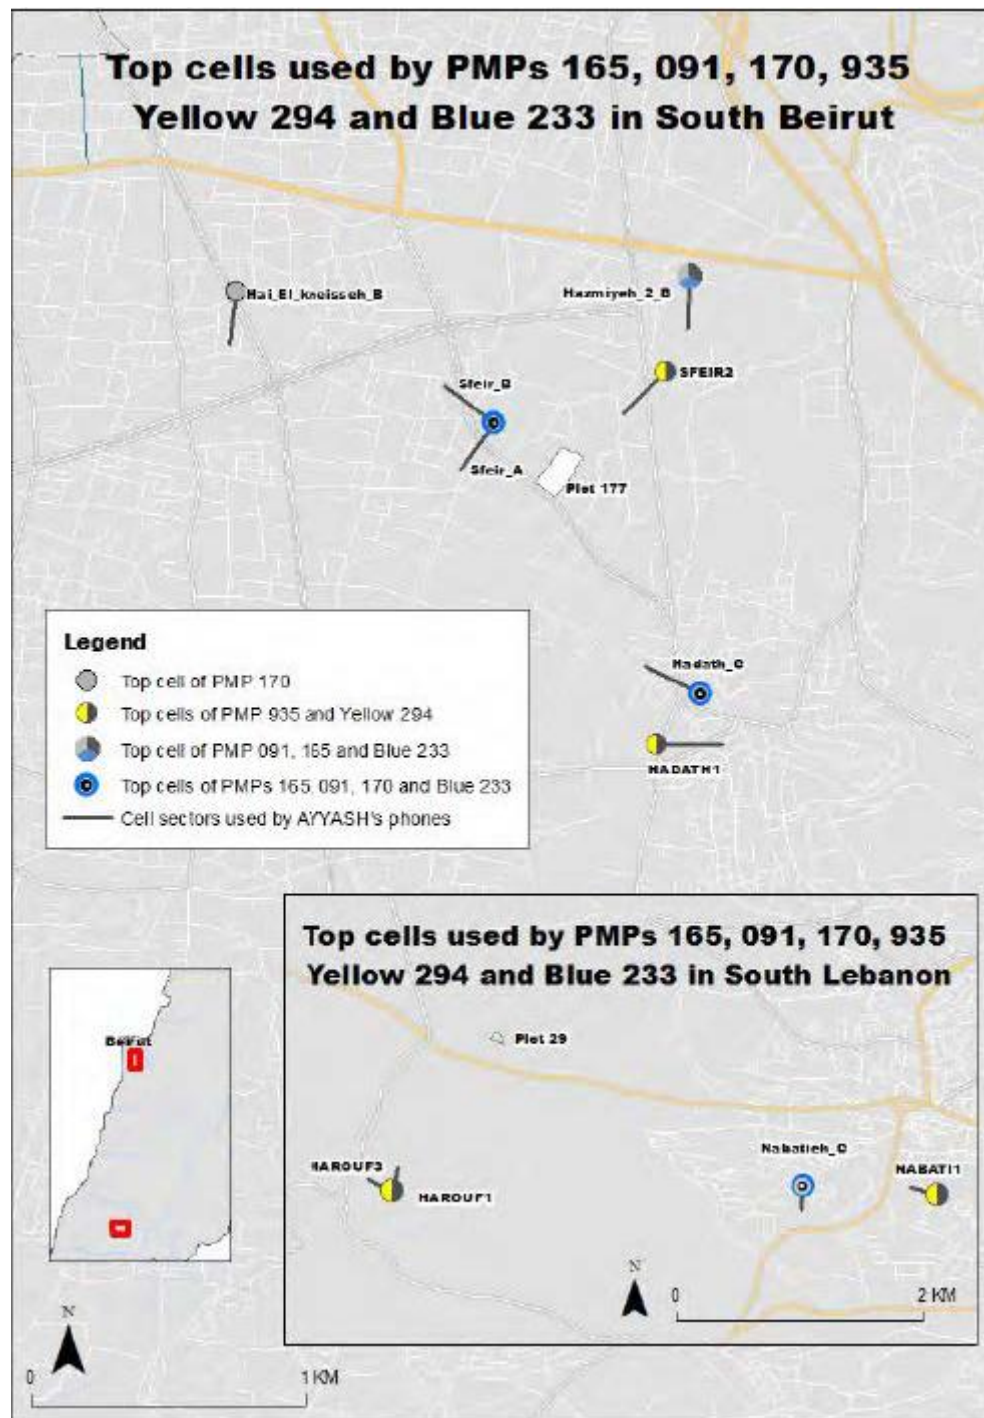

⁶¹²¹ Exhibit P1238, pp 1, 7, 9-12, 15-16, 20, 32; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 393.

⁶¹²² This number was subscribed under the name Faraj Saed Lakkis and also appeared in a company's customer database under this name. *See* para. 2686.

⁶¹²³ Andrew Donaldson, T. 23 August 2017, pp 28, 31; exhibit P1238, p. 26; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 392, 426. *See also* exhibit P1634 (Subscriber note for number 202). Mr Donaldson testified that there was no indication that the call from the hospital was a misdial, Andrew Donaldson, T. 23 August 2017, p. 31.

⁶¹²⁴ Andrew Donaldson, T. 23 August 2017, pp 29-30; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 392(b), 699. *See also* exhibit P2025, slide 217.

Attribution report of Andrew Donaldson regarding Mr Ayyash—exhibit P2026.2, p. 162

3103. A member of Mr Ayyash's family had scheduled appointments at Witness PRH078's office on 29 June and 23 July 2005. On both dates, Blue 233 activated a cell near this office. On 29 June 2005, within one minute of each other, mobile 170 and Blue 233 activated the same cell near this

office.⁶¹²⁶ Mr Donaldson testified that Blue 233 should be attributed to Mr Ayyash based on its geographic profile, its co-location with his three personal mobiles and its use near the office where Mr Ayyash's family member had scheduled appointments.⁶¹²⁷

e. Single user analysis

3104. Blue 233, used from Monday 10 January to Wednesday 21 September 2005, had overlapping attribution periods, according to the Prosecution, with Mr Ayyash's:

- personal mobile 091, attributed to him from 13 January to 6 March 2005;
- personal mobile 170, attributed to him from 7 January to 26 November 2005;
- personal mobile 935, for three days in its attribution period between 31 May 2004 and 13 January 2005;
- Green 300, whose attribution period is from 30 September 2004 to 14 February 2005; and
- Red 741, from 14 January to 14 February 2005.

3105. Differing attribution periods did not permit co-location analysis with mobile 165, Yellow 669 and Yellow 294.⁶¹²⁸ Co-location analysis of Blue 233 with Green 300 and Red 741 is set out elsewhere, in relation to the Green and Red network mobiles.

Blue 233 and mobile 091

3106. Mr Donaldson noted that Blue 233 was never in contact with mobile 091.⁶¹²⁹ There were three overlapping calls involving both mobiles, on 28 and 29 January and 9 February 2005.⁶¹³⁰

⁶¹²⁶ Andrew Donaldson, T. 23 August 2017, pp 33-36; exhibit P707 (Statement of Witness PRH078), ERNs 60305706-60305707; exhibit P707.1 (Interview of Witness PRH078), ERN 60137993; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 420, 431, 597-598, 604-605, 699. *See also* exhibit P2025, slides 222-224.

⁶¹²⁷ Andrew Donaldson, T. 23 August 2017, p. 28.

⁶¹²⁸ *See* sub-sections (B) (1) (d) (iii) 'Findings', (B) (2) (a) (iii) 'Findings' and B) (2) (b) (iii) 'Findings'.

⁶¹²⁹ Andrew Donaldson, T. 23 August 2017, pp 37-38; exhibit P1238; exhibit P1256; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 398, 429.

⁶¹³⁰ Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 187-188, 195-196, 204-205, 240, 276.

3107. On Friday 28 January 2005, the two mobiles used cells that were around six kilometres apart, at times which would preclude their co-location.⁶¹³¹ On this occasion, mobile 091, using the Airport-II cells, also dislocated from Green 300, Red 741 and mobile 170. This is analysed elsewhere.⁶¹³²

3108. For the overlapping calls on Saturday 29 January and Wednesday 9 February, Blue 233 and mobile 091 used the same cell, Mar Michael_B, or cells with some contiguous coverage, Haret_Hreik_A and Mic_Mcharrafieh, all of which were in the southern suburbs of Beirut. On this basis, Mr Philips found that the two may have co-located.⁶¹³³

3109. According to Mr Donaldson, Blue 233 and 091 were both active on 42 days.⁶¹³⁴ In his report Mr Donaldson demonstrated 12 days of the mobiles' possible co-location, on 13, 16, 22-23, 26-27, 29-30 January, 4-6 and 10 February 2005, and found no inconsistencies as to their potential co-location.⁶¹³⁵

3110. Mr Philips concluded that, based on his analysis of pairs of calls, Blue 233 may have co-located 29 times with mobile 091, the calls would not preclude co-location 61 times and the calls would preclude co-location three times; all three instances occurred on Friday 28 January 2005.⁶¹³⁶ Ten pairs of possibly co-locating calls used the same cells, such as Sfeir_A, Sfeir_B, Hadath_C, Nabatiyeh_C and Mar Michael_C, within five minutes and an additional nine pairs of these calls were made within 15 minutes.⁶¹³⁷ In his report, Mr Philips concluded that Blue 233 possibly co-located with mobile 091 in January and February 2005.⁶¹³⁸

⁶¹³¹ Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 187-188; exhibit P1259 (Call sequence table of ten numbers—Mr Ayyash), p. 350.

⁶¹³² The evidence regarding mobile 091's separation from Blue 233, and other mobiles, is summarised in sub-sections (B) (2) (f) 'Red 741' and (B) (2) (g) 'The 2005 Hajj', below.

⁶¹³³ Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 195-196, 204-205; exhibit P1259, pp 352, 359; John Edward Philips, T. 20 April 2017, pp 42-43.

⁶¹³⁴ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 397 (b).

⁶¹³⁵ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 408-419, annex D, pp 313-325. *See also* Andrew Donaldson, T. 24 August 2017, pp 46-51; exhibit P2025.1, slides 64-92.

⁶¹³⁶ John Edward Philips, T. 24 April 2017, pp 80-82; exhibit P1935 (PowerPoint presentation on single user analysis, John Edward Philips), slides 459, 463, 515.

⁶¹³⁷ This excludes overlapping calls. These occurred on 13, 18, 20-22, 27-28 January and 1 February 2005, exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 103, 114, 121-122, 141, 145, 150, 154, 156-157, 179-181, 183, 207, 216-217, 256-259.

⁶¹³⁸ Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 203, 275.

Blue 233 and mobile 170

3111. Mr Donaldson explained that it was important to first establish that mobile 170 belonged to Mr Ayyash before examining Blue 233, because both were used for a long period in 2005, thus providing a wide window for comparison.⁶¹³⁹

3112. Blue 233 was never in contact with mobile 170.⁶¹⁴⁰ On 3 February 2005, one pair of calls, an outgoing and an incoming, overlapped on the mobiles by a second.⁶¹⁴¹ The centres of the best server coverage of the cells activated by the mobiles were about 1.5 kilometres apart, which, according to Mr Philips, would not preclude the two from being co-located.⁶¹⁴²

3113. According to Mr Donaldson, Blue 233 and mobile 170 shared 137 days of use and of these, he demonstrated the mobiles' possible co-location on 12 days, on 10, 13, 16, 22-23, 26-27, 29 January, 4-6 and 10 February 2005, and found no inconsistencies regarding potential co-location.⁶¹⁴³

3114. Mr Philips concluded that, based on his analysis of pairs of calls, Blue 233 may have co-located 28 times with mobile 170, and the calls would not preclude co-location 54 times.⁶¹⁴⁴ Of the 28 possible co-locating calls, 11 occurred within five minutes of one another on cells Sfeir_A, Hai_El_Kneisseh_B, Hadath_C, Hadat_2_C, Nabatiyeh_C, Borj_Brajneh_2_C and Hazmiyeh_2_C.⁶¹⁴⁵ A further seven pairs of possibly co-locating calls activated within 15 minutes Hai_El_Kneisseh_B, Airport_B, Nabatiyeh_C, Sfeir_B and Hadath_C.⁶¹⁴⁶ In his report,

Mr Philips concluded that Blue 233 possibly co-located with mobile 170 in January and February 2005.⁶¹⁴⁷

3115. Mr Donaldson examined three instances where it appeared that Blue 233 and mobile 170 did not move in concert.

3116. On 12 June 2005, Blue 233 activated the cell Saadiyat_A (at the coast) at 13:57. Eight minutes later, mobile 170 activated the cell Ayn_Sikkeh_B (near the airport), 16 kilometres away, while according to Mr Donaldson, it was possible to travel between the two locations in just eight minutes. Also, some of the predicted cell coverage for Saadiyat_A was relatively close to that of Ayn_Sikkeh_B, namely one to two kilometres away.⁶¹⁴⁸ The two cells' predicted best server coverage is depicted in the map created by the Trial Chamber using the electronic presentation of evidence software, exhibit P592.1:

⁶¹⁴⁷ Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 203, 275.

Predicted best server coverage areas of Touch's Saadiyat_A and Ain_Sikkeh_B cells created from exhibit P592.1

3117. On 23 June 2005, Blue 233 activated the cell Nabatiyeh_C, in southern Lebanon at 14:21 and one minute later mobile 170 activated the cell Shamaa_A, at the coast, 36 or 37 kilometres

away.⁶¹⁴⁹ Mr Donaldson gave evidence that this was a dislocation and anomaly for Blue 233 and demonstrated it on the following map.⁶¹⁵⁰

Mapped calls for mobile 170 and Blue 233 on 23 June 2005—exhibit P2111, p. 4

3118. On 29 June 2005, Blue 233 activated the cell Marjayoun_C in southern Lebanon at 15:42. Blue 233 then activated the cell Sultaniyeh_A (24 kilometres away) at 15:43, one minute after mobile 170 also activated Sultaniyeh_C.⁶¹⁵¹ In Mr Donaldson's view, the Touch network was 'relatively sparse' in that area in 2005, and it was plausible that the mobiles were together.⁶¹⁵² These cells had small isolated pockets of coverage, as shown on the map below, that may have been only several kilometres apart:⁶¹⁵³

Blue 233 and mobile 935

3119. Blue 233 was never in contact with mobile 935.⁶¹⁵⁴ There were no overlapping calls involving both mobiles.⁶¹⁵⁵

3120. Mr Donaldson analysed the activity of Blue 233 and mobile 935 on 10, 12 and 13 January 2005 and found no inconsistencies as to their potential co-location.⁶¹⁵⁶

⁶¹⁵⁴ Exhibit P1238; exhibit P1261; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 398, 429; Andrew Donaldson, T. 23 August 2017, pp 37-38.

⁶¹⁵⁵ Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 204-205, 276.

⁶¹⁵⁶ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 407-408, 498, annex D, pp 313-314, 350; Andrew Donaldson, T. 24 August 2017, pp 42-43. *See also* exhibit P2025.1 (Additional co-location presentation, Andrew Donaldson), slides 48-50.

3121. Mr Philips concluded in his report that, based on his analysis of pairs of calls, Blue 233 may have co-located with mobile 935 one time,⁶¹⁵⁷ and the calls would not preclude co-location five times.⁶¹⁵⁸

Overall pattern

3122. Mr Philips highlighted in his testimony that on at least eight dates in January and February 2005, including on Monday 14 February 2005, Blue 233's movement was consistent with other mobiles attributable to Mr Ayyash.⁶¹⁵⁹ Mr Philips examined 181 pairs of calls involving Blue 233 and mobiles 091, 170 and 935 and found that, save for three pairs of calls on Friday 28 January 2005, when mobile 091 separated from Blue 233 using cells at the Beirut Airport, the mobiles possibly co-located or their co-location would not be precluded.⁶¹⁶⁰

3123. According to Mr Donaldson, from January to September 2005, Blue 233 and at least one other personal mobile attributable to Mr Ayyash were used on 145 days.⁶¹⁶¹ On at least 142 of these days, he found that Blue 233 moved together with another personal mobile attributed to Mr Ayyash.⁶¹⁶² Mr Donaldson calculated that, on these days, Blue 233 was used within ten minutes of mobiles 091, 170 or 935 on 233 times.⁶¹⁶³ Of these, 51 per cent were on the same cell tower or a cell likely located in the same building or position, 18 per cent were over two kilometres apart, 17 per cent were less than two kilometres apart and 14 per cent were less than one kilometre apart.⁶¹⁶⁴

⁶¹⁵⁷ This occurred on 11 January 2005, when mobile 935 activated Alfa's SABRA1/HARA3 and Blue 233 used Touch's Haret_Hreik_2_A. Both SABRA1 and HARA3 had overlapping best server coverage with Haret_Hreik_2_A. Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 96-97; exhibit P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review), pp 28-29.

⁶¹⁵⁸ John Edward Philips, T. 24 April 2017, pp 80-82; exhibit P1935, slide 515.

⁶¹⁵⁹ These dates are: 18, 24, 28 January, 2, 8, 11, 12 and 14 February 2005. Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 125-134, 155-162, 183-193, 208-211, 229-239, 248-267; 270-274; John Edward Philips, T. 21 April 2017, pp 40-63, 67-78, 81-85, 88-97, T. 24 April 2017, pp 6-16, 18-23, 30-32, 36-39, 47-62. *See also* exhibit P1935, slides 253-427, 436-440.

⁶¹⁶¹ Andrew Donaldson, T. 23 August 2017, pp 36-37; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 401, 429. *See also* exhibit P2025, slide 225.

⁶¹⁶² Andrew Donaldson, T. 23 August 2017, p. 38. However, in his report, Mr Donaldson stated that it was 145 days, exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 404. *See also* exhibit P2025, slide 225.

⁶¹⁶³ Andrew Donaldson, T. 23 August 2017, p. 38. *See also* exhibit P2025, slide 225.

⁶¹⁶⁴ Andrew Donaldson, T. 23 August 2017, pp 39-41. *See also* exhibit P2025, slide 226. By contrast, in his report, Mr Donaldson calculated it at 42 per cent in the same sector, 23 per cent less than one kilometre, 17 per cent less than

3124. In his report, Mr Donaldson closely analysed 13 days of possible co-location.⁶¹⁶⁵ Almost all involved cells in the southern suburbs of Beirut.⁶¹⁶⁶ Mr Donaldson prepared a list of 15 examples where Blue 233 had moved together with at least one personal mobile outside the southern suburbs—between 17 January and 13 July 2005—such as in Bachoura, on the coast road north of Beirut, in Nabatiyeh, west and north-west Beirut and Baalbek.⁶¹⁶⁷

3125. Mr Donaldson testified that after the attack on Monday 14 February 2005, Blue 233 did not go to a significant number of what he described as unusual locations. Instead, there were frequent trips between the southern suburbs of Beirut and the Nabatiyeh area during which Blue 233 and mobile 170 moved together.⁶¹⁶⁸ He noted that there were no co-locations with other relevant mobiles for Blue 233 near Quraitem Palace.⁶¹⁶⁹

ii. Submissions

3126. The Prosecution submits that the primary method for attributing Mr Ayyash's network mobiles, including Blue 233, is through co-location analysis with personal mobiles, here 091, 170 and 935.⁶¹⁷⁰ Other evidence supporting the attribution of the network mobiles includes comparing geographic profiles, analysing handsets and reviewing mobile behaviours *vis-à-vis* events in Mr Ayyash's life.⁶¹⁷¹ Hierarchical call flows also show Mr Ayyash used Blue 233 and other network mobiles.⁶¹⁷²

3127. More specifically, Blue 233 had near-exclusive communication with other Blue network mobiles. Blue 233 was active near Mr Ayyash's residences, activating the same cells as mobile 091, and near the office where Mr Ayyash's family member had appointments. Blue 233's use overlapped for 145 days with other mobiles attributed to Mr Ayyash, and Blue 233 moved with these mobiles on 142 days. Nearly every time that Blue 233 was used within ten minutes of another

two kilometres and 18 per cent over two kilometres, exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 401.

⁶¹⁶⁵ Andrew Donaldson, T. 23 August 2017, p. 41; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 407-419, annex D, pp 313-325.

⁶¹⁷² Prosecution final trial brief, para. 497, fn. 1009.

mobile attributable to Mr Ayyash, the two mobiles activated the same cell tower, or cell towers up to two kilometres apart. Finally, Blue 233 called mobile 401, which was in contact with Mr Ayyash's landline 696 and his personal mobiles 165 and 935.⁶¹⁷³

3128. The Ayyash Defence notes that Mr Donaldson found Blue 233, among other mobiles, was active near Witness 78's office. It submits that this mobile 'lack[s] any corresponding evidence' supporting its attribution to Mr Ayyash.⁶¹⁷⁴ The Ayyash Defence also generally challenges the attribution of network mobiles, including Blue 233, to Mr Ayyash.⁶¹⁷⁵

iii. Findings

3129. Similarly to the other network mobiles, the named subscriber for Blue 233 is not Mr Ayyash. However, the person listed as the subscriber neither used nor recognised it.

3130. The Trial Chamber has found that Blue 233 was part of a covert network of mobiles, and that using a false identity for a mobile subscription was a common feature of covert mobiles.⁶¹⁷⁶ The Trial Chamber therefore finds that the evidence of its named subscriber neither assists nor weighs against attributing this mobile to Mr Ayyash. The Trial Chamber instead primarily focused on the activity of Blue 233 and that of the two personal mobiles for which it has already found that Mr Ayyash was the principal user, namely mobiles 091 and 170.⁶¹⁷⁷

3131. The attribution periods of Blue 233 and a third personal mobile of Mr Ayyash's, mobile 935, overlapped only for four days, namely Monday 10 to Thursday 13 January 2005. Logically, the potential for close-in-time calls is diminished. Mr Philips found one occurrence of possible co-location. Mr Donaldson stated that during the four days shared there was no inconsistency regarding their potential co-location.⁶¹⁷⁸ On its own, this is insufficient to find that Blue 233 and mobile 935 had the same user. However, this is addressed further in analysing Green 300, as both

⁶¹⁷³ Prosecution final trial brief, paras 263-266; Prosecution closing submissions, T. 12 September 2018, pp 79, 92, 94, 96-97.

⁶¹⁷⁶ See chapter VIII 'Nature and purpose of colour-coded mobile networks and Purple group of mobiles', (E) 'Blue network'.

⁶¹⁷⁷ See sub-sections (B) (1) (e) (iii) 'Findings' and (B) (1) (g) (iii) 'Findings'.

⁶¹⁷⁸ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 407-408, annex D, pp 313-314.

mobile 935 and Blue 233 had substantial overlapping attribution periods with that Green network mobile. This is also consistent with assessing the totality of the evidence.

3132. Mr Philips and Mr Donaldson agreed that, based on the cell activations, Blue 233 consistently moved together with mobiles 091 and 170. Mr Philips's overall conclusion was that Blue 233 possibly co-located with mobiles 091 and 170 in January and February 2005. Of the 29 times it possibly co-located with mobile 091, it did so ten times within five minutes and nine times within 15 minutes.

3133. Mr Philips highlighted that for every pair of calls that he analysed, Blue 233 may have co-located with mobile 091, or the calls would not preclude co-location, except for one day, on Friday 28 January 2005, when mobile 091 was active at the airport. But even then, Blue 233 moved consistently throughout Beirut with the other mobiles, strengthening the inference that they had the same user. Mr Donaldson noted the same discrepancy on 28 January 2005 and observed that Blue 233's activity was otherwise consistent with the activity of the three personal mobiles throughout January and February 2005. The Trial Chamber addressed the dislocation of mobile 091 from the other mobiles elsewhere.⁶¹⁷⁹

3134. Mr Philips found that Blue 233's calls overlapped three times with those of mobile 091 and once with mobile 170. The Trial Chamber finds that these few examples of overlapping calls are of miniscule import in light of the number of call pairs⁶¹⁸⁰ analysed by Mr Philips. Further, as Mr Philips explained, even a few instances of overlapping calls could be consistent with a single person using both mobiles, particularly when the mobiles involved used the same cell, adjacent cells or cells with overlapping predicted best server coverages.⁶¹⁸¹ There were no contacts between Blue 233 and the two personal mobiles, which is also consistent with a single person using Blue 233 and mobiles 091 and 170.

3135. The activations of cells providing coverage to Mr Ayyash's two residences provides some limited support to his using these mobiles, notwithstanding the lack of direct evidence of when he

⁶¹⁷⁹ See sub-sections (B) (2) (f) 'Red 741' and (B) (2) (g) 'The 2005 Hajj'.

⁶¹⁸⁰ Mr Philips analysed 181 pairs of calls between Blue 233 and mobiles 091, 170 and 935. This also includes one close-in-time call pair with mobile 935.

⁶¹⁸¹ John Edward Philips, T. 19 April 2017, p. 97, T. 20 April 2017, p. 43; exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), p. 2.

was at either of them. Blue 233 shared the most frequently used cells with Mr Ayyash's other mobiles on the Touch network, mobiles 091 and 165, and partly with mobile 170. This may not be inconsistent with the mobiles sharing the same user, however, four of the five most frequently activated cells were in south Beirut, which is geographically not sufficiently distinctive to provide this comparison enough weight.

3136. The Trial Chamber finds that the close-in-time use of Blue 233 with Mr Ayyash's mobiles 170 and 091 provides a sufficient number of examples of possible co-locations—28 with mobile 170 and 29 with mobile 091—to eliminate the possibility that these mobiles did not have a common user. The high frequency of calls also produced a significant number of co-locating call pairs that occurred within five or 15 minutes. This means that the user of the mobiles activated the same cells with different mobiles within a short period, further excluding coincidental call patterns. The common movement of these mobiles further confirms a finding on a single user.

3137. Mr Philips's analysis of Blue 233's activity in relation to the activity of mobiles 091 and 170 covered a significant period, namely January and February 2005. It involved a high number of calls and movement of these mobiles throughout Beirut and Lebanon. Mr Philips highlighted these factors as helping to show that multiple mobiles had a single user.⁶¹⁸² The Trial Chamber finds this evidence compelling in proving that Mr Ayyash used Blue 233.

3138. Based on this, the Trial Chamber finds that Blue 233 and personal mobile 170 had a single user. Except for the afternoon of Friday 28 January 2005, the same person used Blue 233 and personal mobile 091. On the totality of the evidence, the only reasonable inference available is that the user of these mobiles was Mr Ayyash.

3139. Mr Donaldson concluded that Blue 233's attribution period started on 10 January and ended on 21 September 2005 consistent with its first and last calls, and consistency in its contact and geographic profiles, including connecting to a cell near a service provider's office when Mr Ayyash's wife had an appointment there in June and July 2005. However, neither he nor Mr Philips set out Blue 233's possible co-locations with personal mobiles 091 and 170 after Monday 14 February 2005. Mr Donaldson demonstrated two inconsistencies including Blue 233

⁶¹⁸² See sub-section (A) 'Single user analysis', above.

in the mobile's activity after this date: an actual dislocation between Blue 233 and mobile 170 on 23 June 2005, and a possible dislocation on 29 June 2005.

3140. Mr Philips found that Blue 233 possibly co-located and moved together with other mobiles, including personal mobiles, from Tuesday 11 January to Monday 14 February 2005. The Trial Chamber relied on Mr Philips's evidence to determine the period of Blue 233's attribution to Mr Ayyash. It need not analyse its use beyond that date.

3141. The Trial Chamber is therefore satisfied beyond reasonable doubt that Mr Ayyash was the user of Blue 233 from Monday 10 January to Monday 14 February 2005.

(e) Green 300

3142. The Prosecutor pleads that Mr Ayyash was using Green 300, from Thursday 30 September 2004 to Monday 14 February 2005, as one of three mobiles that were used to monitor and coordinate the preparation for the attack on Mr Hariri. This included the preparation of the false claim of responsibility and, on Monday 14 February 2005, monitoring the physical perpetration of the attack.⁶¹⁸³

3143. The Prosecution seeks to prove its attribution to Mr Ayyash through its co-location with his personal and network mobiles. Green 300 was only in contact with one other mobile, namely Green 023, which Mr Badreddine was using during the same period.

i. Evidence

a. Subscriber details

3144. Green 300 was an Alfa post-paid mobile which was activated and purchased on 13 August 2004 and deactivated on 23 August 2005.⁶¹⁸⁴ The subscription contract shows that the subscriber was Mr Chafik Abd al-Rahman Ayach, a student living on Hachem Street, in Beirut.⁶¹⁸⁵

⁶¹⁸³ Amended consolidated indictment, para. 15 (b).

⁶¹⁸⁴ Exhibit P405 (Alfa subscription of 18 Green mobiles), ERNs 60105088, 60105090; exhibit P792 (Alfa SIM cards' activation and deactivation dates).

⁶¹⁸⁵ Exhibit P405, ERN 60105088.

3145. The Trial Chamber, however, received evidence that the civil registration number appearing on the contract belonged to a person with a different name, deceased since 1979.⁶¹⁸⁶ The Lebanese Civil Status Directorate and the General Directorate of Political Affairs and Refugees had no records for Mr Ayach.⁶¹⁸⁷

b. Attribution period and contact profile

3146. The Prosecution attributes Green 300 to Mr Ayyash from Thursday 30 September 2004 to Monday 14 February 2005.⁶¹⁸⁸

3147. Mr Donaldson determined the start date of the period based on a change in the mobile's contact profile.⁶¹⁸⁹ The first call, an incoming Alfa service text message, appears on 17 August 2004 in the call sequence table of Green 300.⁶¹⁹⁰ For a week, it had no contact with other mobiles.⁶¹⁹¹ Then, from 25 August to 26 September 2004, it exchanged calls with four other Green network mobiles, followed by three days of inactivity.⁶¹⁹²

3148. From 30 September 2004, the only contact Green 300 had was with Green 023, save for four incoming voice calls⁶¹⁹³ and four Alfa service text messages.⁶¹⁹⁴ The two Green network mobiles limited their communication to voice calls only and never exchanged text messages.⁶¹⁹⁵ Green 300 was used with one handset from its first call on 17 August 2004, throughout the

attribution period, to its last at 11:58 on 14 February 2005, an hour before the attack on Mr Hariri.⁶¹⁹⁶

c. Geographic profile

3149. Mr Donaldson testified that Green 300's user could be determined from its geographic profile, namely the cell sectors most frequently activated, and its co-location and movement in concert with other mobiles independently attributable to Mr Ayyash.⁶¹⁹⁷

3150. According to Mr Donaldson, Green 300's most frequently activated cells were in the southern suburbs of Beirut. SFEIR2 was the most used for 17 calls, followed by HADATH1 which was activated for eight calls.⁶¹⁹⁸ It used both cells in daytime and at night.⁶¹⁹⁹ These cell towers provided the predicted best server coverage 'in the proximity' of Mr Ayyash's residence in Hadath, and were in the five most frequently used cells of Mr Ayyash's personal mobile 935 and Yellow 294.⁶²⁰⁰ The mobile also activated MRAICI2 and PORT2, in northern Beirut, and MIKAEL3 for five calls each.⁶²⁰¹ It only used these cells during the day, between 10:49 and 17:07.⁶²⁰²

⁶¹⁹⁶ Exhibit P1207; Andrew Donaldson, T. 23 August 2017, p. 66. A query in the Prosecution's structured query language (SQL) database showed that for the period of 1 September 2004 to the end of 2007, the handset with IMEI 352957009089150 was not used with any other number in Lebanon, exhibit P1967 (Witness statement of Christian Carnus regarding examination of Red and Green handset usage), paras 2 (b), 17, 22.

⁶¹⁹⁷ Andrew Donaldson, T. 23 August 2017, p. 65.

Slide 241 of Mr Donaldson's PowerPoint presentation—exhibit P2025

d. Single user analysis

3151. Based on a consolidated call sequence table, Mr Philips identified and analysed pairs of calls made within 60 minutes on Green 300 and any of the other relevant mobiles, Red 741, Blue 233, Blue 322, Yellow 294 and mobiles 935, 170 and 091, within their respective common periods of activity from 30 September 2004 to 14 February 2005.⁶²⁰³ The evidence related to the single user analysis of Green 300 and Red 741 is analysed below, at paragraphs 3207 to 3242.

⁶²⁰³ Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 14-15. Although the Prosecution did not plead in the amended consolidated indictment that Mr Ayyash used Blue 322, Mr Philips included it in his single user analysis. Exhibit P1936 (Expert report of John Edward Philips – Single user analysis in relation to Blue 322, Blue 324 and Blue 585), pp 2-5.

Green 300 and mobile 935

3152. Mr Philips analysed 25 pairs of calls with respect to Green 300 and personal mobile 935 on 17 days between 30 September 2004 and 13 January 2005, when they were active together.⁶²⁰⁴ Mr Philips concluded that for ten pairs of calls, Green 300 and mobile 935 could be co-located.⁶²⁰⁵ Of these, two pairs occurred within five minutes of the calls activating identical cells, MEA1 and SFEIR2.⁶²⁰⁶ The time lapse between an additional three pairs of calls was between five and 15 minutes.⁶²⁰⁷ For these calls, the mobiles activated MHABI1, SFEIR2 and PORT1.⁶²⁰⁸ The longest time between a pair of calls within this category was 37 minutes with both mobiles activating SFEIR2.⁶²⁰⁹

3153. Mr Philips determined that 15 pairs of calls fell in the category of ‘would not preclude co-location’.⁶²¹⁰ Some of these cell activations occurred away from the southern suburbs of Beirut, on MHABI1 in south Lebanon, near the border with Israel, on MEA1 near the Beirut airport, activating PORT1 in north Beirut and on RAHHAL1 in south Lebanon.⁶²¹¹ Both Mr Philips and

⁶²⁰⁴ These days were 30 September, 1, 4, 7, 9, 11, 13, 19-20, 28 October, 10 November, 20, 23, 27-29 December 2004 and 12 January 2005. Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 34, 42-44, 47, 50-52, 54-56, 64, 67, 75, 78-80, 83, 100, 280-281; exhibit P1259 (Call sequence table of ten numbers—Mr Ayyash), pp 282-334. *See also* exhibit P1935 (PowerPoint presentation on single user analysis, John Edward Philips), slides 512, 514-515.

⁶²⁰⁵ These pairs of calls occurred on 9, 11, 13, 20, 28 October, 10 November, 23, 28-29 December 2004 and 12 January 2005. For these calls the two mobiles used MHABI1, SFEIR2, MIKAEL2, MEA1, PORT1, RAHHAL1 and HAROUF3. John Edward Philips, T. 21 April 2017, pp 27-28; exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 47, 50-51, 54, 56, 64, 75, 79-80, 83, 100; exhibit P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review), pp 18, 20-21, 24, 29.

⁶²⁰⁶ On 28 October and 10 November 2004, exhibit P1259, pp 299, 303. These exclude an overlapping call on 20 October 2004.

⁶²⁰⁷ On 9, 13 October and 28 December 2004, exhibit P1259, pp 288, 291, 326.

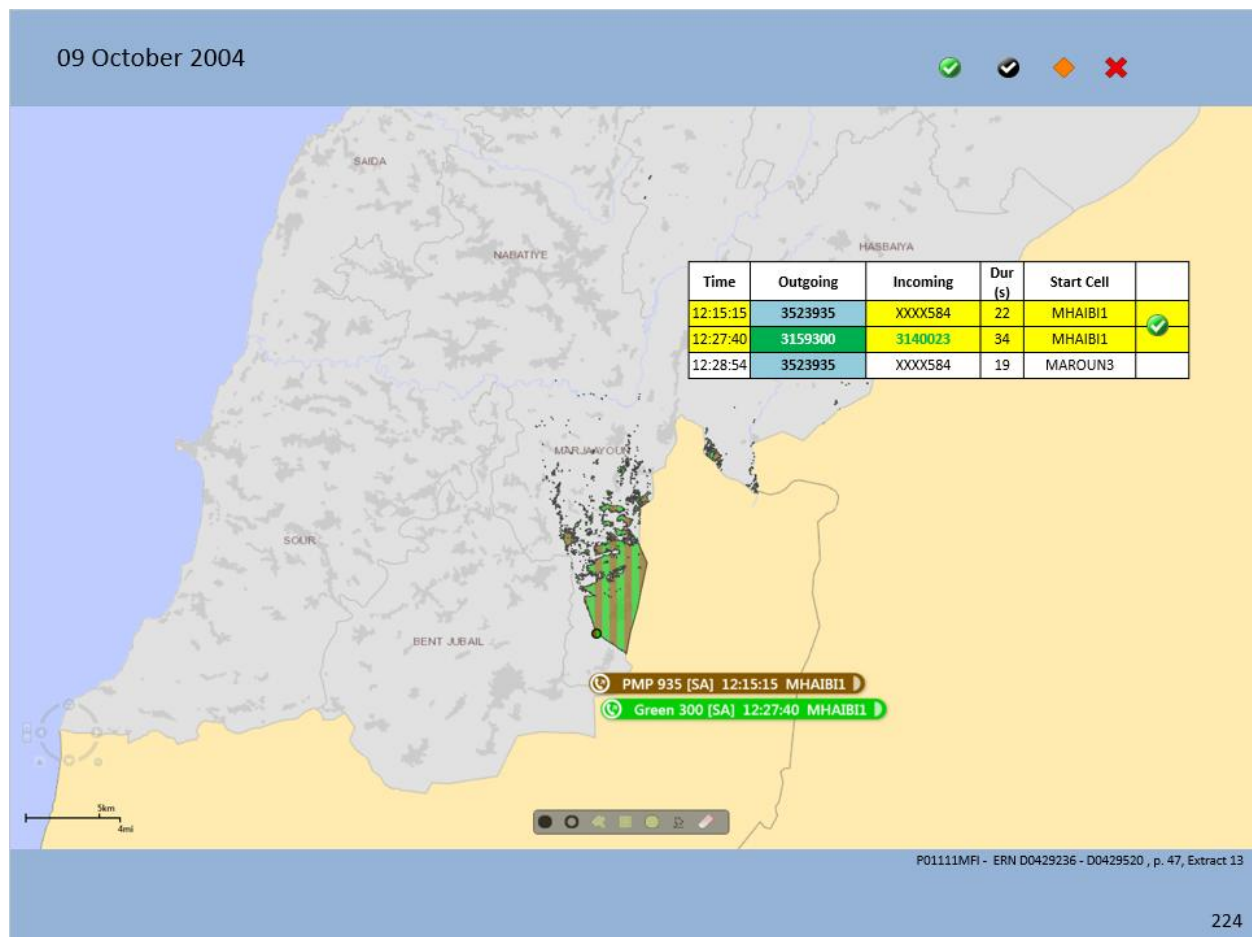

⁶²⁰⁸ Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 47, 51, 79-80; exhibit P1259, pp 288, 291, 326.

⁶²⁰⁹ On 23 December 2004, exhibit P1259, p. 324.

⁶²¹⁰ John Edward Philips, T. 21 April 2017, pp 27-32, T. 24 April 2017, p. 82; exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 34, 42-44, 47, 50-52, 54-56, 64, 67, 75, 78-80, 83, 100, 280-281; exhibit P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review), pp 18, 20-21, 24-25, 29; exhibit P1939 (Statement of Helena Habraken), paras 8-13. *See also* exhibit P1935, slides 225-227, 514-515.

⁶²¹¹ Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 47, 56, 78-80, 83; John Edward Philips, T. 21 April 2017, pp 27-32, 39-40; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 480, 485, 493-494, annex D, pp 331, 336, 345-346. *See also* exhibit P1939 (Statement of Helena Habraken), paras 8-13; exhibit P1935, slides 223, 250. Yellow 294 also co-located with Green 300 when using PORT1 and RAHHAL1. Mr Philips demonstrated through cell activations in south Lebanon that on 9 October 2004 Yellow 294 moved in concert in a northerly direction with mobile 935, and the two activated the same cell, NABATI1, for calls one minute apart. John Edward Philips, T. 21 April 2017, pp 33-34; exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), p. 49; exhibit P1259, p. 289. *See also* exhibit P1935, slides 229-233.

Mr Donaldson demonstrated the possible co-location of Green 300 with mobile 935 activating Alfa's MHABI1 cell near the Israeli border, and mobile 935's movement in tandem with Yellow 294 to the area from Alfa's HAROUF and NABATI cells.⁶²¹² The following map is from Mr Philips's slide presentation depicting the mobiles' co-location on 9 October 2004 in the predicated best server coverage area of MHABI1:

*Exhibit P1935 (PowerPoint presentation on single user analysis, John Edward Philips),
slide 224*

⁶²¹² John Edward Philips, T. 21 April 2017, pp 27-32; Andrew Donaldson, T. 24 August 2017, pp 26-29; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 480, annex D, p. 331; exhibit P1939 (Statement of Helena Habraken), paras 8-13. *See also* exhibit P1935, slides 220-227; exhibit P2025.1 (Additional collocation presentation, Andrew Donaldson), slides 2-9.

3154. On 20 October 2004, Green 300 and mobile 935 had incoming calls at 12:27 and 12:28 which overlapped for 27 seconds, but the two mobiles were using the same cell, MIKAEL2.⁶²¹³

Green 300 and mobile 091

3155. Green 300 had no overlapping calls with mobile 091 during their common period of activity, namely from 13 January to 14 February 2005.⁶²¹⁴

3156. Mr Philips identified ten pairs of calls for Green 300 and personal mobile 091 on seven days within this period.⁶²¹⁵ Mr Philips concluded that for four of these pairs the two mobiles activated cells with overlapping predicted best server coverage, such as PORT2 and HQ_B, SFEIR2 and Sfeir_B, MEA1 and Ouzaii-II_A, and therefore possibly co-located.⁶²¹⁶ He categorised four pairs as ‘would not preclude co-location’.⁶²¹⁷

3157. Mr Philips observed an anomaly with respect to mobile 091 and excluded its co-location with Green 300 and the other mobiles, Blue 233, Red 741 and mobile 170, for a period between 13:11 and 15:02 on 28 January 2005.⁶²¹⁸

⁶²¹³ Exhibit P1259, p. 295; exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), p. 57.

⁶²¹⁴ Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 204-205, 276; exhibit P1259, pp 334-364.

⁶²¹⁵ These days were 17-18, 20, 24, 28 January, 8 and 11 February 2005. Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 124, 126-128, 130, 142, 161-162, 187, 189, 236, 256; exhibit P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review), pp 31-32, 34; exhibit P1259, pp 337-338, 341, 345, 350, 359, 361. This is the Trial Chamber’s own calculation based on Mr Philips’s expert reports, exhibits P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review). Mr Philips calculated nine close-in-time pairs of calls for the two mobiles, exhibit P1935, slide 514.

⁶²¹⁶ On 18 and 24 January and 11 February 2005. John Edward Philips, T. 21 April 2017, pp 46, 49-50, 69, 96. *See also* exhibit P1935, slides 265-266, 315, 376.

⁶²¹⁷ Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 124, 126-128, 130, 142, 161-162, 187, 189, 236, 256; exhibit P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review), pp 31-32, 34. *See also* exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 501.

Green 300 and mobile 170

3158. Mr Philips analysed seven pairs of calls for Green 300 and mobile 170 on five days.⁶²¹⁹ He found that for two pairs of calls, made within 31 and 48 minutes, the two mobiles may have co-located on cells with overlapping predicted best server coverage, Alfa's SFEIR2 and Touch's Sfeir_A, and Alfa's HADATH1 and Touch's Hadath_C,⁶²²⁰ and their co-location would not be precluded for five calls.⁶²²¹ Overlapping calls did not occur between Green 300 and mobile 170.⁶²²²

Green 300 and Yellow 294

3159. Mr Philips analysed 18 pairs of calls made on Green 300 and Yellow 294 on 11 days from 30 September 2004 to 7 January 2005.⁶²²³ The two mobiles used identical cells for seven pairs of calls, five of which occurred within five minutes using SFEIR2, HADATH3, ROUEIS3, GHOBAl1 and PORT1, and therefore could be co-located, according to Mr Philips.⁶²²⁴

⁶²¹⁹ On 11, 15, 18, 25 January and 13 February 2005. Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 92-94, 114-115, 126-127, 268-269; exhibit P1259, pp 333, 336, 338, 346, 363-364. Mr Philips's slide presentation on single user analysis, exhibit P1935 on slide 514, erroneously shows that he analysed nine close-in-time pairs of calls for Green 300 and personal mobile 170, however based on his reports, exhibits P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash) and P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review), the Trial Chamber calculated seven.

⁶²²⁰ On 11 January and 13 February 2005.

⁶²²¹ John Edward Philips, T. 24 April 2017, p. 82; exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 92-94, 114-115, 126-127, 268-269; exhibit P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review), pp 31-32. *See also* exhibit P1935, slides 514-515.

⁶²²² Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 204-205, 276-277; exhibit P1259; John Edward Philips, T. 24 April 2017, pp 50-55; exhibit P1935, slides 459, 467, 471.

⁶²²³ Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 35, 37-39, 42, 45, 65, 67, 69-70, 77-80, 83, 85; exhibit P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review), pp 21-22. Mr Philips's slide presentation on single user analysis, exhibit P1935 on slide 514, erroneously shows that the overall number of analysed call pairs of the two mobiles was 16.

⁶²²⁴ These days were: 30 September, 1 October, 10 November, 22 and 28 December 2004. Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 35, 37, 42, 65, 70, 79-80; exhibit P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review), p. 21. The five pairs of calls made within five minutes occurred on 30 September, 1 October, 10 November, 22 and 28 December 2004, exhibit P1259, pp 282-283, 303, 323, 326.

3160. Mr Philips found that for the remaining 11 pairs of calls the time and distance separating the two mobiles would not preclude their co-location.⁶²²⁵ There were no overlapping calls between them.⁶²²⁶

Green 300 and Blue 322

3161. Mr Philips analysed three pairs of calls for Green 300 and Blue 322 on a total of three days, 19 October, 23 December and 27 December 2004. Mr Philips determined that the three analysed pairs could mean that the mobiles co-located.⁶²²⁷ For these pairs the mobiles used cells with overlapping predicted best server coverage, such as Touch's Sfeir_A and Sfeir_B, and Alfa's SFEIR2 and SFEIR3.⁶²²⁸ He explained that the two mobiles were never in contact with each other and had no calls that overlapped in time.⁶²²⁹

Green 300 and Blue 233

3162. Green 300 had 20 pairs of close-in-time calls, meaning they were made within 60 minutes, with Blue 233.⁶²³⁰ On six days, for 11 pairs of calls, Green 300 and Blue 233 used cells with some overlapping best server coverage, such as PORT3 and CoastRoad_C, MIKAEL3 and Mar Michael_B, SIMON2 and Ouzai_2_A. This meant that the two mobiles possibly co-located.⁶²³¹ Of these, four pairs of calls occurred within five minutes,⁶²³² and three pairs of calls within 15 minutes.⁶²³³ The longest time lapse between these pairs was 26 minutes.⁶²³⁴ The mobiles'

⁶²²⁵ Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 38-39, 42, 45, 67, 69, 77-78, 83, 85; exhibit P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review), p. 22.

⁶²²⁶ Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 36, 57, 66, 86, 204-205.

⁶²²⁷ Exhibit P1936 (Expert report of John Edward Philips – Single user analysis in relation to Blue 322, Blue 324 and Blue 585), pp 80, 109-110, 117. Mr Philips's PowerPoint presentation on single user analysis, exhibit P1935 on slide 514, is incorrect with respect to the number of analysed call pairs of the two mobiles.

⁶²²⁸ Exhibit P1936 (Expert report of John Edward Philips – Single user analysis in relation to Blue 322, Blue 324 and Blue 585), pp 80, 109-110, 117.

⁶²²⁹ Exhibit P1936 (Expert report of John Edward Philips – Single user analysis in relation to Blue 322, Blue 324 and Blue 585), pp 92-93, 100-101, 119-120.

⁶²³⁰ Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 114, 124, 126-130, 165, 139-142, 165-166, 193, 199-202, 204-205, 256-257, 276; exhibit P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review), pp 31-34, 39.

⁶²³¹ These days were 18-19, 25, 28, 31 January and 11 February 2005. Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 128-129, 135, 139-140, 165-166, 193, 199-200, 256-257; exhibit P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review), pp 33, 39.

⁶²³² On 19, 28 and 31 January 2005, exhibit P1259, pp 340, 351, 353.

⁶²³³ On 18, 25 January and 11 February 2005, exhibit P1259, pp 338, 346, 361.

⁶²³⁴ On 11 February 2005, exhibit P1259, p. 361.

geographic location for the remaining nine pairs of calls would not preclude that they co-located, according to Mr Philips.⁶²³⁵

3163. Mr Philips considered the presence and movement of Green 300, Blue 233 and mobile 091 in north Beirut, near the St Georges Marina, in the afternoon on 18 January 2005.⁶²³⁶ Within 20 minutes the three mobiles used cells which had overlapping predicted best server coverage or were adjacent, Alfa's PORT2 and PORT3, and Touch's CoastRoad_B and CoastRoad_C.⁶²³⁷ These are call pairs 3-4 and 5-6 in the call sequence table extract below. Mr Philips concluded that, on these occasions, Green 300 possibly co-located with Blue 233 and mobile 091, and the other cell activations would not preclude the mobiles' co-location.⁶²³⁸

⁶²³⁵ Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 114, 124, 126-130, 140-142, 201-202; exhibit P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review), pp 31-34.

Map 01

*Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash—
exhibit P1111, p. 128*

3164. Mr Donaldson's evidence was that Alfa's PORT and Touch's CoastRoad cell towers were 100 metres apart. He concluded that the above sequence of calls demonstrates common movement of Green 300 with Blue 233 and mobile 091 in an area not frequented by the personal mobile.⁶²³⁹

⁶²³⁹ Andrew Donaldson, T. 24 August 2017, pp 43-46; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 501, annex D, p. 354. See also exhibit P2025.1, slides 57-63.

3165. On Friday 11 February 2005, for just over two hours, Green 300 used overlapping cells with Blue 233 and mobile 091. Mr Philips provided evidence that save for the last call pair in the following call sequence table extract the respective mobiles, including Green 300 and Blue 233, possibly co-located.⁶²⁴⁰ The map shows the predicted best server coverage areas of the activated cells, Touch's Ouzaii_II_A and Sfeir_A, and Alfa's MEA1 and SIMON2.

*Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash—
exhibit P1111, p. 256*

⁶²⁴⁰ Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 256-257; John Edward Philips, T. 21 April 2017, pp 96-97. See also exhibit P1935, slides 373-380.

3166. The expert did not identify overlapping calls between the two mobiles but noted that they operated on different networks, and for two calls received by these mobiles on 18 January 2005, while one used Alfa's PORT 2 and the other Touch's CostRoad_A, the time adjustment on any of the networks might change this conclusion.⁶²⁴¹

Overall pattern

3167. Mr Philips analysed 83 pairs of calls over four and a half months involving Green 300, personal mobiles 091, 170 and 935, and network mobiles Yellow 294, Blue 322 and Blue 233.⁶²⁴² For 37 pairs of calls Green 300 possibly co-located with one of the other mobiles,⁶²⁴³ mostly with Blue 233 (11 times) and mobile 935 (ten times). Mr Philips illustrated common movements of these mobiles on six days, 9 October, 29 December 2004, 18, 24 January, 11 and 14 February 2005.⁶²⁴⁴ On 28 January 2005, there were two pairs of calls when Green 300 did not co-locate with mobile 091, which is summarised in detail below.⁶²⁴⁵

3168. According to Mr Donaldson, from 30 September 2004 to 14 February 2005, Green 300 and one of the other mobiles attributable to Mr Ayyash, namely personal mobiles 935, 091, 170, Yellow 294 and Blue 233, were used on 43 days.⁶²⁴⁶ On these days, Green 300 was used within

⁶²⁴¹ Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 204-205.

⁶²⁴² This is on the Trial Chamber's own calculation of analysed call pairs of Green 300, mobile 935, 091, 170, Yellow 294, Blue 322 and Blue 233 based on Mr Philips's expert reports, exhibits P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), P1936 (Expert report of John Edward Philips – Single user analysis in relation to Blue 322, Blue 324 and Blue 585), and P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review).

⁶²⁴³ Ten times with mobile 935, exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 47, 50-51, 54, 56, 64, 75, 79-80, 83, 100; exhibit P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review), pp 20-21, 24, 29; four times with mobile 091, exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 126-130, 161-162, 256; twice with mobile 170, exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 94, 268-269; seven times with Yellow 294, exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 35, 37, 42, 65, 70, 79-80, 83; three times with Blue 322, exhibit P1936 (Expert report of John Edward Philips – Single user analysis in relation to Blue 322, Blue 324 and Blue 585), pp 80, 109-110, 117; 11 times with Blue 233, exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 129, 135, 139-140, 165-166, 193, 199-200, 256-257, exhibit P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review), pp 33, 39.

⁶²⁴⁴ John Edward Philips, T. 21 April 2017, pp 40-63, 67-78, 81-85, 88-97, T. 24 April 2017, pp 6-16, 18-23, 30-32, 36-39, 47-62. *See also* exhibit P1935 slides 253-427, 436-440.

⁶²⁴⁵ Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 187-189, 204.

⁶²⁴⁶ Andrew Donaldson, T. 23 August 2017, pp 71-72; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 466. Mr Donaldson did not analyse the call and geographic patterns of the other Blue network mobile, Blue 322.

ten minutes of these mobiles 30 times.⁶²⁴⁷ Of these, 30 per cent were on the same Alfa cell sector, 40 per cent of the activations were on cell towers less than one kilometre apart, ten per cent were on cell towers more than one but less than two kilometres apart and ten per cent of the activations occurred on cell towers that were more than two but less than five kilometres apart.⁶²⁴⁸

3169. In his report, Mr Donaldson highlighted these mobiles' possible co-locations on 33 days between 30 September 2004 and 13 February 2005.⁶²⁴⁹ He concluded that the mobiles moved in concert across Lebanon, but mainly within Beirut, with the exception of a limited period in the afternoon on 28 January 2005, when mobile 091 separated from the other mobiles.⁶²⁵⁰ Notwithstanding this dislocation, Mr Philips and Mr Donaldson found the evidence on Green 300 consistent with having the same user as the other mobiles.⁶²⁵¹

ii. Submissions

3170. The Prosecution submits that Mr Ayyash was the user of Green 300 from 30 September 2004 to 14 February 2005 and that the name under which it was subscribed does not exist in Lebanon.⁶²⁵²

3171. The most frequently activated cell tower of Green 300, SFEIR2, provided predicted best server coverage for Mr Ayyash's residence in Hadath.⁶²⁵³ It is also the most frequently activated cell tower of mobiles 935 and Yellow 294. Cell towers in north Beirut commonly used by Green 300 and Red 741 were only activated during the day.⁶²⁵⁴ The Green network mobile was used for 43 days over four and a half months and on each of those days, save for 28 January 2005, it moved in concert with the other mobiles.⁶²⁵⁵

⁶²⁴⁷ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 470.

⁶²⁵³ Prosecution final trial brief, para. 261; Prosecution closing submissions, T. 12 September 2018, pp 92-93.

⁶²⁵⁴ Prosecution final trial brief, para. 261.

⁶²⁵⁵ Prosecution final trial brief, para. 262.

3172. The Ayyash Defence argues that the Prosecution did not present any evidence connecting Mr Ayyash to the network mobiles.⁶²⁵⁶ The primary means for the attribution of network mobiles is through co-location analysis, which is unreliable, and through attribution of the personal mobiles to Mr Ayyash, which the Prosecution failed to establish.⁶²⁵⁷

iii. Findings

3173. As the Trial Chamber has already found, Green 300 was part of a covert network comprised of three Alfa mobiles, all purchased using false identification documents.⁶²⁵⁸ From 30 September 2004 to 14 February 2005, its user had calls only with one other mobile, Green 023.

3174. Green 300 made and received 100 calls on 43 days. On Mr Donaldson's evidence, the mobile had a link with Mr Ayyash's residence in Hadath, as it used SFEIR2 and HADATH1, in day time and at night, for 25 per cent of its calls. Mr Ayyash had a registered residence in Hadath, and he made and received some of the calls involving landline 696. However, in the absence of direct evidence on this point, the Trial Chamber could not determine when he was present there.⁶²⁵⁹

3175. The commonalities in the geographic profile with mobile 935 and Yellow 294 for 25 calls in south Beirut do not assist in attributing Green 300 to Mr Ayyash, although they are not inconsistent with it.

3176. The Trial Chamber is satisfied that Green 300 did not change user from 30 September 2004 to 14 February 2005. This is shown in its contact profile in that it called and received calls from only one number, Green 023, and its use of the same handset.

3177. It made its final call on 14 February 2005, one hour before the attack on Mr Hariri, using—at the end of that call—PHENMB1, Alfa's temporary relay cell, placed on the back of a truck across the road from the Phoenicia Hotel facing in the hotel's direction and close to the scene of the attack.⁶²⁶⁰

⁶²⁵⁷ Ayyash Defence final trial brief, paras 292, 670-671; Ayyash Defence closing submissions, T. 17 September 2018, pp 117-118.

⁶²⁵⁸ See chapter VIII 'Nature and purpose of colour-coded mobile networks and Purple group of mobiles', (C) 'Green network'.

⁶²⁵⁹ See sub-section (B) (1) (b) (v) 'Findings'.

⁶²⁶⁰ See in para. 3234, below.

3178. To determine if it had a common user with the other mobiles, and whether its user was Mr Ayyash, the Trial Chamber has carefully examined Mr Donaldson's co-location analysis of Green 300 with respect to mobiles 935, 091, 170, Yellow 294 and Blue 233. It has also examined Mr Philips's evidence on single user analysis involving the same mobiles. On the Prosecution's request, Mr Philips included Blue 322 in his analysis despite the Prosecutor, in the amended consolidated indictment, having not attributed this mobile to Mr Ayyash.

3179. During the period analysed by Mr Philips, from Thursday 30 September 2004 to Thursday 13 January 2005, the two Alfa mobiles, Green 300 and Mr Ayyash's personal mobile 935, possibly co-located ten times. The first was on Saturday 9 October 2004 and the last on Wednesday 12 January 2005. For five instances this occurred within 15 minutes. The two mobiles also showed common movements and activated common cells as far as Lebanon's border with Israel. Cells that the mobiles used for further 15 pairs of calls would not preclude that they co-located.

3180. On Wednesday 20 October 2004, Green 300 and mobile 935 had incoming calls that overlapped in time. According to Mr Philips, a few overlapping calls would not exclude the mobiles having one single user, but when it occurs, the mobiles must activate the same cell, adjacent cells or cells with overlapping predicated best server coverage. For these overlapping calls, Green 300 and mobile 935 were using the same cell, MIKAEL2. This therefore, using Mr Philips's terminology, does not preclude that the two mobiles had the same user.

3181. Green 300 and Yellow 294 were two Alfa mobiles. According to Mr Philips, the two mobiles could have co-located seven times, on 30 September, 1 October, 10 November, 22, 28 and 29 December 2004. Each time they activated the same cells, such as SFEIR2, ROUEIS3, HADATH3, GHOBAIL and PORT1. On five occasions, they used the same cells within five minutes. Mr Philips identified a further eleven times where the mobiles' cell activations would not preclude their co-location. The two mobiles did not have overlapping calls.

3182. Further, the Trial Chamber has found that both Yellow 294 and Green 300 shared a common user in their respective overlapping attribution periods with mobile 935.⁶²⁶¹ The total number of possible co-locations of the three mobiles on Mr Philips's evidence was 34. Additionally, the three mobiles activated cells 55 times that, in Mr Philips's opinion, could be

⁶²⁶¹ See sub-sections (B) (1) (f) (iii) 'Findings', (B) (2) (b) (iii) 'Findings' and (B) (2) (e) (iii) 'Findings'.

travelled within the time between the calls, thus not precluding their co-location. Based on the cumulative weight of this evidence, the Trial Chamber is satisfied that Green 300, Yellow 294 and mobile 935 had a single user during their respective attribution periods. Mr Donaldson's co-location analysis of Green 300 supports this finding.⁶²⁶²

3183. Green 300 and Blue 233 operated on different networks, on Alfa and Touch respectively. From mid-January to Friday 11 February 2005, the two mobiles had 20 pairs of close-in-time calls. For 11, they used cells with some overlapping best server coverage which is consistent with the two possibly co-locating. Of these, four pairs of calls occurred within five minutes, three pairs of calls within 15 minutes and the longest time span between two calls was 26 minutes. The cells used for nine pairs of calls would not preclude their co-location. As an additional factor, supporting a finding on single user, the two mobiles also moved in tandem on two days, Tuesday 18 January near the St Georges Marina and on Friday 11 February 2005 north to the Beirut airport, as demonstrated by Mr Philips.

3184. Green 300 and mobile 091 had seven days of common activity from which Mr Philips could analyse pairs of calls. He found four occasions when the Green network mobile possibly co-located with mobile 091. These occurred on Tuesday 18, Monday 24 January and Friday 11 February 2005. Cell activations for a further four pairs of calls would not, according to Mr Philips, preclude their co-location. He noted mobile 091's geographical separation from Green 300 and the other mobiles for about two hours in the afternoon of Friday 28 January 2005, and excluded that the mobiles were used by one person in this period. This is further assessed in the following sections below.⁶²⁶³

3185. Similarly, Green 300 and mobile 170 made seven close-in-time calls on five days. Of the seven, Mr Philips identified only two occurrences when the mobiles possibly co-located, on Tuesday 11 January and on Sunday 13 February 2005, and five incidences that would not preclude their co-location.

3186. Green 300's attribution period, from Thursday 30 September 2004 to Monday 14 February 2005, includes in its entirety the attribution period of Blue 322, which—as specified in the

⁶²⁶² See paras 3048-3050, 3167-3169.

⁶²⁶³ See sub-sections (B) (2) (f) 'Red 741' and (B) (2) (g) 'The 2005 Hajj'.

Prosecution's final trial brief—spans from 18 October to 27 December 2004. Mr Donaldson did not analyse Blue 322's geographic profiles and activities. According to Mr Philips, the two mobiles may have co-located on three occasions activating overlapping cells on Alfa's and Touch's Sfeir towers. However, as the Prosecutor did not allege in the amended consolidated indictment that Mr Ayyash was using this mobile, the Trial Chamber has not made any findings to this effect against him.

3187. The Trial Chamber has found that Mr Ayyash was the principal user of personal mobiles 935, 091 and 170.⁶²⁶⁴ It found that he used network mobiles Yellow 294 and Blue 233.⁶²⁶⁵ Based on this, the Trial Chamber is satisfied that the cumulative occurrences of possible co-locations between these mobiles and their common movements over a period of four and a half months excludes that Green 300 had a separate user.

3188. The totality of the evidence and taking the instances of possible co-locations across the different mobiles that are independently attributed to Mr Ayyash together, the Trial Chamber is satisfied that this pattern is beyond mere coincidence and leads to the only reasonable conclusion available from the evidence that these mobiles had a common user. This user was Mr Ayyash. This does not include the time when mobile 091's cell activations in the area of the Beirut Airport in the afternoon of Friday 28 January 2005 excluded its co-location with mobile 170, Blue 233 and Green 300, as discussed below.

3189. The Trial Chamber, for these reasons, is satisfied beyond reasonable doubt that Mr Ayyash was the user of Green 300 from Thursday 30 September 2004 until Monday 14 February 2005.

(f) Red 741

3190. Red 741, according to the Prosecutor in the amended consolidated indictment, was one of six Red mobiles used by the 'assassination team, consisting of **AYYASH** and five other unidentified individuals (**S5, S6, S7, S8** and **S9**) for carrying out the assassination of **HARIRI**'.⁶²⁶⁶

⁶²⁶⁴ See sub-sections (B) (1) (e) (iii) 'Findings', (B) (1) (f) (iii) 'Findings' and (B) (1) (g) (iii) 'Findings'.

⁶²⁶⁵ See sub-sections (B) (2) (b) (iii) 'Findings' and (B) (2) (d) (iii) 'Findings'.

⁶²⁶⁶ Amended consolidated indictment, para. 15 (a).

3191. The Prosecution attempted to prove that Mr Ayyash was using it through its co-location with Mr Ayyash's personal mobiles 091 and 170, and the network mobiles Blue 233 and Green 300.

i. Evidence

a. Subscriber details

3192. According to Alfa's subscription documentation, Red 741 was activated on 21 December 2004 and deactivated on 17 March 2005.⁶²⁶⁷ The subscriber's name was Fayza Refaayeh with the address of Al-Mina, Port Said Street, Tripoli.⁶²⁶⁸ According to an 'Alfa Active' identification form, the SIM card was purchased on 12 January 2005.⁶²⁶⁹

3193. Ms Fayza Refaayeh stated that around January 2005 her husband, Mr Jawdat Ahmad, bought a SIM card with a number ending in 234 for their family, using her ID card.⁶²⁷⁰ Ms Refaayeh did not recognise number Red 741 as having been used by her family. A number of details on the 'Alfa Active' identification form were incorrect and the handwriting and signature were neither hers nor her husband's.⁶²⁷¹ Mr Ahmad stated that he purchased a SIM with a number ending in 234 in late December 2004.⁶²⁷² Mr Ahmad otherwise confirmed his wife's evidence.

b. Attribution period

3194. Mr Donaldson determined the attribution period of Red 741 to Mr Ayyash as from 14 January to 14 February 2005.⁶²⁷³ While there was a call on 4 January 2005, this was merely one to charge credit.⁶²⁷⁴ As can be seen from Red 741's call sequence table, this call also was made in a handset not used during the attribution period, suggesting a different user.⁶²⁷⁵ The first call was

⁶²⁷⁴ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 529-530; exhibit P1197 (Call sequence table of Red 741), p. 1. *See* chapter VIII 'Nature and purpose of colour-coded mobile networks and Purple group of mobiles', (D) 'Red network'.

⁶²⁷⁵ Exhibit P1197. *See* chapter VIII 'Nature and purpose of colour-coded mobile networks and Purple group of mobiles', (D) 'Red network'.

made on 14 January 2005.⁶²⁷⁶ The final call involving Red 741 was made on 14 February 2005 at 12:50, a few minutes before the attack on Mr Hariri, when it activated ZOUKAK1, a cell providing coverage between the crime scene and Parliament.⁶²⁷⁷

c. Contact profile

3195. During the attribution period, Red 741 had contact with six other Red network mobiles and contacted the Alfa customer service numbers four times.⁶²⁷⁸ Further, it received an SMS from a number ending in 747 on 14 January 2005.⁶²⁷⁹ This number belonged to Mr Hassan Hamza Zaarour and his family.⁶²⁸⁰ Mr Zaarour stated that he had intended to send an SMS to a similar number and had simply mistyped it.⁶²⁸¹ It had no other contacts.

d. Geographic profile

3196. According to Mr Donaldson, Red 741's most frequently activated cells were on the north coast of Beirut, MRAICI2, ZOUKAK1 and PORT2, and in the Mosbeh area, MOSBEH2 and RIMAL1.⁶²⁸²

e. Single user analysis

3197. Red 741 had an overlapping attribution period with that of personal mobiles 091 and 170, Blue 233 and Green 300.⁶²⁸³ Single user analysis between Red 741 and personal mobiles 165, 935, and network mobiles Blue 322, Yellow 669 and Yellow 294 was therefore not possible.⁶²⁸⁴

⁶²⁷⁶ Exhibit P1197, p. 1; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 531.

⁶²⁸² Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 545-549; Andrew Donaldson, T. 23 August 2017, pp 76-77, 79. This is based on the start cell data. When considering the end cell data, the first three most frequented cells, namely MRAICI2, ZOUKAK1 and MOSBEH2, remained the same, according to Mr Donaldson, exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), annex C, paras 5-7.

⁶²⁸³ *See* paras 2784, 2930, 3141, 3189; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 550.

⁶²⁸⁴ *See* paras 2756, 2881-2882, 3027-3028, 3067, 3096.

Red 741 and mobile 091

3198. Mr Philips analysed 18 pairs of calls in relation to Red 741 and mobile 091 on five days, 28 January, 2, 3, 8 and 11 February 2005.⁶²⁸⁵ Mr Philips determined that six of the pairs fell in the category of ‘could be co-located’,⁶²⁸⁶ five in the ‘would not preclude co-location’ category,⁶²⁸⁷ and seven in ‘would preclude co-location’.⁶²⁸⁸ The dislocation of these two mobiles from the others are discussed below in paragraphs 3237-3240.

3199. For four call pairs, the two mobiles possibly co-located within five minutes, once within 12 minutes, and another time within 25 minutes, each time using cells along the coast in Beirut.⁶²⁸⁹

3200. Red 741 was never in contact with mobile 091.⁶²⁹⁰ There were two pairs of overlapping calls between Red 741 and mobile 091, both on 28 January 2005: first Red 741 had an outgoing call from 14:17:05 to 14:18:02, while mobile 091 had an incoming call from 14:18:01 to 14:18:18; next while mobile 091 had an incoming call from 14:56:30 to 14:56:56, Red 741 started an outgoing call at 14:56:31 that lasted until 14:56:53.⁶²⁹¹ As discussed below, these calls occurred at a time when the two mobiles dislocated. Red 741 activated Alfa cells in the Mosbeh area and mobile 091 used Touch’s Airport_II_C.⁶²⁹²

Red 741 and mobile 170

3201. Red 741 had four pairs of calls made within an hour with mobile 170 on three days, 14 January, 9 and 14 February 2005.⁶²⁹³ Mr Philips determined that these pairs fell into the category of ‘would not preclude co-location’.⁶²⁹⁴ Red 741 was never in contact with mobile 170, and there were no overlapping calls in relation to these two mobiles.⁶²⁹⁵

Red 741 and Blue 233

3202. Mr Philips analysed 19 pairs of calls in relation to Red 741 and Blue 233 on nine days, 14, 28, 31 January, 3, 8, 9, 11, 12 and 14 February 2005. He found that seven of the analysed pairs were in the category of ‘could be co-located’⁶²⁹⁶ and 12 fell in the category of ‘would not preclude co-location’.⁶²⁹⁷

3203. As both mobiles belonged to closed networks,⁶²⁹⁸ there were no calls between Red 741 and Blue 233.⁶²⁹⁹ The mobiles had one instance of an overlapping call, when, on 31 January 2005, Red 741 had an outgoing call from 10:54:10 to 10:54:46 and Blue 233 had an incoming call from 10:54:19 to 10:54:28.⁶³⁰⁰ According to Mr Philips, however, the mobiles possibly co-located.⁶³⁰¹

3204. On the basis that the mobiles operated on different networks and that the network times may not have been harmonised, Mr Philips stated that there were two additional instances of

⁶²⁹⁸ See chapter VIII ‘Nature and purpose of colour-coded mobile networks and Purple group of mobiles’, (D) ‘Red network’ and (E) ‘Blue network’.

⁶²⁹⁹ Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 204, 276; exhibit P1197.

⁶³⁰⁰ Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 199-200, 205; exhibit P1259, p. 353.

⁶³⁰¹ Red 741 connected to PORT2 at the start and ETOILE3 at the end of this call, Blue 233 used CoastRoad_C. Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 119-200; exhibit P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review), p. 39; exhibit P1259, p. 353.

possible overlap, namely on Monday 31 January and Saturday 12 February.⁶³⁰² On 31 January 2005, Blue 233—connecting to CoastRoad_C—had an incoming call at 10:53:14 finishing at 10:53:53. Red 741—using PORT2 at the start of the call—had an outgoing call at 10:54:10.⁶³⁰³ Mr Philips found that the two mobiles possibly co-located as the two cells had ‘extensive best server coverage overlap’.⁶³⁰⁴

3205. On Saturday 12 February, Red 741—using RAOUCH3 at the start and RAOUCH1 at the end of the call—had an incoming call between 11:41:59 and 11:43:00. Blue 233—activating Touch’s Fadlallah_C cell—had an incoming call between 11:43:09 and 11:43:32 and because these cells had some overlapping predicted best server coverage, according to Mr Philips, Red 741 and Blue 233 may have co-located.⁶³⁰⁵

3206. Of the remaining possibly co-locating call pairs, two occurred within two minutes on 8 February 2005, Red 741 using ETOILE1 and Blue 233 connecting to Coast-Road_C, and on 14 February 2005, Red 741 activating ETOILE1 and Blue using Riad_El_Soloh_B.⁶³⁰⁶ The time lapse between two pairs of calls was between six and a half and 13 minutes.⁶³⁰⁷

Red 741 and Green 300

3207. On eight days from 14 January to 14 February 2005, Red 741 and Green 300 had 42 pairs of calls.⁶³⁰⁸ Mr Philips identified 26 pairs of calls on seven days when the two mobiles could be co-located.⁶³⁰⁹ Of these pairs, 13 occurred within three minutes, and the two mobiles used identical

⁶³⁰⁷ Both occurred on 8 February 2005: at 12:11 Blue 233 used Riad_El_Soloh_A and at 12:24 Red 741 used ETOILE1; at 12:26 Blue 233 activated Minah_el-hosson_A for a 44-second call and at 12:33 Red 741 used ZOUKAK1. Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 213-232; exhibit P1259, p. 358.

⁶³⁰⁸ Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 187, 189, 191-192, 199-202, 213-216, 234, 236-237, 242-243, 252, 260-263, 265-266, 270, 272-273; exhibit P1259, pp 350-351, 353, 355, 359-364.

⁶³⁰⁹ These days were: 28, 31 January, 3, 8, 9, 12 and 14 February 2005. Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 187, 191-192, 199-202, 213-216, 234, 236-237, 242-243,

cells, such as BASTA3, MRAICI1, MRAICI2, MANARA2, MOSBEH2 and NDU2.⁶³¹⁰ An additional five pairs of calls took place within 15 minutes.⁶³¹¹

3208. Mr Philips illustrated the possible co-location of Red 741 and Green 300 on 8 February 2005.⁶³¹² At 13:39, Red 741 first activated CARACA1 in west Beirut. The call sequence table of Red 741 shows that at the end of this 25-second call, the mobile activated the MANARA2 cell, which was activated by Green 300 a minute later. Three minutes later Red 741 was still on this cell.⁶³¹³ Mr Philips concluded that the two mobiles could have co-located.⁶³¹⁴

252, 260-263, 265-266, 270, 272-273; exhibit P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review), pp 38-41, 43-49.

*Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash—
exhibit P1111, p. 234*

3209. Mr Philips concluded that cell activations for a further 16 pairs of calls would not be inconsistent with the two mobiles co-locating.⁶³¹⁵

3210. Three overlapping calls occurred. The first on 31 January 2005, when seconds before the end of an outgoing call on Green 300, Red 741 had a one-second incoming call from Red 652 and

⁶³¹⁵ John Edward Philips, T. 24 April 2017, p. 82; exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 187, 189, 191-192, 199-202, 213-216, 234, 236-237, 242-243, 252, 260-263, 265-266, 270, 272-273; exhibit P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review), pp 38-41, 43-49. *See also* exhibit P1935, slide 515.

three days later, before Red 741 ended its outgoing call, Green 300 had an outgoing call.⁶³¹⁶ Finally, on 12 February 2005, Red 741 received an eight-second call while Green 300 was in the process of a call.⁶³¹⁷ The mobiles used the same cells for all three overlapping calls.⁶³¹⁸

3211. Mr Philips explained that Red 741 and Green 300 did not operate over extensive periods.⁶³¹⁹ From 14 January to 14 February 2005 there were nine days when both mobiles were active.⁶³²⁰ Calls on Green 300 occurred in the intense period of Red 741's use, and therefore the chance of overlapping calls was high.⁶³²¹

Overall pattern

3212. In his report, Mr Donaldson closely analysed sequences of calls on 11 days between Friday 14 January and Monday 14 February 2005 that Red 741 shared with the other mobiles attributable to Mr Ayyash, personal mobiles 091, 170, and network mobiles Blue 233 and Green 300.⁶³²²

3213. According to Mr Donaldson, on the days of common use Red 741 was used within ten minutes with one of the other mobiles 55 times, in 33 per cent of those the mobiles shared the same Alfa sector.⁶³²³ For 31 per cent of the calls the mobiles activated cell towers that were less than one kilometre apart, and for 15 per cent they connected to cell towers that were more than one

⁶³¹⁶ Exhibit P1259, p. 355; exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 201, 205, 216, 276.

⁶³²⁰ On 20, 28, 31 January, 3, 8-9, 11-12, 14 February 2005. Exhibit P1259, pp 340, 350-351, 353, 355, 359-364; John Edward Philips, T. 20 April 2017, p. 41.

⁶³²¹ John Edward Philips, T. 20 April 2017, p. 41.

⁶³²² On 14, 20, 28, 31 January, 2, 3, 8, 9, 11, 12 and 14 February 2005. Andrew Donaldson, T. 23 August 2017, pp 77-78; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 550, 565-580, annex D, pp 364-385.

⁶³²³ Besides Red 741, Green 300 and Blue 233 were Alfa mobiles. Personal mobiles 091 and 170 operated on the Touch network. Andrew Donaldson, T. 24 August 2017, p. 15; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 554.

kilometre but less than two kilometres apart.⁶³²⁴ The sequential use of the mobiles occurred between 10:00 and 19:00 and mainly in north Beirut.⁶³²⁵

3214. Twenty-two per cent of the calls connected to cell towers which were more than two kilometres away from each other.⁶³²⁶ He concluded that Red 741 had the same user as Green 300, Blue 233, mobile 091 and mobile 170, and it was Mr Ayyash.⁶³²⁷ He added that on 2 February 2005 Mr Ayyash ‘did not have control of Red 741’.⁶³²⁸

Mobiles moving in concert

3215. Mr Philips testified that common movement of mobiles over a common time frame supports the inference that the mobiles had a single user.⁶³²⁹ Based on call sequence tables or combined call sequence table and his reports on single user analysis,⁶³³⁰ he showed on his slides the movement of mobiles on a number of selected days by mapping the cells they activated for sequential calls.⁶³³¹ Regarding mobiles 935, 091, 170, Yellow 294, Blue 233, Blue 322, Red 741 and Green 300, he demonstrated nine days of common movement, namely on 9 October, 3 November, 29 December 2004, 18, 24 January, 8, 11, 12 and 14 February 2005.⁶³³²

3216. To illustrate, in the morning on 24 January 2005, personal mobiles 091 and 170, and Blue network mobile 233 moved from south Beirut to Nabatiyeh.⁶³³³ For seven calls from 10:45 to 14:41, the three mobiles dominantly used Touch’s Nabatiyeh_C cell, where the three mobiles

*Exhibit P1935 (PowerPoint presentation on single user analysis, John Edward Philips),
slides 293, 298, 307*

3217. Mr Philips explained that Kfasir_A, Ansar_A and Nabatieh_C have fragmented best server coverage away from the main areas of best server coverage.⁶³³⁵ Relying on a response to a request for assistance—in which Touch informed the Prosecution that a drive test conducted on 21 August 2006 had shown that Nabatieh_C provided the best server coverage in the Harouf area—⁶³³⁶ and as detailed above, Mr Philips explained that these cell activations did not preclude the mobiles' possible co-location.⁶³³⁷

⁶³³⁵ Exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 156-157.

⁶³³⁶ Exhibit P826.15.

⁶³³⁷ John Edward Philips, T. 21 April 2017, pp 55-56, 60-61, T. 25 April 2017, pp 67-75. *See also* exhibit P1935, slides 295-299.

3218. By 16:01, personal mobile 170 moved to south Beirut, where, for the remaining part of the day, mobile 091, Blue 233 and Green 300 also activated cells, some of which had contiguous or overlapping predicted best server coverage, such as Sfeir_A and Hazmiyeh_2_B, SFEIR2 and Sfeir_B.⁶³³⁸

3219. On Tuesday 8 February 2005, personal mobiles 091 and 170, and network mobiles Blue 233, Green 300 and Red 741, showed common movement.⁶³³⁹ From 10:11 to 10:58, Blue 233 and personal mobile 170 activated two adjacent Touch cells in south Beirut, Sfeir_A and Sfeir_B.⁶³⁴⁰ At 11:02, mobile 170 started to move north using Mar Michael_C, the same cell which mobile 091 used at 11:05 and three minutes later, mobile 091 moved further north to the Chiyah_A cell.⁶³⁴¹

3220. Meanwhile, Blue 233 travelled north and activated Riad_El_Soloh_A for calls from 11:58 to 12:11, and CoastRoad_C at 12:25.⁶³⁴² At 12:24, Red 741 received its first call of the day on Alfa's ETOILE1 cell, which has overlapping predicted best server coverage with Touch's Riad_El_Soloh_A and CoastRoad_C, consistent with these network mobiles' possible co-location in this area, as depicted in Mr Philips's following two slides.⁶³⁴³

⁶³³⁸ John Edward Philips, T. 21 April 2017, pp 67-72; exhibit P1259, pp 345-346. *See also* exhibit P1935, slides 310-322.

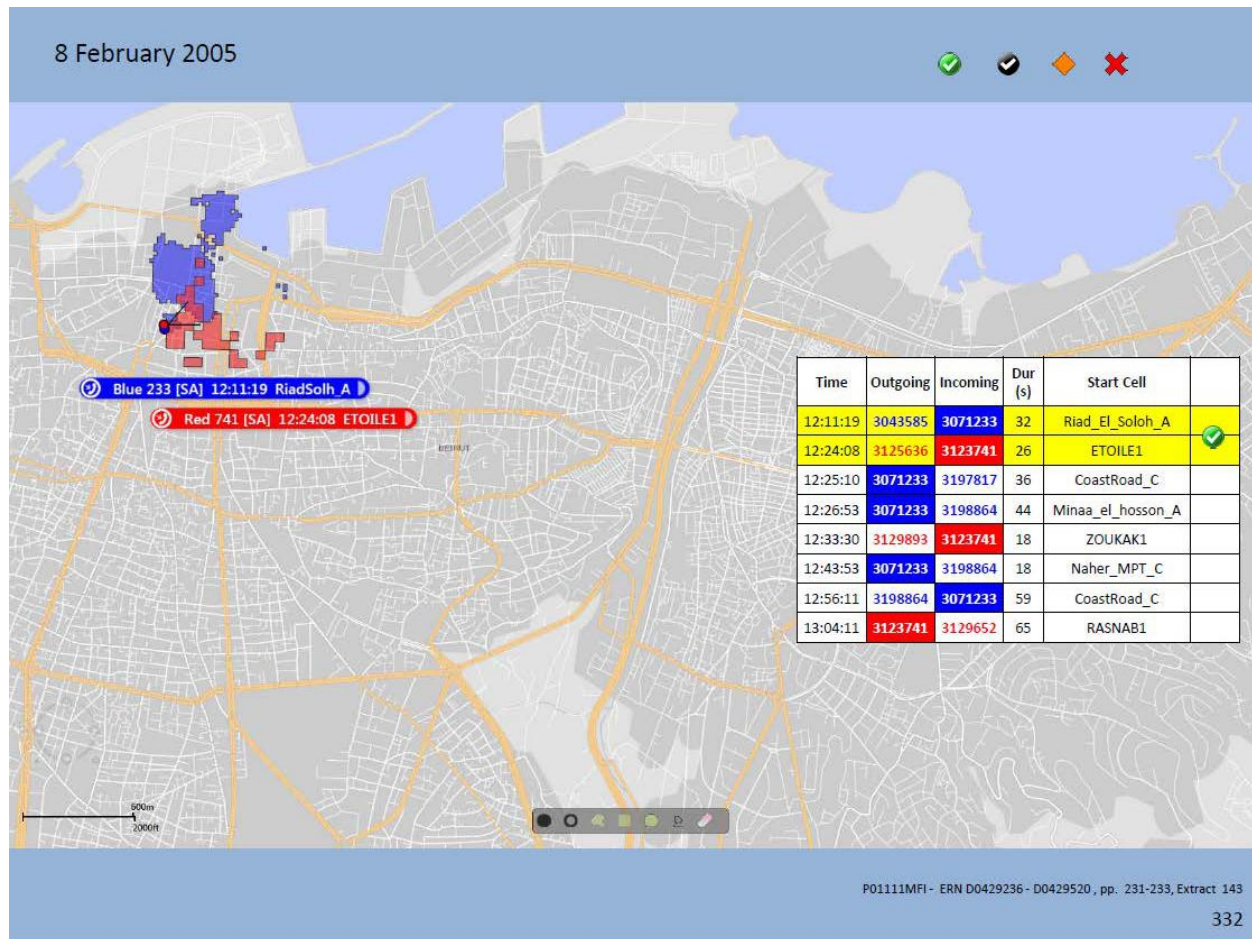

⁶³³⁹ John Edward Philips, T. 21 April 2017, p. 73. *See also* exhibit P1935, slides 323-355.

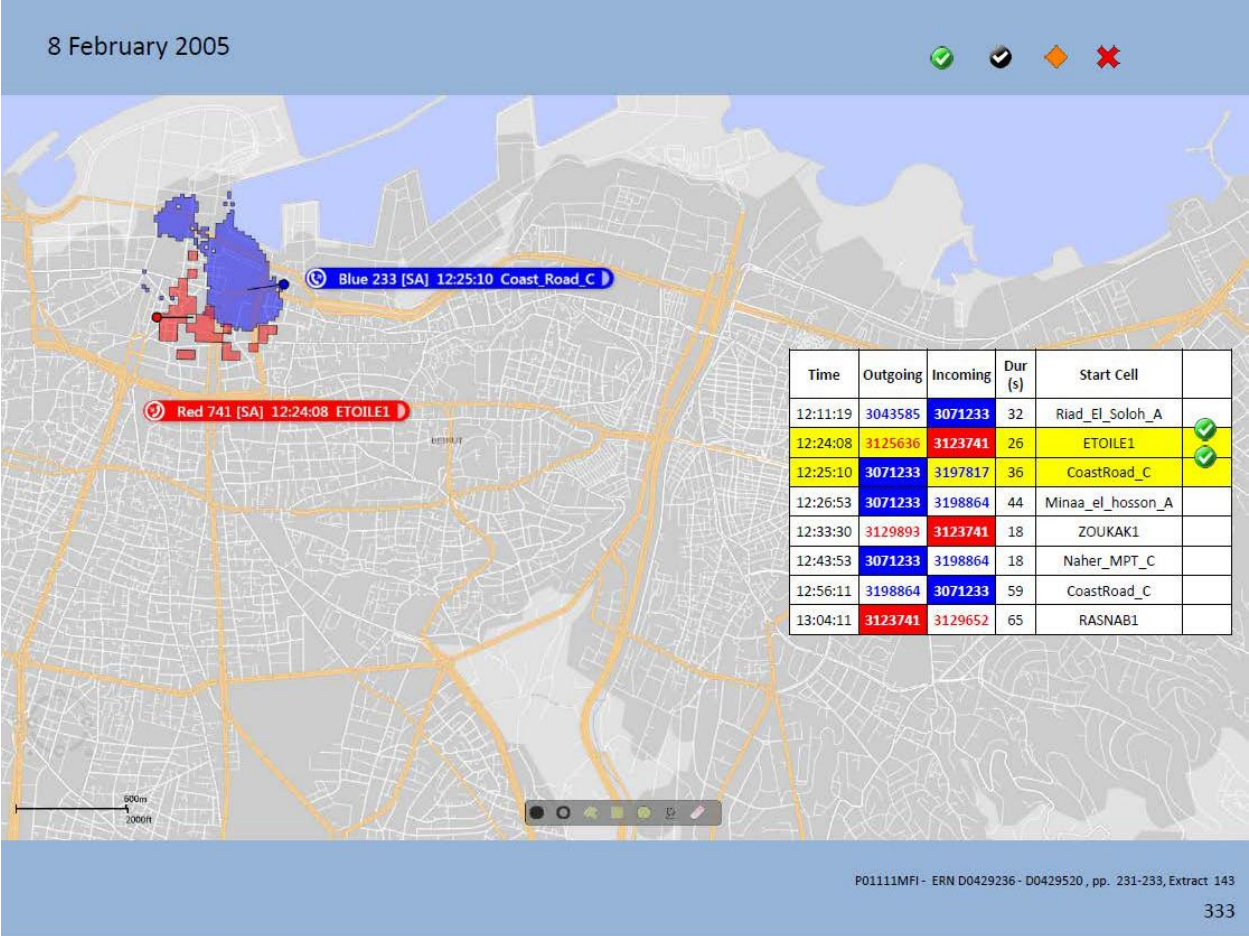

⁶³⁴⁰ John Edward Philips, T. 21 April 2017, p. 73; exhibit P1259, p. 358. *See also* exhibit P1935, slides 324-325.

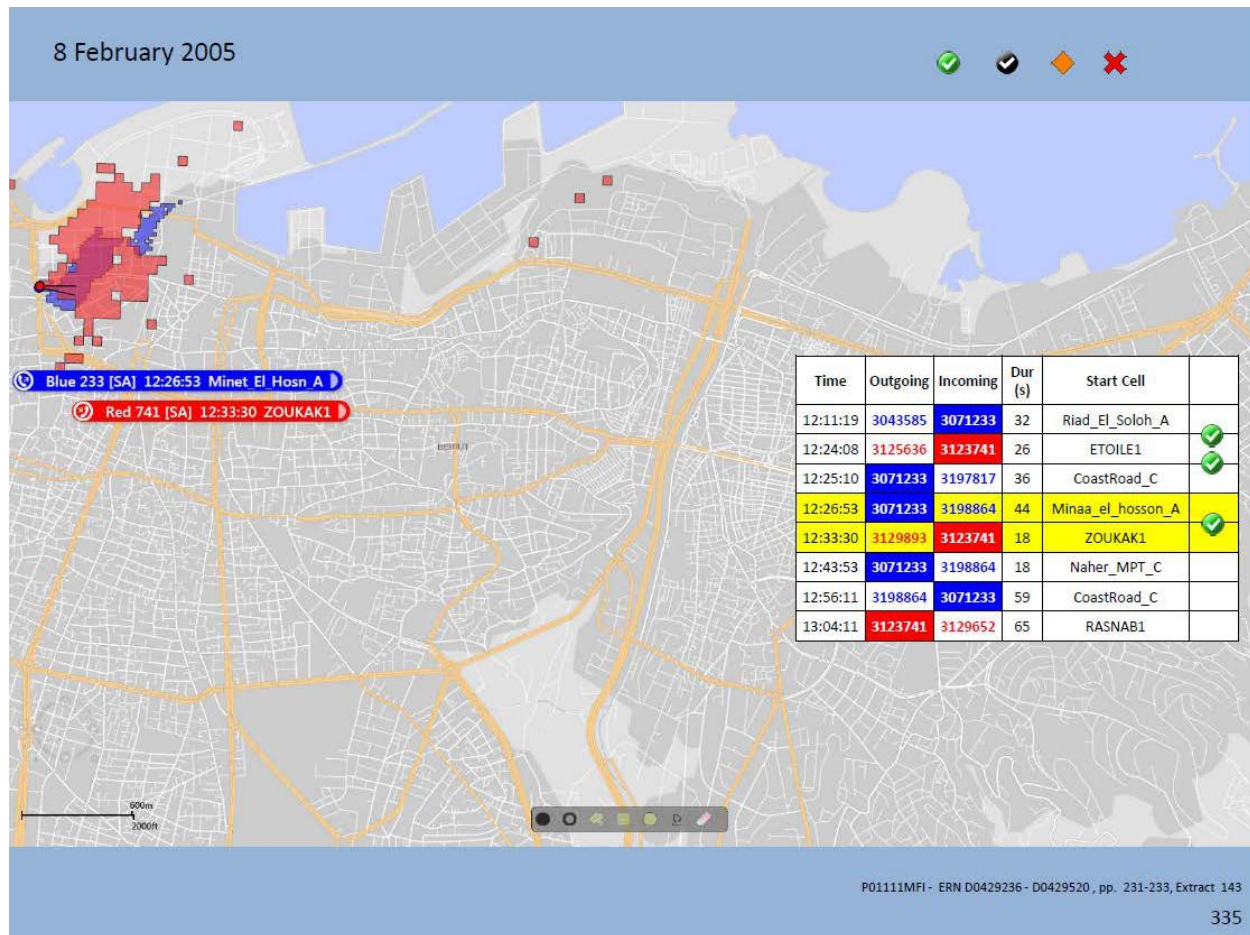

*Exhibit P1935 (PowerPoint presentation on single user analysis, John Edward Philips),
slides 332-333*

3221. In the next ten minutes, Blue 233, using Minet_El-Hosn_A, and Red 741, activating ZOUKAK1, showed a westerly movement and another possible co-location, as illustrated in the following slide.⁶³⁴⁴

⁶³⁴⁴ John Edward Philips, T. 21 April 2017, p. 77; exhibit P1259, p. 358. See also exhibit P1935, slide 335.

*Exhibit P1935 (PowerPoint presentation on single user analysis, John Edward Philips),
slide 335*

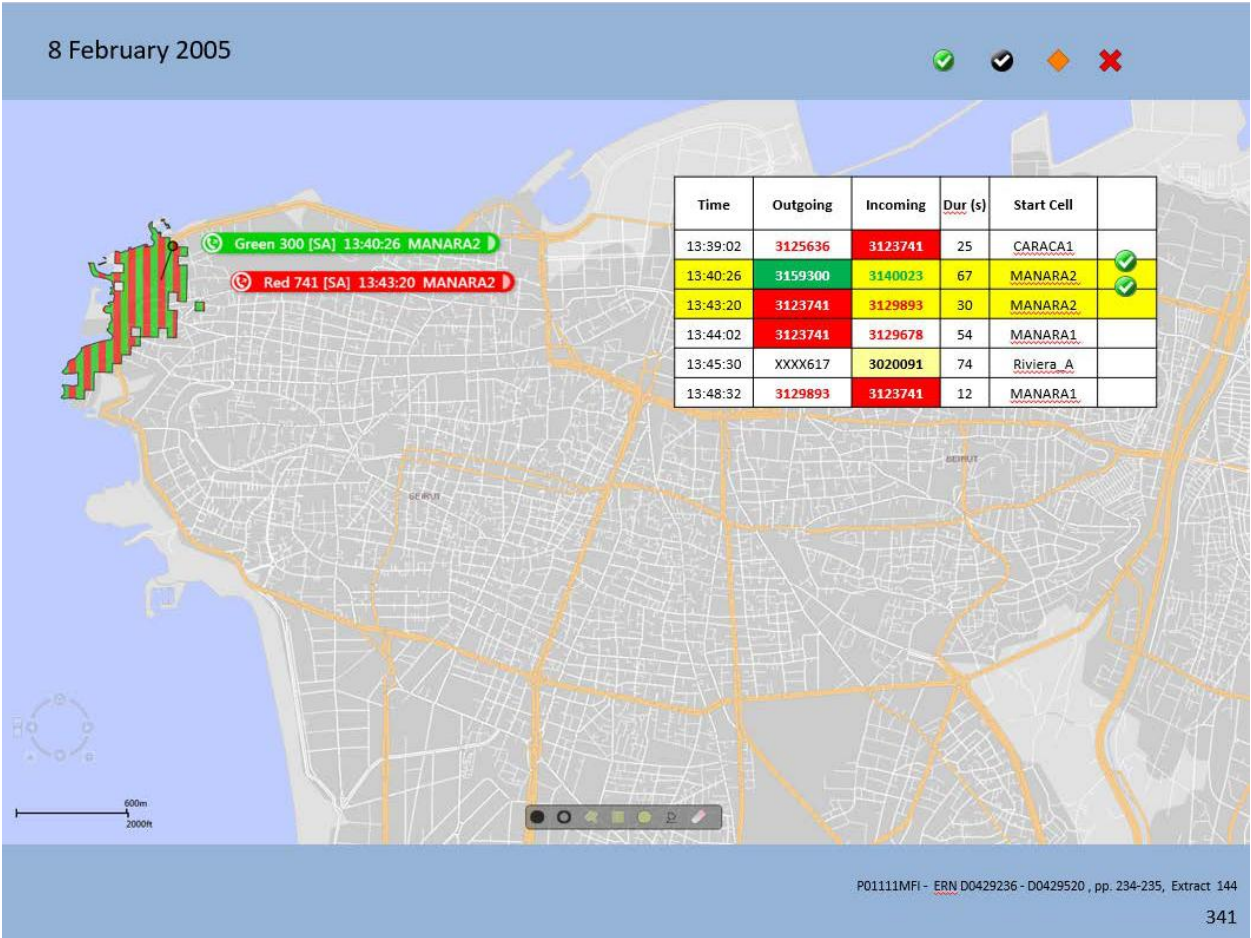

3222. At 12:43, Blue 233 moved to Naher_MPT_C to the east. By 12:56 it was back in the predicted best server coverage area of CoastRoad_C, and made no calls until 16:32.⁶³⁴⁵

3223. At 13:04, Red 741 activated RASNAB1, which is to the south of CoastRoad_C, before it moved to CARACA1, MANARA1 and MANARA2 in north-west Beirut.⁶³⁴⁶ Activating the MANARA cells, it possibly co-located for four pairs of calls made within minutes with Green 300, which activated MANARA2, and personal mobile 091, which used Riviera_A that had

⁶³⁴⁵ John Edward Philips, T. 21 April 2017, p. 77; exhibit P1259, pp 358-359. *See also* exhibit P1935, slides 336-337.

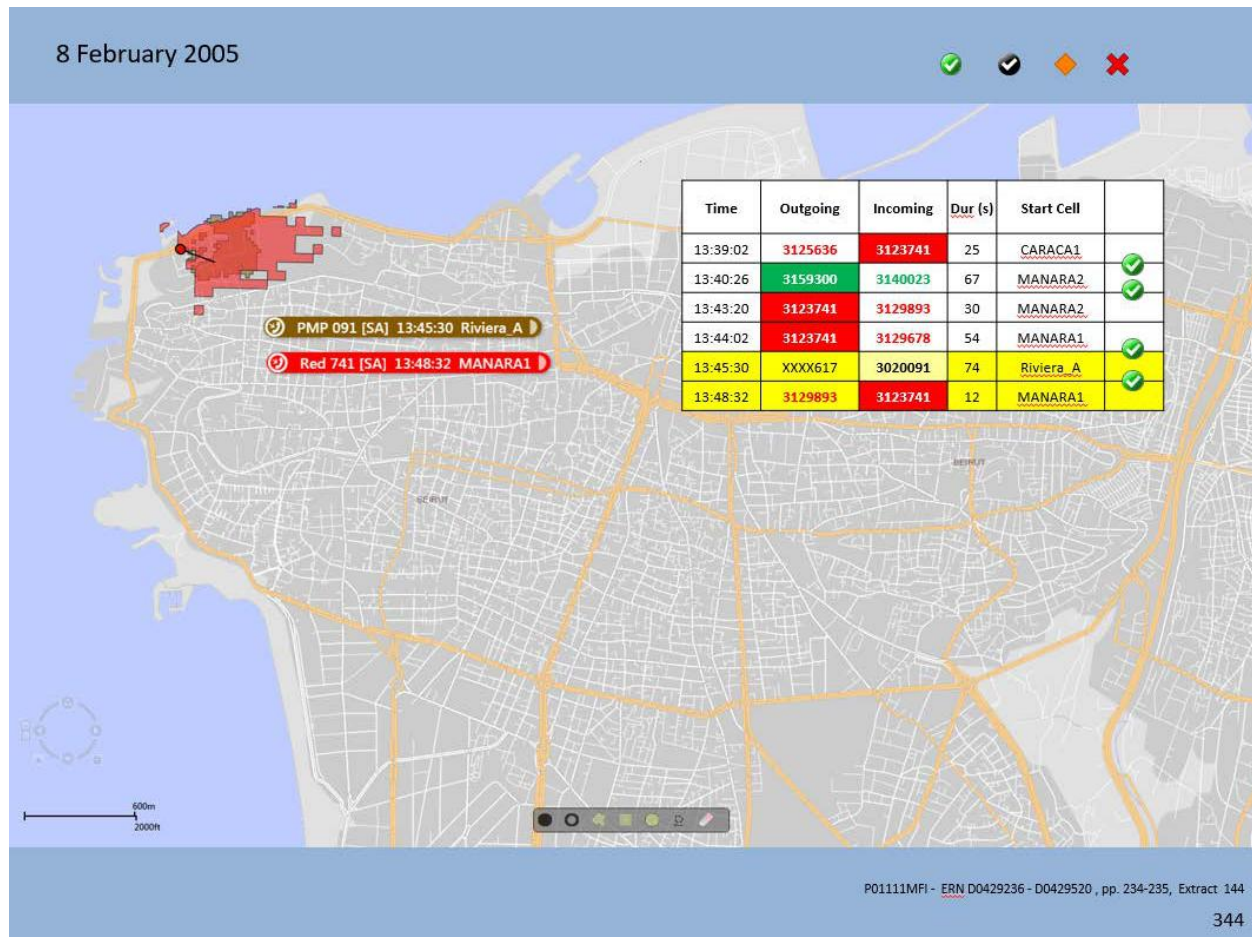

⁶³⁴⁶ John Edward Philips, T. 21 April 2017, p. 77; exhibit P1259, pp 358-359. *See also* exhibit P1935, slides 336-337.

overlapping predicted best server coverage with MANARA1.⁶³⁴⁷ Mr Philips illustrated these possible co-locations in the following slides.⁶³⁴⁸

⁶³⁴⁷ John Edward Philips, T. 21 April 2017, pp 77-78, 81-83; exhibit P1259, pp 358-359; exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 234-235; exhibit P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review), pp 43-44. *See also* exhibit P1935, slides 338-344.

⁶³⁴⁸ The end cells Red 741 used for the calls at 13:39 and at 14:43 were MANARA2 and MANARA1, respectively, exhibit P1259, p. 359; exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), p. 234; exhibit P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review), p. 43.

*Exhibit P1935 (PowerPoint presentation on single user analysis, John Edward Philips),
slides 341, 344*

3224. Next, at 13:52, Red 741 activated ZOUKAK1, which it had used earlier that day and from 14:39 to 15:19, personal mobile 091, Green 300 and Red 741 moved south using Ras Nabah_A, BRAJNE3 and CHIAH1, respectively.⁶³⁴⁹ By 16:02, mobile 091 moved again to the coast in the north activating BayView_C.⁶³⁵⁰ At 16:32, Blue 233 activated Bir_El_Abed_A, and at 17:12 mobile 091 used Haret_Hreik_A in south Beirut.⁶³⁵¹

3225. Blue 233 and mobile 091 were active in south Beirut from 20:55 to 23:32 activating Hadath_C, Hazmiyeh_2_B and Sfeir_A, respectively.⁶³⁵²

⁶³⁴⁹ John Edward Philips, T. 21 April 2017, p. 83; exhibit P1259, p. 359. *See also* exhibit P1935, slides 345-348.

⁶³⁵⁰ John Edward Philips, T. 21 April 2017, p. 83; exhibit P1259, p. 359. *See also* exhibit P1935, slide 349.

⁶³⁵¹ John Edward Philips, T. 21 April 2017, pp 83-84; exhibit P1259, p. 359. *See also* exhibit P1935, slides 350-351.

⁶³⁵² John Edward Philips, T. 21 April 2017, pp 84-85; exhibit P1259, p. 359. *See also* exhibit P1935, slides 352-355.

3226. Further, on Friday 11 February 2005, at 09:30, Blue 233 activated Hadath_C in south Beirut, and 12 minutes later mobile 091 used a contiguous cell, Sfeir_A.⁶³⁵³ Before midday, mobiles 170, 091 and Red 741 connected to overlapping cells Manara_B and CARACA3, then BayView_C and MRAICI2 in west Beirut.⁶³⁵⁴ In the early afternoon, Red 741 used PORT2 and PORT3 near the St Georges Marina, which had been activated by Green 300 a minute earlier.⁶³⁵⁵ After 13:00, Red 741 moved south along the coast, first using MOVPIK1 at the start and RAMLET3 at the end of a call, and then BHOVOUT1.⁶³⁵⁶

3227. RAMLET3 and BHOVOUT1 shared predicted best server coverage with Unesco_B used by mobile 091 12 minutes earlier.⁶³⁵⁷ For five calls from 13:40 to 16:38, Blue 233 and mobile 091 used Ouzai_II_A, north of Beirut airport, a cell with overlapping best server coverage with MEA1 and SIMON2 which were activated by Green 300 for two calls within this period.⁶³⁵⁸

3228. At 17:38, mobile 091 was back in south Beirut using Sfeir_A, and so was mobile 170 at 22:00 followed by Blue 233 at 22:30 using Hadath_C and Sfeir_A, respectively.⁶³⁵⁹ These cell activations are mapped in the following slides:⁶³⁶⁰

⁶³⁵³ John Edward Philips, T. 24 April 2017, pp 9-12; exhibit P1259, p. 361. *See also* exhibit P1935, slides 357-358.

⁶³⁵⁷ John Edward Philips, T. 24 April 2017, pp 9-12; exhibit P1259, p. 361; exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 252-253; exhibit P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review), p. 46. *See also* exhibit P1935, slides 369-371.

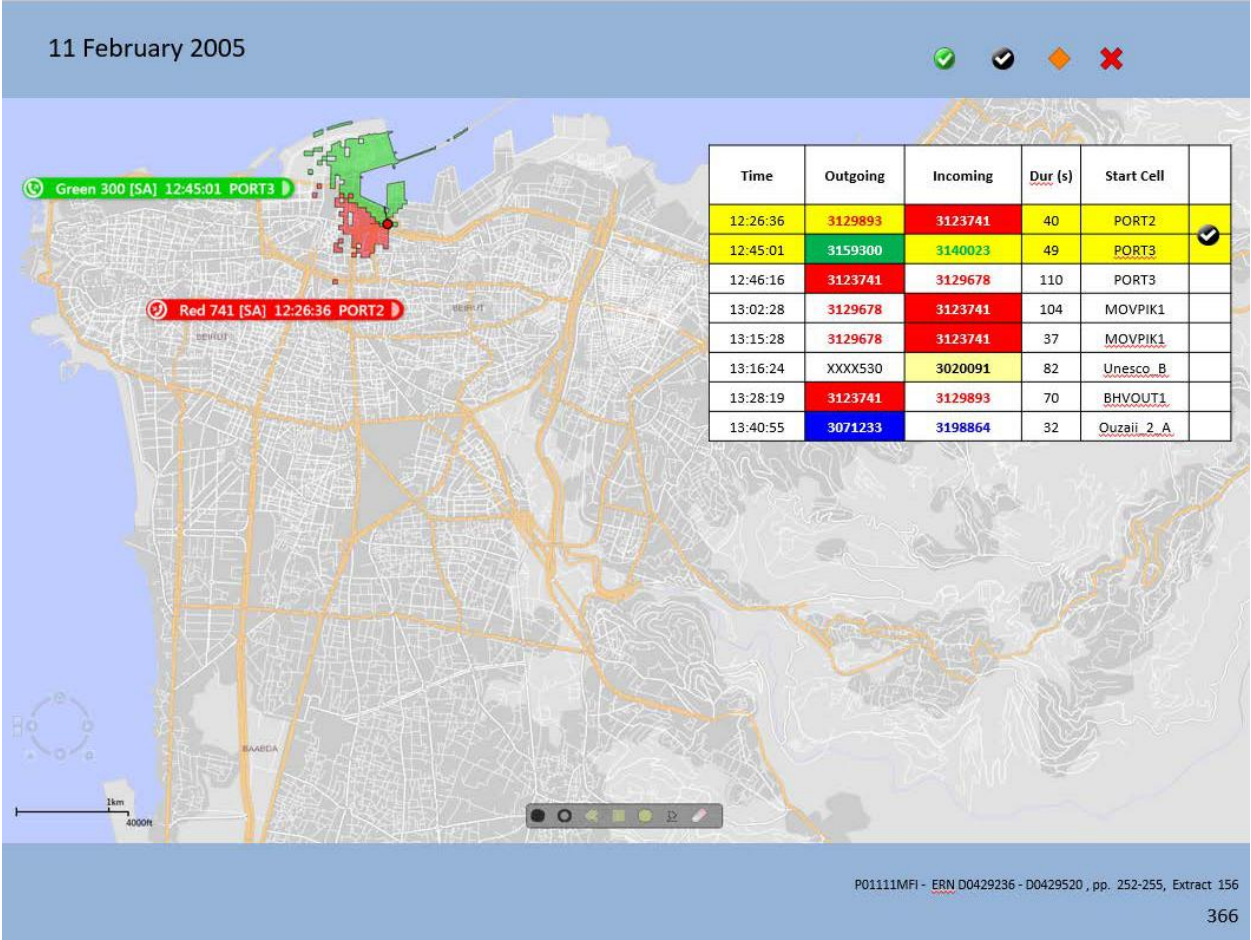

⁶³⁵⁸ John Edward Philips, T. 24 April 2017, pp 9-12; exhibit P1259, p. 361. *See also* exhibit P1935, slides 372-379.

⁶³⁵⁹ John Edward Philips, T. 24 April 2017, pp 9-12; exhibit P1259, pp 361-362. *See also* exhibit P1935, slides 380-388.

⁶³⁶⁰ Slides 366 and 371 do not include the end cells, PORT2 and RAMLET3, that Green 300 and Red 741 used for their respective calls at 12:45 and 13:15. When considering these end cells, Mr Philips modified his expert opinion with respect to the possible co-location of Green 300 and Red 741, and that of Red 741 and mobile 091. He concluded that Green 300's cell activation at the end of the 12:45 call, using PORT2, would not preclude the mobile's co-location with Red 741, which used PORT3 at 12:46. At the end of its call at 13:15 Red 741 used RAMLET3, which had overlapping predicted best server coverage with Unesco_B used by mobile 091 less than 30 seconds later, and therefore the two mobiles could have co-located according to Mr Philips, exhibit P1259, p. 361; exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 252-253; exhibit P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review), p. 46.

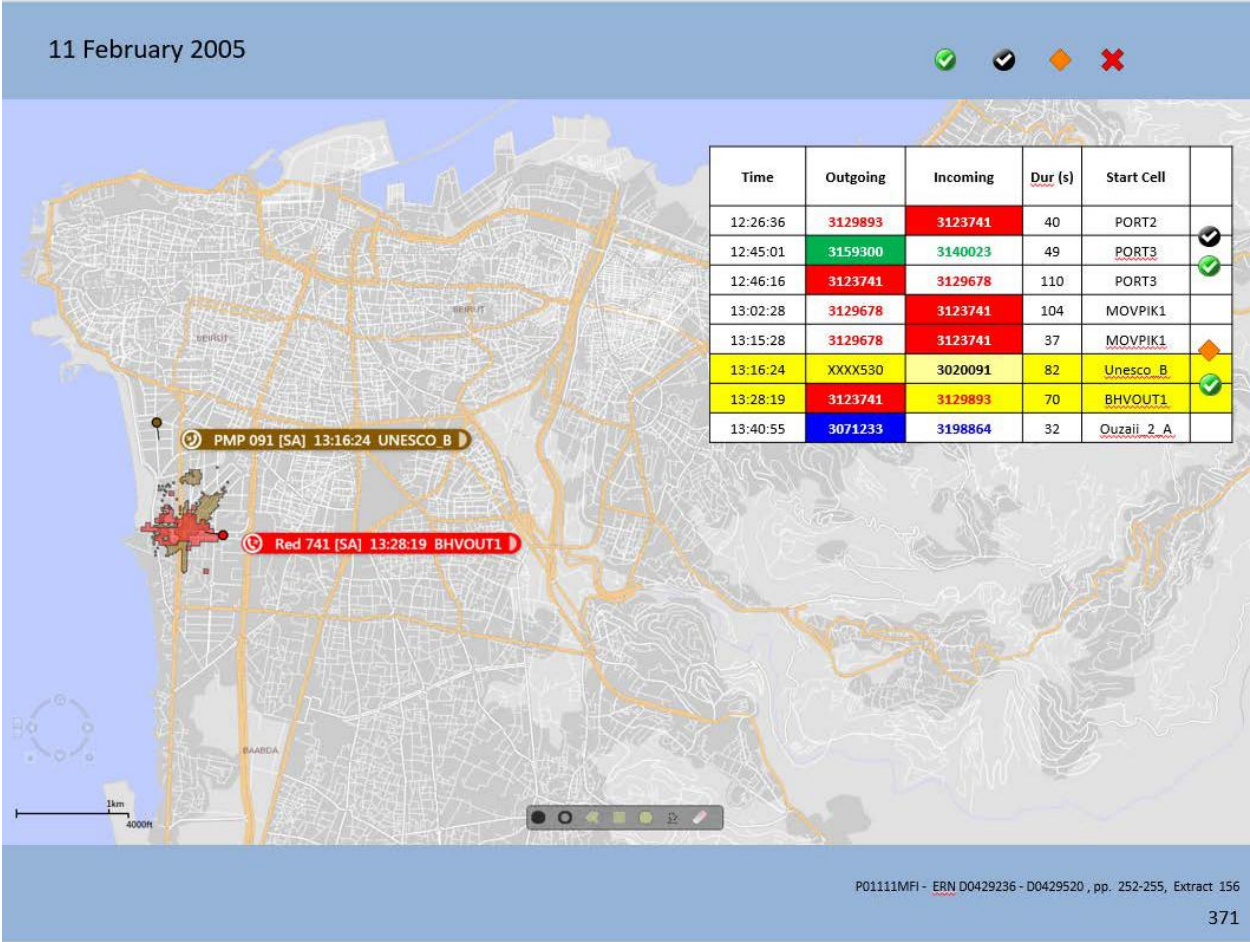

Exhibit P1935 (PowerPoint presentation on single user analysis, John Edward Philips), slides 358, 363, 366, 371

3229. On Saturday 12 February 2005, at 10:32, Blue 233 activated Sfeir_B in south Beirut and from 10:41 to 10:44, Red 741 used Alfa’s cells in south-east Beirut, BACHA2 and ALFA2, then started to move north activating HOTELD2 at 10:49 and JUSTIS1 at 11:14.⁶³⁶¹ Green 300 activated SASSIN1 for a call at 10:51.⁶³⁶² The following slide demonstrates their vicinity:

⁶³⁶¹ John Edward Philips, T. 24 April 2017, pp 13-14; exhibit P1259, p. 362. See also exhibit P1935, slides 390-395.
⁶³⁶² John Edward Philips, T. 24 April 2017, p. 14; exhibit P1259, p. 362. See also exhibit P1935, slide 394.

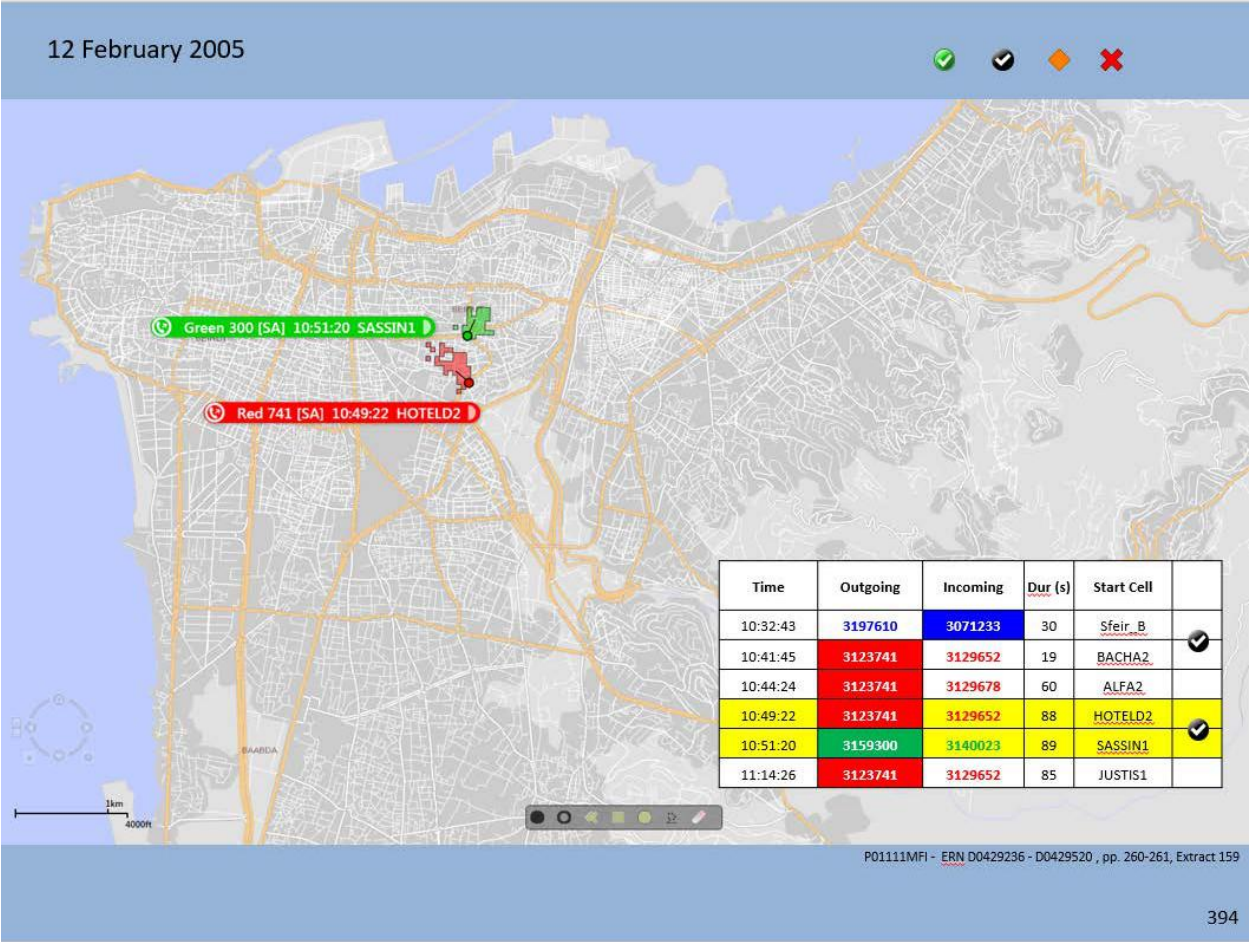

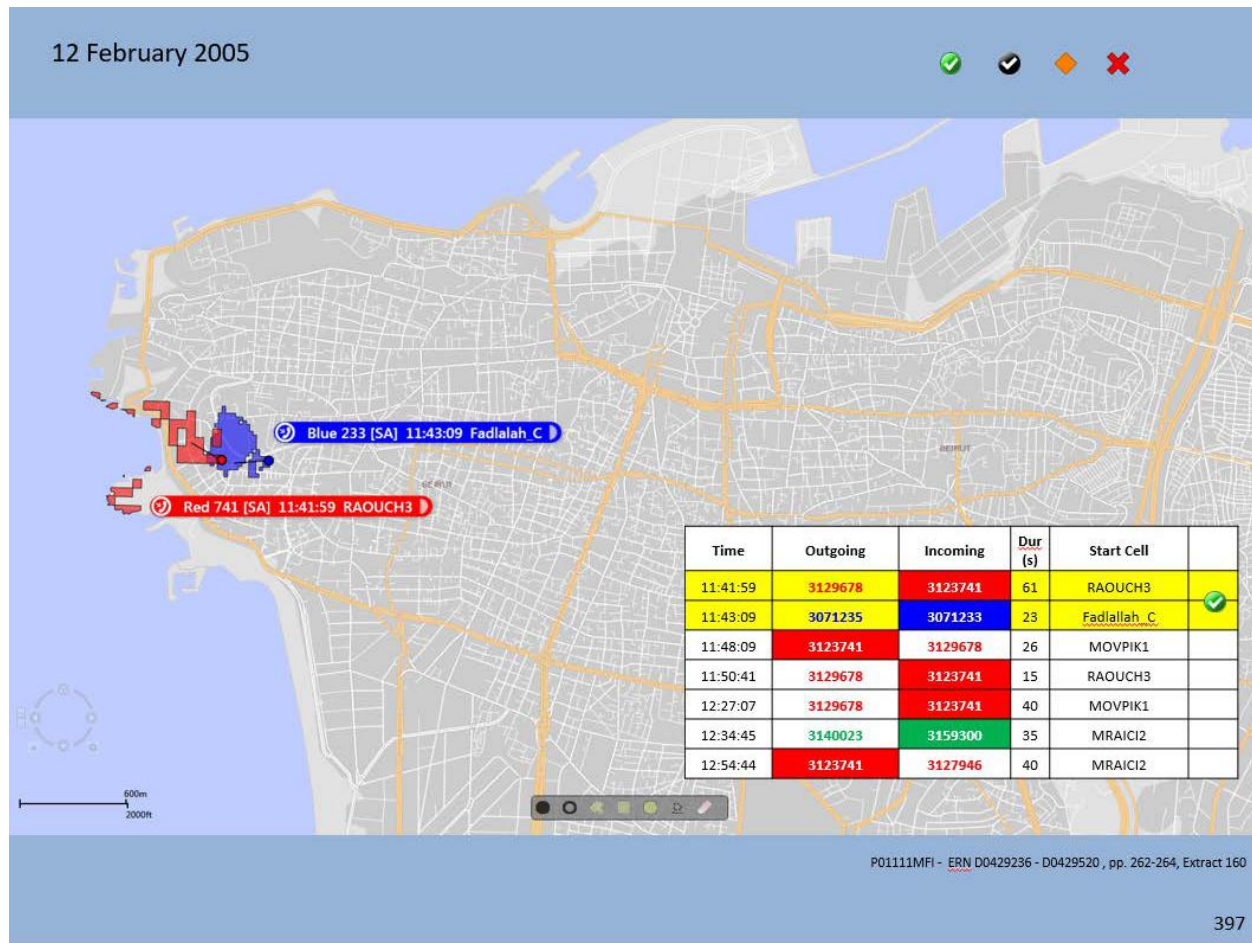

Exhibit P1935 (PowerPoint presentation on single user analysis, John Edward Philips), slide 394

3230. By 11:41, Red 741 moved to west Beirut using RAOUCH3, and, as shown below, possibly co-located with Blue 233, which used Touch’s Fadlallah_C cell seconds later.⁶³⁶³

⁶³⁶³ John Edward Philips, T. 24 April 2017, p. 14; exhibit P1259, p. 362. See also exhibit P1935, slide 397.

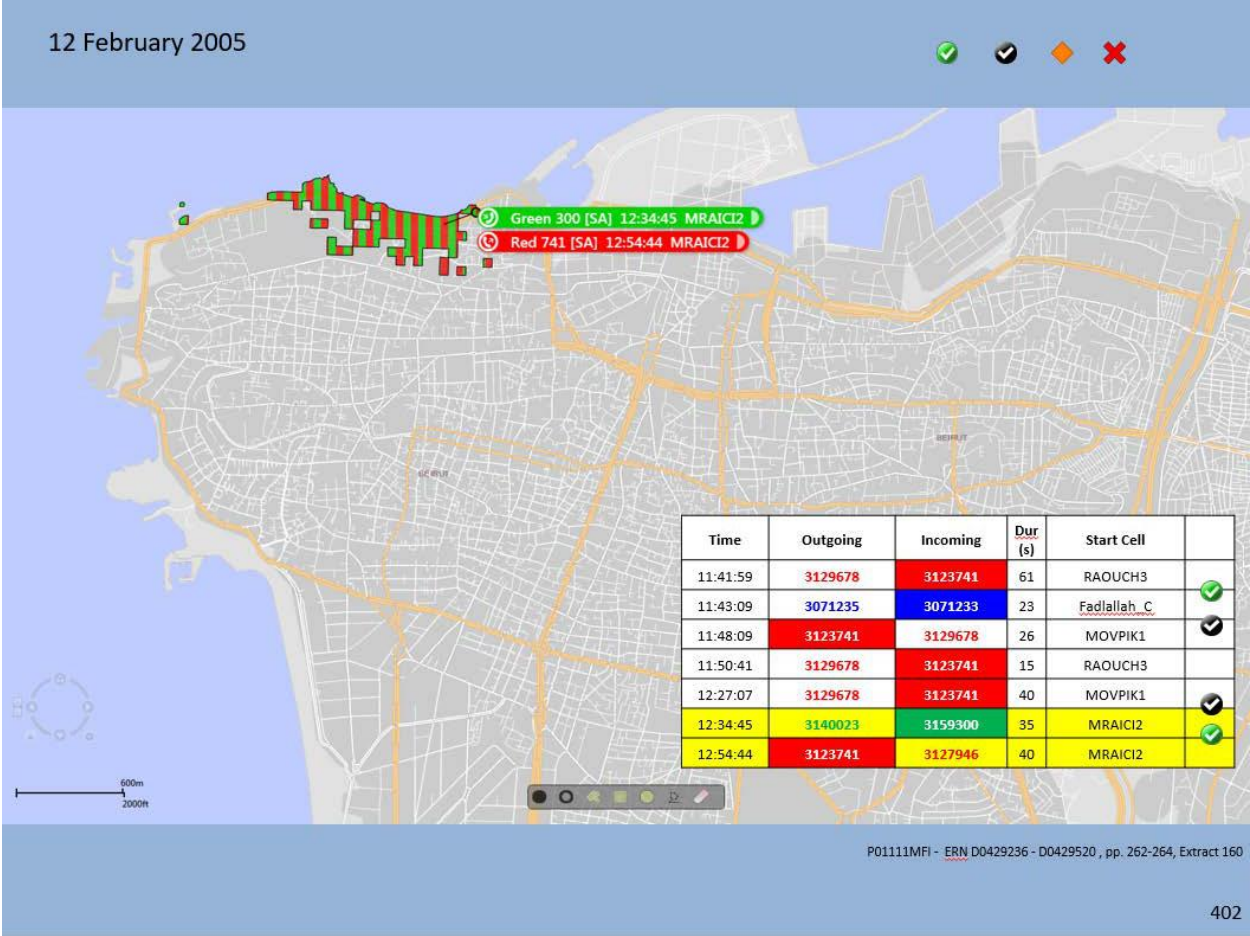

*Exhibit P1935 (PowerPoint presentation on single user analysis, John Edward Philips),
slide 397*

3231. By 12:54, Red 741 moved from the predicted best server coverage area of RAOUCH3 and MOVPIK1 in west Beirut to the northern coast of the city, and activated MRAICI2, the same cell that Green 300 had used 20 minutes earlier.⁶³⁶⁴ In the afternoon, from 13:54 to 17:12, both network mobiles moved to Mosbeh and Rimal, north-east of Beirut, activating MOSBEH2 and RIMAL1.⁶³⁶⁵ The network mobiles' possible co-locations and movements are demonstrated in the following slides:

⁶³⁶⁴ John Edward Philips, T. 24 April 2017, p. 15; exhibit P1259, p. 363. *See also* exhibit P1935, slides 403-408.

⁶³⁶⁵ John Edward Philips, T. 24 April 2017, pp 14-16; exhibit P1259, p. 363. *See also* exhibit P1935, slides 398-408; exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 265-266; exhibit P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review), p. 48. Mr Donaldson too demonstrated Red 741's and Green 300's common movement to Mosbeh, Andrew Donaldson, T. 24

August 2017, pp 57-60; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 579, annex D, pp 381-383; exhibit P2025.1, slides 107-121.

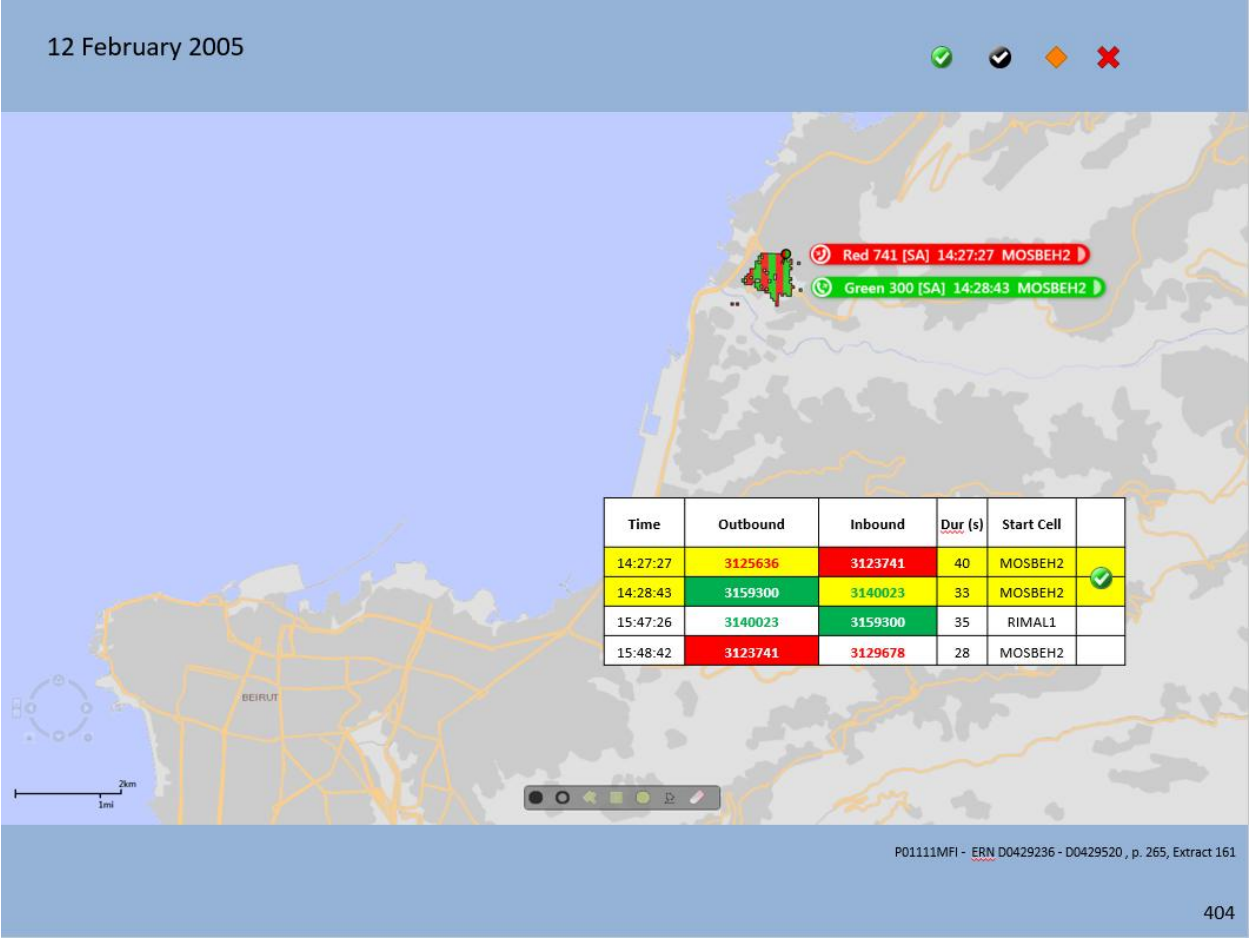

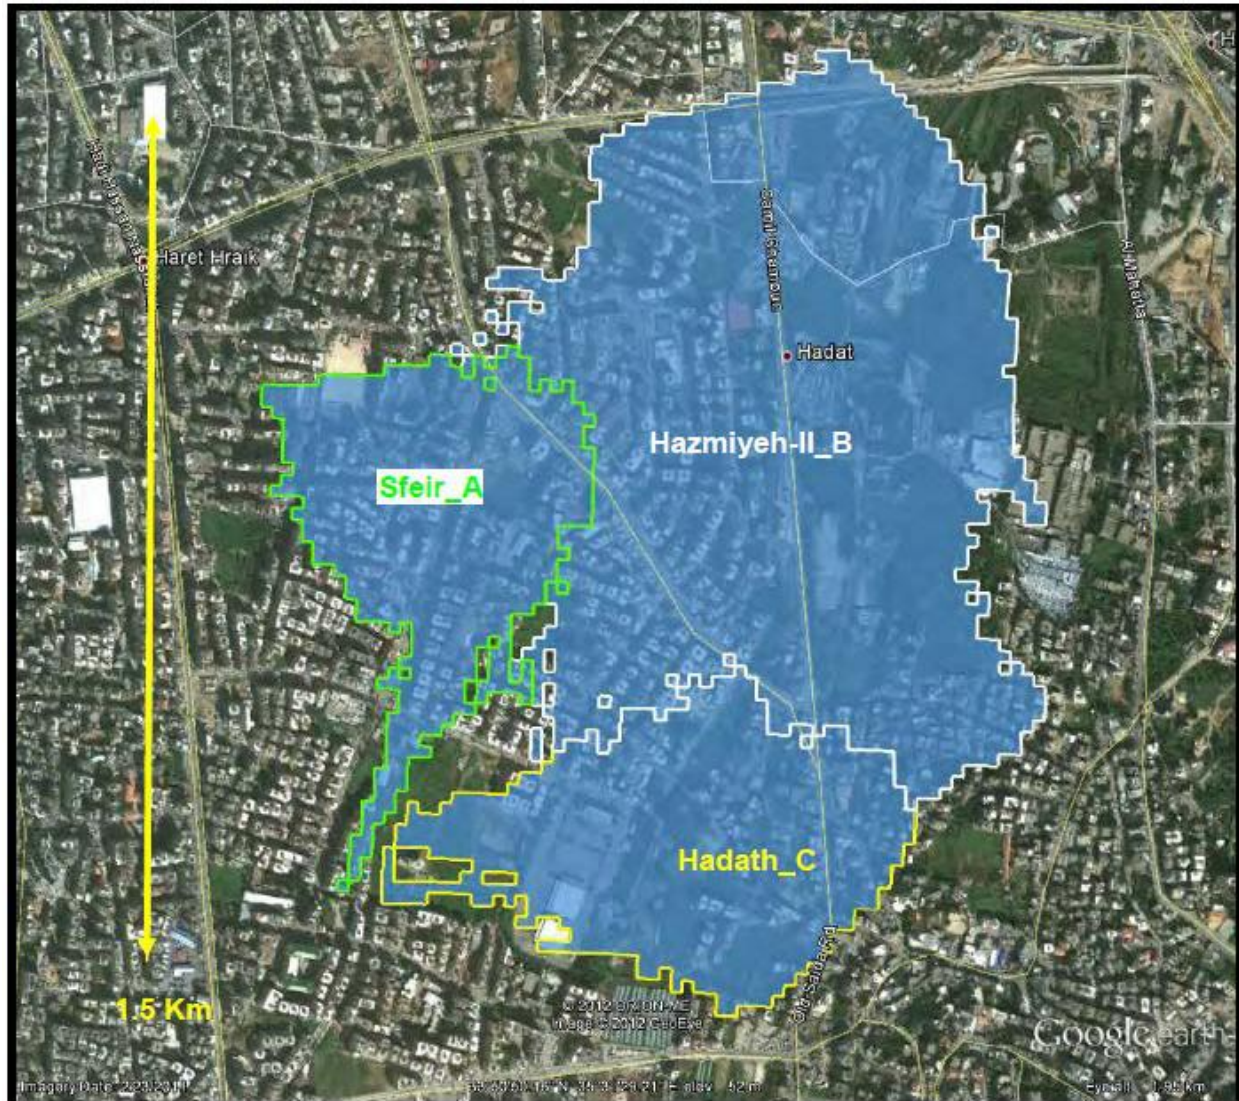

Exhibit P1935 (PowerPoint presentation on single user analysis, John Edward Philips), slides 402, 404

3232. For its last call of the day at 17:48, Red 741 used MOVPIK1 in west Beirut.⁶³⁶⁶ From 19:00 to 20:42, Blue 233 and mobile 091 activated Touch’s cells in south Beirut, Sfeir_A, Hadath_C and Hazmiyeh-II_B, as shown in the map below.⁶³⁶⁷

⁶³⁶⁶ Exhibit P1259, p. 363.
⁶³⁶⁷ John Edward Philips, T. 24 April 2017, p. 16; exhibit P1259, p. 363; exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), p. 267. See also exhibit P1935, slides 409-412.

*Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash—
exhibit P1111, p. 267*

3233. On Monday 14 February 2005, Blue 233 and mobile 170 used contiguous cells, Tabbet_el_Dahra_C and Bir_hassan_B, respectively, for calls made seconds apart and 20 minutes later, mobile 170 moved in a northerly direction to Ras_Nabah_A.⁶³⁶⁸ At 11:35, Blue 233 activated Riad_El_Soloh_B in north Beirut, which had overlapping predicted best server coverage with

⁶³⁶⁸ John Edward Philips, T. 24 April 2017, pp 18-19; exhibit P1259, p. 364; exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 270-271. *See also* exhibit P1935, slides 415-417.

ETOILE1—near the Parliament—used by Red 741 two minutes earlier.⁶³⁶⁹ At 11:47, Blue 233 used Coast_Road_C near the St Georges Marina, a minute later Red 741 used PHENMB1, south-west of the marina, across the Phoenicia Hotel with a 150-metre radius coverage.⁶³⁷⁰

3234. For four calls in the following 16 minutes, Red 741 used PHENMB1, ZOUKAK1, ZOUKAK4 and MRAICI1.⁶³⁷¹ Green 300 also used MRAICI1 at the start of its last call at 11:58, and PHENMB1 at the end of this call.⁶³⁷² The Red network mobile remained in this area, using ZOUKAK1, BEACH1 and PHENMB1, until its last call at 12:50:55 on ZOUKAK1.⁶³⁷³ The electronic presentation of evidence map below depicts the locations and predicted best server coverage areas of Alfa's and Touch's cells that mobile 170, Blue 233, Green 300 and Red 741 connected to while travelling from south to the coast in north Beirut:

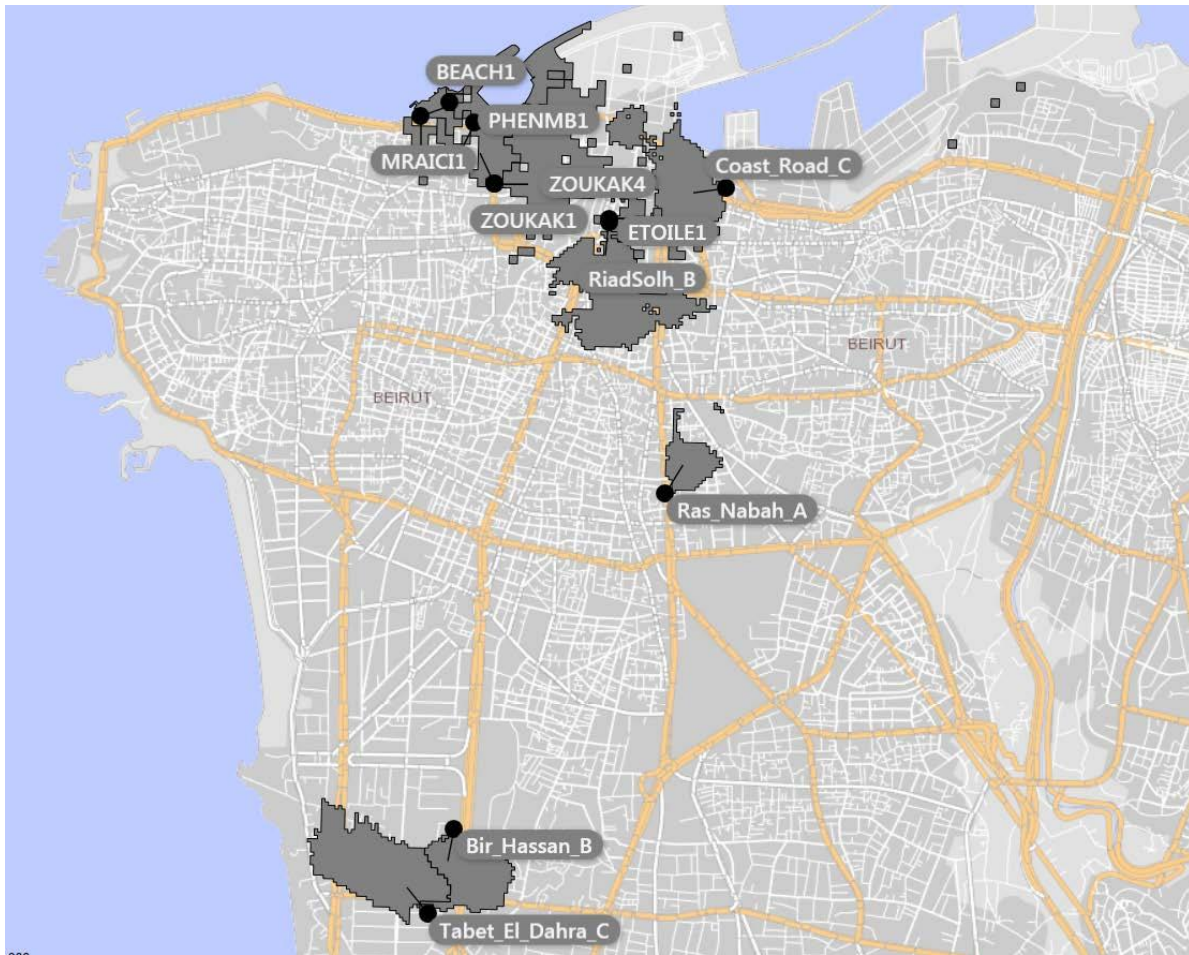

⁶³⁶⁹ John Edward Philips, T. 24 April 2017, pp 18-19; exhibit P1259, p. 364; exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 270-272. *See also* exhibit P1935, slide 418.

⁶³⁷¹ John Edward Philips, T. 24 April 2017, pp 19-20; exhibit P1259, p. 364; exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 270-273; exhibit P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review), p. 49. *See also* exhibit P1935, slides 420-425.

⁶³⁷² John Edward Philips, T. 24 April 2017, pp 20-21; exhibit P1259, p. 364; exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 270-273; exhibit P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review), p. 49. *See also* exhibit P1935, slides 424-425. Mr Donaldson also gave evidence about the movements of Blue 233, Green 300 and Red 741 on 14 February 2005 in the coastal area in north Beirut, Andrew Donaldson, T. 24 August 2017, pp 65-68; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 580, annex D, pp 384-385; exhibit P2025.1, slides 124-129.

⁶³⁷³ Exhibit P1259, p. 364.

Alfa and Touch cells used by mobile 170, Blue 233, Red 741 and Green 300 between 10:50 and 12:50 on 14 February 2005 created from exhibit P592.1

3235. Mobile 091 was active only in the evening on this day activating Hadath_C, which had adjacent predicted best server coverage with Sfeir_A, used by Blue 233 ten minutes earlier.⁶³⁷⁴

3236. Mr Philips concluded that ‘the possibility that these mobiles were not used by the same user in certain instances would appear to be very remote.’⁶³⁷⁵ He and Mr Donaldson, however, acknowledged that if the user were out of Lebanon for two weeks in the analysed period of mobile activities it would exclude that person as the single user of these mobiles.⁶³⁷⁶

⁶³⁷⁴ John Edward Philips, T. 24 April 2017, pp 21-23; exhibit P1259, p. 364; exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 270-273; exhibit P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review), p. 49. *See also* exhibit P1935, slides 426-427.

⁶³⁷⁵ John Edward Philips, T. 24 April 2017, pp 87-89, T. 26 April 2017, pp 96-97.

⁶³⁷⁶ John Edward Philips, T. 26 April 2017, p. 98; Andrew Donaldson, T. 22 August 2017, p. 35.

Dislocation of mobile 091 and Red 741 from the other mobiles

3237. Mr Philips and Mr Donaldson identified and examined the same instances of cell activations which precluded that mobile 091 and Red 741 co-located with the other mobiles. These occurred on Friday 28 January and Wednesday 2 February 2005, respectively.

3238. Mr Philips concluded that mobile 091's activation of Touch's BorjBrajneh-II_B cell at 12:24 on Friday 28 January 2005 for an 88-second call may preclude its co-location with mobile 170 which used Touch's Hadat_2_C when it received a text message at 12:25, and excluded its co-location with Green 300, Blue 233 and Red 741 for a period between 13:11 and 15:02.⁶³⁷⁷ While using cells near the airport, mobile 091 had four calls with mobile 170, between 13:11 and 14:20, which was moving to the north of Beirut,⁶³⁷⁸ and from 13:20 to 14:56 it had overlapping calls with Blue 233, using Tehwita_A to the north-east of the airport, and Red 741, activating MOSBEH2.⁶³⁷⁹ However, in this period the other mobiles, Green 300, Blue 233, Red 741 and mobile 170, continued to co-locate and move in concert in the Mosbeh area.⁶³⁸⁰

3239. The following three slides extracted from Mr Philips's evidence on single user analysis for Mr Ayyash illustrate mobile 091's dislocation and overlapping calls and the other four mobiles' possible co-location in the same period.⁶³⁸¹

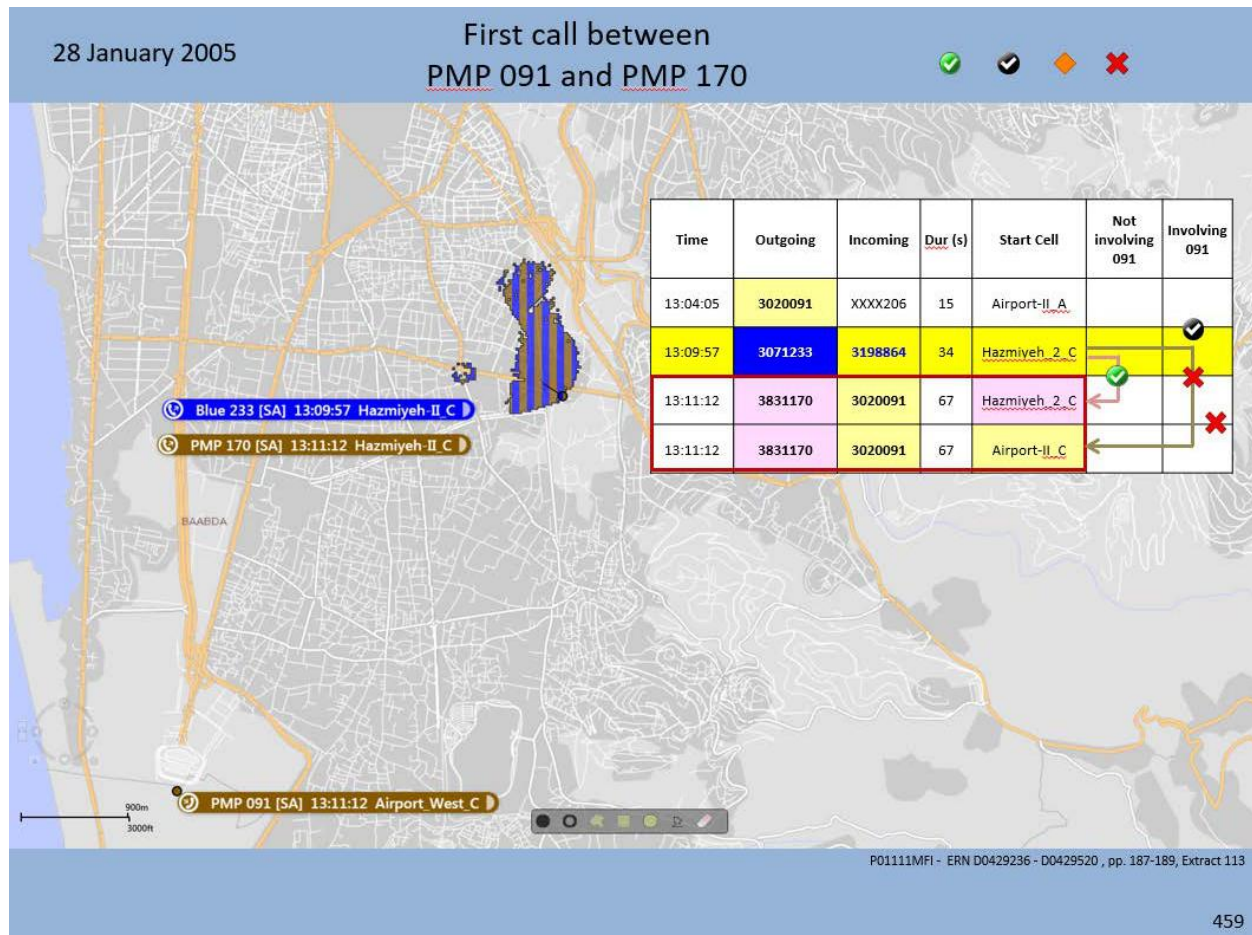

⁶³⁷⁷ John Edward Philips, T. 24 April 2017, pp 36-39, 47-53, 56-59; exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 184-185, 187-190, 204; exhibit P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review), p. 37. *See also* exhibit P1935, slides 443-500.

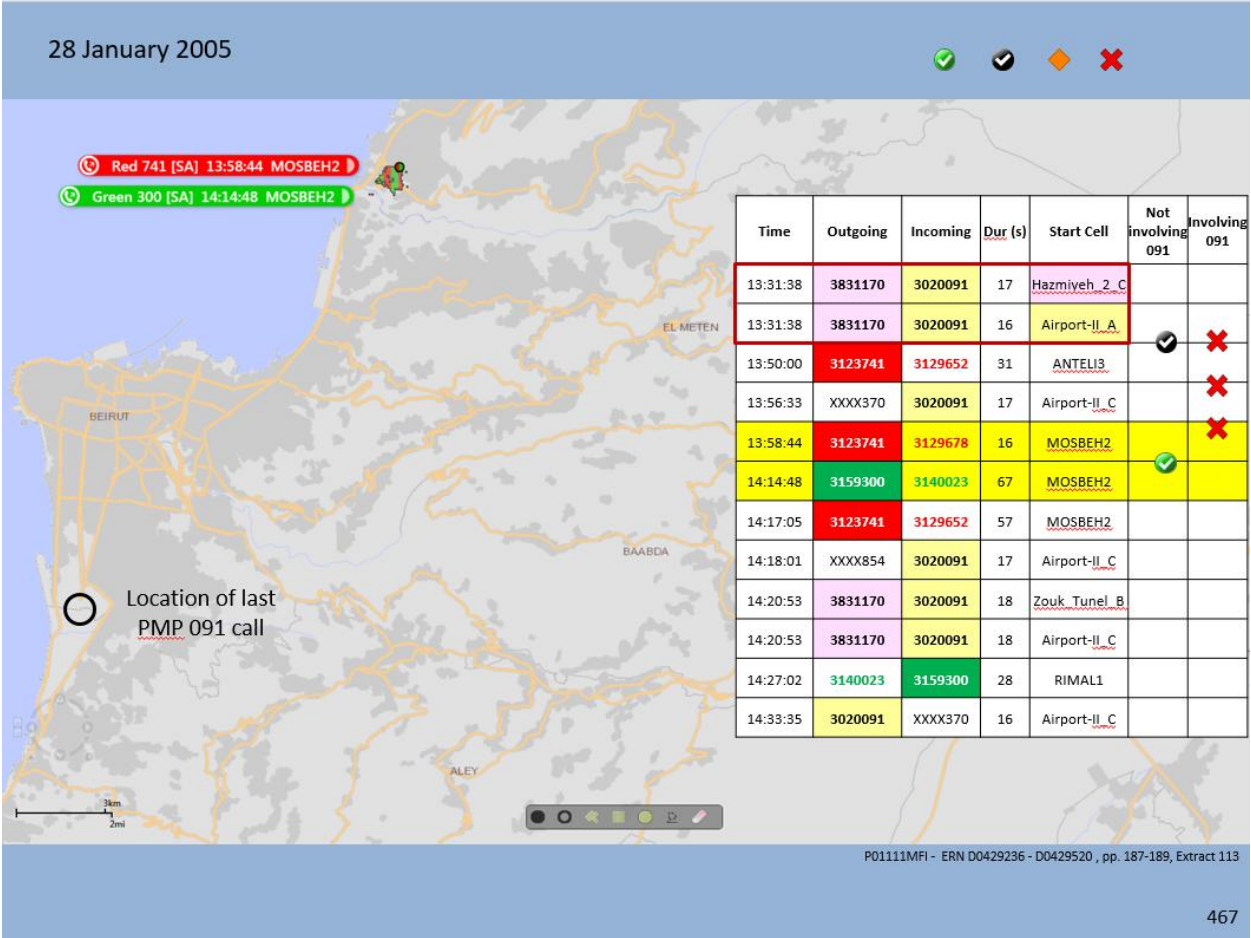

⁶³⁷⁸ John Edward Philips, T. 24 April 2017, pp 49-51; exhibit P1259, p. 350. *See also* exhibit P1935, slides 457-470.

⁶³⁷⁹ Exhibit P1259, pp 350-351. *See also* exhibit P1935, slides 463, 469.

⁶³⁸⁰ John Edward Philips, T. 24 April 2017, pp 61-62; Andrew Donaldson, T. 22 August 2017, pp 25, 31-33; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 561.

⁶³⁸¹ John Edward Philips, T. 24 April 2017, pp 50-55; exhibit P1935, slides 459, 467, 471.

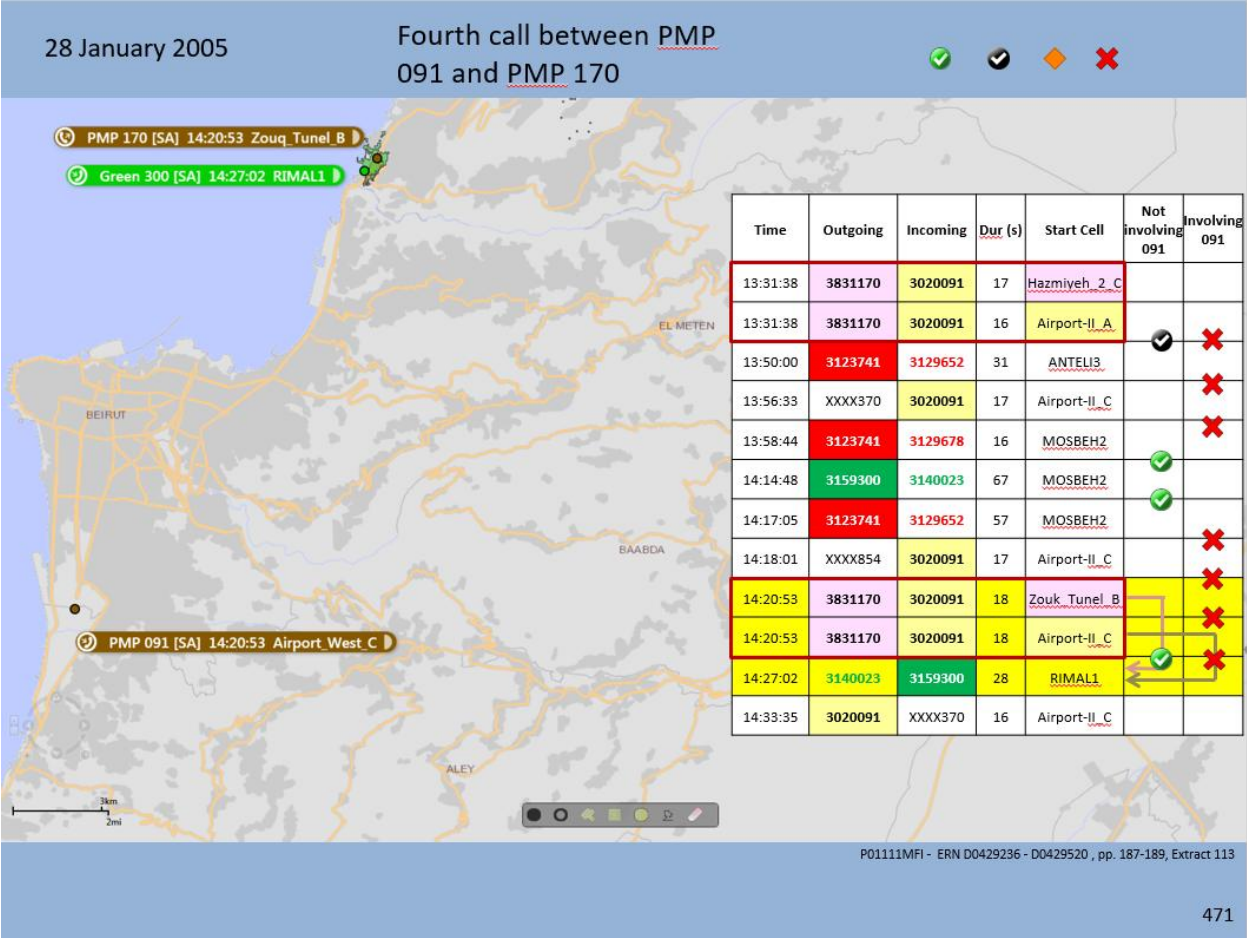

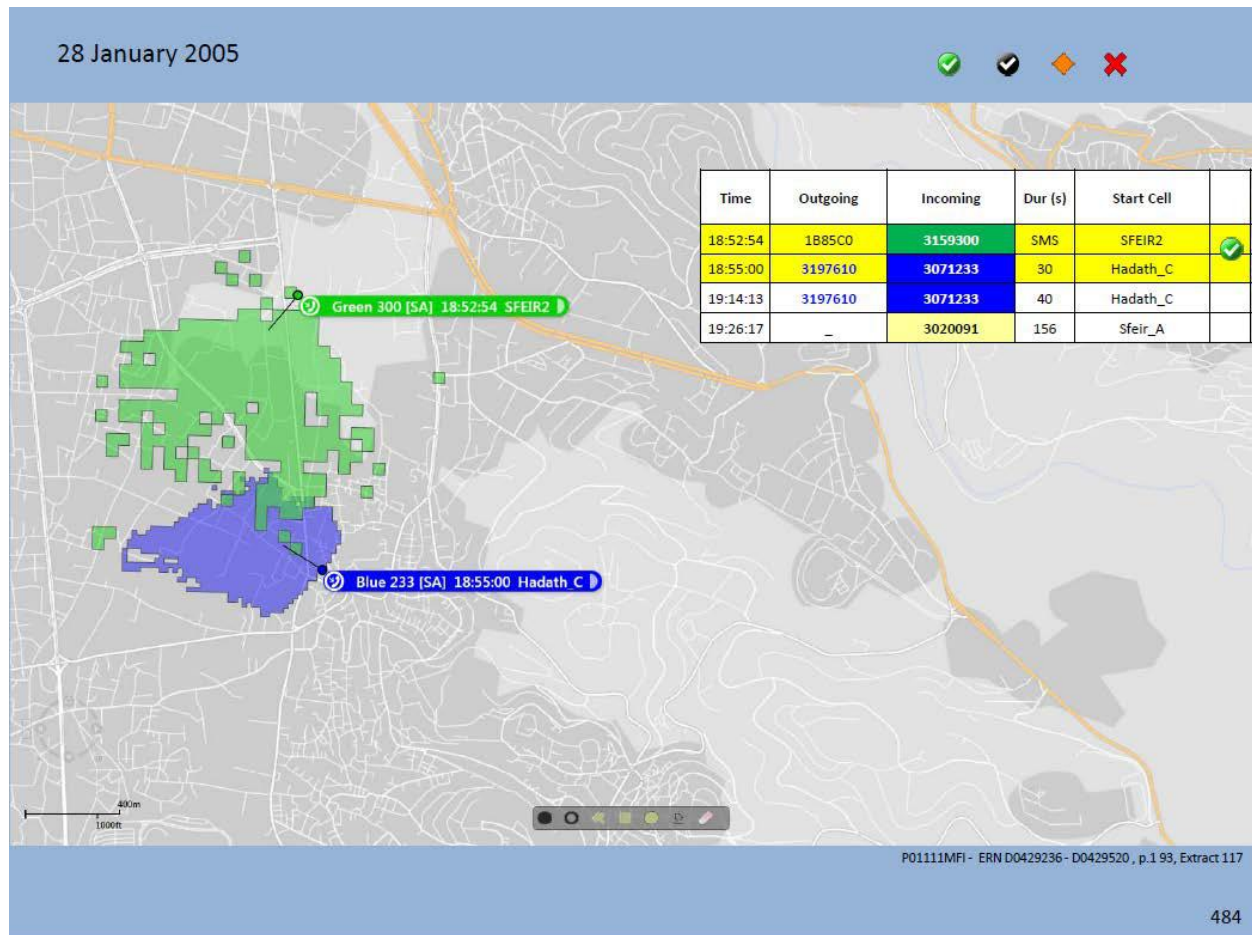

Exhibit P1935 (PowerPoint presentation on single user analysis, John Edward Philips), slides 459, 467 and 471

3240. According to Mr Philips and Mr Donaldson, for this period of the day mobile 091 may have been given to someone else who went to the airport, while Blue 233, Red 741, Green 300 and mobile 170 travelled to the area of Mosbeh and Rimal, north-east of Beirut.⁶³⁸² In the evening, however, mobile 091 returned to south Beirut, as did Blue 233 and Green 300, as depicted in the following slides:⁶³⁸³

⁶³⁸² John Edward Philips, T. 24 April 2017, pp 61-62; Andrew Donaldson, T. 22 August 2017, pp 25, 31-33, T. 24 August 2017, pp 22-24; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), paras 558-564, 572, annex D, pp 368-369.

⁶³⁸³ John Edward Philips, T. 24 April 2017, p. 62. See also exhibit P1935, slides 484-486.

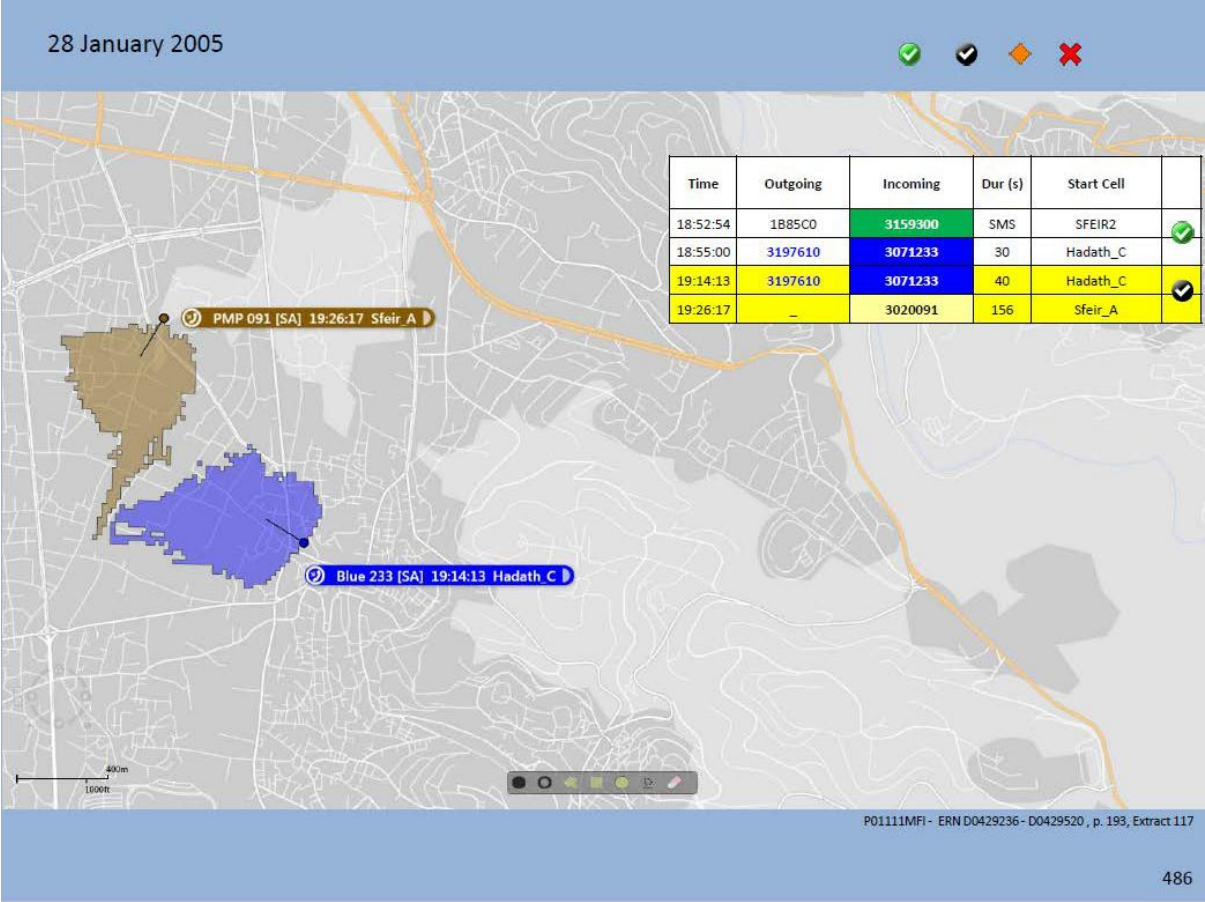

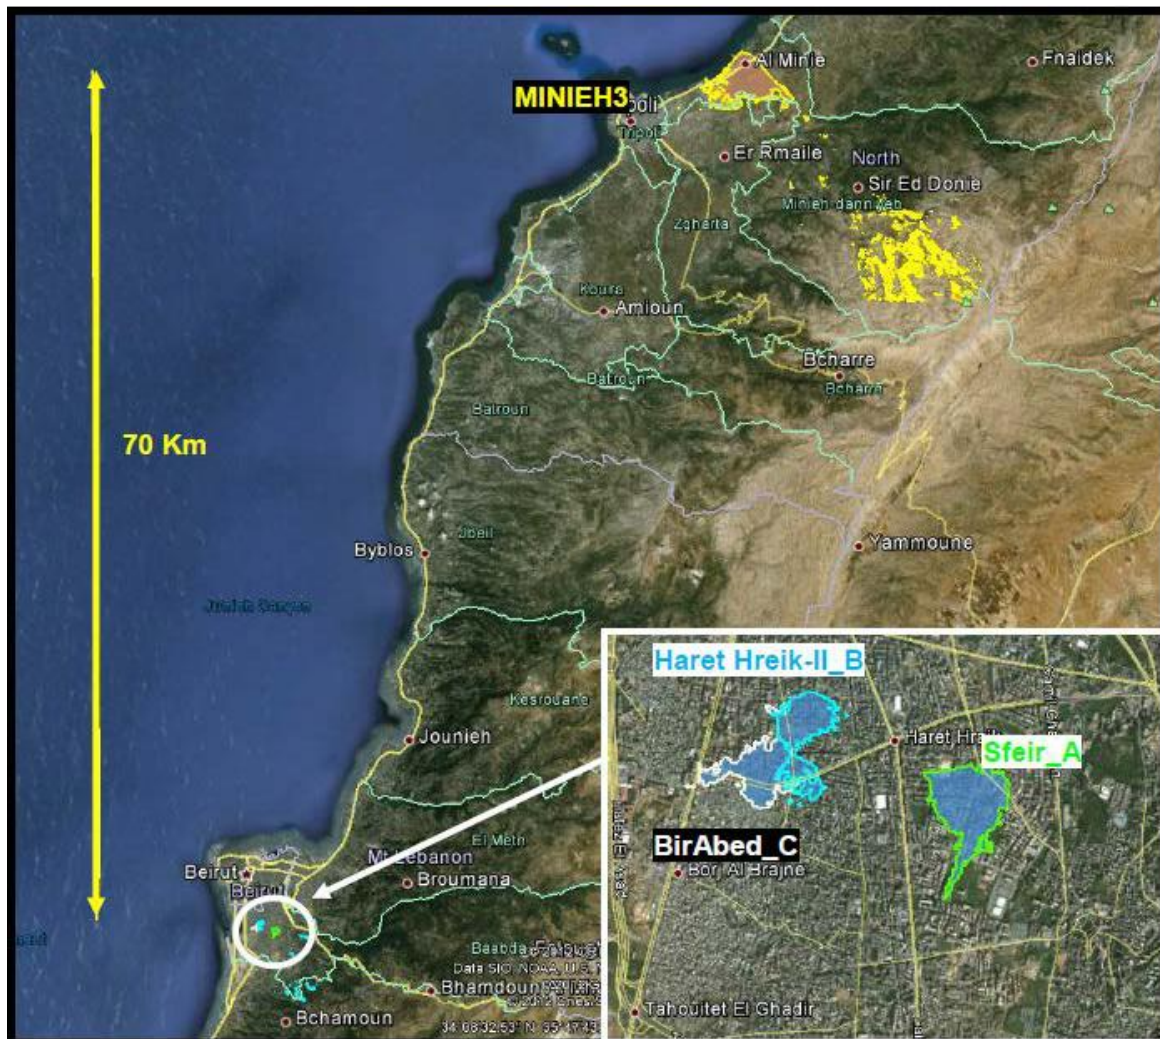

Exhibit P1935 (PowerPoint presentation on single user analysis, John Edward Philips), slides 484, 486

3241. Mr Philips observed that on Wednesday 2 February 2005, for calls to an Alfa service number at 19:14 and at 19:15, Red 741 activated Alfa’s MINIEH3 cell north-east of Tripoli, and separated from mobile 091, which activated Touch’s Haret Hreik-II_B and Bir Abed_C cells in south Beirut 36 minutes before and three minutes after the Red mobile’s calls.⁶³⁸⁴ The following map depicts the mobiles’ separation from each other:

⁶³⁸⁴ John Edward Philips, T. 24 April 2017, pp 30-31; exhibit P1259, p. 354; exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 209-210. See also exhibit P1935, slides 437-439.

*Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash—
exhibit P1111, p. 209*

3242. The Trial Chamber heard evidence, including from Mr Philips, that Red network mobiles were topped up in Tripoli on this day between 18:41 and 19:25, in a sequential manner.⁶³⁸⁵

⁶³⁸⁵ John Edward Philips, T. 24 April 2017, pp 31-32. See also Andrew Donaldson, T. 24 August 2017, pp 15-16, 19, 24-25; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 574.

ii. Submissions

3243. The Prosecution submits that Mr Ayyash was the user of Red 741 from Friday 14 January to Monday 14 February 2005. The person whose name was used to subscribe Red 741, Ms Refaayeh, never actually bought that SIM card.⁶³⁸⁶

3244. With respect to mobile 091's separation from mobile 170, Blue 233, Green 300 and Red 741 in the afternoon of 28 January 2005, the Prosecution argues that before and after this occurrence, the mobiles were grouped together. In this period, mobile 091 moved to and remained stationary at Beirut International Airport, which is consistent with Mr Ayyash lending this mobile to a person who would have been asked to pick up Mr Ayyash's family travelling back from the Hajj pilgrimage in Saudi Arabia on that day.⁶³⁸⁷

3245. The Ayyash Defence submits that the primary means for attribution of all network mobiles is co-location analysis, which it submits is unreliable. The attribution of the network mobiles to Mr Ayyash is wholly dependent on the attribution of the personal mobiles to him. As the Prosecution failed in the attribution of personal mobiles, attribution to network mobiles also fails.⁶³⁸⁸

iii. Findings

3246. The contact profile of Red 741 and its subscriber information are inconclusive as to who was using the mobile. Further, both Mr Philips and Mr Platt noted that the geographic profiles of the Red mobiles were distinct from those of the other network mobiles, as most of their cell activations occurred in western Beirut.⁶³⁸⁹ As a result, the only evidence the Trial Chamber has to determine this relates to its possible co-location with other mobiles.

3247. The attribution period of Red 741—Friday 14 January until Monday 14 February 2005—does not overlap with the attribution periods of personal mobiles 165 and 935, and network mobiles Yellow 669 and Yellow 294. Nor does it overlap with the attribution period of Blue 322 that was specified in the Prosecution's final trial brief, but not pleaded in the amended consolidated

⁶³⁸⁶ Prosecution final trial brief, para. 257.

⁶³⁸⁷ Prosecution final trial brief, paras 256 (c), 314; Prosecution closing submissions, T. 13 September 2018, pp 7-11.

⁶³⁸⁹ See chapter VIII 'Nature and purpose of colour-coded mobile networks and Purple group of mobiles', (D) (3) 'Usage'.

indictment. Accordingly, any co-location analysis was limited to personal mobiles 091 and 170, Blue 233 and Green 300.

3248. Red 741 and Green 300 were active together on eight days on which they had 42 pairs of close-in-time calls. On seven days, 28 and 31 January, 3, 8, 9, 11, 12 and 14 February 2005, the two Alfa mobiles' cell activations showed possible co-location 26 times. Based on the combined call sequence table, the mobiles used identical cells 13 times for calls not more than three minutes apart. For the remaining 16 pairs of calls their cell activations would not preclude their co-location, and the two mobiles did not dislocate.

3249. Cell activations show that the two mobiles moved together in west Beirut and in the area of Mosbeh. The Trial Chamber finds that the frequency of possible co-locations and the common movement of the mobiles weigh strongly in favour of finding that Green 300 and Red 741 were used by the same person.

3250. Red 741 and Green 300 had three overlapping calls, which could be a factor against the same person using them. However, Mr Philips acknowledged that exceptionally this may occur and on its own would not necessarily exclude that the mobiles had a single user. The Trial Chamber notes Mr Philips's evidence that these calls occurred in the intense period of Red 741's use, and for all three overlapping calls the two mobiles used the same cell sectors.

3251. Red 741 had six possible co-locations with mobile 091 and seven with Blue 233. Excluding the overlapping calls, Red 741 possibly co-located with mobile 091 within one to 25 minutes, and with Blue 233 within two to 13 minutes. Although it did not co-locate with mobile 170, on their three days of common use, the mobiles' cell activations for four pairs of calls would not preclude their co-location. Mr Philips demonstrated considerable common movements of these mobiles which points towards a single user. Additionally, the Trial Chamber has found that—save for when mobile 091 dislocated from the other mobiles in the afternoon on 28 January 2005—mobiles 091 and 170, and Blue 233 were used by the same person as Green 300, and it was Mr Ayyash.

3252. The Trial Chamber received evidence that on Friday 28 January 2005 between 12:24 and 15:02 mobile 091 using cells in the airport area dislocated from Red 741, Green 300, Blue 233 and mobile 170, while these four continued to move together north-east of Beirut. Calls between the mobiles and overlapping calls, while dislocating, exclude that the same person was then using

them. Mr Philips and Mr Donaldson both concluded that during the dislocation a different person may have taken mobile 091 to the airport. The Trial Chamber finds this explanation reasonable in the context of its conclusions at paragraphs 3409-3410 below that Mr Ayyash did not travel to the Hajj in January 2005.

3253. Mobile 091 also dislocated from Red 741 on Wednesday 2 February 2005. The Trial Chamber has received evidence that on this day the Red network mobiles were topped up in Tripoli. Logically, whoever was topping up a group or network of mobiles took the mobiles from their individual users to Tripoli. That therefore does not exclude that Red 741 and mobile 091 generally had the same single user.

3254. With these exceptional periods in mind, the Trial Chamber is satisfied beyond reasonable doubt, based on the totality of the evidence, that Red 741 also had the same user as the other mobiles analysed above. That user was Mr Ayyash from Friday 14 January to Monday 14 February 2005.

3255. The Trial Chamber is therefore satisfied beyond reasonable doubt that Mr Ayyash was the user of Red 741 from Friday 14 January to Monday 14 February 2005.

(g) The 2005 Hajj

3256. The presence or absence of Mr Ayyash in Lebanon during the Hajj in January 2005 (year 1425 in the *Hijri* calendar) is central to the attribution of relevant mobile numbers to him.⁶³⁹⁰

3257. Had he travelled to the Kingdom of Saudi Arabia, it would exclude him as the single user of mobiles attributed to him at least during that period.⁶³⁹¹ The Prosecution concedes this by stating that Mr Ayyash ‘could not have continued normal use in Lebanon of the mobiles’ had he travelled to Mecca in January 2005.⁶³⁹² In addition, that period—the second half of January 2005—is a significant period in relation to the preparation of the attack on Mr Hariri.

3258. The Prosecution submits that Mr Ayyash had initially intended to travel to Saudi Arabia between 15 and 28 January 2005 to perform the Hajj pilgrimage. However, he cancelled his trip

⁶³⁹⁰ Andrew Donaldson, T. 22 August 2017, p. 35, T. 3 October 2017, pp 38-39, T. 18 October 2017, p. 29.

⁶³⁹¹ John Edward Philips, T. 26 April 2017, p. 98; Andrew Donaldson, T. 22 August 2017, p. 35.

⁶³⁹² Prosecution final trial brief, para. 282.

and instead remained in Lebanon. In his place, someone else using the name ‘Salim Jamil Ayyash’ and his Hajj passport travelled to Saudi Arabia.⁶³⁹³

3259. To confirm Mr Ayyash’s presence in Lebanon in this period, Mr Andrew Donaldson compared the call and geographical patterns of mobiles that the Prosecution attributed to him in the Hajj periods in 2004, when he travelled to Mecca, and 2005, when he did not, according to the Prosecution. The Ayyash Defence, on the other hand, argues that Mr Ayyash left Lebanon and travelled to Saudi Arabia in January 2005 for the Hajj.⁶³⁹⁴

3260. The Trial Chamber received extensive evidence concerning the Hajj application and passport requirements, air travel procedures and records and Lebanese Civil Defence attendance, leave and payment practices. Records show that Mr Ayyash received Hajj passports and travel visas in two consecutive years, and he requested time off work to perform the Hajj in 2004 and 2005. Lebanese and Saudi Arabian entry and exit records and flight manifests also bear his name.

3261. However, the Trial Chamber heard testimony that casts doubt on the integrity of the Beirut airport security procedures with respect to the identification of pilgrims during the 2004 and 2005 Hajj seasons. Further, Mr Ayyash’s leave application for the 2005 Hajj was cancelled and he received the ‘commute compensation’ for the cost of travelling to work, which had been deducted when his original leave was approved.

i. Evidence

a. Hajj application, passport and travel

3262. The Trial Chamber heard evidence from Mr Ibrahim Itani, the Religious Affairs Co-ordinator for the *Al-Mustaqbal* Party⁶³⁹⁵ and the Executive Director of the Hajj Committee, on the Hajj application procedures in 2004 and 2005 and the role of the Hajj Committee.⁶³⁹⁶ Anyone wishing to perform the Hajj pilgrimage to Mecca had to submit an application for a Hajj passport to the General Security Directorate, the *Sûreté Générale*, before the published due date through a

⁶³⁹³ Prosecution final trial brief, paras 281, 285, 289; Prosecution closing submissions, T. 13 September 2018, p. 3.

⁶³⁹⁴ Ayyash Defence final trial brief, para. 373; Ayyash Defence closing submissions, T. 17 September 2018, p. 27.

⁶³⁹⁵ *Al-Mustaqbal* or Future Party was headed by Mr Rafik Hariri, then by his son, Mr Saad Hariri, Marwan Hamade, T. 9 December 2014, p. 19; exhibit P1667 (Witness statement of Ibrahim Itani, 12 March 2010), para. 5.

⁶³⁹⁶ Ibrahim Itani, T. 12 December 2016, p. 23; exhibit P1667 (Witness statement of Ibrahim Itani, 12 March 2010), paras 5-7; exhibit P1667 (Witness statement of Ibrahim Itani, 12 March 2010), ERNs 60128950-60128966, 60128969-60128984.

moarref, a liaison of a certified travel agency.⁶³⁹⁷ Applications for the 2005 Hajj were due between 14 August and 13 October 2004.⁶³⁹⁸

3263. The application required potential pilgrims to provide information including their name, date and place of birth, current address, travel agency information, health status and their pilgrim category. It also required the personal information and signatures of two witnesses and a *mukhtar*. Next to the *mukhtar*'s signature was also a stamp.⁶³⁹⁹ Along with the application, the pilgrim had to supply an ID card, a civil registry ID stating the religious group the applicant belonged to, a certificate proving the relationship between the applicant and any accompanying family members and a certificate of a *sheikh* from a religious authority.⁶⁴⁰⁰ The pilgrim had to provide four photographs, one for the Hajj application, two for the passport and the remaining one as reserve to keep by the Hajj Committee until the completion of the Hajj.⁶⁴⁰¹

3264. Some restrictions applied to female pilgrims under the age of 45 who were required to be accompanied by a *mahram*, either her husband or a male kin.⁶⁴⁰² Both the woman and the *mahram* had to complete separate Hajj applications, which included the other's name, to allow the Hajj Committee to choose both the woman and the *mahram* to travel together instead of accepting one application and denying the other.⁶⁴⁰³ Applications from anyone under 18 were rejected.⁶⁴⁰⁴ A minor may have travelled on the Hajj only if their name was on a parent's Hajj application, or if they received a travel visa directly from the Saudi Arabian government and travelled using their national passport.⁶⁴⁰⁵

⁶³⁹⁷ Exhibit P1667 (Witness statement of Ibrahim Itani, 12 March 2010), paras 13, 23; exhibit P1668 (Witness statement of Ibrahim Itani, 30 June 2010), paras 8-9; exhibit P1672 (Witness statement of Ibrahim Itani, 16 April 2012), para. 7.

⁶³⁹⁸ Ibrahim Itani, T. 12 December 2016, p. 37; exhibit P1667 (Witness statement of Ibrahim Itani, 12 March 2010), para. 13; exhibit P1672 (Witness statement of Ibrahim Itani, 16 April 2012), para. 10.

⁶³⁹⁹ For example, exhibit 1D293 (Mr Ayyash's 2005 Hajj application and passport), p. 1.

⁶⁴⁰⁰ Ibrahim Itani, T. 12 December 2016, p. 36; exhibit P1667 (Witness statement of Ibrahim Itani, 12 March 2010), para. 15.

⁶⁴⁰¹ Ibrahim Itani, T. 12 December 2016, p. 36; exhibit P1667 (Witness statement of Ibrahim Itani, 12 March 2010), para. 15; exhibit P1668 (Witness statement of Ibrahim Itani, 30 June 2010), paras 22, 24.

⁶⁴⁰² Ibrahim Itani, T. 12 December 2016, p. 55; exhibit P1667 (Witness statement of Ibrahim Itani, 12 March 2010), para. 20; exhibit P1672 (Witness statement of Ibrahim Itani, 16 April 2012), para. 37.

⁶⁴⁰³ Ibrahim Itani, T. 12 December 2016, p. 55.

⁶⁴⁰⁴ Exhibit P1667 (Witness statements of Ibrahim Itani), para. 21; exhibit P1672 (Witness statement of Ibrahim Itani, 16 April 2012), para. 12.

⁶⁴⁰⁵ Ibrahim Itani, T. 12 December 2016, p. 76; exhibit P1667 (Witness statement of Ibrahim Itani, 12 March 2010), para. 22.

3265. The *moarref* took the application to the *Sûreté Générale*, which produced the Hajj passport and sent it, together with the application, to the Hajj Committee.⁶⁴⁰⁶ The Hajj Committee then decided who was chosen for the pilgrimage.⁶⁴⁰⁷

3266. The Hajj passport was a document perforated in the middle which had two identical sides with the pilgrim's name and the photo.⁶⁴⁰⁸ In 2005, the personal information in the Hajj passports was handwritten, and it was the sole means of identification required from the pilgrims at Beirut Airport.⁶⁴⁰⁹

3267. The Saudi Arabian government set an annual quota of pilgrims allowed to travel from each country based on that country's population.⁶⁴¹⁰ Under normal circumstances, 6,000 Lebanese were allowed to travel on Hajj, half of whom were Shiite and half Sunni and there was a quota for 1,500 Palestinians and 500 for the representatives of the Hajj Committee which was shared with ministers and MPs and pilgrims under their sponsorship.⁶⁴¹¹ Between 2002 and 2004, the Saudi government allowed a higher quota for Lebanon of 20,000 pilgrims, 'due to the intervention of then Prime Minister Hariri'.⁶⁴¹² The 2005 quota was 17,000.⁶⁴¹³

3268. The Hajj Committee selected people wishing to travel based on age and whether they had travelled before.⁶⁴¹⁴ Older applicants and those who had never travelled were given priority.⁶⁴¹⁵

⁶⁴⁰⁶ Ibrahim Itani, T. 12 December 2016, pp 36-37; exhibit P1667 (Witness statement of Ibrahim Itani, 12 March 2010), para. 16; exhibit P1668 (Witness statement of Ibrahim Itani, 30 June 2010), para. 9.

⁶⁴¹⁵ Ibrahim Itani, T. 12 December 2016, pp 39-40, 82; exhibit P1667 (Witness statement of Ibrahim Itani, 12 March 2010), paras 19, 21; exhibit P1672 (Witness statement of Ibrahim Itani, 16 April 2012), para. 12.

3269. MPs belonging to the Loyalty to the Resistance Bloc, or Hezbollah, could travel to the Hajj every year.⁶⁴¹⁶ Each Hezbollah MP could sponsor one or two escorts annually.⁶⁴¹⁷ The sponsor and the sponsored did not have to travel together during the Hajj.⁶⁴¹⁸ Occupants of certain posts, such as prime minister or speaker of Parliament, could sponsor as many people as they liked and could do so even if they did not plan to perform the Hajj themselves that year.⁶⁴¹⁹

3270. In 2005, the Hajj passports and a CD containing the names of those selected to go on Hajj were hand delivered to the Beirut Embassy of the Kingdom of Saudi Arabia.⁶⁴²⁰ In very rare cases, someone who was chosen by the Hajj Committee was declined a travel visa by the Kingdom of Saudi Arabia because they had been blacklisted.⁶⁴²¹

3271. Approximately one month before the travel date, at the start of *Shawwal*, the month occurring directly after Ramadan in the Islamic calendar, the Hajj Committee released the list of approved Hajj pilgrims.⁶⁴²² For the 1425 Hajj, the list should have been posted in the middle of December 2004 and the Committee waited as long as possible to release the list of accepted pilgrims in case they received additional names from the Saudi authorities.⁶⁴²³ The selected pilgrims were not allowed to make their own arrangements—this could only be done through approved travel agencies—so the registered travel agencies began booking flights and accommodations for the pilgrims only once the list was released.⁶⁴²⁴ Even when selected, about five per cent of approved pilgrims chose not to travel.⁶⁴²⁵

⁶⁴²⁴ Exhibit P1667 (Witness statement of Ibrahim Itani, 12 March 2010), paras 23-24; exhibit P1672 (Witness statement of Ibrahim Itani, 16 April 2012), para. 11.

⁶⁴²⁵ Ibrahim Itani, T. 12 December 2016, p. 69; exhibit P1667 (Witness statement of Ibrahim Itani, 12 March 2010), para. 32.

3272. In the days before the pilgrims were due to travel, the Hajj Committee provided the Hajj passports to the travel agents, who were responsible for giving the passports to the pilgrims via the *moarref*.⁶⁴²⁶ Pilgrims received only one of the identical sides of the Hajj passport at the airport, the other remained with the Committee.⁶⁴²⁷ The *moarref* was responsible for each group of pilgrims, which could range from 11 to 19, but was generally 13, and one *sheikh* accompanied approximately every *hamla*, a group of 50 pilgrims.⁶⁴²⁸

3273. In 2005, the Hajj Committee also provided ID cards containing a scanned copy of the pilgrim's photograph, that each pilgrim had to wear throughout the trip.⁶⁴²⁹ However, Mr Itani stated that in 2005 the ID card 'was not really used', it did not have serial numbers and could easily be altered by rescanning it with a different photograph.⁶⁴³⁰

3274. In 2005, pilgrims could only travel on Hajj by air via direct flights on MEA or Saudi Arabian Airlines between Beirut and Medina or Jeddah.⁶⁴³¹ When the pilgrims entered the airport, internal airport security checked each to ensure that the pilgrim had a passport, meaning either a Hajj travel document or a national passport with a Saudi visa.⁶⁴³² They did not check the details, but only that everyone had a passport.⁶⁴³³ From there, the pilgrims went through internal airport security for bag and body scanning.⁶⁴³⁴

3275. Next, everyone approached the airline counter for check-in and to receive their boarding passes.⁶⁴³⁵ The *moarref* gave the check-in attendant the passports of those he was responsible for. The attendant checked everyone in as a group and handed the passports and boarding passes back

⁶⁴²⁶ Ibrahim Itani, T. 12 December 2016, p. 42, T. 13 December 2016, pp 11-12; exhibit P1667 (Witness statement of Ibrahim Itani, 12 March 2010), para. 24; exhibit P1668 (Witness statement of Ibrahim Itani, 30 June 2010), para. 14.

⁶⁴³⁵ Ibrahim Itani, T. 12 December 2016, pp 43-44.

to the *moarref* as a group and then distributed the passports and boarding passes to each pilgrim.⁶⁴³⁶ Finally, the pilgrims passed through the *Sûreté Générale* to have their passports stamped.⁶⁴³⁷ Pilgrims used their Hajj passport as the only means of identification to go through immigration.⁶⁴³⁸ This should have been done one-by-one.⁶⁴³⁹ The passports were checked one final time at the boarding gate to ensure that they had a Lebanese exit stamp.⁶⁴⁴⁰

3276. According to information MEA representatives provided to the Prosecution, during the normal check-in procedure, the attendant registered every passenger and entered their details in the flight manifest. The crew received a copy of the manifest once final checks were complete, while another copy remained with the MEA dispatcher and—with the flight coupons—was sent to the MEA's finance department.⁶⁴⁴¹

3277. To control the group and to keep count, the *moarref* took the Hajj passports from the pilgrims once they had boarded the plane.⁶⁴⁴² When they landed, the *moarref* gave the pilgrims their passports to go individually through Saudi Arabian immigration.⁶⁴⁴³ Next, the *moarref* again collected the Hajj passports and provided them to the office of the *motawef*, which was responsible for the movement of all pilgrims and kept the passports for the duration of the trip and gave them back to the pilgrims when they returned to the airport.⁶⁴⁴⁴

3278. Once back in Lebanon, pilgrims were supposed to hand their Hajj passport back to the *Sûreté Générale* as they passed through customs, but this did not always occur.⁶⁴⁴⁵ The *Sûreté Générale* returned the Hajj passports to the Hajj Committee at the end of the pilgrimage. Based on

⁶⁴³⁶ Ibrahim Itani, T. 12 December 2016, p. 44.

the returned passports, the Committee recorded whether the pilgrim did go to the pilgrimage, and checked the identification page against that removed at the beginning of the trip, to ensure a match.⁶⁴⁴⁶ If not, the Committee reported it to the *Sûreté Générale*.⁶⁴⁴⁷

3279. The Committee was responsible for keeping a record of every application, regardless of whether it had been granted or rejected, and whether the applicant had travelled on the Hajj.⁶⁴⁴⁸ The Hajj Committee maintained the original Hajj documents for a year before it scanned and stored them in electronic format.⁶⁴⁴⁹ It destroyed the original hardcopies after scanning.⁶⁴⁵⁰

3280. The application procedure used in 2004 and 2005 has since changed. Pilgrims now travel with their national passport and do not get a special Hajj travel document.⁶⁴⁵¹ The Saudi Arabian authorities receive the photographs and visas of the pilgrims electronically.⁶⁴⁵²

b. Exceptions to general Hajj procedures

3281. Although the Hajj Committee denied applications submitted outside of the application period, Mr Itani stated that in 2005 around 15 people received Hajj passports after the application window had closed.⁶⁴⁵³ However, this was the only exception to the normal procedure for issuing Hajj passports in 2005 and the Hajj Committee only found out about the late issuances after the pilgrims had returned to Lebanon and their passports were returned to the Committee with the others. These Hajj passports were issued after the application period because the *Sûreté Générale* went directly to the Saudi Embassy and not to the Hajj Committee.⁶⁴⁵⁴

⁶⁴⁴⁶ Ibrahim Itani, T. 12 December 2016, pp 37, 47, 82; exhibit P1668 (Witness statement of Ibrahim Itani, 30 June 2010), para. 22.

⁶⁴⁵³ Exhibit P1667 (Witness statement of Ibrahim Itani, 12 March 2010), paras 13, 40.

⁶⁴⁵⁴ Exhibit P1667 (Witness statement of Ibrahim Itani, 12 March 2010), paras 34, 40.

3282. According to Mr Itani, ‘there is always a possibility for manipulation’ of the Hajj passports and the most common was someone falsifying their date of birth to fulfil the age requirement. Pilgrims had also tried to change their photograph.⁶⁴⁵⁵

3283. Upon request by Prosecution investigators, Mr Itani checked the Hajj Committee records for the exact number of forged Hajj passports reported to the *Sûreté Générale* between 2002 and 2007. In 2002, eight cases were reported; two in 2003; one in 2004; none in 2005; 18 in 2006; and one in 2007.⁶⁴⁵⁶

3284. Mr Itani stated that, because of the high number of pilgrims travelling it was not possible for the security personnel at the entry and exit points to study every single face carefully. It was common practice for the travel agents to collectively present the Hajj documents of all of their clients and for the *Sûreté Générale* officer to simply perform a headcount and stamp the presented documents as a group.⁶⁴⁵⁷ Mr Itani added that in the Hajj season ‘the people at the Security General don’t match photos and names’ and that ‘they’ll check the passport as fast as they can, stamp it, and go ahead’.⁶⁴⁵⁸ As a result, it was ‘possible for someone to use the Hajj travel document of someone who looked similar’ and travel in their place.⁶⁴⁵⁹

3285. Further, on some occasions a pilgrim’s Hajj application may have been denied, yet entry and exit records showed them travelling to Saudi Arabia.⁶⁴⁶⁰ Mr Itani explained that the pilgrim might have received a travel visa directly from the Saudi Embassy.⁶⁴⁶¹ These pilgrims were beyond the Hajj Committee’s control and therefore its responsibility.⁶⁴⁶² In 2005, the Committee was unable to tell if someone had previously travelled on the Hajj using their own passport.⁶⁴⁶³

⁶⁴⁵⁵ Exhibit P1667 (Witness statement of Ibrahim Itani, 12 March 2010), para. 34; exhibit P1668 (Witness statement of Ibrahim Itani, 30 June 2010), para. 23.

⁶⁴⁵⁶ Exhibit P1669 (Witness statement of Ibrahim Itani, 12 July 2010), para. 9.

⁶⁴⁵⁹ Exhibit P1667 (Witness statement of Ibrahim Itani, 12 March 2010), para. 35.

⁶⁴⁶⁰ Exhibit P1668 (Witness statement of Ibrahim Itani, 30 June 2010), para. 33.

⁶⁴⁶¹ Exhibit P1667 (Witness statement of Ibrahim Itani, 12 March 2010), para. 39; exhibit P1668 (Witness statement of Ibrahim Itani, 30 June 2010), para. 33; exhibit P1672 (Witness statement of Ibrahim Itani, 16 April 2012), para. 35.

⁶⁴⁶² Exhibit P1667 (Witness statement of Ibrahim Itani, 12 March 2010), para. 41; exhibit P1672 (Witness statement of Ibrahim Itani, 16 April 2012), para. 35.

⁶⁴⁶³ Ibrahim Itani, T. 13 December 2016, p. 11.

3286. A pilgrim could also be flagged by the Hajj Committee as having ‘not travelled’ while simultaneously being marked in the *Sûreté Générale* database as ‘travelled’.⁶⁴⁶⁴ The Committee recorded whether a pilgrim had travelled after reviewing the Hajj documents at the end of the pilgrimage.⁶⁴⁶⁵ Those who had been issued Hajj passports but did not return them were marked in the database as having travelled.⁶⁴⁶⁶

3287. Mr Itani acknowledged that in 2005, if a pilgrim did not return their Hajj passport, the Hajj Committee could not have determined whether they had travelled, or had not left Lebanon.⁶⁴⁶⁷ The Committee’s database did not record those who had received travel visas directly from the Saudi Embassy.⁶⁴⁶⁸

3288. Finally, Mr Itani stated that although women under 45 were culturally expected to travel with their *mahram*, sometimes ‘a woman can use her husband’s passport and travel without him’.⁶⁴⁶⁹ Notwithstanding that the wife’s visa and passport would say—according to Mr Itani—that she was with her husband even if she travelled with someone else, there was no definite way to check whether the person travelling with the woman was her husband or not.⁶⁴⁷⁰ The Hajj Committee would only become aware if somebody complained that their passport had been used by someone else. In those cases, the Committee compared the photographs and referred the matter to the *Sûreté Générale* to investigate.⁶⁴⁷¹

c. Mr Ayyash’s Hajj application, passport and travel

3289. An application for performing the Hajj pilgrimage in January 2005 was submitted in the name of Mr Salim Jamil Ayyash in 2004.⁶⁴⁷² Mr Itani testified that although the month on the

⁶⁴⁶⁴ Exhibit P1667 (Witness statement of Ibrahim Itani, 12 March 2010), para. 37.

⁶⁴⁶⁵ Ibrahim Itani, T. 12 December 2016, pp 47, 82, T. 13 December 2016, p. 9; exhibit P1667 (Witness statement of Ibrahim Itani, 12 March 2010), para. 37.

⁶⁴⁶⁶ Ibrahim Itani, T. 13 December 2016, p. 9; exhibit P1667 (Witness statement of Ibrahim Itani, 12 March 2010), para. 38.

⁶⁴⁶⁷ Ibrahim Itani, T. 13 December 2016, pp 9-10.

⁶⁴⁶⁸ Exhibit P1667 (Witness statement of Ibrahim Itani, 12 March 2010), para. 39.

⁶⁴⁶⁹ Ibrahim Itani, T. 12 December 2016, p. 60.

⁶⁴⁷⁰ Ibrahim Itani, T. 12 December 2016, pp 60-62.

⁶⁴⁷¹ Ibrahim Itani, T. 12 December 2016, p. 62.

⁶⁴⁷² Exhibit 1D293, p. 1.

application was unclear, it was most likely submitted in October, as opposed to November, since the application period for the 2005 Hajj closed in October 2004.⁶⁴⁷³

3290. Mr Ayyash's application includes a fingerprint, a signature and his photograph. It also states that he is the *mahram* of his wife, Ms Fatima Hajj, and includes her personal data. The application bears a signature and a stamp of a travel agency. Two witnesses signed the application certifying that 'the applicant's nationality and photo are valid'. On the application, a *mukhtar* certified the validity of the personal information included, in particular the photograph, the thumbprint, the signature, the address, the identification details and the nationality of the applicant. Next to the *mukhtar*'s signature was a stamp.⁶⁴⁷⁴

3291. An application for Mr Ayyash's wife was also submitted for the 1425 Hajj and her application contained a photograph, a right thumbprint and a signature.⁶⁴⁷⁵ It also stated 'woman accompanied by a Mahram' for the pilgrim category and included Mr Ayyash's name.⁶⁴⁷⁶ Her application also had the stamp of and the signature on behalf of a travel agency, two witnesses' signatures and the *mukhtar*'s and a stamp next to it.⁶⁴⁷⁷

3292. The Trial Chamber received into evidence the scanned copies of Mr Ayyash's and his wife's 2005 Hajj passports issued by the *Sûreté Générale*. The passports have their holders' photographs and show their personal data including the place and the year of birth, civil register number and nationality. The *Sûreté Générale*'s stamp print on the passport runs over on the photographs, which appear to have been glued onto the documents. The right edge of the passports shows where the documents have been perforated. The passport number is printed on and perforated in the document. Neither of the passports states that Ms Hajj and Mr Ayyash, as her *mahram*, were travelling together.⁶⁴⁷⁸

⁶⁴⁷⁸ Exhibit 1D293, p. 2; exhibit 1D294, p. 2.

Mr Ayyash's 2005 Hajj passport photograph — extract from exhibit 1D293

3293. Pilgrims who had never travelled on the Hajj were prioritised over those who had. However, Mr Itani explained ‘that there are no restrictions if a person is chosen by the members of parliament or political blocs despite having travelled before’.⁶⁴⁷⁹ The Trial Chamber received into evidence a letter from the Loyalty to the Resistance Bloc to the Head of the Pilgrimage Affairs Committee detailing those sponsored to travel by MPs for the 2005 Hajj which includes both Mr Ayyash and his wife.⁶⁴⁸⁰ Mr Itani stated that although Mr Ayyash had performed the Hajj the year before, his 2005 Hajj application was granted, and Mr Ayyash and his wife received the Hajj passports, because Mr Ayyash was sponsored by an MP.⁶⁴⁸¹

3294. An extract from the *Sûreté Générale*'s records shows the name of Mr Ayyash and his Hajj passport number exiting Lebanon for Saudi Arabia via the airport on 15 January 2005.⁶⁴⁸² Similar

⁶⁴⁷⁹ Exhibit P1672 (Witness statement of Ibrahim Itani, 16 April 2012), paras 10, 50.

⁶⁴⁸⁰ Exhibit P1673 (Lists of persons sponsored by the Loyalty to the Residence Bloc to the President regarding the Hajj pilgrimages in years 2004 to 2011), p. 12.

⁶⁴⁸¹ Exhibit P1672 (Witness statement of Ibrahim Itani, 16 April 2012), paras 48, 50; exhibit P1673, pp 10-13; exhibit 1D293, p. 2; exhibit 1D294, p. 2. Mr Ayyash was also sponsored to travel for the 2004 (1424) Hajj Pilgrimage by MP Ibrahim Bayan of the Loyalty to the Resistance Bloc, exhibit P1673, p. 6.

⁶⁴⁸² Exhibit 1D295 (Extract from Lebanese entry/exit records regarding Mr Ayyash).

documents also show Mr Ayyash's wife and daughter, Ms Zeinab Ayyash, leaving Lebanon for Saudi Arabia via the Beirut Airport on the same date.⁶⁴⁸³

3295. Further, the list of checked-in passengers and the flight manifest for flight ME2303 dated 15 January 2005 lists Mr Ayyash, his wife and his daughter.⁶⁴⁸⁴ Finally, correspondence from the Saudi Arabian Ministry of the Interior's Permanent Counter-Terrorism Committee to the Prosecution confirmed that Mr Ayyash and his wife arrived in Saudi Arabia on 16 January 2005.⁶⁴⁸⁵ It further states that no photographs or fingerprints for either Mr Ayyash or his wife were found because their travel took place before the Saudi Arabian government implemented its fingerprinting system for those entering the country.⁶⁴⁸⁶ As for Mr Ayyash's daughter, the Saudi Arabian Ministry was only able to locate information for the 2004 Hajj, not for 2005.⁶⁴⁸⁷

3296. After examining the Hajj applications and the entry and exit records, Mr Itani stated that because Ms Zeinab Ayyash was not included on Mr Ayyash's Hajj application, as she should have been as a minor, aged 15 at the time, and was travelling on her national passport as opposed to a Hajj passport, she must have been granted an entry visa courtesy of the Saudi Embassy.⁶⁴⁸⁸

3297. Due to the large number of flights to and from Saudi Arabia during the Hajj period, no automated flight manifest exists for the return flights from the Hajj on 28 January 2005.⁶⁴⁸⁹ Representatives from MEA explained that instead of a flight manifest, they provided the Special Tribunal with a passenger flight status list.⁶⁴⁹⁰ A passenger flight status list is different from a flight manifest in that it was created by retrieving passengers' names based on 'flight coupons' archived by the company's finance department as opposed to being automatically generated during the check-in procedure.⁶⁴⁹¹

3298. The same records that showed Mr Ayyash, his wife and daughter leaving Lebanon on 15 January 2005 also show them returning to Lebanon from Saudi Arabia via the Beirut International Airport on 28 January 2005.⁶⁴⁹² The memorandum from the Saudi Arabian Ministry of the Interior's Permanent Counter-Terrorism Committee confirms that the departure of Mr Ayyash and his wife for Lebanon at 10:44 on 28 January 2005 matches computerised records.⁶⁴⁹³ Additionally, the passenger flight status list for flight ME3015 from Medina to Beirut on 28 January 2005 shows the name of Mr Ayyash, his wife and his daughter.⁶⁴⁹⁴ The Hajj Committee's records note that Mr Ayyash and Ms Hajj travelled on the 2005 Hajj.⁶⁴⁹⁵

d. Evidence from the Lebanese Civil Defence

3299. At the time, Mr Ayyash worked for the Lebanese Civil Defence in Doueir, in south Lebanon.⁶⁴⁹⁶ Civil Defence is under the supervision of the Ministry of Interior and Municipalities of Lebanon and carries out humanitarian and rescue operations.⁶⁴⁹⁷ Civil Defence typically does firefighting—in conjunction with the Fire Brigade or Army—and responds to medical emergencies such as car accidents or cardiac arrests.⁶⁴⁹⁸

3300. In 2005, the Civil Defence in Doueir had three teams of two members, and volunteers worked there in their spare time and each team worked for 48 hours and then had 96 hours off to allow them to rest and or attend their other jobs.⁶⁴⁹⁹

3301. Team members were supposed to remain at the station for the duration of their shift, but a team member could leave for an hour or two with the supervisor's special permission.⁶⁵⁰⁰ However, an employee who wanted to take longer than a couple of hours off work, had to write to the head of the regional station requesting leave.⁶⁵⁰¹ The head of the regional station would transfer the leave request cable to the Directorate in Beirut for a decision.⁶⁵⁰² When a Civil Defence

employee was away from work on leave, commute compensation for the travel expenses to work and the emergency allowance, which was 50 per cent of the salary, were deducted from his salary.⁶⁵⁰³

3302. The attendance policy of the Doueir station included that at the beginning of each shift each employee had to sign the attendance sheet in the station supervisor's presence and those ending their 48 hours shift signed out and those beginning their shift signed in.⁶⁵⁰⁴ In theory, no one should sign the attendance sheet for anyone but himself.⁶⁵⁰⁵ The supervisor should mark absences on the attendance sheet.⁶⁵⁰⁶ If the employee was not present by 09:00 to 09:30, the supervisor would then take the attendance sheet back into his locked office and send a cable reporting the absence to the head of the regional station in Nabatiyeh.⁶⁵⁰⁷

3303. Although the shift change occurred at 08:00, because it was part of the supervisor's job to stop by the Nabatiyeh Regional Station each morning to see if there were any cables or missions he needed to take back to his station, the supervisor may not have arrived at the station until after a shift change.⁶⁵⁰⁸ As a result, the supervisor would leave the attendance sheet outside of his office before he left the night before and collect it when he returned to work the next morning, meaning that the Civil Defence employees would sign it in his absence.⁶⁵⁰⁹ Team members would sign in and out for each other.⁶⁵¹⁰

3304. If anyone was absent, the supervisor of the station should have marked the absence on the attendance sheet, prepared a memorandum and sent it to the regional station at Nabatiyeh specifying the absence.⁶⁵¹¹ This process was important for two reasons. First, allowances and compensations were deducted for the days of absence and the following rest days.⁶⁵¹² The supervisor was responsible for the station and would have got in trouble if he said that someone

was on duty when they were not.⁶⁵¹³ Second, the supervisor had to substitute the absent staff or call a volunteer to assist the team on duty.⁶⁵¹⁴

3305. On 11 January 2005, Mr Ayyash submitted a ten-day leave application from 16 to 25 January 2005 to perform the Hajj.⁶⁵¹⁵ On 14 January 2005, the Director General of the Civil Defence granted ten days paid leave for Mr Ayyash.⁶⁵¹⁶ It included his base salary but excluded emergency allowance and commute compensation and the Director General's decision required the Chief of the Nabatiyeh Regional Station to assign a substitute during Mr Ayyash's absence.⁶⁵¹⁷

3306. Mr Ayyash's leave application, however, was later cancelled and the reason given was that Mr Ayyash was unable to 'obtain the required entry visas'.⁶⁵¹⁸ To cancel his leave, Mr Ayyash would have had to have spoken in person with the supervisor of his station and the supervisor would then have had to have informed the regional station that Mr Ayyash was not taking leave to avoid Mr Ayyash losing his allowances.⁶⁵¹⁹

3307. In a letter dated 24 January 2005, the Chief of Nabatiyeh Regional Station informed the General Director of the Civil Defence that Mr Ayyash had not benefitted from the authorised leave and he was still in 'actual service'.⁶⁵²⁰ When asked to comment on certain attendance sheets, a witness was sure that Mr Ayyash was in Doueir working on 18, 19, 24 and 25 January 2005.⁶⁵²¹

⁶⁵¹³ Exhibit P1911, pp 31, 69.

⁶⁵¹⁸ T. 6 March 2017, pp 73-75 (closed session); exhibit P1165 (Letter from Chief of Nabatiyeh Regional Station to Director General of the Civil Defence cancelling Mr Ayyash's leave application); exhibit P1166 (Decision of the Director General of the Civil Defence cancelling Mr Ayyash's leave); exhibit P1912, p. 35, ERNs 60255336-60255337, 60243636-60243637.

⁶⁵¹⁹ Exhibit P1912, pp 35-36, ERNs 60255336, 60243637.

⁶⁵²⁰ Exhibit P1165; exhibit P1912, ERNs 60255336, 60243637.

⁶⁵²¹ Exhibit P1911, pp 63-69. However, one of the attendance sheets shown to the witness, at ERN 60178551, was dated 19 May 2005. Exhibit P1911, ERNs 60178548-60178551, 60170401-60170402, 60170407-60170408. Because the attendance system was not monitored closely, the Prosecution does not rely on the attendance records from the Doueir station, T. 28 September 2016, p. 22, T. 22 August 2017, p. 74.

Four to six volunteers' signatures also appear on the attendance sheets on several days, including 18, 24 and 25 January 2005.⁶⁵²²

3308. Finally, although Mr Ayyash would have only missed four actual work days while performing the Hajj, rest days also counted when calculating leave time which is why he originally requested ten days leave.⁶⁵²³ The Lebanese Ministry of Finance's official records show that it reimbursed Mr Ayyash for the previously deducted commute compensation, 42,000 LBP,⁶⁵²⁴ because he did not benefit from his leave.⁶⁵²⁵

e. The 2004 Hajj

3309. The evidence regarding Mr Ayyash's 2004 Hajj application, passport and travel is relevant to Mr Donaldson's analysis as to how Mr Ayyash's attributed mobiles behaved when he travelled on the Hajj, in 2004, and when he did not, on the Prosecution's case, in 2005.

3310. For the 1424 Hajj in 2004, the Hajj database included two applications for Mr Ayyash.⁶⁵²⁶ The first application was rejected, but the second was granted because an MP belonging to the Loyalty to the Resistance Bloc sponsored Mr Ayyash.⁶⁵²⁷ Due to flaws in the *Sûreté Générale*'s system, Mr Itani stated that it is possible that Mr Ayyash received two Hajj passports for that year. In an effort to avoid such mistakes in 2005 the Hajj Committee introduced a system to check applications.⁶⁵²⁸

3311. Mr Ayyash's wife, Ms Hajj, also successfully submitted an application for the 1424 Hajj. As with Mr Ayyash, her application stated that she was an MP's companion for the trip.⁶⁵²⁹ Upon review of the entries of Ms Hajj's 1424 and 1425 Hajj applications in the Committee's database, Mr Itani was of the view that 'this is a different picture from the wife who travelled in 1424

⁶⁵²² Volunteers' signatures appear on the attendance sheets of 1, 6-7, 12-13, 18, 24-25, 30-31 January, 5-6, 11-12, 17, 23-24 February 2005. Exhibit P1911, ERNs 60178538-60178540, 60178542-60178547, 60178548-60178550, 60178552-60178556.

⁶⁵²³ Exhibit P1912, pp 32-33.

⁶⁵²⁴ Forty-two thousand LBP was equivalent to around 28 USD at the time of the reimbursement, in March 2005, and still is.

⁶⁵²⁵ T. 6 March 2017, p. 76 (closed session); exhibit P1167 (Lebanese Ministry of Finance adjustment form); exhibit P1912, pp 41-42.

⁶⁵²⁶ Exhibit P1672 (Witness statement of Ibrahim Itani, 16 April 2012), paras 46-48, ERNs 60255954-60255955, 60251933-60251934.

⁶⁵²⁷ Exhibit P1672 (Witness statement of Ibrahim Itani, 16 April 2012), paras 46-47, 50; exhibit P1673, p. 6.

⁶⁵²⁸ Exhibit P1672 (Witness statement of Ibrahim Itani, 16 April 2012), para. 48.

⁶⁵²⁹ Exhibit P1672 (Witness statement of Ibrahim Itani, 16 April 2012), ERNs 60255956, 60251932.

although she has the same personal details'.⁶⁵³⁰ The witness explained that the 1425 application could have been for a second wife of Mr Ayyash or that one of the applications was fake.⁶⁵³¹

3312. Further, Mr Ayyash requested and was granted leave from his work, then at the Markaba Civil Defence station, to perform the 2004 Hajj, and the 15-day leave request was submitted on 17 January 2004 for the leave period starting on 25 January 2004 and was granted on 18 January 2004.⁶⁵³² A letter from the Nabatiyeh Civil Defence station sent to the General Directorate dated 14 February 2004 states that Mr Ayyash resumed work on 10 February 2004 following his leave.⁶⁵³³

3313. The Lebanese entry and exit records show Mr Ayyash travelling to Saudi Arabia leaving at 16:50 on 28 January 2004 and returning to Lebanon at 08:38 on 8 February 2004.⁶⁵³⁴ However, the Ministry had no record of travel for Mr Ayyash's wife during that period.⁶⁵³⁵

3314. Within this period, two withdrawals from Mr Ayyash's USD bank account occurred at automatic teller machines located in Mecca.⁶⁵³⁶ These withdrawals were recorded on 29 January 2004 for USD 26.94, that involved a USD 2.84 fee, and on 31 January 2004 for USD 107.74, costing USD 3.11.⁶⁵³⁷

f. Comparison of mobile telephone activities

3315. Calls made and received with Lebanese mobiles roaming outside of Lebanon appear in the call data records of the telecommunication companies.⁶⁵³⁸ Prosecution analyst Mr Andrew Donaldson stated in his report that if the user leaves their mobile behind and gives it

⁶⁵³⁰ Exhibit P1672 (Witness statement of Ibrahim Itani, 16 April 2012), para. 51, ERNs 60255947, 60196227, 60255956, 60251932.

⁶⁵³⁸ For roaming call data records, *see* paras 1718, 1772. Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), annex B, para. 13.

to someone else while travelling, its call records may show different patterns with respect to the direction and duration of calls, and telephone numbers contacted.⁶⁵³⁹

3316. To confirm that Mr Ayyash remained in Lebanon in January 2005, Mr Donaldson compared call patterns of mobiles that the Prosecution attributed to him during the 2004 and 2005 Hajj periods, and in the periods immediately preceding and following the 2004 and 2005 Hajj pilgrimages.

3317. Based on Lebanese entry and exit records, Mr Ayyash left Lebanon for the 1424 Hajj at 16:50 on 28 January and returned at 08:38 on 8 February 2004.⁶⁵⁴⁰ Mr Donaldson observed a decrease in the calls made and received on Mr Ayyash's personal mobile 165 from 28 January to 8 February 2004 compared to the number of calls before and after.⁶⁵⁴¹ It had 26 calls in eight days between the times and dates on the Lebanese entry and exit records.⁶⁵⁴² The call sequence table of this mobile shows that, bar eight days, it was active every day before and after the 2004 Hajj period.⁶⁵⁴³ On the Trial Chamber's own calculation, there was an average of 57 calls each week on that mobile in the 92 weeks from 23 April 2002, the start of its attribution period, to 27 January 2004, inclusive.⁶⁵⁴⁴

3318. Mobile 165 had no calls after 15:55 on 28 January 2004.⁶⁵⁴⁵ For its calls on and after 29 January 2004, it used a different handset until 7 February 2004 and from 8 February 2004, it was again used with its old handset.⁶⁵⁴⁶

3319. During the 2004 Hajj period, on 1 and 2 February 2004, this mobile received calls from a Saudi Arabian number and exchanged calls with a number ending 617, a mobile linked to

⁶⁵³⁹ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), annex B, paras 13, 21, 24, 36.

⁶⁵⁴⁰ Exhibit P2083, ERN 60265990.

⁶⁵⁴¹ Personal mobile 165 made and received 26 voice and SMS calls to and from 12 numbers between 16:50 on 28 January 2004 and 08:38 on 8 February 2004. Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), annex A, paras 13-14, 38 (a); exhibit P1254, pp 177-178; Andrew Donaldson, T. 22 August 2017, pp 50-51.

⁶⁵⁴² Exhibit P1254, pp 177-178; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), annex A, para. 29; Andrew Donaldson, T. 22 August 2017, pp 50-51.

⁶⁵⁴³ Exhibit P1254. The days when mobile 165 had no calls were 27 July, 17, 18 August, 20, 21 December 2002, 21 April, 25, 29 May, 11 August, and 15 October 2003, exhibit P1254, pp 29, 37, 73, 108, 114-115, 133, 152.

⁶⁵⁴⁴ Exhibit P1254, pp 1-177.

⁶⁵⁴⁵ Exhibit P1254, p. 177.

⁶⁵⁴⁶ Exhibit P1254, pp 177-178; Andrew Donaldson, T. 22 August 2017, pp 49-50.

Mr Ayyash's business associate, Mr Ghaleb Jaber.⁶⁵⁴⁷ The evidence also shows that this number may have belonged to Mr Jaber's car workshop, and multiple people may have used it.⁶⁵⁴⁸

3320. In this period, mobile 165 activated a limited number of cells, mostly in the area of Mr Ayyash's Hadath residence.⁶⁵⁴⁹ On 1 February 2004, it activated Touch's Jabal Safi_B cell, having never done so before or after.⁶⁵⁵⁰ Of the numbers in contact with his mobile 165 during these 12 days, three were not in contact with it outside this period.⁶⁵⁵¹

3321. As shown in Mr Donaldson's table below, from Mr Ayyash's exiting Lebanon on 28 January to his returning on 8 February 2004, Yellow 669 made only four calls using Alfa's SFEIR2 and SFEIR3, all of which were to an Alfa service number.⁶⁵⁵² Its regular calling pattern resumed on 8 February 2004.⁶⁵⁵³

⁶⁵⁴⁷ Exhibit P1254, pp 177-178; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), annex A, paras 15, 29. *See* para. 2729.

⁶⁵⁴⁸ *See* para. 2686.

⁶⁵⁴⁹ Of the 26 calls in total, it activated Sfeir_A and Sfeir_B, its top cells, for 17, Saki Hadath_A, Hadath_A, Hadath_B and Hadath_C for six calls. Andrew Donaldson, T. 22 August 2017, pp 50-51; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), annex A, paras 17-21, 23, 25, 29, 38 (c); exhibit P1254, pp 177-178. *See* sub-section (B) (1) (b) 'Landline 696—Ayyash family residence in Hadath, Beirut'.

⁶⁵⁵⁰ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), annex A, paras 27, 29; exhibit P1254, p. 177.

⁶⁵⁵¹ From one of these three numbers, ending in 701, 042 and 141, personal mobile 165 had an incoming call. Andrew Donaldson, T. 22 August 2017, pp 50-51; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), annex A, paras 15-16, 38 (a); exhibit P1254.

⁶⁵⁵² Andrew Donaldson, T. 22 August 2017, p. 52; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), annex A, paras 32-34, 36, 38 (a), (d); exhibit P1248, p. 37; exhibit P1192 (Statement of Witness PRH707, 11 November 2015), paras 270, 282. The IMEI number was not available for the period before 1 August 2004 in the Alfa call data records, Andrew Donaldson, T. 22 August 2017, p. 53; exhibit P1192 (Statement of Witness PRH707, 11 November 2015), para. 95.

⁶⁵⁵³ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), annex A, paras 35-36, 38 (d).

Extract from Andrew Donaldson's attribution report regarding Mr Ayyash—exhibit P2026.2

3322. According to Mr Donaldson, the explanation for the decline in the number of calls, the change in mobile 165's handset, the relatively static cell tower activations during the 2004 Hajj period and the resumption of regular calls thereafter is that the regular user left mobile 165's SIM card with a family member or a close associate while travelling abroad.⁶⁵⁵⁴

3323. The attribution periods of mobile 165 and Yellow 669 ended on 18 April 2004.⁶⁵⁵⁵ At the end of 2004 and the beginning of 2005, Mr Ayyash used personal mobiles 935, 170, 091 and network mobiles Yellow 294, Blue 233, Green 300 and Red 741.⁶⁵⁵⁶ To detect any change in these mobiles' activities, Mr Donaldson analysed their overall call patterns ten weeks before, during and ten weeks after the 2005 Hajj, namely from 1 November 2004 to 9 April 2005.⁶⁵⁵⁷

3324. However, none of these mobiles' attribution periods encompassed the entirety of this 22-week period. The attribution period of personal mobile 935 and Yellow 294 ended in the days

⁶⁵⁵⁵ *See* paras 2756, 3027-3028.

⁶⁵⁵⁶ *See* paras 2784, 2881-2882, 2930, 3067, 3141, 3189, 3255.

⁶⁵⁵⁷ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), annex B, paras 7-8, 10.

before Saturday 15 January 2005,⁶⁵⁵⁸ and that of mobiles 170 and 091, Blue 233 and Red 741 started only days before.⁶⁵⁵⁹ Green 300 was the sole mobile that was attributable to Mr Ayyash ten weeks before the Hajj period, but it stopped its activities on Monday 14 February 2005.⁶⁵⁶⁰ The Trial Chamber found that Mr Ayyash was the user of Blue network mobile 233 until Monday 14 February 2005, as opposed to until 21 September 2005 as the Prosecution argued.⁶⁵⁶¹

3325. This leaves personal mobile 170 as the only personal mobile that the Trial Chamber found was attributed to Mr Ayyash in the ten weeks after Friday 28 January 2005.⁶⁵⁶²

3326. The manifest for flight ME2303 from Beirut to Jeddah on 15 January 2005 shows that Mr Ayyash checked in at 19:10.⁶⁵⁶³ The passenger flight status list for flight ME3015 from Medina to Beirut on Friday 28 January 2005 has his name as a passenger,⁶⁵⁶⁴ and a response to a request for assistance, addressed to the Kingdom of Saudi Arabia, confirms Mr Ayyash's departure from Saudi Arabia 'aboard Lebanese airline flight No. (ME1015) on 17/12/1425 AH corresponding to 28 January 2005 CE at 10:44.' It is unclear from the evidence if this is the time of stamping of his passport, or the scheduled or actual departure of the flight. Based on the source of the information, namely the Saudi Arabian Ministry of Interior's Permanent Counter-Terrorism Committee, it is likely that the time marks the passport stamping.⁶⁵⁶⁵

3327. Mr Donaldson observed an increase in the activities of mobiles active in this period without a change in the direction or the duration of calls.⁶⁵⁶⁶ Save for Red 741, the mobiles' most frequently used cell towers continued to be in the area of Mr Ayyash's Hadath and Harouf residences.⁶⁵⁶⁷

⁶⁵⁵⁸ Personal mobile 935's attribution period runs from 31 May 2004 to 13 January 2005. Yellow 294's attribution period spans from 29 May 2004 to 7 January 2005. *See* paras 2881-2882, 3027-3067.

⁶⁵⁵⁹ The attribution periods of these mobiles are as follows: personal mobile 170 from 7 January to 26 November 2005, personal mobile 091 from 13 January to 6 March 2005, Blue 233 from 10 January to 14 February 2005, and Red 741 from 14 January to 14 February 2005. *See* paras 2784, 2930, 3141, 3255.

⁶⁵⁶⁰ Green 300's attribution period spans from 30 September 2004 to 14 February 2005. *See* para. 3189.

⁶⁵⁶¹ *See* paras 3097, 3099, 3139, 3141.

⁶⁵⁶² *See* para. 2784.

⁶⁵⁶³ Exhibit 1D297, p. 4.

⁶⁵⁶⁴ Exhibit 1D301, p. 3 (ERN 60129969, at rows 40-41, 44). *See also* exhibit 1D299, p. 6.

⁶⁵⁶⁵ Exhibit 1D302, p. 3.

⁶⁵⁶⁶ Andrew Donaldson, T. 22 August 2017, pp 68-69; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), annex B, paras 8, 10, 19-20, 22-24, 26-27, 54 (a)-(b).

⁶⁵⁶⁷ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), annex B, paras 30-35, 54 (d); exhibit P1238 (Call sequence table of Blue 233), pp 1-7; exhibit P1256, pp 1-5; exhibit P1262, pp 2-5. *See also* exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), annex C, para. 1.

3328. According to Mr Donaldson:

The Doueir Civil Defence station is located close to Salim AYYASH's Harouf Residence. The proximity between the Civil Defence station and his residence means that the same cell towers may best serve both locations.⁶⁵⁶⁸

3329. Because the Prosecution decided not to rely on the Doueir Civil Defence station's attendance records and for the station's geographical vicinity to Mr Ayyash's Harouf residence, Mr Donaldson took the view that a cell site analysis of the mobiles on days when Mr Ayyash had to work, 18, 19, 24 and 25 January 2005, would not assist the determination of his whereabouts.⁶⁵⁶⁹

3330. He added, however, that Blue 233 and mobile 170 activated cells Addoussiyeh_A, Saida_3_C and Aabra_A in south Lebanon between 10:38 and 10:51 on Tuesday 18 January 2005, and these two mobiles and mobile 091 used Nabatiyeh_C from 10:45 to 14:41 on 24 January 2005.⁶⁵⁷⁰

3331. In his view, this meant that a sign-in and or a partial day at work at the Doueir station was plausible on those days on the basis that Mr Ayyash was the user of these mobiles.⁶⁵⁷¹ Further, activation of cells around Mr Ayyash's Harouf residence and the Doueir station were consistent in the week before, during and in the weeks after the Hajj.⁶⁵⁷²

3332. According to Mr Donaldson, there was no change in the IMEI numbers of mobiles 170, 091, Blue 233, Green 300 and Red 741, meaning that the same handsets were used with each mobile.⁶⁵⁷³ In fact, Red 741 was active on Tuesday 4 and Friday 14 January 2005 before the 2005

⁶⁵⁶⁸ Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), para. 650.

⁶⁵⁶⁹ Andrew Donaldson, T. 22 August 2017, pp 70-74. *See also* Procedural matters, T. 28 September 2016, p. 22; exhibit P1911, pp 63-69, ERNs 60178548-60178550, 60170401, 60170407-60170408.

⁶⁵⁷¹ Although Nabatiyeh_C may also serve Mr Ayyash's residence in Harouf, Andrew Donaldson, T. 23 August 2017, pp 3-5, 8; exhibit P1259, pp 338, 344-345.

⁶⁵⁷² Exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), annex B, para. 35.

⁶⁵⁷³ Andrew Donaldson, T. 22 August 2017, p. 76; exhibit P2026.2 (Attribution report of Andrew Donaldson regarding Mr Ayyash), annex B, paras 28, 54 (c); exhibit P1207, pp 2-5; exhibit P1238, pp 1-11; exhibit P1262, pp 1-52; exhibit P1256, pp 1-12. *See also* exhibit P2025, slide 185. Personal mobile 091 was used with a handset that had been used with mobile 935 until 13 January 2005. The two mobiles, and mobile 165, had shared contacts with service providers, Mr Ayyash's landlines, his family members, Civil Defence contacts and car trade associates, Andrew Donaldson, T. 22 August 2017, pp 19, 41-46; exhibit P1256, p. 5; exhibit P1261, p. 97. *See also* exhibit P2025, slide 141.

Hajj period.⁶⁵⁷⁴ It used two different handsets on these two days.⁶⁵⁷⁵ It then used a third handset throughout the remaining part of its activity from Thursday 20 January to Monday 14 February 2005.⁶⁵⁷⁶

3333. Regular contacts, family members and business associates remained in contact with Mr Ayyash's personal mobiles.⁶⁵⁷⁷ Additionally, mobile 091 had daily contacts with four Saudi Arabian numbers during this period.⁶⁵⁷⁸ It was in contact with two of these numbers only in this period, more precisely from 19:26 on Sunday 16 January to 11:32 Beirut time on Friday 28 January 2005.⁶⁵⁷⁹ One of these numbers exchanged 27 calls with mobile 091.⁶⁵⁸⁰ The other two Saudi numbers called mobile 091 on five days, 14, 15, 18, 28 and 30 January 2005.⁶⁵⁸¹ The Prosecution did not bring any evidence as to who were the users of these numbers.⁶⁵⁸²

3334. On Saturday 15 January 2005, from 19:12 to 20:03, Blue 233 and mobiles 091 and 170 activated the Airport_B cell which had two areas of best server coverage around the Beirut airport, and for one call at 19:39 mobile 091 used Airport-II_C, an indoor cell.⁶⁵⁸³ This coincided with the check-in time.⁶⁵⁸⁴ Nine minutes later, it activated Airport_B, used by mobile 170 at 19:49 and by Blue 233 at 20:03.⁶⁵⁸⁵

⁶⁵⁷⁴ Exhibit P1197, p. 1.

⁶⁵⁷⁵ Exhibit P1197, p. 1. During the setting up of the Red network mobiles, handset swapping occurred among Red mobiles. *See* chapter VIII 'Nature and purpose of colour-coded mobile networks and Purple group of mobiles', (D) (1) 'Setting up the network'.

⁶⁵⁸³ Exhibit P1259 (Call sequence table of ten numbers—Mr Ayyash), p. 336; exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), pp 112-114.

⁶⁵⁸⁴ *See* para. 3326.

⁶⁵⁸⁵ Exhibit P1259, p. 336; exhibit P1111 (Expert report of John Edward Philips – Single user analysis, Suspect 1, Mr Ayyash), p. 114.

3335. According to Mr Donaldson, save for Friday 28 January 2005, the mobiles continued their possible co-location during and after the 2005 Hajj period, as in the days before.⁶⁵⁸⁶ To illustrate, Blue 233, mobile 091 and mobile 170 used the same or adjacent Touch cells on 13, 22, 23, 26, 27, 29 January, 6 and 10 February 2005 for pairs of sequential calls made within ten minutes.⁶⁵⁸⁷ Green 300 activated identical, overlapping or neighbouring cells with Red 741, Blue 233 and Mr Ayyash's personal mobiles 091 and 170 on 11, 12, 18, 19, 25, 28, 31 January, 3, 8, 11, 12 and 14 February 2005.⁶⁵⁸⁸

3336. Mr Philips found that Blue 233 and mobiles 170 and 091 possibly co-located every day between 15 and 28 January 2005⁶⁵⁸⁹ for a total of 55 pairs of calls made within one hour.⁶⁵⁹⁰ On four days, Green 300 also possibly co-located with Blue 233 and mobile 091 with respect to eight pairs of calls.⁶⁵⁹¹

3337. Due to their respective attribution periods,⁶⁵⁹² all possible co-locations with mobile 935 and Yellow 294 occurred before Saturday 15 January 2005. Based on Mr Philips's evidence from 30 September 2004 to mid-January 2005, Yellow 294 and mobile 935 possibly co-located for 17 pairs of calls on nine days. These were 1, 9, 19, October, 10 November, 21, 23, 28-29 December 2004 and 2 January 2005. Blue 233 and mobile 935 possibly co-located for one pair of calls;⁶⁵⁹³ Green 300 with mobile 935⁶⁵⁹⁴ and Yellow 294⁶⁵⁹⁵ for 17 pairs of calls on 14 days.⁶⁵⁹⁶

3338. During the 2005 Hajj period, Red 741 was active only on Thursday 20 and Friday 28 January 2005.⁶⁵⁹⁷ On 20 January, it made no close-in-time sequential calls with any of the other network mobiles or personal mobiles that Mr Donaldson or Mr Philips could have analysed.⁶⁵⁹⁸ On 28 January 2005, Red 741, Green 300, Blue 233 and personal mobile 170 travelled from south Beirut to the Zouk Mosbeh area north of Beirut while mobile 091 activated cell towers at the Beirut airport between 12:57 and 15:06.⁶⁵⁹⁹ While at the airport, mobile 091 had four calls with mobile 170.⁶⁶⁰⁰ According to Mr Donaldson, a possible explanation for this anomaly is that another person used mobile 091 during this period.⁶⁶⁰¹

3339. Mr Philips noted that cell activations by mobiles 170 and 091 at 12:42 and 12:43 on 24 January 2005 may preclude their co-location, but also explained that the fragmented best server coverage of one of the cells may not preclude these two mobiles from being co-located.⁶⁶⁰²

3340. Mr Philips also observed that at 12:24 and 12:25 on 28 January 2005 mobile 091 may not have been co-locating with mobile 170, and excluded mobile 091's co-location with Green 300, Blue 233 and Red 741 for specific periods between 13:11 and 15:02.⁶⁶⁰³ During this period, mobile 091 had four calls with mobile 170 between 13:11 and 14:20,⁶⁶⁰⁴ and from 13:20 to 14:56 it had overlapping calls with Blue 233 and Red 741.⁶⁶⁰⁵

3341. As set out in paragraph 3240 above, Mr Philips and Mr Donaldson concluded that for this period of the day mobile 091 may have been given to someone else who went to the airport, while Blue 233, Red 741, Green 300 and mobile 170 travelled to the area of Mosbeh and Rimal, north-

east of Beirut.⁶⁶⁰⁶ In the evening, however, mobile 091 returned to south Beirut, as did Blue 233 and Green 300.⁶⁶⁰⁷

3342. After 28 January 2005, Red 741, Green 300, Blue 233 and mobiles 091 and 170 continued their possible co-locations.⁶⁶⁰⁸ Red 741 with Green 300,⁶⁶⁰⁹ Blue 233⁶⁶¹⁰ and mobile 091⁶⁶¹¹ for 34 pairs of calls; Green 300 with Blue 233,⁶⁶¹² mobile 091⁶⁶¹³ and 170⁶⁶¹⁴ for four pairs of calls; Blue 233 with mobiles 091⁶⁶¹⁵ and 170⁶⁶¹⁶ for 13 pairs of calls.⁶⁶¹⁷

3343. Based on the contrast between the behaviour of the respective mobiles during the 2004 and 2005 Hajj periods, and that Green 300, Red 741, Blue 233 and Mr Ayyash's personal mobiles 091 and 170 did not break their regular activities, Mr Donaldson concluded that Mr Ayyash travelled to Mecca in 2004 but did not leave Lebanon in 2005.⁶⁶¹⁸

3344. Both Mr Philips and Mr Donaldson acknowledged that if the user was out of Lebanon for these two weeks it would exclude that person, Mr Ayyash, as the single user of these mobiles.⁶⁶¹⁹ Mr Donaldson added that the alternative to this is that a person other than Mr Ayyash:

- lived in a village near Nabatiyeh, moved to Hadath from the same region that Mr Ayyash had lived before;
- transferred from Markaba to Doueir at the same time as Mr Ayyash;
- had extensive contacts with his family, business associates and workplace, and called foreign countries when Mr Ayyash's family was away;

- had their telephone numbers provided for Mr Ayyash on documents, such as the bill of lading of a 1999 Dodge Durango and the car registration of Mr Ayyash's Toyota Camry with mobile 170 handwritten on the back and attached to an insurance claim in connection with an accident involving that vehicle;
- used cells near two service providers at the time of Ayyash family-related appointments;
- was present at Mr Ayyash's car accident, and had access to the telephone in his BMW; and
- left Lebanon for the Hajj in 2004 at the same time as Mr Ayyash, and did not participate in the pilgrimage in 2005.⁶⁶²⁰

ii. Submissions

3345. The Prosecution submits that Mr Ayyash did not travel to Saudi Arabia between Saturday 15 and Friday 28 January 2005 to perform the Hajj pilgrimage,⁶⁶²¹ but instead stayed in Lebanon so that he could coordinate the preparation and set up of the attack on Mr Hariri.⁶⁶²² Mr Ayyash applied to attend the 2005 Hajj pilgrimage, was sponsored, was issued a Hajj passport⁶⁶²³ and requested leave from work.⁶⁶²⁴

3346. The preparation for the attack on Mr Hariri was not meant to accelerate until late January 2005, but Mr Hariri's refusal to accept Syrian 'electoral deposits'⁶⁶²⁵ on Sunday 9 January demanded that the plan accelerate sooner.⁶⁶²⁶ Therefore, according to the Prosecution, although

⁶⁶²⁴ Prosecution final trial brief, para. 284; Prosecution closing submissions, T. 12 September 2018, pp 115-116 (private session).

⁶⁶²⁵ Prosecution witnesses described the 'electoral deposits' as candidates that the Syrian Government imposed on Mr Hariri by insisting that he included them in his electoral list. They were seen as loyal to Syria rather than to Mr Hariri's Future Movement. *See* para. 472.

⁶⁶²⁶ Prosecution final trial brief, paras 737, 750.

Mr Ayyash had been granted a travel visa,⁶⁶²⁷ he cancelled his work leave for the 2005 Hajj⁶⁶²⁸ and was instead present in Lebanon.⁶⁶²⁹

3347. The Prosecution submits that someone other than Mr Ayyash may have travelled to Saudi Arabia for the 2005 Hajj using Mr Ayyash's Hajj passport while Mr Ayyash remained in Lebanon.⁶⁶³⁰ To support this claim, the Prosecution compares Mr Ayyash's mobile activity in the 2004 Hajj period with its activity in the 2005 Hajj period.⁶⁶³¹ When he did go, mobiles attributed to Mr Ayyash⁶⁶³² had a drastic change in use during the 2004 Hajj period including a significant decline in call volume,⁶⁶³³ whereas the activity of five mobiles attributed to Mr Ayyash⁶⁶³⁴ remained constant during the 2005 Hajj period.⁶⁶³⁵

3348. Furthermore, consistent with Mr Ayyash using his mobile 091 in Lebanon to contact family members in Saudi Arabia, this was the only period when mobile 091 was in daily contact with Saudi numbers.⁶⁶³⁶ Mobile 091's separation from the other mobiles in the afternoon on Friday 28 January 2005, is consistent with Mr Ayyash lending this mobile to a person who would have been asked to pick up Mr Ayyash's family travelling back from Saudi Arabia on that day.⁶⁶³⁷ Additionally, due to the increased airport activity from Hajj travellers, airport security and documentation was done in a group, as opposed to an individualised manner, allowing for someone other than Mr Ayyash to travel using Mr Ayyash's Hajj passport, which may have as well been manipulated.⁶⁶³⁸

3349. The Prosecution argues that the only reasonable inference available on the totality of the evidence is that Mr Ayyash continued normal use of his mobiles during the Hajj period.⁶⁶³⁹ Relying

⁶⁶³⁹ Prosecution final trial brief, para. 316.

on Mr Donaldson's testimony, the Prosecution adds that the alternative, that the mobiles had another user, would be premised on unsustainable propositions.

3350. These are, as noted above, the user having: residences in the same areas; regularly activating cell sectors in the area of Mr Ayyash's workplace in Markaba; and stopping activating those cells when Mr Ayyash was transferred to Doueir; contacting Mr Ayyash's family members, acquaintances, Iranian numbers when Mr Ayyash's family travelled there; having access to the handset in Mr Ayyash's BMW; being in the area where Mr Ayyash had an accident with his BMW on 20 November 2004; having contact with the tow truck driver, the insurance broker and the accident expert; contacting the insurance broker and the garage with respect to the accident involving Mr Ayyash's Toyota Camry; drastically limiting the usage of mobiles in Lebanon in the period when Mr Ayyash travelled to the Hajj in 2004; but not changing their use when Mr Ayyash would have travelled to Saudi Arabia from Saturday 15 to Friday 28 January 2005; and providing Mr Ayyash's mobile numbers as contacts on a plethora of documents from at least 2003 to 2005.⁶⁶⁴⁰

3351. The Ayyash Defence submits that Mr Ayyash was not in Lebanon from 15 to 28 January 2005, and instead was in Saudi Arabia performing the Hajj pilgrimage.⁶⁶⁴¹ In support, it details the integrity of the Hajj selection process,⁶⁶⁴² including the requirement of sponsorship to travel,⁶⁶⁴³ the stringent application process for the 2005 Hajj⁶⁶⁴⁴ and the special requirements for women.⁶⁶⁴⁵ Moreover, the Hajj passports were reliable and the specific purpose of their design was to increase security.⁶⁶⁴⁶

3352. Additionally, the Ayyash Defence emphasises the integrity of airport and immigration security measures in Beirut and Saudi Arabia.⁶⁶⁴⁷ Finally, official Lebanese and Saudi Arabian

records corroborate Mr Ayyash's travel, including exit and entry movements of Mr Ayyash and lists of passengers checked in for the flights to and from Saudi Arabia that include Mr Ayyash's name.⁶⁶⁴⁸

3353. The Prosecution's assertion that someone else travelled as Mr Ayyash for the 2005 Hajj is groundless and the Prosecution failed to identify who supposedly travelled in his place.⁶⁶⁴⁹ In response to Mr Donaldson's testimony that the Hajj passport, entry and exit records and flight manifest are merely a 'repeated record of the Hajj passport having travelled' as opposed to three independent records, the Ayyash Defence submits that the cumulative effect of the integrity of the Hajj selection process, reliability of the Hajj passports, Beirut and Saudi Arabian airport security and Lebanese official records more than verifies that Mr Ayyash travelled on the 2005 Hajj.⁶⁶⁵⁰

3354. The Ayyash Defence also questions the reliability of the Lebanese Civil Defence evidence led by the Prosecution.⁶⁶⁵¹ Finally, the Prosecution's comparison of the 2004 Hajj with the 2005 Hajj does not prove that Mr Ayyash did not travel during the 2005 Hajj.⁶⁶⁵² The Prosecution's and Mr Donaldson's logic regarding the alternative user of the mobiles is based on arbitrary premises and unfounded assumptions.⁶⁶⁵³

3355. The Prosecution no longer attributes personal mobile 165 and Yellow 669 to Mr Ayyash in 2005, therefore its comparison of the mobile activities during the two Hajj periods is irrelevant.⁶⁶⁵⁴ The attribution period of personal mobile 935 and Yellow 294 ended by mid-January 2005, and that of personal mobiles 091, 170, Blue 233 and Red 741 started in January 2005, leaving Green 300 as the sole mobile that was active before, during and after the 2005 Hajj.⁶⁶⁵⁵

iii. Findings

3356. The Trial Chamber received extensive evidence regarding whether Mr Ayyash travelled to Saudi Arabia in January 2005 to perform the Hajj pilgrimage or remained in Lebanon.

3357. The application for a Hajj passport at the relevant time required the applicants to provide their personal information, ID card, civil registry identification stating the religious affiliation certified by a *sheikh* and a certificate to prove relationship between the applicant and an accompanying family member. The application form required the signatures of two witnesses and the *mukhtar*.

3358. Mr Ayyash's and his wife's applications to perform the Hajj pilgrimage in January 2005 included their fingerprints, signatures and photographs. The application forms included signatures from two witnesses certifying their nationality and the validity of the photographs. Additionally, a *mukhtar* certified the validity of their personal data including their photographs, thumbprints, signatures and places of residence.

3359. Notwithstanding these safeguards, upon reviewing Ms Fatima Hajj's applications, Mr Itani, the Executive Director of the Hajj Committee, noted a difference between the photographs on Ms Hajj's 2004 and 2005 applications. He was of the view that the 2005 application may have been for a second wife of Mr Ayyash or that one of the applications was fake.

3360. It is undisputed that the Hajj Committee approved Mr Ayyash's and his wife's applications for the 2004 and 2005 Hajj pilgrimage and issued Hajj passports for them. The Hajj Committee would normally have denied their applications with respect to the 2005 Hajj, giving priority to those who had not travelled on the Hajj before. However, a Loyalty to the Resistance Bloc MP sponsored them in both years, meaning that they could travel on two consecutive years.

3361. The personal data on Mr Ayyash's and his wife's 2005 Hajj passports were handwritten. The stamp print of the *Sûreté Générale* runs over their photographs, which appear to have been glued onto the documents. Hajj passports, it would appear, were not sufficiently protected against falsification. Nevertheless, for the travelling pilgrims these documents were the sole means of

identification at the Lebanese and Saudi Arabian airports. The Hajj Committee may have been able to detect misuse of the Hajj passport only if the pilgrim returned it after the travel.

3362. The Hajj Committee issued the Hajj passports to the *moarref* through the certified travel agents, and the evidence establishes that pilgrims were not handed their passports before entering Beirut Airport on the day of travel. However, the Trial Chamber heard evidence that Hajj passports could be manipulated, specifically with respect to the date of birth and the photographs. The evidence does not establish whether Mr Ayyash's passport had been altered. In 2005, the Hajj Committee did not report any such case to the *Sûreté Générale*, and in any event the original Hajj passports were destroyed one year after their return. However, the evidence establishes sufficient deficiencies in the process to raise doubts with respect to the rigour of the identification process at the respective airports during the Hajj seasons at the time when this was the only required identification document to pass through immigration.

3363. The Trial Chamber acknowledges that the Beirut Airport security procedures, entry and exit records and flight records support that Mr Ayyash travelled to Saudi Arabia with his wife in 2005. Their daughter also apparently travelled using her national passport.

3364. The *Sûreté Générale*'s official records show Mr Ayyash with his wife and daughter exiting Lebanon for Saudi Arabia on 15 January and returning on 28 January 2005 via the Beirut Airport. Correspondence with Saudi Arabian Ministry of Interior's Permanent Counter-Terrorism Committee attests to the arrival of Mr Ayyash and his wife in Jeddah on 15 January, and their departure from Medina on 28 January 2005. The Saudi authorities however did not record their daughter's entry and exit. This factor casts some doubt on the reliability of these records.

3365. The Trial Chamber heard evidence that in 2005, 17,000 pilgrims may have travelled to Saudi Arabia from Lebanon over a few weeks. During the 2005 Hajj, pilgrims could only travel to Medina or Jeddah in Saudi Arabia via direct flights on one of two approved airlines. This meant that the airports and these airlines experienced a considerable increase in traffic.

3366. Security at the entrance of Beirut Airport checked whether the pilgrims had a passport but not the details. Mr Itani's evidence was that the travel agent in charge of a group of pilgrims collected their passports, commonly presented them to the *Sûreté Générale* as a group and the *Sûreté Générale* merely took a headcount, collectively stamped the passports and let everyone

through. Mr Itani also said that due to the extensive increase in air travel, it would have been almost impossible at that time for the *Sûreté Générale* to have inspected each individual passport with the scrutiny needed to match the photograph to the face.

3367. Similarly, it was not unusual for the *moarref* to present the Hajj passports as a group to the flight check-in attendants. The final passport check occurred at the boarding gate to ensure they had a Lebanese exit stamp.

3368. As outlined in the assessment of evidence section, at paragraphs 364-365, official records, such as Lebanese and Saudi entry and exit records, are presumed to have *prima facie* reliability by virtue of their nature, however, their authenticity or reliability may be challenged or rebutted. Although Lebanese entry and exit records show Mr Ayyash leaving Lebanon on Saturday 15 January and returning on Friday 28 January 2005, these may have been generated based on the Hajj passports presented collectively to the *Sûreté Générale*. This diminishes their reliability in determining whether Mr Ayyash actually left Lebanon for the 2005 Hajj.

3369. Because she was then aged 38, Mr Ayyash's wife had to travel with a *mahram*. According to their Hajj applications, her *mahram* was Mr Ayyash. Contrary to Mr Itani's testimony, however, this was not included in their Hajj passports, the only identification document used by the pilgrims at the airports. It may eventually have enabled Ms Hajj to travel without her husband. Based on Mr Itani's testimony, a wife could use her husband's passport and travel without him. Notwithstanding that Ms Hajj's visa to Saudi Arabia may have included that Mr Ayyash was her *mahram*, Mr Itani stated that there was no definite way to check whether a person travelling with a woman was her husband. Although sponsored by the Loyalty to the Resistance Bloc, Mr Ayyash did not have to travel with his sponsor.

3370. The list of checked-in passengers and the flight manifest for flight ME2303 show that Mr Ayyash, his wife and daughter boarded the flight from Beirut to Jeddah on 15 January. Mr Itani evidence was that the check-in attendants received the passports from the *moarref* and checked the pilgrims in as a group. Therefore, these records, too, appear to have been generated based on the collective handling of the pilgrims' passports, rather than as passengers boarding a flight or checking in for one.

3371. According to Mr Itani's evidence, the practice was that the *moarref* collected the pilgrims' passports after boarding the plane and gave them back to allow them to go individually through Saudi Arabian immigration. Fingerprint and photograph procedures to verify the travellers' identity entering Saudi Arabia were not in place in 2005. Saudi entry and exit records, therefore, may only show that Mr Ayyash's Hajj passport passed through the immigration but cannot verify the identity of its bearer. Ms Zeinab Ayyash's name appears on the flight manifest of checked-in passengers for flight ME2303 from Beirut to Jeddah on Saturday 15 January, and the passenger flight status list for flight ME3015 from Medina to Beirut on Friday 28 January 2005. Lebanese entry and exit records show her leaving Lebanon for Saudi Arabia on 15 January 2005. According to Mr Itani, she travelled on her national passport because as a minor, aged 15 at the time, she should have been included in her father's Hajj application. The Saudi authorities, however, did not record her entering and exiting Saudi Arabia on those dates. This is a further factor diminishing the reliability of the records.

3372. While performing the Hajj in 2005 in Saudi Arabia, some pilgrims received special identification cards with their photographs on it. However, Mr Itani stated that these were not secure, as the photograph could have easily been replaced and the document rescanned.

3373. The passenger flight status list shows that Mr Ayyash, his wife and daughter were on the MEA flight from Medina to Beirut on Friday 28 January 2005. With respect to the return flight, an automated flight manifest of checked-in passengers was not available because of the large number of flights to and from Saudi Arabia during the Hajj period. The list was created retroactively based on 'flight coupons' archived by the flight company's finance department. This record therefore adds no real weight in determining whether Mr Ayyash was actually on the flight.

3374. The Hajj Committee database entry recorded that Mr Ayyash travelled on the Hajj in 2005. The Committee recorded that the pilgrim travelled if the returned Hajj passport bore entry and exit stamps. It also marked pilgrims as having 'travelled' if the pilgrim was issued a Hajj passport, but did not return it at the end of the trip. This evidence therefore does not assist the Trial Chamber's determination as the Hajj Committee may have recorded Mr Ayyash's travel even if it did not receive his Hajj passport after completing his pilgrimage.

3375. In summary, the Trial Chamber finds that there were flaws in the identification process at Beirut Airport in the 2005 Hajj season.

3376. This in turn reduces the reliability of the Lebanese entry and exit records related to the Hajj pilgrimage and hence one inference that Mr Ayyash, his wife and daughter left Lebanon on 15 January and returned on 28 January 2005. Similarly, the lack of a fingerprinting system for those entering Saudi Arabia, and the inconsistency of the Saudi and Lebanese entry and exit records and the lists of flight passengers with respect to Mr Ayyash's daughter further diminishes the reliability of these records. The MEA's 'collective' check-in process was not designed to check the identity of each travelling pilgrim, and therefore did not produce reliable records as to who actually boarded the flights.

3377. Turning to the Civil Defence records, Mr Ayyash requested time off work from Sunday 16 to Tuesday 25 January 2005 to perform the Hajj. On Friday 14 January 2005, the Director General of the Civil Defence approved ten days of paid leave for Mr Ayyash. This excluded his entitlements to emergency allowance and commute compensation.

3378. The leave Mr Ayyash had previously sought from work to perform the 2005 Hajj was cancelled on Monday 24 January 2005, nine days after he was due to travel to Saudi Arabia on Saturday 15 January 2005. The reason for the cancellation was that Mr Ayyash had not received the required Saudi visa. This contradicts the evidence that the Hajj Committee granted his Hajj application and the *Sûreté Générale* issued a Hajj passport for him.

3379. The Trial Chamber heard testimony that Mr Ayyash would have had to have personally come to the station to cancel his leave. Whether this in fact occurred does not affect the reliability of the letter from the Chief of the Nabatiyeh Regional Station and the decision of the Director General of the Civil Defence cancelling Mr Ayyash's leave.

3380. The general procedure at the Doueir station required the supervisor to inform the Nabatiyeh Regional Station of employees' absences to deduct allowances and compensations for the days of absence. Conversely, it would have been equally important to communicate leave cancellations so that payments were reimbursed to the employee or not deducted from the salary. Civil Defence employees at Doueir worked their 48-hour shifts in teams of two, with a few volunteers also present, making it obvious to the supervisor if someone was absent.

3381. According to the Lebanese Ministry of Finance's records, the commute compensation that was deducted from Mr Ayyash's pay when his leave request was granted, and the amount, equivalent to around USD 28, was paid to him upon the cancellation of his leave. Organisations, especially governments, have a business interest in ensuring that payment is only provided for work completed. The Trial Chamber finds that Mr Ayyash's leave cancellation and reimbursement provide support for the contention that he remained in Lebanon and was present at work.

3382. Further, based on the Civil Defence attendance sheets, Mr Ayyash's name was signed in at work during his leave on Tuesday 18, Monday 24 and Tuesday 25 January 2005.⁶⁶⁵⁶ However, the Trial Chamber heard evidence that questioned the integrity of the attendance sign-in procedure. This included that signing in was not closely monitored and employees could sign the attendance sheets for each other. According to the attendance records, volunteers were also present in the Doueir station on these three days, but other days too.

3383. Their presence therefore does not mean that Mr Ayyash was away from the station. The station supervisor may also have stepped in for absent staff but the attendance sheets on those three days did not record any such replacement. Moreover, the Prosecution did not rely on the attendance records.

3384. As Mr Donaldson acknowledged, on 18, 19, 24 and 25 January 2005 the cell site activations of Mr Ayyash's attributed mobiles, personal mobiles 091, 170, Blue 233, Red 741 and Green 300, were inconclusive as to whether they were used in Doueir or in Harouf.

3385. The Trial Chamber finds that mobile activity patterns are probative as to whether a mobile or a set of mobiles changed user. It, therefore, carefully considered Mr Donaldson's evidence with respect to the mobiles' activities in the 2004 and 2005 Hajj periods, and for completeness it carefully reviewed Mr Philips's single user analysis based on the co-location of the mobiles.

3386. That Mr Ayyash travelled to Saudi Arabia to perform the Hajj pilgrimage from Wednesday 28 January to Sunday 8 February 2004 seems to be uncontested. Nevertheless, the Trial Chamber has considered the related evidence.

⁶⁶⁵⁶ One of the attendance sheets received into evidence was dated 19 May 2005 as opposed to January. Exhibit P1911, ERN 60178551.

3387. Sponsored by the Loyalty to the Resistance Bloc, both Mr Ayyash and his wife received Hajj passports in 2004. Mr Ayyash applied for and was granted 15 days of leave from his workplace, then at the Markaba Civil Defence station, from 25 January 2004, and resumed work on 10 February 2004. According to the Lebanese entry and exit records he left Lebanon on 28 January and returned on 8 February 2004, but no such record was available with respect to his wife.

3388. As set out before, the Trial Chamber found the Lebanese entry and exit records related to the Hajj travels unreliable. On its face, therefore, nothing makes this evidence more reliable with respect to the 2004 Hajj pilgrimage. The Trial Chamber must, therefore, examine the other evidence relevant as to whether Mr Ayyash travelled to Saudi Arabia in this period.

3389. On 29 and 31 January 2004, Mr Ayyash's USD account shows cash withdrawals at automatic teller machines in Mecca. The Trial Chamber finds this consistent with Mr Ayyash's presence in Mecca, at least on these days.

3390. According to the Civil Defence records, Mr Ayyash requested leave to travel to Saudi Arabia on 27 January 2004. The Director General of the Civil Defence granted Mr Ayyash's leave application, and he resumed work on 10 February 2004. The Trial Chamber has not received any evidence that would make these records unreliable.

3391. The Trial Chamber has found that Mr Ayyash was the principal user of mobile 165.⁶⁶⁵⁷

3392. Mobile 165's activity decreased in the period when Mr Ayyash's exit and entry from Lebanon were recorded in 2004. This mobile only ever contacted three particular numbers in this 12-day period. The mobile used cells mainly near Mr Ayyash's residence in Hadath. For one call, it activated Jabal Safi_B, which it never used before or after. The call sequence table of the mobile shows a change in the IMEI number, meaning that the SIM card was used in a different handset from 29 January to 7 February 2004. From its first call on 8 February 2004, it was used again with the same handset as before. The Trial Chamber finds these factors indicative of mobile 165 having had a different user between 29 January and 8 February 2004.

⁶⁶⁵⁷ See para. 2756.

3393. Throughout its attribution period, mobile 165 had 192 contacts with a mobile linked to Mr Jaber. This number, 617, was its fifth most frequently contacted number, following Mr Ayyash's brother, Loutfi, sister-in-law, Ms Bassima Al-Hajj, Mr Ayyash's Harouf residence landline and the Nabatiyeh Civil Defence landline.⁶⁶⁵⁸ The evidence also shows that this number may have belonged to Mr Jaber's car mechanic shop, and multiple people may have used it.⁶⁶⁵⁹ Mobile 165's contacts with this number and the two calls with an unattributed Saudi number in the 2004 Hajj period, therefore, do not assist the Trial Chamber's determination as to who could have used this mobile during these 11 days.

3394. The Trial Chamber has also found that, based on the preponderance of the evidence, it is more likely that Mr Ayyash was the principal user of Yellow 669.⁶⁶⁶⁰ The Yellow mobile was generally inactive in this period. It made four calls to an Alfa service number activating SFEIR2 and SFEIR3.

3395. Mobile 165 and Yellow 669 remained in Lebanon during the 2004 Hajj period. The change in the handset of mobile 165, and that Yellow 669 became generally inactive from 28 January to 8 February 2004 cumulatively support the finding that they were used by a person other than Mr Ayyash, from at least 29 January to the morning on 8 February 2004. The call patterns and cell usage of the two mobiles during the 2004 Hajj period confirm this finding.

3396. The Civil Defence records, specifically three letters from the Chief of Nabatiyeh Regional Station, dated 17, 30 January and 14 February 2004, informing the Director General of the Civil Defence that Mr Ayyash requested leave, that he travelled to Saudi Arabia on 27 January 2004 and that he resumed work on 10 February 2004, and the Director General's decision of 19 January 2004 granting leave for Mr Ayyash, further corroborate this finding, and support that Mr Ayyash was not in Lebanon from at least 29 January to 8 February 2004.

3397. Mobiles 170, 091, Blue 233 and Green 300, which were active in 2005, continued to use the same handsets. Additionally, the Trial Chamber received evidence that the Red network mobiles, including Red 741, were initialised on the Alfa network on 4 January 2005 in Tripoli, and

⁶⁶⁵⁸ See para. 2686.

⁶⁶⁵⁹ See para. 2686.

⁶⁶⁶⁰ See para. 3028.

inactive until 14 January 2005.⁶⁶⁶¹ Red 741 used two different handsets on these two days, which were also used with Red 572, Red 636 and Red 893 respectively, as handset swapping was regular among the Red network mobiles, including in the initialisation period.⁶⁶⁶² However, from Thursday 20 January to its last call on Monday 14 February 2005, Red 741 used the same handset. Conversely, Blue 322 was used with the same handset following its attribution period to Mr Ayyash, after 27 December 2004.

3398. However, Mr Donaldson did not analyse this mobile, and moreover, as noted above, the Prosecutor did not plead in the amended consolidated indictment that Mr Ayyash was using Blue 322.

3399. According to Mr Donaldson, regular contacts continued to communicate with these personal mobiles. He noted an increase in the mobiles' call activities and no change in the direction and the duration of calls during the 2005 Hajj period compared to the mobiles' activities ten weeks before and ten weeks after. The Trial Chamber, however, finds his analysis in this respect difficult to follow because none of the seven mobiles⁶⁶⁶³ that he analysed was active ten weeks before, during and ten weeks after the 2005 Hajj period. Additionally, the Trial Chamber found that Mr Ayyash used Blue 233 from 11 January to 14 February 2005, a shorter period than that considered by Mr Donaldson.

3400. Unlike Yellow 669 during the 2004 Hajj period, network mobiles Blue 233 and Green 300 did not become inactive in January 2005. Further, Red 741 commenced its activities on 14 and 20 January 2005.

3401. Mr Philips did not observe a change in Blue 233's, Green 300's and Red 741's activities in the 2005 Hajj period which could have been consistent with these mobiles having had a different user. Both Mr Philips and Mr Donaldson found that Blue 233 and mobiles 170 and 091 had possible co-location every day between 15 and 28 January 2005 for a total of 55 pairs of calls made within an hour. Green 300 also co-located with Blue 233 and mobile 091.

⁶⁶⁶¹ See chapter VIII 'Nature and purpose of colour-coded mobile networks and Purple group of mobiles', (D) (1) 'Setting up the network'.

⁶⁶⁶² See chapter VIII 'Nature and purpose of colour-coded mobile networks and Purple group of mobiles', (D) (2) 'Equipment'.

⁶⁶⁶³ Personal mobiles 935, 091, 170, Yellow 294, Blue 233, Green 300 and Red 741.

3402. Save for mobile 091's separation from the other mobiles in the afternoon on 28 January, these mobiles had no cell activations that would exclude their co-location. Mr Philips analysed common movements of these mobiles, including during the 2005 Hajj. He, therefore, was of the view that 'the possibility that these mobiles were not used by the same user in certain instances would appear to be very remote.' Mr Donaldson did not observe any difference with respect to the mobiles' most frequently used cells.

3403. The Trial Chamber has found that Mr Ayyash was the principal user of personal mobiles 170 and 091, and he used Blue 233, Green 300 and Red 741. It has found that another person used mobile 091 in the afternoon on 28 January 2005, when this mobile activated cells near the Beirut Airport.

3404. The Trial Chamber is satisfied that the five mobiles did not have a user other than Mr Ayyash during the 2005 Hajj period, except for the limited duration of mobile 091's separation from the other mobiles on 28 January 2005. This is based on the evidence demonstrating that there were no changes in their normal behaviour during the 2005 Hajj. The mobiles continued to co-locate and move in tandem in their respective attribution periods, had calls with their regular contacts and did not change their geographic profile. Mr Donaldson's comparison of the mobiles' activities during the 2004 and the 2005 Hajj periods provides some limited support to this finding.

3405. Personal mobiles 170 and 091 did not change handsets, as opposed to mobile 165, which did for the duration of the 2004 Hajj. This weighs in favour of the Trial Chamber's finding that there was no change in their user in this period.

3406. Blue 233, Green 300 and Red 741—like Yellow 669 in 2004—did not change their IMEI numbers during the 2005 Hajj period. Handset swapping is consistent with the covert nature of the Blue and Red network mobiles. That it did not occur in this short period does not affect the Trial Chamber's finding that Blue 233 and Red 741 were covert network mobiles.⁶⁶⁶⁴

3407. The Trial Chamber notes the contacts with Saudi Arabian numbers on Mr Ayyash's mobiles in early February 2004, and on mobile 091 in January 2005. However, the Trial Chamber received no evidence as to who the users of these Saudi numbers were and their relationship with

⁶⁶⁶⁴ See chapter VIII 'Nature and purpose of colour-coded mobile networks and Purple group of mobiles' for further details.

Mr Ayyash. Therefore, these calls have no probative value with respect to Mr Ayyash's whereabouts in January 2005.

3408. In January 2005, Mr Ayyash's USD and Lebanese pound current accounts were not debited through cash withdrawals. This neither confirms nor excludes whether Mr Ayyash was in Mecca in January 2005.

3409. After careful consideration of the totality of the evidence, the Trial Chamber's overall assessment of the evidence and findings are as follows:

- Mr Ayyash and his wife, Ms Fatima Hajj, received Hajj passports to perform the pilgrimage in two consecutive years, 2004 and 2005;
- Bar for the stamp print of the *Sûreté Générale* running over Mr Ayyash's and Ms Hajj's photographs on their 2005 Hajj passports, these documents were insufficiently safeguarded from falsification. Most commonly, the date of birth was manipulated to meet the age requirement, but photographs were also replaced;
- Notwithstanding this, if a Lebanese pilgrim, like Mr Ayyash, had a Hajj passport, it was the only required means of identification at the Lebanese and Saudi Arabian airports;
- The Hajj Committee reported some cases of forged Hajj passports to the *Sûreté Générale* between 2002 and 2007, but none in 2005;
- Based on the evidence, it cannot be established that Mr Ayyash's 2005 Hajj passport was falsified, or that his passport photograph was changed;
- However, the deficiencies of the Hajj travel document raise doubts with respect to the rigour of the identification process at the Lebanese and Saudi Arabian airports during the 2004 and 2005 Hajj seasons when this was the sole document required for a pilgrim to pass through immigration;
- Mr Ayyash's and his wife's 2005 Hajj passports did not include that Ms Hajj's *mahram* was Mr Ayyash, and there was no definitive way to check if the person travelling with the woman was her husband;

- However, there is no direct evidence to support the Prosecution's submission that someone else using Mr Ayyash's passport accompanied his wife and daughter on the 2005 pilgrimage;
- A wife could use her husband's Hajj passport and travel without him;
- Additionally, it was common practice that the *Sûreté Générale* checked and stamped the Hajj passports collectively and merely made a head count. In 2005, 17,000 pilgrims may have travelled from Lebanon to Saudi Arabia within a period of weeks via the direct flights of two approved airlines, MEA and the Saudi Arabian Airlines. This caused a considerable increase in traffic at the Beirut Airport, which meant that the pilgrims were not properly identified by the *Sûreté Générale*;
- Further, it diminished the reliability of the Lebanese entry and exit records that showed that Mr Ayyash, Ms Fatima Hajj and Ms Zeinab Ayyash left Beirut on 15 January and returned on 28 January 2005;
- The practice in 2004 and 2005 was that the security at the entrance of the Beirut Airport, check-in attendants and the passport check at the boarding gate did not check the pilgrim's identity;
- In 2004 and 2005, check-in attendants commonly checked the pilgrims in as a group for their flights and handed the Hajj passports and the boarding passes back to the *moarref* as a group;
- Pilgrims' names were therefore entered in the flight manifests on the basis of a collective check-in, as opposed to a thorough passenger-by-passenger review;
- Although the flight manifest of checked-in passengers for the flight on 15 January 2005 from Beirut to Jeddah included the names of Mr Ayyash, Ms Hajj and their daughter, the practice of checking in pilgrims diminishes the reliability of the record to the point that it loses its probative value;
- Saudi Arabian entry and exit records show Mr Ayyash arriving with his wife in Jeddah on 15 January and departing on 28 January 2005. However, the records do not include

their daughter, whose name appeared on the Lebanese entry and exit records leaving for Saudi Arabia, and on the flight records of passengers arriving in Jeddah and leaving from Medina on those days;

- The absence of any rigorous identification process at Beirut Airport in the 2004 and 2005 Hajj seasons, the collective check-in procedure, the lack of fingerprinting system for those entering Saudi Arabia and the inconsistencies of the Saudi entry and exit records with Lebanese records diminish their reliability. They are thus insufficient to prove that Mr Ayyash, his wife and daughter travelled to Saudi Arabia from 15 to 28 January 2005;
- The Hajj Committee's database recorded whether pilgrims participated in the Hajj based on the entry and exit stamps in their Hajj passports, if they were returned at the end of the travel, or on assumption, if they were not. Therefore, the entry showing that Mr Ayyash travelled on the Hajj in 2005 does not prove that he actually did;
- On 11 January 2005, Mr Ayyash submitted a leave application, and on 14 January 2005 the Director General of the Civil Defence granted him ten days paid leave starting on 16 January 2005;
- Because he worked—at the Doueir Civil Defence station at that time—for 48 hours and had 96 hours off, rest days also counted when his leave time was calculated and for this period he was not entitled to emergency allowance and commute compensation;
- In his absence, his supervisor was responsible for calling volunteers to assist or step in his place;
- On 24 January 2005, the Chief of the Nabatiyeh Regional Station informed the General Director of the Civil Defence in writing that Mr Ayyash had not benefited from the authorised leave and had been in service. In a decision, dated 12 February 2005, the General Director cancelled Mr Ayyash's leave;

- As a consequence, Mr Ayyash was reimbursed for the deducted commute compensation, 42,000 LBP (around 28 USD);
- Mr Ayyash should have personally sought the cancellation of his leave, but the Trial Chamber received no proof if he in fact did;
- Nevertheless, the Trial Chamber regards the cancellation of Mr Ayyash's leave and the reimbursement of his commute compensation as evidence which supports the conclusion that Mr Ayyash did not leave Lebanon to perform the Hajj in January 2005;
- Mr Ayyash's name is signed on the attendance sheets of the Doueir station on 18, 24 and 25 January 2005. Volunteers also signed in on these and other days;
- Signing in to work at the Doueir station was not closely monitored, and signing in for others was possible. The attendance sheets therefore lack the necessary reliability to determine whether Mr Ayyash was in fact present at Doueir to work his shifts in the second half of January 2005. The presence or absence of volunteers does not alter the Trial Chamber's findings;
- Due to the geographical vicinity of the Doueir station to Mr Ayyash's residence in Harouf, cell site activations on days by Blue 233 and mobile 170 when he was expected to work do not assist in determining if Mr Ayyash was present in Doueir;
- Mobile activity patterns are probative as to whether a mobile or a set of mobiles changed user;
- Lebanese entry and exit records show Mr Ayyash leaving at 16:50 on 28 January 2004 and returning to Lebanon at 08:38 on 8 February 2004, but there are no records for Ms Hajj. For reasons set out in paragraphs 3363-3365, 3368, 3375 above, the Trial Chamber did not find this evidence reliable;
- However, on 29 and 31 January 2004, there were two cash withdrawals at automatic teller machines in Mecca from Mr Ayyash's USD account. This is probative of Mr Ayyash's presence in Mecca, on these two days;

- On 18 January 2004, the Director General of the Civil Defence granted Mr Ayyash 15 days fully paid leave. He resumed work on 10 February 2004. The Trial Chamber finds this evidence reliable;
- Mr Ayyash's personal mobile 165 was used in a different handset from 29 January to 7 February 2004, and with its old handset from 8 February 2004. In this period, mobile 165 had three new contacts, and one unusual cell activation using Jabal Safi_B. These factors are indicative of the mobile having a different user between 29 January and 8 February 2004;
- Contacts with mobile 617, which may have belonged to Mr Ghaleb Jaber's car mechanic shop, and with an unattributed Saudi number in this period do not assist the Trial Chamber's determination as to who was using these mobiles in these 11 days;
- Yellow 669, which was more likely Mr Ayyash's, became inactive. It made four calls to an Alfa service number activating SFEIR2 and SFEIR3;
- The change in mobile 165's handset and Yellow 669's behaviour cumulatively support a finding that these mobiles were used by a person other than Mr Ayyash from at least 29 January to the morning of 8 February 2004. The call patterns and cell usage confirm this finding, and that the two mobiles remained in Lebanon;
- The letters from the Chief of Nabatiyeh Regional Station on 17, 30 January and 14 February 2004, the Director General's decision granting leave for Mr Ayyash and the withdrawal from his USD bank account in Mecca support that Mr Ayyash was not in Lebanon from at least 29 January to 8 February 2004;
- Mr Ayyash's network mobiles, Blue 233 and Green 300 remained active during the 2005 Hajj, and Red 741 started its network activities;
- The mobiles continued to co-locate and move in tandem in the period analysed by Mr Philips, including the 2005 Hajj;
- Regular contacts continued to communicate with these mobiles, and there was no change in their geographical profile;

- In contrast with personal mobile 165's handset change during the 2004 Hajj, personal mobiles 170 and 091 continued to use the same handset before and after the 2005 Hajj;
- These are the factors that satisfied the Trial Chamber that mobiles 091, 170, Blue 233, Green 300 and Red 741 did not have a user other than Mr Ayyash in the period of the 2005 Hajj, except for the duration of mobile 091's separation from the other mobiles on 28 January 2005; and
- Calls with unattributed Saudi Arabian numbers on personal mobile 091, and the absence of ATM withdrawals on Mr Ayyash's USD and LBP accounts in January 2005 neither confirm nor counter whether Mr Ayyash performed the 2005 Hajj in Mecca.

3410. The Trial Chamber consequently finds that Mr Ayyash did not leave Lebanon between Saturday 15 and Friday 28 January 2005.

(h) Overall findings

3411. In summary, based on the evidence and analysis above, the Trial Chamber finds beyond reasonable doubt that Mr Ayyash was the user of the following network mobiles:

- Yellow 294—from 29 May 2004 to 7 January 2005;
- Blue 233—from 11 January to 14 February 2005;
- Green 300—from 30 September 2004 to 14 February 2005; and
- Red 741—from 14 January to 14 February 2005.

3412. The Trial Chamber is also satisfied beyond reasonable doubt that Mr Ayyash was the principal user of the following personal mobiles for the following periods:

- mobile 165—from 23 April 2002 to 18 April 2004;
- mobile 170—from 7 January to 26 November 2005;
- mobile 091—from 13 January to 6 March 2005; and
- mobile 935—from 31 May 2004 to 13 January 2005.

3413. It is also satisfied that he was using Blue 322, from 18 October to 27 December 2004, but because this was not pleaded against him in the amended consolidated indictment, the Trial Chamber has made no findings against Mr Ayyash arising from his use of this mobile.

3414. The preponderance of evidence establishes that Mr Ayyash was the principal user of Yellow 669 from 23 December 2003 to 18 April 2004, but the Trial Chamber cannot be satisfied of this to the high standard of beyond reasonable doubt.

C. Hassan Habib Merhi

3415. Hassan Habib Merhi was born on 12 December 1965 in Beirut.⁶⁶⁶⁵ He married Ms Rima Toufaily on 23 March 1984.⁶⁶⁶⁶ They have four sons, Mohamad Merhi, born in 1987, Ali Merhi, in 1991, Hussein Merhi, in 1995, and Habib Al Mahdi Merhi, in 2000.⁶⁶⁶⁷

3416. The Prosecutor alleges that Mr Merhi was using two mobiles, namely the Green network mobile, Green 071, and his personal mobile, Purple 231, to further his pleaded role in the conspiracy that was aimed at committing a terrorist act in assassinating Mr Hariri by means of a large explosive device.

3417. In relation to the Purple mobiles, the Prosecutor, in the amended consolidated indictment, pleads that Mr Merhi was the user of Purple 231, one of the three ‘Purple phones’, ‘used from at least 1 January 2003 until 16 February 2005’. Mr Merhi, and the other two Accused, Mr Oneissi and Mr Sabra used their personal mobiles, respectively Purple 095 and Purple 018, ‘colour-coded “**Purple Phones**”’, in relation to preparations for the attack’. The three mobiles ‘were used to coordinate the false claim of responsibility’. The Prosecutor also pleads a ‘history of contact between **ONEISSI, SABRA and MERHI**’ between January 2003 and 16 February 2005, and between Mr Merhi and Mr Ayyash on their personal mobiles, between 4 December 2003 and 6 February 2005.⁶⁶⁶⁸

3418. Regarding Green 071, the Prosecutor, in the amended consolidated indictment, pleads that the three Green network mobiles, Mr Badreddine’s Green 023, Mr Ayyash’s Green 300 and Mr Merhi’s Green 071 were used from at least 30 September 2004 until 14 February 2005,⁶⁶⁶⁹ and:

The Green Network was a coordination network used exclusively by three co-conspirators – Mustafa BADREDDINE, **AYYASH**, and **MERHI** – to exchange information regarding all aspects of the conspiracy and coordinate the acts done in furtherance of the conspiracy. For example, the **Green Network** was used by Mustafa BADREDDINE to monitor, and together with **AYYASH**, coordinate the surveillance of HARIRI in preparation for the

⁶⁶⁶⁶ Exhibit P1057 (Marriage certificate Hassan Merhi and Rima Toufaily), p. 1.

⁶⁶⁶⁷ Exhibit P1055 (Personal status extract), p. 1.

⁶⁶⁶⁸ Amended consolidated indictment, paras 15 (e), 16, 17, 19 (d); Prosecution’s updated pre-trial brief (Ayyash, Badreddine, Oneissi and Sabra case), para. 115; Prosecution pre-trial submissions (Merhi case), annex A, para. 106.

⁶⁶⁶⁹ Amended consolidated indictment, para. 15 (b).

attack and the purchase of the van that was used for the attack. Mustafa BADREDDINE also used the **Green Network** to monitor the physical perpetration of the attack. In addition, the **Green Network** was used by Mustafa BADREDDINE to monitor, and together with **MERHI**, coordinate the preparation of the false claim of responsibility.⁶⁶⁷⁰

3419. To prove that Mr Merhi was using Purple 231 at the time relevant to the charges against him, from 22 December 2004 until 14 February 2005, Prosecution analyst Mr Andrews Donaldson prepared a report entitled, ‘Evidence of Telephone Attribution Hassan Habib Merhi’ in which he analysed the use of Purple 231, the Green network mobile, Green 071 and a personal mobile 091. He concluded that Purple 231 and Green 071 were attributable to Mr Merhi and another, referred to as personal mobile 6091, was attributable to Mr Merhi’s family.⁶⁶⁷¹

3420. Mr Donaldson concluded that Purple 231 was ‘attributable to’ Mr Merhi from at least 19 December 2002 until 15 February 2005 and that Green 071 was ‘attributable’ to Mr Merhi from 29 September 2004 until 7 February 2005.⁶⁶⁷²

3421. The Prosecution also used its cell site expert, Mr J. E. Philips for cell site analysis of Purple 231, Green 071 and a further mobile, the ‘Grey mobile’ that came to light during the trial. Mr Philips prepared two reports specifically related to Mr Merhi whom he knew as ‘Suspect 3’.⁶⁶⁷³

3422. In his first report, exhibit P1938, Mr Philips concluded that mobiles Green 071 and Purple 231, ‘are consistent with being used by the same person over the period analysed’.⁶⁶⁷⁴ In an updated report, exhibit P2120, in which he also analysed possible co-location of these two mobiles together with the Grey mobile, he concluded that the calling characteristics of the three mobiles ‘are such that they very strongly support the proposition that they could be used by a single person’.⁶⁶⁷⁵

3423. Mr Donaldson and Mr Philips worked with incomplete cell site data. Records were available of the cells to which Purple 231, an Alfa SIM, connected when it made calls from 19

⁶⁶⁷⁰ Amended consolidated indictment, para. 19 (a).

⁶⁶⁷¹ Exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), para. 1.

⁶⁶⁷² Exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), paras 9, 15.

⁶⁶⁷³ Exhibit P1938 (Expert report of John Edward Philips – Demonstration of single person use of multiple mobile phones using cell site analysis, Suspect 3, Mr Merhi); exhibit P2120 (Expert report of John Edward Philips – Revised single user analysis, Suspect 3, Mr Merhi).

⁶⁶⁷⁴ Exhibit P1938 (Expert report of John Edward Philips – Demonstration of single person use of multiple mobile phones using cell site analysis Suspect 3), p. 3.

⁶⁶⁷⁵ Exhibit P2120, p. 4.

December 2002. Until 1 August 2004, no cell site data was available for incoming calls or texts, namely, of the cell to which an Alfa mobile connected when it received calls, and received or sent text messages.⁶⁶⁷⁶ The location of the mobile in these circumstances was unknown. End cell data for voice calls was available from 1 October 2004 onwards.⁶⁶⁷⁷ Records were available during the attribution period for Touch mobiles such as mobile 6091 of the cell activated for calls and for sending and receiving texts.

1. Summary of evidence

3424. The case that Mr Merhi was using either Purple 231 or Green 071 is circumstantial. The Prosecution at first sought to establish that he was using Purple 231 by adducing evidence that Mr Merhi and his family were using the personal mobile 6091, and then comparing the geographical and contact profiles of the two mobiles. From this, it then sought to demonstrate that Purple 231 and Green 071 were co-locating in a manner proving that the two mobiles had a single user, namely Mr Merhi.

3425. In opening the case against Mr Merhi, Prosecution counsel stated, in summary form, how Purple 231 and Green 071 could be attributed to him:

And the analytical process in attributing Green 071 to Mr. Merhi primarily rests upon the attribution to him of Purple 231, enhanced by data related to a third phone, a family phone, ending in the digits 091.

There is considerable documentary evidence connecting the family phone, 091, to the Merhi family, including to Mr. Merhi himself. It is, for instance, the number provided by Mr. Merhi on his income tax form, which he signed. There are many other documents with that number connected to the Merhi family and to Mr. Merhi, and I expect that you'll find the evidence attributing that phone to the Merhi family to be very strong. But it's not the position of the Prosecution that that family phone was used by Mr. Merhi exclusively.⁶⁶⁷⁸

⁶⁶⁷⁶ Andrew Donaldson, T. 29 June 2017, pp 21-22, 25; exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), para. 67; exhibit P527 (Call sequence table of Purple 231), pp 1-69.

⁶⁶⁷⁷ Mr Donaldson did not explicitly note this in exhibit P1962.1, but this is evident in the call sequence table of Purple 231. Exhibit P527. *See also* Gary Platt, T. 7 February 2017, pp 64-65; Prosecution final trial brief, para. 540.

⁶⁶⁷⁸ Prosecutor's opening statement regarding Hassan Habib Merhi, T. 18 June 2014, pp 67-68.

3426. During the trial, with the discovery of the Grey mobile, the Prosecution's case shifted from its initial reliance on mobile 6091 to using co-location between the Grey mobile, Purple 231 and Green 071 to prove that Mr Merhi was using Purple 231 and Green 071 as charged. The Prosecution produced direct evidence that Mr Merhi was the sole user of the Grey mobile. From this it led expert evidence from Mr Philips seeking to show that Purple 231, Green 071 and the Grey mobile were co-locating in a manner that the three mobiles must have a single user.

3427. Two mobiles ending in 091 feature in the case, one attributed to the Merhi family and one attributed as Mr Ayyash's personal mobile. Although the Prosecution has referred to both as mobile '091', the Trial Chamber—in order to distinguish it from Mr Ayyash's personal mobile—has added its preceding number '6' to it, and has therefore referred to it as 'mobile 6091'.

(a) The Merhi family

3428. Mr Merhi's parents, Mr Habib Ali Merhi and Ms Latifa Abbas, married in 1961 in Beirut,⁶⁶⁷⁹ and had eight children.⁶⁶⁸⁰ Their youngest son, Mr Youssef Merhi, died on 10 March 2004.⁶⁶⁸¹ From May 1975 until the 2006 war with Israel, Mr Habib Ali Merhi leased a house on Daccache Street, Bir-El-Abed in Haret Hreik, which is real estate 'plot 1416'. His family lived there.⁶⁶⁸² The Prosecution, using Lebanese official documents, prepared a Merhi family tree.⁶⁶⁸³

(b) Mr Merhi's residence

3429. The Prosecution produced evidence that Mr Merhi and his family lived in Bourj-El-Barajneh, in Beirut.

3430. On 3 July 2001, according to Lebanese Land Registry records, Mr Merhi bought a three-bedroom apartment on the seventh floor of a building in Bourj-El-Barajneh. This is identified as real estate 'plot 2501'. According to the same records, he sold it on 26 December 2005.⁶⁶⁸⁴

⁶⁶⁷⁹ Exhibit P1050 (Personal status extracts and certificates), pp 20-21 (ERN 60236911); exhibit P1051 (Personal status extracts and certificates), p. 1.

⁶⁶⁸⁰ Exhibit P1051, p. 1.

⁶⁶⁸¹ Exhibit P1051, p. 1; exhibit P1052 (Birth and death certificates), pp 17-18 (ERN 60236920).

⁶⁶⁸² Exhibit P651 (Real estate documents for parcels 1416 and 2501), pp 18-20, 24-28 (ERNs 60230417-60230419, 60230423-60230426); exhibit P705 (Statement of Witness PRH688), paras 17-18; *see also* exhibit P652 (Contract of sale and real estate certificate for real estate number 1416); exhibit P1753 (Vehicle registration for Rima Toufaili).

⁶⁶⁸³ Exhibit P1958. *See also* exhibit P1961 (PowerPoint presentation regarding Mr Merhi, Andrew Donaldson), slide 7.

⁶⁶⁸⁴ Exhibit P647 (Contract of sale and real estate certificate of Hassan Habib Merhi), pp 1-3.

However, an information sheet issued by the Lebanese Directorate General for Real Estate Affairs, dated 4 September 2010, stated that Mr Merhi was still the owner of plot 2501 as of that date.⁶⁶⁸⁵ Using official Lebanese Land Registry maps, Prosecution analyst, Mr Andrew Fahey, mapped plot 2501 onto maps of Beirut,⁶⁶⁸⁶ as shown on the extract from his statement below:

3431. The apartment is close to, about a kilometre from, his parents' home in Haret Hreik, which Mr Fahey also mapped.⁶⁶⁸⁷

3432. The building was heavily damaged during the war with Israel in July 2006. Some documents link Mr Merhi to this address, including a 'Rebuild Lebanon' application submitted to

⁶⁶⁸⁵ Exhibit P646 (Real estate information sheet for Hasan Habib Merhi), p. 1.

⁶⁶⁸⁶ Exhibit P662 (Statement of Andrew Fahey), paras 54-65, annex 3.

⁶⁶⁸⁷ Exhibit P662 (Statement of Andrew Fahey), paras 81-99, annex 4.

the Ministry of the Displaced in September 2006,⁶⁶⁸⁸ electricity subscription records dated 30 July 2001⁶⁶⁸⁹ and an undergraduate application to the University of Balamand in Lebanon in the name of Mr Merhi's son, Mohammad Hasan Merhi, dated 29 July 2005.⁶⁶⁹⁰

3433. The building is known as the Gardenia building; it has nine residential floors and some commercial premises, including a gym. The reconstruction of the building, badly damaged by the Israeli bombing, was completed in 2009. In an interview in January 2012, Witness PRH647 stated after seeing Mr Merhi's passport application photograph, that he was 70 to 80 per cent sure—but as a consequence of the photograph's poor quality—that this person lived in the building in 2010 to 2012. He lived on the seventh floor east, and had the family name Merhi. The witness believed that this person had lived there before the 2006 war.⁶⁶⁹¹ However, when questioned about this in court almost four years later, he no longer remember and stated, 'But before 2006, I don't recall seeing him'.⁶⁶⁹²

3434. According to Lebanese Land Registry records, Mr Merhi also bought land in Ain Qana in southern Lebanon on 3 May 2003.⁶⁶⁹³

2. Personal mobile 6091

3435. The Prosecution, through Mr Donaldson, attributes mobile 6091 to Mr Merhi's family from 1 January 2003 until at least 31 December 2007.⁶⁶⁹⁴ It was a Touch 'Magic' line, activated as a pre-paid subscription on 7 October 2000 and deactivated on 12 April 2012.⁶⁶⁹⁵ No personal details of the subscriber were recorded.⁶⁶⁹⁶

3436. An income tax form, a 'Rebuild Lebanon' claim, university records and medical records list mobile 6091 alongside the names of Merhi family members. Mr Donaldson also examined

⁶⁶⁸⁸ Exhibit P651, pp 4, 9.

⁶⁶⁸⁹ Exhibit P649 (*Électricité du Liban* documents in the name of Hasan Habib Merhi), pp 1-2 (ERN 60183393).

⁶⁶⁹⁰ Exhibit P1007 (Undergraduate application to University of Balamand, Mohammad Hasan Merhi), p. 2 (ERN 60290903).

⁶⁶⁹¹ Exhibit P703 (Statement of Witness PRH647), pp 28, 35-36, 39-40, 60-73; Witness PRH647, T. 9 November 2015, pp 19-20, 25-34, 36. The statement was admitted under Rule 156, T. 9 November 2015, p. 19.

⁶⁶⁹² Witness PRH647, T. 9 November 2015, p. 34.

⁶⁶⁹³ Exhibit P2016 (Land registry documents in relation to plot 352); exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), para. 345; *see also* exhibit P646, p. 1.

⁶⁶⁹⁴ Exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), para. 84

⁶⁶⁹⁵ Exhibit P1489 (Touch subscriber note for mobile 6091), p. 1; exhibit P1101, p. 1; exhibit P826 (Witness PRH705's statement of 16 November 2015), para. 275.

⁶⁶⁹⁶ Exhibit P1489, p. 1.

mobile 6091's geographic profile, its contact profile and text message content, and concluded that they link mobile 6091 to members of the Merhi family.

3437. Witness PRH688 knew Mr Merhi's father Habib Ali Merhi, who had leased property for a clothing shop, and recognised a photograph of Mr Merhi as one of his sons, but not Haidar.⁶⁶⁹⁷

(a) Attribution period

3438. Mr Donaldson attributes mobile 6091, from 1 January 2003 to 31 December 2007, to the Merhi family and predominantly to Mr Merhi's wife, although multiple people had access to it, and in particular their children.⁶⁶⁹⁸ Call data records available to the Prosecution were from 1 January 2003 until 12 April 2012, when mobile 6091 was deactivated.⁶⁶⁹⁹ Mr Donaldson identified consistent frequent contacts during the attribution period, and consistent frequently used cells between 1 January 2003 and 13 July 2006.⁶⁷⁰⁰ He selected 31 December 2007 as the end of the attribution period to 'try and prevent going into the records of 2008'.⁶⁷⁰¹

(b) Documents

i. Income tax form

3439. An income tax form in the name of 'Hasan Habib Merhi', civil registration number 1126, civil registration place 'Zqaq el-Blat', lists the telephone number as 03/686091.⁶⁷⁰² The personal address is listed as: 'Building: Hoteit & Abou Taaam'; 'Floor: 7'; 'Street: Abyad'; 'District: Baabda'; 'Area – Town: Bourj el-Barajneh'. The date is illegible.⁶⁷⁰³

⁶⁶⁹⁷ Exhibit P705 (Statement of Witness PRH688), paras 37-38. In court he stated that he barely remembered what Mr Habib Ali Merhi's children looked like, so many years afterwards. Witness PRH688, T. 10 November 2015, pp 18, 27.

⁶⁶⁹⁸ Andrew Donaldson, T. 28 June 2017, p. 40, T. 29 June 2017, p. 24; exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), paras 86-88.

⁶⁶⁹⁹ Exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), para. 87, p. 33; exhibit P1101 (Touch list of activation and deactivation dates), p. 1; exhibit P1264 (Call sequence table of mobile 6091), p. 1.

⁶⁷⁰⁰ Exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), paras 88-91; *see also* Andrew Donaldson, T. 28 June 2017, p. 52.

⁶⁷⁰¹ Andrew Donaldson, T. 28 June 2017, p. 52.

⁶⁷⁰² Exhibit P2013 (Income tax form Hasan Habib Merhi), p. 1; exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), para. 94 (c); Andrew Donaldson, T. 28 June 2017, pp 59-61.

⁶⁷⁰³ On 30 June 2017, the Trial Chamber admitted into evidence a certified copy of the form, obtained from the Lebanese Ministry of Finance in 2012; Procedural matters, T. 30 June 2017, p. 43; exhibit P2013, p. 1. The date may be legible on the original form, but this was not tendered into evidence.

ii. 'Rebuild Lebanon' claim

3440. The number 03/686091 is handwritten on an undertaking and receipt bearing Mr Merhi's name, relating to the 'Rebuild Lebanon' recovery project following the 2006 war with Israel.⁶⁷⁰⁴ It came from the General Secretariat of the Council of Ministers.⁶⁷⁰⁵ The document is signed and dated 18 September 2007, and contains Mr Merhi's personal details, including his place and year of birth, 'Beirut 1965', 'register' place and number, 'Zqaq-El-Blat 1126', and area and parcel number, 'Bourj-El-Barajneh/Baabda_27/2501'.⁶⁷⁰⁶

3441. The document is a receipt acknowledging that 'Hasan Habib Merhi' received 35 million Lebanese pounds, as the first part of the aid granted to him. An English translation, prepared for Mr Donaldson's court slides, is below:⁶⁷⁰⁷

Name: Hasan Habib Merhi	Date: 18/09/2007
Signature: [signed]	
<u>Receipt</u>	
On 18/09/2007, I received from the HRC through the CFD a check bearing number 192371, dated 8/6/2007 issued in my favor from the BDL for 35,000,000 LBP – thirty-five million Lebanese Pounds only. This amount is the first payment of the aid granted to me as per the above undertaking.	
Name: [blank]	Signature: [signed]
[Handwritten phone No. 03/686091]	
Footnote 212	

Exhibit P1961 (PowerPoint presentation regarding Mr Merhi, Andrew Donaldson), slide 20

iii. University of Balamand documents

3442. An application dated 29 July 2005 in the name of Mr Merhi's son, 'Mohammad Hasan Merii', for admission to the University of Balamand, provided the number 03/686091.⁶⁷⁰⁸ It

⁶⁷⁰⁴ Exhibit P2014 (Rebuild Lebanon claim Hasan Habib Merhi), p. 1; Decision on admission of attribution documents for Mr Merhi, para. 4.

⁶⁷⁰⁵ Decision on admission of attribution documents for Mr Merhi, para. 4.

⁶⁷⁰⁶ Exhibit P2014, p. 1; exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), para. 94 (d); Andrew Donaldson, T. 28 June 2017, p. 61.

⁶⁷⁰⁷ Exhibit P1961, slide 20, copy of exhibit P2014.

⁶⁷⁰⁸ Exhibit P1007, pp 2-3, 5 (ERNs 60290903-60290904, 60290906); exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), para. 94 (f); Andrew Donaldson, T. 28 June 2017, p. 63.

contains the applicant's personal details, including date of birth, family registration number, 1126, mother's maiden name, Rima Khalil Tofaily, and home address of Gardinia Bldg, 7-East, Hay Al-Abyad, Al-Roweiss, Beirut.⁶⁷⁰⁹

3443. Another application, dated 4 June 2008, in the name of Mr Merhi's son, 'Ali Hassan Merhi', for admission to the University of Balamand, lists telephone number 03686091.⁶⁷¹⁰ The document contains the applicant's personal details, including his date of birth family registration number, mother's maiden name, and home address of Al-Nargis (2), Al-Gamous, Beirut.⁶⁷¹¹ This document post-dates Mr Donaldson's attribution period for mobile 6091.⁶⁷¹²

3444. A receipt for student fees at the University of Balamand in Lebanon in the name 'merii mohamed hassan' notes the number 03/686091. The dates 5 August 2005, 21 September 2005 and 22 September 2005 are written on the payment slip.⁶⁷¹³

iv. Medical records

3445. Patient registration forms in the names of Mr Merhi's sons, 'Mereey Hassan Hussein', dated 3 December 1999, 'Mereey Hassan Ali', undated, and 'Mereey Hassan Mouhamad', dated 13 December 1999, note the number 03686091. On each form 'Roueiss' is written in the address field. While the fields for the patient's date of birth is blank on all three of the forms, the age of the patient is noted as four years for Hussein, nine years for Ali and 12 years for Mouhamad,⁶⁷¹⁴ which is consistent with the ages of Mr Merhi's children around December 1999.⁶⁷¹⁵

⁶⁷⁰⁹ Exhibit P1007, pp 2-3 (ERNs 60290903-60290904).

⁶⁷¹⁰ Exhibit P1008 (Information from University of Balamand on Mohammed Hasan Merhi and Ali Hasan Merhi), pp 8-9 (ERNs 60277998-60277999); exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), para. 94 (e); Andrew Donaldson, T. 28 June 2017, p. 62.

⁶⁷¹¹ Exhibit P1008, pp 8-9 (ERNs 60277998-60277999).

⁶⁷¹² Andrew Donaldson, T. 28 June 2017, p. 62.

⁶⁷¹³ Exhibit P1008, p. 31, ERN 60278021; exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), para. 94; Andrew Donaldson, T. 28 June 2017, pp 63-64.

⁶⁷¹⁴ Exhibit P2017 (Medical forms for Mr Merhi's children), pp 3, 5, 9 (ERNs 60315531, 60315533, 60315537). The forms required that the 'last' name be provided first in the sequence, and that the 'first' name be provided last in the sequence. Exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), para. 94 (h)-(j); Andrew Donaldson, T. 28 June 2017, pp 64-67. In his report, Mr Donaldson incorrectly states that all three of the forms are undated, and in court incorrectly stated that dates of birth are provided for the first and third form. As stated above, the first and third forms are dated while the second is not, and dates of birth are not provided on any of the three forms.

⁶⁷¹⁵ Exhibit P1055, p. 1.

(c) Geographic profile

3446. Within the attribution period of 1 January 2003 to 31 December 2007, Mr Donaldson identified a period of consistent cell sector use between 1 January 2003 and 13 July 2006,⁶⁷¹⁶ falling approximately one and half years short of the end of the attribution period itself. The cell sector most frequently activated by mobile 6091 between 1 January 2003 and 13 July 2006 was Touch's Saquiet_Hadath_2_A (64.55 per cent),⁶⁷¹⁷ which provided predicted best server coverage to plot 2501 in Bourj-Barajneh, that the Prosecution alleges was Mr Merhi's home.⁶⁷¹⁸ This was cell predominantly used throughout the day.⁶⁷¹⁹

3447. The second most frequently activated cell was Sarba_B (5.88 per cent), which covered a rural area that included the village of Ain Qana.⁶⁷²⁰ Also among mobile 6091's ten most frequently used cells were Anquoun_A (1.21 per cent) in south Lebanon and Katermaya_B (2.02 per cent), north-east of Saida.⁶⁷²¹ These cells' use was most pronounced at weekends, although activations occurred throughout the week.⁶⁷²² On the basis of these activations, Mr Donaldson concluded that the user of mobile 6091 was able to spend not only weekends in south Lebanon, but also some weekdays.⁶⁷²³

3448. The third most frequently activated cell was Haret Hreik_B (3.77 per cent), which provided predicted best server coverage to Mr Merhi's parents' home, plot 1416.⁶⁷²⁴

⁶⁷¹⁶ Exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), para. 142; Andrew Donaldson, T. 28 June 2017, p. 68.

⁶⁷¹⁷ Exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), paras 142-144; Andrew Donaldson, T. 28 June 2017, pp 67-68.

⁶⁷¹⁸ Exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), para. 142; exhibit P1122 (ArcView shape files Touch); Andrew Donaldson, T. 28 June 2017, pp 69-70; exhibit P1961 (PowerPoint presentation regarding Mr Merhi, Andrew Donaldson), slides 27-28.

⁶⁷¹⁹ Exhibit P1961, slide 52; Andrew Donaldson, T. 29 June 2017, pp 34-35; exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), para. 144.

⁶⁷²⁰ Exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), paras 142-143, p. 56; Andrew Donaldson, T. 28 June 2017, pp 67-68, 70; exhibit P1961, slides 29-30.

⁶⁷²¹ Exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), paras 142-143, p. 56. The cell tower of Anquoun_A was approximately 9.7 kilometres north-west of Ain Qana. The closest distance between Ain Qana and this cell's predicted best server coverage was approximately 600 metres, exhibit P1122. The cell tower of Katermaya_B was approximately 9.8 kilometres north-east of Saida. The closest distance between Saida and this cell's predicted best server coverage was approximately 3.8 kilometres, exhibit P1122.

⁶⁷²² Exhibit P1961, slide 53; exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), paras 142-143, 150; Andrew Donaldson, T. 29 June 2017, pp 39-41.

⁶⁷²³ Andrew Donaldson, T. 29 June 2017, pp 40-41.

⁶⁷²⁴ Exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), paras 142-143, p. 55; exhibit P1122; Andrew Donaldson, T. 28 June 2017, pp 71-72; exhibit P1961, slide 31; exhibit P651, pp 18-20, 24-28, ERNs

3449. In his report, Mr Donaldson prepared a map showing the most frequently activated Touch cells providing coverage around Mr Merhi's and his father's residences. Mr Merhi's residence is marked as plot 2501, and his father's is plot 1416:

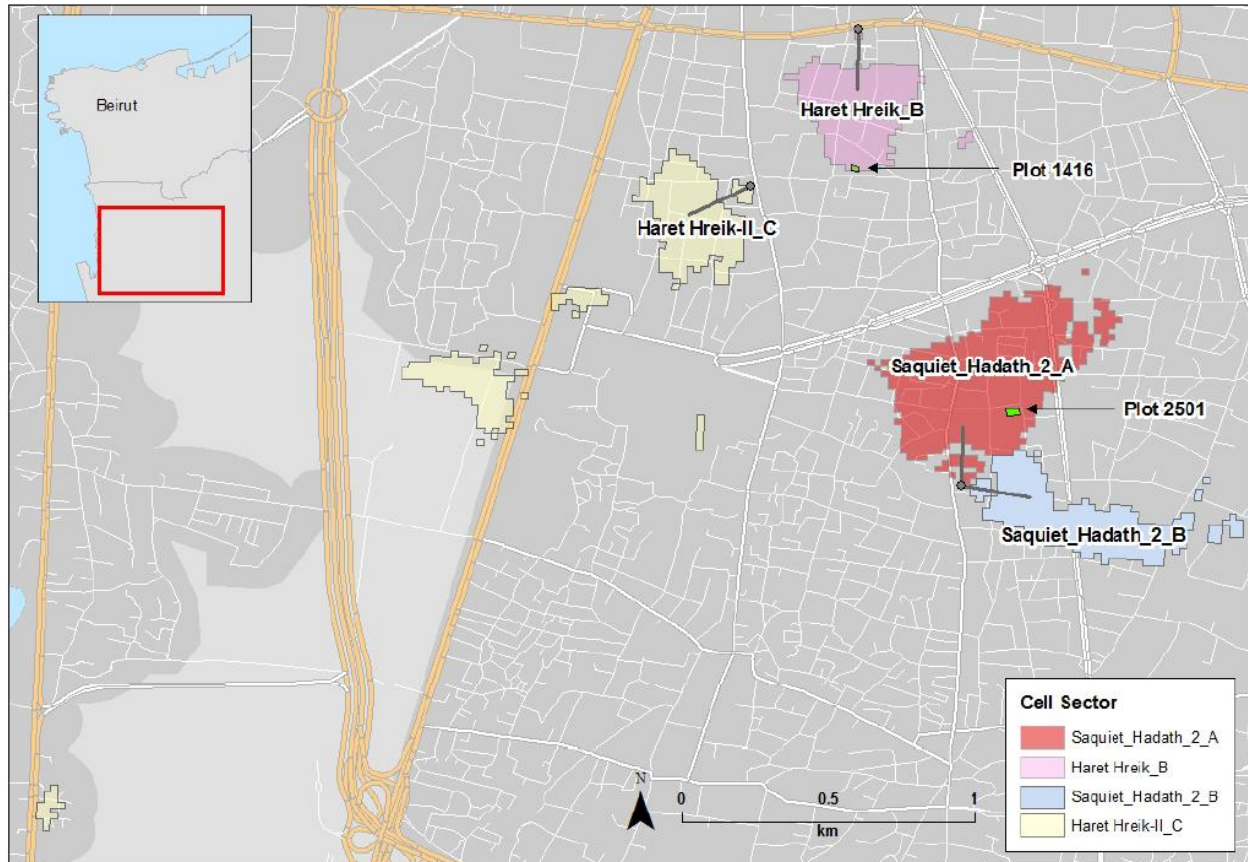

Exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), p. 55

(d) Contact profile

3450. According to Mr Donaldson, during the attribution period mobile 6091 had contact:

- 2,554 times (ranked first) with a mobile number linked to Ms Alia Khalil Toufaily, who is also known as Alya Kanso or Qanso, Mr Merhi's wife's sister.⁶⁷²⁵ The number, ending in

60230417-60230419, 60230423-60230426; exhibit P705 (Statement of Witness PRH688), paras 17-18; *see also* exhibit P652; exhibit P662 (Statement of Andrew Fahey), paras 81-99; exhibit P1753.

⁶⁷²⁵ Exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), paras 106-107; exhibit P1059 (Family personal status extract), pp 11-14, 51 (ERNs 60246880-60246881 60246903).

844, was subscribed to Hassan Kanso,⁶⁷²⁶ Ms Alia Khalil Toufaily's husband.⁶⁷²⁷ A customer database lists this number for 'Alya Kanso'.⁶⁷²⁸ The mobile ending in 844 had frequent contact with the mobile ending in 759 which was linked to Mr Hassan Kanso;⁶⁷²⁹

- 584 times (ranked second) with a mobile linked to Mr Merhi's brother-in-law, Mr Yahya Beydoun, who is married to Mr Merhi's sister.⁶⁷³⁰ Witness PRH028 stated that the mobile ending in 515 was Mr Beydoun's.⁶⁷³¹ The number was subscribed in the name of 'Yehya Baydoun',⁶⁷³² and was listed under his name in a business customer database, three bank account application forms, one of which was a joint application, and a vehicle registration record.⁶⁷³³
- 564 times (ranked third) with a mobile linked to Mr Merhi's son, Mr Mohammed Merhi.⁶⁷³⁴ The number, ending in 031, was subscribed in the name of 'Mohammad Merhi'.⁶⁷³⁵ It is handwritten on a payment slip from the University of Balamand which lists the name 'Mohamad Merhi'.⁶⁷³⁶ The number is also written on a student medical record form from the University of Balamand for 'Mohammad Hasan Merii',⁶⁷³⁷

(e) Text messages

3451. According to Mr Donaldson's analysis, mobile 6091's text messages show that the number was used by the Merhi family, specifically Mr Merhi's sons—Mohammed, Ali and Hussein—and their mother, and the various instances in which the senders introduced themselves suggest that the number was used by several people.⁶⁸²⁷

3452. Between 19 January 2005 and 29 December 2007, several text messages were sent from mobile 6091 in which the senders identified themselves as 'Mohamad', 'Mohammed', 'Ali', 'Ali Merhi' and 'Merhi'.⁶⁸²⁸ Between 28 July 2006 and 24 September 2006, mobile 6091 received several text messages addressed to 'Ali' and 'Hussein/Hassan'.⁶⁸²⁹

3453. On 28 August 2007, a text message was sent from mobile 6091 in which the sender stated that 'my phone is with my mother and I have hers'.⁶⁸³⁰ On 29 December 2007, a text message was sent from mobile 6091 in which the sender introduced himself as 'Ali Merhi' and stated that 'this is my number (mom's)'.⁶⁸³¹

3. Purple 231

3454. Purple 231 was activated as a pre-paid 'Alfa Active' subscription on 14 December 2002 and deactivated on 11 March 2005.⁶⁸³² The customer name is recorded as 'Imad Ibrahim',⁶⁸³³ which is the same name used to subscribe Purple 095, that is attributed to the Accused, Mr Oneissi.⁶⁸³⁴

3455. The attribution of Purple 231 to Mr Merhi rests on evidence from Mr Donaldson about the mobile's geographic and contact profile, and evidence from Mr Philips about its co-location with the Grey mobile. In his report, and under the heading, 'Co-location between Green 3150071 and

⁶⁸³³ Exhibit P900, p. 1.

⁶⁸³⁴ P1949 (Attribution report of Andrew Donaldson regarding Mr Oneissi), para. 10.

3575231' Mr Donaldson also positively concluded that Green 071 was co-locating with Purple 231.⁶⁸³⁵

3456. The Trial Chamber, as noted at paragraphs 2626-2628, in allowing Mr Donaldson to provide opinion evidence, held that he should not have drawn this conclusion. Rather, he could only offer an opinion as to whether co-location was possible, but to do this he had to explain why, including setting out his methodology.

3457. Mr Donaldson testified that Purple 231 and mobile 6091 activated the same cells outside of Beirut on four occasions. He also linked Purple 231's cell site activity to events concerning Mr Merhi and his family. Purple 231 activated cells at Beirut International Airport when Mr Merhi's wife and son departed on a flight to Iran and returned a week later. Purple 231 activated a cell in south Lebanon on a day in May 2003 when Mr Merhi purchased land in south Lebanon. Purple 231 also activated cells near Mr Merhi's parents' home before Mr Merhi's brother's funeral procession, and was inactive during the procession and during a condolence service four days later. Purple 231 was also in contact with a furniture retailer who, the Prosecution alleges, sold an item of furniture to Mr Merhi.

(a) Attribution period

3458. Mr Donaldson attributes Purple 231 to Mr Merhi from 19 December 2002 to 15 February 2005.⁶⁸³⁶ This start date was chosen because call data records are only available from 19 December 2002.⁶⁸³⁷ The last activity of Purple 231 was on 15 February 2005.⁶⁸³⁸

3459. Mr Donaldson considered that Purple 231's frequent contacts and frequently used cells were consistent over the attribution period.⁶⁸³⁹ Purple 231 used the same SIM card throughout the

⁶⁸³⁵ Exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), paras 14, 205-238, 247.

attribution period and the same IMEI from 1 August 2004—the date from which IMEI information is available—until 15 February 2005.⁶⁸⁴⁰

(b) Geographic profile

3460. The cells most frequently activated by Purple 231 between 19 December 2002 and 15 February 2005 were:

- SFEIR3 (29.1 per cent), which was adjacent to BRAJNE2 and covered an area north-east of Mr Merhi's home in Bourj-El-Barajneh;
- BRAJNE2 (16.13 per cent), which provided predicted best server coverage to Mr Merhi's home; ROUEIS2 (4.16 per cent), which was adjacent to BRAJNE2 (to its north) and to ROUEIS3 (to its south-east); and
- ROUEIS3 (3.21 per cent), which provided predicted best server coverage to Mr Merhi's parents' home.⁶⁸⁴¹

⁶⁸⁴⁰ Exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), paras 26-28; exhibit P900 (Subscriber note for Purple 231), p. 1; exhibit P527, pp 69-117.

⁶⁸⁴¹ Exhibit P1123 (ArcView shape files Alfa); exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), paras 67-70, 72. Cell use information is not available for SMS or inbound calls before 1 August 2004. The unavailable data accounts for 25.06 per cent of activations. Mr Donaldson stated that his analysis of the end cell information did not substantively change the geographic profile.

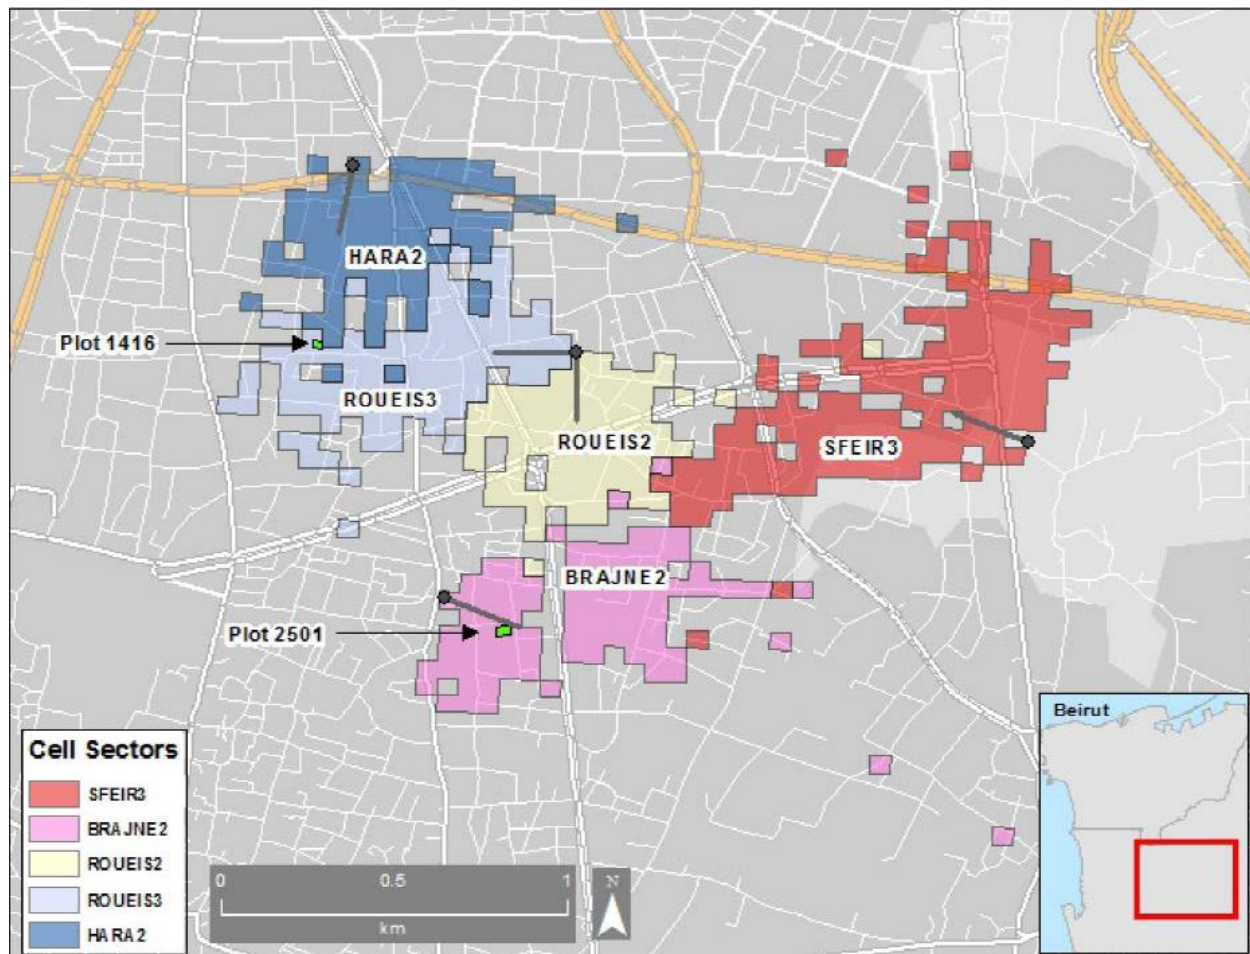

Exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), p. 30

3461. Mr Donaldson noted that SFEIR3 was Purple 231's most frequently used cell from Mondays to Saturdays between 10:00 and 20:00. Outside of this, BRAJNE2 was the most frequently activated cell.⁶⁸⁴² Mr Donaldson therefore concluded that the user of Purple 231 lived in the area of BRAJNE2 and had daytime commitments in the area of SFEIR3.⁶⁸⁴³ Furthermore, Purple 231 frequently activated ANQOUN2 (a total of 69 activations or 2.05 per cent), primarily

at weekends.⁶⁸⁴⁴ This cell provided coverage to the town of Ain Qana.⁶⁸⁴⁵ According to records from the Land Registry of Lebanon, Mr Merhi owned land in Ain Qana from 2003.⁶⁸⁴⁶

(c) Contact profile

3462. According to Mr Donaldson, during the attribution period, Purple 231 was in contact:

- 674 times (ranked first) with a mobile ending in 515, linked to Mr Merhi's brother-in-law, Mr Yahya Beydoun, who was married to Mr Merhi's sister, Wafaa Habib Merhi;⁶⁸⁴⁷
- 292 times (ranked second) with a mobile ending in 744, linked to Mr Merhi's brother, Mr Abbas Habib Merhi;⁶⁸⁴⁸
- 213 times (ranked fourth) with Purple 018, attributed by the Prosecution to Mr Assad Hassan Sabra;⁶⁸⁴⁹
- 194 times (ranked seventh) with Purple 095, attributed by the Prosecution to Mr Hussein Hassan Oneissi;⁶⁸⁵⁰
- 146 times (ranked eighth) with a mobile ending in 543, linked to Mr Samer Atwi, whose daughter married Mr Merhi's son in 2011;⁶⁸⁵¹
- 139 and 60 times respectively (ranked ninth and fifteenth respectively) with two mobiles linked to Mr Merhi's brother, Mr Mohammed Haider Habib Merhi.⁶⁸⁵² The first number, ending in 072, was subscribed in the name of 'Chiraz Ibrahim' from 11 March 2003.⁶⁸⁵³ After analysing the contact and geographic profile of this number, Mr Donaldson set the

⁶⁸⁵³ Exhibit P893 (Subscriber note for mobile ending in 072), p. 1.

attribution period as 19 March 2003 to 5 September 2004.⁶⁸⁵⁴ Mr Donaldson concluded, based on call data records, that Mr Mohammed Haider Habib Merhi began using the second number, ending in 472, from around 20 August 2004.⁶⁸⁵⁵ Mr Donaldson testified that the two mobiles had common top contacts, similar geographic profiles and for 16 days activated cells in a way that is consistent with a single user.⁶⁸⁵⁶ Mobile 472 also changed its handset at that time.⁶⁸⁵⁷ Account information from *Électricité du Liban* from September 2003 shows that Mohammed Haidar Habib Merhi lived at plot 177, El-Hadath, Sfeir, a property owned by ‘Adham Tabaja’;⁶⁸⁵⁸

The most used cell at night for mobiles 072 and 472 was SFEIR2; the predicted best server coverage of this cell covered this property.⁶⁸⁵⁹ The numbers had frequent contact with members of the immediate family of Mr Mohammed Haidar Habib Merhi, including two brothers-in-law, two brothers, a sister and his father.⁶⁸⁶⁰ A text message received by mobile 072 was addressed to ‘Haidar’;⁶⁸⁶¹

- 115 times (ranked tenth) with a mobile ending in 725, linked to Mr Ali Ammar, a Hezbollah Member of Parliament;⁶⁸⁶²
- 15 times (ranked 22nd) with mobile 165, attributed by the Prosecution to Mr Salim Jamil Ayyash;⁶⁸⁶³
- ten times (ranked joint 26th) with mobile 935, attributed by the Prosecution to Mr Salim Jamil Ayyash;⁶⁸⁶⁴

⁶⁸⁶³ Exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), para. 44; *see chapter IX* ‘Attribution of mobile telephones to the Accused and Mustafa Amine Badreddine’, (B) (1) (d) (iii) ‘Findings’.

⁶⁸⁶⁴ Exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), para. 44; *see chapter IX* ‘Attribution of mobile telephones to the Accused and Mustafa Amine Badreddine’, (B) (1) (f) (iii) ‘Findings’.

- five times with a mobile ending in 131, linked to Mr Merhi's sister, Ms Wafa Habib Merhi;⁶⁸⁶⁵
- three times each with two landlines linked to a business co-owned by Mr Yahya Beydoun.⁶⁸⁶⁶ A witness told Prosecution investigators that the number ending in 589 is a landline for the company and the number ending in 495 is a fax number.⁶⁸⁶⁷ Subscriber records, vehicle registration records and bank documents corroborate this;⁶⁸⁶⁸
- three times with a landline ending in 953, linked to Mr Merhi's father, Mr Habib Ali Merhi;⁶⁸⁶⁹
- once with mobile 6091, attributed to the Merhi family;⁶⁸⁷⁰
- once with a mobile ending in 753, linked to Mr Merhi's brother-in-law, Mr Zakaria Rammal,⁶⁸⁷¹ and
- once with a mobile ending in 479, linked to Mr Merhi's sister, Ms Nawal Habib Merhi.⁶⁸⁷²

3463. Mr Donaldson concluded from the contact profile of Purple 231 that this mobile was used for a specific purpose and was likely a work-related mobile.⁶⁸⁷³ Mr Donaldson testified that this purpose may have been shared by Mr Merhi's brothers and brothers-in-law, but not his father or sisters.⁶⁸⁷⁴ He noted that the majority of Purple 231's frequent contacts were men of a similar age

⁶⁸⁷⁴ Exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), annex A, para. 66; Andrew Donaldson, T. 29 June 2017, pp 60-61.

to Mr Merhi.⁶⁸⁷⁵ Only four members of Mr Merhi's family were among the top 30 contacts.⁶⁸⁷⁶ He contrasted this with mobile 6091's contact profile, which included more women and more members of Mr Merhi's family.⁶⁸⁷⁷

3464. Mr Donaldson highlighted that Purple 231's only contact with Mr Merhi's father, his sisters, one of his brothers-in-law and mobile 6091 occurred in a two-week period in September and October 2003.⁶⁸⁷⁸ All of these calls were outbound.⁶⁸⁷⁹ This period also coincided with an unusually high frequency of activations of ZAHARAN1 in south Lebanon.⁶⁸⁸⁰ Several members of Mr Merhi's family also activated cells in this area during the week following 21 September 2003, which led Mr Donaldson to conclude that the activity could be consistent with an exceptional family event.⁶⁸⁸¹

(d) SMS content

3465. Mr Donaldson's report referred to the text message content of Purple 231 for the period 1 February 2004 to 11 March 2005.⁶⁸⁸² A Prosecution analyst, Ms Helen Green, reviewed the thirteen SMS messages in the call sequence table for Purple 231 and found nothing revealing the identity of the user.

3466. Three texts were message delivery notices, four had no legible content and one was a cash/advertising message. The remaining five were from the same number, mobile 474. The Prosecution interviewed the sender, who stated that she was sending them to someone else.⁶⁸⁸³ Two of these messages contained obvious romantic content.

⁶⁸⁷⁵ Andrew Donaldson, T. 29 June 2017, pp 56-57, 60-61, 83, T. 3 July 2017, pp 22-23, 28; exhibit P1961, slides 56-57.

⁶⁸⁸¹ Exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), annex A, paras 50-63, 65; Andrew Donaldson, T. 29 June 2017, pp 70-75; exhibit P1961, slides 59-64.

⁶⁸⁸² Exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), para. 29.

⁶⁸⁸³ Exhibit P2019 (statement of Helen Green), paras 16-19. Mr Donaldson testified that once mobile 474 was attributed to a taxi-driver, they lost importance. Andrew Donaldson, T. 29 June 2017, p. 47.

(e) Funeral of Youssef Habib Merhi, 10 March 2004

3467. As an additional attribution point, Mr Donaldson referred to the funeral of Mr Merhi's brother, Youssef Habib Merhi, who died on Wednesday 10 March 2004.⁶⁸⁸⁴ His funeral procession was reported to have started from his parents' home in Haret Hreik with a burial ceremony that day at 15:00 in Ghobeiry. Hezbollah's official website announced that same day describing him as someone 'who was killed today during his duty of Jihad'.⁶⁸⁸⁵ Another media source, *Al-Intiqad*, described him as a martyr known as 'Jawad' and noted that Hezbollah officials and three of its MPs attended the memorial ceremony.⁶⁸⁸⁶

3468. Mr Donaldson noted that mobile 6091 activated Touch's HaretHreik_B cell, which provides predicted best server coverage to Mr Merhi's parents' address at 13:00 and 13:29. At 14:13 Purple 231 activated HARA2, the Alfa cell providing coverage. The two mobiles were then inactive until after 19:00. Similarly, during a commemoration ceremony at around 15:00 on 14 March 2004 in Bir Hassan, south Beirut, the two mobiles were inactive.⁶⁸⁸⁷

(f) Other characteristics—possible 'Hezbollah cadre' mobile

3469. Mr Donaldson in his report described Purple 231 as having the characteristics of a 'work-related mobile', used for a specific purpose.⁶⁸⁸⁸ In court he used the term 'cadre mobile' to describe Purple 231 and other mobiles with a contact profile that included Hezbollah officials and MPs. This term distinguished these mobiles from, for example, Purple 018 and Purple 095.⁶⁸⁸⁹ This is further analysed in the overview of the Purple mobiles at paragraphs 2438-2439.

3470. These mobiles had no pattern of family contacts and their identifiable contacts were primarily men between aged 20 and 50. There was little SMS content and the numbers were rarely provided as business contacts.⁶⁸⁹⁰ Hezbollah cadres, including Mr Badreddine, and others had the same contact profile.⁶⁸⁹¹ Purple 231 had some of these characteristics, suggesting it may have been

⁶⁸⁹¹ Andrew Donaldson, T. 3 July 2017, pp 23, 31-32.

a ‘non-personal’ mobile.⁶⁸⁹² Most contacts were unattributed and among them were Hezbollah officials or MPs. Family contacts were absent, and the contacts were ‘generally men of a similar generation’.⁶⁸⁹³

3471. In comparing the contact profiles of Purple 231 and mobile 6091, Mr Donaldson used the following slides in his testimony:⁶⁸⁹⁴

Example of Contacts			
Mobile 091		Purple 231	
	Sister of MERHI wife	2,254	0
	Sister of MERHI	177	5
	Husb. of wife's sister	126	0
	Father of MERHI	124*	3
	Nieces / nephews of MERHI wife	115	0
	Brother MERHI wife <small>(sub)</small>	81	0

14	 Hassan Assad SABRA 213
1	 Ali AMMAR MP 115
43	 Abbas MERHI 292
54	 Mohammed Haidar MERHI 199
3	 Salim AYYASH 25

(g) Common travel in Lebanon—Purple 231 and mobile 6091

3472. To find an association between Purple 231 and mobile 6091, Mr Donaldson analysed their movements and patterns.

3473. He found four instances of common travel in Lebanon for mobiles Purple 231 and 6091. The first two are on 20 June 2004. At 18:38 and 20:41 respectively, Purple 231 and mobile 6091 activated adjacent cells in the far south of Lebanon,⁶⁸⁹⁵ and then on 27 August 2004, at 17:46 and 18:00 respectively, Purple 231 and mobile 6091 activated cells in east Lebanon, near the Syrian border.⁶⁸⁹⁶

⁶⁸⁹⁵ Mobile 6091 activated Ain_Ebel_B at 11:43 and Ain_Ebel_A at 20:41. Purple 231 activated MAROUN1 at 18:38, which was adjacent to Ain_Ebel_B. Exhibit P527, p. 62; exhibit P1264, p. 78; exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), paras 319-321; exhibits P1122-P1123.

⁶⁸⁹⁶ Mobile 6091 activated Majdel_Anjar_A at 18:00 and Majdel_Anjar_B at 18:05. These cells are situated along the Syrian border. Purple 231 activated CHTAUR3 at 17:46. This cell is east of Majdel_Anjar_A and Majdel_Anjar_B. Exhibit P527, p. 79; exhibit P1264, p. 88; exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), paras 322-326; exhibits P1122-P1123.

3474. The third occurred on 10 October 2004, when at 15:33 and 15:39 respectively, Purple 231 and mobile 6091 activated cells in an area about six kilometres south-west of Mr Merhi's home.⁶⁸⁹⁷ The fourth was on 6 November 2004, when at 19:31 and 19:37 respectively, Purple 231 and mobile 6091 activated cells in south Lebanon, south of Saida.⁶⁸⁹⁸

(h) Beirut International Airport

3475. Another relevant instance was when Mr Merhi's wife, Rima Toufaily, and Mr Merhi's son, Hussein Merhi, travelled to Iran from Beirut International Airport on 29 September 2004.⁶⁸⁹⁹

3476. They went through passport control at 18:16.⁶⁹⁰⁰ At 17:20 and 17:26, Purple 231 activated Alfa's MEA1 and MEA2.⁶⁹⁰¹ MEA2 provided predicted best server coverage to the airport. MEA1 was adjacent to MEA2.⁶⁹⁰² At 17:34, mobile 6091 activated Touch's Borj_Brajneh_2_B, north of the airport, and at 17:55 Hai_El_kneisseh_A, north of Mr Merhi's home.⁶⁹⁰³ At 18:28, Purple 231 activated ROUEIS3 and MIKAEL3, both of which were north of Mr Merhi's home.⁶⁹⁰⁴ The Grey mobile was inactive on this day.⁶⁹⁰⁵

⁶⁸⁹⁷ Purple 231 activated JAMHOU2 at 15:33. At 15:39, mobile 6091 activated Kahhaleh_B. The shortest distance between Mr Merhi's home and the predicted best server coverage is approximately 6.1 kilometres. Exhibit P527, p. 91; exhibit P1264, p. 95; exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), paras 332-337; exhibits P1122-P1123.

⁶⁸⁹⁸ Purple 231 activated MSAILE2 between 19:29 and 19:31. This cell mast is approximately nine kilometres south of Saida. Mobile 6091 activated Addoussiyeh_A at 19:37. This cell mast is approximately 4.7 kilometres south of Saida. The cell covers the coastal road south of Saida. Exhibit P527, p. 96; exhibit P1264, p. 98; exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), paras 338-344; exhibits P1122-P1123.

⁶⁹⁰⁵ Exhibit P2144, p. 36.

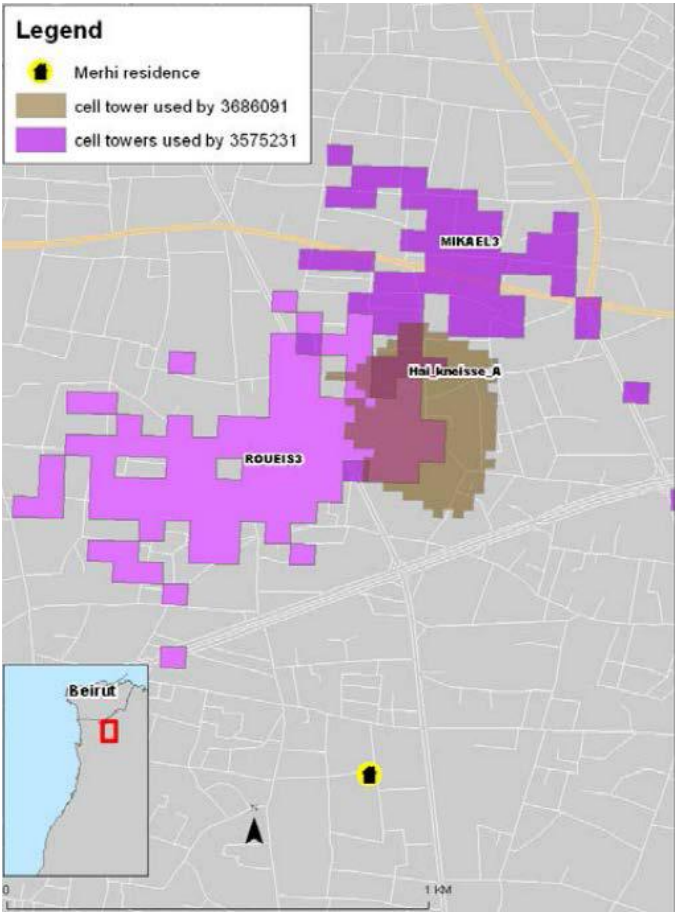

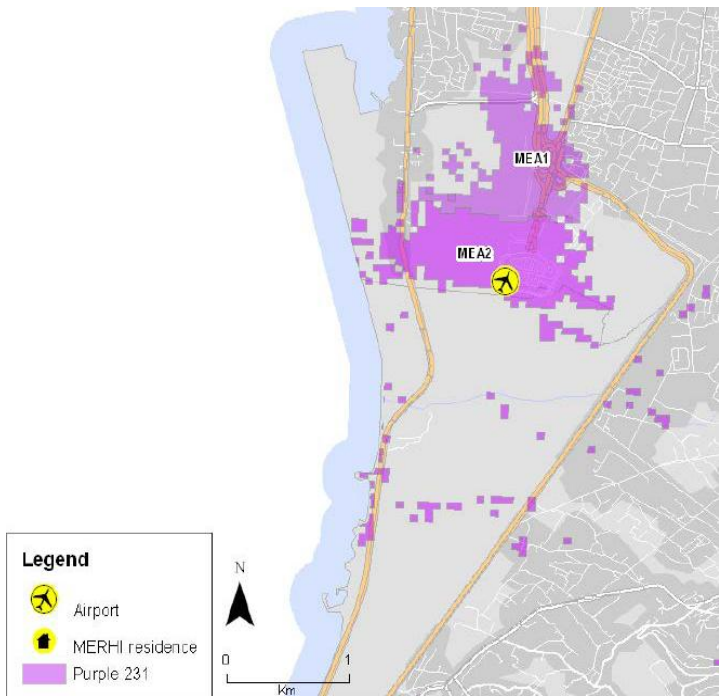

Exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), pp 105-106

3477. Mr Donaldson found that between 29 September and 6 October 2004, during Ms Toufaily's absence, Purple 231 and mobile 6091 were used every day.⁶⁹⁰⁶ Mobile 6091 received five calls for which there was no information regarding the caller. Mr Donaldson explained that this may be because the calls originated from outside Lebanon.⁶⁹⁰⁷

3478. On 6 October 2004, Ms Toufaily and Mr Hussein Merhi returned to Beirut International Airport. They passed through passport control at 18:07.⁶⁹⁰⁸ At 17:02, Purple 231 activated SFEIR3, east of Mr Merhi's home.⁶⁹⁰⁹ At 17:48, mobile 6091 activated Airport_West_A, located in the area of the airport.⁶⁹¹⁰

3479. At 17:57, mobile 6091 received a call from a number, ending in 883, which was included on an application to the Hajj of 2004 in the name of Sobhi Mohammed Saqr.⁶⁹¹¹ Sobhi Mohammed Saqr, with the same date of birth as on the Hajj application, travelled on the same flights as Rima Tofaily and Hussein Merhi, departing Beirut International Airport on 29 September 2004 and returning on 6 October 2004.⁶⁹¹² During this call, mobile 6091 activated Airport_West_C and mobile 883 activated Airport_M1, in the area of the airport.⁶⁹¹³

3480. At 17:58 and 17:59, Purple 231 activated MATAR2, which covered the airport.⁶⁹¹⁴ At 18:11, mobile 6091 activated Airport_West_C.⁶⁹¹⁵ At 18:42, mobile 6091 activated

(i) Land purchase in Ain Qana

3482. According to Lebanese Land Registry records, Mr Merhi entered into a contract to purchase land in Ain Qana on 3 May 2003.⁶⁹¹⁹ At 10:55 that day, Purple 231 activated NABATI3, which provided coverage to the town of Nabatiyeh in south Lebanon.⁶⁹²⁰ Mobile 6091 activated cells in south Lebanon throughout the day, including Sarba_B at 09:54, 10:51, 12:03, 12:50, 13:20 and 22:04; this cell provided coverage to the wider area of Ain Qana.⁶⁹²¹

⁶⁹²¹ Exhibit P1264, p. 19; exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), paras 350-351.

(j) Furniture deliveries

3483. In November 2004 a mattress was delivered to the Merhi family home. Due to an incorrect size a new one was delivered in its place two days later. Mobile 6091 was used as the contact numbers for the delivery, while Purple 231 twice called the delivery company to arrange the first delivery and the replacement delivery. The delivery was to Hassan Merhi.⁶⁹²²

3484. Mohammed Assi Trading Establishment, in Dahyieh, sold the relevant product.⁶⁹²³ The manufacturer sometimes delivered products purchased through retailers like Mohammed Assi directly to the customer's residential address.⁶⁹²⁴

3485. On 22 November 2004, at 17:15, Purple 231 called a mobile number 734 of Mohammed Assi.⁶⁹²⁵ Three and a half minutes later, this number called Purple 231.⁶⁹²⁶ The next day, at 9:38, mobile 6091 received a call from a landline ending in 167 of the company's showroom in Haret Hreik.⁶⁹²⁷

3486. The manufacturer's records show that 'Aassi Mohammad' placed an order for some items on 23 November 2004, for delivery the following day to 'El-Roueiss, Hay Al-Abiad, above Qaser-El-Riyada Gym, Gardenia building, Sixth floor, El-Hajj Hasan Merhi'. The contact number on the order was mobile 6091 with a remark to 'call before arriving'.⁶⁹²⁸

3487. On 24 November 2004, between 9:15 and 10:13, mobile 6091 activated Touch's Saquiet_Hadath_2_A, which provided predicted best server coverage to Mr Merhi's home.⁶⁹²⁹ At 10:45, mobile 6091 called a number, ending in 695, used by the manufacturing company's delivery

⁶⁹²² Exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), paras 251-286

⁶⁹²⁹ Exhibit P1264, p. 100; exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), para. 266; exhibit P1122.

drivers.⁶⁹³⁰ During this call, mobile 695 activated ALEY2, outside Beirut.⁶⁹³¹ Mobile 6091 activated Mar_Michael_B.⁶⁹³² The cell tower for Mar_Michael_B is approximately 1.3 kilometres north of the cell tower for Saquiet_Hadath_2_A.⁶⁹³³ At 11:45 and 11:51, mobile 695 activated Alfa's BRAJNE2, which provided predicted best server coverage to Mr Merhi's home.⁶⁹³⁴ Mobile 6091 did not make any calls around this time.⁶⁹³⁵

3488. A delivery note for the order dated 24 November 2004 specifies that the item was returned to the company because of its size.⁶⁹³⁶ The note bears a signature, above which the name 'Hassan Merhy' is handwritten.⁶⁹³⁷

3489. At 11:58 and 12:01 on 24 November 2004, Purple 231 called the trading company on number 734.⁶⁹³⁸ Sixteen minutes later, at 12:17, this number called Purple 231. Purple 231 activated BRAJNE2 for these three calls.⁶⁹³⁹

3490. The manufacturer's records show that Mohammed Assi placed a second order on 24 November 2004, for delivery on 26 November 2004 to the same address. A note reads: 'instead of a mattress which was returned size 180'. Another reads: 'Merhi. Call before delivering 03/686091'.⁶⁹⁴⁰ There is a corresponding invoice and entry on a list of deliveries for 26 November

⁶⁹³⁰ On this day, mobile 695 was in contact with the delivery driver's landline. The number was also in contact with three other numbers which were recorded against orders allocated to this driver. Exhibit P1264, p. 100; exhibit P1265 (Call sequence table for mobile ending in 695), p. 1; exhibit P702 (Statement of Witness PRH649), paras 18, 24 (ERN 60310659); exhibit P677 (Subscriber note for landline ending in 779), p. 1; exhibit P610, p. 1 (ERN 60240067); exhibit P628 (List of telephone numbers used by delivery drivers), p. 1; exhibit P621 (Computer printout for order dated 23 November 2004), p. 1 (ERN 60238404); exhibit P623 (Computer printout for order dated 23 November 2004), p. 1 (ERN 60238406); exhibit P627 (Computer printout for order dated 19 November 2004), p. 1 (ERN 60238410); Witness PRH651, T. 2 October 2015, pp 47, 51, 56-58.

⁶⁹³¹ Exhibit P1265, p. 1; exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), para. 268; exhibit P1123.

⁶⁹³² Mobile 6091 activated this cell two more times at 10:48 and 10:59. Exhibit P1264, pp 100-101.

2004.⁶⁹⁴¹ A delivery note for this order dated 26 November 2004 bears a signature, above which ‘Hassan Merhy’ is handwritten.⁶⁹⁴²

3491. The delivery drivers used another mobile, ending in 684.⁶⁹⁴³ On 26 November 2004, at 14:52, it called mobile 6091,⁶⁹⁴⁴ activating HARA3.⁶⁹⁴⁵ Mobile 6091 activated Touch’s Saquiet_Hadath_2_A.⁶⁹⁴⁶ At 15:22 and 15:23, number 684 activated SFEIR3, which was adjacent to BRAJNE2.⁶⁹⁴⁷ Two minutes later, at 15:25, Purple 231 activated BRAJNE2.⁶⁹⁴⁸

3492. The delivery drivers, when questioned about the two deliveries two months short of eight years later, could remember nothing about them from the delivery notes.⁶⁹⁴⁹

4. The ‘Grey mobile’

3493. The Prosecution’s pre-trial briefs outlining its case against Mr Merhi referred only to three mobiles, Purple 231, Green 071 and the personal mobile 6091.⁶⁹⁵⁰ They did not refer to the Grey mobile. This mobile came to light only towards the end of the trial when the Merhi Defence itself put the mobile and its call sequence table into evidence, as a mobile that was potentially co-locating with Green 071, and thus providing an alternative user for Green 071.

3494. Consequently, the Prosecution did a cell dump for three mobiles, namely, Purple 231, Green 071 and the Grey mobile and had its expert, Mr Philips, prepare a revised report, examining

⁶⁹⁴¹ Exhibit P613 (Invoice for order dated 26 November 2004), p. 1 (ERN 60240076); Witness PRH651, T. 2 October 2015, pp 33-35; exhibit P614 (Invoice list for deliveries on 26 November 2004), p. 1 (ERN 60240072).

⁶⁹⁴² Exhibit P615 (Delivery note dated 26 November 2004), p. 1 (ERN SI-0011324.03); Witness PRH651, T. 2 October 2015, pp 36-37.

⁶⁹⁴³ Exhibit P628, p. 1; exhibit P679 (Subscriber note for mobile ending in 684), p. 1; Witness PRH651, T. 2 October 2015, pp 57-58; exhibit P701 (Statement of Witness PRH650), para. 22 (ERN 60309885).

⁶⁹⁴⁴ On the same day, this mobile was used to call the landline of the delivery driver who had been assigned to deliver the replacement order. Exhibit P701 (Statement of Witness PRH650), para. 16 (ERN60309884); exhibit P680 (Subscriber note for landline ending in 021), p. 1; exhibit P1267 (Call sequence table of mobile ending in 684), p. 1; exhibit P1264, p. 101.

⁶⁹⁴⁵ Exhibit P1267, p. 1.

⁶⁹⁴⁶ Exhibit P1264, p. 101; exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), para. 282; exhibit P1122.

⁶⁹⁴⁷ Exhibit P1267, p. 1; exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), para. 282; exhibit P1123.

⁶⁹⁴⁸ Exhibit P527, p. 101.

⁶⁹⁴⁹ Exhibit P701 (Statement of Witness PRH650), para. 18; exhibit P702 (Statement of Witness PRH649), paras 21, 23. Witness PRH649 did not know anyone of the name, ‘Hassan Merhy’.

⁶⁹⁵⁰ Prosecution’s updated pre-trial brief (Ayyash, Badreddine, Oneissi and Sabra case), paras 56-59; Prosecution pre-trial submissions (Merhi case), annex A, paras 31-34.

the three mobiles. In his initial report, exhibit P1938, in examining just Purple 231 and Green 071, Mr Philips had analysed 940 calls, of which only 22 were relevant, in 16 ‘extracts’.

3495. However, after adding the Grey Phone to this analysis in his revised report, exhibit P2120, Mr Philips examined 1832 calls and found relevant 190 extracts, involving 266 pairs of calls. He found that 168 ‘could be co-located’, and the other 98 fell into the category, ‘would not preclude co-location’.⁶⁹⁵¹ In other words, with the addition of the Grey mobile, the number of relevant pairs of calls increased by 244, a more than tenfold rise.

3496. The Trial Chamber also received evidence from a witness who recognised a photograph of Mr Merhi as the user of the Grey mobile. Also relevant to the attribution of the Grey mobile are its contact profile and text message content.

(a) Subscriber details

3497. According to Alfa subscription documents, the Grey mobile was subscribed to ‘Labban Mostapha’ on 5 November 2003 and disconnected on 11 May 2005.⁶⁹⁵² The subscriber record notes other details:⁶⁹⁵³

Date of Birth	20-FEB-2047
Address Line 1	R ZKAK BLAT I ZEIN
Address Line 2	829401
City	ZKAK BLAT BEY

(b) Contact with the Grey mobile

3498. Someone consistently contacted the Grey mobile and recognised a photograph of Mr Merhi as the Grey mobile’s user, but not under that name. The user was using a name different to Hassan Merhi.⁶⁹⁵⁴ The photograph came from an application for an identity card in the name of ‘Hasan Habib Merhi’, date of birth 12 December 1965, place of birth Beirut, register number 1126,

⁶⁹⁵¹ Exhibit P2120, pp 3-4.

⁶⁹⁵² Exhibit P2149 (Subscriber note for the Grey mobile), p. 1.

⁶⁹⁵³ Exhibit P2149, p. 1.

⁶⁹⁵⁴ Exhibit P2138, para. 50.

mother's name 'Latifa Abbas', address 'Haret-Hreik, Daccache street, Mohammed Selman Karim Bldg, 1st floor'.⁶⁹⁵⁵ The photograph was also attached to a passport application in Hassan Habib Merhi's name with matching personal details. The photograph was endorsed by a *mukhtar* on 24 August 2007, as one of Mr Merhi.⁶⁹⁵⁶

3499. Someone knew the person in the photograph between 1996 and 2008.⁶⁹⁵⁷ His birthday, like Mr Merhi's, was on 12 December.⁶⁹⁵⁸ Someone also identified text messages sent to the Grey mobile between February 2004 and April 2005.⁶⁹⁵⁹

(c) Contact profile

3500. Call data records show that between 21 February 2004 and 15 April 2005, the Grey mobile had 2,077 calls and SMS messages.⁶⁹⁶⁰ The content of 649 text messages involving the Grey mobile between 21 February 2004 and 16 April 2005 are in evidence.⁶⁹⁶¹ The Grey mobile was almost exclusively in contact with one mobile, three Alfa service numbers (111, 1456 and 1454),⁶⁹⁶² and two landlines.⁶⁹⁶³

3501. The cells activated by the Grey mobile were overwhelmingly in south Beirut in the vicinity of Mr Merhi's residence.

5. Single user analysis—Purple 231 and the Grey mobile

3502. Mr Philips analysed the call data and cell site records of the Grey mobile and Purple 231. He found that the two were never in contact with each other, and there were no overlapping calls.⁶⁹⁶⁴

⁶⁹⁵⁵ Exhibit P683 (Identity card application form of Mr Merhi), p. 1.

⁶⁹⁵⁶ Exhibit P1568, pp 2, 5 (ERN 60236957).

⁶⁹⁵⁷ Exhibit P2138, paras 34, 36, 38-39, 41, 43.

⁶⁹⁵⁸ T418, p. 76 (closed session); exhibit P2138, para. 16.

⁶⁹⁵⁹ Exhibit P2139, paras 9, 11-12, annex C; exhibit P2148 (Client database extract), p. 1.

⁶⁹⁶⁰ Exhibit P2144 (Call sequence table for Grey mobile), pp 1-70.

⁶⁹⁶¹ Exhibit P2147 (SMS content for Grey mobile), pp 1-56.

⁶⁹⁶² Exhibit P1192 (Statement of Witness PRH707, 11 November 2015), paras 281-282.

⁶⁹⁶³ Exhibit P2144, pp 1-70; exhibit P2147, pp 1-56; exhibit P2139, para. 11; exhibit P2138, para. 10; exhibit P2142 (Subscriber note for landline in contact with Grey mobile), p. 1; exhibit P2143 (Subscriber note for a second landline in contact with Grey mobile), p. 1.

⁶⁹⁶⁴ Exhibit P2120 (Expert report of John Edward Philips – Revised single user analysis, Suspect 3, Mr Merhi), pp 4, 38, 190.

3503. He analysed 226 instances when Purple 231 and the Grey mobile activated cells within one hour of each other. He determined that on 147 occasions Purple 231 and the Grey mobile activated the same cell, that he described as ‘could be co-located’, and on 79 occasions the two mobiles activated different cells but within a distance that could have been travelled in the time between the calls, meaning that they were in the category of ‘would not preclude co-location’. There were no pairs of calls which fell into the categories ‘may preclude co-location’ or ‘would preclude co-location’.⁶⁹⁶⁵

3504. Mr Philips highlighted occasions when Purple 231 and the Grey mobile activated cells close in time away from the main area of concentration in Bourj Brajneeh and Haret Hreik. On 23 December 2004, for example, at 15:49, the Grey mobile activated PORT2 in north Beirut. Four minutes later, Purple 231 also activated PORT2. At 15:55, the Grey mobile activated ETOILE1, which was adjacent to PORT2.⁶⁹⁶⁶

3505. Two days later, on 25 December 2004, at 20:04, the Grey mobile activated SABRA2. Forty minutes later Purple 231 also activated that cell,⁶⁹⁶⁷ which was approximately three kilometres north of the airport.⁶⁹⁶⁸

3506. On 10 February 2005, at 17:48, Purple 231 activated SFEIR3. At 18:46, the Grey mobile activated RADOUF3. At 19:07, Purple 231 activated GHADIR3.⁶⁹⁶⁹ A map prepared by Mr Philips, below, shows the distances between the coverage areas of these three cells:

⁶⁹⁶⁵ On pages 3 to 4 of his report, Mr Philips states that 79 pairs of calls fall into the category “would not preclude”; on page 177 he states that 80 calls fall into this category. The Trial Chamber has reviewed the individual call pairs in the report and concludes that the table on pages 3 to 4 of Mr Philips’s report is correct. Exhibit P2120 (Expert report of John Edward Philips – Revised single user analysis, Suspect 3, Mr Merhi), pp 4-5, 177.

⁶⁹⁶⁶ Exhibit P1123; exhibit P2120 (Expert report of John Edward Philips – Revised single user analysis, Suspect 3, Mr Merhi), p. 103; John Edward Philips, T. 9 November 2017, p. 44.

⁶⁹⁶⁷ Exhibit P2120 (Expert report of John Edward Philips – Revised single user analysis, Suspect 3, Mr Merhi), p. 107; John Edward Philips, T. 9 November 2017, p. 48.

⁶⁹⁶⁸ Exhibit P1123.

⁶⁹⁶⁹ Exhibit P2120 (Expert report of John Edward Philips – Revised single user analysis, Suspect 3, Mr Merhi), p. 167; John Edward Philips, T. 9 November 2017, p. 56.

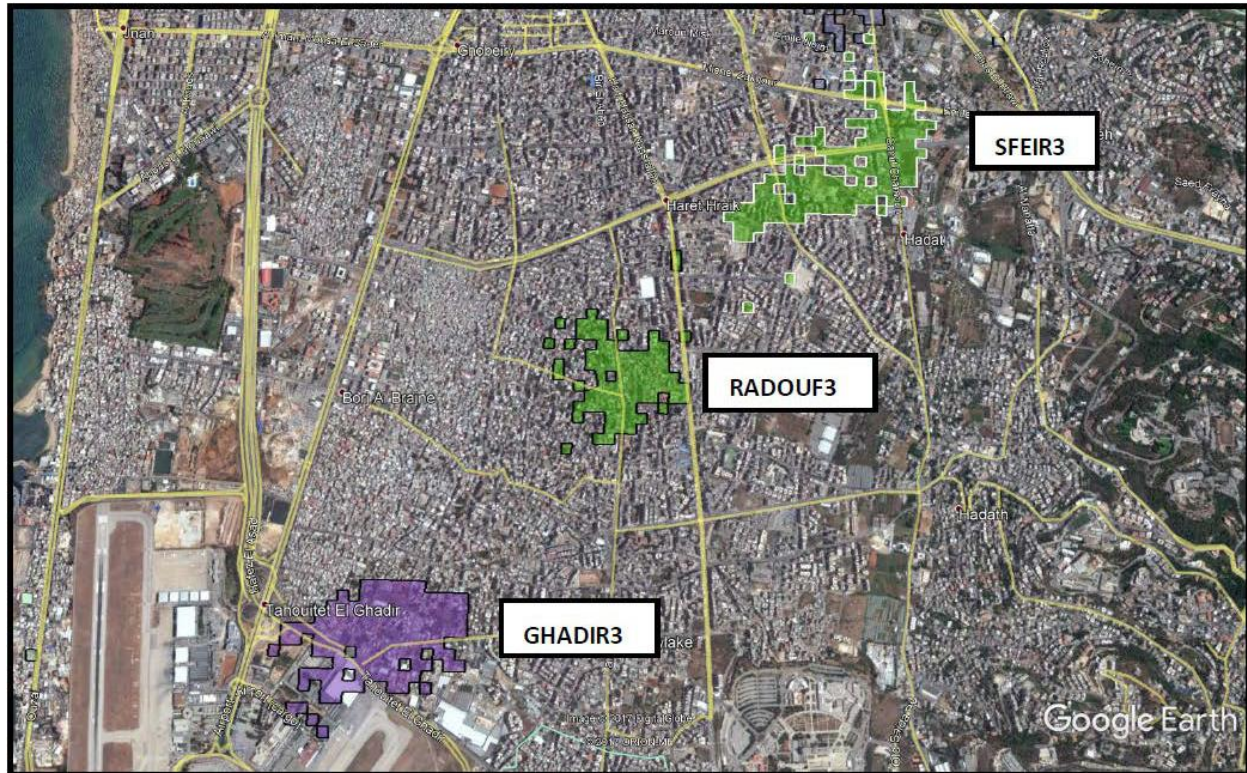

Exhibit P2120 (Expert report of John Edward Philips – Revised single user analysis, Suspect 3, Mr Merhi), p. 167

3507. Three days later, on 13 February 2005, at 13:58 and 14:55 respectively, Purple 231 and the Grey mobile both activated MAROUN3 in south Lebanon, approximately 26.5 kilometres south-east of Tyre.⁶⁹⁷⁰ A map from Mr Philips's report shows the cell and its proximity to Tyre:

⁶⁹⁷⁰ Exhibit P2120 (Expert report of John Edward Philips – Revised single user analysis, Suspect 3, Mr Merhi), p. 170; John Edward Philips, T. 9 November 2017, pp 57-58.

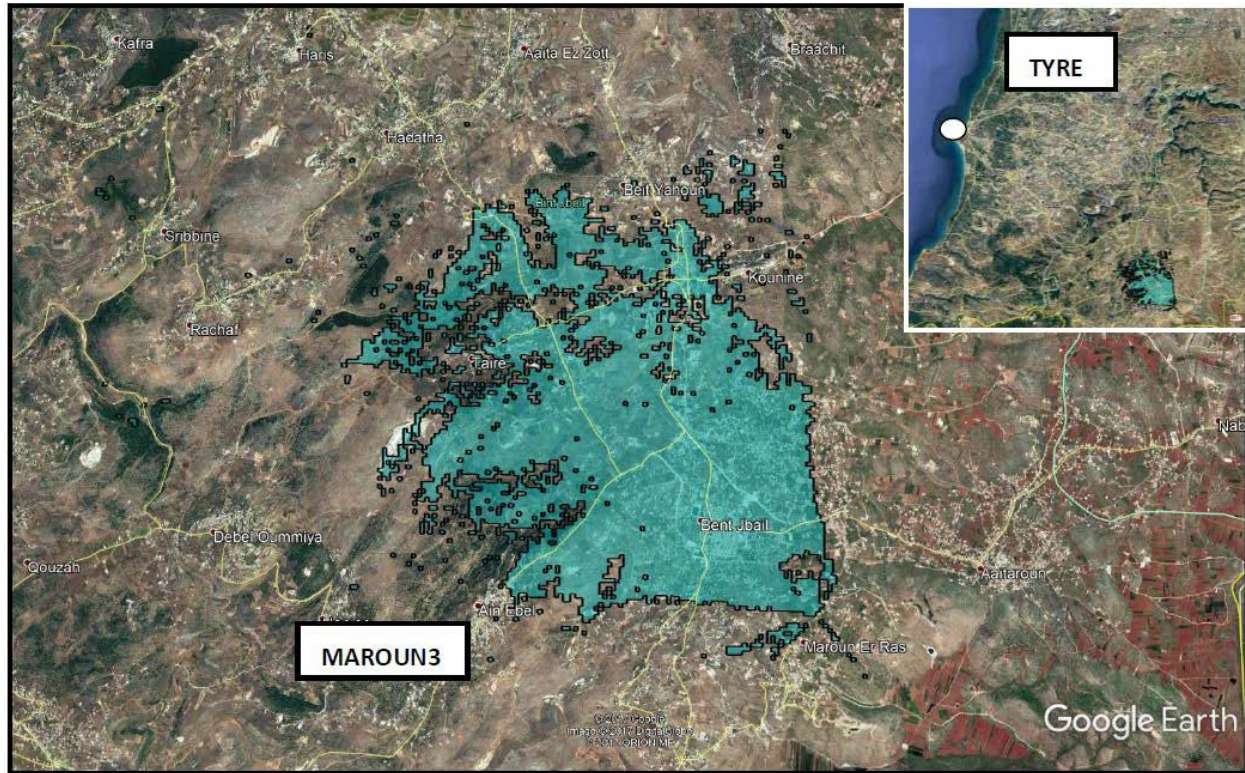

Exhibit P2120 (Expert report of John Edward Philips – Revised single user analysis, Suspect 3, Mr Merhi), p. 170

3508. Mr Philips identified one possible dislocation between Purple 231 and the Grey mobile, on 28 December 2004.

3509. On that day, Purple 231 activated SFEIR3 in south Beirut at 15:00. Two minutes later, the Grey mobile activated BOSTAN2, which was 7.25 kilometres east of SFEIR3. However, less than one minute later the Grey mobile also activated SFEIR3.⁶⁹⁷¹

3510. Mr Philips testified that the Grey mobile likely picked up the signal from BOSTAN2 within the area of SFEIR3, which is an example of ‘anomalous propagation’ that can occur when a signal projects across water or hilly terrain.⁶⁹⁷² He therefore concluded that there was no dislocation

⁶⁹⁷¹ Exhibit P2120 (Expert report of John Edward Philips – Revised single user analysis, Suspect 3, Mr Merhi), p. 114.

⁶⁹⁷² John Edward Philips, T. 9 November 2017, pp 49-51.

between the two mobiles.⁶⁹⁷³ The map below from his report demonstrates the distance between their coverage areas:

Exhibit P2120 (Expert report of John Edward Philips – Revised single user analysis, Suspect 3, Mr Merhi), p. 114

3511. Mr Donaldson did not analyse the Grey mobile as its existence was unknown to him and the Prosecution when he prepared his report and testified in court.

6. Green 071

3512. The attribution of Green 071 to Mr Merhi rests primarily on Mr Philips's analysis of Green 071's co-location with Purple 231 and its co-location with the Grey mobile. The Trial Chamber has also received evidence from Mr Donaldson about Green 071's geographic profile. As noted above, at paragraphs 3419-3420, Mr Donaldson concluded in his attribution report that Mr Merhi was its single user and that it was co-locating with Purple 231. There was no evidence directly connecting this mobile with Mr Merhi.

(a) Subscriber details

3513. The SIM Green 071 was activated as an Alfa post-paid subscription on 15 July 2004 and was deactivated on 23 August 2005.⁶⁹⁷⁴ The subscriber's name was 'Assaf Jamal Mohammad' with the address of 'Al Abyad Street, Fwaz Building, Haret Huriek, Beirut'. The contract for Green

⁶⁹⁷³ Exhibit P2120 (Expert report of John Edward Philips – Revised single user analysis, Suspect 3, Mr Merhi), pp 4, 115, 118, 177; John Edward Philips, T. 9 November 2017, pp 49-51.

⁶⁹⁷⁴ Exhibit P797 (Extract from Alfa subscriber database), p. 2 (ERN D0472165); Witness PRH707, T. 17 February 2016, p. 27.

071's subscription is dated 9 July 2004.⁶⁹⁷⁵ An 'Individual Civil Status Extract' was submitted as proof of identity.⁶⁹⁷⁶ The Lebanese Directorate General of Civil Status had no records for the name listed on the identity document.⁶⁹⁷⁷

(b) Attribution period

3514. Mr Donaldson fixed the attribution period for Green 071 from 24 September 2004 until 7 February 2005.⁶⁹⁷⁸ Call data records are available from 26 July 2004.⁶⁹⁷⁹ From that date until 4 August 2004, Green 071's only contact was with an Alfa service number.⁶⁹⁸⁰ Between 5 and 23 August 2004, Green 071 was inactive.⁶⁹⁸¹ The first call not involving a service number occurred on 24 August 2004.⁶⁹⁸² Green 071's last activity was on 7 February 2005.⁶⁹⁸³

3515. Mr Donaldson thus identified 'a window of potential attribution' from 24 August 2004 until 7 February 2005.⁶⁹⁸⁴ Over this period, Green 071 used the same SIM card and handset.⁶⁹⁸⁵

3516. However, Mr Donaldson concluded that Green 071's contact and geographic profile changed from 24 September 2004, and he adjusted the attribution period accordingly.⁶⁹⁸⁶ Mr Donaldson acknowledged that before 24 September 2004, Green 071's movement was inconsistent with Purple 231.⁶⁹⁸⁷

⁶⁹⁷⁵ Exhibit P405 (Alfa subscription of 18 Green mobiles), p. 1 (ERN 60105004).

(c) Contact profile

3517. From 24 August 2004 to 20 September 2004, Green 071 was involved in 190 calls with four mobiles, including five calls with Green 023.⁶⁹⁸⁸ All four mobiles were subscribed using false identity documents.⁶⁹⁸⁹ On 21, 22 and 23 September 2004, Green 071 was inactive.⁶⁹⁹⁰

3518. During the attribution period from 24 September 2004 to 7 February 2005, Green 071 was involved in 43 calls and received three service SMS messages.⁶⁹⁹¹ Green 071's only contact during this period was with Green 023, except for two inbound calls on 24 September 2004 and 1 October 2004. Both calls were from numbers which were among Green 071's previous contacts. The first call, from Green 026, lasted 12 seconds. The second, from Green 290, lasted ten seconds.⁶⁹⁹²

(d) Geographic profile

3519. Between 24 August and 20 September 2004, Green 071 never activated SFEIR3 or BRAJNE2; conversely, these were the top two cells during the attribution period.⁶⁹⁹³

3520. ROUEIS3, HARA2 and MIKAEL2 were in the top five most frequent cells both before and after 24 September 2004, but Green 071 only activated these three cells seven times during the attribution period, compared to activating SFEIR3 and BRAJNE2 30 times during the same period.⁶⁹⁹⁴

3521. Green 071's most frequently activated cells during the attribution period were SFEIR3 (20 activations, 43.48 per cent), BRAJNE2 (ten activations, 21.74 per cent), HARA2 (three activations, 6.52 per cent), MIKAEL2 (two activations, 4.35 per cent) and ROUEIS3 (two activations, 4.35 per cent).⁶⁹⁹⁵ Fourteen out of 20 activations of SFEIR3 occurred between 10:00

⁶⁹⁸⁸ Exhibit P1205, pp 1-7; exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), para. 182.

⁶⁹⁸⁹ Exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), para. 184; exhibit P797, pp 1-2 (ERNs D0472164-D0472165); exhibit P397, pp 3, 5 (ERNs 60144933-60144934).

⁶⁹⁹³ Andrew Donaldson, T. 3 July 2017, pp 47-48; exhibit P1961, slides 105-106; exhibit P1945 (Additional slides on attribution of Green 071), slide 2.

⁶⁹⁹⁴ Exhibit P1961, slide 105; exhibit P1945, slide 2.

⁶⁹⁹⁵ Exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), para. 198; exhibit P1961, slides 109-114; Andrew Donaldson, T. 3 July 2017, pp 61-65.

and 20:00. By contrast, eight out of ten activations of BRAJNE2 occurred between 20:00 and 10:00.⁶⁹⁹⁶ Mr Donaldson noted that Purple 231 also activated SFEIR3 more frequently during the day, and BRAJNE2 more frequently at night.⁶⁹⁹⁷

3522. During the attribution period, Green 071 activated cells outside of its main area of concentration in Bourj Brajneeh and Haret Hreik five times.⁶⁹⁹⁸

7. Single user analysis—whether Green 071, Purple 231 and the Grey mobile had a single user

3523. Mr Philips analysed all calls and cell activations by Green 071, Purple 231 and the Grey mobile between 29 September 2004 and 15 February 2005. There were 1832 calls that were put onto a combined call sequence table of the three mobiles. Purple 231 and the Grey mobile each had over 48 per cent of the calls, while Green 071 had around 2.5 per cent of them.⁶⁹⁹⁹

3524. Mr Philips's overall conclusion was that the 'calling characteristics of the three mobiles 'are such that they very strongly support the proposition that they could be used by a single person'.⁷⁰⁰⁰ And:

The analysis undertaken, contains a total of 266 pairs of calls of which ~63% use the same cell for adjacent-within-one hour time calls, whilst the balance of ~37% cells were within distances which could be travelled within the time separation of the 2 calls.

These are 2 very positive factors that would point towards the potential use of the 3 mobile phones by a single person.

Since these 2 'components' collectively account for 100% of the calls, there are patently no exceptions to this where the 3 mobile phones could not be used by a single person.⁷⁰⁰¹

⁶⁹⁹⁶ Exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), para. 201; Andrew Donaldson, T. 3 July 2017, p. 64.

⁶⁹⁹⁷ Andrew Donaldson, T. 3 July 2017, p. 64.

⁶⁹⁹⁸ On 25 September 2004, Green 071 activated ANQOUN2 in south Lebanon. On 27 September 2004, Green 071 activated MEA2, which covered the airport. On 23 December 2004, Green 071 activated WARDIE3 (end cell WARDIE2), between Quraitem Palace and Parliament in Beirut. On 15 January 2005, Green 071 activated SALOUM2 (end cell SINFIL3) in east Beirut. On 16 January 2005, Green 071 activated SABRA3 north of the airport. Exhibit P1205, pp 7-9; exhibit P1961, slide 109; Andrew Donaldson, T. 3 July 2017, pp 60-61; exhibit P1123.

⁶⁹⁹⁹ Exhibit P2120 (Expert report of John Edward Philips – Revised single user analysis, Suspect 3, Mr Merhi), p. 175.

⁷⁰⁰⁰ Exhibit P2120, p. 4.

⁷⁰⁰¹ Exhibit P2120, p. 190.

3525. The top ten cells activated by Green 071, Purple 231 and the Grey mobile combined, between 24 September 2004 and 15 February 2005, were all in the southern suburbs of Beirut.⁷⁰⁰²

Cell	Times used	% util
SFEIR3	829	45.25%
BRAJNE2	541	29.53%
ROUEIS3	45	2.46%
MIKAEL2	32	1.75%
ROUEIS2	30	1.64%
SFEIR2	30	1.64%
BRAJNE1	22	1.20%
HADATH3	18	0.98%
HARA2	18	0.98%
BIRABD3	13	0.71%

Exhibit P2120 (Expert report of John Edward Philips – Revised single user analysis, Suspect 3, Mr Merhi), p. 19, table 05/03

3526. Mr Philips produced a map in Google Earth which illustrates the concentration of six of the top ten most frequently used cells in Bourj Brajneeh and Haret Hreik. They are all contiguous, and some have pockets of coverage in other cell areas:

⁷⁰⁰² Exhibit P2120 (Expert report of John Edward Philips – Revised single user analysis, Suspect 3, Mr Merhi), pp 18-19, table 05/03; John Edward Philips, T. 9 November 2017, pp 33-34.

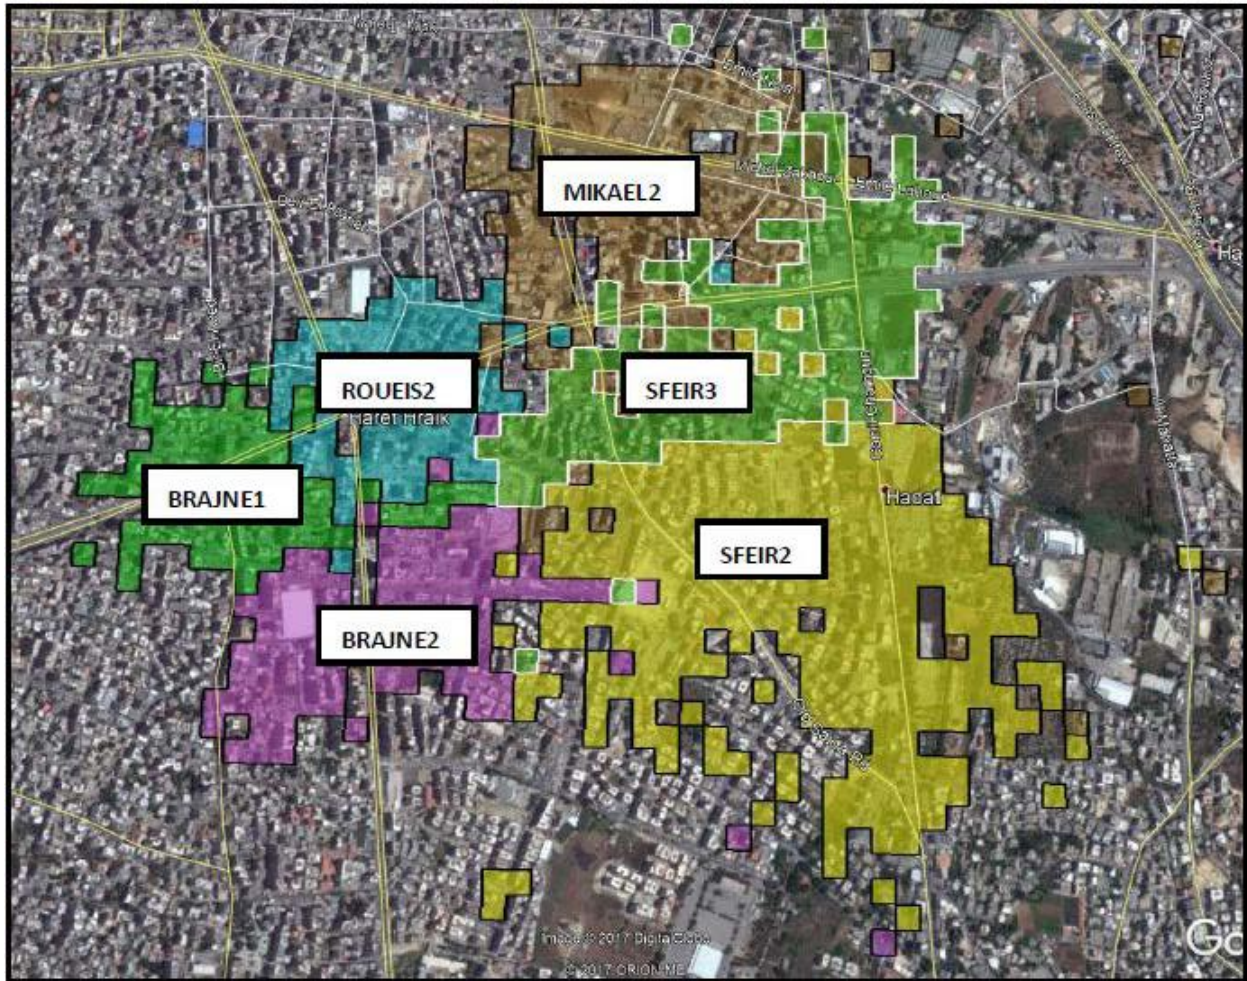

Exhibit P2120 (Expert report of John Edward Philips – Revised single user analysis, Suspect 3, Mr Merhi), p. 21, map 05/02

3527. Another map shows the same six cells but with the addition of HARA2, ROUEIS3, BIRABD3 and HADATH3 in south Beirut:

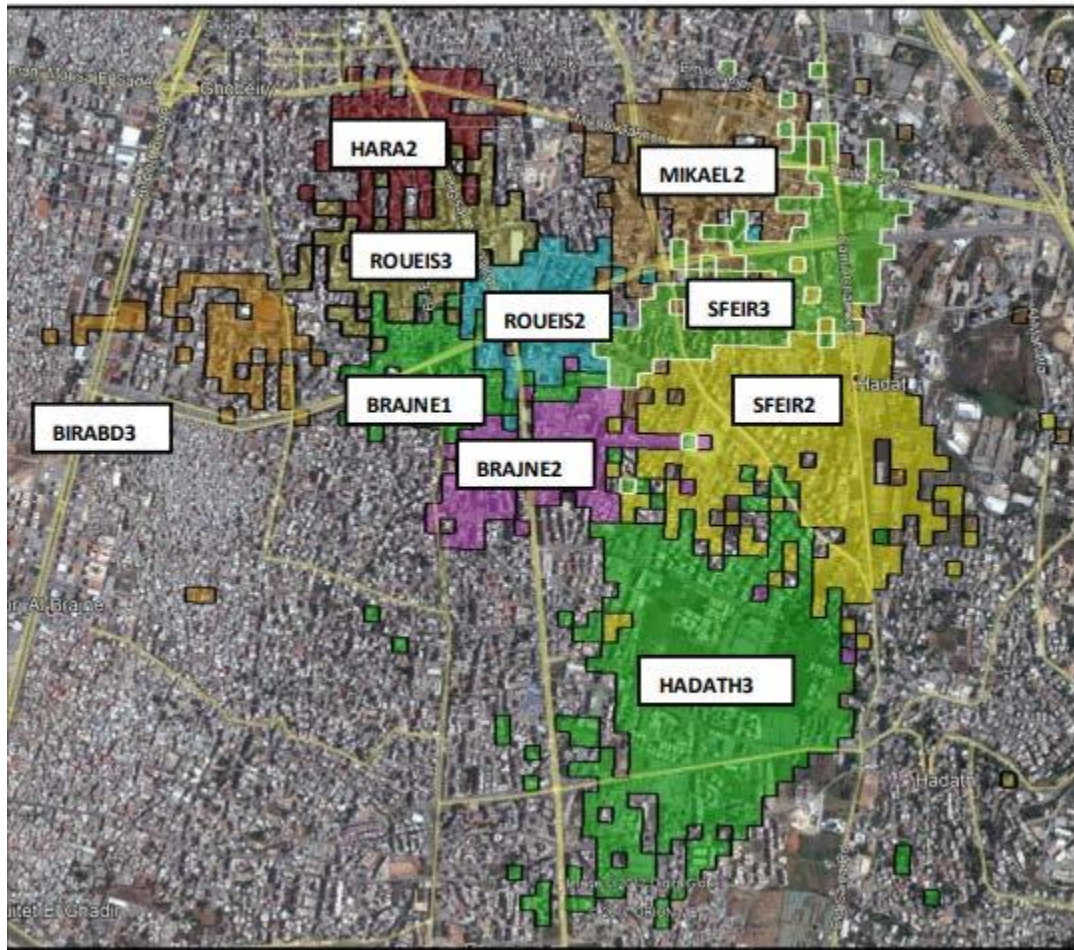

Exhibit P2120 (Expert report of John Edward Philips – Revised single user analysis, Suspect 3, Mr Merhi), p. 22, map 05/03

(a) Green 071 and Purple 231

3528. Both Mr Donaldson and Mr Philips provided evidence on the possible co-location of Green 071 and Purple 231.

3529. Mr Donaldson positively concluded that the two mobiles were co-locating. The Trial Chamber, here, reiterates that Mr Donaldson is not an expert on co-location or cell site analysis, which limits the probative value of his opinion on co-location and hence a single user.⁷⁰⁰³ In ruling

⁷⁰⁰³ Decision on opinion evidence (Mr Donaldson), para. 70; *see* sub-section (A) ‘Single user analysis’, (5) ‘The Trial Chamber’s approach to single user analysis’, above.

on a Defence objection to receiving Mr Donaldson's opinion evidence, the Trial Chamber held that it would not accept Mr Donaldson's unqualified opinion that two mobiles had a single user.⁷⁰⁰⁴

3530. Mr Donaldson, in his attribution report, noted that Green 071 was never in contact with Purple 231.⁷⁰⁰⁵ Green 071 and Purple 231 had one overlapping call on 30 September 2004. The overlapping time was one second.⁷⁰⁰⁶

3531. According to Mr Donaldson, Green 071 and Purple 231 had 22 days of common activity.⁷⁰⁰⁷ He analysed the activity of Green 071 and Purple 231 on 24 September, 25 September, 28 September, 29 September, 30 September, 7 October 2004, 2 January, 12 to 15 January (inclusive) and 7 February 2005 and found no inconsistencies as to their potential co-location.⁷⁰⁰⁸

3532. Mr Donaldson testified that on ten occasions Green 071 and Purple 231 activated cells within ten minutes of each other. Of those, the two mobiles activated the same cell seven times; the remaining three activations involved cell towers less than one kilometre apart.⁷⁰⁰⁹

3533. When extending the time between calls to 20 minutes, Mr Donaldson identified 16 pairs of calls between Green 071 and Purple 231. For 56 per cent of these pairs of calls, the two mobiles activated the same cell. For the remaining pairs of calls, the distance between the cell towers activated by two mobiles was less than one kilometre for 25 per cent, between one and two kilometres for seven per cent, between two and five kilometres for six per cent, and between ten and 20 kilometres for six per cent.⁷⁰¹⁰ Mr Donaldson concluded that Green 071 and Purple 231 had a single user.⁷⁰¹¹

⁷⁰⁰⁴ Decision on opinion evidence (Mr Donaldson), paras 90-97; *see* sub-section (A) 'Single user analysis', (5) 'The Trial Chamber's approach to single user analysis', above.

⁷⁰⁰⁵ Exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), para. 208; exhibit P1205, pp 1-9.

⁷⁰⁰⁶ Exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), paras 209, 222; exhibit P2120 (Expert report of John Edward Philips – Revised single user analysis, Suspect 3, Mr Merhi), p. 38; John Edward Philips, T. 9 November 2017, pp 39-40.

⁷⁰⁰⁷ Exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), paras 205-206.

⁷⁰⁰⁸ Mr Donaldson found no relevant pairs of calls on 26 September, 27 September, 1 October, 2 October, 4 October 2004 and 20 January 2005. Mr Donaldson found 'little additional information' on 6 November, 9 November, 23 December and 27 December 2004. Exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), paras 213-238, 247.

⁷⁰⁰⁹ Andrew Donaldson, T. 3 July 2017, pp 96-97; exhibit P1961, slide 119.

⁷⁰¹⁰ Andrew Donaldson, T. 3 July 2017, p. 97; exhibit P1961, slide 120.

⁷⁰¹¹ Andrew Donaldson, T. 28 June 2017, p. 40; *see also* exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), para. 247.

3534. Mr Philips, as the cell site expert, analysed 26 instances in which Green 071 and Purple 231 activated cells within one hour of each other.⁷⁰¹²

3535. Out of these 26 pairs of calls, Mr Philips determined based on the start cell information that on 13 occasions the two mobiles activated the same cell and thus ‘could be co-located’. On 13 occasions the two mobiles activated different cells but within a distance that could have been travelled in the time between the calls, thus falling into the category of ‘would not preclude co-location’. There were no pairs of calls which fell into the categories ‘may preclude co-location’ or ‘would preclude co-location’.⁷⁰¹³ After including end cell information in his analysis, he determined that there were 14 instances in the first category and 12 instances in the second.⁷⁰¹⁴

3536. On Saturday 25 September 2004, Purple 231 and Green 071 activated the same cell in the south of Lebanon.

3537. At 14:21, 15:53 and 17:02 Purple 231 activated ANQOUN2.⁷⁰¹⁵ Anqoun is about 50 kilometres south of Beirut, depending upon how the distance is measured. Two hours later, at 19:18, Green 071 activated the same cell.⁷⁰¹⁶ At 20:12, Purple 231 activated NAAMEH1 to the north of ANQOUN2.⁷⁰¹⁷ The centres of the predicted best server coverage of the two cells, according to Mr Philips, are approximately 29 kilometres apart.⁷⁰¹⁸ At 20:28, Green 071 activated ROUEIS3 in south Beirut.⁷⁰¹⁹ At 20:45, Purple 231 activated BRAJNE2 in south Beirut.⁷⁰²⁰ ANQOUN2 and NAAMEH1 are shown in the map Mr Philips prepared for his court testimony:

⁷⁰¹² Exhibit P2120 (Expert report of John Edward Philips – Revised single user analysis, Suspect 3, Mr Merhi), pp 25-27, 30, 32-36, 46, 110, 120, 131-132, 135, 137, 140, 177.

⁷⁰¹³ On pages 3 to 4 of his report, Mr Philips states that the ratio between these four categories is 13:13:0:0; on page 177 he states that it is 13:12:0:0. Exhibit P2120 (Expert report of John Edward Philips – Revised single user analysis, Suspect 3, Mr Merhi), pp 3-4, 177. The Trial Chamber has reviewed the individual call pairs in the report and concludes that the table on pages 3 to 4 of Mr Philips’s report is correct.

⁷⁰¹⁴ John Edward Philips, T. 20 April 2017, pp 66-67, T. 24 April 2017, p. 71; exhibit P1935 (PowerPoint presentation on single user analysis, John Edward Philips), slides 77, 502-503.

⁷⁰¹⁵ Exhibit P527, p. 86.

⁷⁰¹⁶ Exhibit P1205, p. 7.

⁷⁰¹⁷ Exhibit P527, p. 86.

⁷⁰¹⁸ Exhibit P2120, p. 27.

⁷⁰¹⁹ Exhibit P1205, p. 7.

⁷⁰²⁰ Exhibit P527, p. 86.

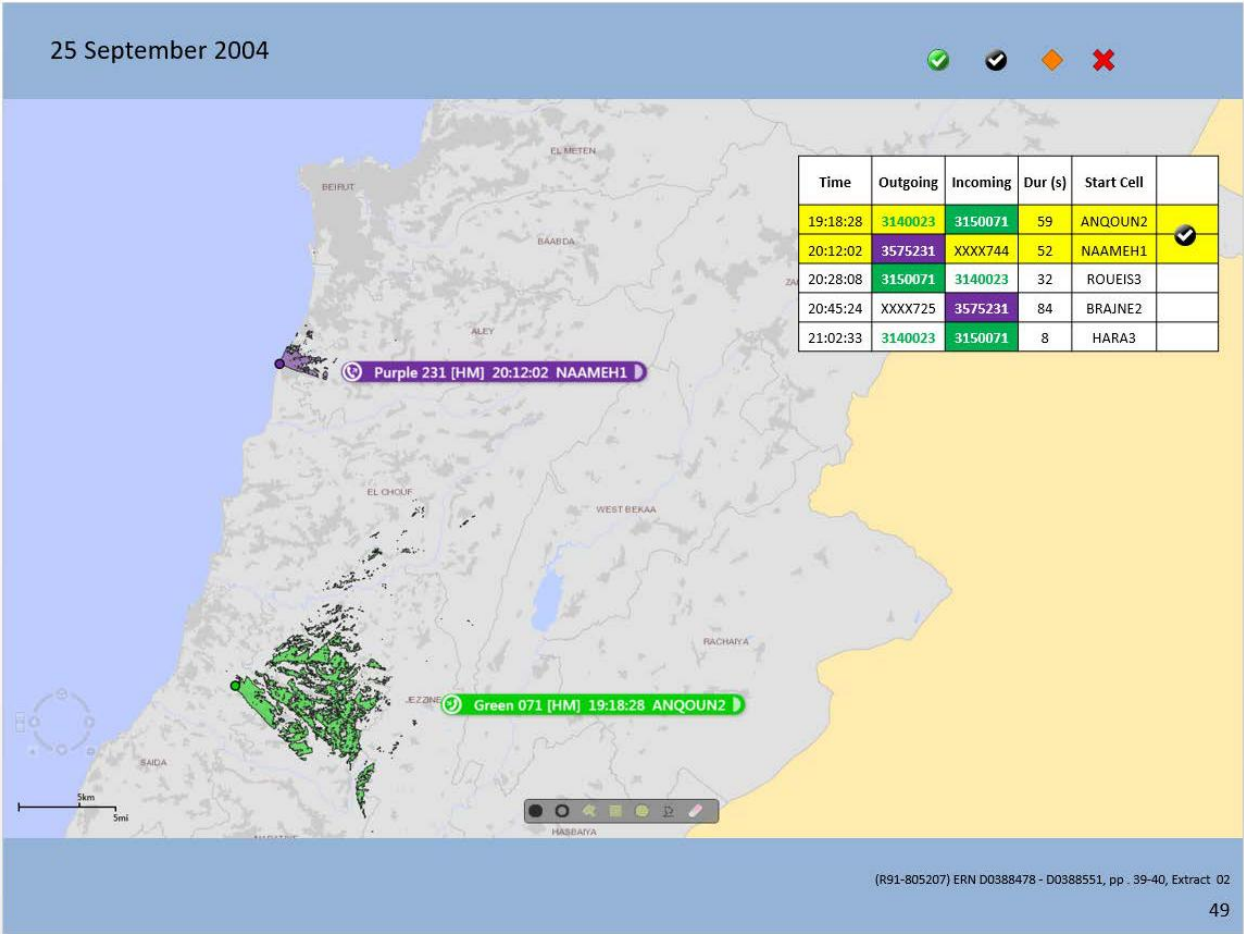

Exhibit P1935 (PowerPoint presentation on single user analysis, John Edward Philips), slide 49

3538. In his statistical analysis, Mr Philips did not note the common activation by Purple 231 and Green 071 of ANQOUN2 on 25 September 2004 because Green 071 activated the cell more than one hour after Purple 231.

3539. Mr Philips and Mr Donaldson nevertheless testified that the common activation of a cell which was far away from south Beirut and cell use that shows aligned movement of mobiles over time is a ‘positive indicator’ for single user analysis, or does not preclude co-location.⁷⁰²¹

⁷⁰²¹ John Edward Philips, T. 20 April 2017, pp 53-55, T. 9 November 2017, pp 35-37; exhibit P1935, slides 48-52; Andrew Donaldson, T. 3 July 2017, pp 71-73, T. 4 July 2017, pp 3-6; exhibit P1961.1 (Additional PowerPoint presentation regarding Mr Merhi, Andrew Donaldson), slides 2-11; exhibit P2021 (Result of a cell dump analysis for travel between NAAMEH1 and ANQOUN2).

3540. On 12 January 2005, Purple 231 and Green 071 both activated SFEIR3 at 12:54 and 13:27 respectively. Later that day, Green 071 and Purple 231 both activated BRAJNE2 at 20:20 and 20:22 respectively.⁷⁰²²

3541. Three days later, on 15 January 2005 at 18:41, Purple 231 activated ZALKA1 in north-east Beirut. At 18:51:07, Green 071 activated SALOUM2, approximately 4.42 kilometres south-east of ZALKA1. At the end of this call, which lasted 31 seconds, Green 071 activated SINFIL3, 440 metres south of SALOUM2.⁷⁰²³ At 18:52:38, Purple 231 also activated SINFIL3.⁷⁰²⁴ These three cells are shown on the map below from Mr Philips's report:

Exhibit P2120 (Expert report of John Edward Philips – Revised single user analysis, Suspect 3, Mr Merhi), p. 140

⁷⁰²² John Edward Philips, T. 20 April 2017, pp 64-65; exhibit P1935, slides 70-73; Andrew Donaldson, T. 3 July 2017, pp 82-84; exhibit P1961.1, slides 13-17; exhibit P1264, p. 8; exhibit P527, p. 110.

⁷⁰²³ These were the distances between the cell towers, *see* above, at para. 2641.

⁷⁰²⁴ Exhibit P2120 (Expert report of John Edward Philips – Revised single user analysis, Suspect 3, Mr Merhi), p. 140; John Edward Philips, T. 20 April 2017, pp 65-68, T. 9 November 2017, pp 53-54; exhibit P1935, slides 75-77; Andrew Donaldson, T. 3 July 2017, pp 84-86; exhibit P1961.1, slides 18-21; exhibit P1264, p. 9; exhibit P527, p. 110.

(b) Green 071 and the Grey mobile

3542. Mr Philips analysed 14 instances of Green 071 and the Grey mobile activating cells within one hour of each other.⁷⁰²⁵

3543. Out of these 14 pairs of calls, Mr Philips determined that Green 071 and the Grey mobile activated the same cell eight times, meaning that they could be co-located. On six occasions they activated cells at a distance which, in Mr Philips's assessment, could be travelled in the time between the calls, under the category, 'would not preclude co-location'. There were no instances where co-location may have been precluded or would have been precluded.⁷⁰²⁶

8. Submissions

(a) Prosecution

3544. The Prosecution submits that Mr Merhi was the user of the Grey mobile at least from 21 February 2004 until 16 April 2005. This is based on the evidence of the witness who was the Grey mobile's primary contact, as well as corroborating evidence in the form of the contact profile and the Grey mobile's text message content.⁷⁰²⁷

3545. Purple 231 is attributable to Mr Merhi at least from 19 December 2002 to 15 February 2005.⁷⁰²⁸ Its contact profile comprised men of a similar age to Mr Merhi, including Mr Ayyash, Mr Oneissi, Mr Sabra, Mr Ali Ammar and Mr Merhi's brothers, with calls to other family members being limited to a two week period.⁷⁰²⁹

3546. The Prosecution also referred to the call records and documents relating to the furniture delivery in November 2004,⁷⁰³⁰ Mr Merhi's brother's funeral and Mr Merhi's wife's trip to Iran

⁷⁰²⁵ Exhibit P2120 (Expert report of John Edward Philips – Revised single user analysis, Suspect 3, Mr Merhi), pp 25-27, 29-30, 42, 66, 110, 120, 142, 144, 165.

⁷⁰²⁶ Exhibit P2120 (Expert report of John Edward Philips – Revised single user analysis, Suspect 3, Mr Merhi), pp 3-4, 177.

⁷⁰²⁷ Prosecution final trial brief, paras 134-139; Prosecution closing submissions, T. 12 September 2018, pp 47, 71-76 (closed session).

⁷⁰²⁸ Prosecution final trial brief, paras 120-123; Prosecution closing submissions, T. 12 September 2018, p. 42.

⁷⁰²⁹ Prosecution final trial brief, paras 120-123; Prosecution closing submissions, T. 12 September 2018, pp 48-49.

⁷⁰³⁰ Prosecution final trial brief, paras 124-133; Prosecution closing submissions, T. 12 September 2018, p. 50.

with their son.⁷⁰³¹ Co-location with the Grey mobile further strengthens the attribution of Purple 231 to Mr Merhi.⁷⁰³²

3547. Mr Merhi, according to the Prosecution, was the user of Green 071 between 24 September 2004 and 7 February 2005.⁷⁰³³ A change in user of Green 071 occurred around 21 to 23 September 2004, which is reflected in changes to its contact and geographic profiles, and in Green 071 starting to co-locate with Purple 231 after this date.⁷⁰³⁴

3548. Green 071, Purple 231 and the Grey mobile had a similar geographic profile, including commonly used cells, in particular BRAJNE2, which provided coverage to Mr Merhi's home.⁷⁰³⁵

3549. From 24 September 2004 to 15 February 2005, Green 071, Purple 231 and the Grey mobile had a single user.⁷⁰³⁶ When used close in time, the mobiles either activated the same or overlapping cell sectors, or cell sectors at distances which could be travelled in the intervening time, such that it would not preclude them being used by a single person.⁷⁰³⁷ Furthermore, all three mobiles showed common use of cells outside of the main area of concentration in south Beirut, particularly in south Lebanon.⁷⁰³⁸ There were no inconsistencies in the single user analysis between Green 071, Purple 231 and the Grey mobile.⁷⁰³⁹

3550. Finally, Green 071 was never in contact with Purple 231 or the Grey mobile.⁷⁰⁴⁰

(b) Merhi Defence

3551. The Merhi Defence submitted that the Prosecution had not proved that Mr Merhi was using the three mobiles attributed to him.

3552. The Prosecution did not prove his residence. No-one positively identified him, and in particular the identification photograph relating to his residence in the Gardenia Building is

⁷⁰³⁸ Prosecution final trial brief, paras 152-153; Prosecution closing submissions, T. 12 September 2018, pp 62, 67-68.

⁷⁰³⁹ Prosecution final trial brief, para. 154.

⁷⁰⁴⁰ Prosecution final trial brief, para. 149.

weak.⁷⁰⁴¹ The Prosecution had not proved that the photograph in evidence was actually that of Mr Merhi, as it is an undated identity card application photograph of poor quality.⁷⁰⁴² Witness 647 did not positively identify Mr Merhi as the man living in the Gardenia Building between 2001 and 2006.⁷⁰⁴³ The Prosecution could not positively prove that Mr Merhi lived there before 2010.⁷⁰⁴⁴ Witness 688's evidence about Mr Merhi's father's sons has no probative value as he did not positively identify Mr Merhi from a photograph.⁷⁰⁴⁵

3553. Further, regarding the Grey mobile, the person who regularly called it did not identify Mr Merhi by the name Hassan Habib Merhi, but by another.⁷⁰⁴⁶ The Prosecution failed to investigate that other name and that the named person is not Mr Merhi.⁷⁰⁴⁷

3554. The Merhi Defence submits that the Prosecution has not proven the attribution of Green 071 and Purple 231 to Mr Merhi beyond reasonable doubt.⁷⁰⁴⁸

3555. In relation to Purple 231, the Merhi Defence submits that the SMS content of Purple 231 is a factor weighing against attributing Purple 231 to Mr Merhi, because the users of Purple 231 and mobile 474 clearly knew each other.⁷⁰⁴⁹

3556. Further, the lack of contact between mobile 6091 and Purple 231 is a negative indicator for the attribution of Purple 231 to Mr Merhi. This is particularly because there was only one call between the two mobiles, in September 2003, and if mobile 6091 was used by Mr Merhi's wife, more contact would have been expected between the mobiles.⁷⁰⁵⁰

3557. The furniture delivery in November 2004 does not prove that Mr Merhi was the user of Purple 231. The Prosecution's theory on this is flawed because none of the documents bear the number Purple 231 and no one, including the delivery drivers, recognised Mr Merhi from a photograph. Witness 651 was not even there. The Prosecution did not ask the delivery drivers to

identify from photographs who took delivery of the items. Also, the furniture was delivered to the sixth floor of the building when Mr Merhi allegedly lived on its seventh floor.⁷⁰⁵¹

3558. The Prosecution also failed to explain the significance of SFEIR3, Purple 231's dominant cell.⁷⁰⁵² The only evidence about Mr Merhi's profession was tendered by the Defence, stating that he became an associate in 1994 in a company 'MEIDCO' that was set up in El-Ghobeiri, in 1993. Mr Donaldson, however, had not seen the document and thus did not consider this in analysing Mr Merhi's daily movements, although he acknowledged that it might have been useful in analysing Mr Merhi's professional activities.⁷⁰⁵³ The Prosecution 'failed to establish Mr Merhi's daily activities in cell sector SFEIR3' and in 'the absence of any indication of the possible links between Merhi and SFEIR3, the Chamber's findings must be the one most favourable to the accused'.⁷⁰⁵⁴

3559. The Prosecution failed to prove attribution of Green 071.⁷⁰⁵⁵ It failed to consider the reasonable possibility that Green 071's user did not have another 'coloured' mobile, as for example with its case regarding Mr Badreddine, to whom the Prosecution attributed personal and sequential mobiles and a Green one, but not a Purple, Red, Blue or Yellow mobile. Mr Donaldson attempted to attribute Green 071 to a mobile that had already been identified as suspicious, 'to the exclusion of all other phones that might constitute a reasonable possibility'.⁷⁰⁵⁶

3560. Mr Donaldson's methodology was flawed and he never explained the methodology used to determine that Purple 231 was the only viable candidate for co-location.⁷⁰⁵⁷ He was vague and said that he had confined himself to an analysis of 'intelligent candidates'.⁷⁰⁵⁸

3561. The Prosecution provided no explanation of Mr Donaldson's methodology, meaning that the Trial Chamber cannot assess the probative value and the weight to be given to the attribution, 'as it cannot test or judge its limitations, its shortcomings or its inaccuracies'. The methodology

⁷⁰⁵⁷ Merhi Defence final trial brief, paras 223-234.

⁷⁰⁵⁸ Merhi Defence final trial brief, para. 224.

the Prosecution used for cells dumps is flawed and produced results that were too limited, making it ‘impossible to discover other numbers offering an alternative to Purple 231’.⁷⁰⁵⁹

3562. Mr Donaldson’s cell dumps were inadequate, and using the methodology he employed for the Red network analysis required three cumulative hypotheses, namely, three calls at different times, whether the two mobiles used the same cells, and within one and a half hours after the call of interest. He would only select candidates falling within the three cell dumps. But this ‘method is deficient and incomplete’, and it eliminates numerous potential candidates from the outset. The chances that the mobile of interest and the potential candidate made three calls in three different cells in two hours are very small.⁷⁰⁶⁰

3563. Further, Mr Philips confirmed that Mr Donaldson’s methodology was ‘inappropriate’. Mr Philips explained how a cell dump, even of an hour before and after, although ‘likely to give more complete results than Donaldson’s methodology, poses a problem in that it excludes all other potential candidates who did not make any calls in the given cell and in the set time frame’.⁷⁰⁶¹ Two mobiles may have a single user and not activate the same cell in a fixed time of plus or minus an hour.⁷⁰⁶² Further, ‘an absence of activation can also constitute an absence of incompatibility in terms of co-location’, thus, the more the period is broadened ‘the greater the chance of selecting all the potential viable candidates’.⁷⁰⁶³

3564. Moreover, the Prosecution has failed to prove beyond reasonable doubt that Green 071 and Purple 231 had a single user.⁷⁰⁶⁴ The so-called change of user on 24 September 2004 is essential to attribute Green 071 to Purple 231’s user.⁷⁰⁶⁵ However, the Prosecution’s case was replete with ambiguity, and Mr Donaldson himself admitted that the evidence was not unequivocal.⁷⁰⁶⁶

3565. There was no change of IMEI which would be expected with a change of user. Mr Philips had said that it was unusual for a ‘mission phone’ to be recycled, namely, to pass it on without a

⁷⁰⁵⁹ Merhi Defence final trial brief, paras 225-226.

⁷⁰⁶⁰ Merhi Defence final trial brief, paras 227-229.

⁷⁰⁶¹ Merhi Defence final trial brief, para. 230, and heading, ‘The expert Philips confirmed that Donaldson’s methodology is inappropriate’.

⁷⁰⁶³ Merhi Defence final trial brief, paras 232-233.

⁷⁰⁶⁴ Merhi Defence final trial brief, paras 236-279, and heading, ‘The Prosecution fails to prove beyond reasonable doubt its single user theory for Green 071 and Purple 231’.

⁷⁰⁶⁵ Merhi Defence final trial brief, para. 237.

⁷⁰⁶⁶ Merhi Defence final trial brief, paras 238-239.

change of IMEI or SIM.⁷⁰⁶⁷ The argument that there was a three day gap in use between 21 and 23 September 2004, thus indicating a change in user, is ‘absurd’ in light of Green 071’s numerous periods of inactivity.⁷⁰⁶⁸

3566. It was also illogical that Green 026 and Green 290 would call Green 071 in error after 24 September 2004, if they had been part of a common group before, as the previous user would have told them to stop calling Green 071.⁷⁰⁶⁹

3567. The progressive reduction in the number of contacts post 24 September 2004 does not demonstrate a change in user, because the user is in contact with Green 023, attributed to Mr Badreddine, before and after that date. Green 071 has registered ‘a reduction in contacts because the users of certain phones have no further phone activity. Green 071 does not initiate this change in its contact profile, it is subject to it’.⁷⁰⁷⁰ And the geographical profile before and after that date do not differ significantly.⁷⁰⁷¹

3568. The reduction in the use of the SFEIR3 and BRAJNE2 cells is of little significance as this occurred only from October 2004 onwards. The Prosecution is unable to exclude the reasonable possibility that the user of Green 071 simply moved house. The cells activated are not far apart and in south Beirut.⁷⁰⁷² The ‘alleged change of user of Green 071 defies all logic. It is contrary to and incompatible with the theory of the mission phone advanced by Philips and Platt.’⁷⁰⁷³

3569. There is therefore a reasonable possibility that it did not change user. In the alternative, the Prosecution failed to prove the change as of 24 September 2004 and not as of a later date. Mr Philips concluded that it was a mission phone as of 13 October 2004. But on the Prosecution’s theory more than half of its 46 calls (26) were before that date.⁷⁰⁷⁴

⁷⁰⁶⁷ Merhi Defence final trial brief, para. 241.

⁷⁰⁶⁸ Merhi Defence final trial brief, para. 242.

⁷⁰⁶⁹ Merhi Defence final trial brief, para. 246.

⁷⁰⁷⁰ Merhi Defence final trial brief, para. 247.

⁷⁰⁷¹ Merhi Defence final trial brief, para. 248.

⁷⁰⁷² Merhi Defence final trial brief, paras 249-250.

⁷⁰⁷³ Merhi Defence final trial brief, para. 251.

⁷⁰⁷⁴ Merhi Defence final trial brief, paras 252-259.

3570. The Prosecution also did not rule out that Green 071 changed user more than once. It was more logical that Green 071 and Purple 231 had different users.⁷⁰⁷⁵

3571. Furthermore, Green 071's and Purple 231's cell activations on 25 September 2004, when both activated ANQOUN2 in south Lebanon in the afternoon and then moved to Beirut, show that the mobiles had separate users.⁷⁰⁷⁶ On that day, Purple 231 had activated ANQOUN2 at 14:21, 15:53 and 17:02, while Green 071 had activated it two hours later at 19:18. Purple 231 then activated NAAMEH1 in south Beirut at 20:12, followed by Green 071 activating ROUEIS3 at 20:28.⁷⁰⁷⁷

3572. The distance between the ANQOUN and NAAMEH towers is 27 kilometres, but Mr Donaldson did not know whether it was possible to travel that distance in 53 minutes, nor what the road conditions or traffic density were that day. Mr Donaldson did not know precisely where the mobiles were and ANQOUN2 has an area of approximately 100 square kilometres. This means that there is a reasonable possibility that the actual distance travelled to activate the two towers was far greater than the 27 kilometres between them, and could not have been travelled in 53 minutes between the two calls.⁷⁰⁷⁸

3573. Using the Prosecution's electronic presentation of software, the Merhi Defence had prepared maps of the likely movements of Purple 231 and Green 071 between 20:28 and 23:48.⁷⁰⁷⁹ Two of these, exhibits 3D430.2 and 3D430.3 show a more logical movement than Mr Donaldson's, 'indicating that different users probably used Green 071 and Purple 231' that day.⁷⁰⁸⁰ The two exhibits are extracted below:

⁷⁰⁷⁵ Merhi Defence final trial brief, paras 260-262.

⁷⁰⁷⁶ Merhi Defence final trial brief, paras 262-268.

⁷⁰⁷⁹ Exhibit 3D430 (Map showing movement of Green 071 and Purple 231 on 25 September 2004); exhibit 3D430.1 (Interactive map showing movement of Green 071 and Purple 231 on 25 September 2004); exhibit 3D430.2 (Alternative interactive map showing movement of Green 071 and Purple 231 on 25 September 2004); exhibit 3D430.3 (Alternative map showing movement of Green 071 and Purple 231 on 25 September 2004).

⁷⁰⁸⁰ Merhi Defence final trial brief, para. 264.

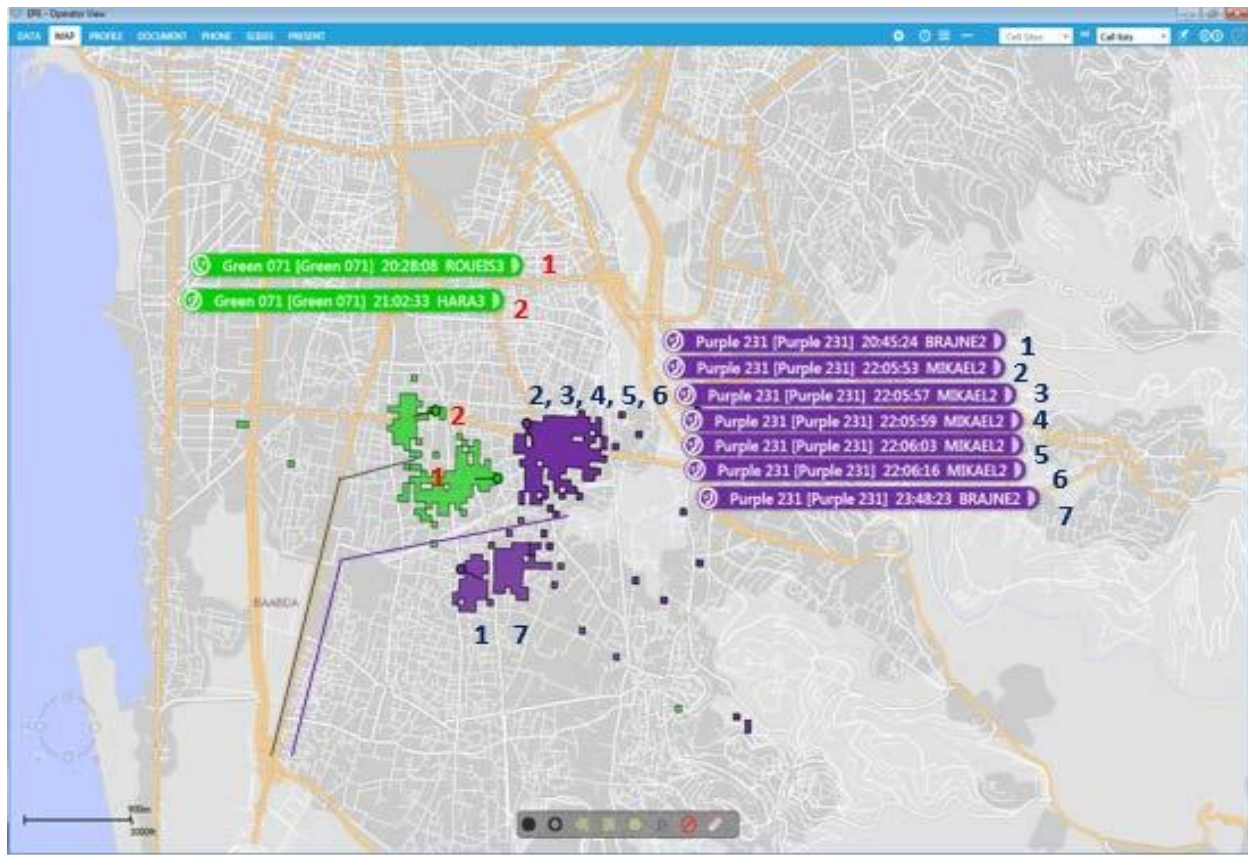

Exhibit 3D430.2 (Alternative interactive map showing movement of Green 071 and Purple 231 on 25 September 2004)

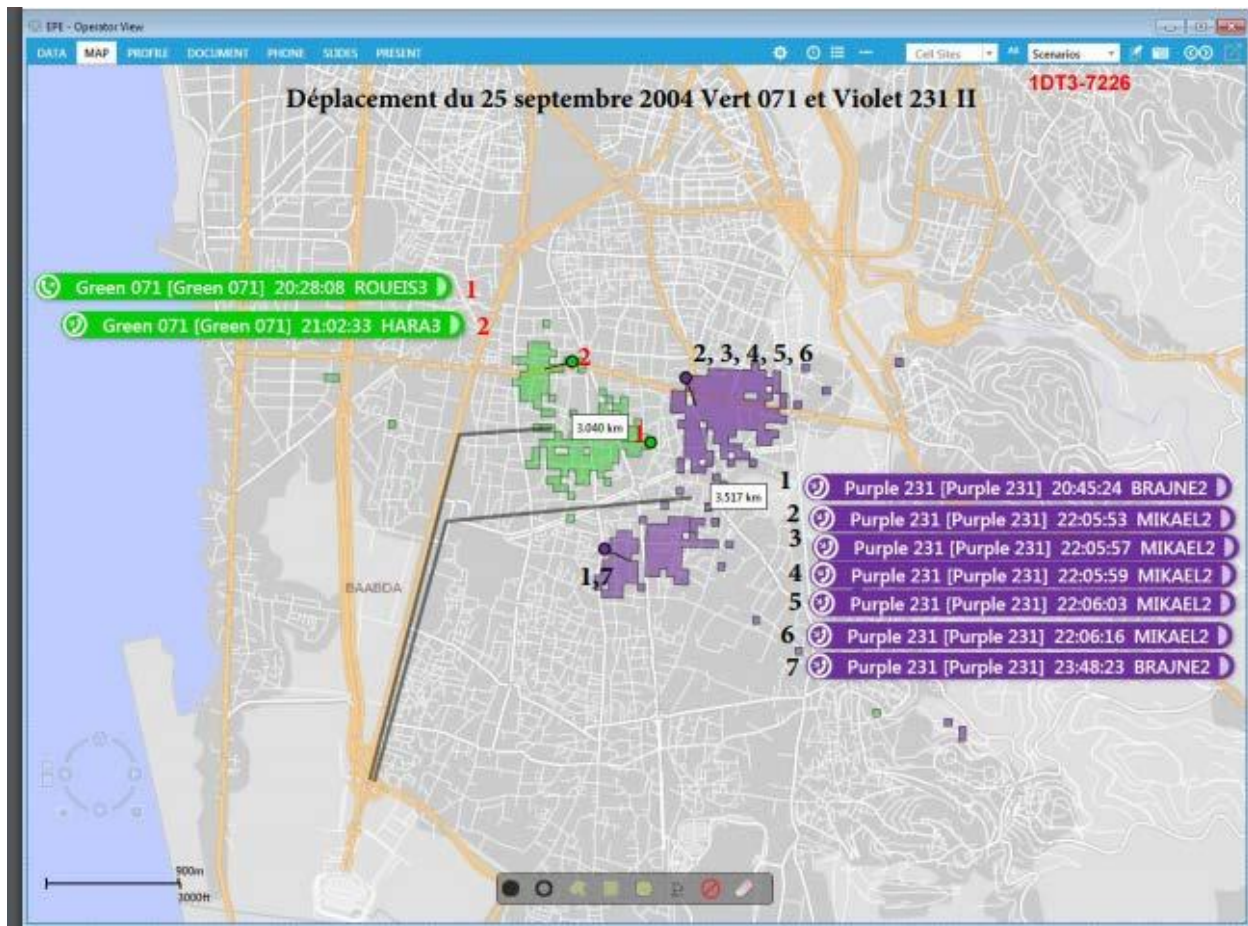

Exhibit 3D430.3 (Alternative map showing movement of Green 071 and Purple 231 on 25 September 2004)

3574. The Merhi Defence also highlights that the attribution of Green 071 is based on minimal data.⁷⁰⁸¹ Purple 231 and Green 071 behaved differently, which leads to the conclusion that they had different users.⁷⁰⁸² Finally, Green 071 co-located with mobiles other than Purple 231.⁷⁰⁸³

⁷⁰⁸¹ Merhi Defence final trial brief, paras 269-272.

⁷⁰⁸² Merhi Defence final trial brief, paras 273-279.

⁷⁰⁸³ Merhi Defence final trial brief, paras 280-287.

3575. The Merhi Defence also challenges the reliability of the predicted best server coverage of BRAJNE2 which the Prosecution alleges included Mr Merhi's home,⁷⁰⁸⁴ and the methodologies of Mr Donaldson and Mr Philips regarding attribution of Green 071 and Purple 231 generally.⁷⁰⁸⁵

3576. The attribution of Purple 231 was based essentially on third party contacts without attribution, and there was an absence of primary sources, including SMS messages.⁷⁰⁸⁶ Mr Donaldson was selective in choosing extracts of documents and failing to include contradictory statements or testimonies. Relying on the ICTY in *Martić* as legal authority, where an ICTY Trial Chamber had attached no weight to a Prosecution analyst's views, conclusions and analyses, the Merhi Defence submits that this Trial Chamber should likewise place no weight on his attribution method.⁷⁰⁸⁷

3577. Mr Donaldson's 'attribution of Green 071 is based entirely on expertise for which he is not recognised'.⁷⁰⁸⁸ He 'based almost his entire attribution of Green 071 to Purple 231 on the alleged co-location between the two', and went too far. His opinion should be rejected. No weight should be given to his report or testimony.⁷⁰⁸⁹

3578. Regarding Mr Philips, his opinion was 'vitiating by the lack of relevant information he received' from the Prosecution, and he was thus unable to provide a reasoned opinion on the attribution of the two mobiles to Mr Merhi.⁷⁰⁹⁰ Mr Philips was not told that the Prosecution alleged a change in users of Green 071 and Green 023, nor does he know how Green 071 was attributed to Purple 231 nor the method used to do this.⁷⁰⁹¹ This filtering affected the results, including his conclusions attributing Green 071 to Mr Merhi.⁷⁰⁹² Mr Philips's opinion has no value and no weight should be given to it.⁷⁰⁹³

9. Findings

(a) Introduction

3579. In opening its case against Mr Merhi, Prosecution counsel described him as a ‘grey man’ operating in the shadows, submitting that:

Mr. Merhi was born in Beirut on the 12th of December, 1965, and was 39/40 during the material time. He was married with five children and lived in South Beirut. There is no evidence that he was employed and there is no evidence as to the source of his income. There are no records of any bank accounts in his name or in the names of his wife or children in Lebanon. He is known to pay for items such as school and university fees for his children in cash or by banker’s drafts for which no bank account is required.

In my opening statement in January I referred to Mr. Merhi as someone having many things in common with his co-conspirators, a grey man who understood how to operate in the shadows without drawing attention to himself and who is trusted by his co-conspirators with whom he shared many common and strong bonds.⁷⁰⁹⁴

3580. The Trial Chamber is unaware of any evidence that Mr Merhi was habitually known to pay for things in cash or by banker’s drafts. There was no evidence of Mr Merhi’s work, beyond a corporate document produced by the Merhi Defence showing that in August 1994 Mr Merhi became a partner, via the transfer of shares, in Middle East Idea Company S.A.R.L. (MEDCO), a company founded in August 1993. An abstract of the company’s memorandum of association listed as its objects that:

The Company shall engage in the organization and holding of all types of exhibitions, design, enhancement, implementation and execution of general engineering and commercial projects, import and export, commercial representation, advertising and insurance services, property development and the purchase and sale of real estate.⁷⁰⁹⁵

3581. This is of course neither evidence of an occupation nor its location. And Mr Merhi assumed his interest in the company in August 1994, some ten years before the attribution period in the amended consolidated indictment.

⁷⁰⁹⁴ Prosecutor’s opening statement regarding Hassan Habib Merhi, T. 18 June 2014, p. 69 (Mr Cameron).

⁷⁰⁹⁵ Exhibit 3D442.

3582. The Trial Chamber received strong proof that Mr Merhi owned real estate in Beirut and in Ain Qana. It also received into evidence Mr Merhi's passport application, dated 17 October 2009, attached to which was an officially certified photograph. Nothing was placed before the Trial Chamber to suggest that this official document contained any errors. An undated identity card application in the same name, stamped and signed by the *mukhtar* of El-Bachoura, and accompanied by the same photograph (plus finger and thumb prints), is also in evidence. In this sense, the Prosecution's opening statement may somewhat overstate Mr Merhi's apparent invisibility.

3583. The Trial Chamber can only find that Mr Merhi was using Green 071 if it is satisfied beyond reasonable doubt that he was also using Purple 231 and or the Grey mobile. This can only be established on the Prosecution's case by its evidence that the three mobiles were co-locating in such a fashion that the only reasonable conclusion available from the evidence is that the mobiles were together with a single user.

3584. To establish that Mr Merhi was using Purple 231 the Prosecution presented evidence of its usage patterns and compared it with mobile 6091 which is attributed to the Merhi family. The evidence for a single user of Purple 231 and Green 071, which is based solely on co-location and cell activations, is not strong. It is, however, strengthened by the addition of the Grey mobile, for which the evidence that Mr Merhi was its user is undeniable.

(b) Mobile 6091

3585. The evidence linking the Merhi family to mobile 6091 is overwhelming. The evidence associating Mr Merhi and his family with living at plot 2501 in Bourj-El-Barajneh from about 30 July 2001 onwards is also strong. From this date, the electricity to plot 2501 was subscribed in Mr Merhi's name. Witness 647 and some documents also tie Mr Merhi to this address until 2012.

3586. The evidence establishes that members of the Merhi family used mobile 6091 from 1 January 2003 to 31 December 2007. The number was included on administrative documents which named Mr Merhi, namely, an income tax form and a 'Rebuild Lebanon' claim from September 2007. The number is associated with the names of Mr Merhi's children on documents from the University of Balamand from July to September 2005 and June 2008, and a service provider's records from December 1999.

3587. Mr Merhi's home lies within the predicted best server coverage of mobile 6091's most frequently activated cell, Touch's Saquiet_Hadath_2_A, which accounted for 64.55 per cent of activations. This can be consistent with normal experience of mobile usage. The predicted best server coverage of the second most frequently activated cell, Sarba_B, which accounted for 5.88 per cent of activations, included the town of Ain Qana where Mr Merhi also owned a property from May 2003. Mobile 6091 also frequently activated other cells in this area, particularly at weekends. The call sequence table for the number has 10,209 entries for voice calls and SMS between 1 January 2003 and 31 December 2007.

3588. Its contact profile provides compelling evidence of the mobile's use by the Merhi family. During the attribution period, it was in contact 2,554 times with a number linked to the sister of Mr Merhi's wife, 584 times with the husband of Mr Merhi's sister and 564 times with Mr Merhi's son. Many other frequently contact numbers are linked to members of Mr Merhi's family. Text messages show that the mobile was used by Mr Merhi's children but belonged primarily to their mother. That Mr Merhi's wife was not the exclusive user of mobile 6091 is evident from the continued use of this mobile while she was in Iran between 29 September and 6 October 2004.

3589. The furniture delivery in November 2004 to the Merhi family home associates both mobiles 6091 and Purple 231 with the furniture, the address, the delivery and each other. The same people taking delivery of the furniture, under the name 'El-Hajj Hassan Merhi' to El-Roueiss, Hay Al-Abiad, above Qaser-El-Riyada Gym, Gardenia building, Sixth floor', were using both mobile 6091 and Purple 231. Purple 231 twice called the delivery company, once to arrange the initial delivery and the second time to arrange for a replacement item. Purple 6091 was given as the contact number. The evidence associating the four things on this particular occasion: name, address and the two mobile numbers, is incontrovertible.

3590. The Merhi Defence submission that the evidence of the furniture delivery does not prove that Mr Merhi was using Purple 231 is correct to the extent that this piece of evidence alone does not do so. But when taken in combination with other pieces of evidence it assumes some strength.

3591. The obvious question arising is of what other explanation could there be for someone using Purple 231 to twice organise the furniture delivery to someone called Hassan Merhi at the Merhi family residence, giving the number mobile 6091, and signing the invoice as Hassan Merhi, other

that it was Mr Merhi. The Trial Chamber can see no other inference available from the evidence. Further, the failure of busy delivery drivers to remember anything—and based on reviewing delivery records when interviewed at least eight years later—about delivering a mattress to an apartment, including who may have been present when the furniture was delivered, is hardly surprising.

3592. The Trial Chamber can therefore safely conclude that mobile 6091 was used by the Merhi family during both the attribution and the pleaded indictment period.

(c) The Grey mobile

3593. The evidence that Mr Merhi was using the Grey mobile is unequivocal. It was essentially a mobile used by Mr Merhi to contact only one person over a lengthy period, of at least eight years. Mr Merhi was identified from a passport application photograph and numerous texts. The fact that Mr Merhi was not known by the name ‘Hassan Habib Merhi’ and therefore was not identified by that name, as submitted by the Merhi Defence, is irrelevant. Although he was using a different name, it was the same person.

3594. The evidence provides direct and unambiguous proof that Mr Merhi was using the Grey mobile. The Merhi Defence neither cross-examined anyone about this nor challenged the identification of him from a passport application photograph. Contrary to the Merhi Defence’s submissions, the Prosecution had no need to attempt to locate someone of the name that Mr Merhi was using once he had already been positively identified from a photograph and text messages. There was no investigative failure by the Prosecution in this respect.

3595. The Trial Chamber finds that Mr Merhi used the Grey mobile from 21 February 2004 to 16 April 2005. This covers the indictment period of Thursday 11 November 2004 to Monday 14 February 2005. The named subscriber for the Grey mobile is not Mr Merhi, but the subscriber record includes patently false information that is contradicted by reliable evidence. This evidence, it is emphasised, was not challenged by the Merhi Defence. Counsel for Mr Merhi chose not to challenge it when they had the opportunity to do so. Presumably this was a forensic decision to the effect that doing so would not advance the Merhi Defence case.

3596. A further piece of evidence pointing to its use by Mr Merhi is its geographic profile in that its predominant cell activations were near Mr Merhi's residence in south Beirut.

(d) Purple 231

3597. Purple 231 was subscribed under the name 'Imad Ibrahim'. There was no evidence of whether this person existed, but names were not required for pre-paid Alfa subscriptions, and the Trial Chamber received much evidence of subscriber names and details not matching the reality of who was actually using the mobile.

3598. The furniture delivery to the Merhi family residence on 24 and 26 November 2004, as noted immediately above, provides convincing evidence linking Mr Merhi to Purple 231. Someone twice called the furniture deliverer from that number to have deliveries made to the Merhi residence. The name 'Hasan Merhi' was noted. The deliverer called the number back. The deliverer then passed on the details to the manufacturer, including the customer's name, Hasan Merhi, and the mobile contact number 6091. This provides a strong association between Mr Merhi and Purple 231 during the pleaded indictment period. This alone, of course, cannot prove that this mobile was Mr Merhi's, nor that he was its single user. It can only associate Mr Merhi with the mobile.

3599. On 20 June, 27 August, 10 October and 6 November 2004, Purple 231 and mobile 6091 activated cells in similar locations outside of Beirut, including remote locations in south Lebanon. While Mr Merhi was not the exclusive user of mobile 6091, the common travel nevertheless provides some reasonable circumstantial evidence linking him to Purple 231.

3600. When Mr Merhi's wife and son travelled to Iran in September 2004, Purple 231 activated cells serving Beirut International Airport less than one hour before they went through passport control. When they returned on 6 October 2004, Purple 231 activated an internal airport cell less than ten minutes before they passed passport control. Around the same time, mobile 6091 received a call from a number linked to Mr Sobhi Mohammed Sakr, who travelled on the same flights as Mr Merhi's wife and son, consistent with them travelling together. Mobile 6091 also activated a cell that covered the airport at this time.

3601. On 3 May 2003, the day when Mr Merhi purchased land in Ain Qana, Purple 231 activated NABATI3, which provided coverage to the town of Nabatiyeh, south of Ain Qana.

3602. The Trial Chamber has considered whether other members of Mr Merhi's family, particularly his wife and children, may have used Purple 231.

3603. However, the geographic and contact profiles of Purple 231 work against this. Purple 231's geographic profile can be distinguished from mobile 6091, the family mobile. Purple 231's most frequent cell was SFEIR3 during the day—from 10:00 to 20:00—and BRAJNE2 on Sundays and at night, from 20:00 to 10:00.

3604. Mr Philips concluded, based on this, that Purple 231's user lived in BRAJNE2's predicted coverage area and may have worked in SFEIR3's. By contrast, mobile 6091's most frequent cell was BRAJNE2 throughout the day. The Trial Chamber agrees that Mr Philips's conclusion is a plausible explanation, although it notes that it has no evidence of whether or where or when Mr Merhi worked.

3605. The call sequence table for Purple 231's calls and SMS messages has 3,212 entries between 19 December 2002 and 15 February 2005. Its top two most frequent contacts were Mr Merhi's brother-in-law, with 674 contacts, and Mr Merhi's brother, with 292 contacts. The sixth was with the Alfa helpline with 209 contacts. Purple 231 also had 204 contacts with Purple 018 used by Mr Sabra, 194 with Purple 095 used by Mr Oneissi, 15 with mobile 165 used by Mr Ayyash and ten with mobile 935 used by Mr Ayyash. The only contact with Mr Merhi's father, his sisters and mobile 6091 were outbound calls in a two-week period in September and October 2003.

Co-location with the Grey mobile

3606. Mr Merhi used the Grey mobile almost exclusively to communicate with one person. The Trial Chamber is convinced beyond reasonable doubt that he was its sole user during its attribution period. The issue is whether the Prosecution has proved that it co-located with Purple 231 in such a manner that the only reasonable conclusion is that Mr Merhi was the single user of both mobiles.

3607. Mr Philips analysed the cell site evidence and concluded that Purple 231 and the Grey mobile activated the same cell within one hour of each other 147 times. On a further 79 occasions

these two mobiles activated cells which in Mr Philips's assessment could be travelled within the time between the calls and therefore would not preclude co-location.

3608. Significantly, he identified only one instance, on Tuesday 28 December 2004, when Purple 231 and the Grey mobile may have dislocated. However, given that the Grey mobile activated SFEIR3 one minute after activating BOSTAN2, he convincingly explained that the Grey mobile likely picked up the signal of BOSTAN2, outside of Beirut, while it was in the area of SFEIR3 in south Beirut. Having carefully reviewed the totality of Mr Philips's evidence, the Trial Chamber accepts this explanation.

3609. To summarise Mr Philips's conclusions on possible co-location between the Grey mobile and Purple 231, he found:

- in September 2004, seven instances of 'could be co-located', and two of 'would not preclude' co-location;
- in October 2004, 29 instances of 'could be co-located', and 11 of 'would not preclude' co-location;
- in November 2004, 24 instances of 'could be co-located', and 19 of 'would not preclude' co-location;
- in December 2004, 31 instances of 'could be co-located', and 19/20 of 'would not preclude' co-location and 1 to 0 of 'would preclude'. This was on 28 December, with an explanation for this immediately above;
- in January 2005, 33 instances of 'could be co-located', and 21 of 'would not preclude' co-location; and
- in February 2005, 23 instances of 'could be co-located', and six of 'would not preclude' co-location.

3610. This totals 225/226 instances when the mobiles either could co-locate or Mr Philips concluded that co-location was not precluded. A significant number of these pairs of calls—namely a call between Purple 231 and another number, either preceded or followed by a call from the Grey mobile to another number—either activated the same cell, such as SFEIR3 or BRAJNE2,

or an adjacent cell. Mr Philips's calculation criteria was of the calls occurring within an hour of each other, and connecting to cells in which the distance between the centre of their predicted best server coverage plots could be travelled within the time between the calls.

3611. Mr Philips's analysis has provided convincing evidence that the two mobiles could be co-locating. Added to this is the direct and compelling evidence that Mr Merhi was using the Grey mobile, and the strong circumstantial evidence connecting him with Purple 231. When these three strands of evidence are considered in their totality, the Trial Chamber is satisfied the only conclusion reasonably available is that Mr Merhi was using the two mobiles and that they were co-locating for that reason. The Trial Chamber is of the view that this confluence of circumstances is beyond coincidence. Therefore, and considering this evidence in its totality, the Trial Chamber finds that Mr Merhi was using both Purple 231 and the Grey mobile. The Trial Chamber is therefore satisfied beyond reasonable doubt that Mr Merhi was using Purple 231. The strongest piece of evidence comes from that identifying the Grey mobile as Mr Merhi's.

3612. The issue then is whether he was the single user of both mobiles. The evidence that the Grey mobiles was his and his alone is overwhelming. Purple 231 was often used close in time and geographical proximity to the Grey mobile.

3613. The user of this mobile was evidently not someone who was using it to send texts. The SMS messages sent from mobile 474 were clearly intended for someone else. There is no other plausible explanation on the evidence. However, there were numerous texts between the Grey mobile and one other mobile, demonstrating the differences between the two mobiles. The Trial Chamber cannot make any findings on whether Purple 231 had the alleged characteristics of a 'cadre' mobile, as Mr Donaldson suggested. It has no comparative evidence from which it could draw such a conclusion.

3614. The Trial Chamber has carefully examined Purple 231's call sequence table, and has found no usage patterns suggesting that Mr Merhi was not its user. Further, the Trial Chamber has seen no evidence from which it could conclude that someone other than Mr Merhi was using Purple 231 that would displace this conclusion.

3615. The Trial Chamber has closely scrutinised the calls involving both mobiles in the indictment period, and a strong pattern emerges of the two mobiles being frequently used in the

same cell within a short period of time. When this is considered with the evidence associating Mr Merhi with Purple 231 and the unchallenged evidence that he was exclusively using the Grey mobile, it leads to one conclusion, namely, that Mr Merhi was the single user of both mobiles in that period.

3616. The Trial Chamber is therefore satisfied beyond reasonable doubt that Mr Merhi was the single user of Purple 231 in the pleaded indictment period, namely from Wednesday 22 December 2004 to Monday 14 February 2005.

(e) Green 071

3617. On the Prosecution's case, Green 071 is attributed to Mr Merhi from 24 September 2004 until 7 February 2005. Beyond its geographical profile and its apparent co-location with Purple 231 and the Grey mobile, no evidence connects Mr Merhi with Green 071. The fact that Green 071 was contacting Green 023, which in turn was contacting Green 300—a mobile attributed to Mr Ayyash, whose personal mobiles Purple 231 was contacting—cannot be used to prove that Mr Merhi was using Green 071.

3618. The Alfa subscription records do not assist in attributing Green 071 because it was subscribed using a false identity document. Green 071's contacts before the attribution period, Green 300 and Green 023, were also subscribed with false identities.

3619. Whether Mr Merhi was using Green 071 rests solely upon its co-location with Purple 231 and the Grey mobile. There is some reasonable evidence that the three mobiles *could* be co-locating.

3620. Whether this is sufficient to find that the three—which includes Green 071—had a single user, however, is a different issue and is the next, and ultimate, step. The challenge is determining this based on the extremely limited number of Green mobile calls, a mere 43, over a four and a half months period, and then on only 23 days, of which 22 had possible candidate calls for co-location. Complicating this is the smaller number of calls within the indictment period itself, of only fourteen candidate calls made on nine days in the 43-day period from 27 December 2004 until Monday 7 February 2005 inclusive.

3621. Mr Philips, unlike Mr Donaldson, would never categorically state, based on cell site evidence alone, that two or more mobiles *had* a single user. That is the Trial Chamber's role as the fact-finder. To determine this, the Trial Chamber must have first found that Mr Merhi was the single user of Purple 231 and the Grey mobile at all relevant times.

3622. Mr Donaldson, however, in his report and under the heading, **CO-LOCATION BETWEEN GREEN 3150071 AND 3575231**, boldly asserted that Purple 231 and Green 071 were co-locating and hence had a single user in Mr Merhi.⁷⁰⁹⁶ Of Green 071, he concluded that this 'number is attributable through co-location and geographic profile to the user of 3575231, which in turn is attributable to Hassan Habib Merhi'.⁷⁰⁹⁷ But the evidence of this is weak as it comes from only 23 calls over 22 separate days.

3623. And, regarding the Merhi Defence's arguments based on *Martić* that Mr Donaldson's evidence has no probative value, the Trial Chamber, for the reasons expressed at paragraphs 2623-2647 has given little weight to Mr Donaldson's conclusions on whether Purple 231 and Green 071 had a single user.⁷⁰⁹⁸

3624. The Trial Chamber therefore must closely examine Green 071's geographic profile and co-location with other two mobiles for evidence supporting its attribution to Mr Merhi.

i. Possible change in user between Monday 20 and Friday 24 September 2004

3625. The starting point is the Prosecution's argument that the mobile changed user in September 2004. Mr Donaldson analysed Green 071's geographic and contact profiles and concluded that its user changed between Monday 20 and Friday 24 September 2004. This was based on a change in cell site activation and calls before and after those dates. His view was that its geographical profile

⁷⁰⁹⁶ Exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), pp 75-90, and para. 179.

⁷⁰⁹⁷ Exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), para. 240.

⁷⁰⁹⁸ The relevant passage at para. 35 in the *Martić* Trial Judgment, though, is probably distinguishable on its facts. In *Martić*, the analyst was an organiser of and participant in several Prosecution missions to examine documents in the Croatian State Archives. In his testimony and statement he 'presented views on and drew conclusions from the information contained in the documents although he neither possesses expertise in this area nor personal knowledge of the information'. This is footnoted to a Prosecution filing acknowledging that the witness 'lacks expertise'. Mr Donaldson, on the other hand, was actively involved in analysing the evidence in the case, seeking to draw analytical conclusions, and had the requisite expertise to do this, but up to a point.

after 24 September became more consistent with Purple 231's. The Merhi Defence, on the other hand, suggests that if he is wrong on this, the two mobiles did not have a single user.

3626. From Friday 24 September 2004, Mr Donaldson observed a reduction in the number of mobiles contacted, a reduced call volume and a change in the main cells activated. Of significance was that Green 071 never activated SFEIR3 or BRAJNE2 before 24 September 2004. These two cells, however, became Green 071's top two cells during the attribution period, from 24 September onwards. These factors in combination, in his view, establish that Green 071 changed user between 20 and 24 September 2004.

3627. In his report, Mr Donaldson stated that the 'beginning of this attribution period marks an observable change in the number's contacts and geographical profile'.⁷⁰⁹⁹ The Trial Chamber partly accepts his evidence on this point. The mobile was clearly communicating with other mobiles within a closed network, and Green 071's calling and cell activation patterns did change from 24 September 2004. But not as significantly as Mr Donaldson suggests.

3628. Looking at its contact geographical profile, ROUEIS3, HARA2 and MIKAEL2 were in the five most activated cells both before and after 20 September. After 20 September, Green 071 activated these three cells for a combined seven times, while it activated SFEIR3 20 times and BRAJNE2 10 times. Between 3 August and 20 September 2004, by contrast, there were 50 activations of ROUEIS2, 33 of HARA2 and 24 of MIKAEL2.

3629. But Green 071 was involved in only 43 calls (plus three incoming service texts) after 24 September 2004, making a total of 46 cell activations, including end cell. The top five cells activated both before and after that date, as the Merhi Defence points out, were all in south Beirut. The network coverage maps show that these six cells are all contiguous and cover an area of around less than two square kilometres. This is shown on the two Google Earth maps extracted above, that show some evident cell coverage overlap.

⁷⁰⁹⁹ Exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), para. 180.

3630. In this respect, it is important here to reiterate Mr Philips's words of caution expressed in his report on the possible co-location of the three mobiles:

It must be remembered that the best coverage plots are computer predictions of the areas over which any cell is estimated to provide best server coverage.

There will also be areas outside of the best server coverage plot where the cell also provides some best server coverage, but are not shown, and also some areas within the plot where the cell does not provide the best server coverage.⁷¹⁰⁰

3631. This change in geographical profile alone could not prove a change in user, especially as there is no evidence of where in the cell the mobile was when activating it, and because of the contiguous and overlapping nature of the cells activated. Mr Philips also testified that the coverage of cells extends beyond the networks' best server coverage plots. The Trial Chamber therefore does not find the marginally altered geographical profile—based on 46 later cell activations on 23 days over four and a half months—particularly persuasive.

3632. Similarly, the change in the contact profile, of itself too, cannot prove a change in user. Between 24 August and 20 September 2004 Green 071 had 190 contacts. These were exclusively with Green 026, 080, 290 and 023, and receiving service SMS.

3633. However, from Friday 24 September onwards, with the exception of two brief inbound calls from Green 026 and Green 290—respectively, on 24 September and 1 October 2004—it communicated exclusively with Green 023. Its first call with Green 023 was on 25 August 2004 and it had four further calls with that number before 24 September 2004. Its remaining 51 calls with Green 023 were between Friday 24 September and Monday 7 February 2005.

3634. Before Monday 20 September 2004, Green 071 communicated with Green 026, Green 280, Green 290 and Green 023. It did so after that date as well, but made and received far fewer calls and almost all were with Green 023. Taking this fact alone, of itself it could suggest a change of user. Or, just as plausibly, the user could have stopped communicating with the other mobiles, based on whatever the reason was for the network's existence.

⁷¹⁰⁰ Exhibit P2120, p. 14, paras 3.2.2.4-3.2.2.5.

3635. Putting the two profiles, geographical and contact, together shows that something changed after 20 September 2004. As noted, a change in user is one possibility; another is a change in the reason for contacting others in the closed network. Or the user, as the Merhi Defence suggests, could simply have moved house. And the number 071—that is the Alfa network SIM 071—did not change handset as shown by using the same IMEI. Further, the Prosecution presented no evidence of who could have been an alternate user of Green 071 before 20 September 2005 based on analysing call patterns, and co-location with any ‘non-network’ mobiles.

3636. The Trial Chamber is of the view that the case for a change in user from Monday 20 September 2004, while credible, is not that strong. However, it does not necessarily logically follow, as the Merhi Defence suggests, that if mobile’s user did not change from 24 September, then Mr Merhi could not have been its single user. The Trial Chamber had no evidence of Green 071’s possible co-location with any other mobiles before 20 September, whose geographical and contact profile it could examine, in order to draw a firm conclusion that its user had changed from that date.

ii. Co-location between Green 071 and Purple 231, and Green 071 and the Grey mobile

3637. Without the Grey mobile any connection between Green 071 and Purple 231 is very weak. It is based on 22 calls over a period of less than five months, in which the cell site expert Mr Philips could place it no higher than having consistency ‘with being used by the same person over the period analysed’. Consistency certainly does not equate to proof beyond reasonable doubt, and without the Grey mobile, the Trial Chamber would be unable to reach that threshold of proof.

3638. The most convincing evidence for attributing Green 071 to Mr Merhi is of cell activations that were close in time to some of those of Mr Merhi’s two personal mobiles, Purple 231 and the Grey mobile. These, in Mr Philips’s view, are consistent with co-location. Or, as he put it in his report, the calling characteristics are such as to ‘very strongly support the proposition that they *could* be being used by a single person’ (*italics* added). Mr Philips did not say ‘*were* being used by a single person’.

3639. Examining the attribution period, Green 071 was involved in only 43 calls and receiving three service SMS. But the mobile was active, in the sense of making calls, and receiving calls and

texts on only 23 days. On 22 of these days Purple 231 was also active. The Grey mobile was active on all but three of the 23 days, namely 28, 29 and 30 September 2004. Sunday 16 January 2005 was the only day on which Purple 231 did not activate any cells, while on that day, the Grey mobile received two texts and made one call between 18:36 and 18:37, activating SFEIR3.

3640. The Trial Chamber, as explained above, is satisfied that Mr Merhi was using the Grey mobile and Purple 231. Based on this finding, the Trial Chamber can move to compare, in a manner that Mr Philips could not—as he could not make such a determination—whether Green 071 was co-locating with those two mobiles. And if so, whether the three mobiles had Mr Merhi as their single user.

3641. The list below shows the total number of possible co-locations between Green 071 and either of the two personal mobiles that Mr Merhi was using. Regarding the possible co-location of Purple 231 and Green 071, Mr Philips concluded in summary that there were:

- in September 2004, seven instances of ‘could be co-located’, and nine of ‘would not preclude’ co-location;
- in October 2004, one instance of ‘could be co-located’, and one of ‘would not preclude’ co-location;
- in November 2004, no instances of either;
- in December 2004, one instance of ‘would not preclude’ co-location;
- in January 2005, five instances of ‘could be co-located’, and two of ‘would not preclude’ co-location; and
- in February 2005, no instances of either.

3642. Mr Philips also concluded, in summary form, regarding possible co-location between the Grey mobile and Green 071, that there were:

- in September 2004, two instances of ‘could be co-located’, and three of ‘would not preclude’ co-location;

- in October 2004, one instance of ‘would not preclude’ co-location;
- in November 2004, two instances of ‘could be co-located’;
- in December 2004, one instance of ‘would not preclude’ co-location;
- in January 2005, three instances of ‘could be co-located’, and one of ‘would not preclude’ co-location; and
- in February 2005, one instance of ‘could be co-located’.

3643. In totality, he identified 40 examples over the wider attribution period of 24 September 2004 to 7 February 2005.

3644. During the more confined indictment period of Thursday 11 November 2004 to Monday 14 February 2005, Mr Philips found only nine instances where the two sets of mobiles—namely, the Grey mobile and Green 071, and Purple 231 and the Grey mobile—‘could be co-located’ and five in the category of ‘would not preclude’ co-location. These fourteen calls are broken down into two on 27 December, eleven in January 2005, and one on Green 071’s last day of use, 7 February 2005.

3645. The sample size in the indictment period was tiny—a mere fourteen calls made on nine days in a 43-day period—comprised of one day in December 2004, seven in January 2005 and one in February 2005. The vast majority of possible co-locations that Mr Philips analysed involved not Green 071, but rather the Grey mobile and Purple 231. This is as opposed to the three being together or in their other possible combinations of Green 071 and the Grey mobile, and Green 071 and Purple 231.

3646. Mr Philips found that on 26 occasions in the attribution period Green 071 activated cells within one hour of Purple 231. Fourteen of these activated the same cell and the other 12 activated cells that, in Mr Philips’s opinion, could be travelled within the time between the calls. Mr Philips did not identify any pairs of calls that were inconsistent with the mobiles having a single user.

3647. Mr Donaldson, by contrast, analysed pairs of calls within ten minutes of each other and found seven instances when Green 071 and Purple 231 activated the same cell. On three occasions these two mobiles activated cell towers which were less than one kilometre apart.

3648. Furthermore, he concluded that Green 071's geographic profile was similar to Purple 231's. SFEIR3 and BRAJNE2 were the top two cells activated for Green 071 and Purple 231. Both mobiles, in his view, tended to use SFEIR3 during the day and BRAJNE2 at night. For Green 071, 14 out of 20 activations of SFEIR3 occurred between 10:00 and 20:00. Eight out of ten activations of BRAJNE2 occurred between 20:00 and 10:00. Similarly, SFEIR3 was the top cell activated for Purple 231 between 10:00 and 20:00 from Monday to Saturday, whereas BRAJNE2 was the top cell outside of those hours. Mr Merhi's home falls within the predicted best server coverage of BRAJNE2. His thesis was that the mobiles' single user lived in the BRAJN2 cell area and worked in that of SFEIR2.

3649. This assessment, however, does not really hold for Green 071's 20 activations of SFEIR3. Of its 20 activations of that cell, eight were before midday—including one at 00:29 on 29 September—seven were between midday and 18:00, and the remaining five occurred after 18:00. Thus, eleven of the 20 occurred between 18:00 and 06:00.

3650. Of Green 071's ten activations of BRAJNE2 from 24 September 2004 onwards, six were in the evening (after 19:18), and four were in the morning (between 06:19 and 10:45). This is more consistent with Mr Donaldson's theory, but does not explain the SFEIR3 activations 'out of hours', so to speak.

3651. The Trial Chamber accordingly does not see the same pattern here as argued by Mr Donaldson, which suggest activations of BRAJNE2 in the evening when Mr Merhi was at home, and his activating SFEIR3 when he was out working somewhere else. No real pattern has emerged for Green 071's activations of SFEIR3 from which positive conclusions one way or another can be drawn.

3652. The Trial Chamber has examined the pairs of calls identified by Mr Philips as falling into the two categories of 'could be co-located' and 'would not preclude co-location'. These are:

- In September 2004:
 - 1) on 24 September, between 17:35 and 17:47, and activating SFEIR3, Purple 231 made a call, Green 071 received a call and the Grey mobile received a call;

- 2) on 25 September, at 19:18 and activating ANQOUN2 in south Lebanon, Green 071 received a call. At 20:12, activating NAAMEH1 which lies between that cell and Beirut, Purple 231 made a call; the geographical centres of the two cells are about 29 kilometres apart.

At 20:28, Green 071 made a call, activating ROUEIS3 in south Beirut. Activating BRAJNE2, Purple 231 received a call at 20:45. At 20:50, and activating the same cell, the Grey mobile made a call. Twelve minutes later, at 21:02, Green 071 received a call, activating HARA3, whose geographical centre is about 1.5 kilometres from BRAJNE2's;

- 3) on 26 September, in the evening and within a five minute period, both Green 071 and the Grey mobile made calls, activating adjoining cells in Haret Hreik;
- 4) on 27 September, in the morning and within seven minutes, Green 071 received a call and the Grey mobile made a call, activating SFEIR3;
- 5) on 28 September, and within 42 minutes, Green 071 and Purple 231 activated SFEIR3 and MATAR6, cells that are around five kilometres apart. Almost six hours later, from 14:07 to 16:20, both activated SFEIR3 six times. Between 18:48 and 19:33 the two mobiles activated SFEIR2 and SFEIR3 five times;
- 6) on 29 September, Green 071 and Purple 231 activated SFEIR2 and SFEIR3 three times over an hour and ten minutes, mid-afternoon;
- 7) on 30 September, Green 071 and Purple 231 activated BRAJNE2 within two minutes in the late evening;

- In October 2004:

- 8) on 4 October, Green 071 activated ROUEIS3 at 14:07 for a call, and at 14:52, activating nearby SFEIR3, the Grey mobile received a call. The cells' geographical centres are about 1.25 kilometre distant; and
- 9) on 7 October, Green 071 and Purple 231 activated SFEIR3 in calls five minutes apart from 14:09, followed by Purple 231 activating nearby HADATH3 at 15:07.

- In November 2004:

10) on 6 November, Green 071 and the Grey mobile activated BRAJNE2 to make calls two minutes apart, at 10:34 and 10:36; and

11) on 9 November, Green 071 and the Grey mobile activated SFEIR3 to receive texts at 14:55 and 15:23.

- In December 2004:

12) on 27 December, Green 071 made a call and activated BRAJNE2 at 09:56. At 10:22, 26 minutes later, the Grey mobile received a text and activated BIRABD3. The geographical centres of these cells are around 1.2 kilometres apart.

- In January 2005:

13) on Sunday 2 January, at 19:14 the Grey mobile made a call, and at 19:18 Green 071 made a call, with both activating BRAJNE2;

14) on Wednesday 12 January, at 20:20 Green 071 received a call, and at 20:22, Purple 231 made a call, with both mobiles activating BRAJNE2;

15) on Thursday 13 January, at 19:48 and 19:50 and both activating SFEIR3, Purple 231 received and Green 071 made a call;

16) on Friday 14 January, Green 071 and Purple 231 activated BRAJNE2 in making calls four minutes apart, at 19:55 and 19:59;

17) on Saturday 15 January, Purple 231 activated ZALKA1 to receive a text at 18:41, Green 071 made a call and activated SALOUM2 at 18:51, followed by Purple 231 making a call at 18:52, activating SINFIL3. The geographical centres of ZALKA1 and SALOUM2 are about 3.5 kilometres apart, and there is about 750 metres between those of SALOUM2 and SINFIL3; and

18) on Thursday 20 January, in a period of 55 minutes from 06:01, and activating SFEIR3, Green 071 made a call, the Grey mobile received and sent a text, and Green 071 received a call. Later, at 14:38 and 14:47, activating HARA2 and

BRAJNE2 respectively, Green 071 received a text, and the Grey mobile made a call. The cell centres are around 1.25 kilometres apart.

- In February 2005:

19) on Monday 7 February, activating BRAJNE2 at 10:45, Green 071 made a call, and 58 minutes later the Grey mobile received a service SMS.

3653. For these activations, the Trial Chamber has only added in the activation of either the Grey mobile or Purple 231 that was the closest in time to one of Green 071's cell activations. This is because the combination of all three is unnecessary for analysing the possible co-location of Green 071 with either of Mr Merhi's personal mobiles. For analytical purposes, as Mr Merhi was using both personal mobiles, it does not matter which co-locates with Green 071, nor in what order.

3654. The Trial Chamber is of the view that the Prosecution could not establish co-location between Purple 231 and Green 071 without the Grey mobile. Similarly, the Prosecution could not rely only on a combination of the cell activations of Green 071 and the Grey mobile to prove that they were co-locating and had a single user. Only the combination of the Grey mobile and Green 071, and Purple 231 and Green 071, could prove that Mr Merhi's personal mobiles were co-locating with the Green network mobile.

3655. On one hand, it is clear that on some days there is a reasonable case that Green 071 co-located with either the Grey mobile or Purple 231 or both. Activations of the same cell within minutes—by the three different mobiles—provide examples of this. But on the other hand the sample size is very small, and over a relatively lengthy period for the number of activations involved, and does not factor in the quantity of mobile connections, numbering in the thousands, in that area of Beirut at the time.

3656. To illustrate, on 24 September 2004, 28 September 2004 in the afternoon, 29 September 2004, 30 September 2004, 7 October 2004, 9 November 2004 and 12 January 2005, Green 071 had close-in-time calls with Purple 231 and or the Grey mobile that fit the pattern identified by Mr Donaldson. Between 10:00 and 20:00 the mobiles activated SFEIR3. Between 20:00 and 10:00 they activated BRAJNE2.

3657. This, however, is also consistent with two people living and working in the same areas and may not necessarily lead to the conclusion that the mobiles had a single user, especially given that many people may live and work in these areas of Beirut. As Mr Philips and Mr Donaldson both acknowledged, to conclude that two mobiles had a single user, there must be a diversity of examples of co-location combined with movement.⁷¹⁰¹ Indeed, Mr Donaldson testified—and based upon his years of analysing Lebanese call data and cell site records—that for ‘just a single sector in Beirut you will have thousands of numbers used within the same hour.’⁷¹⁰²

3658. Also weighing against the attribution of Green 071 to Mr Merhi is the small number of calls available for analysis. Further, their cell activations were concentrated in Bourj Brajneeh and Haret Hreik in Beirut. Only on five occasions, did Green 071 activate cells outside this main area of concentration. However, when Green 071 activated BRAJNE2 or SFEIR3 outside the ‘usual’ hours identified by Mr Donaldson, on at least five occasions Purple 231 or the Grey mobile also activated the same cell at the ‘unusual’ time.⁷¹⁰³

3659. There was also little movement of Green 071 from which co-location could be concluded. The most ‘extreme’ example of movement is the activation on 25 September 2004 of ANQOUN2, some 50 or so kilometres south of Beirut. The only other two movements out of southern Beirut, were first in activating MEA2, which provides coverage to the airport, on 27 September 2004, and second in activating WARDIE3 and WARDIE2 in central Beirut in the same call on 23 December 2004. The movement of this mobile, with those three exceptions, was confined to the same cluster of cells in south Beirut.

3660. Mr Philips emphasised that it is the combination of: the period of calls, the frequency of calls and the movement of the mobiles, which allows a conclusion of single user attribution based on co-location. Here, the element of real movement is lacking. The ANQOUN2 activation on 25 September provides the only example when either Purple 231 or the Grey mobile were used in a

⁷¹⁰¹ John Edward Philips, T. 20 April 2017, p. 60; Andrew Donaldson, T. 4 July 2017, pp 8-11.

⁷¹⁰² Andrew Donaldson, T. 4 July 2017, p. 9.

⁷¹⁰³ This occurred on 27 September 2004, 6 November 2004, 2 January 2005, 20 January 2005 and 7 February 2005. Similar activity occurred on 13 and 14 January 2005, but at times that were more consistent with the periods identified by Mr Donaldson.

manner that made co-location possible by virtue of the common movements of the mobiles. Otherwise the common activations were of cells in a confined area in southern Beirut.

3661. The Trial Chamber must exercise any evidential doubt in an Accused's favour. So the ultimate question is whether the patterns of use are such that the only conclusion reasonably available from the evidence is that the reason that Green 071 and Purple 231, and Green 071 and the Grey mobile appeared to be co-locating is that they had a single user in Mr Merhi.

3662. It is useful here to compare the activations of the network and personal mobiles attributed to Mr Ayyash and to Mr Badreddine and their co-location and hence whether single-user attribution can be concluded. There is a qualitative difference between those the Prosecution attributes to the other two in both the number of calls and the movements of the mobiles.

3663. Green 300 is attributed to Mr Ayyash. But compared to Green 071, Red 741, which is also attributed to him, had 83 candidate calls on ten days in the 32-days from 14 January to 14 February 2005 inclusive. Mr Philips calculated 39 possible co-locations of Red 741 with Green 300, Blue 233 or Mr Ayyash's personal mobile 091. Green 300 had 94 candidate calls on 29 days between 22 November 2004 and 14 February 2005. It had 34 possible co-locations with Mr Ayyash's personal mobiles 935, 170, 091, and with the network mobiles, Yellow 294 and Blue 233. Blue 233 had 181 candidate calls every day on 36 days from 10 January to 14 February 2005. It had 58 possible co-locations with Mr Ayyash's personal mobiles 935, 170, 091. This is far more than the calls attributed to Mr Merhi.

3664. Regarding Mr Badreddine and Green 023, Mr Philips analysed 1,421 calls over a selected 15 days. He concluded that on these days Green 023 had 55 possible co-locations with one of Mr Badreddine's other mobiles, broken down into 42 with personal mobile 663, nine with sequential mobile 944 and four with personal mobile 354. He concluded that Green 023 may have co-located with these other mobiles on fourteen days, on 28, 29, 30 September, 1, 20 October 2004, 11, 12, 15, 18, 19, 28, 31 January, 11 and 12 February 2005. Thirty-one of the possibly co-locating call pairs occurred within five minutes. Further, cell activations of another 41 pairs of calls with mobiles 663 and 944, in his view, would not have precluded the mobiles' co-location with Green 023.

3665. On the element of movement, Green 023, frequently moved well outside of its most used cells in southern Beirut over the 15 days analysed. On five days, Mr Philips found movement from which there was possible co-location of Green 023 with Mr Badreddine's personal mobiles including activating the same cells within a short period. This included its movements between Beirut and the Jounieh area, 20 kilometres to its north. This provided strong evidence of common movement between the personal mobiles attributed to Mr Badreddine and the Green network mobile, 023.

3666. In the Trial Chamber's view there is insufficient evidence to make a finding to the high standard of beyond reasonable doubt that Mr Merhi was using Green 071. There were an inadequate number of calls, and significantly, a lack of movement from which it could positively conclude that Green 071 was co-locating with either Purple 231 or the Grey mobile in a manner in which the two personal mobiles, plus Green 071, had a single user. The main distinction between Green 071 on the one hand, and Green 300 and Green 023 on the other, is that these latter two mobiles had far more calls and much greater movement from which conclusions of co-location and thus their having a single user could be drawn.

3667. While the Grey mobile and Purple 231 had a single user in Mr Merhi, there is insufficient evidence to reach the high standard of beyond reasonable doubt that Mr Merhi was also using Green 071.

(f) Conclusion

3668. The evidence that Mr Merhi was using the Grey mobile is incontrovertible. The evidence was not challenged by the Defence.

3669. Purple 231 is associated with Mr Merhi, primarily through the furniture delivery to his home in November 2004, and the similarity of its contact and geographical profile with mobile 6091. Its top two contacts were his brother in law and his brother. Its geographical profile is consistent with Mr Merhi's residence in south Beirut. The four highlighted instances of common travel in Lebanon, between Purple 231 and mobile 6091, also provide support to Mr Merhi being its user. Additionally, there is no evidence connecting it with anyone else.

3670. The evidence establishes the co-location of Purple 231 and the Grey mobile. The only reasonable conclusion in these circumstances is that they had a single user in Mr Merhi.

3671. The evidence of Purple 231's and Green 071's geographical profiles and cell activations, however, is insufficient to establish that Mr Merhi was the single user of Green 071. Adding the cell activations of the Grey mobile does not alter this conclusion. The sample size, and the lack of common movement between Green 071 and the other two mobiles, is too small to establish beyond reasonable doubt that Mr Merhi was the single user of Green 071.

D. Hussein Hassan Oneissi—Purple 095

3672. Hussein Hassan Oneissi, formerly known as Hussein Hassan Issa, was born on 11 February 1974, and married to Hala Bachir, whose date of birth is 30 November 1976. They entered into a marital contract in June 1999 in Baabda, and as of June 2012 had three children.⁷¹⁰⁴

3673. The Prosecutor, in the amended consolidated indictment, pleads that Mr Oneissi used one of three 'Purple phones', which 'were used from at least 1 January 2003 until 16 February 2005'. Mr Merhi, Mr Oneissi and Mr Sabra allegedly used their personal mobiles, "'colour-coded **Purple Phones**", in relation to preparations for the attack'. The three mobiles 'were used to coordinate the false claim of responsibility'. A 'history of contact between **ONEISSI, SABRA** and **MERHI**' between January 2003 and 16 February 2005, is also pleaded.⁷¹⁰⁵

3674. The Prosecution relies upon the analysis of Mr Andrew Donaldson to prove that Mr Oneissi was using Purple 095 at the time relevant to the charges against him, namely, between 22 December 2004 and 14 February 2005. Mr Donaldson prepared a report, 'Evidence of Telephone Attribution Hussein Hassan Oneissi', in which he concluded that Purple 095 was attributable to Mr Oneissi from at least 9 January 2003 until 16 February 2005.⁷¹⁰⁶

3675. Mr Donaldson was working with incomplete cell site data. Records were available of the cells to which Purple 095 connected when it made calls from 9 January 2003 onwards. Mr

⁷¹⁰⁴ Exhibit P1066 (Family civil status register extract for Hassan Oneissi), p. 2; exhibit P1069 (Lebanese marriage certificate of Hussein Issa to Hala Bachir and family personal status extract from the Residents' Records of the 1932 Census).

⁷¹⁰⁵ Amended consolidated indictment, paras 15 (e), 16-17, 19 (d); Prosecution's updated pre-trial brief (Ayyash, Badreddine, Oneissi and Sabra case), para. 115.

⁷¹⁰⁶ Exhibit P1949 (Attribution report of Andrew Donaldson regarding Mr Oneissi), para. 1.

Donaldson, however, had no cell site data until 1 August 2004 for incoming calls or texts, namely, of the cell to which a mobile connected when it received calls, and received or sent text messages.⁷¹⁰⁷ This means that the location of the mobile was unknown. Further, the end cell data for voice calls was available only from 1 October 2004.⁷¹⁰⁸

1. Summary of evidence

3676. Purple 095 is the SIM used in at least four consecutive handsets between 31 July 2004 and 16 February 2005. It was a pre-paid Alfa Active mobile subscription. It was activated on 28 December 2002 and deactivated on 17 March 2005, after its last use on Wednesday 16 February 2005.⁷¹⁰⁹ Like Purple 231, attributed to Mr Merhi, Purple 095 was subscribed in the name of the unknown Ibrahim Imad.⁷¹¹⁰

3677. The attribution of Purple 095 to Mr Oneissi, according to Mr Donaldson, is based on Purple 095's call data records, cell site records, contact and geographic profile and documents and witness evidence relating to Mr Oneissi's change of name, his familial relationships, residence and use of professional services throughout the attribution period.⁷¹¹¹

3678. For Mr Donaldson, Purple 095 was a personal mobile that Mr Oneissi used 'to call family members prominently', and was provided as contact number on a number of documents along with a name.⁷¹¹² He acknowledged that Mr Oneissi's wife may have used it on occasions.⁷¹¹³ His assessment was that:

The use of Purple 095, to me, is very typical, normal personal phone use. It's used to call family members prominently. It is provided on regular occasions alongside a name. This

⁷¹⁰⁷ Exhibit P1223 (Call sequence table of Purple 095), pp 1-194; exhibit P1949 (Attribution report of Andrew Donaldson regarding Mr Oneissi), para. 12; Andrew Donaldson, T. 21 June 2017, pp 99-100.

⁷¹⁰⁸ Mr Donaldson did not note this in his report, exhibit P1949, but it is apparent in Purple 095's call sequence table, exhibit P1223. *See also* Gary Platt, T. 7 February 2017, pp 64-65; Prosecution final trial brief, para. 540.

⁷¹⁰⁹ Exhibit P914 (Subscriber note for Purple 095); exhibit P1223 (Call sequence table of Purple 095); Andrew Donaldson, T. 21 June 2017, pp 89-92.

⁷¹¹⁰ Exhibits P914, P900 (Subscriber note for Purple 231). Different addresses were given for Mr Imad in the two subscriptions. Purple 231 was activated on 14 December 2002.

⁷¹¹¹ Exhibit P1949 (Attribution report of Andrew Donaldson regarding Mr Oneissi), paras 1, 4-8, 11, 15-19.

⁷¹¹² Andrew Donaldson, T. 21 June 2017, pp 74-75.

⁷¹¹³ Andrew Donaldson, T. 25 August 2017, p. 59, T. 18 October 2017, pp 74-80.

doesn't, to me, have many traits of somebody who is trying to hide their phone number. It appears to be a perfectly normal phone to me.⁷¹¹⁴

3679. Regarding its discovery, Mr Donaldson testified that the Lebanese ISF identified Purple 095 as a 'suspect phone' and provided this information to the UNIIIC. This was in November 2008. The ISF believed that it had identified Hussein Hassan Issa as its user. Mr Donaldson stated that he and his team sought to independently test its veracity and collect all relevant information about the mobile and its user.⁷¹¹⁵

3680. The evidence underlying the attribution of Purple 095 to Mr Oneissi comes from business and official documents, the testimony of one witness who provided services to Mr Oneissi as Mr Hussein Hassan Issa, and the mobile's contact and geographical profile. Mr Donaldson in his report and testimony analysed this evidence. The Trial Chamber has assessed Mr Donaldson's evidence in light of the underlying evidence. It has not, as explained elsewhere,⁷¹¹⁶ simply accepted Mr Donaldson's assertion in his report that this 'number was attributable to' Mr Oneissi from at least 9 January 2003 to 16 February 2005.

3681. During the attribution period, Purple 095 had 195 contacts with Purple 231, used by Mr Merhi, and 82 with Purple 018, attributed to Mr Sabra.⁷¹¹⁷

(a) Documentary evidence

i. Judicial decision 'correcting' the family name to Oneissi from Issa, January 2004

3682. All documents bar one underlying Mr Donaldson's attribution of Purple 095 to Mr Oneissi relate to Mr Hussein Hassan 'Issa'. The sole exception comes from the Civil Court of Jwaya, that on 12 January 2004, issued seven decisions correcting the family name of Mr Hussein Hassan Issa,

⁷¹¹⁴ Andrew Donaldson, T. 21 June 2017, p. 74.

⁷¹¹⁵ Andrew Donaldson, T. 21 June 2017, pp 74-79. *See also* Andrew Donaldson, T. 25 August 2017, p. 67, T. 19 September 2017, pp 17-22; exhibit 5D414 (Information from ISF regarding Purple 095); exhibit 5D418 (Investigator Notes – Finding the Communication Networks). The UNIIIC received information from the ISF on 22 November 2008, that it believed that 'they may have identified the user of the telephone 3598095, who the ISF hypothesise may have placed the Abu Adass tape in the tree at Riad Al Solh Square. The ISF believe the user may be Hussein Hassan ISSA', exhibit 5D414.

⁷¹¹⁶ *See* sub-section (A) 'Single user analysis', (5) (b) 'Methodology and Trial Chamber's approach to evaluating this evidence'.

⁷¹¹⁷ Exhibit P1223; exhibit P1949 (Attribution report of Andrew Donaldson regarding Mr Oneissi), para. 31.

and his six brothers, from ‘Issa’ to ‘Oneissi’. This was based upon an error incorrectly registering the name of their father, Mr Hassan Ali Issa, as Issa instead of Oneissi.⁷¹¹⁸

3683. Consequently, on the Prosecution’s case, Hussein Hassan Issa and Hussein Hassan Oneissi are the same person, namely, Mr Oneissi, and the names are interchangeable.⁷¹¹⁹

ii. Subscription for Purple 095

3684. An extract from Alfa’s subscriber database provides the same subscriber names for Purple 095 and Purple 231, namely Ibrahim Imad.⁷¹²⁰

3685. Mr Donaldson explained that he had found from his years of experience, and his wide range of inquiries in attempting to identify the users of many numbers, that Lebanese mobile subscriptions frequently do not provide the actual user’s identity. Generally speaking, although a subscription for a number could be in one name, ten documents could consistently attribute it to another person. Therefore, in his view, other documents are more reliable than the mobile subscription. He would therefore defer to them in attributing a mobile number to a particular person.⁷¹²¹

3686. Similarly, his experience of reviewing mobile records revealed that, often, mobile subscriptions are not updated. On multiple occasions, for example, he had seen a father subscribing three lines and then passing them to his children. Thus, the mobiles’ named subscriber never used them.⁷¹²²

3687. Hence, in Mr Donaldson’s view, subscriber notes in isolation must be considered with caution.⁷¹²³

⁷¹¹⁸ The court had corrected their father’s family name on 25 March 2002. Exhibit P1876 (Judicial decisions by the Civil Court of Jwaya), pp 25-27 (ERNs 60216331-60216333); exhibit P1066.

⁷¹²² Andrew Donaldson, T. 22 June 2017, pp 47-48.

⁷¹²³ Andrew Donaldson, T. 22 June 2017, p. 46.

iii. Bank documents

3688. The Trial Chamber received into evidence documents from four banks bearing Hussein Issa's name.

a. Application to Audi Bank

3689. The first set of documents relates to the Audi Bank. On 15 January 2003, an application was made to open a joint bank account at 'Bank Audi S.A.L.' signed by Hussein Issa and Ms Fatima Darwish, to which is annexed a contract to open a joint account. Al-Hadath, Al-Jamous Street, Building Ahmad Abbas, 7th floor is listed as the applicants' address. Purple 095 is listed as a contact number with another number, ending in 188.⁷¹²⁴ Fatima Darwish is Mr Oneissi's mother.⁷¹²⁵

3690. Hussein Issa opened another account with Audi Bank in the following month, on 25 February 2003. As in the application of 15 January 2003, Purple 095 is listed with mobile 188 as the contact numbers, and Hadath / Jamous, Building Ahmad Abbas, as the address. Attached to the application is a copy of Mr Issa's identity card, which lists his date and place of birth as 11 February 1974, Beirut.⁷¹²⁶

b. Application to the Lebanese Canadian Bank

3691. The second bank is the Lebanese Canadian Bank. In June 2010, it produced an application from the 'rightful economic holder Mr. Bilal Mohammed Kheireddine and/or Mr. Hussein Hassan Issa', to open a joint bank account at the Lebanese Canadian Bank S.A.L., dated 1 March 2004, with a contract to open and activate credit accounts at the bank.⁷¹²⁷

3692. In the client form, Purple 095 is listed as the contact number and Al-Jamous Street, Ahmad Abbas Building, 7th floor as the address. The form also contains information concerning Mr Issa's deposits with Audi Bank.⁷¹²⁸

⁷¹²⁴ Exhibit P1877 (Application and contract to open a joint account at Bank Audi S.A.L.), p. 1.

⁷¹²⁵ Exhibit P1066. *See also* exhibit P1876, ERN 60216337; exhibit P1877, p. 11. Ms Darwish's family name is also spelt 'Darwich' in English translations. Nothing turns on this as these are common transliterations of the same Arabic name.

⁷¹²⁶ Exhibit P1878 (Application to open an account at Bank Audi S.A.L.), pp 1, 5.

⁷¹²⁷ Exhibit P1879 (Application and contract to open a credit account at the Lebanese Canadian Bank S.A.L.).

⁷¹²⁸ Exhibit P1880 (Lebanese Canadian Bank S.A.L. Know Your Client form), p. 1.

3693. The bank also stated that it had an account in the name of ‘Mr. Hussein Hassan Issa and / or Kheireddine Bilal Ahmad at our branch in Al-Chiyah’, that was closed on 31 August 2004.⁷¹²⁹ Although Mr Kheireddine’s given names differ on the documents, the account number is the same.

c. Loan application to Bank Saderat Iran and related evidence

3694. The third bank, Bank Saderat Iran, provided an undated loan application in the name of and signed by Hussein Issa, listing Purple 095 as his contact number, with the same address as in the other applications.⁷¹³⁰ It was at the bank’s El-Ghobeiri Branch, and was for the purchase of a newly built apartment in Hadath.

3695. On the application, Mr Issa’s occupation was listed as a freelance accountant earning approximately USD 800 per month, while his wife, Hala’s, was also listed as an accountant, working at ‘FVF’ in Bir-El-Abed, and earning a USD 400 salary. He had had five years of work as a freelance accountant.

3696. According to two bills, signed by Hussein Issa, in favour of Bank Saderat Iran, the bank provided loans of USD 23,800 and USD 500, totalling USD 24,300.⁷¹³¹

3697. The loan was processed on 21 July 2003, and was of USD 18,467 for the ownership of ‘Real Estate 233, Section G/24’ in El-Hadath. The title deed was submitted for the transaction. The loan was repaid in monthly deposits on Mr Issa’s bank account at the El-Ghobeiri Branch, without any cash withdrawals.⁷¹³²

3698. The relevant documents also include a title deed on divided co-ownership, dated 7 October 2002, issued by the Secretariat of the Land Registry of Baabda, Real Estate Zone El-Hadath, concerning land registry plot number 233, real estate number G/24. The property was divided into lots between Hassan Hussein Ali and Ahmad Abass. At the top of the document, the name ‘Hussein Issa’ is handwritten.⁷¹³³ Who wrote it and when is unknown.⁷¹³⁴

⁷¹²⁹ Exhibit P1879, p. 1.

⁷¹³⁰ Exhibit P641 (Bank Saderat Iran loan application form and loan bills), ERN 60276504.

⁷¹³¹ Exhibit P641, ERN 60276506. Bills 021090/2001 and 022211/2001.

⁷¹³² Exhibit P641, ERN 60276501.

⁷¹³³ Exhibit P641, ERN 60276502.

⁷¹³⁴ Prosecution submissions, T. 21 June 2017, pp 83, 85-87, T. 22 June 2017, p. 7.

3699. The loan application was accompanied by an undated loan guarantee to Bank Saderat Iran from Mr Ahmad Abbas for Mr Hussein Issa.⁷¹³⁵

3700. Mr Abbas is a construction developer specialising in apartment building. He stated that Real Estate number 233, section G/24, which is also known as the Ahmad Abbas and Sons Building (his company name) was part of a project he developed in Hadath between 1999 and 2002. This building complex has seven blocks and is just beside the *Lycée des Arts*. Building G would usually be the seventh building in a complex. He had sold approximately 3,000 apartments since 1990. By 2002 he had sold all the apartments.⁷¹³⁶

3701. Mr Abbas did not know Mr Issa, but he did not rule out that he might have seen him, but without remembering him, as he had had some 3,000 clients.⁷¹³⁷ Generally, his clients would provide an irrevocable power of attorney to the bank, the contract would be signed, the bank would pay the remaining amount to him and the client would repay the loan to the bank. Mr Abbas would also provide a loan guarantee to the bank for the client. The client would not be involved in the loan guarantee process.⁷¹³⁸ Mr Abbas was uncertain if his office had any records regarding Mr Issa but that any would be similar to the Real Estate Directorate's.⁷¹³⁹

d. Application to Blom Bank S.A.L.

3702. The fourth bank is the Blom Bank S.A.L., where, on 13 September 2004, Hussein Hassan Issa opened an account at its Rmeil branch. Purple 095 is again listed as his contact number with a landline, ending in 555. The address is the same as for the previous applications, of Al-Hadath, Al-Jamous, Ahmad Abbas Building, but with some additional information, namely, 'near *Lycée des Arts*, Residence Hussein Issa'.⁷¹⁴⁰

3703. Mr Issa's place and date of birth is also the same, namely 11 February 1974, Beirut.⁷¹⁴¹ The place of register is Shhour, Tyre.⁷¹⁴²

⁷¹³⁵ Exhibit P641, ERN 60276505.

⁷¹³⁶ Exhibit P645 (Witness statement of Ahmad Abbas), paras 9, 11, 13-16.

⁷¹³⁷ Exhibit P645 (Witness statement of Ahmad Abbas), para. 20.

⁷¹³⁸ Exhibit P645 (Witness statement of Ahmad Abbas), paras 18-19.

⁷¹³⁹ Exhibit P645 (Witness statement of Ahmad Abbas), paras 20-21.

⁷¹⁴⁰ Exhibit P642 (Banking records from Blom Bank S.A.L.), pp 3, 5, 13.

⁷¹⁴¹ Exhibit P642, p. 3.

⁷¹⁴² Exhibit P642, p. 9.

3704. The same address, namely ‘Street: Near *Lycée des Arts*, Region: Al-Hadath; City: Tyre, Building: Ahmad Abbas’ appears in another related document, Mr Issa’s client information form. The address is listed both as his residential and postal address. The type of residence is the ‘resident’s own property’. Purple 095 is listed as the mobile number together with the same landline number 555.⁷¹⁴³

3705. In the client form, Mr Issa listed that he is an employee, an accountant, at *Al Nachat* Institution, in the field of work of ‘Trade of carpet and Moquette’, and since 1998.⁷¹⁴⁴

3706. Mr Donaldson testified that the company listed as the employer is a carpet shop, which Mr Oneissi’s brother, Ahmad, had run in Tyre since 1998. In Mr Donaldson’s view, the information listing an address in Beirut—Near *Lycée des Arts* Street in Al-Hadath—in another city, Tyre, is confusing.⁷¹⁴⁵

iv. Other documents

3707. A ten-day temporary circulation permit for a Mitsubishi Lancer, issued on 10 September and expiring on 20 September 2004, was issued in the name of Hussein Hassan Issa.⁷¹⁴⁶ The related receipt, issued by the Registration Department of the Traffic and Motor Vehicle Authority at the Lebanese Ministry of Interior, lists Mr Oneissi as the vehicle’s owner as of 20 September 2004. This document also records Purple 095 in the owner’s address field, together with the address Al-Hadath, Al-Jamous Street.⁷¹⁴⁷ This is the same address as that listed in the temporary circulation permit, although the names of the buildings differ: one lists ‘Hussein Issa Building’ and the other shows ‘Hassan Abbas Building’.⁷¹⁴⁸

3708. Similarly, a related, undated certificate—but with the handwritten number 4795/2004, ‘2004’ seemingly indicating its year of issue—issued by the Haret Hreik *mukhtar* lists the

⁷¹⁴³ Exhibit P642, pp 9-10.

⁷¹⁴⁵ Andrew Donaldson, T. 21 June 2017, pp 96-97. *See also* exhibit P1950 (PowerPoint presentation regarding Mr Oneissi, Andrew Donaldson), slide 22.

⁷¹⁴⁶ Exhibit P1883 (Temporary circulation permit for Mitsubishi Lancer owned by Hussein Hassan Issa), p. 1.

⁷¹⁴⁷ Exhibit P1883, pp 1, 5-6.

⁷¹⁴⁸ Exhibit P1883, pp 1, 6.

residential address of Mr Hussein Hassan Issa as Al-Hadath, Hassan Abbas Building, Al-Jamous Street, 7th floor, next to *Lycée des Arts*.⁷¹⁴⁹

3709. Mr Hussein Hassan Issa is also identified as the buyer in an undated sales deed and related documents concerning a Mitsubishi Lancer. His place of residence is Al-Hadath, Al-Jamous street, Hassan Abbas Building. Purple 095 is listed as his residence number.⁷¹⁵⁰

3710. The Oneissi Defence tendered into evidence documents concerning the ownership of real estate by Mr Ayyash, Mr Oneissi, Mr Sabra and Mr Badreddine. A document entitled ‘Information Card on Real Estate Ownership’, issued on 9 November 2011 by the Director General of Real Estate Affairs on the request of the Lebanese Public Prosecution Office at the Court of Cassation, states that Mr Oneissi did not own real estates, according to ‘information transferred until 4 November 2011’. The document does not specify to which period it refers.⁷¹⁵¹

3711. The document also states that Ms Hala Bachir owned real estate number 523, section 10, Real Estate Zone Haret-Hreik, Baabda District.⁷¹⁵² This same information is in another set of documents, issued by the Secretariat of the Land Registry, Baabda. These describe Ms Bachir owning the property as of 25 May 2006, and include a real estate insurance contract, a sales contract, a record of ending of a real estate insurance contract, real estate register, additional real estate register and a real estate certificate.⁷¹⁵³ Mr Oneissi’s name is not mentioned in the documents.

3712. Marriage certificate records and family personal status records identify Ms Hala Bachir as Mr Oneissi’s wife.⁷¹⁵⁴ She is also listed as Mr Issa’s wife in the application, with Mr Kheireddine, to the Lebanese Canadian Bank to open a joint bank account.⁷¹⁵⁵

⁷¹⁵⁴ Exhibit P1069, pp 1-2.

⁷¹⁵⁵ Exhibit P1880, p. 1.

(b) Telecommunications evidence

i. Handset usage

3713. Purple 095's call sequence table shows that this SIM used handset IMEI 351350102829960 between 31 July 2004 and 12 November 2004, handset IMEI 350998806249760 between 12 November 2004 and 5 December 2004, handset IMEI 351347202381110 for four days between 6 December 2004 and 9 December 2004 and handset IMEI 350998806249760 for the remainder of the attribution period.⁷¹⁵⁶

3714. Mr Donaldson explained that change of handset usage in itself does not entail a change in a mobile's user. A handset change should not be considered in isolation, but should be assessed holistically in light of other facts, such as whether it coincided with a mild to strong change in contacts and or geography. This was not the case with Purple 095's contact and geographic profile, which remained consistent throughout the attribution period. In particular, Purple 095's call data records did not show any erratic behaviour throughout the attribution period that would suggest a change in its user.⁷¹⁵⁷

ii. SMS content

3715. The Trial Chamber also viewed some SMS content for Purple 095 between 1 February 2004, from when records were available, and 16 February 2005. Mr Donaldson reviewed Purple 095's SMS records to identify any content consistent with Mr Oneissi as its user. The records are of 21 entries, two of which contain identifying information of either the sender or the recipient. Both are incoming texts.⁷¹⁵⁸

3716. The first SMS is from 20 June 2004, written in mixed English and Arabic, the recipient of which is 'Hossin'. It mentions two other names, Abbas and Hajji Om Ali. It reads in full:

Salam alikom how are u hossin, abbas tell me he send money for me if u please can sendt
with alhaji om ali and he asked about the home,if u see it? thank u.

⁷¹⁵⁶ Exhibit P1223, pp 194 and following; exhibit P1949 (Attribution report of Andrew Donaldson regarding Mr Oneissi), para. 21.

⁷¹⁵⁷ Andrew Donaldson, T. 25 August 2017, pp 90-91, *see also* T. 21 June 2017, pp 91-92.

⁷¹⁵⁸ Exhibit P1222 (Call sequence table of Purple 095 with SMS content), p. 1. According to its call sequence table, exhibit P1223, Purple 095 sent and received 722 text messages, including service SMS.

This was translated into English as:

Peace be with you. how are u Hussein, Abbas told me that he sent money for me if you could please send it with hajji Om Ali and he asked about the home, if you saw it? thank you.

3717. Mr Donaldson considered this SMS as the only relevant one,⁷¹⁵⁹ explaining that it appears to provide Mr Oneissi's name, a name consistent with his brother Abbas's name and potentially a reference to his mother.⁷¹⁶⁰ Mr Donaldson explained that the term 'Hajji Om Ali', given that Mr Oneissi's eldest brother is Ali, may refer to a woman whose eldest son is Ali, that is, Mr Oneissi's mother.⁷¹⁶¹

3718. The second SMS, received on 28 December 2004, is from a boutique selling lingerie, children's wear and make-up, wishing its recipient a 'Happy New Year'.⁷¹⁶²

3719. Mr Donaldson acknowledged that the absence of outgoing SMS content did not assist in having a complete picture for identifying Purple 095's user.⁷¹⁶³

3720. A call sequence table of another Alfa mobile, mobile 755, shows incoming text messages between 25 November 2005 and 31 December 2008 addressed to both Mr Oneissi and his wife, Ms Bachir.⁷¹⁶⁴ Mr Donaldson agreed that mobile 755 may have been a shared mobile.⁷¹⁶⁵ He noted, however, the absence of text messages addressed to Ms Bachir in the SMS content of Purple 095.⁷¹⁶⁶

⁷¹⁵⁹ Exhibit P1949 (Attribution report of Andrew Donaldson regarding Mr Oneissi), paras 24-25; Andrew Donaldson, T. 22 June 2017, pp 20-21, T. 25 August 2017, pp 84, 87.

⁷¹⁶⁴ Exhibit 4D467 (Call sequence table of mobile 755 with SMS content).

⁷¹⁶⁵ Andrew Donaldson, T. 18 October 2017, pp 74-78.

⁷¹⁶⁶ Andrew Donaldson, T. 18 October 2017, pp 78-80.

iii. Contact profile

3721. Mr Donaldson's report lists Purple 095's contact profile, in particular its top 30 ranking numbers.⁷¹⁶⁷ These also include ten Lebanese,⁷¹⁶⁸ one Swiss⁷¹⁶⁹ and one Saudi Arabian⁷¹⁷⁰ numbers. The Prosecution brought no evidence as to who used these numbers.⁷¹⁷¹ The mobile's call sequence table also shows 265 contacts with an unidentified number marked as '0', as the sixth most frequent contact.⁷¹⁷²

3722. Purple 095's call sequence table demonstrates that its most frequent contact throughout the attribution period is with a number attributable to Mr Oneissi's mother, Ms Fatima Darwish. Mr Donaldson's report used this in his attribution analysis.⁷¹⁷³ Mr Donaldson did not identify a number used by Ms Bachir before 16 February 2005.⁷¹⁷⁴ Apart from Ms Darwish, among the most frequent contacts of Purple 095 are three of Mr Oneissi's brothers, Ahmad, Mounir and Mohammed, his sisters Alia and Jamila and some of his in-laws.⁷¹⁷⁵ The Prosecution tendered a family tree of the Oneissi family into evidence.⁷¹⁷⁶

a. Fatima Darwish—Mr Oneissi's mother

3723. Purple 095's call sequence table, as identified by Mr Donaldson, shows 747 contacts between Purple 095 and a number ending in 188, attributable to Ms Darwish.⁷¹⁷⁷ The documents attributing number 188 to Ms Darwish include Mr Oneissi's and Ms Darwish's joint application of 15 January 2003 to open a joint account with Audi Bank, and a registration form at the Lebanese

⁷¹⁶⁷ Exhibit P1949 (Attribution report of Andrew Donaldson regarding Mr Oneissi), paras 26-27, 31, annex A.

⁷¹⁶⁸ These numbers end in 987, 119, 254, 679, 550, 652, 885 and 070, and also include Associate Purple mobiles 251 and 375.

⁷¹⁶⁹ Number 080.

⁷¹⁷⁰ Number 226.

⁷¹⁷⁷ Exhibit P1223; exhibit P1949 (Attribution report of Andrew Donaldson regarding Mr Oneissi), para. 28 (a).

Ministry of Finance to liquidate Mr Oneissi's father's, Mr Hasan Ali Oneissi's, estate following his death in August 2005.⁷¹⁷⁸

3724. Number 188 was subscribed anonymously. In the Alfa subscription note for this number, the field 'Customer name' lists a number instead of a name.⁷¹⁷⁹ The same number was listed both as the home and work number in the name of Ali Hasan Issa in Touch's subscriber database, dated 29 September 2009.⁷¹⁸⁰ A Lebanese official family civil status register extract lists Ali Hassan Issa as Mr Oneissi's brother.⁷¹⁸¹

b. Ahmad (Ahmed) Hassan Oneissi—Mr Oneissi's brother

Number ending in 795

3725. The second most frequent contact of Purple 095, according to the telecommunications evidence, and as set out in Mr Donaldson's report, is with a number ending in 795, attributable to one of Mr Oneissi's brothers, Mr Ahmad Hassan Oneissi.⁷¹⁸² Purple 095 had 695 contacts with this number.⁷¹⁸³

3726. Among the documents supporting the attribution of this number to Mr Oneissi's brother are Mr Ahmad Oneissi's and his wife's—Ms Basima Youssef Darwish's—passport applications, both dated 20 January 2003,⁷¹⁸⁴ Mr Ahmad Oneissi's undated Hajj application⁷¹⁸⁵ and the Lebanese Ministry of Finance registration form for estate liquidation, where this number is listed in the name of 'Ahmed Hassan Oneissi'.⁷¹⁸⁶ This number is subscribed in the name of another of Mr Oneissi's brothers, Mr Abbas Hassan Issa.⁷¹⁸⁷

⁷¹⁷⁸ Exhibit P1882 (Information on Hussein Hassan Oneissi's registration at the Ministry of Finance for liquidation of his father's legacy); exhibit P1877, p. 1.

⁷¹⁸⁶ Exhibit P1882.

⁷¹⁸⁷ Exhibit P911 (Subscriber note for number ending in 795); exhibit P1066.

3727. The same number is listed in a similar name to that of Ms Basima Darwish—Nasima Darwish—in a company’s customer database.⁷¹⁸⁸

3728. In an application for a joint savings account for Ms Basima Darwish and Mr Hussein Hassan Issa, dated 11 November 2008, number 795 is listed for both applicants.⁷¹⁸⁹

Landline 111

3729. Purple 095 was also in contact with a landline number ending in 111, subscribed to his brother Ahmad.⁷¹⁹⁰ This number was listed in the name of Mr Oneissi’s brother, Abbas, on a vehicle bill of sale, dated 2 September 2004.⁷¹⁹¹

3730. Mr Donaldson’s report noted that both numbers, 795 and 111, are listed as Mr Oneissi’s work numbers, along with Purple 095, in his client information form at Blom Bank.⁷¹⁹²

Landline 555

3731. Landline number ending in 555, subscribed in the name of Mr Oneissi’s brother, Ahmad, was also in contact with Purple 095 six times between January 2003 and May 2004.⁷¹⁹³ The same number is listed in Mr Ahmad Hassan Issa’s name, with number 795 in his passport application, dated 20 January 2003.⁷¹⁹⁴

3732. Number 555 was provided for Mr Oneissi’s sister, Ms Mona Hasan Issa, on a bill of sale for a vehicle in 2008.⁷¹⁹⁵

⁷¹⁹⁴ Exhibit P1581, p. 2.

⁷¹⁹⁵ Exhibit P1761 (Vehicle registration documents, Mona Hasan Issa), p. 3; exhibit P1066.

c. Mohammed Kamel Issa—Mr Oneissi's nephew

3733. Another number, ending in 677, with which Purple 095 communicated 235 times, is subscribed in the name of 'Issa Mohamad Kamel'.⁷¹⁹⁶ Mr Donaldson noted that Mr Oneissi has a nephew named Mr Mohammed Kamel Issa.⁷¹⁹⁷

d. Mounir Hassan Issa (Oneissi)—Mr Oneissi's brother—and related family members

Number ending in 154

3734. Purple 095 had 207 contacts with a number ending in 154, attributable to another of Mr Oneissi's brothers, Mr Mounir Hassan Issa.⁷¹⁹⁸ This number was the ninth most frequent contact.⁷¹⁹⁹ The evidence supporting attribution of number 154 includes its subscriber notes, which identify Mr Mounir Hassan Issa as its subscriber,⁷²⁰⁰ an extract from a customer database, where this number is linked with 'Mounir Ounayssi',⁷²⁰¹ and client forms listing number 154 in the name of Mr Mounir Oneissi.⁷²⁰² This number is also listed as Mr Mounir Oneissi's number in the Lebanese Ministry of Finance registration form for estate liquidation.⁷²⁰³

3735. This number is on a bill of sale, issued by the Lebanese Ministry of Interior, Traffic and Motor Vehicle Registration Department, dated 11 January (no year), listing Mr Mounir Oneissi as the seller of a Renault Express. The company El-Diwane (Mounir, Mustafa and Co.) also appears in the bill of sale. Number 154 is listed as the buyer's number.⁷²⁰⁴ Number 154 was also provided

⁷¹⁹⁶ Exhibit P912 (Subscriber note for number ending in 677); exhibit P1223.

⁷¹⁹⁷ Exhibit P1949 (Attribution report of Andrew Donaldson regarding Mr Oneissi), para. 28 (e); exhibit P1064 (Family civil status register extract for Kamel Mohammed Issa); Andrew Donaldson, T. 22 June 2017, p. 41. The father of Mr Mohammed Kamel Issa is called Mr Kamel Mohammed Issa, who is Mr Oneissi's brother-in-law. *See also* exhibit P1951 (Oneissi family links chart).

⁷¹⁹⁸ Exhibit P1223; exhibit P1949 (Attribution report of Andrew Donaldson regarding Mr Oneissi), para. 28 (f); exhibit P1066.

⁷²⁰⁴ Exhibit P1764 (Vehicle registration documents, Mounir Oneissi), p. 3.

as a contact for Mr Mounir Oneissi's wife, Ms Nayla Mohammed Issa, in a passport application, and for his daughter in a vehicle sales contract.⁷²⁰⁵

Number ending in 898

3736. The telecommunications evidence shows that Purple 095 also had a few limited communications with numbers attributable to Mr Mounir Oneissi's wife and children.⁷²⁰⁶ As noted in Mr Donaldson's report and as reflected by Purple 095's call sequence table, there were five contacts with number 898 attributable to three of Mounir's children, Diala, Faten and Faisal.⁷²⁰⁷

3737. The attribution of number 898 is supported by a subscriber note in the name of 'Dyala Mounir Onaissi',⁷²⁰⁸ and documents relating to vehicle registration, including a bill of sale, where number ending in 898 is listed in Ms Diala Mounir Oneissi's name.⁷²⁰⁹

3738. Mr Donaldson also attributed this number to Mr Mounir Oneissi's other two children, Faten and Faisal. This was on the basis of: extracts from the Lebanese University's lists of students listing number ending in 898 in Ms Faten Oneissi's name for the academic years 2005-2006 and 2006-2007⁷²¹⁰ and a passport application by Mr Faisal Mounir Oneissi, dated 10 August 2006, where number ending in 898 is listed as the applicant's number.⁷²¹¹

Landline 081

3739. Purple 095 had one contact with a landline number ending in 081 attributable to Mr Mounir Oneissi's wife, daughter, Faten, and son, Mohammed.⁷²¹² Supporting its attribution, the Trial Chamber admitted a subscriber note in the name of Mr Mounir Oneissi's wife, Ms Nayla

⁷²⁰⁵ Exhibit P1576 (Nayla Mohammed Issa's Lebanese passport application), p. 2; exhibit P1766 (Vehicle registration documents, Daewoo Prince, Diala Mounir Oneissi); exhibit P1067 (Family civil status register extract for Mounir Oneissi).

Mohammed Issa.⁷²¹³ It also received extracts from the Lebanese University's lists of students listing number 081 in Ms Faten Oneissi's name for the 2004-2005 academic year,⁷²¹⁴ and from the Lebanese International University in the name of 'Mohammad Moneir Onaisi' for 2003-2006 with the same number.⁷²¹⁵

Number ending in 695

3740. Another number, ending in 695, subscribed to 'Mounir Hasan Hissa' between August 2004 and February 2005 was in contact 57 times with Purple 095.⁷²¹⁶

e. Bilal Khayreddine (Kheireddine)

3741. The telecommunications evidence shows that Purple 095 had 195 contacts with a number ending in 176.⁷²¹⁷ This number is attributable to Mr Bilal Khayreddine (also transliterated as Kheireddine), based on banking documents. As noted above, he had a joint bank account with Mr Oneissi at the Lebanese Canadian Bank. He provided number 176 in his client information.⁷²¹⁸

f. Jamila Hassan Issa—Mr Oneissi's sister

3742. Throughout the attribution period, Purple 095 had 181 contacts with a number attributable to Ms Jamila Hassan Issa,⁷²¹⁹ who according to the family civil status register is Mr Oneissi's sister.⁷²²⁰ The number ending in 728 was provided by Ms Jamila Issa in a passport application⁷²²¹ and is also listed in the name of 'Jamile Eeisa' in a tow-truck company's customer database.⁷²²²

⁷²¹³ Exhibit P1655 (Subscriber note for number ending in 081).

⁷²²¹ Exhibit P1578 (Jamila Hasan Issa's Lebanese passport application).

⁷²²² Exhibit P1855 (Extract from a tow-truck company's customer database).

g. Mohammed Hassan Oneissi—Mr Oneissi's brother

Number 566

3743. Another number, ending in 566, with which Purple 095 communicated 134 times is attributable to Mr Oneissi's brother, Mr Mohammed Hassan Oneissi.⁷²²³ According to family personal status records, he is married to Ms Zeinab Hussein Khashab.⁷²²⁴

3744. Mr Donaldson testified that number 566's subscriber history was one of the more complicated subscriptions.⁷²²⁵ This number was initially subscribed to 'Mohamad Hassan Issa', from June 1996 to December 2002.⁷²²⁶ Subsequently, throughout Purple 095's attribution period, it was subscribed to 'Zeynab Husse Khachab', until June 2003⁷²²⁷ and then until June 2006 to Abboud Zeinab Hussein Khachab.⁷²²⁸ In 2009, it was subscribed to 'Mohamad Hassan Onaisse'.⁷²²⁹

3745. Number 566 is listed in Mr Mohammed Oneissi's name in the registration form at the Lebanese Ministry of Finance for the liquidation of Mr Oneissi's father's estate⁷²³⁰ and in a form related to the purchase and registration of a vehicle in November 2006.⁷²³¹

Landline 322

3746. Another number, a landline ending in 322 subscribed in the name of Mr Oneissi's brother Mohammed, had six contacts with Purple 095.⁷²³²

3747. Mr Donaldson drew a distinction between a mobile number and a landline number subscription, explaining that a landline's subscriber is usually resident at the landline's address. Hence, Mr Donaldson considered landline contacts more reliable because of the generally high

⁷²³² Exhibit P1654 (Subscriber note for landline 322); exhibit P1223, pp 5-6, 25; exhibit P1949 (Attribution report of Andrew Donaldson regarding Mr Oneissi), para. 28 (l).

correlation between the name and the identified users, which is not necessarily the case with mobile subscriptions.⁷²³³

3748. Mr Donaldson had experienced only limited examples of a landline subscription being used beyond the family. This was unlike mobile subscriptions, which frequently do not provide the actual user's identity.⁷²³⁴ Also, a property is needed for the landline's installation.⁷²³⁵

h. Alia Hassan Issa—Mr Oneissi's sister

3749. Purple 095 had 67 contacts with a number attributable to another member of Mr Oneissi's family, his sister, Ms Alia Hassan Issa.⁷²³⁶ The attribution evidence includes Ms Issa's Hajj registration⁷²³⁷ and the registration form at the Lebanese Ministry of Finance for the liquidation of Mr Oneissi's father's estate.⁷²³⁸ Both documents list the number ending in 837 in Ms Alia Hasan Issa's name.

3750. The same number is also listed in the names of Mr Hassan Abdel Karim Jaber and Ms Najjat Abdel Karim Jaber in their university registrations.⁷²³⁹ According to Ms Najjat Jaber's university registration form, the student's father's name is Abdel Karim and the family name is Jabr. Ms Alia Issa is listed as Ms Najjat Jaber's mother.⁷²⁴⁰

i. Mazen Hasan Bachir and Hasan Hussein Bachir—
Mr Oneissi's brother-in-law and father-in-law

3751. An official family personal status extract lists Mr Hasan Hussein Bachir as the father of Mr Oneissi's wife and Mr Mazen Hasan Bachir as her brother.⁷²⁴¹

⁷²⁴⁰ Exhibit P1013.

⁷²⁴¹ Exhibit P1068 (Family personal status extract for Hasan Hussein Bachir); exhibit P1069.

Numbers ending in 727 and 376

3752. The telecommunications evidence shows that Purple 095 was in frequent communication, 204 times, with a post-paid number ending in 727 subscribed to Mr Mazen Hasan Bachir.⁷²⁴² The call data records also show 42 contacts between Purple 095 and a number ending in 376.⁷²⁴³ This number is subscribed to ‘Hassan Husein Bachir’⁷²⁴⁴ and appears as Mr Bachir’s contact number in documents related to the purchase and registration of a vehicle, dated 4 February 2008.⁷²⁴⁵ Mr Mazen Bachir provided the same number in his passport application, dated 22 February 2010.⁷²⁴⁶

Number ending in 953

3753. In February 2005 Purple 095 had five contacts with another number, which may be linked to Mr Oneissi’s brother-in-law, Mr Mazen Bachir.⁷²⁴⁷ This number, ending in 953, was subscribed to ‘Mazen Hasan Bachir’ on 26 January 2005.⁷²⁴⁸

j. Rabih Hassan Bachir—Mr Oneissi’s brother-in-law

Number ending in 895

3754. Purple 095 had 25 contacts with a number, ending in 895,⁷²⁴⁹ which throughout Purple 095’s attribution period was subscribed as an anonymous prepaid Touch number.⁷²⁵⁰ Subsequently, in August 2005, it was subscribed to Mr Rabih Hasan Bachir, Mr Oneissi’s brother-in-law.⁷²⁵¹

3755. Given his experience in examining subscription records, Mr Donaldson explained that this is a typical example of an updated subscription record. He noted that both subscriptions are

⁷²⁴² Exhibit P1501 (Subscriber note for number ending in 727).

relevant, explaining that in this instance number 895's calls ran up to the date of its re-subscription and then proceeded immediately, meaning the number was never returned to Touch for redistribution.⁷²⁵²

Landline 731

3756. In 2003, Purple 095 had eight contacts with a landline number, ending in 731, subscribed as of 4 August 2003 in the name of Mr Rabih Hasan Bachir.⁷²⁵³ The same number is his contact number in his passport application, dated 21 October 2005, in a vehicle sales contract, dated 7 September 2006, and related documents.⁷²⁵⁴

k. Witness 67—Mr Oneissi's service provider

3757. Purple 095's call sequence table shows 65 contacts with three numbers associated with Witness 67, who provided professional services to Mr Issa between 15 January 2003 and 28 January 2005.⁷²⁵⁵ Purple 095 had 44 contacts with one of the witness's business's landline numbers and 20 contacts with the other.⁷²⁵⁶ Purple 095 also had one contact with Witness 67's mobile.⁷²⁵⁷

3758. The Trial Chamber received Witness 67's business card into evidence, which displays the three telephone numbers. Two were his office numbers. The third was his personal mobile number since 1990 or 1992, including between 2000 and 2005, used for personal and professional purposes.⁷²⁵⁸

⁷²⁵⁸ Exhibit P599 (Copy of Witness PRH067's business card); Witness PRH067, T. 30 September 2015, pp 20-22.

(c) Witness 67's testimony and related evidence

3759. Witness 67 provided services to Mr Oneissi as Mr Issa between January 2000 and August 2004.⁷²⁵⁹ Mr Oneissi—registered in Witness 67's business records as Houssein Hasan Issa—had 49 appointments at Witness 67's business between 3 January 2003 and 21 August 2004.⁷²⁶⁰

3760. Mr Issa became Witness 67's client around the end of 1999 and at the beginning of 2000. His last appointment was on 21 August 2004. Mr Issa's personal details, which included his name, date of birth and contact number, were initially recorded on paper. In 2000, the business switched to electronic records and Mr Issa's details were transferred to the electronic system.⁷²⁶¹

3761. The only contact telephone number provided by Mr Issa was Purple 095. The call data records show numerous communications with Witness 67's two office numbers from January 2003 to January 2005,⁷²⁶² and one incoming call from the witness's mobile number in July 2004.⁷²⁶³

3762. Witness 67's business recorded appointment dates without times.⁷²⁶⁴ The witness, however, remembered that Mr Issa would come to his office mostly in the afternoon because Mr Issa was taking morning classes at the Arab University.⁷²⁶⁵ Once, he attended an appointment with his wife 'and that was not usual'. The witness also 'learned that he wasn't working'.⁷²⁶⁶

3763. After their last appointment on 21 August 2004, Witness 67's office continued to call Mr Issa either to make a new appointment or to discuss unpaid bills for the services provided to him.⁷²⁶⁷ Usually, his secretaries contacted the clients, but if there was a problem or if the witness had to ask private questions, the secretary would pass the call to the witness.⁷²⁶⁸

⁷²⁵⁹ Witness PRH067, T. 30 September 2015, pp 26-27, 42; exhibit P602 (Business records concerning the client Hussein Hasan Issa).

⁷²⁶⁴ Witness PRH067, T. 30 September 2015, p. 31.

⁷²⁶⁵ Witness PRH067, T. 30 September 2015, pp 31, 39, 42-43.

⁷²⁶⁶ Witness PRH067, T. 30 September 2015, p. 39.

⁷²⁶⁷ Witness PRH067, T. 30 September 2015, pp 31-32, 50-51.

⁷²⁶⁸ Witness PRH067, T. 30 September 2015, pp 21, 47-48.

3764. After 21 August 2004, 12 calls were made from Witness 67's office to Purple 095, ten between August and November 2004 and two in January 2005.⁷²⁶⁹

3765. Witness 67 'immediately' recognised a photograph of Mr Oneissi as that of his client Mr Issa, from a photo board of twelve people that Prosecution investigators showed him.⁷²⁷⁰ Mr Donaldson used Witness 67's evidence as a further attribution point allowing him to test the information in the documents and the call data records attributing Purple 095 to Mr Oneissi.⁷²⁷¹

(d) Geographic profile

3766. Mr Donaldson compiled a geographic profile for Purple 095 based on Mr Oneissi's address as provided in various documents under the name Issa, the location of Mr Oneissi's appointments with Witness 67 and Purple 095's most frequently used cell sectors.⁷²⁷²

3767. Mr Donaldson, however, conceded that Purple 095's geographic profile, taken in isolation, did not rule out that the mobile had more than one user, or that its user was not Mr Oneissi.⁷²⁷³

i. Mr Oneissi's address

3768. Mr Donaldson's geographical profile for Purple 095 was based on documents providing addresses for Hussein Issa. His report identifies the following addresses within the attribution period, in particular between 15 January 2003 and 13 September 2004:

- Al-Hadath, Al-Jamous Street, Ahmad Abbas Building, 7th floor;
- El-Hadath, El-Jamous, Ahmad Abass, 7th floor;
- Al-Jamous, Al-Jamous Street, Ahmad Abbas Building, 7th floor;

⁷²⁶⁹ Exhibit P1223, pp 202-203, 210, 213, 222, 235, 237, 244, 246, 259, 270.

⁷²⁷³ Andrew Donaldson, T. 25 August 2017, pp 18-19.

- Tyre-Shhour – Issa Property;
- Al-Hadath, Hussein Issa Building, Al-Jamous Street and Al-Hadath, Hassan Abbas Building, Al-Jamous Street; and
- Al-Hadath, Al-Jamous, near *Lycée des Arts*, Ahmad Abbas Building, Residence Hussein Issa.⁷²⁷⁴

3769. Another address associated with Mr Oneissi, but after the attribution period, is Real Estate number 523, section 10, Haret-Hreik, Baabda, that his wife, Ms Hala Bachir, purchased in 2006.⁷²⁷⁵

3770. Regarding the property in Al-Jamous Street, Mr Donaldson referred to a Bank Saderat Iran transaction to purchase Real Estate number 233, section G/24 in the El-Hadath area, but he could not identify which building was the seventh or ‘G’.⁷²⁷⁶

3771. A Prosecution analyst, Mr Andrew Fahey, compared the locations of Real Estate number 233. He found that it was less than ten metres from the *Lycée des Arts* and 60 metres from Al-Jamous Street.⁷²⁷⁷ The Prosecution did not find a landline registered either to Mr Oneissi or linked to plot G/24.⁷²⁷⁸

ii. Most frequently used cell sectors

3772. Mr Donaldson explained that Alfa’s call data for the period before 31 July 2004 reflects cell data only for outbound calls, and cell ID was also often absent for this period.⁷²⁷⁹ Therefore, in the table of Purple 095’s most frequently used cells below he denoted the missing cell data for

⁷²⁷⁴ Exhibit P1877, p. 1; exhibit P641, ERN 60276504; exhibit P1880, p. 1; exhibit P1884 (Information from Special Investigation Commission Fighting Money Laundering *Banque du Liban*), ERN 60238125; exhibit P1883, pp 1, 6; exhibit P642, p. 3; exhibit P1949 (Attribution report of Andrew Donaldson regarding Mr Oneissi), para. 32 (c)-(h).

⁷²⁷⁷ Exhibit P662 (Statement of Andrew Fahey), paras 113-121, pp 87-93 (annex 5).

⁷²⁷⁸ Andrew Donaldson, T. 25 August 2017, pp 60-61.

⁷²⁷⁹ Exhibit P1949 (Attribution report of Andrew Donaldson regarding Mr Oneissi), paras 12, 36; Andrew Donaldson, T. 21 June 2017, pp 99-100, T. 22 June 2017, pp 10-11, T. 25 August 2017, pp 9-13.

3,728 calls as ‘N/A’.⁷²⁸⁰ In other words, the cell site information is incomplete before 1 August 2004. The table of cell activations is below:

Rank Order	Cell Name	Total	Percentage
1	N/A	3,728	45.80%
2	SFEIR2	694	8.53%
3	BRAJNE2	605	7.43%
4	SFEIR3	582	7.15%
5	ROUEIS2	217	2.67%
6	HARA2	170	2.09%
7	BRAJNE1	153	1.88%
8	MIKAEL2	146	1.79%
9	HADATH3	127	1.56%
10	ROUEIS3	115	1.41%

Attribution report of Andrew Donaldson regarding Mr Oneissi—exhibit P1949, para. 36

3773. From 1 August 2004 until the end of the attribution period, 16 February 2004, SFEIR2, SFEIR3 and BRAJNE2 were the most frequently used cells.⁷²⁸¹ Mr Donaldson concluded that including the end cell data, which is available from 1 October 2004, did not significantly change Purple 095’s geographic profile.⁷²⁸²

3774. Mr Donaldson noted that ROUEIS2 and subsequently SFEIR3 were predominantly used during the day, with the hours between 10:00 and 17:00, the ‘usual working hours’, amounting to

⁷²⁸⁰ Exhibit P1949 (Attribution report of Andrew Donaldson regarding Mr Oneissi), paras 12, 36; Andrew Donaldson, T. 21 June 2017, pp 99-100, T. 22 June 2017, pp 10-11, T. 25 August 2017, pp 9-14. *See also* exhibit 4D324.

⁷²⁸¹ Exhibit P1949 (Attribution report of Andrew Donaldson regarding Mr Oneissi), paras 36-38, 41; Andrew Donaldson, T. 25 August 2017, pp 12-13.

⁷²⁸² Andrew Donaldson, T. 25 August 2017, p. 10; exhibit P1949 (Attribution report of Andrew Donaldson regarding Mr Oneissi), para. 42.

three quarters of all activations. By contrast, the majority of activations for SFEIR2 and BRAJNE2 occurred outside of these hours.⁷²⁸³

3775. The map below, extracted from Mr Donaldson's report, shows the proximity of Real Estate 233, the address that Mr Issa frequently used on forms, with the predicted best server coverage areas of Alfa's SFEIR2, BRAJNE2, ROUEIS2 and HARA2:

'Map of home address with predicted best serving coverage'—Attribution report of Andrew Donaldson regarding Mr Oneissi—exhibit P1949, p. 24

⁷²⁸³ Exhibit P1949 (Attribution report of Andrew Donaldson regarding Mr Oneissi), paras 39-40; Andrew Donaldson, T. 22 June 2017, pp 12-13.

iii. Cell activations during Mr Oneissi's appointments with Witness 67

3776. Throughout the attribution period, in particular between 10 January 2003 and 18 November 2004, Purple 095 activated two cells of a certain Alfa cell site 40 times. Thirty-seven of these were on 22 days on which Mr Oneissi had appointments with Witness 67.⁷²⁸⁴ Most were either around noon or in the afternoon.⁷²⁸⁵

3777. A Prosecution analyst, Ms Helena Habraken, analysed the call data records of Purple 095 and Witness 67's records of appointments with Mr Oneissi. She concluded that the location of Witness 67's office falls within the predicted best coverage of one of the Alfa cells and the other is in its vicinity.⁷²⁸⁶

3778. Mr Donaldson calculated that the 22 appointment days on which Purple 095 activated these two Alfa cells aligned with 95 per cent of its use of this cell.⁷²⁸⁷ Further, Mr Oneissi's residence is not near Witness 67's business, and the cell covering the witness's office is not within the cells most frequently used by this mobile.⁷²⁸⁸

3779. The significance of this is in showing that on a day when it is known where Mr Oneissi was, Purple 095 was also there. Mr Donaldson concluded that this corroborates other information that suggests that Mr Oneissi was in control of Purple 095 during the attribution period.⁷²⁸⁹ In his view, the distinctive cell site usage aligns with Mr Oneissi's activities.⁷²⁹⁰

2. Submissions

(a) Prosecution

3780. The Prosecution submits that there is a link between Purple 095 and Purple 231, given that the subscriber name of both mobiles is the same, despite different people using them.⁷²⁹¹ Purple

⁷²⁸⁴ Exhibit P1223, pp 1-2, 7, 46, 83-84, 86, 88, 90, 101-102, 107-108, 110-111, 165, 168-169, 182, 184-185, 195-197, 243; exhibit P602, pp 2, 8-9; exhibit P1949 (Attribution report of Andrew Donaldson regarding Mr Oneissi), paras 45, 47-48.

⁷²⁸⁵ Exhibit P1223, pp 1-2, 84, 86, 88, 90, 101, 107-108, 110, 168-169, 182, 184-185, 195-197.

⁷²⁸⁹ Andrew Donaldson, T. 22 June 2017, pp 54-55.

⁷²⁹⁰ Andrew Donaldson, T. 22 June 2017, p. 55.

⁷²⁹¹ Prosecution final trial brief, para. 164.

095's use was conventional, namely to frequently call family members. It was regularly provided as a contact number for Mr Oneissi in different documents throughout the attribution period.⁷²⁹²

3781. Purple 095's contact profile demonstrates that its user was in regular and consistent contact with numbers attributed to Mr Oneissi's family members, including his mother, three brothers, two sisters, two brothers-in-law and his father-in-law. This number was also in regular and consistent contact with Mr Kheireddine, with whom Mr Oneissi held a joint bank account.⁷²⁹³

3782. Another relevant piece of evidence is an SMS to Purple 095 from 20 June 2004, addressing the recipient as 'Hussein' and mentioning Mr Oneissi's brother and mother.⁷²⁹⁴

3783. Purple 095's most frequently used cells provide coverage to 'the vicinities of Mr Oneissi's home address'.⁷²⁹⁵ These cells and the most frequent contacts remained constant throughout the attribution period, which illustrated that there was no change in the mobile's user.⁷²⁹⁶ As regards the Oneissi Defence's contention that there is no clear evidence that Mr Oneissi owned an apartment at plot 233, the Prosecution submits that his actual legal status is irrelevant. It does not matter whether he owned or rented the apartment. What matters is that throughout the attribution period Mr Oneissi regularly provided this address as his address of residence.⁷²⁹⁷

3784. A further attribution point comes from the evidence concerning Mr Oneissi's appointments with Witness 67, with whom Purple 095 had multiple communications and activated the cell providing predicted best server coverage to the witness's office's location when Mr Oneissi had scheduled appointments.⁷²⁹⁸ Witness 67 recognised Mr Oneissi as his customer, describing the recognition as obvious since he remembered him.⁷²⁹⁹

3785. According to the Prosecution, the Defence's proposition that Mr Oneissi's wife could have been Purple 095's co-user is not supported by any evidence. There is no evidence that this mobile

⁷²⁹² Prosecution final trial brief, paras 164-165.

⁷²⁹⁹ Prosecution final trial brief, para. 173; Prosecution closing submissions, T. 12 September 2018, pp 11-12.

was shared with anyone, including Mr Oneissi's wife, unlike another mobile, ending in 755, subsequent to Purple 095's attribution period.⁷³⁰⁰

(b) Oneissi Defence

3786. The Oneissi Defence contends that as the telecommunications evidence is the backbone of the case against Mr Oneissi, the Prosecution must establish that Mr Oneissi was the sole user for Purple 095 for each SMS and call record relied on by the Prosecution.⁷³⁰¹

3787. The attribution of Purple 095 to Mr Oneissi must meet the standard of beyond a reasonable doubt. This is an indispensable fact for a conviction, which has not been established.⁷³⁰² The Prosecution has not proven this, nor that its cell site analysis or the Alfa telecommunications evidence can establish the physical locations of Purple 095 on the basis of its call data records.⁷³⁰³

3788. Mr Donaldson lacks expertise in cell site analysis, specifically attribution. He has no formal training in attribution techniques, he never testified on the attribution of mobiles, nor has he ever composed a written report that was used as evidence.⁷³⁰⁴

3789. In addition, the Prosecution elected not to have Mr Donaldson's attribution report peer-reviewed by the Prosecution's only expert in cell site analysis, Mr J. E. Philips. Much of Mr Donaldson's report contains opinion-based conclusions that must be disregarded in accordance with international case law. In addition, Mr Donaldson's bias is reflected in his testimony. He willfully omitted evidence or specifically selected evidence to provide to the Trial Chamber.⁷³⁰⁵

3790. For instance, Mr Donaldson unequivocally stated that Mr Oneissi purchased plot 223 while he was a renter, which was later demonstrated to be contradictory to documents provided by the

⁷³⁰⁴ Oneissi Defence final trial brief, para. 15.

⁷³⁰⁵ Oneissi Defence final trial brief, paras 16-21. Mr Donaldson, in response to a question regarding the possibility that Purple 095 was shared between Mr Oneissi and his wife, stated that if that had been the case, 'her name "should be on the indictment"', which according to the Oneissi Defence is 'a clear demonstration of his prejudice against Mr Oneissi'.

Secretariat of Baabda Land Registry. Mr Donaldson actively removed this document from the final version of his attribution report.⁷³⁰⁶

3791. The documents do not link Purple 095 to Mr Oneissi beyond 20 September 2004, which is three months before the indictment period. Along similar lines, the SMS review of Purple 095 conducted by Mr Donaldson was limited to 34, roughly six per cent, of 552 non-service text messages.

3792. Of the six per cent, Mr Donaldson found only one relevant SMS. It was the only recorded contact between Purple 095 and the other number and it predated the indictment period by six months.⁷³⁰⁷

3793. Purple 095's attribution is based primarily on the location of the mobile and the cell towers it activated. The core issue, however, is that the Prosecution has not established the actual location of Mr Oneissi's residence, nor that it is in the *actual* as opposed to *theoretical* coverage area of the cells.⁷³⁰⁸ Moreover, the cell site data was missing for all incoming calls, all outgoing and incoming text messages before 1 August 2004 and all end cell data before 1 October 2004. The data set was therefore incomplete for 82 per cent of the attribution period. For 46 per cent of the calls and text messages, the cell to which Purple 095 connected remains unknown.

3794. This incomplete data set provides an incomplete geographical profile for Purple 095, creating a likelihood that those missing cell sites were not in the area alleged to be Mr Oneissi's residence.⁷³⁰⁹

3795. The Lebanese Land Registry's response to the requests for assistance confirms that Mr Oneissi never owned plot 233, which the Prosecution uses to place him in the designated coverage areas of Purple 095. The initial alleged residence of Mr Oneissi did not fall within any of the suggested most frequently used cells by Purple 095, therefore not matching its geographical profile. When questioned on this particular point, Mr Donaldson asserted that this location was

⁷³⁰⁶ Oneissi Defence final trial brief, para. 22.

⁷³⁰⁷ Oneissi Defence final trial brief, paras 23-24; Oneissi Defence closing submissions, T. 19 September 2018, pp 125-127. *See also* exhibit 4D384 (Timeline of attribution evidence regarding Mr Oneissi).

⁷³⁰⁸ Oneissi Defence final trial brief, paras 27, 29, 31-35; Oneissi Defence closing submissions, T. 19 September 2018, pp 127-128.

⁷³⁰⁹ Oneissi Defence final trial brief, para. 28; Oneissi Defence closing submissions, T. 19 September 2018, pp 42-43, 46-48.

‘established as being incorrect’ however, this is clearly wrong as no location has been established for Mr Oneissi’s residence.⁷³¹⁰

3796. Witness 67’s evidence was limited in temporal scope to 21 August 2004, the last appointment between Mr Oneissi and the witness. This occurred four months before the indictment period. Witness 67 did not see Mr Oneissi after that. All subsequent calls made to Purple 095 were through the witness’s office, not through him personally, so he could not confirm that Mr Oneissi answered the calls.⁷³¹¹

3797. Both Mr Donaldson and Mr Gary Platt observed that sharing a mobile in the family was a common practice throughout Lebanon.⁷³¹² The SMS evidence does not rule out that Purple 095 was used by more than one person. Another SMS analysed by Mr Donaldson appeared to be from a lingerie store.⁷³¹³

3798. Purple 095’s contact profile is also inconclusive. The top 30 known contacts are comprised of Oneissi and Bachir family members, but Mr Donaldson was unable to establish a relationship for 13 of the 27 non-service numbers with Mr Oneissi.⁷³¹⁴

3799. Additionally, Mr Oneissi’s wife is missing from these contacts. This is highly unusual in light of Mr Philips’s cell site analysis report suggesting that a spouse is usually listed second in a typical list of contacts.⁷³¹⁵

3800. The attribution evidence of Purple 095 supports the likelihood that it was a shared mobile. The Prosecution was only interested in finding documents listing Mr Oneissi’s name and not Purple 095. Moreover, the ‘additional attribution point’ was based on only 65 out of 8,140 calls and or texts, which in no way rules out the shared use of Purple 095.⁷³¹⁶

3801. Mr Donaldson’s evidence was also tainted by ‘confirmation bias’. He admitted that he merely sought to corroborate the information that the Lebanese ISF provided to the UNHCR,

⁷³¹⁰ Oneissi Defence final trial brief, paras 32, 35.

⁷³¹¹ Oneissi Defence final trial brief, para. 36; Oneissi Defence closing submissions, T. 19 September 2018, p. 127.

⁷³¹² Oneissi Defence final trial brief, para. 39.

⁷³¹³ Oneissi Defence final trial brief, paras 25, 42.

⁷³¹⁴ Oneissi Defence final trial brief, paras 26, 42.

⁷³¹⁵ Oneissi Defence final trial brief, para. 26.

⁷³¹⁶ Oneissi Defence final trial brief, paras 41-42; Oneissi Defence closing submissions, T. 19 September 2018, pp 128-129.

namely that Mr Oneissi was Purple 095's user. This is discernible in various requests for assistance in which the Prosecution sought information in relation to Mr Oneissi and not with regard to Purple 095.⁷³¹⁷

3. Findings

3802. As a preliminary matter, the Trial Chamber is not satisfied that the Lebanese ISF's possible identification of Purple 095 in November 2008, and of Hussein Hassan Issa as its user, and the Prosecution's requests for assistance regarding Mr Oneissi demonstrates confirmation bias in Mr Donaldson's attribution analysis.

3803. Investigations typically start with leads. They have to come from somewhere. The ISF had been investigating, since February 2005, the networks it considered were involved in the attack. On 22 November 2008, unidentified ISF officials informed the UNIIC of ISF suspicions regarding Purple 095. But this fact alone cannot demonstrate that Mr Donaldson was attempting to confirm that Mr Oneissi was using Purple 095, and was biased towards doing so merely because of the ISF's suspicions. There is no evidence of this.

3804. Moreover, the UNIIC investigator's note containing this information, exhibit 5D414, attributes Purple 018 not to Mr Sabra, but rather to Assad Salloum. On the Oneissi Defence's confirmation bias theory, Mr Donaldson and his team would not have investigated Mr Sabra's possible involvement in the crimes charged, but rather should have attempted to prove the culpability of another person.

3805. The evidence reveals that the Prosecution engaged in an enormous amount of investigation of numerous of Purple 095's (and Purple 018's) contacts in attempting to discover who was using the mobile(s). These included the standard investigatory inquiries of banks, official registries and contacts of the number. They all led in one direction, namely to Hussein Hassan Issa or Oneissi. On this point, the evidence also conclusively proves that Hussein Hassan Issa and Hussein Hassan Oneissi are the same person.

⁷³¹⁷ Oneissi Defence final trial brief, para. 38, referring to exhibit 5D414; exhibit 4D466 (Various Prosecution requests for assistance requesting records from Lebanese entities); exhibit 4D466.1 (Index of Prosecution requests for assistance and responses); Oneissi Defence closing submissions, T. 19 September 2018, pp 129-130.

3806. Throughout the attribution period, Mr Oneissi, using his former family name Issa—and even after its formal judicial correction in January 2004 to Oneissi—consistently used Purple 095 as his contact number for business and official reasons. This is demonstrated by the various documents where Mr Oneissi provided Purple 095 as his number, and often as his only number.

3807. That Purple 095 was not subscribed in Mr Issa's or Mr Oneissi's name does not affect its attribution to Mr Oneissi. The Trial Chamber, in this respect, accepts Mr Donaldson's evidence of his experience that Lebanese mobile subscriptions—at least in the attribution period—often did not provide the actual user's identity, or were not updated when the mobile was given to someone else. The Trial Chamber received an abundance of evidence to this effect, including in the form of subscriber notes. Subscriber details were not required for pre-paid SIM cards.

3808. The numerous documents, such as applications to open bank accounts and to purchase a Mitsubishi Lancer, listing Purple 095 as Mr Issa's contact, provide consistent and mutually corroborating evidence that Mr Issa/Oneissi was Purple 095's actual user.

3809. Mr Donaldson did not analyse Purple 095's call patterns to attempt to find a unique geographical signature—as identified by Mr Philips⁷³¹⁸—that would identify its user as Mr Oneissi, based upon things such as his home and work addresses and his lifestyle patterns. This is with the exception of noting in his report the timing of the majority of the activations of the cells ROUEIS2, SFEIR3, SFEIR2 and BRAJNE.⁷³¹⁹ The Prosecution made no submissions to the effect that such a profile proved that it could only have been Mr Oneissi's mobile.

3810. However, Purple 095's contact profile provides strong evidence that he was its user. The call data records demonstrate that a significant number of the top 30 contacts are with numbers attributed to Mr Oneissi's family, in-laws and acquaintances. Most notably, the highest-ranking contact is with a number attributable to his mother, Ms Fatima Darwish, with which Purple 095 had 747 contacts. The second ranking contact is with one of Mr Oneissi's brothers, Ahmad. Within the 15 top ranking contacts are also two other brothers of Mr Oneissi, one of his sisters and Mr Kheireddine, with whom Mr Oneissi had a joint bank account.

⁷³¹⁸ Exhibit P549, p. 151.

⁷³¹⁹ Exhibit P1949 (Attribution report of Andrew Donaldson regarding Mr Oneissi), paras 37-40.

3811. Further, its contact profile demonstrates consistent usage throughout the attribution period. The communication with Mr Oneissi's mother shows a calling pattern between these two numbers from the first date until 15 February 2005. The same applies to the communication with Mr Oneissi's brother, Ahmad, with which Purple 095 had 695 contacts.

3812. Additional supporting evidence is in a single text message, received on 20 June 2004, sent to 'Hossin' (Hussein) and mentioning 'Abbas' and 'Ali', which are the names of two of Mr Oneissi's brothers. SMS is an informal method of communication in which names are not typically used. This mobile's text messages seem to fit that profile. On this point, and significantly, no Party directed the Trial Chamber to any other text mentioning a name pointing towards someone other than Mr Oneissi using the mobile. Thus, the only positive evidence of a recipient name in any text is that of 'Hossin', meaning 'Hussein', Mr Oneissi's given name.

3813. The consistency of Purple 095's communications throughout the attribution period also signifies that the SIM's use of four handsets was not due to a change in its user.

3814. Further evidence that Mr Oneissi was Purple 095's user throughout the entirety of the attribution period comes from Witness 67, his client records concerning Mr Issa and the call data records of Purple 095's communications with his business's two office numbers.

3815. Mr Issa's client profile, as in the other documents, lists Purple 095 as his contact number. Moreover, this is the only number that he provided. Witness 67 also recognised Mr Oneissi from a photo board and confirmed that it was of his client Mr Issa. This establishes an additional compelling link between Mr Oneissi and Purple 095. Additionally, on the 22 days when Mr Oneissi had appointments at the witness's office, Purple 095 activated cells providing predicted best server coverage to it. Many of these cell activations occurred in the afternoon, which was when Witness 67 had most appointments with Mr Issa.

3816. In addition, the two cells that Purple 095 activated almost every time Mr Issa visited Witness 67's office within the attribution period—37 out of 40 activations—do not fall within its most frequently used cell sectors. This provides further support to the conclusion that Purple 095's user had a particular reason to visit the area in the predicted best coverage of these two cells, namely of Mr Oneissi visiting Witness 67. Incontrovertibly, on this evidence, Mr Oneissi—who it is emphasised that Witness 67 recognised in a photograph—was using Purple 095.

3817. As regards Purple 095's geographic profile, the Trial Chamber has received evidence of sufficient documents to associate Mr Oneissi (as Mr Issa) with the address Al-Hadath, Al-Jamous, near *Lycée des Arts*, Ahmad Abbas Building, residence Hussein Issa. Moreover, in July 2003 Mr Oneissi, as Mr Issa, borrowed USD 24,300 from the Iran Saderat Bank to buy the property.

3818. As with Purple 095, Mr Issa consistently provided this address, with some variations, in his applications to open bank accounts, loan applications and in the records related to the purchase of the Mitsubishi Lancer. However, unlike Mr Oneissi's appointments at Witness 67's office, there is no evidence linking the activations of SFEIR2 and BRAJNE2 with his presence at this residence on particular days or times of day.

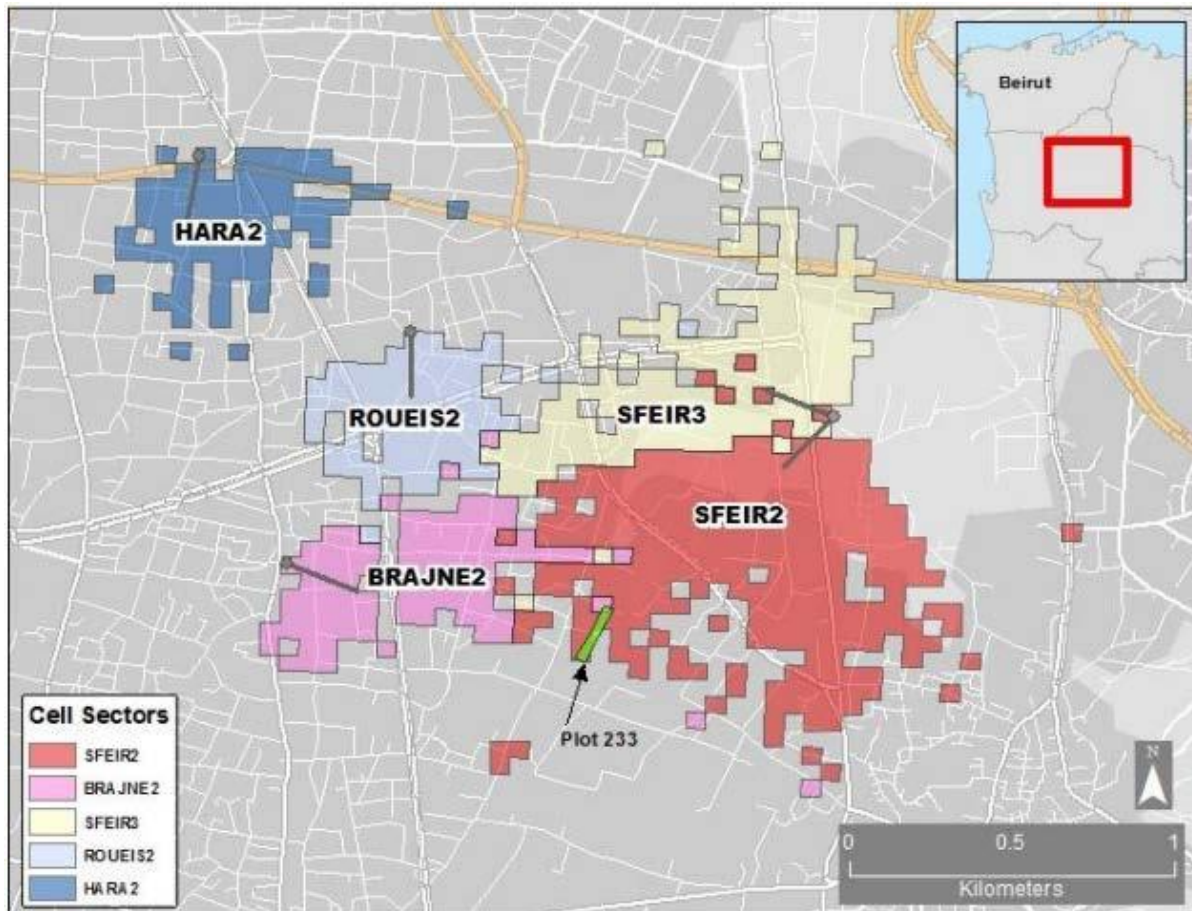

3819. Four Alfa cells provided coverage so close to Plot 233's address that—based upon the Trial Chamber's assessment of the cell site evidence, and in particular that of Mr Philips and Witness 707—a mobile in or very near the building could conceivably connect to any of them. As is shown on the diagram from the electronic presentation of evidence above, plot 233 diagonally intersects the coverage of HADATH3, SFEIR2 and BRAJNE2 and is immediately adjacent to RADOUF1. The top two cells activated for which cell site information was available, but in the overall attribution period, were SFEIR2 and BRAJNE2 (15.96 per cent) and the majority of activations occurred before 10:00 and after 17:00.⁷³²⁰ The adjacent cell SFEIR3 was third with 7.15 per cent of activations. In first place, with 3,728 activations, or 45.8 per cent, was 'N/A'.

3820. The activation of two cells providing predicted best server coverage to plot 233 therefore give some limited support to the user of Purple 095 living in an area covered by them, namely, SFEIR2 and BRAJNE2.

3821. The mobile's most frequently activated cells between 1 August 2004 and 16 February 2005—which covers the indictment period—are, first SFEIR3 (18.46 per cent), then BRAJNE2 (16.18 per cent), followed by SFEIR2 (13.86 per cent), which was formerly in first place. This is the period in which records are available of the cells activated by incoming calls, and of texts sent and received. In this period, 30 per cent of the activations were to cells with predicted best server coverage over plot 233. The diagram below from Mr Donaldson's report shows that most of

⁷³²⁰ Exhibit P1949 (Attribution report of Andrew Donaldson regarding Mr Oneissi), paras 37-40.

SFEIR3's predicted coverage is several hundred metres away from plot 233, although there is a patch of scattered coverage around 100 metres from it:

'Map of home address and most frequently used cell sectors'—Attribution report of Andrew Donaldson regarding Mr Oneissi—exhibit P1949, p. 26

3822. In the face of the consistent use of that address as a contact address, and Mr Oneissi receiving a bank loan to buy it, the fact that he is not legally identified as owning real estate as of mid-2011 is not determinative of it not being his residence. The preponderance of evidence proves his residence there from at least July 2003 onwards, when the cell activation shifted towards two of the cells covering plot 233, namely SFEIR2 and BRAJNE2. But even if this is incorrect, and he did not live there, and perhaps was either letting the property—for which he received and was repaying a bank loan—or was allowing someone else to use it, the contact profile provides sufficient evidence to connect Mr Oneissi to Purple 095.

3823. The Trial Chamber received no positive evidence of where, if anywhere, Mr Oneissi worked at the time, which could account for mobile usage during whatever his work hours may have been. The sole reference to his place of work—noted in September 2004 in a banking document, stating that he was an accountant in a carpet shop in Tyre—in the Trial Chamber’s view, is not particularly probative. It is before the indictment period, and the banking form erroneously records the city address as Tyre: ‘Street: Near *Lycée des Arts*, Region: Al-Hadath; City: Tyre’.

3824. The Trial Chamber cannot rule out that someone else at times used the mobile, and in particular, that it was Mr Oneissi’s wife, Ms Hala Bachir. She may sometimes have used her husband’s mobile, as is not unusual in relationships. There was also no evidence that she had her own mobile before 16 February 2005. Mr Donaldson, in cross-examination, agreed that husbands and wives or even a family sharing a ‘family mobile’ in Lebanon at that time was ‘certainly something we’ve observed’.⁷³²¹

3825. Apart from Mr Oneissi’s wife, the Trial Chamber has no evidence from which it could conclude that anyone else might have used Purple 095. However, Ms Bachir’s *possible* use of the mobile does not undermine the conclusion that Mr Oneissi was its consistent user.

3826. The Trial Chamber cannot of course positively find that Mr Oneissi was the only person who ever used Purple 095, but the totality of the evidence points to him as its principal user. The Trial Chamber has carefully considered the underlying evidence that Mr Donaldson relied upon. Its assessment of the evidence leads it to the only conclusion reasonably available from the totality of the evidence, namely that Mr Oneissi was the principal user of Purple 095 from at least 9 January 2003 until 16 February 2005. It is satisfied of this beyond reasonable doubt.

3827. The final issue is whether there is anything in the call data and cell site records that casts doubt on whether Mr Oneissi was the principal user on the days pleaded in the amended consolidated when he was allegedly using Purple 095 for false claim of responsibility related activities.

⁷³²¹ Andrew Donaldson, T. 25 June August 2017, p. 58.

3828. The Trial Chamber has examined the records and particularly Purple 095's call sequence table. It cannot use the evidence of the call patterns between the three Purple mobiles, 018, 095 and 231, on any of the dates pleaded to support the inference that Mr Oneissi was the user of Purple 095 at the relevant pleaded times. To do so would employ circular reasoning.

3829. However, no call pattern emerges—on any of the days when Mr Oneissi was alleged to have been near the Arab University Mosque, namely 22, 28, 29 and 31 December 2004, and 3 and 7 January 2005—suggesting that someone else was using the mobile. Similarly, on Monday 14 February 2005, Purple 095 made only four calls; three were to Purple 018, between 15:58 and 16:02, and one was to an unknown number, mobile 516, at 12:16, for 104 seconds.

3830. There were also three calls from his mother's attributed mobile to Purple 095 on Sunday 13 and Tuesday 15 February 2005 which provides further support to Mr Oneissi using the mobile at that time.

3831. The Trial Chamber is therefore satisfied that nothing points to anyone else using the mobile on those particular days.

E. Assad Hassan Sabra—Purple 018

3832. Assad Hassan Sabra was born on 15 October 1976 in Beirut. He married Hala Salloum, in Baabda, on 11 November 2000.⁷³²² They lived in Beirut. Between 22 November 2001 and 16 February 2005 a mobile, number 3419018, had numerous contacts with family members of both. That mobile is alleged to be Purple 018 that was used in the false claim of responsibility made after the attack on Mr Hariri's life on Monday 14 February 2005.

3833. The Prosecutor pleads that Mr Sabra had one of three 'Purple phones', which 'were used from at least 1 January 2003 until 16 February 2005'. The amended consolidated indictment specifies that Mr Merhi, Mr Oneissi and Mr Sabra used their personal mobiles, 'colour-coded "**Purple Phones**"', in relation to preparations for the attack. The '**Purple Phones** were used to coordinate the false claim of responsibility'. Further, there was also 'a history of contact between **ONEISSI, SABRA** and **MERHI**' between January 2003 and 16 February 2005.⁷³²³

3834. The Prosecution relies on the work of its analyst, Mr Andrew Donaldson, to prove that Mr Sabra was using Purple 018 at the time relevant to the charges against him, namely between 22 December 2004 and 14 February 2005. In his report, 'Evidence of Telephone Attribution Assad Hassan Sabra', Mr Donaldson concluded that Purple 018 was attributable to Mr Sabra from 22 November 2011 until 16 February 2005.⁷³²⁴

3835. Mr Donaldson also used two other mobiles, numbers 546 and 657 that were used from 24 February and 20 July 2005 respectively, to attribute Purple 018 to Mr Sabra.

3836. Mr Donaldson testified that he believed that the mobiles 546 and 657 had a 'common user', but Purple 018 is attributable to Mr Sabra between 22 November 2011 and 16 February 2005, and did not have multiple users.⁷³²⁵ In fact, to the contrary, there is ample evidence that if Mr Sabra was using it, so was his wife, Ms Salloum, and that it could be seen as a family mobile.

⁷³²² Exhibit P1078 (Family personal status extract), p. 2; exhibit P1080 (Marriage certificate of Assad Sabra and Hala Salloum).

⁷³²³ Amended consolidated indictment, paras 15 (e), 16-17, 19 (d); Prosecution's updated pre-trial brief (Ayyash, Badreddine, Oneissi and Sabra case), para. 115.

⁷³²⁴ Exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), para. 9.

⁷³²⁵ Andrew Donaldson, T. 22 June 2017, pp 98-99, T. 27 June 2017, pp 49, 74-75, T. 28 June 2017, pp 29-31; exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), paras 17, 55, 83. *See also* exhibit P1952 (PowerPoint presentation regarding Mr Sabra, Andrew Donaldson), slides 6-7, 42, 115.

3837. In examining Mr Donaldson's methodology, at paragraphs 2623-2644 above, the Trial Chamber has explained in detail the caution it has exercised in examining Mr Donaldson's conclusions on attribution.

1. Summary of the evidence

3838. Mr Donaldson reviewed the relevant evidence and concluded that Purple 018 is attributable to Mr Sabra from 22 November 2001 to 16 February 2005, meaning that he was its user.⁷³²⁶ In his report he described what he did:

The use of 3419018 was investigated using a range of sources and techniques. These include: witness testimony, documentary evidence, text message contents, profiling of contacts, geographical footprint, IMEI crossover, potential co-location with other phones and any further events that could demonstrate attribution.⁷³²⁷

3839. Purple 018 was not used again after Wednesday 16 February 2005. To assist in attributing that mobile to Mr Sabra, Mr Donaldson also analysed the use patterns of two mobiles that the Prosecution states that Mr Sabra or his wife used after the attack, namely, mobiles 546 and 657. In relation to Purple 018 he summarised:

The following evidence provides attribution points: a) Contact profile; b) Geographic profile; c) Text message content; and d) Similar contact and geographic profiles with mobiles 546 and 657 which are in turn attributable to SABRA and his wife.⁷³²⁸

⁷³²⁶ Exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), paras 9, 17, 19. Records were available for Purple 018 from November 2001, while complete cell site data—including end cell data—records were available only from October 2004 until February 2005. Mr Donaldson explained that the Prosecution only had 'cell sector information for outbound voice calls prior to August 2004'. Exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), para. 21. *See also* Andrew Donaldson, T. 27 June 2017, p. 51.

⁷³²⁷ Exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), para. 4.

⁷³²⁸ Exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), para. 8.

3840. His conclusion on attribution covers the period from the mobile's first recorded call to its last⁷³²⁹—during which, according to Mr Donaldson, its frequent contacts were consistent.⁷³³⁰ In his testimony he concluded:

But if I could talk about the terminology I've used in the report, the indicators of Purple 018 do not bear, in my view of them, indicators of multiple users. Whereas, for example, the SMS of the two later phones do. We also have direct attribution to Mr. Sabra's wife on at least one of the later phones, as well as Mr. Sabra. The use overall appears that this is an open phone used by multiple people.⁷³³¹

3841. There is no direct evidence of who Purple 018 'belonged' to. It had no subscriber details and no evidence was presented of it being used as a contact number for anything. The Prosecution relies on its contact profile, the content of six SMS messages, the cells to which it connected and the contact and geographical similarities, including text message content, with two mobiles that were used after this one.

3842. There is no evidence associating the name 'Assad Sabra' with this mobile. Two texts sent to the mobile in 2004 refer to 'Assad' and one refers to 'Hala'. Another mentions 'Asodi'. In short, there is no evidence *directly* connecting it to Mr Sabra. The closest is an interview with Mr Sabra's maternal nephew who sent a text addressed to '*khal*', which could refer to a maternal uncle, on Eid 2005.

(a) Handset use

3843. The mobile number 'Purple 018' comes from the SIM and the number allocated by the Alfa network. It was a pre-paid 'Alfa Active' plan SIM that was activated on 8 November 2001 and deactivated by the network on 8 March 2005. Alfa had no subscriber details for its user(s).⁷³³² It was not used between 16 February 2005 and its deactivation.⁷³³³

⁷³²⁹ The number was activated on 8 November 2001 and deactivated on 8 March 2005. Exhibit P905 (Subscriber note for Purple 018). There was no call activity between 16 February 2005 and the mobile's deactivation. *See also* Andrew Donaldson, T. 27 June 2017, pp 49-50; exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), para. 24.

⁷³³⁰ Exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), paras 20-21, 24-25; exhibit P1221 (Call sequence table of Purple 018).

⁷³³¹ Andrew Donaldson, T. 22 June 2017, p. 98. *See also* exhibit P1952, slides 6-7.

⁷³³² Exhibit P905; exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), para. 18.

⁷³³³ Exhibit P1221; Andrew Donaldson, T. 27 June 2017, p. 50.

3844. It was used in three different handsets between 1 August 2004 and 16 February 2005,⁷³³⁴ including handset IMEI 353381001114730 from 12 August 2004 to 16 February 2005.⁷³³⁵ IMEI data before 1 August 2004 was not available⁷³³⁶ meaning that its handset use before 1 August 2004 is unknown.

(b) Contact profile

3845. To determine who was using the mobile, Mr Donaldson examined its contacts. A call sequence table of its contacts reveals 8,739 calls and SMS messages in the Prosecution's attribution period of 22 November 2001 to 16 February 2005. The most activated number was the Alfa Active Recharge line, with 592 contacts. The fifth most contacted number was Purple 231 attributed to the Accused Mr Merhi, with 214 contacts. The 25th most contacted was Purple 095, attributed to Mr Oneissi.⁷³³⁷

3846. During its attribution period, Purple 018 was in contact with 17 mobile and landline telephone numbers linked to family members of either Mr Sabra or his wife, Ms Hala Salloum.⁷³³⁸ The Prosecution tendered two family tree diagrams, one for Mr Sabra and one for Ms Salloum.⁷³³⁹

3847. The mobile contacts included:⁷³⁴⁰

- 306 contacts with a mobile number linked to Mr Sabra's father, Mr Hassan Taan Sabra.⁷³⁴¹ The number 934 was subscribed under the name 'Gaby Antonios', activated in December 1997, and recorded under the same name in a sales company's customer database.⁷³⁴² Mr

⁷³⁴² Exhibits P906, 5D397.

Hassan Taan Sabra used this number from at least 27 July 2005 to late 2010.⁷³⁴³ This number was also listed in the 2008 Hajj application for Mr Sabra's sister, Ms Fatima Hassan Sabra,⁷³⁴⁴ and a passport application for Mr Sabra's brother Mr Fahd Hassan Sabra;⁷³⁴⁵

- 267 contacts with a mobile linked to Mr Sabra's brother-in-law, Mr Hassan Haidar Makki.⁷³⁴⁶ Mr Makki activated mobile 592 on 29 November 2004 and used it until at least 2010.⁷³⁴⁷ The mobile is listed, in the name of 'Hassan Haidar Makkeh' on a vehicle bill of sale dated 3 February 2006,⁷³⁴⁸ and in the name of Hasan Makki, on an entry in a sales company's customer database.⁷³⁴⁹ Witnesses attribute this number to Mr Makki and to his auto repair shop.⁷³⁵⁰ An open source lists this number for 'Makki Auto Parts'.⁷³⁵¹ Finally, it is listed on a passport application for Mr Makki's wife;⁷³⁵²
- 212 contacts with a mobile linked to Ms Salloum's aunt, Ms Nadia Salloum,⁷³⁵³ and 72 contacts with three landlines linked to her workplace.⁷³⁵⁴ Ms Nadia Salloum provided mobile number 473 in passport applications in 1999 and 2009.⁷³⁵⁵ It is also listed as her contact number in a tow-truck company's customer database.⁷³⁵⁶ Landline numbers 431,

- 37 contacts with mobile number 318 linked to Mr Sabra's cousin, Mr Haytham Kallout by two witnesses and an Alfa subscription;⁷³⁸⁰
- 12 contacts with mobile number 085 attributed to Mr Sabra's cousin, Mr Mohammed Kallout by two witnesses;⁷³⁸¹
- eight contacts with the mobile subscribed to Mr Tayssir El-Dakak, Ms Salloum's aunt's husband.⁷³⁸² Mobile 675 was subscribed under the name 'Tayssir Afifeh Dakak' and activated on 15 December 1997;⁷³⁸³
- seven contacts with Mr Sabra's maternal nephew, Mr Abbas Alaaeddine's mobile 637;⁷³⁸⁴ and
- three contacts with mobile number 878 linked to Ms Salloum's cousin, Ms Nancy El-Meqdad.⁷³⁸⁵ This is her contact number in her passport application of 4 February 2005.⁷³⁸⁶

3848. This adds up to 1,592 contacts (meaning calls or texts) out of 8,739 in the period, or around 18 per cent of the total. For direct evidence of these contacts, in October 2010, Prosecution investigators showed Mr Sabra's nephew, Mr Alaaeddine, a list of seven contacts between his own mobile and Purple 018 in January and February 2005. He could not remember the number and at

⁷³⁸⁰ Exhibit P1221, telephone number ending in 318. ⁷³⁸³ Exhibit P904 (Alfa subscriber note for mobile 675).

⁷³⁸⁴ Exhibit P1221, telephone number ending in 637; exhibit P2103 (Interview with Abbas Alaaeddine, 21 October 2010), pp 20-22; Andrew Donaldson, T. 27 June 2017, p. 72, T. 27 September 2017, p. 78; exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), para. 32 (n). The Trial Chamber declined to extend provisional protective measures to this witness (Witness PRH024) in Decision on Protective Measures for Witnesses 024 and 028.

⁷³⁸⁵ Exhibit P1221, telephone number ending in 878; Andrew Donaldson, T. 27 June 2017, p. 72, T. 27 September 2017, p. 71; exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), para. 32 (o). Ms Nancy El-Meqdad is Ms Salloum's cousin, exhibit P1076 (Marriage certificate of Hasan El-Meqdad and Faiza Salloum); exhibit P1077 (Family personal status extract); exhibit P1082.

⁷³⁸⁶ Exhibit P1593 (Ms Nancy El-Meqdad's Lebanese passport application).

first thought that it could have belonged to an ex-girlfriend; and stated that it was not stored in his handset. He also identified a photograph of his uncle.⁷³⁸⁷

3849. A call sequence table shows seven contacts between his mobile and Purple 018 between 7 January 2005 and 6 February 2005—there were four voice calls from Purple 018, two to Purple 018 and there was one text on 20 January 2005 to Purple 018. All calls were short, with the longest lasting 71 seconds.⁷³⁸⁸ Mr Alaaeddine had no recollection of either the calls or the text.⁷³⁸⁹

3850. Of Mr Sabra, he said that ‘I barely know him’, but he knew that he used to drive a green BMW.⁷³⁹⁰ Usually on Eid his uncles came to visit him, but otherwise they did not contact each other.⁷³⁹¹ He had recorded mobile 657 in his handset as his uncle Assad’s number.⁷³⁹² He knew little of his uncle’s political affiliations, but knew that he ‘supports Hezbollah but I don’t know if he has any particular relation with the Party’. And ‘I know that he’s religiously committed, he does all his religious duties such as prayer, fasting, and he hangs pictures of El-Sayyed Hasan Nasrallah’.⁷³⁹³ On the same issue, in October 2010, Witness PRH069 stated that ‘When we were teenagers or younger he used to support Hezbollah but right now, I don’t know’.⁷³⁹⁴

3851. Mr Alaaeddine’s statement was received into evidence under Rule 158 over the Sabra Defence’s objections.⁷³⁹⁵ Despite Mr Alaaeddine’s protestations of barely knowing his maternal

⁷³⁸⁷ Exhibit P2103 (Interview with Abbas Alaaeddine, 21 October 2010), pp 40-41. What appeared to be a call sequence table was described as ‘Exhibit TJS/48’, at p. 42. ‘Exhibit TJS/48’ is a list of seven contacts between Purple 018 and mobile 637 on 7, 11, 20, 22, 29 January and 6 February 2005. Similarly, at pp 43-44, regarding the SMS of 20 January 2005, the investigators showed the witness something marked as ‘Exhibit JP1’. It is a text message from 637 to Purple 018 on 20 January 2005. Based on Purple 018’s call sequence table with SMS content, exhibit P523, the text message reads in English ‘Many happy returns to you uncle’. The investigators, at p. 64, showed the witness a photograph ‘marked as Exhibit EK1’ of someone he identified as his uncle ‘my mother’s brother Assad’. It is Mr Sabra’s photograph from his passport application, exhibit P2086. The documents and the copy of the passport photo are attached to an investigator’s note, dated 21 October 2010, by Mr Toby Smith, at ERNs 60185412-60185414, and received into evidence with the witness’s statement as exhibit P2103.

⁷³⁸⁸ Exhibit P523 (SMS call sequence table of Purple 018), p. 2 (SMS no. 24); exhibit P1221, pp 283-284, 286, 288-289.

⁷³⁸⁹ Exhibit P2103 (Interview with Abbas Alaaeddine, 21 October 2010), pp 43-47.

⁷³⁹⁰ Exhibit P2103 (Interview with Abbas Alaaeddine, 21 October 2010), pp 49-50.

⁷³⁹¹ Exhibit P2103 (Interview with Abbas Alaaeddine, 21 October 2010), p. 53.

⁷³⁹² Exhibit P2103 (Interview with Abbas Alaaeddine, 21 October 2010), p. 56.

⁷³⁹³ Exhibit P2103 (Interview with Abbas Alaaeddine, 21 October 2010), p. 60.

⁷³⁹⁴ Exhibit P1150 (Interview of Witness PRH069, 19 October 2010), p. 31.

⁷³⁹⁵ Corrected decision under Rule 158 (Witness PRH024).

uncle, the call sequence tables for Purple 018, mobile 657 and mobile 546 show 78 contacts with mobile 637 between 7 January 2005 and 7 October 2006.⁷³⁹⁶

(c) SMS content

3852. Evidence of the text messages sent and received by Purple 018 is very limited. The call sequence table detailing Purple 018's text messages commences on 14 February 2004, and the first SMS alleged to be relevant to attribution is from 9 May 2004.⁷³⁹⁷ The last relevant SMS text message was on 20 January 2005.⁷³⁹⁸ There is, moreover, no relevant outgoing text message content, meaning none from texts sent from Purple 018. Alfa did not store these at the time.

3853. Mr Donaldson relied on the following six text messages received by Purple 018. The first five were in the Latin script:

- A text message sent on 9 May 2004 refers to 'Assad' as the recipient, stating, '**assad** i am seating dawn alon) amargil may you came . I don't have unit to call u'.⁷³⁹⁹ It was sent from a mobile number (ending in 889) linked to Mr Sabra's brother, Mr Nimr Sabra;⁷⁴⁰⁰
- A text message on 12 August 2004 from the same number says in Arabic, '*sho wainak mish tbayin kifak wahala inshaalla malah wani mishi alhal* .good night'.⁷⁴⁰¹ This was translated into English as, 'so where have you been you haven't been seen. How are you and hala hope you are fine and I am fine .good night.'

Mr Donaldson in his report interpreted this as an inquiry about the health of the 'unidentified male recipient' and 'Hala', who he identified as Mr Sabra's wife;⁷⁴⁰²

⁷³⁹⁶ Seven with Purple 018, 31 with mobile 546 and 40 with mobile 657. Exhibit P1221, pp 283-284, 286, 288-289; exhibit P1271 (Call sequence table of mobile 546), pp 1, 3-10, 12, 14, 18-19; exhibit P1274 (Call sequence table of mobile 657), pp 15-18, 22, 29, 31-33, 36-37, 40-41, 45, 52, 54, 56, 58-59, 63, 70-71, 92, 105.

⁷³⁹⁷ Exhibit P523, p. 1 (SMS no. 3).

⁷³⁹⁸ Exhibit P523, p. 2 (SMS no. 24).

⁷³⁹⁹ Exhibit P523, p. 1 (SMS no. 3).

⁷⁴⁰⁰ Andrew Donaldson, T. 27 June 2017, pp 55, 59; exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), para. 28 (a). *See above*, at para. 3847.

⁷⁴⁰¹ Exhibit P523, p. 1 (SMS no. 4); *see also* Andrew Donaldson, T. 27 June 2017, p. 59.

⁷⁴⁰² Exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), para. 28 (b).

- A text message on 14 November 2004 in Arabic and from the same number 889, refers to ‘asodi’ as its intended recipient. Translated, it says, ‘so asodi you don't want to go to the village’;⁷⁴⁰³
- A text message from an unidentified number (ending in 941) received on 19 December 2004 refers to ‘Assad’, saying, ‘hello assad tshert footbool in the shop real madrid take care’;⁷⁴⁰⁴
- Eid Al-Adha was on Thursday 20 January in 2005. A text message from mobile 637 on 20 January 2005 refers to the recipient as ‘khal’, meaning ‘uncle’.⁷⁴⁰⁵ It says, ‘Yen3ad 3lek ya khal’, or in English, ‘Many happy returns to you uncle’. Mr Abbas Alaaeddine, Mr Sabra’s maternal nephew, used mobile 637 from ‘two months before he left the army’ in 2005.⁷⁴⁰⁶ He stated that he would usually use the word ‘*khal*’ to identify a maternal uncle, but it can also be used as a sign of respect for someone unrelated;⁷⁴⁰⁷

In October 2010, five years and nine months after the text was sent, Prosecution investigators showed it to Mr Alaaeddine, but he could not recall sending it.⁷⁴⁰⁸ His uncles would visit him on Eid or a wedding or funeral but, ‘Usually I don’t call my uncles or send them text messages on the occasion of Eid. We’re not that close to exchange messages’.⁷⁴⁰⁹ He did not have much contact with his maternal uncles;⁷⁴¹⁰ and

- Another text message also sent on Eid, on 20 January 2005 is translated as: ‘He (she) who would challenge my love to you, I accept their challenge! And he (she) who shares

⁷⁴⁰⁹ Exhibit P2103 (Interview with Abbas Alaaeddine, 21 October 2010), p. 46.

⁷⁴¹⁰ Exhibit P2103 (Interview with Abbas Alaaeddine, 21 October 2010), pp 26, 36-37.

my love to you, tell his mother to accept my condolences. Yeah! (May it return well on you and your family and especially Sado)’. The message was in the Arabic script but with the word ‘Sado’ in the Latin script.⁷⁴¹¹

3854. Mr Donaldson testified that ‘I believe that Sado is diminutive of Assad.’⁷⁴¹² He also testified that ‘What I have seen is that often nicknames, such as Sado, can be used in text messages.’⁷⁴¹³

(d) Geographic profile

3855. Mr Donaldson also examined the mobile’s geographical profile, meaning the cells to which it connected when receiving or making calls, texts and voice messages. This was to find patterns that could connect the user(s) with particular locations, such as home and work.

i. Mr Sabra’s residence in 2004 and 2005

3856. To prove where Mr Sabra lived during the period relevant to attribution, and hence to try to establish call usage patterns, the Prosecution led evidence from: two witnesses who knew the Sabra family, Witness 69 and Mr Alaaeddine; a service provider to the family who gave an imprecise contact address; and evidence from the electricity supplier. The only official record relating to a home address for Mr Sabra is for an electricity subscription in 2003. No land registration records recording him as owning property in Lebanon were received into evidence.

3857. Mr Donaldson stated in his report that ‘Enquiries made with the Electricité du Liban provided an address for SABRA in Hadath, “Al Hadath, rue 58, Building 28, 4th Floor, Apartment 2”’.⁷⁴¹⁴ This statement has two footnotes, one of which, footnote 159, states that it has been ‘removed’, meaning that the document referenced in an earlier version of Mr Donaldson’s report

⁷⁴¹¹ Exhibit P1965 (Decoded SMS of Purple 018), p. 1; exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), paras 28 (f), 97; Andrew Donaldson, T. 27 June 2017, pp 64-65, T. 22 September 2017, pp 6-10. *See also* exhibit P1952, slides 32, 56.

⁷⁴¹² Andrew Donaldson, T. 20 September 2017, p. 9.

⁷⁴¹³ Andrew Donaldson, T. 27 June 2017, pp 64-65, 80, T. 21 September 2017, p. 32. *See also* exhibit P1952, slides 32, 56.

⁷⁴¹⁴ Exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), para. 41.

is not in evidence.⁷⁴¹⁵ The other footnote refers to exhibit P656, which includes a series of documents received from the *Électricité du Liban* regarding Mr Sabra's electricity subscription.

3858. The *Électricité du Liban* recorded that Mr Sabra owned a property under the address: '23 Municipality; 03 Area; 27 Building (Tabaja); 58 Street; 04 4th floor'.⁷⁴¹⁶ The address is linked to him from 11 September 2003, the commencement date of an electricity subscription in his name; an electricity meter was installed there on 15 September 2003.⁷⁴¹⁷ A map extracted below, titled 'Municipalite Hadath (23) Numéation Des Immeubles & Rues Secteur - 3-' shows the location of numbered streets, including a street numbered 58:

⁷⁴¹⁵ Compare exhibit P1953 MFI (Attribution report of Andrew Donaldson regarding Mr Sabra, version 3), fn. 159, referring to ERN 60183339.

⁷⁴¹⁶ Exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), para. 41; exhibit P656 (Information from *Électricité du Liban* on property owned by Mr Sabra), ERNs 60288929-60288930; exhibit P661 (Statement of Toby Smith), paras 10-26. See also Andrew Donaldson, T. 27 June 2017, p. 9; exhibit P2103 (Interview with Abbas Alaaeddine, 21 October 2010), pp 48-49; exhibit P1155 (Statement of Witness PRH339, dated 25 October 2010 and 5 March 2015), p. 8.

⁷⁴¹⁷ Exhibit P656, ERN 60288930.

PUBLIC

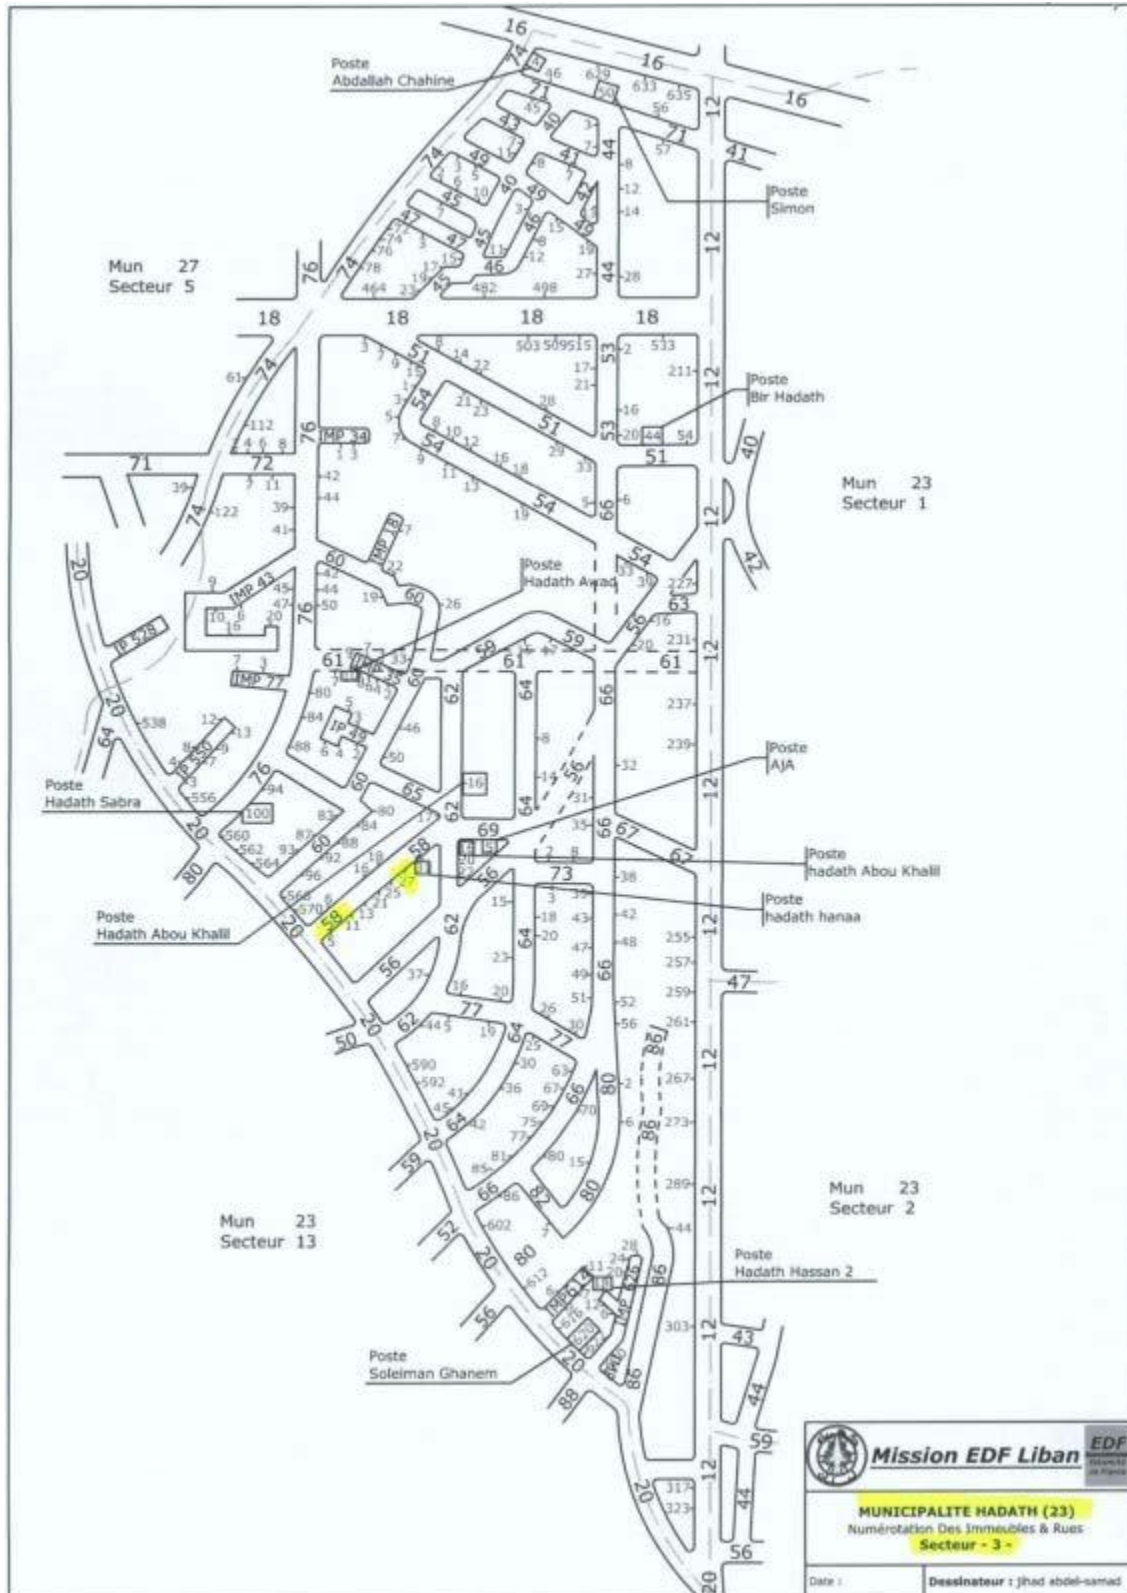

Exhibit P656, ERN 60288934

3859. A subscription receipt from the same service provider records Mr Sabra's address, 'Hadath, Hadath motorway, Sfeir, Tabaja Building', 'Real estate No. 177, Zone: Hadath' as 'his property'.⁷⁴¹⁸ *Électricité du Liban* recorded its subscriber addresses by code numbers rather than a precise street address, such as say, 58 Saint Therese Street, Hadath, Beirut, Lebanon, as is shown below. A Prosecution investigator, Mr Toby Smith, used those codes to reconstruct the property's address.⁷⁴¹⁹ The subscription is:

Accounting	Électricité Du Liban Public Establishment	Subscription date			Subscription number								Branch No. 683047	Tariff 000
		D	M	Y	CD	VIL	SECT	STR	ENT	IMP	EL	LOC		
The subscriber admits to have received a copy of the subscription policy as ratified by the Ministry of public Works as per decision No. 390 dated 05 March 1957, and to have agreed to all its conditions and regulations. Date & signature of the subscriber:		11	09	2003	230358028000402									
Record: District: Date:		Name		Mr Assad Sabra										
				Mr Sabra Assad										
Procedure fee Paid: Twenty thousand Lebanese Pounds 20000LBP		Address		Hadath, Hadath motorway, Sfeir, Tabaja Building, his property										
Power processing duties Paid: (None of the above amounts are refundable)				R. Hadath, I. Sabra										
VAT: Two thousand 2000 LBP (This amount is absolutely non-refundable)		Box or chamber: 3us3	Without junction <input type="checkbox"/>	With junction <input type="checkbox"/>	Order No. Chiyah Division – Reception					Municipality H. Hreik				
Paid in advance for power consumption: One hundred and fifty thousand 150000 LBP (This amount would be refunded upon submission of form No. 4, given to the subscriber, and after having settled all the calculated amounts until the date of termination or transfer.) 		Capacity change												
		Subscription transfer			Previous subscriber: NB					Real estate No. 177 Zone: Hadath				

*Extract from exhibit P656—subscription receipt, Électricité du Liban*⁷⁴²⁰

3860. Mr Smith examined other documents from the electricity provider, which broke the address down into the following:⁷⁴²¹

- a) Municipality 23 (Hadath); Area 03; Street 58 ; Building 27 (Tabajah); 4th floor; Apartment 2
- b) El Hadath, El Hadath Highway, Sfeir, Tabajah Building, his property
- c) R. Hadath I. Sabra
- d) Real Estate: Zone: Hadath Number: 177

⁷⁴¹⁸ Exhibit P656, ERN 60288935.

⁷⁴¹⁹ Exhibit P661 (Statement of Toby Smith), para. 11, referring to ERN 60183339. Ultimately, this subscription was not tendered into evidence, but in its place, exhibit P956, which contains the same information, was tendered. Mr Donaldson's final report, exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), fn. 159, marked Mr Smith's version as 'Removed'.

⁷⁴²⁰ Exhibit P656, ERN 60288935.

⁷⁴²¹ Exhibit P661 (Statement of Toby Smith), para. 19.

3861. From this he attempted to find the address, while noting:

I am aware that outside of central Beirut there are few official street names and that it is not unusual for streets to be known by more than one name. I am also aware that buildings in Lebanon can also be known by more than one name. For example, buildings may be referred to by a name which is given to them or by the name of the person who constructs them, owns them or resides in them.⁷⁴²²

He ultimately concluded, of these records, however:

I therefore took this entry to be 'Rue Hadath, Immeuble Sabra' i.e. Hadath Street, Sabra Building. This description did not provide sufficient detail to enable me to identify the location to which electricity was supplied under the subscription.⁷⁴²³

3862. As Mr Smith could not determine a precise location for the address listed in the electricity records,⁷⁴²⁴ a Prosecution analyst, Mr Andrew Fahey, examined the Lebanese Land Registry records and located plot 177 in Hadath, marked it on a map and compared it to the location of street number coded 58 on the map received from the *Électricité du Liban*. These records show plot 177 as having eight buildings, some of which were multi-floored.⁷⁴²⁵ He concluded that the locations from the two sources corresponded,⁷⁴²⁶ as shown in his map below:

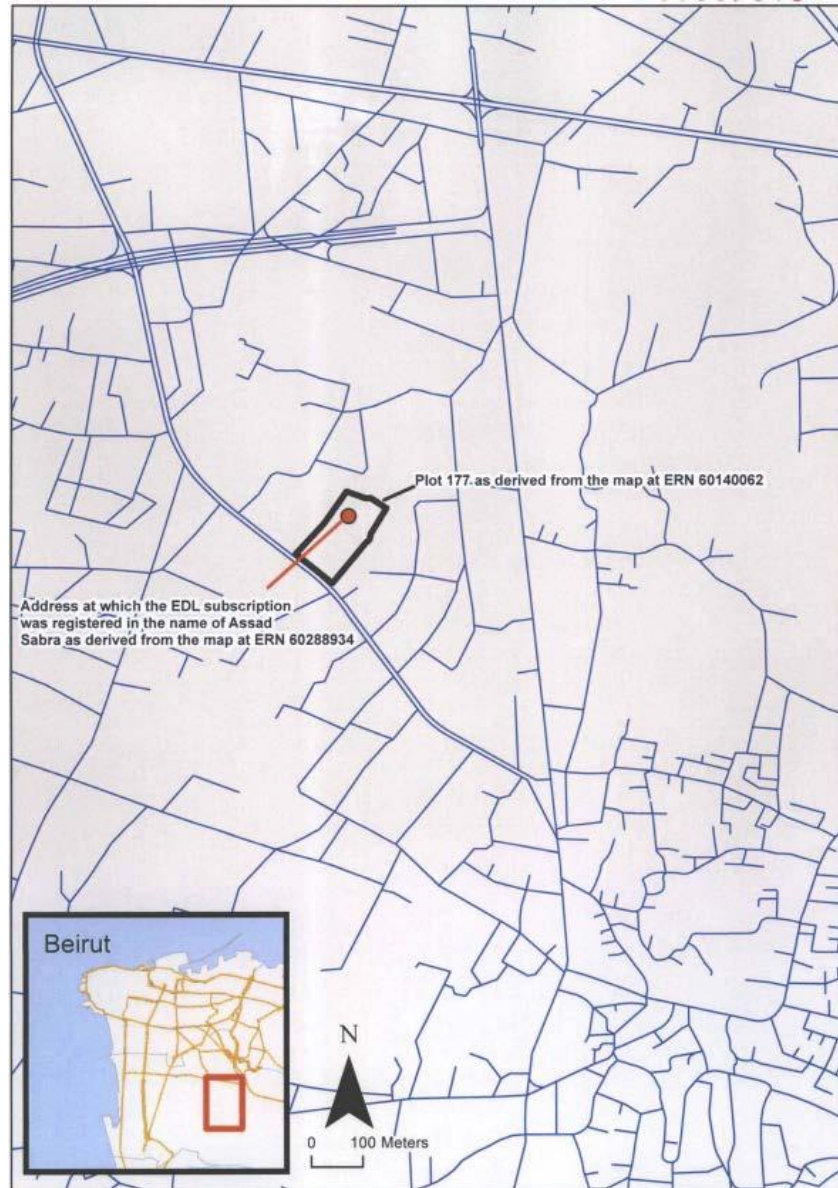

⁷⁴²² Exhibit P661 (Statement of Toby Smith), para. 22.

⁷⁴²³ Exhibit P661 (Statement of Toby Smith), para. 24, *see also* paras 20-21, 23.

⁷⁴²⁴ Exhibit P661 (Statement of Toby Smith), paras 20-23.

⁷⁴²⁵ Exhibit P662 (Statement of Andrew Fahey), paras 136-142, annex 1, p. 5 (ERN 60309444), *see also* annex 7, p. 3 (ERN 60309513). *See also* exhibit P661 (Statement of Toby Smith), paras 24-26; exhibit P1952 (PowerPoint presentation regarding Mr Sabra, Andrew Donaldson), slide 11.

⁷⁴²⁶ Exhibit P662 (Statement of Andrew Fahey), paras 141-142, annex 7, pp 2-3 (ERNs 60309512-60309513).

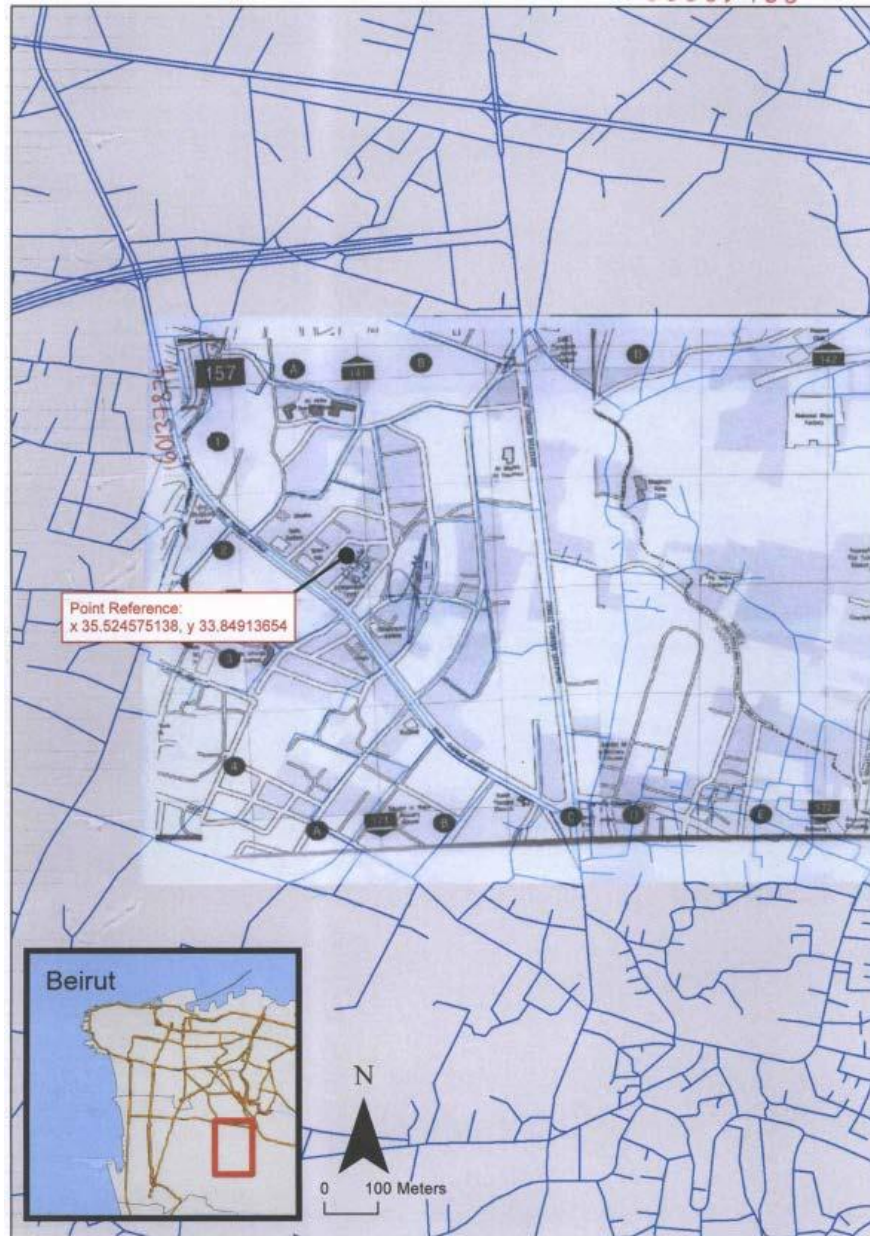

Statement of Andrew Fahey—exhibit P662, p. 102

3863. In another map,⁷⁴²⁷ Mr Fahey overlaid map 157 of the 2005 edition of the Zawarib Atlas of greater Beirut,⁷⁴²⁸ and the result shows plot 177's location *vis-à-vis* Saint Therese Avenue. Mr Fahey's map and map 157 of the Zawarib Atlas are extracted below:

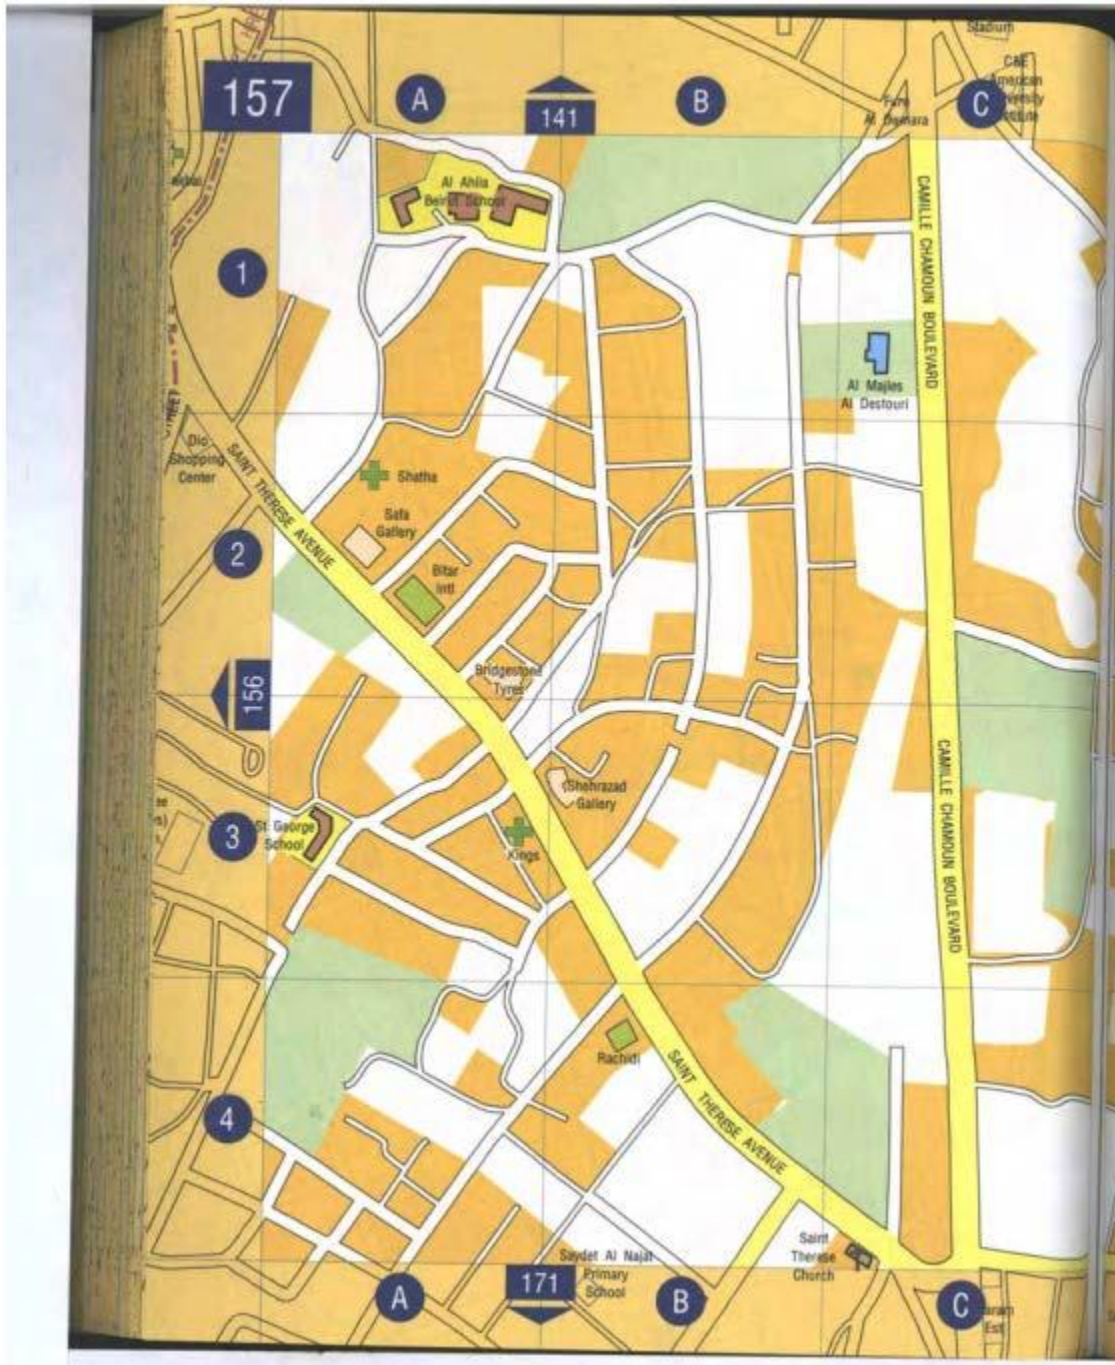

⁷⁴²⁷ Exhibit P662 (Statement of Andrew Fahey), annex 1, p. 11 (ERN 60309456).

⁷⁴²⁸ Exhibit P298, p. 83 (ERN 60298263).

PUBLIC

Statement of Andrew Fahey—exhibit P662, p. 45

Zawarib Greater Beirut Atlas, 2005 edition—exhibit P298, map 157

3864. A service provider for members of the Sabra family, including Ms Salloum, daughter Nour Sabra and Mr Sabra's father, recorded the address of Mr Sabra's wife, Ms Salloum—whose first

visit was on 28 November 2003—as ‘Haret Hreik’.⁷⁴²⁹ From her first visit on 30 June 2005, he recorded Nour Sabra’s address as ‘Haddath, St Therese’.⁷⁴³⁰ Hadath and Haret Hreik are adjoining areas in southern Beirut.

3865. In October 2010, Mr Sabra’s nephew, Mr Abbas Alaaeddine, told Prosecution investigators that before he had travelled out of Lebanon, several months earlier, Mr Sabra and his family had lived ‘at Sainte-Thérèse street’. Mr Sabra lived with his family in a ‘big compound and next to it there is a shop called Abou-Adal’, and the witness had visited there three to four times.⁷⁴³¹ The period of these visits was not specified.

3866. However, there is no *Sainte-Thérèse* street in Hadath in the Beirut street directory and the investigators did not ask him to mark this address on a map. Maps of Beirut show a Saint Therese Avenue in Hadath and a Saint Therese Street in Baabda.⁷⁴³²

3867. Further, and in a significant omission in an investigation interview designed to elicit admissible evidence about Mr Sabra, including where he lived in 2004 to 2005, the investigators failed to ask Mr Alaaeddine anything about his knowledge of the period in which Mr Sabra and his family lived at that address.

3868. An important consideration here is that the Trial Chamber, by majority, admitted Mr Alaaeddine’s interview into evidence under Rule 158 after the Prosecution provided evidence that he could not be located after the Trial Chamber had summoned him to appear in court.⁷⁴³³ The Defence opposed the admission of the interview into evidence and could not question the witness. This has diminished the weight that the Trial Chamber can give to it.

⁷⁴²⁹ Exhibit P1155 (Statement of Witness PRH339, dated 25 October 2010 and 5 March 2015), pp 11, 14; Andrew Donaldson, T. 25 September 2017, p. 42.

⁷⁴³⁰ Exhibit P1155 (Statement of Witness PRH339, dated 25 October 2010 and 5 March 2015), pp 11, 13; *see also* Andrew Donaldson, T. 28 June 2017, pp 28, 32, T. 25 September 2017, pp 38-39, 42.

⁷⁴³¹ Exhibit P2103 (Interview with Abbas Alaaeddine, 21 October 2010), pp 48-49.

⁷⁴³² Mr Donaldson said that there was a St Therese Avenue where plot 177 was, Andrew Donaldson, T. 25 September 2017, pp 44-49. *See also* exhibit P662 (Statement of Andrew Fahey), paras 136-142, annex 1, p. 5 (ERN 60309444), annex 7, p. 3 (ERN 60309513). For Saint Therese Avenue, exhibit P298 (Zawarib Greater Beirut Atlas), ERN 60298263 (map 157, grid B/3 of the atlas). A Saint Therese Street is recorded in the Zawarib Greater Beirut Atlas’s street index in Baabda, exhibit P298, ERN 60298299. The street is mapped at ERN 60298265 (map 161, grid B/4 of the atlas).

⁷⁴³³ Corrected decision under Rule 158 (Witness PRH024). The witness was not served with the summons before the scheduled date of his court appearance. Judge Re dissented on this.

3869. Another witness who knew the Sabra family, Witness PRH106, marked on the Beirut Street directory where he believed they lived.⁷⁴³⁴ That address, however, is on *Deir Al Aazareih* Street, and is about a kilometre and a half from plot 177. Witness 106 and Mr Alaaeddine plainly were referring to different addresses.

3870. In October 2010, Witness 69 stated that when Mr Sabra had his first daughter, he used to live ‘somewhere next to *Sainte-Thérèse* area. *Sainte-Thérèse* Street.’ That daughter, Nour Sabra, was born in April 2005.⁷⁴³⁵ ‘It was a kind of big compound of buildings’, but he did not know the number and stated that ‘Even if I go right now to see it I don’t remember the building’. When asked when this was, he replied, ‘No, it’s a long time’. The witness also thought that Mr Sabra had sold the place a long time ago.⁷⁴³⁶

ii. Where Mr Sabra worked

3871. The Trial Chamber received no direct evidence of where Mr Sabra (or his wife) worked during the periods relevant either to attribution or the indictment. In Prosecution interviews in October 2010, three witnesses, Mr Alaaeddine and Witnesses 106 and 69, stated that he worked in a printing business.

3872. Mr Alaaeddine said that Mr Sabra worked in a printing company, but he did not know where it was.⁷⁴³⁷ He did not say when Mr Sabra worked in printing. Witness 106 stated that Mr Sabra was working in a printing establishment, but he did not know exactly what his profession was nor where he worked, but the printing company was ‘somewhere underground where he does not have mobile phone reception’, so the witness would contact Mr Sabra through his wife.⁷⁴³⁸

3873. Witness 69, in October 2010, stated that ‘He, I think worked as a painter, paint houses and then in a printing or publishing house’, ‘the last thing I can remember is that he was working for a printing factory or house’ but he did not know which printing house.⁷⁴³⁹

⁷⁴³⁴ Exhibit P1149 (Statement of Witness PRH106, dated 15 October 2010), para. 27, marking p. 139, grid A/2, of the Zawarib Beirut Atlas, of an unknown publication date, p. 14 of the statement. The marking appears to correspond to a location in exhibit P298 (Zawarib Greater Beirut Atlas), ERN 60298254 (map 140, grid D/2).

⁷⁴³⁵ Exhibit P1074 (Family personal status extract).

⁷⁴³⁶ Exhibit P1150 (Interview of Witness PRH069, 19 October 2010), pp 28-30.

⁷⁴³⁷ Exhibit P2103 (Interview with Abbas Alaaeddine, 21 October 2010), pp 34-35.

⁷⁴³⁸ Exhibit P1149 (Statement of Witness PRH106, dated 15 October 2010), paras 20, 31, 43.

⁷⁴³⁹ Exhibit P1150 (Interview of Witness PRH069, 19 October 2010), p. 26.

iii. Mr Sabra's father's residence

3874. Mr Sabra's father, Mr Hassan Taan Sabra, according to Mr Donaldson's analysis, may have lived on the second floor of the Toufeilli building, in Hussein Mustafa Street, in Haret Hreik, Beirut. Mr Donaldson based this on analysing documents including a landline subscription for that address in his name including a lease agreement from 1997, and claims submitted for reconstruction funds for damage incurred to the property in the war with Israel in 2006.⁷⁴⁴⁰ Mr Donaldson stated that these 'elements collectively may indicate that the Hussein Mustafa Street, Toufeilli building, 2nd Floor was in fact the residence of Hassan Taan SABRA.'⁷⁴⁴¹ He put it no higher than this.

3875. The address in the reconstruction claim was for a property on Hussein Mustafa Street, real estate number 1225/3 in Haret Hreik. From Land Registry maps, Mr Fahey plotted this location on the Geovision street map of Lebanon, exhibit P548.⁷⁴⁴²

3876. Mr Sabra's father's apparent residence, according to Mr Donaldson, it appears was used at various times by his children,⁷⁴⁴³ including Mr Assad Sabra.⁷⁴⁴⁴ It was in the predicted best server coverage area of HARA2.⁷⁴⁴⁵

iv. Ms Salloum's family residence

3877. Mr Donaldson examined telephone landline subscription documents in the name of Ms Salloum's grandfather, Mr Assad Salloum, which included a lease agreement, and documents for repairs after the 2006 war with Israel. The landline address was El-Chiyah, Hussein Mustafa Street, Karim Building 4th floor, building number 1416. The reconstruction claim was for a

⁷⁴⁴⁵ Andrew Donaldson, T. 27 June 2017, pp 44-47; exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), para. 51 (b).

property in El-Daccache Street, Haret Hreik, with the property number 1416.⁷⁴⁴⁶ Mr Fahey mapped this property number 1416 onto a map using Lebanese Land Registry records.⁷⁴⁴⁷

3878. Using the Ogero landline subscription records, Mr Donaldson concluded that until November 2006, the Salloum family address of Mr Sabra's wife's family was at property number 1416.⁷⁴⁴⁸ This was in the predicted best server coverage area for ROUEIS3, bordering HARA2.⁷⁴⁴⁹

3879. The three addresses, namely Mr Sabra's, his father's and his wife's family's, are quite close, with the Sabra address being about two kilometres from the other two.

v. Cell activations

3880. Cell site data is available for all outgoing voice calls made by Purple 018 from 22 November 2001, the first day of the attribution period, meaning that the cell activated in making the call is recorded. However, no records are available of the cells to which Purple 018 connected when it received calls before 1 August 2004.⁷⁴⁵⁰

3881. Further, the end cell data for voice calls is available only from 1 October 2004,⁷⁴⁵¹ meaning that only the cell to which the mobile connected at the start of the call was recorded before that date. No cell site data is therefore available for 52.99 per cent of cell activations between 22 November 2001 and 16 February 2005.⁷⁴⁵² In practical terms, this means that Mr Donaldson could only analyse the cells to which Purple 018's outgoing voice calls connected until 31 July 2004.

3882. The cell towers that Purple 018 most frequently activated from 22 November 2001 to 16 February 2005 in making calls were: SFEIR2 (8.75 per cent), HARA2 (7.11 per cent),

⁷⁴⁴⁶ Exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), paras 45-46.

⁷⁴⁴⁷ Exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), paras 45-46; exhibit P662 (Statement of Andrew Fahey), paras 143-151, annex 4 (ERNs 60309481-60309490).

⁷⁴⁴⁸ Exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), para. 48, exhibit P1650; Andrew Donaldson, T. 27 June 2017, p. 22.

⁷⁴⁴⁹ Exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), para. 51 (c).

⁷⁴⁵⁰ Exhibit P1221; exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), para. 22; Andrew Donaldson, T. 27 June 2017, pp 49-51.

⁷⁴⁵¹ Exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), para. 22.

⁷⁴⁵² Exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), para. 50.

ROUIES2 (5.80 per cent), ROUIES3 (4.46 per cent), BRAJNE3 (2.57 per cent) and SFEIR3 (1.89 per cent).⁷⁴⁵³ Each is in the neighbouring Haret Hreik and or Hadath areas of southern Beirut.⁷⁴⁵⁴

3883. Mr Donaldson also analysed the frequency in which cells were activated between 1 August 2004 and 16 February 2005—namely for the six and half months in which all cell site data was available.⁷⁴⁵⁵ SFEIR2 and HARA2 were also the top two cells activated. However, the commonly activated cells changed. The most frequently activated cells from 1 August 2004 were: SFEIR2 (19.46 per cent), HARA2 (13.46 per cent), BRAJNE3 (8.58 per cent), SFEIR3 (8.18 per cent) and ROUEIS3 (6.99 per cent).⁷⁴⁵⁶

3884. Purple 018 activated SFEIR2 the most frequently in both periods, but activated it regularly only from 6 August 2002 until 15 February 2005. Purple 018 activated it only once in May 2002, and not at all in June or July 2002.⁷⁴⁵⁷ This led Mr Donaldson to note—contrary to his conclusion that cell use was consistent for the entire attribution period—that Purple 018’s activated cells were in fact consistent only from August 2002.⁷⁴⁵⁸

3885. Mr Donaldson mapped for his court evidence the following slide showing the most used cells for Purple 018. In rank order, the most frequently activated cell is ‘N/A’, meaning not available, 53 per cent.⁷⁴⁵⁹

⁷⁴⁵³ Exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), para. 50; Andrew Donaldson, T. 27 June 2017, pp 51-54, T. 25 September 2017, p. 29.

⁷⁴⁵⁴ Exhibit P1152 (Atlas of relevant cell sectors).

⁷⁴⁵⁵ Save for end cell data, which were available from 1 October 2004. Mr Donaldson noted, however, that the additional end cell data analysis provided ‘no substantive change to the geographic profile of **3419018**’. Exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), para. 53.

⁷⁴⁵⁶ Exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), para. 52; Andrew Donaldson, T. 27 June 2017, p. 52.

⁷⁴⁵⁷ Exhibit P1221. *See also* exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), para. 23.

⁷⁴⁵⁸ Exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), para. 23.

⁷⁴⁵⁹ Exhibit P1952, slide 20.

Slide 20 of Mr Donaldson's PowerPoint presentation—exhibit P1952

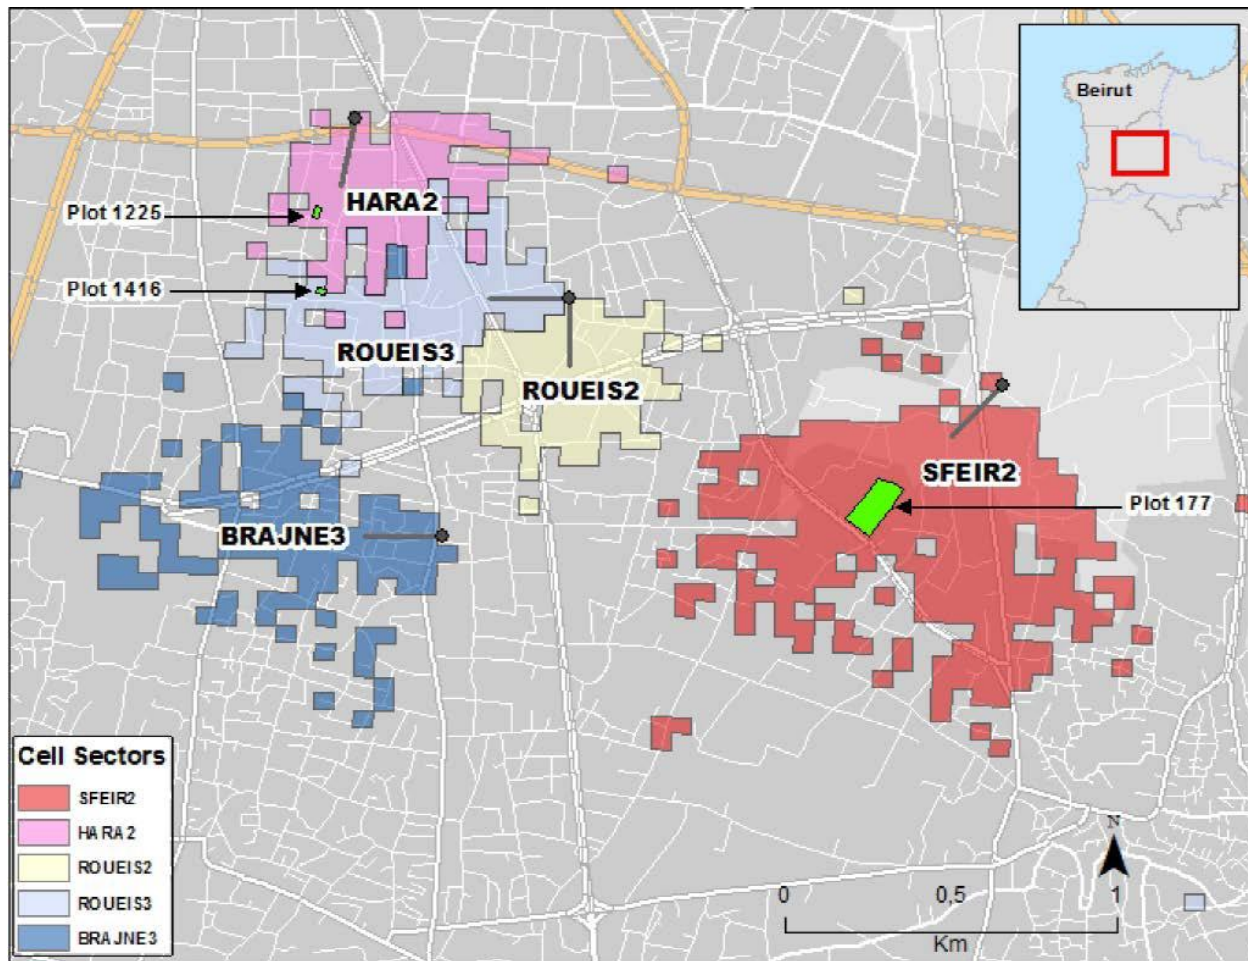

3886. Using the predicted best server coverage map for the most frequently activated cells, Mr Donaldson mapped, in the electronic presentation of evidence, the following family residences: the 'rue 58' property of Mr Sabra (marked as 'Plot 177'),⁷⁴⁶⁰ the Sabra family ('Plot 1225')⁷⁴⁶¹ and the Salloum family ('Plot 1416').⁷⁴⁶²

3887. This map clearly shows the overlapping cell coverage of HARA2, ROUEIS3 and BRANJE3. Plot 1416 is on the border of the predicted best server coverage of HARA2 and ROUEIS3 and a few hundred metres from pockets of BRANJE3's coverage. Plot 1225, while in HARA2, is likewise located several hundred metres from the possible coverage of the other two.

⁷⁴⁶⁰ Andrew Donaldson, T. 27 June 2017, pp 12-14, 17.

⁷⁴⁶¹ Andrew Donaldson, T. 27 June 2017, pp 17-18.

Attribution report of Andrew Donaldson regarding Mr Sabra—exhibit P1953.1, para. 51

vi. Ms Hala Salloum's visit to a service provider

3888. Ms Hala Salloum was a registered customer of the service provider Witness PRH339.⁷⁴⁶³ Purple 018 was in contact with this witness on 28 November 2003, a day when she is recorded as having had an appointment.⁷⁴⁶⁴ The service provider recorded number ending in 657 as contact number for Ms Salloum, and 'Haret Hreik' as her address.⁷⁴⁶⁵

⁷⁴⁶³ Exhibit P1155 (Statement of Witness PRH339, dated 25 October 2010 and 5 March 2015), para. 10 (p. 2), para. 6 (p. 11).

⁷⁴⁶⁴ Exhibit P1155 (Statement of Witness PRH339, dated 25 October 2010 and 5 March 2015), para. 9 (p. 11), p. 14; *see also* Andrew Donaldson, T. 28 June 2017, pp 28-29, 32.

⁷⁴⁶⁵ Exhibit P1155 (Statement of Witness PRH339, dated 25 October 2010 and 5 March 2015), para. 9 (p. 11), p. 14.

- (e) Shared contact and geographic profiles with mobiles 546 and 657, attributed to Mr Sabra and his wife

3889. Mr Donaldson analysed two mobiles used after Purple 018 and attributed them jointly to Mr Sabra and Ms Salloum, finding that their similar contact and geographic profiles supported the attribution of Purple 018.⁷⁴⁶⁶

3890. According to Mr Donaldson, mobile 546 is attributable to Mr Sabra and Ms Salloum from 24 February 2005 to 21 July 2005,⁷⁴⁶⁷ whereas mobile 657 is attributable to the two from 20 July 2005 until at least 31 December 2006.⁷⁴⁶⁸

i. Mobile 546

3891. Mobile 546 was a 'Magic' line SIM on the Touch network, which was activated on 3 February 2005, but with a sale date of 22 February 2005, and for which no subscriber details were provided.⁷⁴⁶⁹ Call activity commenced on 24 February 2005.⁷⁴⁷⁰

3892. Witness PRH590 stated that a client of her company provided mobile 546 as the contact for 'Hala Sabra', recorded as residing at the town/post code for 'Hadath', as of 28 July 2005.⁷⁴⁷¹

3893. The top 25 contacts for mobile 546 include seven numbers associated with Mr Sabra's family and four numbers linked to Ms Salloum's family.⁷⁴⁷² All were previously in contact with Purple 018.

⁷⁴⁶⁶ Exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), para. 5; Andrew Donaldson, T. 27 June 2017, pp 74-75, 78, T. 28 June 2017, pp 30-32. *See also* exhibit P1952, slides 40-41, 48, 74.

⁷⁴⁶⁷ Exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), paras 55, 58. The subscriber period for that mobile commenced on 3 February 2005, but it was first used on 24 February 2005. A handset change on 21 July 2005 marked a change in contract and geographic profiles, suggesting a new user. Exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), paras 59, 62-65; Andrew Donaldson, T. 27 June 2017, pp 77, 88.

⁷⁴⁶⁸ Exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), para. 83. The end date was selected to limit the volume of data. Exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), para. 85; *see also* Andrew Donaldson, T. 27 June 2017, pp 77, 88-89, T. 28 June 2017, pp 4-5.

⁷⁴⁶⁹ Exhibit P1497 (Touch subscriber note for mobile 546); exhibit P1101 (Touch list of activation and deactivation dates); exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), para. 56.

⁷⁴⁷⁰ Exhibit P1271 (Call sequence table of mobile 546); exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), para. 59.

⁷⁴⁷¹ Exhibit P1157 (Statement of Witness PRH590), paras 11-20; Andrew Donaldson, T. 27 June 2017, p. 77.

⁷⁴⁷² Exhibit P1271 (Call sequence table of mobile 546); exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), paras 78-79; Andrew Donaldson, T. 27 June 2017, pp 84-87. *See also* exhibit P1952, slide 66.

3894. In addition, it had nine contacts with a Ghanaian telephone number that Mr Sabra's nephew Mr Abbas Alaaeddine stated was that of Mr Sabra's brother, Mr Fahd Sabra.⁷⁴⁷³ It also had two contacts with his brother, Mr Ali Sabra,⁷⁴⁷⁴ two contacts with his cousin, Mr Haytham Kallout,⁷⁴⁷⁵ one call to a mobile linked to Mr and Ms Fadi and Fadia Salloum, cousins of Ms Salloum;⁷⁴⁷⁶ and one call to Ms Salloum's cousin, Ms Nancy El-Meqdad.⁷⁴⁷⁷

3895. The cells most frequently activated by mobile 546 were Touch's Haret_Hreik_B (38.83 per cent) and Hazmiyeh_2_B (25 per cent).⁷⁴⁷⁸ The Sabra and Salloum family residences, 'Plot 1225' and 'Plot 1416', were within the predicted best server coverage for Touch's cell Haret_Hreik_B.⁷⁴⁷⁹ Hazmiyeh_2_B provides predicted best server coverage for Plot 177 associated with Mr Sabra.⁷⁴⁸⁰

3896. Mr Donaldson mapped these addresses on the predicted best server coverage maps for Touch cells using the electronic presentation of evidence.⁷⁴⁸¹

⁷⁴⁷³ Exhibit P1271, pp 19-21; exhibit P2103 (Interview with Abbas Alaaeddine, 21 October 2010), pp 9-10, 28-29; exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), para. 79.

⁷⁴⁸¹ Andrew Donaldson, T. 27 June 2017, pp 78-79.

Attribution report of Andrew Donaldson regarding Mr Sabra—exhibit P1953.1, para. 81

3897. Mr Donaldson also examined text messages sent and received by mobile 546. One SMS sent by mobile 546 is signed off ‘Hala/Nour’, the given names of Mr Sabra’s wife and daughter.⁷⁴⁸² Two text messages are addressed to ‘Lalo’, with one sending a kiss to ‘Nour’ and another regards to ‘Nana’.⁷⁴⁸³ Two outgoing text messages are signed by ‘Nadia’.⁷⁴⁸⁴ A further two outgoing

⁷⁴⁸² Exhibit P1273 (SMS call sequence table of mobile 546), p. 11; exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), para. 70; Andrew Donaldson, T. 27 June 2017, pp 80-81. Ms Salloum’s given name is Hala, and Mr Sabra and Ms Salloum’s daughter is called ‘Nour’, exhibit P1074 (Family personal status extract).

⁷⁴⁸³ Exhibit P1273, p. 5; exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), para. 71; Andrew Donaldson, T. 27 June 2017, pp 81-82.

⁷⁴⁸⁴ Exhibit P1273, p. 7; exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), para. 72; Andrew Donaldson, T. 27 June 2017, p. 83.

messages are sent by ‘Fadi’, although one instructs the recipient to call back ‘on my nb plz’.⁷⁴⁸⁵ Finally, one SMS contains the words ‘I am your boss bro Salloum.’⁷⁴⁸⁶

ii. Mobile 657

3898. Mobile 657 on the Touch network was activated on 13 May 2005 and deactivated on 31 December 2012. It was a ‘Magic’ line pre-paid number, for which there were no subscriber details.⁷⁴⁸⁷

3899. On 20 July 2005, SIM mobile number 657 changed handsets to IMEI 35162300018999.⁷⁴⁸⁸ This was the same handset used by mobile 546 throughout its attribution period, namely from 24 February 2005 until 21 July 2005.⁷⁴⁸⁹

3900. In 2008, it appears that Mr Sabra took out a bank loan. A *Société Générale du Banque de Liban* form, dated 18 June 2008 and signed in the presence of Ms Salloum’s aunt, Ms Nadia Salloum, lists mobile 657 as a contact number for its customer, Assad Hassan Sabra.⁷⁴⁹⁰

3901. Witness 106 did not have a mobile number for Mr Sabra, but stated that mobile 657 belonged to Ms Salloum.⁷⁴⁹¹ Similarly, Witness 69 stated that mobile 657 belonged to Ms Salloum and was always with her, although it was saved under ‘Assad’ in his mobile.⁷⁴⁹² Mr Sabra’s nephew, Mr Alaaeddine, stated in October 2010 that mobile 657 was Mr Sabra’s mobile.⁷⁴⁹³

3902. The two cells most frequently activated by mobile 657 are the same as those used by mobile 546, albeit with some shift in usage: Hazmiyeh_2_B accounts for 36.43 per cent and

⁷⁴⁸⁵ Exhibit P1273, p. 4; exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), para. 73.

⁷⁴⁸⁶ Exhibit P1273, p. 6; exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), para. 74; Andrew Donaldson, T. 27 June 2017, pp 83-84.

⁷⁴⁸⁷ Exhibit P1498 (Touch subscriber note for mobile 657); exhibit P1101, exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), para. 84.

⁷⁴⁸⁸ Exhibit P1274 (Call sequence table of mobile 657), pp 12-13; exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), para. 93. *See also* exhibit P1271, pp 1-27. The next handset change occurred on 10 September 2006.

⁷⁴⁸⁹ Exhibit P1271; exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), para. 67; Andrew Donaldson, T. 27 June 2017, pp 76-77.

⁷⁴⁹⁰ Exhibit P1869 (*Banque du Liban* signature card); exhibit P1872; Andrew Donaldson, T. 27 June 2017, pp 90-91.

⁷⁴⁹¹ Exhibit P1149 (Statement of Witness PRH106, dated 15 October 2010), para. 25.

⁷⁴⁹² Exhibit P1150 (Interview of Witness PRH069, 19 October 2010), pp 21-22.

⁷⁴⁹³ Exhibit P2103 (Interview with Abbas Alaaeddine, 21 October 2010), p. 17. *See also* Andrew Donaldson, T. 28 June 2017, p. 16.

Haret_Hreik_B for 14.02 per cent.⁷⁴⁹⁴ An application form for a change of address for the Salloum family landline, to ‘El-Aarid’ street in ‘El-Chiyah’, dated 21 November 2006,⁷⁴⁹⁵ coincides with a spike of cell activity of mobile 657 in Bir_El_Abed_A and Bir-El_Abed_C—although the Salloums’ new address was not sufficiently precise to establish which cell would provide predicted best server coverage.⁷⁴⁹⁶

3903. Among the contacts of mobile 657 were 14 numbers linked to relatives of Mr Sabra and eight numbers linked to Ms Salloum’s family.⁷⁴⁹⁷ The most frequent contacts—Mr Sabra’s father; Ms Salloum’s aunt and parents; and Mr Sabra’s brother-in-law—were consistent with those seen in Purple 018 and mobile 546. On the other hand, there were significantly fewer calls to other family members, with only four direct relatives of Mr Sabra falling within the top 28 contacts.⁷⁴⁹⁸

3904. Three text messages sent by mobile 657 on 17, 19 and 27 September 2005 identify the mobile’s user as ‘Lalo’, ‘Hala’ and ‘Lalo and Sado’.⁷⁴⁹⁹ All three messages pass on regards from ‘Assad and Nour’, ‘Sado and Nana’ and ‘Nour’ and one SMS initially states ‘I’m Hala’ and signs off as ‘Lalo and Sado’.⁷⁵⁰⁰

3905. These interchangeable associations of names provided in the SMS translations, seen also in text messages of Purple 018 and mobile 546, led Mr Donaldson to posit that ‘Lalo’ may be synonymous with ‘Hala’ and ‘Sado’ with ‘Assad’.⁷⁵⁰¹ Mr Donaldson believed that ‘the term “Sado” may be used to refer to Assad Sabra’, and ‘Lalo’ ‘is an affectionate term for Hala’.⁷⁵⁰²

3906. A message received by mobile 657 on 12 January 2006 states: ‘Hi Hala, hi Asad, hi Nour’.⁷⁵⁰³ A further seven text messages do not identify the sender, but send regards from Hala,

⁷⁵⁰¹ Exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), para. 97; Andrew Donaldson, T. 27 June 2017, p. 80, T. 20 September 2017, pp 29-30, 41-42, T. 22 September 2017, pp 29, 39-40.

⁷⁵⁰² Andrew Donaldson, T. 27 June 2017, p. 80.

⁷⁵⁰³ Exhibit P1272, p. 25.

Assad and Nour.⁷⁵⁰⁴ Two other messages that mobile 657 received between August and October 2006 are addressed to Hala, Assad and Nour, and specify ‘Nana’ and ‘Nadia’ in the third person.⁷⁵⁰⁵

3907. Finally, mobile 657 was in contact with Witness 339’s business on three dates when either Ms Salloum or her daughter are recorded as having had an appointment, 17 July 2005, 27 January 2006 and 10 May 2006.⁷⁵⁰⁶

2. How Purple 018 was discovered

3908. During the trial, the Sabra Defence put in issue how the Prosecution had connected Purple 018 with Mr Sabra.

3909. In November 2008, the UNIIIC received information from the Lebanese Internal Security Forces relating to the three Purple mobiles. This included the possible involvement of Purple 018 in the dissemination, on Monday 14 February 2005, of the videoed claim of responsibility for the attack earlier that day.⁷⁵⁰⁷ The ISF reported to the UNIIIC that Purple 018 ‘was the primary contact’ of Purple 231, which was last active on 14 February 2005 with only one incoming call the next day. Mr Donaldson set this out in a Prosecution investigator’s note on 2 November 2012, with the subject heading, ‘Finding the communications networks’, stating that the ISF had informed the UNIIIC that:

Another number was in contact with **3419018** on this day, **3598095**. This phone was located on this day in the vicinity of the tree in ESCWA square from where the video tape was collected by the AI Jazeera staff. It was also last used on 16th February 2005, hence followed a similar deactivation pattern as the other two numbers.⁷⁵⁰⁸

⁷⁵⁰⁴ Exhibit P1272, pp 19, 27, 34, 36, 39, 64, 68.

⁷⁵⁰⁵ Exhibit P1272, pp 43, 50; Andrew Donaldson, T. 28 June 2017, pp 13-23. Mr Donaldson observed that there were two Nadias in the Salloum family, one was Ms Hala Salloum’s aunt and the other Ms Salloum’s younger sister also named Nadia. Andrew Donaldson, T. 28 June 2017, pp 18-19; exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), para. 100.

⁷⁵⁰⁶ Exhibit P1155 (Statement of Witness PRH339, dated 25 October 2010 and 5 March 2015), para. 9 (p. 11), pp 13-14; exhibit P1274, pp 14, 44, 59; exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), paras 116-119; Andrew Donaldson, T. 28 June 2017, pp 8, 28-29.

⁷⁵⁰⁷ Andrew Donaldson, T. 19 September 2017, pp 19-22, T. 29 September 2017, p. 57; exhibit 5D418 (Investigator notes – Finding the Communication Networks), para. 44 (b). *See also* exhibit P2122 (Interview of Wissam Al-Hassan, 16 June 2012), pp 125-126, 146.

⁷⁵⁰⁸ Exhibit 5D418, para. 44 (c).

3910. The ISF had not at first linked Purple 018 to Mr Sabra, but rather to another person.⁷⁵⁰⁹ However, based on the content of text messages and the mobile's contact profile—meaning who the call data records showed that it was in contact with—the ISF revised its initial conclusion and suggested that Mr Sabra was its user.⁷⁵¹⁰

3911. The Sabra Defence contends that Purple 018's attribution is based on information from a compromised source, namely a senior ISF officer, Mr Wissam Al-Hassan, who in 2005 was working for Mr Hariri as the head of his personal security. In early 2006, after returning to the ISF and as the head of its Information Branch, he was assigned to lead the investigation into Mr Hariri's death.⁷⁵¹¹ According to the Sabra Defence the Prosecution failed to eliminate alternative users and to properly investigate who used this number.⁷⁵¹²

3912. The Prosecution argues that the information the UNHCR received from the ISF regarding Purple 018 was only an investigative lead. Purple 018 is attributable to Mr Sabra through evidence received by the Trial Chamber, namely the mobile's contact and geographic profile, text message content and similarity of its contact and geographic profiles with follow-on mobiles that Mr Sabra and his wife used.⁷⁵¹³

3. Submissions

(a) Prosecution

3913. The Prosecution submits that Purple 018 is attributable to Mr Sabra from 22 November 2001 to 16 February 2005, arguing that:

Purple 018 is attributed to **SABRA** from 22 November 2001 to 16 February 2005. **Mobile 546** is attributed to **SABRA** and **SALLOUM** from 24 February 2005 to 21 July 2005.

⁷⁵⁰⁹ Exhibit 5D413 (Information from ISF related to Purple 018); exhibit 5D418, para. 44 (e). *See also* Andrew Donaldson, T. 28 September 2017, pp 74-76.

⁷⁵¹⁰ Exhibit 5D417 (Response from Lebanese ISF to request for assistance in relation to Purple 018). *See also* Andrew Donaldson, T. 28 September 2017, pp 76, 94, 97.

⁷⁵¹¹ Decision on admission of Mr Al-Hassan's interview, paras 1-2.

⁷⁵¹² Sabra Defence final trial brief, paras 165, 172 and following; Sabra Defence closing submissions, T. 21 September 2018, pp 10-12.

⁷⁵¹³ Prosecution final trial brief, paras 180-182 and following; Prosecution closing submissions, T. 12 September 2018, pp 36-40. *See also* Andrew Donaldson, T. 28 September 2017, pp 97, 109.

Mobile 657 is attributed to **SABRA** and SALLOUM from 20 July 2005 to at least 31 December 2006.

And:

SABRA was the user of **Purple 018** from 22 November 2001 to 16 February 2005. A single user of the phone was assessed based upon the contact and geographic profile'.⁷⁵¹⁴

3914. Purple 018 was in contact with 17 mobile and landline numbers attributed to the families of Mr Sabra and his wife, Ms Hala Salloum.⁷⁵¹⁵ On 28 November 2003, it was also in contact with Witness 339, a service provider, whose client was Ms Salloum.⁷⁵¹⁶ Further, Purple 018 received several text messages addressed to 'Assad', 'Asodi'—which the Prosecution asserts is a diminutive name for Assad—and 'you and Hala'.⁷⁵¹⁷

3915. Furthermore, the top five most frequently used cells activated by Purple 018 were in the vicinity of Mr Sabra's residence, his parents' residence and his in-laws' residence, and the top most frequently used cell towers of Purple 018 include the cells covering the three, namely, SFEIR2, HARA2 and ROUIES2.⁷⁵¹⁸

3916. The Prosecution's final trial brief did not argue the significance of these activations, beyond stating that these cells covered the three addresses.

3917. Mr Sabra and Ms Salloum were the users of two other mobiles after Purple 018, namely, mobile 546 from 24 February 2005 to 21 July 2005, and mobile 657 from 20 July 2005 to at least 31 December 2006.⁷⁵¹⁹ Attributing these two mobiles to Mr Sabra and his wife supports Purple 018's attribution to Mr Sabra.⁷⁵²⁰

3918. All three are 'linked by their sequential use, contacts, geographic use and extracts from SMS content' and the commonalities between them demonstrate that they were used sequentially

⁷⁵¹⁴ Prosecution final trial brief, paras 181, 183; Prosecution closing submissions, T. 12 September 2018, p. 18.

⁷⁵¹⁵ Prosecution final trial brief, para. 184.

⁷⁵¹⁶ Prosecution final trial brief, para. 185.

⁷⁵¹⁸ Prosecution final trial brief, paras 188-189; Prosecution closing submissions, T. 12 September 2018, p. 23.

⁷⁵¹⁹ Prosecution final trial brief, paras 181, 190-191, 197; Prosecution closing submissions, T. 12 September 2018, p. 18.

⁷⁵²⁰ Prosecution final trial brief, para. 182.

by a common user.⁷⁵²¹ Conversely, because documents and witness statements demonstrate the attribution of mobile 546 and mobile 657 to both Mr Sabra and his wife, only these mobiles displayed signs of multiple users.⁷⁵²²

(b) Sabra Defence

3919. The Sabra Defence submits that the Prosecution failed to attribute Purple 018 to Mr Sabra beyond a reasonable doubt. As its case is solely predicated on this attribution, this is fatal to the Prosecution's case against him.⁷⁵²³

3920. According to the Sabra Defence, the Prosecution's case on the attribution of Purple 018 to Mr Sabra was built on evidence tainted by the credibility and reliability of its source. It came from Mr Wissam Al-Hassan who was Mr Hariri's chief of security in 2005. However, there were challenges to his reliability and credibility, including allegations that he was in a position to influence the UNIIIC investigation. These were raised throughout trial. It was Mr Al-Hassan who provided UNIIIC with the information on Purple 018.⁷⁵²⁴

3921. The Sabra Defence argued that:

Throughout trial, challenges to the reliability and credibility of AL-HASSAN were raised by the Defence, based on: (i) his conspicuous absence from HARIRI's convoy on the day of the attack, (ii) flaws and inconsistencies in his alibi for that day, (iii) his foundational role in the investigation, and (iii) as a witness of fact.⁷⁵²⁵

3922. The attribution of Purple 018 to Mr Sabra is based on Mr Al-Hassan's evidence. Initially, in November 2008, he gave the UNIIIC the information on the Purple mobiles.⁷⁵²⁶ The Prosecution, however, did not investigate the allegations regarding his reliability and credibility

⁷⁵²¹ Prosecution final trial brief, paras 205, 209; Prosecution closing submissions, T. 12 September 2018, p. 18.

⁷⁵²² Prosecution final trial brief, paras 190, 209; Prosecution closing submissions, T. 12 September 2018, pp 20, 35-36.

⁷⁵²³ Sabra Defence final trial brief, paras 164, 166-167; Sabra Defence closing submissions, T. 21 September 2018, pp 37-38.

⁷⁵²⁴ Sabra Defence final trial brief, paras 171, 175.

⁷⁵²⁵ Sabra Defence final trial brief, para. 172.

⁷⁵²⁶ Sabra Defence final trial brief, paras 168-185.

despite the Defence challenges in this regard and did not disclose in an unredacted form the documents related to his reliability, including a UNHCR memorandum regarding Mr Al-Hassan.⁷⁵²⁷

3923. The Sabra Defence final trial brief, at paragraph 104—which was the subject of a Trial Chamber question in the closing submissions, see below—states that:

The Prosecution’s telecommunications-based case relies heavily on hearsay. First, in relation to the “discovery” of the networks and **Purple-Phones**, the Prosecution relies entirely on the anonymous second-hand information provided in the untested statement of AL-HASSAN. AL-HASSAN did not personally work on the “discovery” of the networks or **Purple-Group** and provides no elucidation or accurate methodology to how these telephone numbers, and subsequent attribution, were located. Despite this, the Prosecution founded their case on the hearsay he provided, without investigating other possible lines of investigation. The fact that AL-HASSAN is deceased does not increase the reliability of his testimony.

3924. The Prosecution’s interview with Mr Al-Hassan of 16 June 2012 was admitted into evidence under Rule 158, as he was deceased.⁷⁵²⁸ The Defence therefore could not cross-examine him on his role on providing telecommunications evidence to the Prosecution.⁷⁵²⁹ Due to the Prosecution’s failures in relation to Purple 018’s attribution, the Trial Chamber should give negligible weight to Mr Donaldson’s conclusions.⁷⁵³⁰

3925. Substantively, the Sabra Defence attacks the quality of the evidence the Prosecution used to attribute Purple 018 to Mr Sabra. Mr Donaldson, it is argued, ‘displays neither the independence nor the competence to assume’ the responsibility of attributing the mobile.⁷⁵³¹

⁷⁵²⁷ Exhibit 5D426. Sabra Defence final trial brief, paras 177-185, referring to Decision denying Sabra Defence application for disclosure, paras 40-41.

⁷⁵²⁸ Exhibit P2121 (Interview of Wissam Al-Hassan, 17 June 2012); exhibit P2122 (Interview of Wissam Al-Hassan, 16 June 2012). The Trial Chamber held that Mr Al-Hassan’s interview may corroborate evidence connected to paragraph 49 of the amended consolidated indictment, namely that the four Accused and Mr Badreddine were supporters of Hezbollah, and the alleged provenance of the network of Green mobiles as a Hezbollah network. Decision on admission of Mr Al-Hassan’s interview, para. 87.

⁷⁵²⁹ Sabra Defence final trial brief, paras 186-187.

⁷⁵³⁰ Sabra Defence final trial brief, paras 188-191.

⁷⁵³¹ Sabra Defence final trial brief, para. 192.

3926. Mr Donaldson failed to describe his methodology, including the term ‘attribution’ and employed ‘shifting terminology’ that was designed to fill gaps in the Prosecution’s case.⁷⁵³² He failed to ‘differentiate and explain the concepts of single-user, control and attribution’ and his reports contained no explanation that Mr Sabra was the mobile’s single user.⁷⁵³³ He failed to explain many of the underlying elements thus undermining the Prosecution’s attribution of Purple 018 to Mr Sabra.⁷⁵³⁴

3927. Mr Donaldson’s attribution of third party contacts was lax and susceptible to errors, ‘significantly undermining the relevance and probative value of this evidence’.⁷⁵³⁵

3928. As an example of the limitation of the SMS content and flaws in Mr Donaldson’s report, the Sabra Defence referred to Mr Alaaeddine’s evidence relating to the text of 20 January 2005.⁷⁵³⁶ Mr Donaldson omitted to mention in his report that Mr Alaaeddine did not recognise Purple 018 and it was not saved to his mobile, and that the text was probably sent to a friend because of its informality. The Sabra Defence was critical of this omission, submitting that:

The need for diligent review of sources cited in any report is not a disputed matter. It is DONALDSON’s representation of this underlying evidence in a manner more favourable to the Prosecution’s case, by omitting the full extent of the witness’ misgivings, which casts doubt on his impartiality as a witness. Given the opportunity to explain whether a duty to bring such evidence to the attention of the Chamber rested on him, DONALDSON obfuscated.⁷⁵³⁷

3929. Mr Donaldson’s evidence was also based on the assumption that all mobiles have a single user and he would only amend this if he identified evidence inconsistent with this hypothesis. His description of a single-user mobile as ‘not multi-user’ was ‘fatuous’, and he could not distinguish between evidence ‘providing’ or ‘supporting’ attribution of a mobile to someone.⁷⁵³⁸

⁷⁵³⁶ Sabra Defence final trial brief, para. 250.

⁷⁵³⁷ Sabra Defence final trial brief, para. 252.

⁷⁵³⁸ Sabra Defence final trial brief, paras 197-199.

3930. Purple 018's contacts actually pointed away from the mobile having a single user for the following five reasons. First, its contacts are not exclusive to a single user. Second, the limited decoded and translated SMS content does not point to a single user. Third, the geo-profile evidence is consistent with any number of individuals within the area using it, in light of the number of people living and working in the areas of cells most activated. Fourth, no witness evidence attributed it to a single user, and fifth, there was a marked absence of documentation attributing it to a single user.⁷⁵³⁹

3931. Further, there was no self-attribution by Mr Sabra, nor are there intercepts or co-location evidence.⁷⁵⁴⁰ There was no documentary evidence supporting attribution such as insurance records, passport applications, utility bills, house ownership, etc.⁷⁵⁴¹ No witness attributed the mobile to Mr Sabra.⁷⁵⁴² Witness 69 had only contacted Mr Sabra through his wife on mobile 657, and a 'reasonable inference from this evidence is that SABRA did not possess a phone in 2005'.⁷⁵⁴³

3932. The Prosecution did not lead any evidence of Mr Sabra saying that Purple 018 was his number. In fact, 'Two further witnesses specifically deny that Purple-018 was used by SABRA at the relevant time', namely, Witnesses 106 and 69.⁷⁵⁴⁴

3933. The SMS evidence 'is replete with inconsistencies, limitations and gaps' rendering it unsuitable as the principal basis of attribution.⁷⁵⁴⁵ The Prosecution relies only on six incoming text messages, amounting to three per cent of the total SMS content for that mobile.⁷⁵⁴⁶ As all six were incoming, this merely permits the assumption that the sender believed the intended recipient had the receiving mobile.⁷⁵⁴⁷ Minimal weight should be given to it.⁷⁵⁴⁸ The Defence also highlighted evidentiary weaknesses in the SMS content including spelling.⁷⁵⁴⁹

⁷⁵⁴⁹ Sabra Defence final trial brief, paras 232-257.

3934. Regarding the mobile's 'geo-profile', it only identifies a general area rather than specific locations.⁷⁵⁵⁰ The cell site data was incomplete.⁷⁵⁵¹ Mr Donaldson also failed to account for the unreliability inherent in the Prosecution's predicted coverage maps, nor the reliability of the maps, thus undermining his conclusions that residences linked to Mr Sabra were within the predicted coverage of certain cells.⁷⁵⁵² There is no unique geographical signature for Mr Sabra, such as his work or social activities.⁷⁵⁵³ Mr Donaldson failed to thoroughly analyse the underlying data.⁷⁵⁵⁴ For example, there was no clear and contemporaneous evidence of residence,⁷⁵⁵⁵ and evidence of the three family addresses is inconclusive.⁷⁵⁵⁶

3935. The reliance on third-party contacts for attribution, 'while superficially attractive, is deeply flawed',⁷⁵⁵⁷ for example, 'various phones could have a similar contact pattern towards family members or a group of contacts without any possibility of distinguishing between them'.⁷⁵⁵⁸ Further, only a limited number of close family contacts was analysed, namely 17 mobile and landline numbers out of a total of 962 contacts.⁷⁵⁵⁹ There is also a lack of independent evidence demonstrating the relationship with these contacts,⁷⁵⁶⁰ and there were errors in attributions.⁷⁵⁶¹

3936. Regarding the 'follow-on phones', namely mobiles 546 and 657, the attribution of them to Mr Sabra 'by itself proves nothing'.⁷⁵⁶² In this respect, the Sabra Defence made detailed criticisms of Mr Donaldson's attribution of these two mobiles, similar to those in respect of Purple 018.⁷⁵⁶³

3937. Moreover, there was a clear alternative user, namely Mr Assad Salloum, who the Lebanese ISF had initially suspected of being the user of Purple 018.⁷⁵⁶⁴ The UNIIC and Prosecution had

known of this information. The Prosecution thus failed to exclude a viable alternative user.⁷⁵⁶⁵ Mr Donaldson himself had conceded that ‘if there is more than one viable candidate for attribution of a particular phone then “you don’t have an attribution”’.⁷⁵⁶⁶

3938. The Sabra Defence argues that the evidence points away from Purple 018 having a single user.⁷⁵⁶⁷ The ISF’s decision to revise Purple 018’s initial attribution and to attribute it to Mr Sabra was poor and ‘does not withstand any modest degree of scrutiny’.⁷⁵⁶⁸ The Prosecution could not rule out the possibility that the user of Purple 018 was someone other than Mr Sabra.⁷⁵⁶⁹

4. Findings

3939. The Prosecution evidence seeking to attribute Purple 018 to Mr Sabra is the weakest of any of the attribution evidence led against the four Accused and Mr Badreddine. No conclusive evidence was presented about exactly where Mr Sabra lived during the indictment period, namely from late 2004 to early 2005, nor with whom, nor where he worked, nor what he did. Mr Sabra, on the Prosecution’s case, was using Purple 018 until Wednesday 16 February 2005, when it was discarded.

3940. The Prosecution, furthermore, presented no evidence of a geographical footprint that could be traced to Mr Sabra by virtue of his home address, place of work and his leisure and social activities including those with his family. Nor was one presented for his wife, who was another potential user of Purple 018. Over the attribution period there were 8,739 contacts, as in calls made and received and texts, for which there are records, over 1,183 days. This is an average of just under 7.4 per day.

3941. The Prosecution’s pre-trial brief stated that:

SABRA is the user of Purple 018. This is attributed to **SABRA** through SMS content, the contacts profile (multiple family members as well as the two other purple phone users) and cell utilisation analysis (compared with his home address). In addition, the contacts and

⁷⁵⁶⁵ Sabra Defence final trial brief, paras 405-419, referring for example to exhibits 5D414, 5D415 and 5D416, UNIIIC memoranda stating that the ISF had informed it on 22 November, 23 December 2008 and 8 January 2009 of its belief of the alternative user of Purple 018.

⁷⁵⁶⁶ Sabra Defence final trial brief, para. 398, referring to Andrew Donaldson, T. 19 September 2017, p. 29.

⁷⁵⁶⁷ Sabra Defence final trial brief, paras 202-207.

⁷⁵⁶⁸ Andrew Donaldson, T. 29 September 2017, pp 47-53

⁷⁵⁶⁹ Sabra Defence final trial brief, paras 405-411.

cell utilisation profile of two subsequent phones, both of which are directly attributed to **SABRA** or his family, were compared with the profile of Purple 018 and provide support for the attribution of this telephone to **SABRA**.⁷⁵⁷⁰

3942. The Prosecution's final trial brief argues in a roundabout fashion that, 'A single user of the phone was assessed based upon the contact and geographic profile'.⁷⁵⁷¹ It argues that Mr Sabra was the user of Purple 018.

3943. To attribute the mobile to Mr Sabra during the pleaded indictment period, the Prosecution must prove that he was using it at all relevant times. A family or a group could of course share a mobile, but to establish criminal liability based on use of the mobile, the Prosecution must prove who was using it in making specified calls.

3944. The Prosecution case attributing single use of Purple 018 to Mr Sabra is based upon its contact and geographical profile, and the content of four text messages to that mobile—combined with similar evidence for mobiles 546 and 657.

3945. It is not a strong case. The evidence comes from an electricity subscriber record, a service provider's records, two imprecise witness statements from witnesses who were not cross-examined by the Defence, cell site evidence of the Purple mobile's activations and its contacts. There is no direct evidence of a precise address that the Prosecution could locate within plot 177, where the Prosecution submits that Mr Sabra lived. A precise address, however, is less important than a general location falling within a specified cell coverage area, here SFEIR2.

3946. Hence to determine whether Mr Sabra was using Purple 018, it is also necessary to examine who could have been using mobiles 546 and 657, that were used only after Wednesday 16 February 2005. On the Prosecution's case these were successor mobiles used by Mr Sabra after he discarded Purple 018 on Wednesday 16 February 2005, two days after completing his role in disseminating the false claim of responsibility. The case that mobiles 546 and 657 had the same users is strong; the SIMs were used in the same handset and had similar geographic and contact profiles.

⁷⁵⁷⁰ Prosecution's updated pre-trial brief (Ayyash, Badreddine, Oneissi and Sabra case), para. 55.

⁷⁵⁷¹ Prosecution final trial brief, para. 183.

3947. But this only takes the case so far. Even if it is established that Mr Sabra was using the mobile, the evidence must also establish as the only reasonable inference available that he was using it in the calls specified in the amended consolidated indictment. In other words, that he was using Purple 018 on the specific days pleaded in December 2004 and January and February 2005.

3948. Moreover, the cell site records are incomplete for almost 53 per cent of Purple 018's calls, as the cell activated for incoming calls, incoming and outgoing text messages was not recorded until 1 August 2004. End cell data for voice calls was available only from 1 October 2004.

(a) The discovery of the Purple mobiles and Mr Wissam Al-Hassan's role

3949. The Sabra Defence, in arguing that the Prosecution had not proved this attribution, challenged Mr Al-Hassan's credibility, and the reliability of Mr Donaldson's analysis, on which the Prosecution case relies.

3950. First, Mr Al-Hassan. In its decision denying the Sabra Defence's application for the disclosure of a UNIHC memorandum, which made critical observations about Mr Al-Hassan, the Trial Chamber expressed its surprise about Mr Al-Hassan's obvious conflict of roles in moving from his position as Mr Hariri's chief of security—he was absent from work on the day of the explosion—to leading the investigation into his death.⁷⁵⁷² On any objective test, Mr Al-Hassan could not have been seen to have been a neutral investigator or source of information. Despite this evident conflict, the UNIHC was relying upon him for material including investigatory leads.

3951. In Mr Al-Hassan's interview with Prosecution officials in June 2012, he stated of the Purple mobiles that:

We were able to reach a *network*, a small network of three numbers. We identified two. And the owners and identities of two of them. Namely, Assad Sabra and Hasan Issa or Oneissi. And the third we couldn't identify it but with the cooperation with the STL we knew that they identified the third one as Merhi. Merhi.

Q. And how were you able to identify Issa and Sabra? Oneissi and Sabra?

⁷⁵⁷² Decision denying the Sabra Defence application for disclosure of a UNIHC Internal Memorandum on Mr Wissam Al-Hassan, paras 41, 45.

Actually through the geographical co-location of calls and communications that were made from the public phones to Al-Jazeera and Reuters. So out of those, among those three numbers it was easy for us to identify two of them because they were using their phones to contact their parents, to contact their houses, to make their personal phone calls.⁷⁵⁷³

3952. The Trial Chamber admitted Mr Al-Hassan's evidence under Rule 158. As a deceased and therefore unavailable witness, he obviously could not be questioned in court.⁷⁵⁷⁴ The Trial Chamber held that the lack of cross-examination and the hearsay nature of Mr Al-Hassan's evidence would decrease its weight when it was assessed.⁷⁵⁷⁵

3953. This particular passage from the interview, however, appears to be relevant only to the Sabra Defence, which relies on it to discredit the investigatory source of the information provided. It is also a little unclear why the Prosecution had three senior staff⁷⁵⁷⁶ interview Mr Al-Hassan on these types of issues in 2012 a year after the confirmation of the indictment.

3954. In this sense, the Trial Chamber does not believe that the information about the discovery of the Purple mobiles is relevant to the Prosecution's case against any of the Accused, including of course Mr Sabra. The Trial Chamber does not consider the fact that Mr Al-Hassan—whatever issues may arise with his credibility or motives—or any other ISF official, may have provided investigatory leads to the UNIIC or the Prosecution, has any real effect on the case.

3955. In this respect and before hearing the final trial submissions, the Trial Chamber posed the following question to the Sabra Defence, based on the arguments in paragraph 104 of the Sabra Defence final trial brief on Mr Al-Hassan providing the information to the UNIIC:

Paragraph 104 refers to the 'discovery' of the purple mobiles, only in 2008. How does it matter, either legally or evidentially, when the existence of the calls between the three purple mobiles was discovered?⁷⁵⁷⁷

⁷⁵⁷³ Exhibit P2122 (Interview of Wissam Al-Hassan, 16 June 2012), pp 125-126, with the question posed by Mr Alasdair Macleod.

⁷⁵⁷⁴ Exhibit P2121 (Interview of Wissam Al-Hassan, 17 June 2012); exhibit P2122 (Interview of Wissam Al-Hassan, 16 June 2012); Decision on admission of Mr Al-Hassan's interview.

⁷⁵⁷⁵ Decision on admission of Mr Al-Hassan's interview, para. 86.

⁷⁵⁷⁶ Mr Macleod, Mr Michael Taylor and Mr Ekkehard Withopf.

⁷⁵⁷⁷ Questions for closing submissions, para. 45. At para. 25, the Trial Chamber asked the Prosecution, 'Is there any legal significance about when the purple mobiles were 'discovered', referred to in paragraph 104 of the Sabra brief?'

Lead counsel for Mr Sabra responded that:

the manner in which the Purples were discovered is relevant, we say, because it's related, we submit, to the inadequate investigation conducted by the Prosecution and, in turn, the inferences it can ask you to draw relating to the behaviour of the Purple Phones.⁷⁵⁷⁸

3956. Prosecution counsel responded that the ISF merely provided 'lead information from which the investigation re-engineered'. Mr Donaldson did not rely on this information but 'on evidence gathered first by the UNIIIC and then the Office of the Prosecutor', and it points to one user, Mr Sabra.⁷⁵⁷⁹

3957. The Sabra Defence also raised a complaint that the Prosecution disclosed only a redacted version of the Al-Hassan interview to the Defence. Protracted litigation on this issue occurred during the trial, and before the Prosecution's disclosure of the final redacted version, the Trial Chamber scrutinised the Prosecution's proposed redactions and determined that they would cause no prejudice to the Defence.⁷⁵⁸⁰ The same applies to the redactions of names from the UNIIIC memorandum regarding Mr Al-Hassan.⁷⁵⁸¹ Nothing of substance, however, changed after that decision: the Defence had all the information necessary to challenge the reliability of the information and Mr Al-Hassan's credibility, and used this at trial and in final submissions.

3958. The Trial Chamber understands that Defence counsel had some discomfort as to how the UNIIIC apparently received the information concerning the three Purple mobiles, namely, from someone about whom they had suspicions. However, against this is that the Prosecution investigated who was using Purple 018 by painstakingly contacting numerous potential witnesses—including contacts of the mobiles 546 and 657—and researching Mr Sabra's and these contacts' residences. It then used cell site evidence to compile a geographic profile of the users.

3959. This entailed a monumental amount of investigatory work. The UNIIIC and the Prosecution, not the ISF, did most of this. For these reasons, the Trial Chamber does not see it as

⁷⁵⁷⁸ Sabra Defence closing submissions, T. 21 September 2018, pp 10-12.

⁷⁵⁷⁹ Sabra Defence final trial brief, paras 188-191. *See also* Sabra Defence closing submissions, T. 21 September 2018, pp 10-12; Prosecution closing submissions, T. 12 September 2018, pp 37-39.

⁷⁵⁸⁰ Decision on admission of Mr Al-Hassan's interview, paras 93-94; Decision on redactions to Mr Al-Hassan's interview, para. 27.

⁷⁵⁸¹ Decision denying Sabra Defence application for disclosure of a UNIIIC Internal Memorandum on Mr Wissam Al-Hassan, paras 7-8, 44-45, 55-58, 60; exhibit 5D426.

a relevant issue in the case. The ISF's original attribution of Purple 018 to Mr Sabra in the context of the case is thus irrelevant. The information provided was for lead investigation purposes. Moreover, other internal UNIIIC documents suggest a second line of communication with the ISF with other officials suggesting that the user was not Mr Sabra—see directly below.

3960. The Trial Chamber is accordingly satisfied that Mr Donaldson, independently of any ISF influence, assessed the witness statements, documents, text messages, contact and geographic profiles and IMEI use by Purple 018 and mobiles 546 and 657, in a manner that allows the Trial Chamber to consider his conclusions. Moreover, the Trial Chamber has also considered Mr Donaldson's evidence on the discovery of Purple mobiles in 2008, which is addressed in more detail below.⁷⁵⁸²

(b) Mr Assad Salloum as a possible alternate user of Purple 018

3961. On a related point, the Sabra Defence posited, based upon internal UNIIIC file notes referring to ISF suspicions of who was using Purple 018 that Mr Assad Salloum may have been its user. This appears to contradict the information that Mr Al-Hassan was giving the UNIIIC. The Prosecution, the Sabra Defence argues, failed to negative the possibility that Mr Salloum was the user, by not investigating it. Mr Donaldson had not seen any internal Prosecution document eliminating him as a suspect.⁷⁵⁸³

3962. The Trial Chamber can only consider the possibility of a named alternate user if it has received evidence capable of establishing the fact, or the inference sought to be drawn. The evidence for this it appears comes from internal UNIIIC file notes. From this, the implication seems to be that the Trial Chamber should conclude that the Prosecution's apparent failure to investigate this alternative theory allows it to infer that Mr Salloum may have been the user.

3963. The Sabra Defence submissions are based on the supposition that the Prosecution's apparent failure to investigate Mr Salloum's possible use of Purple 018, hence meaning it was not Mr Sabra's mobile, has raised as a reasonable inference that Mr Salloum was the alternative user.

⁷⁵⁸² See chapter XII 'Claim of responsibility for the attack on Rafik Hariri', (H) 'The non-covert nature of the use of Purple mobiles'.

⁷⁵⁸³ Sabra final trial brief, para. 414, referring to Andrew Donaldson, T. 28 September 2017, p. 96.

This would raise a reasonable doubt as to whether Mr Sabra (and or his wife) were using Purple 018.

3964. The evidence supporting this theory is in undated and un-authored internal UNIIIC file notes referring to information received from the ISF in November and December 2008 and January 2009. This was before the Special Tribunal and its Office of the Prosecutor existed. Additionally, an undated ISF document was attached to a letter from the ISF's Director General, dated 22 July 2014, in response to a Trial Chamber's order to the Government of the Lebanese Republic to cooperate with the Special Tribunal by providing information that the Sabra Defence had sought. According to the letter, the ISF had provided a copy of the document to the UNIIIC for its investigation.⁷⁵⁸⁴

3965. The Prosecution took over the investigation from the UNIIIC from 1 March 2009 and as is evident from the evidence put before the Trial Chamber, obtained most of it after that. The Prosecution, it is clear from the dates of interviews and witness statements, was undertaking much investigative work in late 2010 in respect of Mr Sabra's possible involvement in the attack on Mr Hariri.

3966. That the investigative work in respect of Mr Sabra was incomplete several months later in January 2011 is obvious from the fact that when the Prosecutor submitted his initial indictment to the Pre-Trial Judge for confirmation on 17 January 2011, it was only against Mr Ayyash. Nearly another two months passed before the Prosecutor filed an indictment against Mr Sabra and Mr Oneissi, on 11 March 2011.

3967. The first undated UNIIIC document notes that in a meeting on 12 November 2008:

Assad Ahmed SALOUM ... has been identified as the apparent user of 3419018 through SMS and the contacts with landline ... 747 subscribed to Assad Hamid SALOUM (his grand-father).⁷⁵⁸⁵

3968. Another UNIIIC document refers to information received from the ISF on 22 November 2008. It states of Purple 018 that it was:

⁷⁵⁸⁴ Reasons for admission of 22 Sabra Defence documents, para. 75.

⁷⁵⁸⁵ Exhibit 5D413.

suspicious, used by Assad SALLOUM suspicious for contacting AI Jazeera Office and reading a statement claiming responsibility for the assassination of Rafik HARIRI (55 calls) during the period from 14.10.2004 until 14.02.2005.⁷⁵⁸⁶

3969. The undated file note referring to information received on 23 December 2008 states that the ISF believed that Mr Salloum was using Purple 018, but why is not stated. It goes on to say that the ISF:

cannot totally exclude the possibility that for a certain time period the user of 3419018 (the previous Assad SALLOUM number) could have been Assad's brother Fadi SALLOUM. This needs to be clarified.⁷⁵⁸⁷

3970. The undated file note regarding the information received on 8 January 2009 provides no further information on why the ISF believed that Mr Salloum was using Purple 018. The salient extracts from this document state:

The ISF advised that the user of **3419018** seems to be Assad SALLOUM. There are still certain points not clear, so the attribution is still vague. The ISF needs to get the MTC SMS data for this specific number and they are sure that with this SMS data they will have a clear picture as to be certain if Assad SALLOUM was using this phone.

The ISF believes that SALLOUM was the user of **3419018** in 2005 but is still not 100% convinced. The ISF said that they first want to see the result of reviewing the MTC SMS to be sure with their assessment.⁷⁵⁸⁸

3971. In his investigator's note of 2 November 2012, Mr Donaldson summarised the information received from ISF in November 2008 as follows:

Assad SALLOUM was initially named by the ISF as the suspected user of **3419018**. As a result of their continued investigation this attribution was subsequently revised to Assad Hassan SABRA.

⁷⁵⁸⁶ Exhibit 5D414.

⁷⁵⁸⁷ Exhibit 5D415.

⁷⁵⁸⁸ Exhibit 5D416.

He concluded that:

UNIIC analysts were subsequently able to confirm the communications based findings of the ISF report as accurate.⁷⁵⁸⁹

3972. Finally, the undated ISF document provided to the Sabra Defence in 2014 noted mobile 018's frequent contact with landline 747 registered in the name of 'Asaad Haidar Salloum', and two incoming text messages to mobile 018, addressed to 'Asodi' and 'Assad'.⁷⁵⁹⁰ It stated that two persons with the name of 'Asaad' were registered under the same register number in 'Zqaq El-Blat', namely 'Asaad Hamid Salloum' and 'Asaad Ahmad Salloum'. However, after further analysing the mobile's contact profile, the ISF 'deduced' that:

Number 03419018 belongs to Assad Hasan Sabra and not to Asaad Ahmad Salloum.

The two names "Asaad" and "Asodi" mentioned in the incoming SMS to the above-mentioned number, refer to Assad and not Asaad.

Frequent contact between number 03419018 and the landline number 01554747 registered in the name of Asaad Haidar Salloum, since Assad Sabra is married to Hala Hasan Salloum who is the cousin (paternal uncle's daughter) of Asaad Ahmad Salloum.⁷⁵⁹¹

3973. Neither the undated internal UNIIC file notes, nor the ISF document provides positive evidence that Mr Assad Salloum was using Purple 018. They are no more than ISF communications to the UNIIC of mostly unexplained suspicions by unidentified ISF officials concerning Mr Salloum.

3974. Collectively, these documents cannot raise an inference that he was a possible (alternate) user. The main Defence argument appears to be that the Prosecution failed to properly investigate this possibility. But the apparent absence of an investigation provides no evidence that Mr Salloum was actually using Purple 018. It is evidence only of the fact that unknown ISF officials had communicated some suspicions to the UNIIC. There is no evidence before the Trial Chamber capable of supporting the inference sought. The arguments are accordingly dismissed.

⁷⁵⁸⁹ Exhibit 5D418, paras 44 (e), 45.

⁷⁵⁹⁰ The texts, sent on 14 November and 19 December 2004, respectively, stated in English: 'Hey Asodi you don't want to come to the village' and 'Hi Assad football t-shirt at the store real madrid bye'.

⁷⁵⁹¹ Exhibit 5D417.

(c) Defence attacks on Mr Donaldson's methodology and reliability

3975. The Defence of all four Accused strongly attacked Mr Donaldson's qualifications, methodology, conclusions and alleged pro-Prosecution bias. These submissions are detailed in analysing the respective methodologies of Mr Philips and Mr Donaldson.⁷⁵⁹²

3976. The Trial Chamber is of the view that the Prosecution's presentation of Mr Donaldson's evidence was in some respects unsatisfactory. When Mr Donaldson appeared to testify in June 2017, his report was still not in a final form. This resulted in a Defence application to adjourn the proceedings pending the completion of a final report. The Trial Chamber in allowing the evidence to proceed as far as it could, noted that:

The report contains statements or conclusions relating to Prosecution evidence which is either not in evidence or the Prosecution has decided or elected not to tender the documents or the witness statements or to call the witness to provide evidence. So in that respect, Mr. Donaldson's conclusions, in some respects, which have not been clearly identified, rely upon matters which are not in evidence.

The Chamber has brought this to the Prosecution's attention and has indicated its dissatisfaction with the fact that Mr. Donaldson is testifying about reports that are not in a final form.

...

Defence counsel have made legitimate complaints that the reports are not finalized and have addressed the Chamber on the fact that this is an unsatisfactory situation and is causing some prejudice and lack of fairness to the Defence in the manner in which the evidence is being presented.⁷⁵⁹³

(d) Attribution of Purple 018 without mobiles 546 and 657

3977. The evidence attributing Purple 018 to Mr Sabra is weak; without examining mobiles 546 and 657 the Trial Chamber does not believe that it can be attributed to him. Nor that it could conclude that he was its user during the relevant period. Thus, in the Trial Chamber's view, the

⁷⁵⁹² In sub-section (A) 'Single user analysis', above.

⁷⁵⁹³ Decision denying adjournment of hearing Mr Donaldson's evidence, pp 38-39.

most logical way of analysing the evidence is to start with mobile 657 and work backwards. This is done below at paragraphs 3990-4009.

3978. The evidence relating to Purple 018—without mobiles 546 and 657—is divided into two segments, described as a contact profile and geographic profile.

3979. Starting with the geographic profile, Mr Donaldson concluded that Mr Sabra, his father and his wife's family lived in three locations in Hadath and Haret Hreik in southern Beirut. The evidence points to Mr Sabra living at an address somewhere near *Sainte-Thérèse* in Hadath—meaning somewhere in plot 177, which is ascertainable, but where precisely is difficult to locate.

3980. Mr Donaldson's report is vague on the location of Mr Sabra's address in 2004 to 2005 and does not specify precisely where he concluded that Mr Sabra was living, apart from narrowing it to 'rue 58' and plot 177, and plotting this group of eight buildings on a map. The Trial Chamber, however, in examining the relevant Beirut street directory, was unable to find a 'rue 58'.⁷⁵⁹⁴ Based on Mr Fahey's evidence, the street that the *Électricité du Liban* numbered as 58 seems to open perpendicularly from the Saint Therese Avenue in Hadath, where Mr Fahey placed plot 177.⁷⁵⁹⁵

3981. *Électricité du Liban's* connection record from 2003 is strong evidence of Mr Sabra's residence there at some point. Its records indicated that Mr Sabra was still paying the electricity bills in 2010, although decreased usage in 2009 suggested that the property was empty for a period. In normal circumstances, electricity subscriptions are in the name of the person using the service, that is, the residential owner or leaseholder, although of course a landlord could pay the electricity as part of a lease agreement. This points towards his residence there in 2004 and 2005.

3982. In October 2010, Mr Sabra's nephew, Mr Alaaeddine, stated that Mr Sabra and his family lived at '*Sainte-Thérèse*', but he was apparently only referring to mid that year. He was not asked about the period relevant to the case. Mr Alaaeddine, whose evidence was contested, did not appear in court and was not cross-examined. This has substantially diminished the weight that can be given to his evidence, although in the circumstances not much turns on it. His evidence on his

⁷⁵⁹⁴ 'Rue 58' or '58 Street', appears to be merely a number code given by the *Électricité du Liban* to a street in Hadath.

⁷⁵⁹⁵ Exhibit P298 (Zawarib Greater Beirut Atlas), p. 83 (ERN 60298263) (map 157, grid B/3); exhibit P547 (Zawarib Greater Beirut Atlas), p. 66 (ERN 60221032) (map 120, grid D/4).

uncle's apparent address in 2010 is vague and carries no weight as to where Mr Sabra lived during the indictment period.

3983. The cell site evidence of frequent activations of SFEIR2, which provided predicted best server coverage to plot 177 provides very little support to Mr Sabra living there, given that only nine per cent of the activations were to that cell (19.46 per cent from 1 August 2004), meaning that 91 per cent (80.54 per cent from 1 August 2004) were not. Without knowing more (or in reality, anything) about the life or lives of its user(s) it is difficult to draw any conclusions from this.

3984. However, in the circumstances here, namely that SFEIR2 provided coverage to plot 177, and cell site evidence cannot of itself precisely locate someone somewhere, the precise address is less important than its general location in particular cell coverage area. Further, the service provider's records from 2003 give Ms Salloum's address as *Sainte-Thérèse*, Hadath.

3985. Based on Mr Fahey's evidence, plot 177 is a few hundred metres from *Sainte-Thérèse* Avenue. Combining these pieces of evidence, the Trial Chamber is thus satisfied that Mr Sabra lived somewhere on plot 177, which is very close to *Sainte-Thérèse* Avenue, in Hadath, Beirut, in 2004 to 2005, and for some years afterwards.

3986. Concerning Mr Sabra's father's address, the combination of records in evidence convinces the Trial Chamber that it was his address during the attribution period. This address is within the predicted best server coverage area of HARA2, Purple 018's second most frequently activated cell. The significance of this, however, was never explained to the Trial Chamber. Presumably, it means implicitly that Mr Sabra or his wife used their mobiles when visiting their parents and in-laws, and that they must have done this frequently. However, without any evidence of their familial relations, such as whether they were a close family with frequent visits, the Trial Chamber cannot make any finding in this respect.

3987. The Trial Chamber is also satisfied that Mr Sabra's in-laws, the Salloum family, lived at times relevant to the attribution of Purple 018 in the area of ROUIES3, adjacent to HARA2. Depending on the calculation used, ROUIES3 was either the fourth or sixth most commonly activated cell.

3988. There is no evidence, however, linking any cell activations with Mr Sabra's presence at these places on particular days or times of day.

3989. The Trial Chamber considers that Purple 018's contact profile provides some support to attributing that mobile to Mr Sabra and Ms Salloum. Notwithstanding that a number of the most frequent contacts are neither attributed nor factually linked to Mr Sabra or his wife, seven contacts identified as related to Mr Sabra or Ms Salloum fall within the top 26 most frequent contacts, and these represent an appreciable proportion of Purple 018's call volume of 1,340 calls or text messages.

(e) Attribution of mobiles 546 and 657 and effect on attribution of Purple 018

3990. There is clear evidence that mobiles 546 and 657 had the same users. The two SIMs sequentially used the same handset. The SIM for mobile 657 was used in the handset used by mobile SIM 546 until 21 July 2005.

3991. With regard to the names of the users, Witness 590 stated that a client of her company provided mobile 546 as the contact for 'Hala Sabra', recorded as residing at the town/post code for 'Hadath', as of 28 July 2005. This was a week after the SIMs had swapped between the two handsets.

3992. Regarding mobile 657, an 'SGBL' bank form from June 2008 in Mr Sabra's name gives mobile 657 for his contact. No address is provided and no other personal documents are attached to the form, despite the form requiring these. Witnesses 106 and 69 stated that it was Ms Salloum's number, although Witness 69 had it saved under 'Assad'. Mr Sabra's nephew, Mr Alaaeddine, stated in October 2010 that mobile 657 was Mr Sabra's mobile.

3993. Text messages from mobile 657 on 17, 19 and 27 September 2005 identify the mobile's user as 'Lalo', 'Hala' and 'Lalo and Sado', and pass on regards from 'Assad and Nour', 'Sado and Nana' and 'Nour'. One states 'I'm Hala' and signs off as 'Lalo and Sado'. Text messages to and from mobile 546 use similar names, 'Hala/Nour', 'Lalo', one sends a kiss to 'Nour' and another sends regards to 'Nana'. Two are signed 'Nadia'. Two are from 'Fadi' and one says 'I am your boss bro Salloum.'

3994. Apart from the use of the two SIMs in the same handset, and the mobiles being used as business contact numbers for Mr Sabra and Ms Salloum, the geographic and contact profiles of the two mobiles are so similar as to eliminate the possibility of coincidence. Likewise, the text context conclusively points to the mobiles having the same users.

3995. This is notwithstanding the paucity of text content specifically addressed by name to either Mr Sabra or Ms Salloum. But texts are generally an informal mode of communication. They require neither the formality of addressing the recipient by name, nor the sender signing their name when the two are known to each other. Obviously, there are exceptions to this, but for quick informal communications between known communicators, the use of names tends to be the exception rather than the rule. Grammar, punctuation and spelling may vary. The Trial Chamber makes this observation from its own general experience, and notes that the SMS content in evidence generally backs this up: the messages are for the most part short, informal and lacking in names. Symbols and abbreviations are frequently used. The Trial Chamber also observed from the texts in evidence that many contained mixed, and often abbreviated, Arabic and English.

3996. The Trial Chamber thus has no doubt that Mr Sabra and his wife, Ms Salloum, were sequentially using these two mobiles from 24 February 2005, first mobile 546, and then mobile 657 from 20 July 2005.

3997. Purple 018 was not used as a business contact for Mr Sabra or Ms Salloum. There is nothing in evidence attaching a name to the mobile, except for two texts referring to ‘Assad’, one referring to ‘hala’, another to ‘Asodi’ and, less strongly, ‘Sado’. The closest ‘match’, albeit indirect, is in Mr Alaaeddine’s Rule 158 interview relating to his sending a text to his uncle on Eid in January 2005.

3998. It went to Purple 018 but he could not remember, almost six years later, having sent it. But the Trial Chamber received no evidence of any reason why he would remember sending this single SMS when he was asked about it so long afterwards.

3999. The call data records for Purple 018 record the text. Objectively, on 20 January 2005, Eid, his mobile sent a text addressed to his maternal uncle, ‘*khal*’, to a mobile used by Mr Sabra and his wife. This fact can be established by official family records, independently of Mr Alaaeddine’s Rule 158 evidence. Further, the 78 contacts between Mr Alaaeddine’s mobile and Purple 018, 546

and 657 provide strong evidence of regular communication between nephew and maternal uncle (or aunt by marriage) between January 2005 and October 2006, a period of 21 months. The Trial Chamber in the circumstances is accordingly satisfied that he sent the message to his uncle, Assad Sabra, on Eid in 2005. This provides support to Mr Sabra using Purple 018 at the time.

4000. The Trial Chamber thus has to compare the geographic and contact profiles and the SMS content of Purple 018 with mobiles 546 and 657.

4001. There is some geographic consistency between the usages of the three mobiles. The cells providing the predicted best server coverage to the Sabra family home, namely, Alfa's HARA2 and Touch's Haret_Hreik_B, and to plot 177, being Alfa's SFEIR2 and Touch's Hazmiyeh_B, are the two most frequently activated cells on all three mobiles. Alfa's ROUIES3, providing predicted best coverage for the Salloum family home, is in the top five most frequently activated cells of Purple 018 between 1 August 2004 and 16 February 2005, and it also falls within the predicted best coverage of Haret_Hreik_B in the Touch network. While not inconsistent with attribution, all three cells are in southern Beirut, and therefore do not provide geographically distinctive footprints for the mobiles.

4002. Regarding their contact profiles, all three mobiles had among their most frequent contacts Mr Sabra's father, his brother-in-law Mr Hassan Makki, Ms Salloum's aunt Ms Nadia Salloum and the Salloum family home. The text content—at least in the six relevant texts in evidence—shows the same similarities. The names 'Assad' and 'Hala' are used. The name 'Asodi' is also used once. It may be a diminutive of Assad but there is no positive evidence of this. The same applies to 'Sado'.

4003. In its final trial brief, the Prosecution positively asserts that 'Asodi' is a diminutive of Assad, stating that on 'three occasions, Nimr SABRA, SABRA's brother, sent messages to Purple 018 where he addressed the user as "Assad", "Asodi" (a diminutive name for Assad)'. This is footnoted to Mr Donaldson's evidence.⁷⁵⁹⁶ But that is not what Mr Donaldson said. His testimony on point is:

Q. Mr. Donaldson, can you explain to us why you considered "Asodi" as relevant?

⁷⁵⁹⁶ Prosecution final trial brief, para. 186, fn. 322, referring to Andrew Donaldson, T. 27 June 2017, pp 59-60.

A. My understanding from discussions which I had with Lebanese colleagues is that Asodi may be diminutive of Assad, but that is not something which I can speak to personally.

4004. The Prosecution, in referring to the messages to and from ‘Sado’, wrote that ‘Sado is possibly a nickname for Assad, again footnoting this to Mr Donaldson’s testimony, report and slides.’⁷⁵⁹⁷ However, this is what Mr Donaldson actually said in court:

Again this was received by Purple 018 on the 20th of January, 2005, so within the relevant period. And I believe it is addressed to a person who is associated with Sado. What I have seen is that often nicknames, such as Sado, can be used in text messages.⁷⁵⁹⁸

4005. Mr Donaldson’s ultimate conclusions in relation to the references in the text messages to Sado, Lalo and Nana were:

My findings were that I believe the term “Sado” may be used to refer to Assad Sabra. When we see “Lalo”, it is an affectionate term for Hala. I believe “Nana” is a term used to describe Nadia Salloum. I believe that we will see the name Ali pertaining to Ali Salloum and Nour for the daughter.⁷⁵⁹⁹

4006. However, the evidence goes no further than Mr Donaldson’s belief. Mr Donaldson does not speak Arabic and had no knowledge of Lebanese diminutives or nicknames. To conclude that a nickname is used in a text and it belongs to a person with a particular name normally requires some cultural and linguistic experience. Here, there was none. The Trial Chamber thus received no positive evidence that Sado or Asodi were diminutives of Assad, that Lalo is one for Hala nor that Nana relates to Nadia, although this may well be the case.⁷⁶⁰⁰

4007. At its highest, if accepted, it shows that both Mr Sabra and Ms Salloum were using Purple 018. This is also supported by the relevant six text messages received by Purple 018. The first five

⁷⁵⁹⁷ Prosecution final trial brief, para. 186, fn. 326, referring to Mr Donaldson’s report, exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), para. 28 (f), his slides, exhibit P1952, slide 32 and his testimony, Andrew Donaldson, T. 27 June 2017, pp 64-65.

⁷⁵⁹⁸ Andrew Donaldson, T. 27 June 2017, p. 65.

⁷⁵⁹⁹ Andrew Donaldson, T. 27 June 2017, p. 80.

⁷⁶⁰⁰ Nicknames and diminutives may also be different but related concepts. In English for example William has the diminutives ‘Will’, ‘Bill’, ‘Billy/Billie’ and ‘Willy/Willie’, while Elizabeth can be contracted to ‘Liz’, ‘Lizzy/Lizzie’, ‘Bet’, ‘Beth’ and ‘Betty’. By contrast, a true nickname is a humorous or familiar name which is not necessarily connected to the person’s real name. For example, in Australian English, for cultural reasons that need not be explored here, a person with red hair may be nicknamed ‘Bluey’. Thus a ginger-haired William could be called both Bill and Bluey, or even ‘Billy Blue’.

suggest a person named ‘Assad’, spouse of ‘Hala’, ‘Asodi’ or ‘uncle’ (coming from Mr Sabra’s nephew) as the recipient. In contrast, the sixth SMS suggests that ‘Sado’ was not the direct recipient as the text reads, ‘May it return well on you and your family and especially “Sado”’. Even allowing for the informality of texting, a sender probably would not refer to ‘Sado’ both in the second and third person in the same sentence. However, it may have been directed at Sado’s spouse—if Sado was Assad—thus showing common use.

4008. The Trial Chamber therefore has to assess the probabilities of different users of two sets of mobiles using three different consecutive mobiles—namely Purple 018, and mobiles 546/657 which had the same user—sharing a very similar geographic and contact profile and the names ‘Assad’ and ‘Hala’ in text messages. In the Trial Chamber’s view the similarities between the usage of mobiles 546/657 and Purple 018 are so close that they are beyond coincidence. The chances of this occurring by coincidence are so small as to be eliminated as a reasonable conclusion. The Trial Chamber is of this view notwithstanding the lack of evidence of how many possible combinations there may have been of people named Assad and Hala regularly making and receiving calls and texts to more or less the same people in a specified area in Beirut between late 2001 and late 2006.

4009. The Trial Chamber is therefore satisfied beyond reasonable doubt that Mr Sabra and Ms Salloum were using Purple 018 from 22 November 2001 until 16 February 2005, and then used mobile 546 from 24 February 2005 until 21 July 2005 and mobile 657 from 20 July 2005 until at least 31 December 2006.

(f) Single use attribution to Mr Sabra at relevant times in the indictment period

4010. This leads to the main issue, namely, whether the Prosecution has established beyond reasonable doubt that Mr Sabra was the user of Purple 018 in the period pleaded in the amended consolidated indictment on the relevant dates, and for the pleaded calls and incidents.

4011. To determine whether Mr Sabra was the mobile’s user during the relevant period pleaded, the Trial Chamber must examine the mobile’s call patterns and usage. Neither Mr Donaldson nor Prosecution counsel did this. In other words, they did not analyse any outgoing calls close in time

to the pleaded use of Purple 018 in the conspiracy and other crimes charged, to examine whether Mr Sabra was the more likely caller.

4012. The Trial Chamber observes here that the Prosecution did not attempt to explain the significance of the three addresses that the Prosecution put into evidence, namely, the possible addresses of Mr Sabra, his father and his in-laws. The first is implicit and obvious, namely, that Mr Sabra—and his wife in relation to mobiles 546 and 657 on the Prosecution’s case—would have been making calls from his residence or its vicinity, as this accords with the normal experience of personal mobile user behaviour. But without any evidence of the frequency of possible visits to the other two addresses and whether the mobile was used at either, the two addresses have little forensic value. There is simply no evidence of whether Mr Sabra and or his wife visited their parents or in-laws or when. And there is no evidence that when they did that they made or received calls on their mobile.

4013. Further, the five cells relevant to the activations near the three addresses, SFEIR2, HARA2, ROUEIS2, ROUEIS3 and BRAJNE3—set out in a map in Mr Donaldson’s report labelled ‘Map of home address and most frequently used cell sectors’⁷⁶⁰¹—cover an extended surface area of around six square kilometres, based on the predicted best server coverage maps. This is in a built up area of southern Beirut with many apartment blocks and businesses and other multi-use buildings.

4014. Without any evidence of the habits of the user(s) of Purple 018, such as their daily routines, where they went, shopped, worked, any cafes or restaurants frequented, the residences of friends and family who may have been visited, businesses they used, the Trial Chamber cannot draw any conclusions about why these cells were the most frequently activated. That is with the exception of SFEIR2 which covered Mr Sabra’s residence in late 2004 and early 2005.

4015. The Sabra Defence’s argument that ‘two further witnesses specifically deny that Purple-018 was used by SABRA at the relevant time’, namely Witnesses 106 and 69⁷⁶⁰², is unsupported by the evidence. Neither witness categorically stated this. Witness 106 stated that he could not remember if Purple 018 was Mr Sabra’s old number and that number did not sound familiar,⁷⁶⁰³

⁷⁶⁰¹ Exhibit P1953.1 (Attribution report of Andrew Donaldson regarding Mr Sabra), para. 51 (p. 29).

⁷⁶⁰² Sabra Defence final trial brief, para. 216.

⁷⁶⁰³ Exhibit P1149 (Statement of Witness PRH106, dated 15 October 2010), para. 42.

while Witness 69 said that he had Mr Sabra's wife's number, 657, under Assad's name but the witness used it to contact Mr Assad because 'it's all the times with his wife'.⁷⁶⁰⁴

i. Calls to and from Purple 018 between 22 December 2004 and 14 February 2005

4016. The Trial Chamber has examined calls to and from Purple 018 in the pleaded period of 22 December 2004 to 14 February 2005 in an attempt to discern whether there are any patterns pointing to who specifically was using the mobile at these relevant times. As it is evident that both Mr Sabra and Ms Salloum were using the mobile in the entire attribution period spanning 2001 to 2005, it is important to ascertain whether the evidence can establish that Mr Sabra was its user at least during these pleaded times.

4017. The Trial Chamber's review of the call sequence table for Purple 018 during the relevant period has revealed the following:

- Thirty-four calls between landline 747, subscribed to Mr Assad Haidar Salloum, Ms Salloum's grandfather. The last two calls were on 4 February 2005. It was Purple 018's seventh highest contact with 198 contacts;
- Twenty-one contacts with mobile 998, belonging to an unknown user, between 21 December 2004 and 7 February 2004;
- Twenty-one contacts with mobile 934, attributed to Mr Sabra's father, with the last call at 14:01 on Monday 14 February 2005, from Purple 018, then activating SABRA3. There were 306 calls overall and it is the third highest contact in Mr Donaldson's table;
- Nineteen contacts with mobile 375 (Associate Purple 375). No evidence was led as to its user;

⁷⁶⁰⁴ Exhibit P1150 (Interview of Witness PRH069, 19 October 2010), pp 21-22. This is a direct quote: in the interview the interpreter seemed to switch between repeating (i.e. directly interpreting) what the witness had said, and stating in the third person that the witness had said something, for example, when referring to how the witness stored the number in his mobile, 'Because he writes it under the name of the husband', and '*So he wrote it down in his mobile under the name of Assad*'. And, 'I have it in my mobile under the name of Assad because it's his mobile phone, but it's all the times with his wife, *that's why he kept it under Assad's name.*' Another example is on p. 7 where the interpreter, referring to what the witness had said, stated, '*He doesn't know the name of the street or the building, he knows, it's in the seventh floor*'. This deviates from international interpretation standards.

- Seventeen calls with a mobile attributed to Mr Hassan Haidar Makki, Mr Sabra's brother-in-law (his sister's husband) on number mobile 592. This was the fourth highest contact with 267 calls;
- Sixteen text messages were exchanged with mobile 885, including an incoming text at 16:55 on Monday 14 February 2005. Who was using it is not in evidence. However, one message was a general family message, and two sent to mobile 657 in May 2005 appeared not to be directed to Mr Sabra;

On Eid, 20 January 2005, the message written in the Arabic script, stated at the end, 'Yeah! (May it return well on you and your family and especially Sado)', with Sado in the Latin script;

On 4 May 2005, a message was directed to Ms Salloum (on mobile 657) saying, 'Good evening Lalo, how are you? Biggest kiss to the most beautiful "nour"'. On 10 May 2005, a text to 'Lalo', presumably Ms Salloum, identified the sender as 'Dado', saying, 'Hi Lalo I am Dado. You start with the decoration tomorrow because we are coming to you. My regards to little Nana. Bye bye';

- Sixteen contacts with mobile 176, attributed to Mr Bilal Kheireddine, who had a joint bank account with Mr Oneissi. There is otherwise no evidence of who he is. Overall, that number was ranked fourteenth, with 164 contacts;
- Fifteen texts and voice calls with a number attributed to Ms Salloum's aunt, Ms Nadia Assad Salloum, on mobile 473. Purple 018 made the last two voice calls to this number on Thursday 10 February 2005. This was the sixth most regular contact with 212 contacts;
- Eleven contacts with landline 852, the fifteenth highest contact (162 overall);
- Seven calls from landline 377, a number subscribed in Mr Maarouf Rammal's name that was used by customers in his supermarket. In the entire period there were 171 calls from this number, making it the tenth highest contact;
- Seven calls with mobile 869, out of 116 in total;

- Seven contacts with Mr Sabra's maternal nephew, Mr Alaaeddine, on mobile 637, including the text message on Eid, described above. The last contact was a voice call from mobile 637 on Sunday 6 February 2005;
- Three contacts occurred with an unknown mobile 371, the ninth highest with 175 contacts;
- Three contacts with a number attributed to Mr Sabra's brother, Ali Sabra, on mobile 144, out of a total of 162 contacts; and
- Three calls and two SMS from mobile 941.

4018. Normal life experience is that someone in a couple will more likely frequently contact their own relatives than their partner's. This is not of course a hard and fast rule and its general application will depend upon a multitude of factors specific to any relationship, and often unknown outside of it. The Trial Chamber, however, has no information about anything related to Mr Sabra's and Ms Salloum's familial relationships. There is no evidence about the nature or closeness of the familial relationships identified with various contacts suggesting either that *only* Mr Sabra would contact members of his family or *only* Ms Salloum would contact her family on the mobile. Even if a son or daughter more likely regularly contacts their own parents than their in-laws, this obviously does not hold for every situation and the Trial Chamber emphasises that it knows nothing about the Sabra family's.

4019. The Trial Chamber can only postulate that, generally, it would presume that Ms Salloum would be more likely to contact her own relatives, such as an aunt and her parents than Mr Sabra would be *likely* to contact them. And conversely with Mr Sabra; it is more likely that he would regularly call his own father and relatives than Ms Salloum would call them. But this can be put no higher than a general possibility.

4020. The calling patterns in the pleaded indictment period—and putting to one side the calls between the three Purple mobiles—reveal contacts with relatives on both sides of the relationship. There were 48 identified contacts with Mr Sabra's relatives and 49 with Ms Salloum's. An additional 16 were from mobile number 885 which appeared from text message content to be communicating with Ms Salloum. If this theory is correct, namely that members of a couple are

more likely to call their own relatives, the contact with identified relatives on both sides of this relationship is fairly evenly matched. This would strongly suggest that the mobile was used by both Mr Sabra and Ms Salloum in the relevant indictment period of 22 December 2004 to 14 February 2005.

4021. It is stressed, however, that this is no more than a mere possible hypothesis.

- ii. Calls to and from Purple 018 between Wednesday 22 December 2004 and Monday 14 February 2005 when Mr Sabra is alleged to have been involved in the false claim of responsibility

4022. The Prosecution's case is that Mr Sabra was present near the Arab University Mosque on dates in late December 2004 and early January 2005 for the purposes of arranging the false claim of responsibility, and, on Monday 14 February 2005 he participated in making the false claim of responsibility. The Trial Chamber has examined the call sequence table of calls from Purple 018—as it is the Prosecution's case that Mr Sabra was using the mobile at those times—to discern whether patterns emerge that could point to him as the mobile's sole user.

4023. Outgoing calls in this respect are more relevant than incoming calls. This is because if Mr Sabra was using it, logically he would be making calls to people he wished to contact himself, rather than those his wife wished to contact. If the mobile, however, has more than one user, typically callers wishing to speak to someone other than Mr Sabra, might call it. Here, of course there is no direct evidence of who was making or receiving the calls and texts.

4024. In respect of the activities alleged around the Arab University Mosque are the following call patterns:

- On Thursday 30 December 2004, at 18:11, Purple 018 connected to COLA3, providing coverage near the Arab University Mosque. A little over an hour and a half later, at 19:49, Purple 018 called Mr Bilal Kheireddine's mobile 176. At 20:25, Purple 018 called the Salloum family landline on number 747. Both calls activated SFEIR3;
- On Friday 31 December 2004, Purple 018 connected to cells near the Arab University Mosque between 12:39 and 16:34. During this period, Purple 018—apart from the calls to Mr Oneissi's Purple 095—called unknown mobile 998 at 16:05. It also took four

voice calls from the Salloum family landline 747, between 16:35 and 17:58, and then made a call to that number of 82 seconds at 18:31.

Two minutes later, at 18:33, Mr Oneissi's Purple 095 called Purple 018. For these latter two calls, Purple 018 activated CBOURJ3, a cell in southern Beirut;

- On New Year's Day, Saturday 1 January 2005, Purple 018 connected to cells near the mosque between 11:12 and 15:52. It made a call to unknown mobile 869 at 11:12, and then at 12:38 to Mr Bilal Kheireddine's attributed mobile 176;
- On Monday 3 January 2005, Purple 018 connected to cells near the mosque between 11:16 and 12:23. The only outgoing calls were to Mr Oneissi's Purple 095;
- On Tuesday 4 January 2005, Purple 018 activated cells near the mosque between 15:08 and 18:50. The only two outgoing calls were to Mr Merhi's Purple 231;
- On Wednesday 5 January 2005, between 14:34 and 14:44, Purple 018 connected to cells near the mosque. There was a call from an unknown mobile, 803. At 16:35, Purple 018 called the Salloum family landline 747, and again at 18:38, connecting to ROUEIS3 and ROUEIS2;
- On Thursday 6 January 2005, Purple 018 activated cells near the mosque between 11:41 and 18:48. It called Mr Bilal Kheireddine's mobile 176 at 11:41; and
- On Friday 7 January 2005, between 12:54 and 16:47, Purple 018 connected to cells near the mosque. In that period it made four calls to Purple 095.

4025. At 14:11 on Monday 14 February 2005, the first call in the false claim of responsibility was made to Reuters. Three calls were made to Al-Jazeera, the last at 17:04.

4026. Apart from four calls to Mr Merhi's Purple 231 and Mr Oneissi's Purple 095, Purple 018 made two other calls that afternoon. The first was to Mr Bilal Kheireddine's number 176 at 13:33 and the second was to Mr Sabra's father's mobile, number 934, at 14:01.

4027. The calls on Monday 14 February are slightly more supportive of Mr Sabra using the mobile at those particular times, based on the call to his father.

4028. The call pattern on Friday 31 December 2004, however, is of four calls from the Salloum family landline 747 to Purple 018 while it was connecting to cells near the Arab University Mosque. But what is the explanation for this? Could it have been Ms Salloum, at her parents' home, calling Mr Sabra, who had the mobile? Or was it Ms Salloum's parents calling her, or Mr Sabra on Purple 018? Or was it someone else? Another family member? At 18:31, Purple 018 called that number for 81 seconds. But there is no direct evidence of who made that call nor any of the other calls.

4029. On Wednesday 5 January 2005, after Purple 018 had connected to cells near the mosque at 14:44, it twice called the Salloum's family landline 747, at 16:35 and again at 18:38. This suggests that Ms Salloum may have been using the mobile that afternoon. It may also suggest that Mr Sabra was looking for his wife at her parents' home. But these are only possibilities. By contrast, at 14:01 on Monday 14 February 2005, Purple 018 called Mr Sabra's father's number, suggesting that he more likely had the mobile at that point. But this is no more than a possibility.

4030. The Trial Chamber cannot use the evidence of the call patterns between the three Purple mobiles, 018, 095 and 231—at any time—to support the inference that Mr Sabra was the user of Purple 018 at the relevant times. To do so would employ circular reasoning and logic. This is because the attribution to Mr Sabra as the sole user on 14 February depends upon the mobile being attributed to him by other evidence. The Prosecution has to independently prove that he was using the mobile; this cannot be proved by the fact that calls were made between the three mobiles, or from an implicit suggestion that he may be the more likely candidate in his marriage to be the user of the mobile on 14 February.

4031. The Trial Chamber has to be satisfied beyond reasonable doubt that Mr Sabra was using Purple 018 for all relevant pleaded activities. The evidence establishes that both he and his wife were using the mobile during both the attribution and indictment period. The Trial Chamber must exercise caution and evidential doubt in favour of an accused person.

(g) Conclusion

4032. Attributing mobiles 546 and 657 to Ms Salloum and Mr Sabra assists in attributing Purple 018 to both. All three mobiles had among their most frequent contacts Mr Sabra's father, Mr Hassan Sabra; Mr Sabra's brother-in-law, Mr Hassan Makki; Ms Salloum's aunt, Ms Nadia

Salloum; and the Salloum family home. There is also consistency among the use of given names and diminutives in text messages across the three mobiles, supporting the notion that all three had the same users at some times.

4033. The Trial Chamber is satisfied that Mr Sabra and Ms Salloum used both mobiles 546 and 657 although it appears that they were more often used by Ms Salloum. There is clear evidence from the use of this mobile as a business contact number that both members of this couple were using mobile 657. And texts contain their and their daughter's names.

4034. Based on the striking similarity between the contact and geographic profiles and the content of the several text messages mentioning 'Hala' and 'Assad' by name, the Trial Chamber is also satisfied that Purple 018 was also used by both Mr Sabra and Ms Salloum during the extended attribution period.

4035. The Trial Chamber, however, has been unable to find calling patterns for the user(s) of Purple 018 from which it could discern that it had a single user either in the attribution period or the relevant indictment period. On some days, assuming that Mr Sabra was more likely to contact his relatives than his wife's, and vice versa, either could have been using the mobile and at different times. Further, Witness 69 stated that he contacted Mr Sabra on mobile 657, but through Ms Salloum who had the mobile. While this was outside of the indictment period, it supports the notion, based on the call patterns of all three mobiles, that both were using the three mobiles.

4036. Most crucially, during the pleaded indictment period of 22 December 2004 to 14 February 2005, the Trial Chamber cannot conclude that Mr Sabra was the sole, main or principal user of Purple 018. The evidence points to shared usership in that period. But even more critically, the Trial Chamber cannot positively conclude from the only evidence it has—namely, that of the mobile's geographic and contact profiles, for there is no relevant text message content—that Mr Sabra was the sole user of the mobile on the days on which it is pleaded that he was using the mobile for false claim of responsibility related activities.

4037. It cannot agree with Mr Donaldson's assertion that Mr Sabra was the single user of Purple 018. The evidence actually points towards its shared use. The strongest evidence that Mr Sabra was using the mobile is based upon two texts in 2004 that use the name 'Assad' and one in 2005 referring to '*khal*' (maternal uncle) from his maternal nephew. Those three texts out of 8,739

contacts cannot provide sufficient proof beyond reasonable doubt that Mr Sabra was the mobile's *single or principal* user.

4038. The Trial Chamber is therefore unable to conclude beyond reasonable doubt that the only inference reasonably available from the evidence is that Mr Sabra was the single user of the mobile between 22 December 2004 and 14 February 2005. The evidence establishes that while he was most probably using the mobile during the period, his wife was also probably using it. Although the call to his father's attributed mobile at 14:01 on the afternoon of Monday 14 February 2005 points to him as the more likely user of Purple 018—at least between Mr Sabra and his wife as the two candidates *on that day*—this cannot of itself or in combination with any other evidence establish beyond reasonable doubt that Mr Sabra was its single user that afternoon at the relevant times.

4039. In making this finding, the Trial Chamber emphasises that it has examined the evidence in its totality while scrutinising the individual pieces of proof. None, collectively or individually, can establish single use attribution of Purple 018 for Mr Sabra at the relevant times.

F. Mustafa Amine Badreddine

4040. Mustafa Amine Badreddine was born on 6 April 1961 in El-Ghobeiri in Beirut. He was twice married, with six children. His late brother in law was Imad Mughniyeh, who was married to Mr Badreddine's sister, Saada.⁷⁶⁰⁵ Mr Badreddine was one of the four original accused in this case.

4041. In May 2016, Hezbollah announced Mr Badreddine's death in Syria. On 11 July 2016, the Trial Chamber, acting according to a three to two majority Appeals Chamber decision, terminated the case against him.⁷⁶⁰⁶ His name, however, remained in the amended consolidated indictment that the Prosecutor filed following this order.

4042. The Prosecutor, in the amended consolidated indictment, pleads that Mr Badreddine, who was allegedly also known under the alias 'Sami Issa', participated in a conspiracy with the four Accused aimed at committing a terrorist act to assassinate Mr Hariri. Specifically, Mr Badreddine is alleged to have monitored, and, with Mr Ayyash, coordinated the surveillance of Mr Hariri in preparation for the attack and the purchase of the Canter used in the attack. Additionally, he monitored the physical perpetration of the attack. Further, he monitored, and, with Mr Merhi, coordinated the preparation of the false claim of responsibility for the attack.⁷⁶⁰⁷

4043. His involvement in the attack, according to the Prosecutor, is shown by his use of a mobile in the Green network of three mobiles that were used for this purpose. Mr Badreddine is alleged to have used his Green network mobile 023 to communicate with Mr Ayyash, who was using his Green mobile 300, and with Mr Merhi who was using Green mobile 071, 'to exchange information regarding all aspects of the conspiracy and coordinate the acts done in furtherance of the conspiracy'. It was a coordination network used exclusively by these three co-conspirators.⁷⁶⁰⁸ Mr Badreddine is also alleged to have been a supporter of Hezbollah, as are the four Accused.⁷⁶⁰⁹

⁷⁶⁰⁵ Exhibit P1042 (Certified copy of family status extract and certified copy of marriage certificate), p. 13; exhibit P1040 (Birth certificate of Mustafa Badreddine) ERNs 60242738-60242741; exhibit P2023.3, para. 15.

⁷⁶⁰⁶ Interlocutory appeal decision on the death of Mr Badreddine and termination of proceedings; Order terminating proceedings against Mr Badreddine without prejudice and ordering the filing of an amended consolidated indictment.

⁷⁶⁰⁷ Amended consolidated indictment, paras 3 (a), (d)-(e), 48.

⁷⁶⁰⁸ Amended consolidated indictment, paras 15 (b), (18), 19 (a).

⁷⁶⁰⁹ Amended consolidated indictment, para. 49.

1. The cell site evidence

4044. The evidence connecting Mr Badreddine with the Green network mobile 023 comes from the Prosecution's cell site evidence. To prove that he was using Green 023, the Prosecution led evidence that Mr Badreddine was also using two personal mobiles, numbers 663 and 354, that co-located with Green 023. It led extensive evidence of the use of these two mobiles. Mr Badreddine was alleged to have used mobile 354 from 1 September 1997 to 31 December 2005, and mobile 663 from 26 February 2001 to 31 December 2005.

4045. The Prosecutor also pleaded that Mr Badreddine was using five 'sequential mobile phones', with numbers ending in 683, 944, 195, 486 and 593. These were 'used in sequential order, meaning that each phone was used for a period of weeks or months and then replaced by another'.⁷⁶¹⁰ The Prosecution led evidence only of the use of sequential mobile 944, which in reality was another personal mobile, and of its potential co-location with Green 023. The Prosecution alleged that Mr Badreddine used sequential mobile 944 from 9 March 2004 to 9 March 2005.

4046. To prove co-location of the personal mobiles and with Green 023, the Prosecution relied on the analytical evidence of its analyst, Mr Andrew Donaldson, and its cell site expert, Mr J. E. Philips.

4047. Mr Donaldson, the non-expert in-house Prosecution analyst, prepared a lengthy report, 'Evidence of telephone attribution Mustafa Amine Badreddine' a version of which the Prosecutor submitted to the Pre-Trial Judge as part of the confirmation materials used to indict Mr Badreddine.⁷⁶¹¹ Mr Donaldson positively concluded that personal mobiles 354, 663, a series of sequential mobiles, including mobile 944, and Green 023 were all attributed to Mr Badreddine,⁷⁶¹² meaning that he was the single user of all four.

4048. Mr Philips produced a detailed post-indictment report, in November 2012, entitled 'Demonstration of single person use of multiple mobile phones using Cell Site Analysis Suspect 2', in which he analysed the possible co-location of personal mobiles 944, 354, 663 and network Green mobile 023, over 15 days of interest. He concluded that, 'Over the entire period under

⁷⁶¹⁰ Amended consolidated indictment, paras 16, 18.

⁷⁶¹¹ Exhibit P2023.3 (Attribution report of Andrew Donaldson regarding Mr Badreddine), version 6, 13 December 2017.

⁷⁶¹² Exhibit P2023.3, paras 3-4.

review, all mobile phones are consistent with being used *by a single person* with no exceptions'.⁷⁶¹³ He did not positively state that the four mobiles had a single user.

4049. For this report, Mr Philips explained that he was using the three terms 'could be co-located', 'may preclude' and 'would preclude'.⁷⁶¹⁴ In the body of the report, however, he interchangeably used the other terms 'may be co-located' and 'may not be co-located'.

2. Summary of evidence and findings

4050. A number of witnesses knew Mr Badreddine under his alias of Sami Issa. Mr Badreddine had attended the Lebanese American University (LAU) as a student between 1997 and 2004. He graduated in 2005 with a Bachelor of Arts in Political Science. Mobile 354 was Mr Badreddine's contact number at the university. From about 2002 to 2005, calling himself Sami Issa, he befriended students at the university and socialised with them. Sami Issa had bodyguards, one or more apartments in Jounieh, which is about 20 or so kilometres north of Beirut, and or Sahel Alma, a boat 'Samino' that he moored north of Beirut and owned a jewellery business, Samino Jewellery, that had three branches in Beirut.

4051. Three witnesses identified mobile 354, and seven identified mobile 663, as Sami Issa's. Text messages from mobile 663 used the names 'Sami' and 'Samino'. Sami Issa, like Mustafa Badreddine, had a leg injury and walked with a limp. Text messages to both personal mobiles refer to his leg and foot injuries. The two also shared the same birthday, 6 April.

4052. Sami Issa travelled with armed bodyguards, used multiple mobiles and took precautionary measures to avoid being photographed, or leaving his fingerprints on objects.

4053. Mobile 354 had 855 contacts with one of Mr Badreddine's girlfriends and 128 with another. It also had 2,056 contacts with his sister's mobile and hundreds of contacts with the Samino outlets. Mobile 663 had 21,372 contacts with one girlfriend and 3,151 with another. It had thousands of contacts with the Samino stores and its associates, as well as 1,895 with an employee.

⁷⁶¹³ Exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), 6 November 2012, p. 3.

⁷⁶¹⁴ Exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), 6 November 2012, p. 30.

4054. The two mobiles had an overlapping geographical profile and use pattern and numerous common contacts.

4055. The third mobile, number 944, had hundreds of contacts with the mobiles of Sami Issa's business partner at Samino and its registered owner. It had a smaller circle of contacts—including what were described as Samino 'insiders',⁷⁶¹⁵ Hezbollah officials and several Badreddine family members—and a lower volume of traffic.

4056. In May 2016, Hezbollah announced Mr Badreddine's death in combat in Syria and released biographical details including photographs and video footage, and stated that he was a senior Hezbollah military commander. Eight witnesses recognised Mr Badreddine as the person they knew as Sami Issa. The evidence that Mr Badreddine was Sami Issa, and was using the three personal mobiles, is overwhelming.

4057. The cell site evidence establishes that mobiles 354 and 944 co-located, and that mobiles 944 and 663 co-located. Both had a single user. Green 023 was used on 57 days between 28 September 2004 and 12 February 2005. It moved consistently with the other three mobiles.

4058. The evidence establishes that that Mr Badreddine was using personal mobiles 354, 663 and sequential mobile 944 in the periods alleged, either under his own name or his alias Sami Issa. These mobiles co-located with Green 023 in such a manner that the only reasonable conclusion from the evidence is that Mr Badreddine was also using that mobile, as its single user.

3. Mr Badreddine's identity and his alias 'Sami Issa'

4059. Mr Badreddine used more than one name. One was 'Sami Issa'. The Prosecution initially used Mr Donaldson's analytical overview evidence—combined with witness testimony—to show that Mustafa Badreddine and Sami Issa were the same person. Mr Donaldson had relied on witness testimony, documents and text message content to conclude that Sami Issa was an alias for Mr Badreddine.⁷⁶¹⁶

⁷⁶¹⁵ Mr Donaldson used the term Samino 'insiders' to distinguish them from Samino employees in terms of their proximity to Mr Badreddine or Sami Issa. Samino 'insiders' could have been in a position to know his identity. For example, one Samino 'insider' is married into Mr Badreddine's family, while a second had their number provided as a contact for Mr Badreddine's daughter at her school. In contrast, Samino employees did not know the identity of Sami Issa. This is summarised in Mr Donaldson's report, exhibit P2023.3, paras 7-14.

⁷⁶¹⁶ Exhibit P2023.3, paras 6-39.

4060. Mustafa Amine Badreddine did not have a Lebanese passport nor any registered real estate in Lebanon. The Lebanese authorities have no record of a Sami Issa, who was born on 6 April. He too did not have a Lebanese passport. There were no tax records in Sami Issa's name, nor any official records connecting this person with Samino Jewellery, which was a registered company.⁷⁶¹⁷

4061. After Mr Badreddine's presumed death in May 2016, however, eight witnesses who knew Sami Issa recognised Mustafa Badreddine from Hezbollah publicity material, as Sami Issa.

4062. Witnesses who knew Sami Issa stated that he went by many different names. Witness PRH338 took a course with Sami Issa at the LAU and stated that the professor did not call him 'Sami Issa' when taking the class attendance. When the witness asked him about this he said he was taking a course 'instead of his friend'.⁷⁶¹⁸ Others explained that Sami Issa also went by Safi, Sam and Samino.⁷⁶¹⁹

4063. Before attributing any mobiles to Mr Badreddine, Mr Donaldson had to determine whether Mr Badreddine and Sami Issa were the same person.⁷⁶²⁰ The exact date that the alias Sami Issa was adopted is not known, but according to Mr Donaldson, 'evidence suggests that it was commonly used in certain spheres from 2002 onwards'.⁷⁶²¹

4064. The significance of the Sami Issa alias is that it ties or links Mr Badreddine to mobiles that people were contacting thinking that they were communicating with someone they knew as Sami Issa. It also links Mr Badreddine to the Sami Issa who owned three jewellery stores in Beirut. Those contacting the mobile numbers used by Sami Issa included his friends and his employees. The importance of this to the case is to link the mobiles used by Sami Issa/Mustafa Badreddine to the user of the pleaded Green network mobile 023 that was allegedly used to coordinate and monitor Mr Hariri's assassination and the false claim of responsibility.

⁷⁶¹⁷ Exhibit P2065 (Response to request for assistance concerning passports for Mr Badreddine or Mr Issa), p. 2; exhibit P2076 (Ministry of Trade documents in regards to Samino), p. 1; exhibit P2075 (Response to request for assistance concerning tax records), ERNs 60243961-60243962, 60243965-60243969, 60243973-60243976.

⁷⁶²⁰ Exhibit P2023.3, para. 1.

⁷⁶²¹ Exhibit P2023.3, para. 41.

(a) The Lebanese American University

4065. Mr Badreddine applied for admission to the LAU and was assigned a student number.⁷⁶²² LAU documents show that he used multiple different spellings of his name, including ‘Mustafa Amin Badruddin’, ‘Safi Badr’, ‘Safi Badruddin’ and ‘Mustapha’.⁷⁶²³ An email sent from ‘Safi Badr’ under Mr Badreddine’s name to the LAU on 22 November 2003, reads ‘My name is Mustaf Badruddine (Safi Badr). My ID # is 199734980’.⁷⁶²⁴

4066. Witnesses PRH605 and PRH338 attended the LAU and came to know Sami Issa.⁷⁶²⁵ Witness 605 was there from 2003, while Witness 338 attended from 1999 until 2009.⁷⁶²⁶ Witness PRH264 was Sami Issa’s university friend and knew him socially, and met him and a group of friends in 2004 and 2005.⁷⁶²⁷

4067. Sami Issa was enrolled in basic health and ancient Arabic literature at the LAU. In 2000 and 2003, Witness 338 and Sami Issa took courses together.⁷⁶²⁸ In class attendance, Sami Issa was called by a different name that the witness could no longer remember.⁷⁶²⁹ Witness 338 identified photographs and a video of Mr Badreddine as Sami Issa.⁷⁶³⁰

4068. On 28 February 2005—two weeks to the day after the attack on Mr Hariri’s life—and after attending the university for various semesters between 1997 and 2004, ‘Mustafa Amin Badruddin’ was awarded a Bachelor of Arts in Political Science.⁷⁶³¹ Witness testimony suggests that Sami Issa also studied Political Science at LAU.⁷⁶³² Mobile 663’s user also sent and received text messages

⁷⁶²² Exhibit P1139 (Information from LAU regarding Mustafa Badreddine). Following the introduction of a new computer system at the university, the number ‘19’ was added in front and a zero at the end of the student number, changing the original assigned number 973498 to 199734980, meaning that the university had two numbers associated with Mustafa Badreddine. Exhibit P1141 (Response to request for assistance for LAU documents). *See also* exhibit P2023.3, para. 34, where Mr Donaldson summarises the sources concerning the name ‘Safi Badr’.

⁷⁶³² Exhibit P2081 (Statement of Witness PRH273) pp 25, 30; exhibit P2023.3, para. 22.

relating to the user's attendance at university in October and December 2004, as is shown in the two texts extracted below:⁷⁶³³

04-10-2004	17:48:22	3966663	241	hi albi i woke up late&went 2 univrsty.now i am out.i call u	Hi my heart, I woke up late and went to university . Now I am out.i call u
06-12-2004	16:36:10	3966663	789	ana ba3Dni bil jam3ah ana bottosil fiki	I'm still at the university . I call you.

4069. In 2005, Witness 273 collected a degree certificate on Sami Issa's behalf. Sami Issa had asked him to collect the degree as a favour, saying that the degree—a Bachelor of Arts in Political Science—was for a close friend of Sami Issa's by the name of Mustafa Badreddine, who had graduated from the LAU and was 'living outside'. Sami Issa asked the witness to send a fax from an international number, as required by university policy, to request a proxy by the person who was 'living outside'.⁷⁶³⁴ However the LAU did not have any records relating to Sami Issa.⁷⁶³⁵

(b) Mustafa Badreddine and Sami Issa's common birthday

4070. Mustafa Badreddine was born on 6 April 1961,⁷⁶³⁶ and shared a common birthday with 'Sami' Issa, who received birthday messages on 6 April. The texts below show the greetings:⁷⁶³⁷

06-04-04	03:32:45	527	3966663	Hallo SAMI , HAPPY BIRTHDAY w enchalah hal s'n! betkoun senet kh!r w yekhalealak ahlak w kel 2ely bet7!bon 7adak w ye3aydo ma3ak 3alatoul .Best wishes 4 u .Emwa!	Hallo Sami, Happy Birthday and I wish you many happy returns and God bless your parents and all your beloved ones. Best wishes for you. Emwa!
06-04-05	10:11:55	725	3966663	Hi...how r u? Happy birthday and 3a2bél el miyé.Take care...	Hi... how are you? Happy birthday and many happy returns. Take care...

(c) Leg injury

4071. Both Mustafa Badreddine and Sami Issa walked with a limp. After Mr Badreddine's presumed death in May 2016, *Alahed* news agency published a video showing Mr Badreddine

⁷⁶³³ Exhibit P2023.3, para. 169; exhibit P1294 (SMS content for mobile 663), pp 676, 829.

⁷⁶³⁴ Exhibit P2081 (Statement of Witness PRH273), p. 25.

⁷⁶³⁶ Exhibit P1042, p. 13; exhibit P1040, ERNs 60242738-60242739, 60242741; exhibit P2023.3, para. 15.

⁷⁶³⁷ Exhibit P1294, pp 140, 160.

walking with a limp.⁷⁶³⁸ Witnesses PRH416, PRH264, PRH306, PRH470 and PRH089 all stated that Sami Issa walked with a limp or had issues with his leg.⁷⁶³⁹ Witness 416 believed that the issue was with Sami Issa's right knee, while Witness 306 thought it was his left leg.⁷⁶⁴⁰

4072. Witness 89 did not specify which leg, but stated that Sami Issa wore a support on his leg below the knee.⁷⁶⁴¹ Witness 264 stated that Sami Issa did not have a regular limp, but had difficulty walking and that his injured leg was noticeably thinner below the knee.⁷⁶⁴² Further, the user of mobiles 354 and 663 sent and received in 2004 and 2005 text messages relating to his foot surgery. The texts below show this:⁷⁶⁴³

Date (dd/mm/yy)	Time (hh:mm:ss)	Outgoing	Incoming	SMS Content	Translation
20-12-2004	16:08:07	3833354	528	Mrahib.Kifak?Ana mish nasi bes 3milt 3amaliyyi bi ijri w ana 3al 3ikkaizat .C u soon.	Hellos. How are you? I didn't forget but i had surgery to my foot and I am on crutches. See you soon

(d) Precautions

4073. Sami Issa took numerous precautions to physically protect himself, and to avoid leaving traces of his presence anywhere.

⁷⁶³⁸ Exhibit P1415, at timestamps 15 and 24 seconds; Andrew Donaldson, T. 5 July 2017, pp 26-28; exhibit P2023.3, para. 24.

4074. Between approximately 2002 and 2005, he had at least three armed bodyguards.⁷⁶⁴⁴ Witness 416, who was employed at a Samino jewellery store, described Sami Issa as someone who was concerned about being identified. As an example, he described one occasion when Sami Issa was in a shop examining a new mobile, using a cloth to wipe his fingerprints off after handling it.⁷⁶⁴⁵ He also described Sami Issa dipping his silverware into his glass after finishing his meal, as a way to remove his prints.⁷⁶⁴⁶

4075. In the evenings, when Sami Issa went out to smoke *hookah*, he always brought his own tobacco and his own *hookah* device.⁷⁶⁴⁷ According to the witness, Sami Issa was a cautious man and even took precautions when in public, such as disguising himself—altering his facial appearance with a moustache, goatee or wearing sunglasses and hats—and keeping his head down when getting out of his car to avoid being captured on the street video cameras.⁷⁶⁴⁸

4076. Witnesses 89, 338 and 416 said that Sami Issa owned multiple cars. He switched cars throughout the week and sometimes within the same day.⁷⁶⁴⁹

4077. Sami Issa had one or more bodyguards who sometimes also drove for him.⁷⁶⁵⁰ Sami Issa instructed Witness 416 to drive in a circuit before and after the working hours to make sure he was not being followed.⁷⁶⁵¹ Sami Issa also instructed the witness to regularly to switch the cars' number plates, including a military number plate.⁷⁶⁵² A copy of the car registration documents associated with the particular number plate was attached to a car seat pocket, and when the witness received calls from Sami Issa, no number would usually appear on the screen.⁷⁶⁵³

⁷⁶⁵² Witness PRH416, T. 2 December 2015, pp 90-97, T. 3 December 2015, pp 30-31.

⁷⁶⁵³ Witness PRH416, T. 2 December 2015, p 77.

4078. Sami Issa sometimes carried a locked Samsonite briefcase.⁷⁶⁵⁴ Witness 416 once saw pockets inside the briefcase with a mobile in each of them, up to four or five mobiles. Sami Issa established a protocol for others to flip the mobile upside down so that they could not see who was calling and then hand the mobile to him.⁷⁶⁵⁵

(e) Samino jewellery

4079. Sami Issa owned a jewellery store, Samino Jewellery. It had three branches in Beirut. A Lebanese company dealing with precious metals and money changing recorded him as the owner of the Samino jewellery company. The company described him as ‘AMINO Jewelry owner Sami Issa, responsible who writes checks Shaker Nayef “SAMINO”’. This ‘Shaker’ had come in February 2001 ‘and bought 10 kg’.⁷⁶⁵⁶ As the company traded in precious metals, it is presumably referring to such a purchase. Samino Jewellery was officially registered in the name of Ali Fayeze Harb, with no mention of Sami Issa.⁷⁶⁵⁷

4080. Witnesses, however, stated otherwise. Witness 416 stated that Sami Issa owned the three Samino jewellery stores in Bourj Hammoud, Mar Elias and Furn El-Chebbak.⁷⁶⁵⁸ Mr Mohammed Nayef Shukr, who was also known as ‘Estez’, was Sami Issa’s business partner and was responsible for the financial and accounting aspects of all the branches of Samino Jewellery.⁷⁶⁵⁹ He was married to Mr Badreddine’s niece, Ms Thuraya Nazem Haidar.⁷⁶⁶⁰

4081. Witness 338, who knew Sami Issa from the university, used to buy jewellery from the Samino stores in Furn El-Chebbak and Mar Elias, which according to the witness were Sami Issa’s.⁷⁶⁶¹ The witness would see Sami Issa in the Mar Elias store and knew three employees from

⁷⁶⁵⁴ Witness PRH416, T. 2 December 2015, pp 75-76.

the two stores.⁷⁶⁶² She did not know whether Sami Issa was the sole owner of the stores, but Samino employees used to call him ‘the boss’.⁷⁶⁶³

4082. Sami Issa told Witness 605 that he had a jewellery store on Mar Elias street in Beirut.⁷⁶⁶⁴ Witness 89 understood that Sami Issa owned three jewellery stores, including those in Furn El-Chebbak and Mar Elias, but the witness visited only the Mar Elias store.⁷⁶⁶⁵ The witness did not purchase any jewellery from the Mar Elias store, but Sami Issa gave the witness a gift of worry beads sold in the store.⁷⁶⁶⁶

4083. Witness 264, who knew Sami Issa socially in 2004 and 2005 and who was involved in promotional activities sponsored by Samino, said that Sami Issa owned multiple jewellery stores, including that in Furn El-Chebbak.⁷⁶⁶⁷ Sami Issa occasionally gave this witness discounts on jewellery items from his stores.⁷⁶⁶⁸

(f) Identification of Mustafa Badreddine as Sami Issa

4084. On 13 May 2016, Hezbollah announced Mr Badreddine’s death in fighting in Syria.⁷⁶⁶⁹ The Trial Chamber received into evidence ten documents, under three categories, regarding Mr Badreddine’s presumed death:

i. Witness identification of Mr Badreddine as Sami Issa

4085. The first is witnesses identifying Mr Badreddine as Sami Issa. Three statements released by Hezbollah on 13 May 2016 and published on the website of the Lebanese *Al-Manar* TV channel, which reported on Mr Badreddine’s death and the related condolence and commemoration ceremonies, are relevant to the identification of Mr Badreddine as Sami Issa.⁷⁶⁷⁰

⁷⁶⁶² Exhibit P1663 (Statement of Witness PRH338), ERNs 60306060, 60306068, 60306077, 60306089-60306090, 60306110.

⁷⁶⁶³ Exhibit P1663 (Statement of Witness PRH338), ERNs 60306072-60306073, 60306110.

⁷⁶⁶⁴ Exhibit P1664 (Statement of Witness PRH605), ERNs 60314193-60314194.

⁷⁶⁶⁵ Witness PRH089, T. 15 December 2015, pp 49, 51, 58, 66-67, 85.

⁷⁶⁶⁶ Witness PRH089, T. 15 December 2015, pp 66-67.

⁷⁶⁶⁷ Witness PRH264, T. 10 December 2015, pp 19-22, 29-31, 57.

⁷⁶⁶⁸ Witness PRH264, T. 10 December 2015, pp 38-39.

⁷⁶⁶⁹ Exhibit P1982 (*Al-Manar* TV news article, 13 May 2016).

⁷⁶⁷⁰ Exhibit P1982; exhibit P1983 (*Alahed* news article, 13 May 2016); exhibit P1984 (photographs of Mustafa Badreddine from *Alahed* news article, 13 May 2016); exhibit P1415.

4086. The statements also contain a photograph of Mr Badreddine in military fatigues. Eight witnesses identified Mr Badreddine from this photograph as the man they knew as Sami Issa. Witnesses 416, 306, 264, 605, 338, 470, 423 and 369, who were interviewed after the announcement of Mr Badreddine's death, identified him either in images or in a video as the man they knew as Sami Issa, including Mr Badreddine in military camouflage.⁷⁶⁷¹

4087. An article, dated 18 May 2016, from the Iranian *Tasnim* News website records a commemoration ceremony in Damascus from that same date, with photographs of the ceremony.⁷⁶⁷²

4088. Another *Tasnim* News article recorded a meeting on 25 May 2016, where the Iranian Supreme Leader, Ayatollah Ali Khamenei, met Mr Badreddine's family in Tehran and gave his ring to Mr Badreddine's son Ali.⁷⁶⁷³ Photographs of Mr Khamenei with the family, presenting the ring to Mr Ali Badreddine, accompanied the report.⁷⁶⁷⁴

4089. Below are examples of photographs and still image from a video on which the witnesses recognised Mr Badreddine as Sami Issa:

⁷⁶⁷¹ Exhibit P1414 (Statement of Witness PRH416), p. 2; Witness PRH416, T. 3 December 2015, pp 41-45; exhibit P1660 (Statement of Witness PRH306), p. 2; Witness PRH306, T. 7 December 2015, pp 92-94, T. 8 December 2015, p. 7; exhibit P1659 (Statement of Witness PRH264), p. 2; Witness PRH264, T. 10 December 2015, pp 19-21; exhibit P1664 (Statement of Witness PRH605), ERN 60319312, 60319316-60319321; exhibit P1663 (Statement of Witness PRH338), ERN 60318999, 60319002-60319007; exhibit P1658 (Statement of Witness PRH470), ERN 60319010, 60319014-60319019; exhibit P1661 (Statement of Witness PRH423), ERN 60319190, 60319194-60319199; exhibit P1662 (Statement of Witness PRH369), ERNs 60319070, 60319074-60319079. *See also* exhibit P1415; exhibit P2023.3, paras 7-14.

⁷⁶⁷² Exhibit P1990 (*Tasnim* news article on memorial ceremony in Syria, 18 May 2016).

⁷⁶⁷³ Exhibit P1991 (*Tasnim* Iranian news article, 26 May 2016).

⁷⁶⁷⁴ Exhibit P1991, p. 2.

Exhibit P1983 – a photograph of Mr Badreddine in military uniform published in May 2016 in Alahed

Exhibit P1983 – a photograph of Mr Badreddine in military uniform published in May 2016 in Alahed

Exhibit P1415 – a still image of Mr Badreddine in military uniform from a video published in May 2016 in Alahed

4090. Witness 338 also identified Sami Issa from the photograph below which the Prosecution downloaded from a public source website.⁷⁶⁷⁵

⁷⁶⁷⁵ Exhibit P1663 (Statement of Witness PRH338), ERNs 60318074, 60318078.

*Exhibit P724 – a photograph the Prosecution
downloaded from an open source website purporting to be of Mr Badreddine*

ii. Condolence ceremonies for Mr Badreddine in Beirut, Damascus and Tehran

4091. Several condolence ceremonies were held for Mr Badreddine in May 2016 after Hezbollah announced, through *Al-Manar* TV's website, that he had died in Syria. These were held in Beirut, Damascus and Tehran.

4092. Mr Badreddine's funeral procession took place in Beirut on 13 May 2016, and *Al-Manar* broadcast the procession and condolence ceremony.⁷⁶⁷⁶ *Al-Manar* also broadcast a two-hour tribute to Mr Badreddine held a week later, on 20 May 2016, which included a lengthy speech by Hezbollah's Secretary General, Mr Hassan Nasrallah.⁷⁶⁷⁷ Videos of the condolence ceremony on 13 May 2016 show several Hezbollah officials—Mr Ali Ammar, Mr Amine Sherri and Mr Wafik Safa—and Mr Badreddine's brothers, Adnan, Hassan and Mohammed, in attendance.⁷⁶⁷⁸ Hezbollah flags were draped over the coffin.⁷⁶⁷⁹

⁷⁶⁷⁶ Exhibit P1982; exhibits P1986 and P1987 (Video extracts of *Al-Manar* TV broadcast of Mustafa Badreddine's condolence ceremony, 13 May 2016); exhibit P1988 (Video extract of *Al-Manar* TV broadcast of Mustafa Badreddine's funeral procession, 13 May 2016).

⁷⁶⁷⁷ Exhibit P1989 (Transcript of video recording for *Al-Manar* TV regarding Mustafa Badreddine's memorial ceremony).

⁷⁶⁷⁸ Exhibit P1986.

⁷⁶⁷⁹ Exhibit P1988; exhibit P1989.

4093. Footage of the ceremonies was relevant to identifying Mr Badreddine's family and Hezbollah contacts and for the attribution of personal mobiles 354 and 663 and sequential mobile 944.⁷⁶⁸⁰

iii. Mr Badreddine was a Hezbollah supporter

4094. The Prosecutor, in paragraph 49 of the amended consolidated indictment, pleaded that Mr Badreddine, like the four Accused, was a supporter of Hezbollah.⁷⁶⁸¹ The evidence incontrovertibly establishes this in Mr Badreddine's case. At the time of his death, he was both a Hezbollah supporter and a senior Hezbollah military commander.⁷⁶⁸² This fact was not in dispute in the proceedings.

4095. The two documents and one video from *Al-Manar* and *Alahed* support the conclusion that Mr Badreddine was a prominent Hezbollah military commander and refer to his military operational activities on its behalf.⁷⁶⁸³

4096. The *Al-Manar* videos show several Hezbollah officials attending the condolence ceremonies for Mr Badreddine and show Mr Badreddine's coffin draped with a Hezbollah flag for the funeral procession.⁷⁶⁸⁴ The articles from the *Tasnim* News website describe the ceremonies held in Syria and Iran in relation to Mr Badreddine's death.⁷⁶⁸⁵

(g) Findings

4097. The evidence that Mustafa Badreddine and Sami Issa are the same person is overwhelming. The Trial Chamber therefore finds that the Prosecution has proved that Mr Badreddine used the alias Sami Issa from at least 2001 onwards.

⁷⁶⁸⁰ Decision admitting documents on the death of Mr Badreddine, paras 8, 36, disposition; T. 29 June 2017, p. 14. The Trial Chamber also admitted an interview with the late Mr Wissam Al-Hassan, who was Mr Hariri's chief of security at the time of the attack. Decision on admission of Mr Al-Hassan's interview, paras 65, 69-71, disposition; T. 13 December 2017, pp 4-5; exhibit P2121 (Interview of Wissam Al-Hassan, 17 June 2012); exhibit P2122 (Interview of Wissam Al-Hassan, 16 June 2012).

⁷⁶⁸¹ Amended consolidated indictment, para. 49.

⁷⁶⁸² See chapter IV 'Historical and political background to the attack', (S) (1) (b) 'Mustafa Amine Badreddine'.

⁷⁶⁸³ Exhibits P1982, P1983, P1989.

⁷⁶⁸⁴ Exhibits P1986, P1987, P1988, P1989.

⁷⁶⁸⁵ Exhibits P1990, P1991.

4098. The evidence that Mr Badreddine was the proprietor of Samino Jewellery and its three stores in Beirut is likewise unassailable. This leads to the question of whether Mr Badreddine, under any name, was using mobile 354.

4. Personal mobile telephone number 354

(a) Summary of evidence

4099. Mobile 354 was activated on the Touch network on 20 November 1997 and was deactivated on 22 June 2010.⁷⁶⁸⁶ The number was initially subscribed to Khodr Shehadeh Ibrahim Hodroj, with an undated transfer to Samir Ali Hodroj.⁷⁶⁸⁷ There was no break in activity related to this re-subscription.⁷⁶⁸⁸ Mr Hodroj was also the subscriber of mobile 663,⁷⁶⁸⁹ while the same bank account was linked to both mobiles 354 and 663.⁷⁶⁹⁰

4100. The amended consolidated indictment pleads that Mr Badreddine used mobile 354.⁷⁶⁹¹ To prove that it was his and or Sami Issa's from 1 September 1997 to 31 December 2005 the Prosecution relied on documents, contact and geographic profiles, witness testimony and text message content.

4101. Mr Donaldson's analysis of mobile 354 begins on 1 January 1997 and was based on the contacts and absence of any breaks in use.⁷⁶⁹²

4102. From 1998 to July 2001, mobile 704, which was also subscribed in Mr Hodroj's name,⁷⁶⁹³ contacted mobile 354 1,582 times.⁷⁶⁹⁴ Further, mobile 354 had 358 contacts with a mobile ending in 777, which was subscribed in the name of Mr Hodroj's wife, Ms Amal Kamal Haider.⁷⁶⁹⁵ The mobile subscribed to Mr Hodroj's wife was found among mobile 354's more frequent contacts. In

⁷⁶⁸⁶ Exhibit P1101 (Touch list of activation and deactivation dates), p. 1.

⁷⁶⁹¹ Amended consolidated indictment, para. 18.

⁷⁶⁹² Exhibit P2023.3, para. 50.

⁷⁶⁹³ Exhibit P943 (Subscriber note for mobile 704).

⁷⁶⁹⁴ Exhibit P2023.3, para. 108.

⁷⁶⁹⁵ Exhibit P466 (Personal civil status extract of Amal Kamal Haider); ERN SI-0001706; exhibit P1043 (Family civil status register extract for Samir Ali Hodroj), pp 4, 19-20; exhibit P2048 (Rainbow System client database extract); exhibit P2036 (New Trend Media subscriber database extract); exhibit P2023.3, para. 109.

isolation, this could suggest that Mr Hodroj and his wife could have been the actual users, with Mr Samir Hodroj posing as Sami Issa.

4103. However, eight witnesses identified Mr Badreddine as Sami Issa,⁷⁶⁹⁶ while one, Witness 338, did not recognise Mr Hodroj in a photograph.⁷⁶⁹⁷ Mr Donaldson concluded that it was unclear who was using mobiles 704 and 777.⁷⁶⁹⁸

4104. Lebanese American University documents from 2001 also listed mobile 354 as the contact number for ‘Mustafa Amin Badruddin’, who was a student between 1997 and 2004.⁷⁶⁹⁹ It also had over 2,000 contacts with the landline number ending in 354, possibly subscribed to Mr Badreddine’s sister, Saada.

i. Documents

4105. A LAU ‘returnees application form’ dated 27 November 2001 lists mobile 354 as the contact number for ‘Mustafa Amin Badruddin’.⁷⁷⁰⁰ A search on 3 February 2011 in the customer database of a shoe and clothing store showed Sami Issa listed as a customer with mobile 354 as contact number.⁷⁷⁰¹

ii. Witness evidence

4106. Witness 306, who worked for the Samino Jewellery company, identified mobile 354 as Sami Issa’s number.⁷⁷⁰² The witness identified photographs and the *Alahed* video of Mr Badreddine as Sami Issa.⁷⁷⁰³ Witness 89 met Sami Issa at the LAU sometime in 2004 and socialised with him outside the university. Between mid-2004 and into 2005, the witness met Sami Issa three to four times a week.⁷⁷⁰⁴ The witness identified mobile 354 as Sami Issa’s number.⁷⁷⁰⁵

⁷⁶⁹⁶ See para. 4086.

⁷⁶⁹⁷ Exhibit P1663 (Statement of Witness PRH338), ERNs 60298655, 60298665-60298666.

⁷⁷⁰³ Exhibit P1415; exhibit P1660, p. 2.

⁷⁷⁰⁴ Witness PRH089, T. 15 December 2015, pp 13-16.

⁷⁷⁰⁵ Witness PRH089, T. 15 December 2015, pp 7-9.

Witness 423 explained that a text message he sent to mobile 354 in 2005 was to ‘maybe Safi maybe Sami’.⁷⁷⁰⁶

iii. Text messages

4107. Mobile 354’s text messages show a common user throughout the period for which content was reviewed, namely from February 2004 to 31 December 2015,⁷⁷⁰⁷ when its user identified himself and was addressed as ‘Sami’, ‘Sam’ or ‘Safi’.⁷⁷⁰⁸ Between 2004 and at least September 2005, the user of mobiles 354 and 663 received nearly identical messages from a mobile ending in 088,⁷⁷⁰⁹ which was attributed to Sami Issa’s girlfriend.⁷⁷¹⁰ Mr Donaldson assessed the short time lapse between the text messages sent to both mobiles, and the user was twice addressed as ‘Safi’, and concluded that these text messages were intended for the same recipient.⁷⁷¹¹

4108. As noted above, Mr Badreddine appeared in a video walking with a limp and three witnesses said that Sami Issa either walked with a limp or had a problem with his leg.⁷⁷¹² The user of mobiles 354 and 663⁷⁷¹³ sent text messages relating to a foot or leg injury, as is shown immediately below.⁷⁷¹⁴

Date (dd/mm/yy)	Time (hh:mm:ss)	Outgoing	Incoming	SMS Content	Translation
20-12-2004	16:08:07	3833354	528	Mrahīb.Kifak?Ana mish nasi bes 3milt 3amaliyyi bi ijri w ana 3al 3ikkaizat .C u soon.	Hellos. How are you? I didn't forget but i had surgery to my foot and I am on crutches. See you soon

Merry Christmas and Miss Indepent. Wish you the best wishes. I wanted to see you but I did an operation in my leg and walking with crutches nowadays. See you soon.

⁷⁷⁰⁶ Exhibit P1661, p. 52.

⁷⁷⁰⁷ Exhibit P2023.3, paras 58-59.

⁷⁷⁰⁸ For example, exhibit P1286, pp 6-9, 50-51, 53, 55, 57-59, 61, 100, 146-147, 149, 151; exhibit P2023.3, pp 20-21.

⁷⁷⁰⁹ Exhibit P1294, pp 161-203; exhibit P2023.3, p. 19.

⁷⁷¹⁰ See para. 4135.

⁷⁷¹¹ Exhibit P2023.3, para. 63.

⁷⁷¹² Witness PRH416, T. 2 December 2015, pp 84-85; Witness PRH306, T. 8 December 2015, pp 61-64; Witness PRH089, T. 15 December 2015, pp 78-80; exhibit P1415, 00:15.

⁷⁷¹³ See para. 4132.

⁷⁷¹⁴ For example, exhibit P1286, p. 17.

4109. Mr Donaldson explained that mobile 354's user identified himself as 'Sami' or 'Sam' and responded to text messages when addressed as 'Safi'. The texts show that the user of mobiles 354 and 663 received near identical text messages. Mr Donaldson concluded that these text messages were intended for the same recipient.⁷⁷¹⁵

iv. Contact profile

4110. Mr Donaldson identified a number of regular contacts with mobile 354 as including Mr Badreddine's family members, friends, university acquaintances, Samino employees and 'insiders', Hezbollah officials, and other associates.

4111. The mobiles and landlines attributable or subscribed to six out of eight of Mr Badreddine's siblings and one sister-in-law and her son, were in contact with mobile 354. The majority of these contacts occurred before 2002. According to Mr Donaldson, the low frequency of contact with other mobiles attributable to Mr Badreddine with family members, may coincide with the fact that they were acquired in 2001 or later, and a change in Mr Badreddine's use of mobiles.⁷⁷¹⁶ The Prosecution tendered a Badreddine family tree into evidence.⁷⁷¹⁷

4112. During the attribution period, number 354 had:

- 2,056 contacts, ranked fourth, with the landline number ending in 354, which was possibly subscribed in the name of Mr Badreddine's sister, Saada.⁷⁷¹⁸ This number was activated on 24 June 1986 and cancelled on 31 March 2000;⁷⁷¹⁹
- 155 contacts with the mobile ending in 989, which was subscribed in the name of Mr Badreddine's brother, Mohammed⁷⁷²⁰ or variations of this name, and was listed as the home number for Mohammed's son.⁷⁷²¹ This number was also provided for

⁷⁷¹⁵ Exhibit P2023.3, para. 66.

⁷⁷²¹ Exhibit P1423 (Subscriber note for mobile 946), p. 1; exhibit P1540 (Mr Mehdi Badreddine's passport application), pp 1-3.

Mr Badreddine's brother when registering a vehicle⁷⁷²² and was associated with an email account used by Mr Badreddine's brother and a company;⁷⁷²³

- 50 contacts with the mobile ending in 909, which was also possibly subscribed in the name of Mr Badreddine's brother, Mohammed, and for which the landline number ending in 084 was provided as an alternative contact number. The landline 084 was also provided as an alternative number for the mobile 989, mentioned above;⁷⁷²⁴
- 39 contacts with the mobile ending in 777, which was also possibly subscribed in the name of Mr Badreddine's brother, Mohammed.⁷⁷²⁵ This number was associated with an email account of Mr Badreddine's brother and a company⁷⁷²⁶ and was also used in two business customer databases as his contact number;⁷⁷²⁷
- Nine contacts with the mobile ending in 854, which was associated with Ms Bassima Al-Hajj, who was the sister of Mr Ayyash's wife, Ms Fatima Al-Hajj. Ms Bassima Al-Hajj was married to Mr Badreddine's brother, Mohammed.⁷⁷²⁸ This number was used for passport applications for Ms Al-Hajj⁷⁷²⁹ and her son, Mehdi.⁷⁷³⁰ Moreover, mobile 854 was recorded as an alternative number in the subscription form for the mobile ending in 040, which was possibly subscribed in the name of Mr Badreddine's brother, Mohammed;⁷⁷³¹
- Nine contacts with the landline number ending in 147, which was possibly subscribed in the name of another brother of Mr Badreddine, Adnan.⁷⁷³² This landline number was provided for Mr Badreddine's sister, Khadija, when registering a vehicle,⁷⁷³³ and for

⁷⁷³³ Exhibit P2060 (Vehicle registration extract for Khadija Badreddine in relation to landline 147), p. 3.

Mr Badreddine's late brother, Bassam, in a Hajj application.⁷⁷³⁴ Landline 147 was also provided in the passport applications for Mr Badreddine's wife and two of their daughters, his niece, Mariam, and his sister, Saada;⁷⁷³⁵

- Eight contacts with the mobile ending in 614, which was possibly attributable to Mr Badreddine's brother, Hassan.⁷⁷³⁶ This number was subscribed in Mr Hassan Badreddine's name⁷⁷³⁷ and was provided as the contact number in his passport application.⁷⁷³⁸
- A subscription form dated 11 June 1998 for this number registered Hassan as the subscriber⁷⁷³⁹ and was accompanied by a copy of Mr Hassan Badreddine's passport;⁷⁷⁴⁰
- Two contacts, on 12 November 2002 and 26 July 2003, with the mobile ending in 099, which was associated with Mr Badreddine's sister, Khadija.⁷⁷⁴¹ The mobile ending in 099 was provided for Khadija when registering a vehicle,⁷⁷⁴² as well as her contact number in a business customer database;⁷⁷⁴³
- Two contacts, on 3 October 2004, with the mobile ending in 946, which was possibly attributable to Mr Badreddine's nephew, Mehdi.⁷⁷⁴⁴ This number was subscribed in Mehdi's name from 8 July 2005 onwards.⁷⁷⁴⁵ The number was also provided as a contact number for the American University of Science and Technology for an extended family member;⁷⁷⁴⁶

⁷⁷⁴⁵ Exhibit P1423.

⁷⁷⁴⁶ Exhibit P980 (List of students from American University of Science and Technology).

- One contact with the mobile ending in 980. The number was attributable to Mr Badreddine's late brother, Bassam.⁷⁷⁴⁷ Mobile 980 was provided for Mr Bassam Badreddine on a Hajj application,⁷⁷⁴⁸ together with his personal details.⁷⁷⁴⁹ It was also registered as Bassam's contact number in two business customer databases⁷⁷⁵⁰ and was provided as a contact number on the passport application of Mr Badreddine's brother, Mohammed;⁷⁷⁵¹
- 855 contacts, ranked 15th, with the mobile ending in 088, which was attributable to Sami Issa's girlfriend and was provided as her contact number in the customer database of a shoe and clothing store.⁷⁷⁵² In the text messages from mobile 663 to mobile 088, from 2004 to at least 2005, he addressed her by her given name and variations of this name.⁷⁷⁵³

Text messages show that mobile 088's user had a close personal relationship with 663's user, whom she referred to as Safi, Safsoofy and on one occasion, Sami. Before the July 2006 war in Lebanon, one witness remembers having met Sami Issa three or four times in his workshop in Beirut to have dresses made. Sami Issa was accompanied by his girlfriend.⁷⁷⁵⁴ In 2009, she ordered a wedding dress from this workshop, but later cancelled the order and Sami Issa contacted the designer to discuss the refund of its deposit;⁷⁷⁵⁵

- 128 contacts with the mobile ending in 637, which was attributable to another of Sami Issa's girlfriends who was employed at the Samino Jewellery, and was provided to a towing company.⁷⁷⁵⁶ Mr Donaldson concluded that the text messages also corroborate this attribution;⁷⁷⁵⁷

⁷⁷⁴⁷ Exhibit P1042, pp 9-10.

⁷⁷⁴⁸ Exhibit P1693 (Extract from list of applicants for 1425 Hajj related to mobile 980). Mr Donaldson explained that the year 1425 on the Hajj application corresponds to the Hajj beginning in 2005, exhibit P2023.3, fn. 146.

⁷⁷⁴⁹ Exhibit P1691 (January 2005 Hajj application documents), p. 11.

⁷⁷⁵⁷ Exhibit P2023.3, para. 78; exhibit P1320 (Witness Statement of Adrian Kirwan regarding SMS review of mobile 637), pp 4-7.

- 144 contacts with the mobile ending in 434, which was possibly subscribed in Witness PRH244's name and variations of this name.⁷⁷⁵⁸ From 1999 to 2004, Witness 244 studied at the LAU and from 2000 to 2004 was part of a small group of friends who socialised with Sami Issa in 2004 and 2005;⁷⁷⁵⁹
- Nine contacts with the mobile ending in 764. Witness 89 was this mobile's user and the user of the mobile ending in 008.⁷⁷⁶⁰ Witness 89 became a friend of Sami Issa at the LAU in 2004; the witness knew him as Sam and they regularly socialised.⁷⁷⁶¹ Sami Issa and Witness 89 used to meet on Sami Issa's 'Samino' boat, which he kept at Holiday Beach Marina north of Beirut and in Sami Issa's apartment in Jounieh.⁷⁷⁶² Witness 369 interacted with Sami Issa for the two seasons in which Sami Issa used the marina for his boat.⁷⁷⁶³ He identified Sami Issa from the photographs of Mr Badreddine published by *Alahed* in May 2016;⁷⁷⁶⁴
- 14 contacts with the mobile ending in 552, which was used by Witness 264 who worked for Witness 89.⁷⁷⁶⁵ Witness 264 identified Sami Issa from the photographs, contained in the Hezbollah statements, and a video;⁷⁷⁶⁶
- Five contacts with the mobile ending in 747, which was used by Witness 338,⁷⁷⁶⁷ who met Sami Issa when they both studied at the LAU;⁷⁷⁶⁸
- 449 contacts, ranked 23rd, with landline 864, which was the number for the Samino Jewellery branch in Mar Elias;⁷⁷⁶⁹

⁷⁷⁵⁸ Exhibit P926 (Subscriber note for mobile 777).

- 327 contacts with the mobile ending in 666, which was the number for the Samino Jewellery branch in Bourj Hammoud.⁷⁷⁷⁰ Mobile 666 was possibly subscribed to Mr Shukr and variations of this name, who was Sami Issa's business partner and the husband of Mr Badreddine's niece;⁷⁷⁷¹
- Ten contacts with landline 506, the number of the Samino Jewellery branch in Furn El-Chebbak, Beirut.⁷⁷⁷² This landline number was also provided as the contact number on documentation relating to Sami Issa's 'Samino' boat;⁷⁷⁷³
- Seven contacts with the mobile ending in 299, which was used by Sami Issa's bodyguard, Witness 416.⁷⁷⁷⁴ On the photographs, including that contained in the Hezbollah statements published on the *Al-Manar* website, and the video of Mr Badreddine from the *Alahed* news, the witness identified the man he knew as Sami Issa;⁷⁷⁷⁵
- 11 contacts with the mobile ending in 487, which was used by Witness 306.⁷⁷⁷⁶ Witness 306 worked in one of the Samino jewellery stores owned by Sami Issa from 2002 or 2003 to 2005.⁷⁷⁷⁷ He identified Sami Issa from the photographs and a video published by *Alahed* in May 2016;⁷⁷⁷⁸
- 16 contacts with the mobile ending in 190, which was subscribed in the name of and used by the manager of the Furn El-Chebbak branch of the Samino Jewellery.⁷⁷⁷⁹ One witness

similarly attributed this number to an employee of Samino Jewellery,⁷⁷⁸⁰ while another attributed it to one of Sami Issa's bodyguards;⁷⁷⁸¹

- 22 contacts with the mobile ending in 133, which was used by Witness 470.⁷⁷⁸² The witness was linked to one of Sami Issa's Samino jewellery stores;⁷⁷⁸³
- 987 contacts, ranked 12th, with the mobile ending in 880, which was attributable to Mr Ali Fayeze Harb and was possibly subscribed in his name.⁷⁷⁸⁴ Mr Harb was the registered 'business owner' of Samino Jewellery.⁷⁷⁸⁵ Documents, including a passport application, two Hajj applications and extracts from business customer databases corroborate this.⁷⁷⁸⁶ Mobile 880 was one of two numbers for Mr Badreddine's daughter, Soumaya, born in 1994, and recorded in the 2005-2006 records of the school she attended;⁷⁷⁸⁷
- 479 contacts, ranked 21st, with the mobile ending in 421, which was used by Mr Mohammed Ammar,⁷⁷⁸⁸ who was involved in the Samino Jewellery's operations.⁷⁷⁸⁹ Mr Mohammed Ammar was also associated with the mobile ending in 350⁷⁷⁹⁰ and there were seven contacts between this number and mobile 354. Mr Donaldson observed that 97 per cent of these calls occurred before 2002. During the attribution period of mobile 944 (from 9 March 2004 to 9 March 2005), there were only three calls between the mobile 421 and mobile 354, and none between the mobile 421 and mobile 663. There were, however, 119 contacts between the mobile 421 and mobile 944;⁷⁷⁹¹

⁷⁷⁹¹ Exhibit P2023.3, para. 93.

- 344 contacts, ranked 34th, with the mobile ending in 555, which was used by Mr Mohammed Nayef Shukr and was subscribed in his name.⁷⁷⁹² His wife, Ms Haidar, provided mobile 555 when registering a vehicle.⁷⁷⁹³ Documents, including Mr Shukr's identity card attached to a mobile subscription application, vehicle registration records and extracts from two business customer databases, corroborate that this number was used by Mr Shukr and variations of this name.⁷⁷⁹⁴ Mr Donaldson observed that 75 per cent of these calls occurred before 2002. During the attribution period of mobile 944, there were 32 calls between mobile 555 and mobile 354, and none between mobile 555 and mobile 663. There were however 410 contacts between mobile 555 and mobile 944;⁷⁷⁹⁵
- 283 contacts with the mobile ending in 725, which was subscribed in the name of and used by Mr Ali Ammar.⁷⁷⁹⁶ Mr Ammar was an MP for 'Hezbollah/'Loyalty to the resistance Bloc'''.⁷⁷⁹⁷ A phone book extract, two Hajj applications and records from a media website corroborate this attribution.⁷⁷⁹⁸ Mr Ammar attended the condolence ceremony held on 13 May 2016 in Beirut to honour Mr Badreddine;⁷⁷⁹⁹

According to Mr Donaldson, there were 283 contacts between the mobile 725 and mobile 354, 97 per cent of which occurred before 2002. Mr Donaldson observed that throughout mobile 944's attribution period (from 9 March 2004 to 9 March 2005), there was one

call between mobile ending in 725 and mobile 354, and none between mobile 725 and mobile 663, but there were 46 contacts between mobile 725 and mobile 944;⁷⁸⁰⁰

- 90 contacts with the mobile ending in 000, which was possibly subscribed in the name of Mr Amine Sherri or variations of this name.⁷⁸⁰¹ Mr Sherri was a Hezbollah MP for Beirut.⁷⁸⁰² Documents, such as his and his family's Hajj applications, a vehicle registration record and a phone book extract, corroborate that Mr Sherri used this number.⁷⁸⁰³ Mr Sherri also attended the condolence ceremony for Mr Badreddine.⁷⁸⁰⁴ There were also two contacts between another number also ending in 000, subscribed in Mr Sherri's name, and mobile 354.⁷⁸⁰⁵ Mr Donaldson noted in his report that 90 per cent of these calls occurred before 2002. During the attribution period of mobile 944, there was one call between mobile 000 and mobile 354, and none between mobile 000 and mobile 663. There were 99 contacts between mobile 000 and mobile 944;⁷⁸⁰⁶
- 54 contacts with the mobile ending in 505, which witnesses attributed to Mr Wafik Safa,⁷⁸⁰⁷ who was the Head of the Hezbollah Coordination and Liaison Unit.⁷⁸⁰⁸ This number was initially subscribed to Mr Hussein Fakhri Ibrahim (with an end date of 15 October 2003) and then re-subscribed on the same day to Mr Khanafer Yasser Mohammad.⁷⁸⁰⁹ A Hajj application, an extract from a phone book and a number of text messages corroborate this.⁷⁸¹⁰ Mr Safa also attended the condolence ceremony for Mr Badreddine.⁷⁸¹¹ Mr Donaldson noted that the majority of the contacts between mobile ending in 505 and mobile

354 occurred in 2001 to early 2004. Mr Safa was in contact with mobile 354 or mobile 944 over an eight year period;⁷⁸¹²

- 905 contacts, ranked 14th, with the mobile ending in 204, which was subscribed in Witness PRH604's name and which appeared twice on vehicle registration papers.⁷⁸¹³ Records from the Lebanese Ministry of Interior and Municipalities show that, from 1998 to 2005, Witness 604 paid the taxes for an apartment in Sahel Alma used by Sami Issa.⁷⁸¹⁴ In 2006, this apartment was transferred to Mr Mohammed Ammar,⁷⁸¹⁵ who was involved in the Samino Jewellery's operations.⁷⁸¹⁶
- 725 contacts, ranked 17th, with the mobile ending in 763, which was used by and possibly subscribed in the name and variations of this name, of a service provider for Sami Issa in relation to the 'Samino' boat.⁷⁸¹⁷ He provided as contact details Samino Jewellery Furn El-Chebbak branch's landline 506,⁷⁸¹⁸ and
- One contact with the mobile ending in 176, which was possibly subscribed in the name of Mr Ahmad Mokh.⁷⁸¹⁹ This mobile was in contact with Green 034,⁷⁸²⁰ Green 046,⁷⁸²¹ Green 048,⁷⁸²² Green 049,⁷⁸²³ Green 050⁷⁸²⁴ and Green 260.⁷⁸²⁵

⁷⁸²⁵ Exhibit P1206 (Call sequence table of Green 260).

v. Geographic profile

4113. The Lebanese land registry had no record of property registered in Mr Badreddine's name.⁷⁸²⁶ This presented the Prosecution with challenges in determining where he lived during the relevant period.

4114. Mr Donaldson analysed certain addresses based on Mr Badreddine's links to his wider family and his studies at the LAU. In passport applications, Mr Badreddine's wife, Ms Harb, and his nephew and niece provided their address as 'Al-Ghobeiry, Abdallah Al-Hajj Street, property of Khalil Al-Raii'.⁷⁸²⁷

4115. The address on Mr Badreddine's 1997 application for admission to the LAU was 'Al-Jinan Bldg, Al Odaimi Street, with a variant spelling of Al Oudaimi Street, Haret Hreik, Beirut'. His LAU student file recorded another address, namely 'Beirut – Mariot area, Adnan Al Hakim Street'.⁷⁸²⁸

4116. Mr Donaldson highlighted that mobiles 354 and 663 were not used significantly in this area of Beirut. For instance, the four Touch cells (Unesco_C, Jnah El Wata_B, Bir Hassan_C and Mic_Marriot_A) that covered the approximate area corresponding to the addresses listed above contributed less than one per cent to the cell use of mobiles 354 and 663.⁷⁸²⁹

4117. Five witnesses described Sami Issa as using apartments in or close to Jounieh and or in Sahel Alma.⁷⁸³⁰ Mr Donaldson also analysed the addresses associated with the Samino Jewellery which Sami Issa owned.⁷⁸³¹ For example, Bourj Hammoud Samino Jewellery branch on Armenia Street in the Blanco Centre in Bourj Hammoud⁷⁸³² was potentially served by cell site Arax_A. Mr

⁷⁸²⁶ Exhibit P2075, p. 17.

⁷⁸²⁷ Exhibit P1541 (Passport application of Ms Fatima Harb), p. 1; exhibit P1552 (Ms Fatima Harb's passport application), p. 2; exhibit P1553, p. 2; exhibit P1554, p. 2. This exhibit refers to Haret Hreik, Abdallah Al-Hajj street—not the same municipality, but the same street, exhibit P1543, p. 2. The spelling of Arabic names when transliterated into English often varies.

⁷⁸²⁸ Exhibit P1139, ERNs 60230562, 60230569.

⁷⁸²⁹ Exhibit P2023.3, para. 123.

⁷⁸³⁰ Witness PRH089, T. 15 December 2015, pp 50-52; Witness PRH264, T. 10 December 2015, pp 77-78; Witness PRH416, T. 2 December 2015, p. 62; Witness PRH306, T. 8 December 2015, pp 76-77; Witness PRH065, T. 11 November 2015, pp 10-11, 13-17, 19-30; exhibit P735 (Photograph of building in Sahel Alma); exhibit P664 (Statement of Timothy Holford of 23 October 2015), ERNs 60314453-60314454; exhibit P706 (Statement of Witness PRH065), ERN 60302926; exhibit P2082 (Witness Statement of PRH447), ERNs 60307201, 60307203.

⁷⁸³¹ Exhibit P2023.2 (Additional detail for Badreddine Report - paragraph 217), paras 128-129; exhibit P2079, p. 2.

⁷⁸³² Exhibit P732 (Zawarib Greater Beirut Atlas location of Samino Bourj-Hammoud branch); exhibit P298 (Zawarib Greater Beirut Atlas), p. 35; Witness PRH306, T. 8 December 2015, pp 49-50; exhibit P728.

Donaldson noted that mobile 354 registered insignificant use of this cell sector (ten uses), while mobile 663 activated it more frequently (434 uses).⁷⁸³³

4118. Mobile 345 most frequently activated the following cell towers from 16 October 2001 to 16 February 2004. These were: Mar Mikhael_C (1,368 times), Green Tower_B (188 times) and Mar Mikhael_B (183 times). Between 23 February 2004 and 31 December 2005, they were: Bir Abed_A (226 times), Hai Kneisse_C (170 times) and Hai Kneisse_B (111 times).⁷⁸³⁴

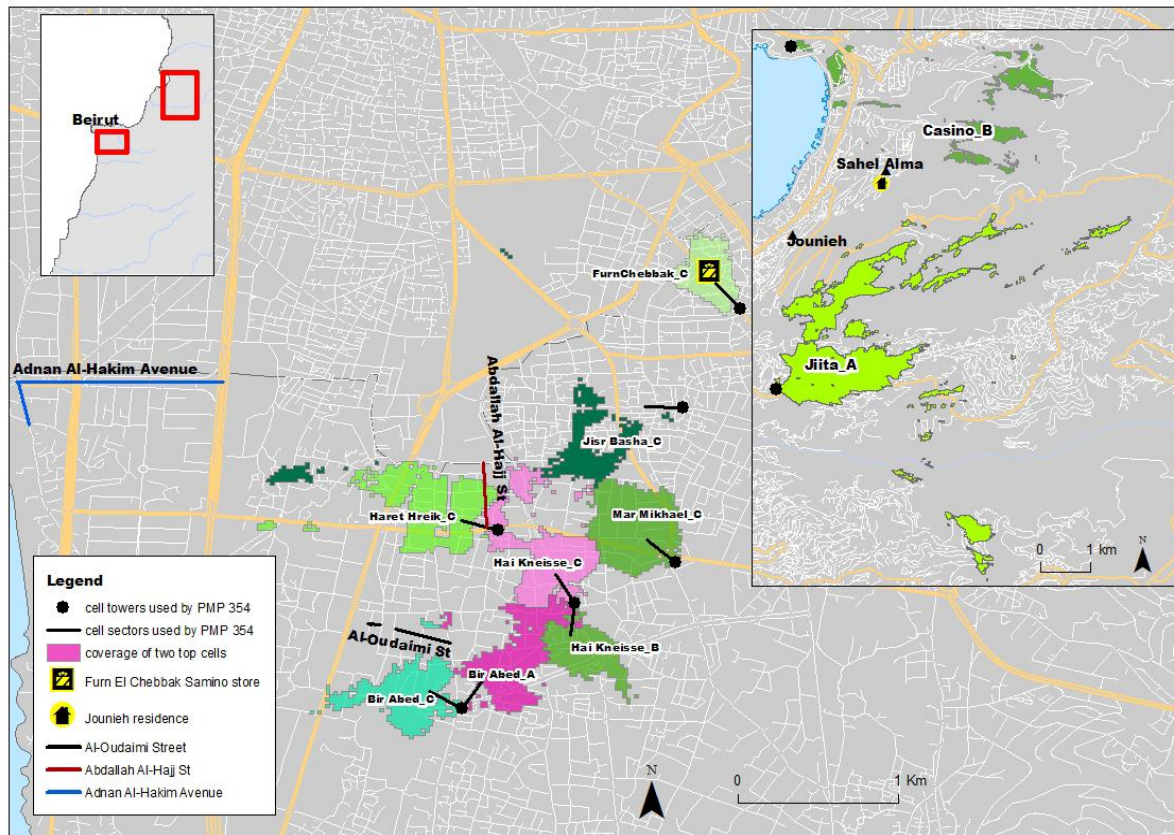

4119. Mr Donaldson explained that the shift in the most frequently activated cells towers by mobile 354 and mobile 663 could suggest that the user moved houses or changed jobs.⁷⁸³⁵ He mapped the most frequently used cell sectors from 23 February 2004 to 31 December 2004 alongside the addresses mentioned above, namely the Samino Jewellery Furn El-Chebbak store, Sami Issa's alleged residence in Jounieh and or Sahel Alma, Al-Oudaimi Street in Beirut, Abdallah Al-Hajj Street in Beirut and Adnan Al Hakim Avenue (or street) in Beirut.⁷⁸³⁶

⁷⁸³³ Exhibit P2023.3, para. 129 (c).

⁷⁸³⁴ Exhibit P2023.3, para. 136.

⁷⁸³⁵ Exhibit P2023.3, paras 136-137, 203-206.

⁷⁸³⁶ Exhibit P2023.3, para. 137. As explained in the map's legend, the black dots and lines show cell towers used, during the attribution period, by mobile 354. The corresponding coverage of the top cells was in different colours. The map also shows the addresses that Mr Donaldson considered relevant in his analysis of mobile 354's geographic profile. These were the addresses for the Furn El-Chebbak store of the Samino Jewellery in Beirut, Sami Issa's alleged residence in Jounieh and Sahel Alma, Al-Oudaimi Street in Beirut (recorded in Mr Badreddine's LAU admission application), Abdallah Al-Hajj Street in Beirut (recorded on the passport applications of Mr Badreddine's wife, nephew and niece) and Adnan Al Hakim Avenue (or street) in Beirut (recorded in Mr Badreddine's LAU student file).

Map of addresses and most frequently used cell sectors for mobile 354 from 23 February 2004 to 31 December 2004 extracted from Mr Donaldson's attribution report related to Mr Badreddine – exhibit P2023.3, para. 137

(b) Findings

4120. Eight witnesses—including Sami Issa's friends from the LAU and Samino employees—were shown either photographs, a video or both of Mr Badreddine and recognised him as Sami Issa. The evidence that Sami Issa was an alias of Mustafa Badreddine is direct and overwhelming.

4121. The outgoing and incoming content of text messages of the mobiles analysed below—including the texts related to his birthday and a leg or foot injury—show that, during the relevant period, their user was addressed and or identified himself as Sami Issa, Sami, Sami Samino, Safi or Badr.

4122. The frequency with which the Badreddine family called the personal mobile analysed below and records from the LAU further support that Mr Badreddine used these mobiles under his

Sami Issa alias. The Trial Chamber as found above is satisfied that Mr Badreddine used various false names and aliases and that throughout the periods relevant to the mobile analysed below, Mr Badreddine frequently used Sami Issa as an alias.

4123. The Trial Chamber had no evidence from which it could determine when Mr Badreddine adopted his ‘Sami Issa’ alias, or why, but three witnesses gave the mobile number 354 as Sami Issa’s. The documents reviewed incontrovertibly associate this mobile with Mr Badreddine and or his Sami Issa alias.

4124. Within the attribution period, the early use of mobile 354 demonstrates direct links to Mr Badreddine as its user, as opposed to his Sami Issa alias. For instance, records from the LAU in 2001 list mobile 354 as the contact number for ‘Mustafa Amin Badruddin’. Further, until 1999 it had over 2,000 contacts with the landline 354, subscribed to Mr Badreddine’s sister, Saada.

4125. After Mr Badreddine’s reported death in May 2016, the witnesses identified him as ‘Sami Issa’. Text message content of mobile 354, which was only available from 2004 onwards, demonstrates a common user throughout the attribution period. Mobile 354’s user consistently identified himself as ‘Sami’ or ‘Sam’ and he was also addressed as ‘Safi’.

4126. Regarding mobile 354’s geographic profile, Mr Donaldson connected its most frequently activated cells to certain addresses. This was based on Mr Badreddine’s family ties, his potential places of residence in Beirut, Jounieh and or Sahel Alma and the location of Samino Jewellery’s branches. There is, however, no direct evidence of Mr Badreddine’s presence at these places on any particular days or times of day. But when the evidence is considered in its totality this does not undermine in any significant manner that Mr Badreddine was using this mobile.

4127. The Trial Chamber therefore finds that Mr Badreddine used number 354 during the attribution period from 1 September 1997 to 31 December 2005, using different names.

5. Personal mobile number 663

(a) Summary of the evidence

4128. Mobile 663 was activated on the Touch network on 21 July 1999, subscribed in the name of ‘Samir Ali Hodroj’ and deactivated on 22 June 2010.⁷⁸³⁷ Mobile 663 was deactivated on the same day as mobile 354.⁷⁸³⁸

4129. In the amended consolidated indictment, the Prosecutor pleaded that Mr Badreddine used mobile 663.⁷⁸³⁹ It is attributed to Mr Badreddine from 26 February 2001 until 31 December 2005. The Prosecution relied on witness testimony, text message content, contacts and geographic profile to prove this.

i. Witness evidence

4130. Seven witnesses, namely Witnesses 306, 89, 416, 264, 605, 338 and 470, identified Mr Badreddine as Sami Issa from the photographs and the video from *Alahed*, and identified mobile 663 as Sami Issa’s.⁷⁸⁴⁰

4131. Mr Donaldson reviewed the content of mobile 663’s outgoing and incoming text messages,⁷⁸⁴¹ within the attribution period, in which its user identified himself as Sami Issa, Sam, Sami, Sami Samino, Safi or Badr, in his report he highlighted:

- nine examples of text messages content in which the user of mobile 663 identified himself as Sami Issa, Sam or Sami in 2004 and 2005;⁷⁸⁴²
- ten examples addressing mobile 663’s user as Safi in 2004 and 2005;⁷⁸⁴³

⁷⁸³⁷ Exhibit P1101, p. 1. Mr Donaldson observed in his report that, while mobile 663 was activated on 21 July 1999, the subscription contract in relation to this number was signed in 2001, exhibit P2023.3 fn. 454; exhibit P1105, p. 2.

⁷⁸⁴¹ Exhibit P2023.3, paras 157-162.

⁷⁸⁴² Exhibit P2023.3, para. 159; exhibit P1294, pp 23, 48, 361, 766, 778, 1166, 1285, 1354, 1822. Further examples are found in exhibit P1294, pp 90, 482, 493, 551, 554, 582, 642, 697-698, 748, 766, 793, 1285, 1354.

⁷⁸⁴³ Exhibit P2023.3, para. 160; exhibit P1294, pp 4, 6, 55, 658, 911, 1048, 1053, 1097, 1929.

- one example from 2004 addressing mobile 663's user as Issa and Badr;⁷⁸⁴⁴
- nine text examples in 2004 and 2005 from mobile 663 identifying himself as Sami Samino or Samino;⁷⁸⁴⁵
- three texts from mobile 663 providing the landline for the Mar Elias branch of the Samino jewellery store;⁷⁸⁴⁶
- ten examples of text extracts from mobile 663 referring to the Samino jewellery store branches;⁷⁸⁴⁷
- two examples in 2004 and 2005 sent to mobile 663 with birthday wishes; in a subsequent text, mobile 663's user clarified that his birthday was on 6 April;⁷⁸⁴⁸
- one text message mobile 663 sent on 5 November 2006, which is outside the attribution period, to a Saudi Arabian mobile specifying 1976 as his year of birth;⁷⁸⁴⁹ and
- 14 texts in 2004 and 2005 from mobile 663 stating that he was attending university.⁷⁸⁵⁰

4132. Mr Donaldson also identified excerpts of texts to and from mobiles 663 and 354 referring to a foot or leg injury,⁷⁸⁵¹ consistent with the evidence from Witnesses 416, 306, 264 and 89 in relation to Mr Badreddine's leg or foot injury.

4133. He further noted that mobiles 663 and 354 received nearly identical texts from the same number and concluded that based on their content the inference could be drawn that these were intended for the same recipient.⁷⁸⁵²

ii. Contact profile

4134. Mr Donaldson reviewed the contacts for mobile 663, within the attribution period, to find common contacts with mobiles 354 and 944. He determined, for instance, that the Samino ‘insiders’ and Hezbollah figures, listed below, were initially mobile 354’s contacts but the volume of contacts with those numbers decreased from 2001 onwards.

4135. Mobile 663’s use began in 2001 and these mobile numbers were at first among its infrequent contacts. By 2004, they are among mobile 944’s frequent contacts.⁷⁸⁵³ According to Mr Donaldson’s analysis, number 663 was in contact with other 4,208 mobile numbers, activating on average over 57 times a day. The contacts for mobile 663 included:⁷⁸⁵⁴

- eight contacts with the landline ending in 147 subscribed in the name of Mr Badreddine’s brother, Adnan;⁷⁸⁵⁵
- 21,372 contacts, ranked first, with the mobile ending in 088 attributable to Sami Issa’s girlfriend;⁷⁸⁵⁶
- 3,151 contacts, ranked 7th, with the mobile ending in 637 attributable to the Samino Jewellery’s employee and another of Sami Issa’s girlfriends.⁷⁸⁵⁷ There were also ten contacts with landline 954, which was listed by Sami Issa’s girlfriend on a passport application and possibly subscribed in her father’s name;⁷⁸⁵⁸
- 2,588 contacts, ranked 8th, with the mobile ending in 434 subscribed in the name of Sami Issa’s acquaintance from the LAU, Witness 244;⁷⁸⁵⁹
- 2,387 contacts, ranked 9th, with mobile 764 subscribed in Witness 89’s name and 215 contacts with mobile 008, which was also subscribed in the name of the same witness;⁷⁸⁶⁰

- the mobile ending in 214, subscribed in the name of and used by Witness 273,⁷⁸⁷⁹ which contacted mobile 663, 669 times, ranked 26th. Witness 273 became a close friend of Sami Issa, whom he also knew as Safi, when they were studying at the LAU in 2002.⁷⁸⁸⁰

iii. Geographic profile

4136. Mr Donaldson observed that for mobile 663 the top most frequently used cell towers before 21 February 2004 were: Mar Mikhael_C (13,762 times), Haret Hreik_C (3,205 times) and FurnChebbak_C (2,526 times), while after this date, they were: Bir Abed_A (8,570 times), Hai Kneisse_C (6,012 times) and Hai Kneisse_B (4,276 times).⁷⁸⁸¹

4137. In the table below, Mr Donaldson compared the most frequently used cell sectors by mobiles 354 and 663 during the attribution period.⁷⁸⁸²

PMP 3833354				PMP 3966663			
Period One		Period Two		Period One		Period Two	
Mar Mikhael_C	1368	Bir Abed_A	226	Mar Mikhael_C	1376 2	Bir Abed_A	8570
Green Tower_B	188	Hai Kneisse_C	170	Haret Hreik_C	3205	Hai Kneisse_C	6012
Mar Mikhael_B	183	Hai Kneisse_B	111	FurnChebbak_C	2526	Hai Kneisse_B	4276

4138. Mr Donaldson reiterated that the change in the activated cells by mobile 663 before and after 21 February 2004 could suggest that the user moved houses or changed jobs.⁷⁸⁸³

⁷⁸⁷⁹ Exhibit P2081 (Statement of Witness PRH273), ERNs 60228549, 60228566, 60228571; exhibit P1449 (Touch subscriber note for mobile 214), p. 1; exhibit P2034 (Vehicle Registration related to mobile 214), p.3; exhibit P2056, p. 1; exhibit P2077 (Record of an email account related to mobile 241), pp 1-12; exhibit P2023.3, para. 184.

⁷⁸⁸⁰ Exhibit P2081 (Statement of Witness PRH273), pp 4-5; Witness PRH089, T. 15 December 2015, p. 17; exhibit P750 (Phone numbers identified by PRH089); exhibit P1145 (LAU documents related to mobile 241), pp 7-9, 18-19.

⁷⁸⁸¹ Exhibit P2023.3, para. 203.

⁷⁸⁸² Exhibit P2023.3, para. 205. 'Period one' and 'period two' headings correspond to the use of the cell sectors by mobiles 354 and 663 before and after 21 February 2004. The cell sectors in bold text appeared in the corresponding period of the other mobile and those with additional grey shading appeared in the same ranked position of the other mobile.

⁷⁸⁸³ Exhibit P2023.3, para. 136.

iv. Further basis for attribution of mobile 663

4139. Mr Badreddine's wife, Ms Fatima Harb, and her son, Mohammed, travelled to Saudi Arabia, from 30 May to 3 June 2005.⁷⁸⁸⁴

4140. Mr Donaldson observed that an unattributed mobile ending in 330—a top contact of mobile 944—activated on the departure day cell towers in the vicinity of the Beirut International Airport and cell towers in the airport area, cell towers Airport_B, Hai_Soullom_2_A, Mreijeh_B and Mreijeh_A, on their arrival day.⁷⁸⁸⁵ A Saudi mobile number ending in 487 was in contact with mobile 663's user and unattributed mobile ending in 330, on the dates Ms Harb and her son were there.⁷⁸⁸⁶

4141. Mr Badreddine's sister-in-law, Ms Muna Harb, died on 23 November 2005⁷⁸⁸⁷ and her death coincided with a death of a member of Sami Issa's family.⁷⁸⁸⁸ On 23 November 2005, the user of mobile 663 sent two text messages stating that a close relative of his died. At 13:23, the user of mobile 663 sent a text message stating 'I'm so busy a relative of mine died' to a mobile ending in 117.

4142. At 13:24, mobile 663 sent a text message stating 'I'm so busy a closed relative died' to mobile 637,⁷⁸⁸⁹ a number used by one of Sami Issa's girlfriends who was a Samino Jewellery employee.

v. Possible co-location of mobile 663 and mobile 354

4143. Mr Philips, as the cell site expert, analysed 23 pairs of calls in relation to mobile 663 and mobile 354 on nine days. These were 28 and 29 September 2004, 20 October 2004, 11, 12, 15, 18

⁷⁸⁸⁴ Exhibit P1040, ERNs 60242739, 60242741; exhibit P2064 (Travel movements of Fatima Harb); exhibit P2070 (Travel movements of Mohammed Badreddine); exhibit P2023.3, paras 218-223.

⁷⁸⁸⁵ Exhibit P1309 (Call sequence table for mobile ending in 330), pp 88, 90; exhibit P2023.3, paras 224-226.

⁷⁸⁸⁶ Exhibit P1296 (Call sequence table for mobile ending in 487), p. 14; exhibit P1309, p. 90; exhibit P2023.3, paras 228-231.

⁷⁸⁸⁷ Exhibit P1037 (Death certificate Ms Muna Harb), ERN 60175046.

⁷⁸⁸⁸ P2023.3, para. 232.

⁷⁸⁸⁹ Exhibit P1294, p. 1856. Mr Donaldson noted in his report that the text was quoted verbatim from the source text and marked the word 'closed' as an error, exhibit P2023.3, para. 235.

and 28 January 2005, and 11 February 2005.⁷⁸⁹⁰ Mr Donaldson provided him with the details of the mobiles and the days of interest.⁷⁸⁹¹

4144. Mr Philips noted that mobile 663 was never in contact with mobile 354.⁷⁸⁹² He found that there were no overlapping calls between mobiles 354 and 663 within the analysed pairs of calls. He concluded that seven pairs of calls fell in the category of ‘may be co-located’⁷⁸⁹³ and 16 pairs of calls were in the ‘would not preclude co-location’ category.⁷⁸⁹⁴ None of the analysed pairs of calls precluded co-location.⁷⁸⁹⁵ Mr Philips concluded that mobile 663 possibly co-located with mobile 354.⁷⁸⁹⁶

4145. Mr Donaldson, unlike Mr Philips, positively determined that the mobiles co-located, for example stating in his report, under heading ‘CO-LOCATION BETWEEN PMP 663 AND 354’ that the ‘co-location was constant’.⁷⁸⁹⁷

4146. According to Mr Donaldson, mobile 663 and mobile 354, within their attribution periods—26 February 2001 to 31 December 2005 for mobile 663 and 1 September 1997 to 31 December 2005 for mobile 354—were both active on 1,034 days and used 4,003 times within ten minutes of each other.⁷⁸⁹⁸

4147. Mr Donaldson analysed the call patterns in the use of mobiles 663 and 354 on 4 November 2001, 24 and 29 April and 8 May 2002, 9 April, 25 May, 16 June 2003, 9, 16 and 29 May, 31 July and 13 November 2004.⁷⁸⁹⁹ Mr Philips was not asked to analyse calls on any of these days.

⁷⁸⁹⁰ Exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), pp 36-37, 50, 80, 82, 118, 127, 142-144, 150, 154-155, 157-158, 189, 223, 225.

⁷⁸⁹¹ Mr Donaldson provided the days of interest on 24 July 2012, exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), pp 12-13. There were fifteen in total.

⁷⁸⁹² Exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), p. 3.

⁷⁸⁹³ Exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), pp 50, 80, 118, 127, 142, 144, 189.

⁷⁸⁹⁴ Exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), pp 36-37, 82, 118, 127, 142-143, 150, 154-155, 157-158, 223, 225.

⁷⁸⁹⁵ Exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), pp 36-37, 50, 80, 82, 118, 127, 142-144, 150, 154-155, 157-158, 189, 223, 225.

⁷⁸⁹⁶ Exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), pp 3, 66, 91, 216.

⁷⁸⁹⁷ Exhibit P2023.3, para. 214.

⁷⁸⁹⁸ Exhibit P2023.3, para. 213.

⁷⁸⁹⁹ Exhibit P2023.3, para. 217; exhibit P2023.2.

4148. Mr Donaldson noted that, on 4 November 2001, mobile 663 was involved in 15 calls or text messages, while mobile 354 received five text messages and made three calls, which were forwarded to voicemail. However, a common user was precluded by ‘the swap in use’ between mobile 663 and mobile 354 at 14:15 and 14:26,⁷⁹⁰⁰ when mobile 663 was in the area of Aley, near Beirut, while mobile 354 was in the area of Sidon, south of Beirut along the coast; the two cell towers involved in these calls were over 37 kilometres apart.⁷⁹⁰¹ However, at 15:06, mobile 663 activated a cell sector further south still of Sidon.⁷⁹⁰² Mr Donaldson noted that, earlier in the day, both mobiles used cell towers in Beirut, and in the evening they used the same cell sector in Beirut at 20:05 and 20:10.⁷⁹⁰³

4149. The call sequence table for mobile 354 shows that, on 4 November 2001, it made two calls at 13:02 and 13:23, both forwarded to voicemail. Afterwards, at 14:26, it received two text messages. Mobile 354 was then inactive until 19:47, when it made a call, connecting to BorjBrajneh-II_C, which was also forwarded to voicemail.⁷⁹⁰⁴ On the same day, around the same time when mobile 354 received two text messages at 14:26, mobile 663 made a call at 14:15, connecting to Aaley El Zouhour C cell. Subsequently, it made two calls at 15:06 and 16:13, connecting to Merwanieh_A cell.⁷⁹⁰⁵

4150. Mr Donaldson observed that mobile 354’s behaviour on the evenings of 24 and 29 April, and 8 May 2002, was consistent with the mobile having been given to another person who travelled to the Keserwan district each time while mobile 663 activated cells in Beirut.⁷⁹⁰⁶

4151. In particular, on 24 April 2002, while mobile 354 made four calls between 21:50 and 22:00, using cell sectors Qornet El Hamra_A and Harissa_B in the Keserwan district, north of Beirut and south of Jounieh, mobile 663 made a call at 21:34 using Ain Tineh_A and received a text at 22:11 using Ouzai_C in west Beirut.⁷⁹⁰⁷

⁷⁹⁰⁰ Exhibit P2023.2, para. 4.

⁷⁹⁰¹ Exhibit P2023.2, para. 5.

⁷⁹⁰² Exhibit P2023.2, para. 5.

⁷⁹⁰³ Exhibit P2023.2, paras 4, 6.

⁷⁹⁰⁴ Exhibit P1311 (Call sequence table for mobile ending in 354), p. 2189.

⁷⁹⁰⁵ Exhibit P1310 (Call sequence table of mobile ending 663), p. 232.

⁷⁹⁰⁶ Exhibit P2023.2, paras 8, 11, 13.

⁷⁹⁰⁷ Exhibit P2023.2, para. 7; exhibit P1311, p. 2296; exhibit P1310, p. 523.

4152. Similarly, on the evening of 29 April 2002, both mobiles were active between 22:12 and 00:37 in disparate locations, similar to those observed on 24 April 2002.⁷⁹⁰⁸ During this period, mobile 663 made two calls, sent one text and received two texts between 22:00 and 22:28 connecting to Ouzai_A and Tabet El Dahra_B in west Beirut.⁷⁹⁰⁹ Meanwhile, mobile 354 made 17 calls between 21:57 and 00:25, connecting to Mazraa MPT_C, CHB_A, Dbaiyeh_A, Zouq Tunel_B, Adonis_C, Jiita_A, Qornet El Hamra_A, Harissa_B and Dora-II_A, whose sequential activation shows the mobile's movement from Beirut along the route to the Keserwan district and then back again.⁷⁹¹⁰ Finally, at 00:37, mobile 354 called mobile 663, both activating cells in west Beirut, Tehwita_B and Ouzai_A, respectively.⁷⁹¹¹

4153. Call sequence tables show that the two mobiles again behaved similarly on the evening of 8 May 2002. Specifically, between 22:35 and 23:06, mobile 663 sent and received text messages and made one call, activating cells Ouzai_C and Tabet El Dahra_B in west Beirut. Meanwhile, between 22:31 and 23:38, mobile 354 made six calls activating Zalka Coast_B, Dbaiyeh_A, Harissa_B, Zouq MPT_A and Jal Dib_A, along the route from Beirut to the Kersewan district and back again. At 00:56 and 00:59, the two mobiles activated cell sectors Tabet El Dahra_B and Tehwita_B, both located in Beirut.⁷⁹¹²

4154. Further, Mr Donaldson noted that, on 9 April 2003, mobile 354 was left in Beirut and only received texts, while mobile 663 was used elsewhere. He concluded that mobile 354 was left at home for a period in the afternoon.⁷⁹¹³ The call sequence table for mobile 354 shows that on this

⁷⁹⁰⁸ Exhibit P2023.2, para. 10.

⁷⁹⁰⁹ Exhibit P1310, pp 537.

⁷⁹¹⁰ Exhibit P1311, pp 2296-2297; exhibit P2323.2, para. 31 (a).

⁷⁹¹¹ Exhibit P1311, p. 2297; exhibit P1310, p. 537; exhibit P2023.2, para. 10. Mr Donaldson incorrectly stated in this paragraph of his report that there were two consecutive calls between the two mobiles at that time. The combined call sequence table—exhibit P1305 (Call sequence table of 13 numbers—Mr Badreddine), p. 2740—contains two entries for this call. However, it is evident from looking at the individual mobile call sequence tables that the two entries concern a single call, with each entry in the combined call sequence table originating from each mobiles' individual call sequence table. Similarly, in a footnote to this paragraph of his report, Mr Donaldson incorrectly stated that mobile 663 called mobile 354 six times between 2001 and 2005, when in fact there were only three contacts (two calls and one SMS), again represented by six entries in the combined call sequence table. Exhibit P1305, pp 3221, 3370; exhibit P1310, pp 1013, 1149; exhibit P1311, pp 2319, 2330.

⁷⁹¹² Exhibit P1310, p. 558; exhibit P1311, p. 2298; exhibit P2023.2, para. 12.

⁷⁹¹³ Exhibit P2023.2, paras 14-15.

day, besides four text messages which it received between 16:01 and 22:45, it had no other call activity.⁷⁹¹⁴

4155. On 25 May 2003, mobile 354 received a text at 15:35, while connecting to the Mic_Naher_Kaled cell. Mobile 663 made two calls between 15:28 and 15:58, activating Batrakieh_C and BayView_C cells.⁷⁹¹⁵ They are both coastal cells and Mr Donaldson noted that 'a body of water exists between the Mic_Naher_Kaled' tower, that activated by mobile 354 and the two cells, activated by mobile 663.⁷⁹¹⁶ This is an understatement; Mic_Naher_Kaled is near Jounieh, while the other two cells are in western Beirut. The approximate distance between the two, measured in a straight line in Google Earth across the water, is at least 15 kilometres.

4156. Mr Donaldson also identified one instance on 16 June 2003 when, as mobile 354 made a call at 19:49 connecting to Mar Mikhael_C in south Beirut, mobile 663 received a text, connecting to Maameltein_B in Jounieh. He concluded that this circumstance would be consistent with mobile 354 being left at home and used by a third person.⁷⁹¹⁷ The call sequence table for mobile 354 shows that the call at 19:49 was the only call it made in the evening. It was preceded by a number of calls between the early morning hours and before noon on the same day, all connecting to Mar Mikhael_C, the last of which was at 11:37.⁷⁹¹⁸

4157. According to Mr Donaldson, on 9, 16 and 29 May 2004, mobile 663 was left in Beirut, while mobile 354 travelled to the Ansar area in southern Lebanon. He added that, on these days, mobile 663 only used the Haret Hreik_C cell sector for inbound texts, while no texts were sent from mobile 663 and no calls were made.⁷⁹¹⁹ He concluded that, in these three instances, the circumstances would be consistent with mobile 663 having been left in Beirut, while mobile 354 was used elsewhere.⁷⁹²⁰

4158. The call sequence table for mobile 663 demonstrates that, on 9 May 2004, it received a number of texts between 00:04 and 02:17, while connecting to Haret Hreik_C in the southern

⁷⁹¹⁴ Exhibit P1311, p. 2342; exhibit P2023.2, para. 31 (b).

⁷⁹¹⁶ Exhibit P2023.2, para. 16.

⁷⁹¹⁷ Exhibit P2023.2, paras 17-18, 31 (c); exhibit P1310, p. 1480; exhibit P1311, p. 2358.

⁷⁹¹⁸ Exhibit P1311, p. 2358.

⁷⁹¹⁹ Exhibit P2023.2, paras 20-24, 31 (d).

⁷⁹²⁰ Exhibit P2023.2, paras 20, 22, 24.

suburbs of Beirut. A few hours later, at 06:21, mobile 663 made a call of 42 seconds, connecting to the Jisr Basha_C cell, which is approximately in the same area. Three hours later, mobile 663 again received numerous texts and made numerous calls until 23:17, connecting to different cells, including Haret Hreik_C, Chatila_B, Chatila_C, Saki Hadath A, Hai Kneissi_C, Mar Mikhael_C, Ghazal_A, Mic_Khabbaz and Casino_B.⁷⁹²¹

4159. The only call activity of mobile 354 on 9 May 2004 was at 00:43 and 00:44, when it made two calls, connecting to Nabatieh_C in the Nabatiyeh district.⁷⁹²² At that time, as noted above, mobile 663 received a text in Haret Hreik.

4160. Similarly, the call sequence table for mobile 354 shows that its only call activity on 16 May 2004 was between 00:08 and 03:43, when it made three calls, connecting to Ansar_A.⁷⁹²³ Around the same time, between 00:09 and 01:50, mobile 663 received three texts, connecting to Haret Hreik_C. It did not make or receive any calls or send or receive texts in this time span. The first call activity of mobile 663 on that day was a few hours later, at 05:37, when it made a call, connecting to Jisr Basha_C, which is in the same area as Haret Hreik_C.⁷⁹²⁴

4161. The call sequence table for mobile 354 also demonstrates that during the night of 29-30 May 2004, it made four calls between 23:37 and 01:40, connecting to the Ansar_A cell.⁷⁹²⁵ Meanwhile, between 23:19 and 01:54, mobile 663 received eight texts, connecting to Haret Hreik_C. It neither sent texts, nor was involved in any calls until 05:55 on 30 May 2004, when it made a call, connecting to Jisr Basha_C.⁷⁹²⁶

4162. Mr Donaldson observed that, on 31 July 2004, while mobile 663 connected to Kaslik_A cell at 22:43 to receive a text, mobile 354 made a call at 22:49, connecting to Hai Kneisse_C cell.⁷⁹²⁷

⁷⁹²¹ Exhibit P1310, pp 2459-2461.

⁷⁹²² Exhibit P1311, p. 2395.

⁷⁹²³ Exhibit P1311, p. 2396.

⁷⁹²⁴ Exhibit P1310, p. 2479.

⁷⁹²⁵ Exhibit P1311, p. 2396.

⁷⁹²⁶ Exhibit P1310, p. 2520.

⁷⁹²⁷ Exhibit P1311, p. 2398; exhibit P1310, p. 2715.

4163. He noted that, on 13 November 2004, mobile 354 was left in Beirut and only received texts, while mobile 663 was used elsewhere.⁷⁹²⁸ The call sequence table for mobile 354 shows that, on 13 November 2004, at 17:55, it received a text and that between 21:24 and 21:30 it made three calls, two connecting to Haret Hreik_C and one connecting to Chiyah_B.⁷⁹²⁹

4164. The call sequence table for mobile 663 shows that 40 minutes before mobile 354 received the text, mobile 663 made a call at 17:15, connecting to Chtoura_C.⁷⁹³⁰ Around the time, when mobile 354 made the three calls, mobile 663 received a text and a call, and was making a call, connecting to Jisr Basha_B.⁷⁹³¹ The Trial Chamber measured these cells, using the electronic presentation of evidence software, as being approximately 200 metres apart. Jisr Basha_C cell is 223 metres away from the Haret Hreik and Chiyah_B cells.⁷⁹³²

4165. Mr Donaldson also noted that mobiles 354 and 663 were in contact with each other on 30 April 2002, 4 December 2002 and 9 February 2003.⁷⁹³³ The first such instance, shortly after midnight on 30 April 2002, involved mobile 354 calling mobile 663 at the end of a period in which mobile 354 dislocated from the other by travelling north of Beirut, before returning to Beirut and calling mobile 663.⁷⁹³⁴ Mr Donaldson explained that this was consistent with one of the mobiles being in someone else's hands during this time.⁷⁹³⁵

4166. The next two calls between the mobiles occurred on 4 December 2002, when mobile 663 called mobile 354 at 23:10—for a two minute 51 second call—and then again at 23:24—for a six second call.⁷⁹³⁶ During these calls, mobile 663 activated cell sectors in central Beirut, while mobile 354 activated cell sectors in south Beirut.⁷⁹³⁷ The final contact between the mobiles occurred at

⁷⁹²⁸ Exhibit P2023.2, paras 28-29.

⁷⁹²⁹ Exhibit P1311, p. 2405.

⁷⁹³⁰ Exhibit P1310, p. 2995.

⁷⁹³¹ Exhibit P1310, p. 2996.

⁷⁹³² Exhibit P592.1 (Electronic Presentation of Evidence Software).

⁷⁹³³ Exhibit P2023.3, para. 210; exhibit P1311, pp 2297, 2319, 2330; exhibit P1310, pp 537, 1013, 1149. Mr Donaldson incorrectly stated that mobile 354 called mobile 663 twice and that mobile 663 called mobile 354 six times, exhibit P2023.2, para. 10, fn. 1. As explained above there were just four contacts between the two mobiles, consisting of mobile 354 calling mobile 663 once, mobile 663 calling mobile 354 twice and sending it an SMS once.

⁷⁹³⁴ Exhibit P1305, p. 2740; exhibit P1310, p. 537; exhibit P1311, p. 2297.

⁷⁹³⁵ Exhibit P2023.2, para. 11.

⁷⁹³⁷ Mobile 663 activated Mar Elias-II_C and Green Tower_B, while mobile 354 activated Sabra_C and Sinjab_C, exhibit P1305, p. 3221; exhibit P1310, p. 1013; exhibit P1311, p. 2319.

12:58 on 9 February 2003, when mobile 663 sent a text to mobile 354. The mobiles both activated Haret Hreik_C during this exchange.⁷⁹³⁸

(b) Findings

4167. Seven witnesses attributed mobile 663 to Sami Issa and identified Sami Issa from photographs of Mr Badreddine. Mobile 663's text messages consistently demonstrate a common user throughout the attribution period who identified himself as 'Sami Issa', 'Sami Samino' or 'Samino'.

4168. The contact profile of mobile 663, which consisted of girlfriends, university acquaintances and Samino employees, essentially corresponded to the profile of mobile 354. This evidence weighs heavily towards Mr Badreddine having used mobile 663 under his alias of Sami Issa.

4169. The Trial Chamber also carefully considered Mr Donaldson's analysis of the cell site use for mobile 663 from October 2001 to December 2005, and his conclusion that, during this period and specifically around 21 February 2004, there was a shift in the most frequently activated cells which mirrored the use of cells by mobile 354. Mr Donaldson pointed out that the difference in the most frequently used cell sector before and after 21 February 2004 was particularly clear for mobile 663, due to its extensive use. Moreover, Mr Donaldson noted that mobile 663 shared the same top three cell sectors as mobile 354 after 21 February 2004.

4170. The Trial Chamber also carefully reviewed Mr Philips's conclusion that for every pair of calls that he analysed, mobile 663 may have co-located with mobile 354, or the calls would not preclude co-location.

4171. The Trial Chamber has examined the call patterns of mobiles 663 and 354 on the dates where Mr Donaldson identified 'inconsistencies. These are 4 November 2001, 24 and 29 April, and 8 May 2002, 9 April, 25 May, and 16 June 2003, 9, 16 and 29 May, 31 July and 13 November 2004.

4172. While the call patterns on these days would appear to preclude co-location of the two mobiles, they are not necessarily inconsistent with the two mobiles having a single user. More

⁷⁹³⁸ Exhibit P1305, p. 3370; exhibit P1310, p. 1149; exhibit P1311, p. 2330.

specifically, on all these days while one of the dislocated mobiles was making calls, the other analysed mobile only received text messages and was not being actively used. This supports the conclusion that the unused mobile was left home or nearby.

4173. The two mobiles were in contact with each other on 30 April 2002, 4 December 2002 and 9 February 2003. This however, is explicable and not inconsistent with attribution of mobiles 354 and 663 to Sami Issa / Mr Badreddine.

4174. More specifically, the calls on 30 April 2002 and 4 December 2002 were consistent with one of the mobiles being in someone else's hands temporarily during the time of the calls, while on 9 February 2003 mobile 663 only sent a text to mobile 354. The call patterns in the use of the two mobiles on 9 April, 25 May, 16 June 2003, 9, 16 and 29 May, 31 July and 13 November 2004 also support the finding that the two mobiles had a single user.

4175. In the context of the sheer number of calls over the period, these possible inconsistencies do not negate the inference that the mobiles had a single user at almost all times. The Trial Chamber therefore finds that the attribution period for mobile 663 spans from 26 February 2001 to 31 December 2005. Mr Badreddine was the principal user of mobile 663 during this time.

6. Sequential personal mobile telephone number 944

(a) Summary of the evidence

4176. Mobile 944 was activated on the Alfa network on 2 March 2004 and was subscribed in the name of 'Yazbeck Maya Ibrahim'.⁷⁹³⁹

4177. In the amended consolidated indictment, the Prosecutor pleads that Mr Badreddine used personal mobile 944.⁷⁹⁴⁰ To attribute 'sequential personal mobile' 944 to Mr Badreddine from 9 March 2004 to 9 March 2005, the Prosecution relied on its contact and geographic profile and co-location between mobiles 944, 663 and 354.⁷⁹⁴¹

⁷⁹³⁹ Exhibit P925 (Subscriber note for mobile 944).

⁷⁹⁴⁰ Amended consolidated indictment, para. 18.

⁷⁹⁴¹ Prosecution final trial brief, paras 102-103. The final trial brief did not analyse the geographical profile, exhibit P2023.3, para. 254.

4178. Mr Donaldson did not specify any deactivation date for this number.⁷⁹⁴² He reviewed the text messages but they provided no details relevant to the attribution of mobile 944's user during this period.⁷⁹⁴³

i. Contact profile

4179. The more frequent contacts of mobile 944 consisted of Samino 'insiders', Hezbollah figures and Mr Badreddine's family members.⁷⁹⁴⁴ Mr Donaldson determined that the Samino 'insiders', Hezbollah figures and family members were initially mobile 354's contacts, but the volume of contacts with those numbers decreased from 2001 onwards.

4180. After 2001, they were only infrequent contacts of mobile 663, but by 2004 they were among mobile 944's frequent contacts.⁷⁹⁴⁵ Mr Donaldson relied on this pattern to illustrate the distribution of people between the two groups of mobiles—private mobiles 354 and 663 as opposed to sequential mobile 944—and that this distribution of contacts changed between 2001 and 2004. No sequential mobile was identified for 2001, which would have established if this was concurrent.⁷⁹⁴⁶

4181. Mr Donaldson generally noted that mobile 944 differed from the profiles of mobiles 354 and 663 after 2001, but was similar to the use of mobile 354 before 2001.⁷⁹⁴⁷ Mr Donaldson identified the following contacts of this mobile number:⁷⁹⁴⁸

- 410 contacts, ranked fourth, with the mobile ending in 555 attributed to Mr Shukr. This mobile was a frequent contact of mobile 354 before 2001 and was in contact with mobile 663, while after 2001 there was little contact with either mobile;⁷⁹⁴⁹
- 219 contacts, ranked 5th, with the mobile ending in 880 attributable to Mr Harb. This number was mobile 354's frequent contact before 2001 and was in contact with mobile

⁷⁹⁴² Exhibit P925; exhibit P2023.3, p. 105.

⁷⁹⁴³ Exhibit P2023.3, paras 255, 265.

⁷⁹⁴⁴ Exhibit P2023.3, para. 253.

⁷⁹⁴⁵ Exhibit P2023.3, paras 194, 253.

⁷⁹⁴⁶ Exhibit P2023.3, para. 195.

⁷⁹⁴⁷ Exhibit P2023.3, para. 253.

⁷⁹⁴⁸ Exhibit P2023.3, paras 266-280.

⁷⁹⁴⁹ Exhibit P2023.3, para. 267.

663, while after 2001 there was little contact with either of them.⁷⁹⁵⁰ There were also two contacts with the landline ending in 256 subscribed in Mr Harb's name;⁷⁹⁵¹

- 119 contacts, ranked 8th, with the mobile ending in 421 attributable to Mr Mohammed Ammar. Similarly, this number was a frequent contact of mobile 354 before 2001 and was in contact with mobile 663. However, after 2001 there was little contact with either mobile;⁷⁹⁵²
- 138 contacts, ranked 6th, with the mobile ending in 505 attributable to Mr Safa;⁷⁹⁵³
- 99 contacts, ranked 10th, with the mobile ending in 000 attributable to Mr Sherri and which was also in contact with mobiles 354 and 663;⁷⁹⁵⁴
- 46 contacts, ranked 16th, with the mobile ending in 725 attributable to Mr Ali Ammar and which was also in contact with mobile 354;⁷⁹⁵⁵
- 132 contacts, ranked 7th, with the mobile ending in 231 and 19 contacts, ranked 21st, with the mobile ending in 254, which were both subscribed to the Ministry of Telecommunications.⁷⁹⁵⁶ Mr Donaldson explained that although these contacts were not considered to add any value, in isolation, to the attribution of mobile 944 to Mr Badreddine, he included them in his report to demonstrate that the user was in regular contact with post-paid mobiles registered to a government ministry;⁷⁹⁵⁷
- ten contacts with the mobile ending in 777 attributable to Mr Badreddine's brother, Mohammed;⁷⁹⁵⁸

⁷⁹⁵⁰ Exhibit P2023.3, para. 268.

⁷⁹⁵¹ Exhibit P1612 (Subscriber note for landline 256).

⁷⁹⁵⁷ Exhibit P2023.3, para. 275.

⁷⁹⁵⁸ Exhibit P2023.3, para. 276.

- five contacts with the mobile ending in 099 associated with Mr Badreddine's sister, Khadija;⁷⁹⁵⁹
- a single contact with the mobile ending in 944 and mobile 614 attributable to Mr Badreddine's brother, Hassan;⁷⁹⁶⁰ and
- a single contact with landline 864 for the Samino Jewellery's Mar Elias branch which also contacted mobiles 354 and 663.⁷⁹⁶¹

ii. Geographic profile

4182. The top most frequently used cell sectors of mobile 944 were: ROUIES3 (963 activations corresponding to 24.39 per cent), which is in Haret Hreik, south Beirut, GHAZIR2 (209 activations corresponding to 5.29 per cent), in Jounieh, north of Beirut and BRAJNE3 (148 activations corresponding to 3.75 per cent), also in south Beirut.⁷⁹⁶² Mr Donaldson mapped mobile 944's most frequently used cell sectors during the attribution period along with addresses associated with Sami Issa.⁷⁹⁶³

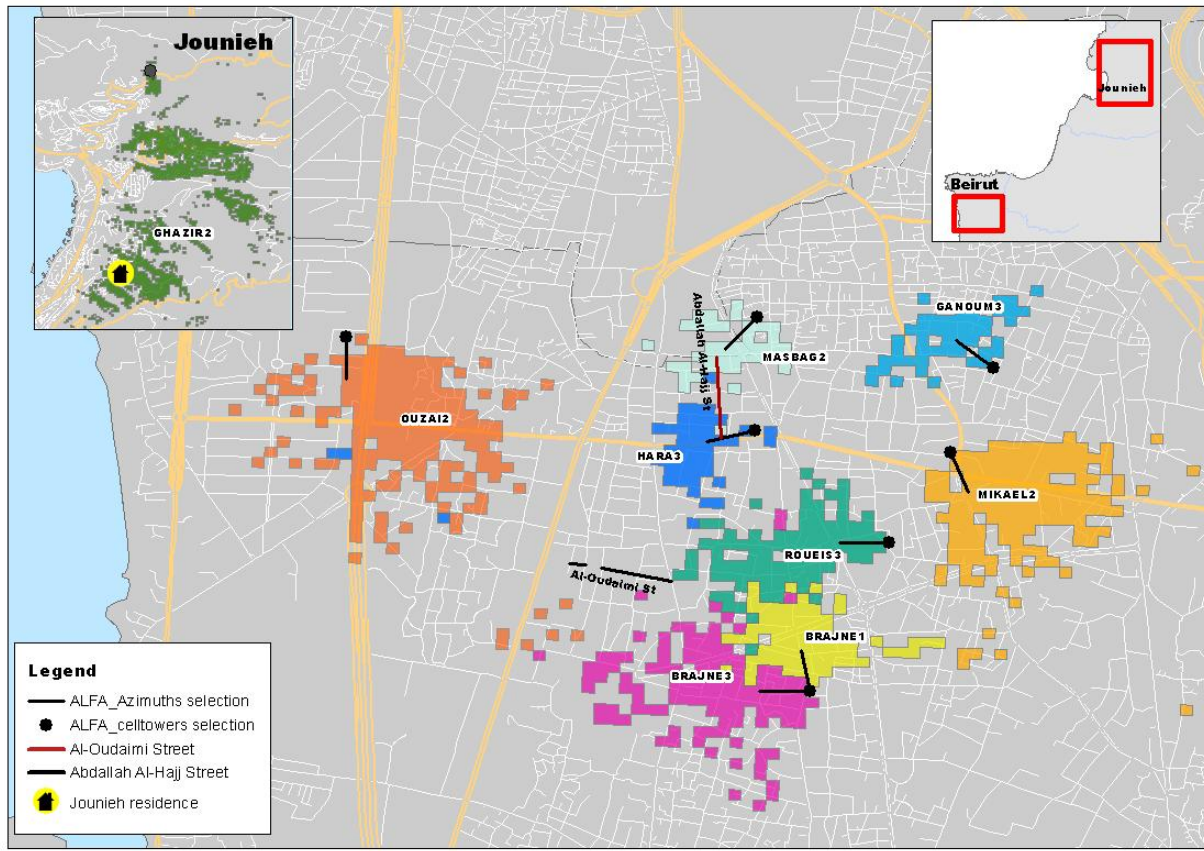

⁷⁹⁵⁹ Exhibit P2023.3, para. 277.

⁷⁹⁶³ Exhibit P2023.3, p. 113.

Map with top ten most frequently used cell sectors for sequential mobile from Mr Donaldson's attribution report related to Mr Badreddine – exhibit P2023.3, p. 110

- iii. Overall call patterns of mobiles 944, 663 and 354 and possible co-location

Mobiles 354 and 944

4183. Mr Philips analysed 14 pairs of calls in relation to mobile 354 and mobile 944 on seven days, namely 20 October 2004, 21 December 2004, 12, 15, 18, and 28 January 2005, and 11 February 2005. He determined that nine of the analysed calls fell in the 'may be co-located' category, and five calls fell in the 'would not preclude co-location' category. None of the analysed pairs of calls precluded co-location.⁷⁹⁶⁴ There were five instances when co-location may have been

⁷⁹⁶⁴ Exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), pp, 50, 80-82, 105, 127, 143-144, 154-156, 188, 223, 225; exhibit P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review), p. 88.

precluded due to a call pair's time between calls, location of calls and call overlap. Mr Philips concluded that mobile 354 possibly co-located with mobile 944.⁷⁹⁶⁵

4184. Mobile 354 was never in contact with mobile 944.⁷⁹⁶⁶ There was one overlapping call on 12 January 2005: mobile 944 had an incoming call at 15:21:52 which ended at 15:26:27 and mobile 354 had an incoming call at 15:26:19 which ended at 15:27:22.⁷⁹⁶⁷ The overlap was minimal and the two mobiles were on different networks.⁷⁹⁶⁸ The overlap, he concluded, would not preclude co-location.⁷⁹⁶⁹

Mobile 944 and mobile 663

4185. Mr Philips analysed 260 pairs of calls in relation to mobile 944 and mobile 663 on 15 days, namely 28, 29, and 30 September 2004, 1 and 20 October 2004, 21 December 2004, 11, 12, 15, 18, 19, 28, and 31 January 2005, and 11 and 12 February 2005. Mr Philips determined that 203 of the analysed pairs fell in the category of 'may be co-located', 54 fell in the category of 'would not preclude co-location', and three fell in the category of 'may preclude co-location'. None of the analysed calls fell in the category of 'would preclude co-location'.⁷⁹⁷⁰ Mr Philips concluded that mobile 944 possibly co-located with mobile 663.⁷⁹⁷¹

4186. Mobile 663 was never in contact with mobile 944.⁷⁹⁷² There were three overlapping outgoing calls⁷⁹⁷³ and 20 other overlapping calls between mobile 663 and 944. Of the total number of overlapping calls, 21 of them had minimal overlaps.⁷⁹⁷⁴ The two mobiles used were on different

⁷⁹⁷² Exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), p. 3.

⁷⁹⁷³ Exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), pp 67, 92, 217.

⁷⁹⁷⁴ Exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), pp 2, 67, 92, 109, 217-219, 239-240.

networks. Allowing a time adjustment to accommodate potential time differences between the two cell networks used, Mr Philips determined those 21 analysed pairs fell into the category of ‘would not preclude co-location’.⁷⁹⁷⁵ There were two instances when co-location may have been precluded due to call overlap.⁷⁹⁷⁶ There were three other instances where call pairs may have precluded co-location due to a call pair’s time between calls and location of calls.⁷⁹⁷⁷ In total, there were three instances where call pairs may have precluded co-location of mobiles 663 and 944.⁷⁹⁷⁸

4187. Mobiles 663 and 944 may not have been co-located for calls at 20:40:59, 20:41:10 and 20:41:27 on 28 September 2004.⁷⁹⁷⁹ In this instance, there were three overlapping calls: mobile 663 had an outgoing call at 20:40:59, which finished at 20:51:31 (call 1) and mobile 944 had an incoming call at 20:41:10, which finished at 20:41:36 (call 2).⁷⁹⁸⁰ These calls were on different networks and the second call started and finished before the first call finished.⁷⁹⁸¹ Mobile 663 also received an SMS at 20:41:27 (call 3). The activations were of cells Bir Abed_A and HADATH3, of which the centres of best server coverage were approximately 1.5 kilometres apart.⁷⁹⁸² Calls 1 and 2 were separated in time by 11 seconds.⁷⁹⁸³ The call pair analysis may preclude the mobiles’ co-location, but there may have been no actual overlap between the calls resulting from the potential time differences between the two networks.⁷⁹⁸⁴

4188. Mobiles 663 and 944 may not have been co-locating during calls at 00:48:19 and 00:48:27 on 1 October 2004.⁷⁹⁸⁵ The two calls were separated in time by eight seconds and used two

⁷⁹⁷⁵ Exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), pp 2, 67, 92, 109, 217-219, 239-240.

⁷⁹⁸⁵ Exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), pp 68, 91.

different cells, which were 4.5 kilometres apart. Mr Philips concluded that the call pair analysis may preclude co-location, but believed that since the cells used have fragmented and extensive coverage areas, the distance between the calls may have been much less.⁷⁹⁸⁶

4189. According to Mr Donaldson, from 9 March 2004 to 9 March 2005, mobile 944 shared all of its 366 days of use with mobile 663, and 194 days of use with mobile 354.⁷⁹⁸⁷ He calculated that, on these days, mobile 944 was used 3,316 times within ten minutes of either mobile 663 or mobile 354. Of the 2,646 times for which ‘Start Cell ID’ was available, 63 per cent of the activated towers were less than 1,000 metres apart.⁷⁹⁸⁸

4190. Mr Donaldson further noted that the co-location between the three mobiles was constant, that the consecutive usage within ten minutes occurred throughout the day and night and that this consecutive usage occurred across a wide geographical area mainly within the Beirut and the Mount Lebanon area.⁷⁹⁸⁹ Based on the analysis of all the available data, he concluded that mobile 944 moved in concert with mobile 663 for at least 364 of the 366 days mobile 944 was used and that mobile 944 moved in concert with mobile 354 for at least 193 of the 194 shared days of usage.⁷⁹⁹⁰

(b) Findings

4191. Mobile 944’s pattern usage supports the conclusion that Mr Badreddine / Sami Issa used it. The numbers most frequently called were of Samino employees, Hezbollah figures and several of Mr Badreddine’s family members, which, as Mr Donaldson highlighted, differed from the contact profiles of mobiles 354 and 663 after 2001, but was similar to that of mobile 354 before 2001.

4192. With regard to the geographic profile of mobile 944, as with mobile 354, Mr Donaldson’s analysis of the most frequently activated cells in relation to certain addresses is based on Mr Badreddine’s family ties and potential places of residence and work in Beirut, Jounieh and Sahel Alma.

⁷⁹⁸⁶ Exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), p. 70.

⁷⁹⁸⁷ Exhibit P2023.3, para. 283.

⁷⁹⁸⁸ Exhibit P2023.3, para. 287.

⁷⁹⁸⁹ Exhibit P2023.3, para. 288.

⁷⁹⁹⁰ Exhibit P2023.3, para. 290.

4193. There was, however, no evidence showing that Mr Badreddine was present at these places on particular days. The insignificant geographic relevance of mobile 944's most frequently activated cells does not preclude attributing it to Mr Badreddine in light of the cumulative weight of mobile 944's consistent use and consistent contact profile.

4194. Mr Philips's overall conclusion was that mobile 944 possibly co-located with mobiles 663 and 354 from 28 September 2004 to 12 February 2005, except for three instances, namely on 28 September and 1 October 2004. He explained, however, this may have been due to the fragmented best server coverage of the cells activated. The Trial Chamber accepts his expert opinion on this matter.

4195. Furthermore, throughout the attribution period—from 9 March 2004 to 9 March 2005—mobile 944 consistently co-located with mobiles 663 and 354, attributable to Mr Badreddine and his Sami Issa alias. This strengthens the inference that Mr Badreddine was also using mobile 944.

4196. The communications with the top ranking contacts show a striking pattern of use by mobiles 354 and 663, conclusively followed by the pattern of use by sequential mobile 944. This pattern comprehensively illustrates the distribution of the distinctive group of contacts between mobiles 354 and 663 as opposed to contacts of sequential mobile 944. Further, the several minor inconsistencies identified by Mr Philips are explicable.

4197. The Trial Chamber received substantial evidence that the three mobiles had common movement. Mr Donaldson analysed the usage of the mobiles from 9 March 2004 to 9 March 2005, based on the relevant call sequence tables, and found convincing evidence of common movement between these personal mobiles attributed to Mr Badreddine. The common movement of these mobiles in this period was consistent and constant. Personal mobile 944, for example, shared its 366 days of use with mobile 663. It also shared 194 days of use with mobile 354. The common movement of these mobiles occurred in different areas in Lebanon and at different times of the day and night.

4198. Moreover, Mr Donaldson's analysis of the constant and consistent pattern of co-location of the three mobiles within this period is convincingly supported by the consecutive use of these mobiles within ten minutes, occurring throughout the day and night. Mr Donaldson highlighted

that these consecutive uses, within ten minutes, occurred across a wide geographical area, predominantly within the areas of Beirut, Jounieh to its north, and Mount Lebanon.

4199. Three examples from Mr Philips's analysis, on Tuesday 21 December 2004, Tuesday 18 January and Saturday 12 February 2005, show the common movement of mobiles 944 and 663 from the southern suburbs of Beirut towards the Jounieh area, in the afternoon/evening. Each showed movement in the same direction at around the same time by Green 023.⁷⁹⁹¹

4200. The Trial Chamber accordingly finds that Mr Badreddine was the user of mobile 944 during the attribution period from 9 March 2004 to 9 March 2005.

4201. The amended consolidated indictment references an additional four mobiles allegedly used by Mr Badreddine, namely 3476683, 3103195, 3121486 and 3442593.⁷⁹⁹² The Prosecution presented no evidence in relation to their attribution. Accordingly, the Trial Chamber will make no findings in relation to these four mobiles.

7. Green 023

(a) Summary of the evidence

i. Subscriber details and handset use

4202. The Prosecutor, in the amended consolidated indictment, pleads that Mr Badreddine used Green 023, one of the three mobiles in the Green network.⁷⁹⁹³ Green 023 was one of 18 post-paid Alfa SIM cards, purchased in southern Beirut in July and August 2004 in nine pairs, by nine subscribers. Collectively they are referred to as the 'Green mobiles'. Each subscriber's name was associated with two mobiles.⁷⁹⁹⁴

4203. Green 023 was subscribed in the name of 'Mofid Samir Haidar'. It was first used on 18 August 2004, and was deactivated on 23 August 2005.⁷⁹⁹⁵ Like the other Green mobiles, Green

⁷⁹⁹¹ Exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), pp 106-107, 195-199, 235-237.

⁷⁹⁹² Amended consolidated indictment, para. 18.

⁷⁹⁹³ Amended consolidated indictment, paras 15 (b), 18, 19 (a).

⁷⁹⁹⁴ Exhibit P1116 (Expert report of John Edward Philips – Green mission phones), p. 22; Gary Platt, T. 6 April 2016, pp 57, 62-63; Andrew Donaldson, T. 6 July 2017, p. 78.

⁷⁹⁹⁵ Exhibit P405 (Alfa subscription of 18 Green mobiles), ERN 60105116; exhibit P797, p. 1; exhibit P2023.3, para. 307, p. 181; exhibit P1116 (Expert report of John Edward Philips - Mission phones green 023, 071 and 300), p. 23,

023 was a post-paid subscription, paid in cash every month.⁷⁹⁹⁶ In Mr Donaldson's view, Green 023 was subscribed under a fictitious identity⁷⁹⁹⁷ because of an intent to hide its acquisition.⁷⁹⁹⁸

4204. The Lebanese Directorate General of Civil Status had no record of the name and personal details on Green 023's subscriber records.⁷⁹⁹⁹ Similarly, the Lebanese Directorate General for Political and Refugees Affairs held no records in the name of Mofid Haidar, and no identity documents were issued in that name.⁸⁰⁰⁰

4205. Throughout the subscription period, Green 023 used only one handset. It was also the only number subscribed in Lebanon that ever used this handset.⁸⁰⁰¹

ii. Attribution period

4206. Mr Donaldson, who produced the Prosecution's first attribution report on Mr Badreddine, identified Green 023's attribution period as from Monday 6 September 2004 to the day of the attack, Monday 14 February 2005.⁸⁰⁰² The mobile, after its activation on 18 August, was not used between 20 and 24 August, 26 and 29 August and between 1 and 5 September 2004.⁸⁰⁰³

4207. Green 023, according to Mr Donaldson's testimony, was not used in the same place and time with mobiles 944, 354 and 663 before 6 September 2004,⁸⁰⁰⁴ as its calls did not correlate with these mobiles.⁸⁰⁰⁵ According to Mr Donaldson's report, instances of Green 023's cell use on 25 August 2004—namely three calls—'appear inconsistent with the cell use' of mobile 663. In his

table 2, p. 69; exhibit P1211 (call sequence table of Green 023), p. 1. According to exhibit P796.1 (Network analysis report – updated 8 February 2018), para. 721, Mofid Haidar was also listed as the subscriber of Green 026.

⁷⁹⁹⁶ Exhibit P2023.3, para. 307; exhibit P796.1 (Network analysis report – updated 8 February 2018), paras 686, 696, 717; Gary Platt, T. 6 April 2016, p. 81.

⁷⁹⁹⁸ Andrew Donaldson, T. 17 July 2017, pp 17-19.

⁷⁹⁹⁹ In the Lebanese Ministry of Interior and Municipalities, exhibit P1964 (Records of national identity card and civil status extract), pp 5-6.

⁸⁰⁰⁰ Exhibit P397, p. 3.

⁸⁰⁰¹ Exhibit P2023.3, para. 308; Andrew Donaldson, T. 6 July 2017, pp 78-79. *See* chapter VIII 'Nature and purpose of colour-coded mobile networks and Purple group of mobiles', (C) 'Green network', (2) 'Equipment'.

⁸⁰⁰² Exhibit P2023.3, para. 303.

⁸⁰⁰³ Exhibit P1211 (call sequence table of Green 023), p. 1. Without explanation, Mr Donaldson, in his report, stated that 'There is a gap in use from 30-08-04 until 06-09-04'. Exhibit P2023.3, para. 316. This is incorrect, as the call sequence table, exhibit P1211, shows its use on 30 August 2004 in receiving a call from Green 300 and receiving a service SMS.

⁸⁰⁰⁴ Andrew Donaldson, T. 6 July 2017, pp 78-79, T. 17 July 2017, pp 23-30.

⁸⁰⁰⁵ Andrew Donaldson, T. 17 July 2017, pp 23-30.

report, without further explanation, and apparently based on these three calls, Mr Donaldson concluded that this precluded mobile 663 from being Green 023's user from 18 to 30 August 2004.⁸⁰⁰⁶

iii. Contact profile

4208. During the attribution period, namely from Monday 6 September 2004 to Monday 14 February 2005, Green 023 had 145 contacts, 139 of which were with Green 300 and Green 071. As from 13 October 2004, these three mobiles formed an absolute closed user group that the Prosecution referred to as the 'Green network'.⁸⁰⁰⁷

4209. On 57 days between 6 September 2004 and 14 February 2005, Green 023 had 96 calls with Green 300, attributed to Mr Ayyash, and 43 calls with Green 071, which is attributed to Mr Merhi.⁸⁰⁰⁸ It received five service text messages from Alfa service numbers.⁸⁰⁰⁹ During the attribution period, but before the communications between Green 023, Green 300 and Green 071 became exclusive on 28 September 2004, only one other number was in contact with Green 023. This was an incoming call from mobile 047 on 27 September 2004,⁸⁰¹⁰ subscribed to *Jibayat*—a Lebanese company providing express couriers and delivery services.⁸⁰¹¹

iv. Geographic profile

4210. Mr Donaldson stated that, since Green 023 was part of a closed and covert network, the possibility of attributing it through investigative methods—such as seeking to trace the registered owner, to interview its contacts or review the text message content—was minimal.⁸⁰¹² Hence, the

⁸⁰⁰⁶ Exhibit P2023.3, paras 314-316, referring to activations at 15:30, 19:45 and 21:40; Andrew Donaldson, T. 17 July 2017, p. 27.

⁸⁰⁰⁷ Exhibit P2023.3, paras 306, 310; Andrew Donaldson, T. 4 July 2017, p. 11, T. 6 July 2017, p. 78, T. 17 July 2017, pp 17, 20-21. For a detailed analysis of the Green network, *see* chapter VIII 'Nature and purpose of colour-coded mobile networks and Purple group of mobiles', (C) 'Green network'.

⁸⁰⁰⁸ Exhibit P1211 (Call sequence table of Green 023).

⁸⁰⁰⁹ Exhibit P2023.3 (Attribution report of Andrew Donaldson regarding Mr Badreddine), paras 309, 327; exhibit P1211, on 28 September (p. 2), 28 October (p. 3), 29 December 2005 (p. 3), 20 January and 28 January 2005 (p. 5).

⁸⁰¹⁰ Exhibit P1211, p. 1.

⁸⁰¹¹ Exhibit P2023.3, para. 326 (a); exhibit P949 (Alfa subscriber note mobile 047). Mr Donaldson stated that enquiries of the number did not reveal any positive leads.

⁸⁰¹² Exhibit P2023.3, para. 311; Andrew Donaldson, T. 4 July 2017, pp 11-12, T. 17 July 2017, p. 20.

main basis for attribution of Green 023 is its geographic profile and co-location with mobiles 944, 354 and 663.⁸⁰¹³

4211. Mr Donaldson observed that Green 023 shared a characteristic geographic profile with mobiles 944, 354 and 663. In particular, each of the four mobiles split its use between two areas that are relatively far apart, namely the Beirut southern suburbs, where Mr Badreddine's alleged primary residence was,⁸⁰¹⁴ and an area in Jounieh, near Sahel Alma,⁸⁰¹⁵ where Mr Badreddine used an apartment under his alias Sami Issa.⁸⁰¹⁶ Because of these two demographically different areas, in which Green 023 and the other mobiles were used, Mr Donaldson described this geographic split as 'uncommon and distinctive'.⁸⁰¹⁷

4212. This geographic split is shown in the map below, which illustrates the cells most activated in those areas.⁸⁰¹⁸

*Top three most frequently used cells for Green 023 and sequential mobile 944 from
6 September 2004 to 14 February 2005 – exhibit P2023.3, p. 186*

4213. As the table below illustrates, Green 023's top three ranked cells were ROUEIS3, BRAJNE3—both are in south Beirut—and GHAZIR2 which provides cell coverage in the Jounieh area to the north of Beirut.⁸⁰¹⁹

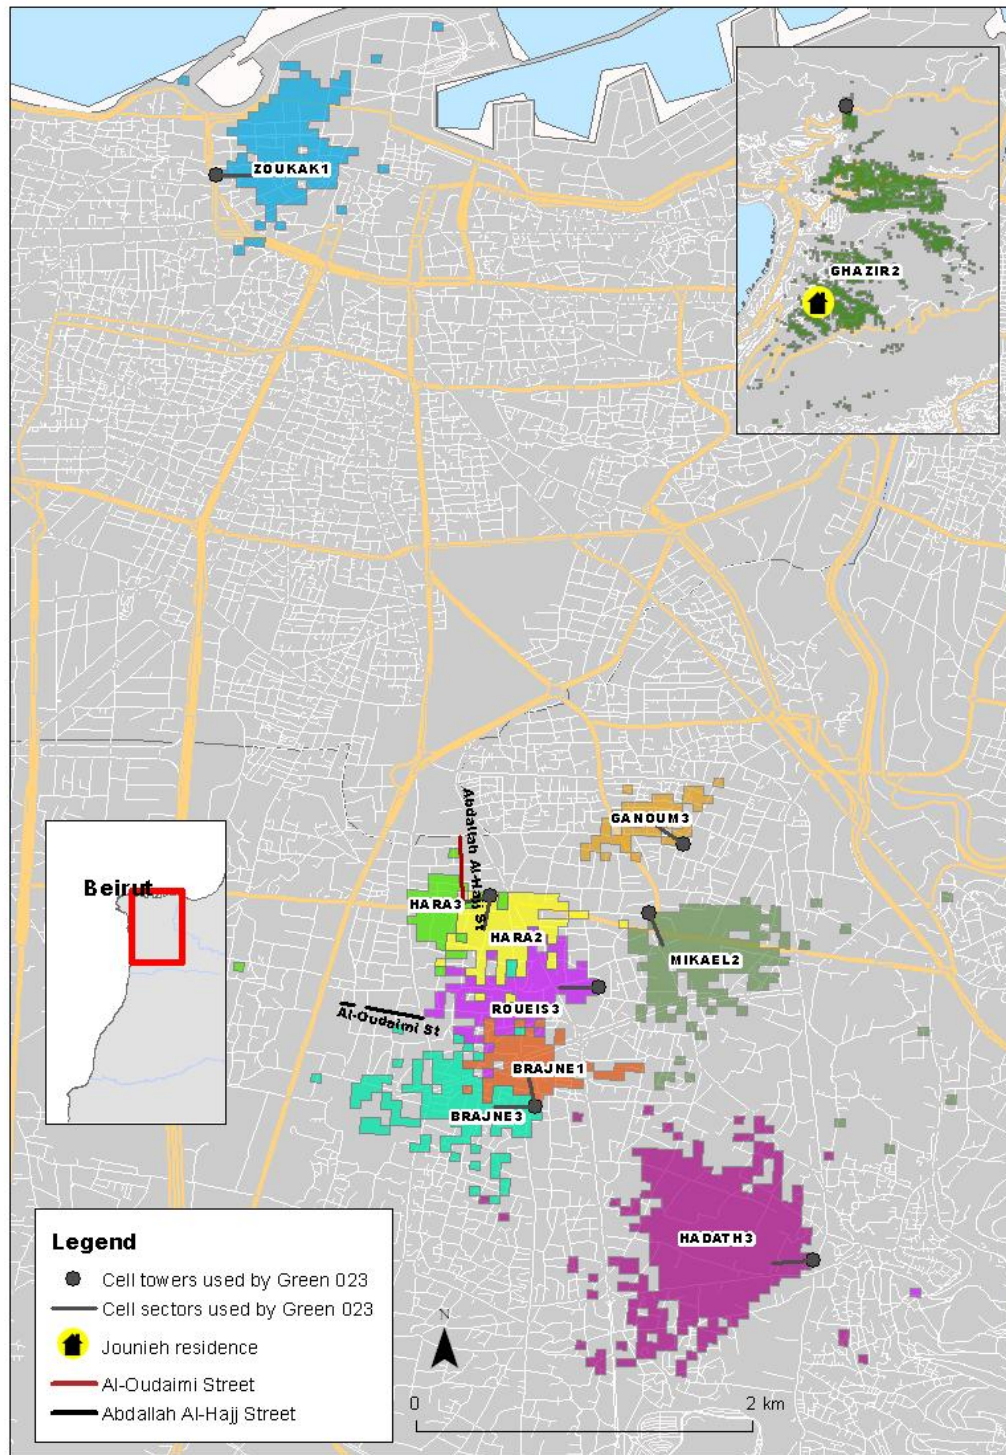

⁸⁰¹⁹ Exhibit P2023.3, para. 329; Andrew Donaldson, T. 5 July 2017, pp 49-50, T. 17 July 2017, pp 19-23.

Rank Order	Cell Name	Total	Percentage
1.	ROUEIS3	36	24.83%
2.	BRAJNE3	8	5.52%
3.	GHAZIR2	7	4.83%
4.	HADATH3	7	4.83%
5.	MIKAEL2	6	4.14%
6.	GANOUM3	4	2.76%
7.	BRAJNE1	4	2.76%
8.	ZOUKAK1	4	2.76%
9.	HARA2	4	2.76%
10.	HARA3	4	2.76%

List of most frequently used cell sectors for Green 023 from 6 September 2004 to 14 February 2005 – exhibit P2023.3, p. 184

4214. Green 023's most frequently used cells are shown in the map below from Mr Donaldson's attribution report.⁸⁰²⁰ Eight of these are more or less in a cluster in southern Beirut, while of the other two, one provides coverage to Jounieh, and the other, ZOUKAK1, is near the port.

⁸⁰²⁰ Exhibit P2023.3, p. 185.

Map of addresses and most frequently used cell sectors for Green 023 from 6 September 2004 to 14 February 2005 extracted from Mr Donaldson's attribution report related to Mr Badreddine – exhibit P2023.3, p. 185

v. Call and movement patterns

4215. Mr Philips, as the Prosecution's cell site expert, analysed approximately 1,421 calls made on 15 specific days from Tuesday 28 September 2004 to Saturday 12 February 2005 in relation to Green 023 and mobiles 354, 663 and 944.⁸⁰²¹ The Prosecution had specified the days, and in this respect, Mr Philips stated, 'Details of the mobile phones and the days of interest was received from Andrew Donaldson of STL on 24th July 2012'.⁸⁰²²

4216. These calls were on 28, 29 and 30 September, 1 and 20 October, 21 December 2004, 11, 12, 15, 18, 19, 28, and 31 January and 11 and 12 February 2005.⁸⁰²³ None of the four mobiles called each other, and Mr Philips concluded that over that period all mobiles were consistent with being used by a single person.⁸⁰²⁴

4217. Of the 1,421 calls, 65 per cent used the same cell or cells with overlapping best server coverage and 33 per cent did not preclude use of the same cell or cells with overlapping best server coverage.⁸⁰²⁵ Two per cent of the calls may have used different cells with no overlapping best server coverage due to a distance of approximately one and a half kilometre between cells the mobiles used within a short time.⁸⁰²⁶

4218. Mr Philips identified only five instances in which it was possible that two of the mobiles did not use the same cell or cells with overlapping best server coverage. However, he explained

⁸⁰²¹ Exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), pp 3, 12-13, 32-240. The combined call sequence table identified on page 12 of exhibit P1937, as the source of data analysed by Mr Philips, is exhibit P1305 (Call sequence table of 13 numbers—Mr Badreddine). Mr Philips's analysis considered all calls within the combined call sequence table and extracted those within +/- 5 minutes and +/- 1 hours, and gave each extract a unique number. Mr Philips's report contains 112 extracts covering 601 calls.

⁸⁰²² Exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), p. 12.

⁸⁰²³ Exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), pp 12-13.

⁸⁰²⁴ Exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), p. 3.

⁸⁰²⁵ Exhibit P1935 (PowerPoint presentation on single user analysis, John Edward Philips), slide 505; John Edward Philips, T. 24 April 2017, pp 73, 75. After receiving additional data on end cell usage, Mr Philips wrote a report on possible changes to previous findings. Despite the identity of some of the end cells differing in light of the additional data, Mr Philips identified only one instance in which a call switched from 'usage of the same cell or cells with overlapping best server coverage' to such a usage 'not being precluded'. In fact, in light of the additional data, more calls than before were identified as falling within the first category, namely 'usage of the same cell or cells with overlapping best server coverage'. Exhibit P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review), p. 76, para. 6.3.28.4, p. 102, para. 6.3.113.

⁸⁰²⁶ John Edward Philips, T. 24 April 2017, pp 73, 75; exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), p. 45, for an example of the possibility that two mobiles may not use cells in the same area at the same time.

that use of the same cell or cells with overlapping best server coverage is assessed in light of the best server coverage plots. However, best server coverage areas extend outside of the areas of the majority of these plots.⁸⁰²⁷ Therefore, assessed in light of fragmented best server coverage, it was still possible that in these five instances the mobiles used the same cell or cells with overlapping best server coverage, within a short time.⁸⁰²⁸

4219. Mr Donaldson noted that the three mobiles were never in contact with Green 023, as is evident in the call sequence tables.⁸⁰²⁹

4220. According to Mr Philips, only 29 of the calls made by the four mobiles overlapped in time.⁸⁰³⁰ This included an allowance for a time adjustment to accommodate potential time clock differences between the two networks. This meant that the number of overlapping calls was likely lower.⁸⁰³¹ Both Mr Donaldson and Mr Philips analysed the variance of timings between Alfa's and Touch's clocks in 2004 and 2005. The analysis demonstrated that between 1 September 2004 and 23 March 2005, 98.9 per cent of time variance between the two mobile network clocks was between zero and 18 seconds.⁸⁰³²

4221. Green 023's call sequence table shows that it was used on 57 days during the attribution period. Mr Donaldson observed that mobile 663 and mobile 944 shared all 57 days of use and moved together with Green 023. It shared 37 days of use with mobile 354, during which in his view, it also moved in concert with Green 023.⁸⁰³³ Consequently, Mr Donaldson concluded that the joint movement of the four mobiles was consistent and constant, meaning, it happened in all areas and at all times of day.⁸⁰³⁴

⁸⁰²⁷ Exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), p. 3, fn. 1; exhibit P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review), p. 78.

⁸⁰³³ Exhibit P2023.3, paras 331, 340, 348.

⁸⁰³⁴ Exhibit P2023.3, paras 338, 341, 349, *see also* paras 342-344, containing maps and tables, providing 31 examples of relevant close in time calls between the four mobiles; Andrew Donaldson, T. 17 July 2017, p. 45.

4222. The map from Mr Donaldson's attribution report below illustrates an instance, on Tuesday 21 December 2004, when Green 023, mobiles 944 and 663 were all connecting to cells in the Jounieh area on the same day and around the same time:⁸⁰³⁵

Map showing the use of Green 023, mobiles 944 and 663 on 21 December 2004 in Jounieh extracted from Mr Donaldson's attribution report related to Mr Badreddine – exhibit P2023.3, p. 198

4223. Mr Philips identified 98 call pairs with respect to Green 023 and Mr Badreddine's personal mobiles 663, 354 and sequential mobile 944 on 15 days between Monday 6 September 2004 and Monday 14 February 2005. He concluded that Green 023 possibly co-located with one of these mobiles on 55 occasions.⁸⁰³⁶

⁸⁰³⁵ Exhibit P2023.3, pp 197-198, "Example 11", depicting the use of the three mobiles on 21 December 2004 between 19:42 and 20:06.

⁸⁰³⁶ These call pairs occurred on 28, 29, 30 September; 1, 20 October; 21 December 2004; 11, 12, 15, 18, 19, 28, 31 January; and 11 and 12 February 2005. Exhibit P1937 (Expert report of John Edward Philips – Single user analysis,

4224. Most frequently, for 42 pairs of calls, Green 023 used cells with overlapping predicted coverage areas with mobile 663, meaning that the two mobiles may have co-located.⁸⁰³⁷ Of these, twenty-one pairs of calls occurred within five minutes.⁸⁰³⁸ The mobiles activated cells in the southern suburbs of Beirut,⁸⁰³⁹ near the west coast area of Beirut,⁸⁰⁴⁰ in the marina area in northern Beirut,⁸⁰⁴¹ near the north-east coast of Beirut,⁸⁰⁴² near the airport,⁸⁰⁴³ in the area of Quraitem Palace,⁸⁰⁴⁴ and in Jounieh.⁸⁰⁴⁵

4225. Six other pairs of calls occurred in under ten minutes.⁸⁰⁴⁶ The time lapse between additional four pairs of calls was not more than fifteen minutes.⁸⁰⁴⁷ The call sequence table and maps extracted from Mr Philips's report demonstrate a series of Green 023's and mobiles 663's and 944's calls and cell activations on Friday 28 January 2005. According to Mr Philips, the mobiles

Suspect 2, Mr Badreddine), pp 32, 34-37, 40-41, 43, 48-49, 54-56, 60-61, 64-65, 68, 70-71, 84-87, 106, 110, 113-116, 123, 130, 132, 145, 148-149, 156-160, 165, 172, 174, 180, 189, 195-196, 199, 205, 207, 222-223, 225, 227-228, 231-232, 236-237; exhibit P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review), pp 80-81, 89, 93.

⁸⁰³⁷ These occurred on 28 September (six times), 29 September (once), 30 September (three times), 1 October (four times), 20 October (twice), 11 January (twice), 12 January (three times), 15 January (three times), 18 January (twice), 19 January (twice), 28 January (three times), 11 February (four times), 12 February (seven times). Map 01

Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine—exhibit P1937, p. 198

⁸⁰⁴⁸ Exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), extract 91, pp 198-200. Out of the forty-two pairs of calls on 28 January 2005, Mr Philips concluded that twenty-eight pairs possibly co-located. Exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), pp 184-203.

4226. Mr Philips determined that twenty pairs of calls of Green 023 and mobile 663 fell into the category of ‘would not preclude co-location’.⁸⁰⁴⁹

4227. On Wednesday 20 October 2004, Green 023 connected to ZOUKAK2 and eight seconds later, mobile 663 used Jesuite_C. Mr Philips thought that the distance between the centres of the two cells may have precluded the mobiles from co-location, as it could not have been travelled in such short time.⁸⁰⁵⁰ However, he also noted that until that point the two mobiles were moving together in the marina area in Beirut.⁸⁰⁵¹

4228. According to Mr Philips, Green 023 had ten possible co-locations with Mr Badreddine’s sequential mobile 944.⁸⁰⁵² The two mobiles used identical Alfa cells, such as KHAYAT2, ROUEIS3, FURN3, GHAZIR2, ADMA3, MOVPIK1, OUZAI2 and MIKAEL2, for eight pairs of calls made within five minutes.⁸⁰⁵³ The ninth pair occurred within 21 minutes, activating BRANJNE3 and HADATH3, and the tenth pair within 41 minutes with both mobiles activating GANOUM3.⁸⁰⁵⁴ Mr Philips found that cell activations for a further twenty-one call pairs would not preclude the two mobiles’ co-location.⁸⁰⁵⁵

4229. On Wednesday 19 January 2005, Green 023 activated JOUNCT3, near Kaslik, north of Beirut, and mobile 944 connected to GHAZIR2, in the area of Jounieh, 22 seconds before. Mr Philips concluded that these cell activations may have precluded the mobiles’ possible co-location.

⁸⁰⁴⁹ Exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), pp 35, 43, 70, 84,87, 106, 130, 132, 148, 158-159, 165, 172, 174, 189, 195, 225, 232, 236; exhibit P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review), p. 89.

⁸⁰⁵⁰ Exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), pp 83-85.

⁸⁰⁵² On 28 September 2004, (once), 30 September 2004, (twice), 11 January 2005, (three times), 15, 19, January (once each day), 31 January (twice), 12 February 2005 (once). Exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), pp 60-61, 64-65, 110, 145-146, 164-165, 195-196, 204-205, 207, 228; exhibit P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review), pp 80-81, 89.

⁸⁰⁵³ Exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), pp 60-61, 110, 145, 164-165, 195-196, 204-205, 207, 228; exhibit P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review), pp 79-80, 89.

⁸⁰⁵⁴ Exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), pp 64-65, 115; exhibit P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review), p. 81.

⁸⁰⁵⁵ Exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), pp 34, 40-41, 43, 49, 54-55, 61, 86, 106, 110, 113-114, 165, 189, 196, 236; exhibit P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review), pp 76, 80, 81, 89.

He noted, however, that the fragmented coverage areas of both cells may have not precluded the mobiles from co-locating.⁸⁰⁵⁶ Mr Philips demonstrated this on a map immediately below:

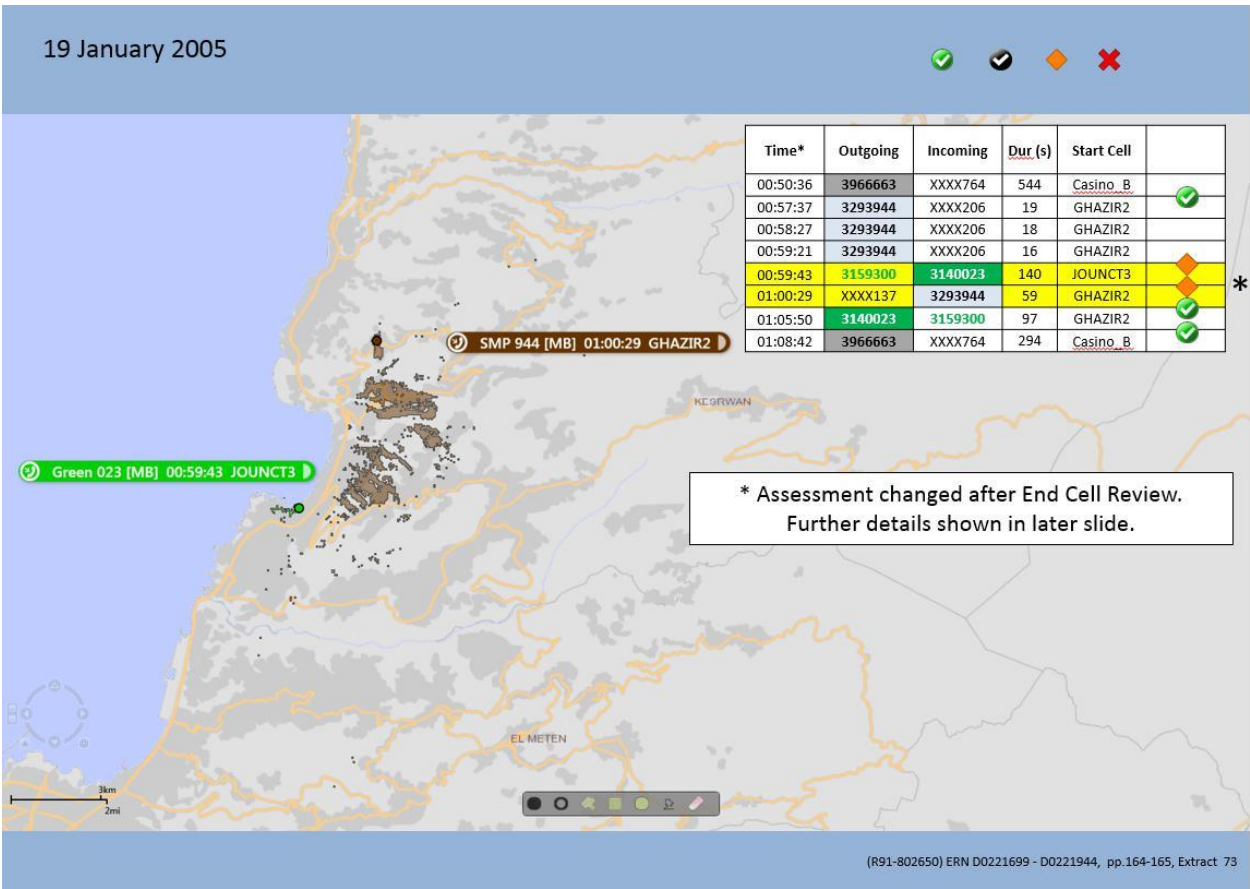

Exhibit P1935 (PowerPoint presentation on single user analysis, John Edward Philips), slide 217

4230. On Tuesday 18 January and Friday 11 February 2005, Green 023 and mobile 354 connected to cells with overlapping predicted best server coverage areas in southern Beirut for four pairs of calls. Of these, three occurred within five minutes apart, and the fourth within twelve minutes.⁸⁰⁵⁷

⁸⁰⁵⁶ Exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), pp 164-165; John Edward Philips, T. 21 April 2017, pp 23-24; exhibit P1935, slides 214-217; exhibit P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review), p. 89.
⁸⁰⁵⁷ Exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), pp 156-157, 159, 223.

The two mobiles had no call pairs, which fell into the categories of ‘would not preclude co-location’ or ‘may preclude co-location’.⁸⁰⁵⁸

4231. Turning to Mr Donaldson’s evidence, he analysed every call made during the 57 days of Green 023’s use and concluded that this mobile was used 129 times within ten minutes of use of mobiles 663, 354 and 944.⁸⁰⁵⁹ Hence, in his view, Green 023 was used in relatively close proximity to the other mobiles each time.⁸⁰⁶⁰ The consecutive use of Green 023 with the other mobiles within ten minutes occurred throughout the day and night from 07:00 to 02:00, and also across a wide geographical area within Beirut and Jounieh.⁸⁰⁶¹

4232. Of the 129 times that Green 023 was used within ten minutes of the other mobiles, in nine per cent of cases it shared the same cell as mobile 944. Fifty-three per cent of these activations were of cell towers less than one kilometre apart. In 18 per cent of the consecutive use within a ten-minute span, Green 023 activated a cell tower between one and two kilometres from the cell tower activated by mobiles 354, 663 or 944. Nineteen per cent of the activations were of cell towers over two kilometres apart.⁸⁰⁶²

4233. Mr Philips and Mr Donaldson analysed examples of the common movement of Green 023 with mobiles 354, 663 and 944 inside and outside of Beirut over the 15 days of interest.⁸⁰⁶³ Green 023 moved significantly over these 15 days outside of its most activated cells, namely, the adjoining ROUEIS3 and BRANJE3 cells in south Beirut. These two cells accounted for 30 per cent of its activations.

⁸⁰⁵⁸ Exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), pp 216, 239.

⁸⁰⁶³ Exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), pp 32, 36-37, 4148, 56, 60-61, 64-65, 70-71, 84-85, 110, 113-116, 123, 130, 145-149, 156-157, 159-160, 165, 180, 189, 199, 205, 207, 223, 225, 228, 231-232, 237; exhibit P2023.3, paras 331-349; exhibit P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review), pp 80-81, 89, 93.

4234. Illustrating common movement of the personal and network mobiles, Mr Philips concluded that based on the cell activations by Green 023, it ‘may be co-located’ with either mobile 663 or 994, over the following days:⁸⁰⁶⁴

In September 2004, on:

- Tuesday 28 September, in the afternoon, in activating cells near in eastern Beirut between 15:59 and 16:07. And in the evening in activating cells in Al-Khayat, to the north of the cells in Hadath;⁸⁰⁶⁵
- Wednesday 29 September, in the late evening, in activating cells providing coverage to Jounieh, which is around 20 kilometres north of Beirut;⁸⁰⁶⁶ and
- Thursday 30 September, in the afternoon in activating cells in Al-Khayat; and in the late evening in activating cells in Ganoum in Beirut.⁸⁰⁶⁷

In October 2004, on:

- Friday 1 October in the early hours in activating cells providing coverage to Jounieh;⁸⁰⁶⁸ and
- Wednesday 20 October, in the evening, in activating cells near the port in Beirut.⁸⁰⁶⁹

In December 2004 on:

- Tuesday 21 December, while activating cells in Jounieh, in the evening, (assessed as ‘may not preclude co-location’).⁸⁰⁷⁰

⁸⁰⁶⁴ Mr Donaldson, by contrast, simply asserted co-location. Exhibit P2303.3, para. 338, stating that ‘The co-location was constant’.

⁸⁰⁶⁵ Exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), pp 36-37, 40-41; exhibit P1935, slide 85.

⁸⁰⁶⁸ Exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), pp 68-70.

⁸⁰⁶⁹ Exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), pp 83-85.

⁸⁰⁷⁰ Exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), p. 106; exhibit P1935, slides 125, 127.

In January 2005, on:

- Wednesday 12 January, in the evening, activating cells near the Lebanese Arab University in Beirut; and later in Beirut;⁸⁰⁷¹
- Saturday 15 January, in the evening, activating cells in eastern Beirut; and then later in the evening, to the north of Beirut; and much later in the evening in activating cells near Faraya, 50 plus kilometres north-west of Beirut;⁸⁰⁷²
- Tuesday 18 January, activating cells near the port in Beirut in the afternoon;⁸⁰⁷³
- Wednesday 19 January, in the early hours of the morning, activating cells near Jounieh; and in the evening in eastern Beirut;⁸⁰⁷⁴
- Friday 28 January, in the afternoon, activating cells on the road north of Beirut and calls that would not preclude co-location; and in Jounieh in the evening;⁸⁰⁷⁵ and
- Monday 31 January, in the morning in eastern Beirut near the coast.⁸⁰⁷⁶

4235. In his court presentation slides, Mr Philips demonstrated the common movements of Green 023, mobiles 663 and 354 and sequential mobile 944 on seven days: 28, 29 September, 21 December 2005, 15, 18, 28 January and 12 February 2005.⁸⁰⁷⁷

4236. As examples of the details of three of the days referred to in the bullet points immediately above, namely on Tuesday 28 September 2004, Tuesday 21 December 2004 and Saturday 15 January 2005, Mr Philips made the following analyses.

⁸⁰⁷¹ Exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), pp 129-130.

⁸⁰⁷² Exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), pp 147-149; exhibit P1935, slides 148-149, 155, 158.

⁸⁰⁷⁴ Exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), pp 164-165, 180-181; exhibit P1113 (Expert report of John Edward Philips – Revised single user analysis, with end cell review), p. 89.

⁸⁰⁷⁵ Exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), pp 188-189; exhibit P1935, slides 18-186.

⁸⁰⁷⁶ Exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), pp 204-205.

⁸⁰⁷⁷ John Edward Philips, T. 20 April 2017, pp 71-104; exhibit P1935, slides 78-198.

4237. On Tuesday 28 September 2004, Green 023 and mobile 663 had calls at 15:29 and 15:40. In his view, they possibly co-located as they activated Alfa's OGER3 and Touch's Ain Tineh_C overlapping cells, in south-west Beirut. At 15:51, mobile 354 connected to the same Touch cell. At 15:59, mobile 663 moved in easterly direction to the Green Tower_B cell, and eight minutes later Green 023 used a cell that had overlapping predicted best server coverage, MSAYBT2. At 16:26, mobile 944 activated KHAYAT2.⁸⁰⁷⁸ The map immediately below shows the coverage areas of the cell activated by the four mobiles in the afternoon on 28 September 2004:

⁸⁰⁷⁸ John Edward Philips, T. 20 April 2017, pp 71-81; exhibit P1935, slides 80-86.

Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine—exhibit P1937, p. 36

4238. Mr Philips testified that from 19:20, Green 023, mobile 663 and 944 moved in concert to southern Beirut, where the three possibly co-located for seven pairs of calls from 20:52 to 23:32.⁸⁰⁷⁹

4239. The second example is in the evening on Tuesday 21 December 2004 when mobiles 663 and 944 moved from central Beirut to the Junieh area. At 19:45 and 19:46, Green 023 and

⁸⁰⁷⁹ John Edward Philips, T. 20 April 2017, pp 77-81; exhibit P1935, slides 87-105.

mobile 944 connected to two cells on Alfa’s JOUNIE tower, cells 1 and 3.⁸⁰⁸⁰ By 20:36, mobiles 663 and 944 moved further north and, in Mr Philips’s view, possibly co-located for three pairs of calls connecting to Casino_B, Kfar Hbab_A and MAAMEL1.⁸⁰⁸¹ Green 023’s and sequential mobile 944’s activation of the JOUNIE tower’s cells is depicted below:

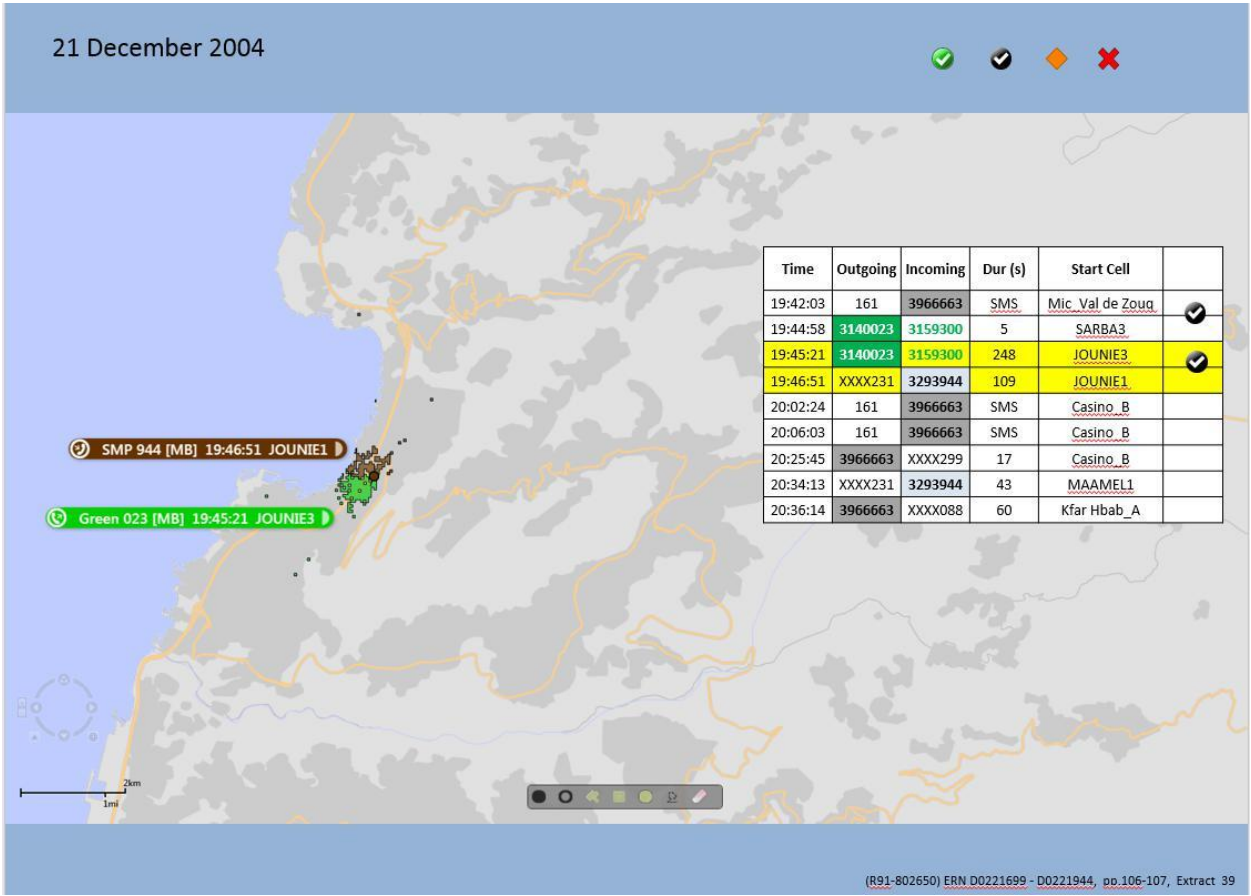

Exhibit P1935 (PowerPoint presentation on single user analysis, John Edward Philips), slide 217

4240. The third example is of Saturday 15 January 2005, when Green 023 and mobiles 663 and 944 possibly co-located while connecting to Alfa’s FURN3 and Touch’s Furn Chebbak_C for calls at 18:42, 18:49, 18:51 and 18:55. Approximately an hour later, mobiles 663 and 944 moved north-east of Beirut along the coastal road, where Green 023 and mobile 663, in Mr Philips’s view, possibly co-located connecting to JALDIB4 and Zalka Coast_A, respectively. Later, the two

⁸⁰⁸¹ John Edward Philips, T. 20 April 2017, pp 87-88; exhibit P1935, slides 128-132.

mobiles moved to the Faqra area and activated cells with overlapping predicted coverage areas, OUYOUN3 and Faraya_A, meaning that they may have co-located.⁸⁰⁸² Mr Philips demonstrated these possible co-locations on the maps extracted from his report:

15/01/2005	18:42:27	3966663	457	Voice	312	3519650038354603	3083	FurnChebbak_C

Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine—exhibit P1937, p. 149

4241. Mr Philips testified that Green 023 had no cell activations that would have precluded its possible co-location with the other three mobiles.⁸⁰⁸³

(b) Findings

4242. Mr Donaldson, unlike the Prosecution's cell site expert, Mr Philips, positively concluded that Green 023 was attributable to the user of mobiles 663, 354 and 944, which in turn were

⁸⁰⁸³ John Edward Philips, T. 20 April 2017, pp 104-105, T. 24 April 2017, p. 74; exhibit P1935, slide 505.

attributable to Mr Badreddine. Through its co-location with these three mobiles, Mr Donaldson concluded that Green 023 was attributable to Mr Badreddine.⁸⁰⁸⁴

4243. He determined that, given that Green 023 formed part of a closed network of three mobiles—without any identifying details—his main basis for attributing it to Mr Badreddine was its geographic profile and co-location with mobiles 944, 354 and 663, which he attributed to Mr Badreddine.

4244. Mr Donaldson observed a pattern that in his view was beyond coincidence. For its 57 days of use in the attribution period, Green 023 jointly and consistently moved with the other three mobiles in all areas and at all times of day, and was used in close proximity with them.

4245. Mr Philips, by contrast, concluded that, ‘Over the entire period under review, all mobile phones are consistent with being used *by a single person* with no exceptions’.⁸⁰⁸⁵ The Trial Chamber, for the reasons explained in assessing single user attribution, has preferred the evidence of Mr Philips over that of Mr Donaldson on any technical cell site matters, including possible dislocations, which he was able to explain technically.

4246. To find that Mr Badreddine was using Green 023 at all relevant times pleaded in the amended consolidated indictment, the Trial Chamber has to be satisfied that Mr Badreddine was using the personal mobiles attributed to him, and that they were co-locating with Green 023. It then has to find that the co-location was such that these mobiles, including Green 023, had a single user, namely Mr Badreddine, and that this is the only conclusion reasonably available from the evidence.

4247. Green 023’s contact profile is limited to contacting Green 071 and Green 300. This does not assist with attribution. As both Mr Philips and Mr Donaldson observed, and as is evident in the call sequence tables, Green 023 was never in contact with the other personal mobiles.

4248. Mr Philips found that only 29 of the 1,421 calls overlapped in time. This is explicable by two things. First, if someone is carrying four mobiles around and making and receiving as many calls as is the case here, overlapping calls must be inevitable. Second, the network clocks are not

⁸⁰⁸⁴ Exhibit P2023.3, paras 304, 317.

⁸⁰⁸⁵ Exhibit P1937 (Expert report of John Edward Philips – Single user analysis, Suspect 2, Mr Badreddine), p. 3.

synchronised and potential time differences between the two networks make it likely that some of the calls may not have overlapped at all.

4249. The call sequence tables show some limited yet explicable instances where some of the four mobiles may not have used the same cell or cells with overlapping best server coverage. Of the 1,421 calls Mr Philips reviewed, however, he identified only five instances in which it was possible that two of the mobiles did not use the same cell or cells with overlapping best server coverage. However, he explained each instance to the Trial Chamber's satisfaction, clarifying that fragmented best server coverage extends beyond the areas of the best server coverage plots, thus making these 'anomalies' possible.

4250. Mr Philips, in all of his cell site attribution work, emphasised that it is the combination of the period and frequency of calls and the movement of the mobiles that permits a conclusion, based on co-location, that the mobiles had a single user.

4251. Regarding the number of calls here, the figure is significant, namely 1,421 calls of four mobiles occurring on 15 days when the Green mobile was in use. Regarding the period, fifteen days is not particularly long, but its length is sufficient for clear patterns to emerge.

4252. More significantly, Mr Philips concluded that Green 023 had 55 possible co-locations with one of Mr Badreddine's other mobiles, 42 with personal mobile 663, nine with sequential mobile 944 and four with personal mobile 354.

4253. Green 023 may have co-located with the other mobiles on fourteen days, on 28, 29, and 30 September, 1 and 20 October 2004, 11, 12, 15, 18, 19, 28 and 31 January, 11 and 12 February 2005. Thirty-one of the possibly co-locating call pairs occurred within five minutes. Cell activations of further 41 pairs of calls with mobiles 663 and 944, Mr Philips concluded, would not preclude the mobiles' co-location with Green 023. Mr Philips also testified and explained in detail that the cell data of the four mobiles did not demonstrate dislocation of the mobiles.

4254. On the third element, that of movement, Green 023, as illustrated above, moved well outside of its most used cells in southern Beirut, and far, and often, over the 15 days analysed. This provides some convincing evidence of common movement between the personal mobiles attributed to Mr Badreddine and the Green network mobile 023.

4255. The evidence is that Mr Badreddine had a primary residence somewhere in the suburbs of south Beirut, but exactly where is difficult to ascertain. There is also evidence—but stronger as it was witness testimony that could be challenged in court—that he used an apartment in coastal Jounieh, 20 or so kilometres to the north of Beirut. The cell site evidence shows the fairly frequent movements of his three personal mobiles between these two locations. It also shows that Green 023 activated cells covering Jounieh on five of the 15 days analysed, and in a manner that shows co-location with his personal mobiles.

4256. This leads to the issue of whether the pattern of co-location is such that is beyond coincidence and the only reasonable conclusion available from the totality of evidence is that the four mobiles had a single user who was Mr Badreddine.

4257. The Trial Chamber has carefully assessed the evidence in its totality and, in light of its findings above, finds that Mr Badreddine was the user of mobiles 354, 663 and 944. The co-location of Green 023 with other personal mobiles, in the Trial Chamber's view, cannot be explained by mere coincidence. Green 023's and the personal mobiles' common activations of its most used cells in southern Beirut, combined with activations in the same cells or cells with overlapping best server coverage areas often within minutes of calls in areas outside of these cells, provides convincing evidence that the four mobiles had a single user. In this regard, the common movement of the mobiles outside of southern Beirut is particularly convincing.

4258. A strong basis for finding that Mr Badreddine was using all four mobiles comes from the geographic profile, in particular, the distinctive split between southern Beirut and the Jounieh area, which Green 023 shared with the other three mobiles. The consistent evidence shows that all four mobiles jointly split their use between these two geographically different and relatively distant locations, in both of which Mr Badreddine used apartments.

4259. Mr Donaldson first identified a pattern of mobiles 663 and 944 consistently sharing all 57 days of use and moving together with Green 023. Mobile 354 shared 37 days of use during which it also moved with Green 023. The co-location in his view was constant and the consecutive uses within ten minutes occurred throughout the day and night across a wide geographical area in Beirut and Jounieh. For Green 023, the best server coverage of its top two cells used was in the southern

suburbs of Beirut and the best server coverage of the third top ranked cell was in Jounieh. Notably, mobile 944 used as its top cell the same as Green 023.

4260. Further, in the Trial Chamber's view, it is significant that Green 023 used only one handset throughout the attribution period, and that it was the only mobile that ever used this handset in Lebanon.

4261. Combined, these facts strongly support the conclusion that Green 023's user remained the same throughout the specified attribution period. The movement between southern Beirut and the cells covering Jounieh is, in this respect, particularly convincing.

4262. The Trial Chamber is therefore satisfied beyond reasonable doubt that Mr Badreddine used Green 023, from at least Monday 6 September 2004 until Monday 14 February 2005. There is no evidence suggesting that anyone else was using the mobile in that period. It is therefore satisfied beyond reasonable doubt that he was the single user of the mobile in this period and was using it in all calls pleaded in and relevant to the amended consolidated indictment. This is the only conclusion reasonably available from the totality of the evidence.

X. CHRONOLOGY OF NETWORK MOBILE ACTIVITY BEFORE MR HARIRI'S ASSASSINATION ON MONDAY 14 FEBRUARY 2005

A. Summary of findings

4263. In the months before Mr Hariri's assassination, the Blue, Red and Yellow networks—and specifically the six core Red mobiles, the six core Blue mobiles and the four core Yellow mobiles—conducted observations and surveillance of Mr Hariri and his movements. On 39 days between Wednesday 20 October 2004 and Monday 14 February 2005, there was significant network activity in the area of his home, Quraitem Palace.

4264. On fourteen days between Thursday 11 November 2004 and Monday 14 February 2005, network mobiles 'followed' Mr Hariri's security detail. This showed an unequivocal pattern of the network mobiles shadowing Mr Hariri. On some of these days, and on others in the same period, network mobiles connected to cells providing coverage to locations relevant to Mr Hariri, such as Quraitem Palace. Some of the surveillance, especially in the weeks before Mr Hariri's death, was clearly connected with the assassination. These network mobiles generally activated cells near Quraitem Palace when Mr Hariri was present there.

4265. The Red network, apart from its surveillance activities, also had a crucial role in executing the attack on 14 February 2005. It was, as the Prosecution alleged, the assassination team or network.

4266. The Red mobiles were active in the area of Quraitem Palace in the morning and then in the Parliament and crime scene area. In the last two hours before the attack, 33 calls were made between the six Red mobiles. Significantly, between 12:49 and 12:53:42, Mr Ayyash's Red 741, Subject 5's Red 636, Subject 6's Red 678, Subject 7's Red 946, Subject 8's Red 893 and Subject 9's Red 652 were involved in the final seven calls of this network. The explosion that killed Mr Hariri and others occurred at 12:55:05. After the explosion, none of the mobiles in the Red network were ever used again.

4267. Some calls between the mobiles in the different networks were 'sequential' in the sense that they appeared to follow each other, but whether they can be deemed hierarchical—and if so

in which direction—was not established. In addition, there were insufficient Green network calls to allow the Trial Chamber to link them to pleaded events, which would have provided the necessary factual context. The Green network had the appearance of a triangular framework with Mr Merhi's attributed Green 071 and Mr Ayyash's Green 300 never calling each other but only communicating with Green 023, which the Prosecution attributes to Mr Badreddine.

4268. Some of the core users of the Red, Yellow, Green and Blue networks had a common mission, namely the assassination of Mr Hariri. The evidence is insufficient to establish that all surveillance by network mobile users in the months preceding Mr Hariri's death was a preparatory act for the assassination and hence connected with it. However, the only conclusion available from the totality of the evidence is that the network mobiles were engaged in surveillance of Mr Hariri in the months prior to the attack, and that a portion of it was preparatory work for his assassination.

B. The Prosecution's allegations of preparatory network surveillance between 11 November 2004 and 14 February 2005

4269. The Prosecutor pleads in the amended consolidated indictment that five interconnected mobile phone groups, four of which operated as networks, were involved in Mr Hariri's assassination.⁸⁰⁸⁶ The amended consolidated indictment specifies of the users of these network mobiles, that:

- 'Mr Ayyash and 'S5, S6, S7, S8, S9, S10, S11, S12, S14 and S23 observed HARIRI on a number of days prior to the attack. These observations were preparatory steps for the assassination;⁸⁰⁸⁷
- 'Observations of HARIRI occurred on 10 days between 20 October and 10 November 2004;⁸⁰⁸⁸ and
- 'On at least 20 days between 11 November 2004 and 14 February 2005, **AYYASH, S5, S6, S7, S8, S9, S10, S11, S12, S14 and S23**, communicating on their **Blue Network** phones and/or **Yellow Network** phones, and/or as of 14 January 2005, their respective **Red Network** phones, carried out acts in preparation for the attack including observation and

⁸⁰⁸⁶ Amended consolidated indictment, para. 14.

⁸⁰⁸⁷ Amended consolidated indictment, para. 20.

⁸⁰⁸⁸ Amended consolidated indictment, para. 21.

surveillance, in order to learn the routes and movements of his convoy and the position of HARIRI's vehicle within it. Surveillance occurred on at least 15 days and in particular on 11 November 2004, 1, 7, 14, 20, 28 and 31 January 2005, and 3, 4, 7, 8, 9, 10, 11 and 12 February 2005. By doing so, **AYYASH** and the assassination team determined the most suitable day, location and method for the attack, which they then executed on 14 February 2005.⁸⁰⁸⁹

4270. The Green network, it is alleged, was a coordination network used exclusively by Mr Badreddine, Mr Ayyash and Mr Merhi. The Yellow, Blue and Red networks were used for various preparatory tasks, including surveillance.⁸⁰⁹⁰ The three Purple mobiles, alleged to have been used by Mr Merhi, Mr Oneissi and Mr Sabra, were used to coordinate the false claim of responsibility.⁸⁰⁹¹

4271. Mr Ayyash, Mr Merhi and Mr Badreddine are pleaded to have agreed to commit a terrorist act by means of an explosive device in order to assassinate Mr Hariri between 11 November 2004 and the morning of 14 February 2005 before the explosion. The date of Mr Oneissi's and Mr Sabra's entry into the same conspiracy is pleaded as 22 December 2004.⁸⁰⁹²

4272. The attribution of various mobiles to each Accused and Mr Badreddine is separately addressed in respect of each person.⁸⁰⁹³ The Prosecution's case relies on the following attributions, namely, that:

- The user of Yellow 294, Red 741, Blue 233, Blue 322⁸⁰⁹⁴ and Green 300 was Mr Ayyash;
- The user of Green 023 was Mr Badreddine; and
- The user of Green 071 was Mr Merhi.

⁸⁰⁸⁹ Amended consolidated indictment, para. 22.

⁸⁰⁹⁰ Amended consolidated indictment, para. 19 (a) and (b).

⁸⁰⁹¹ Amended consolidated indictment, para. 15 (e).

⁸⁰⁹² Amended consolidated indictment, para. 48 (a), (c).

⁸⁰⁹³ See chapter IX 'Attribution of mobile telephones to the Accused and Mustafa Amine Badreddine'.

⁸⁰⁹⁴ The amended consolidated indictment alleges that Subject 14 (S14) was the user of Blue 322 (amended consolidated indictment, p. 11). The Prosecution final trial brief clarifies that while S14 was its user as of 6 January 2005, Mr Ayyash was its user between 18 October 2004 and 27 December 2004. Prosecution final trial brief, Annex E, p. 2; Prosecution closing submissions, T. 11 September 2018, p. 31.

4273. The Prosecution also alleges that the unidentified Subjects 5, 6, 7, 8 and 9 were the single users of the following multiple network mobiles:

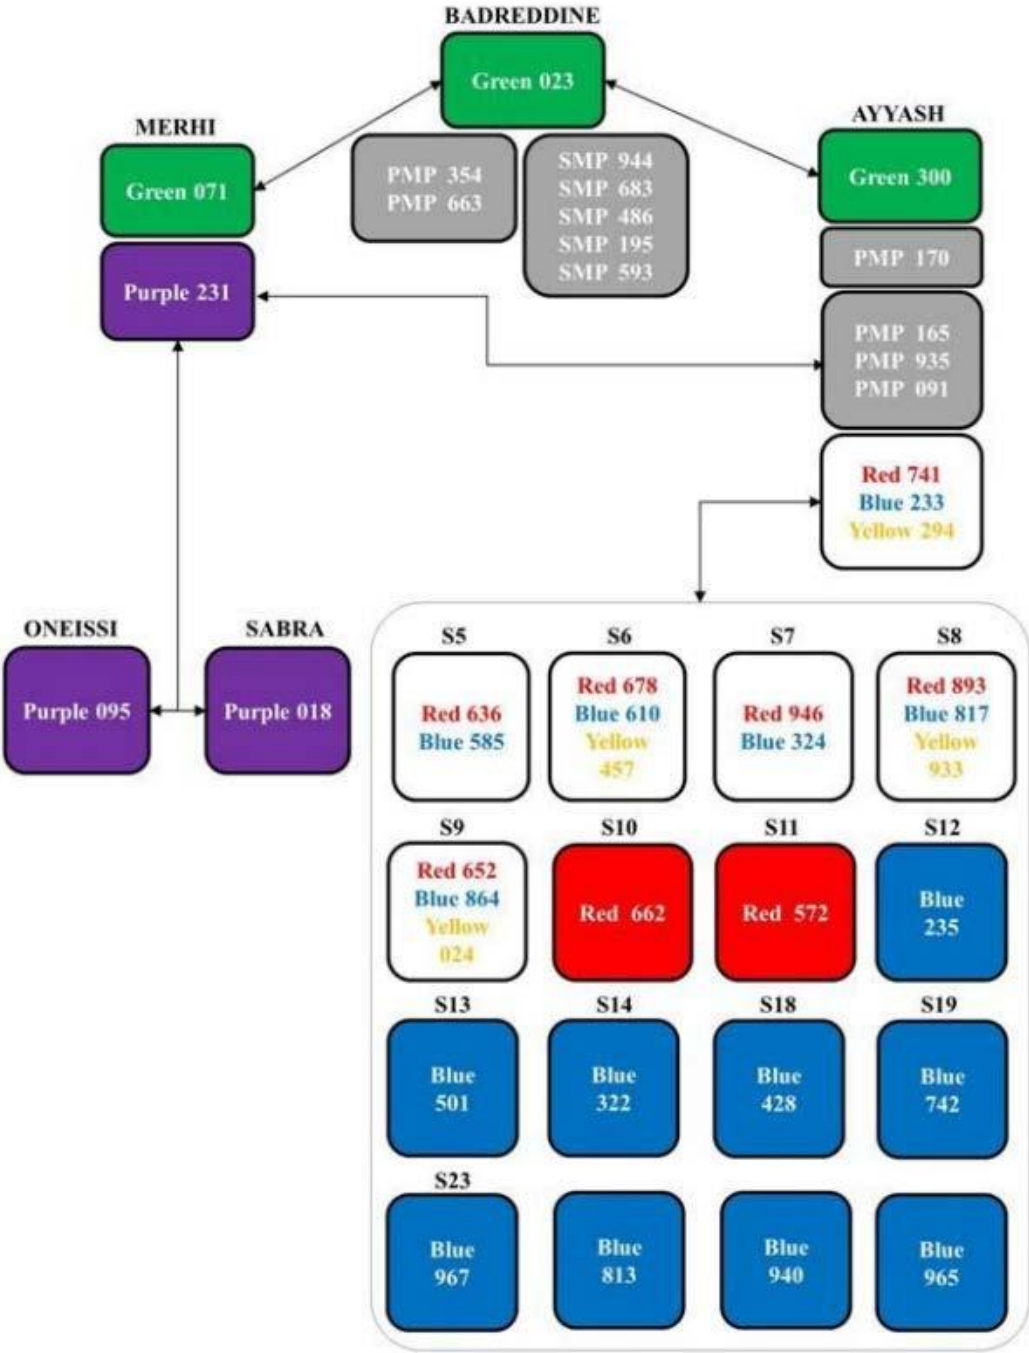

- Subject 5: Red 636 and Blue 585;
- Subject 6: Red 678, Blue 610 and Yellow 457;
- Subject 7: Red 946, Blue 324;
- Subject 8: Red 893, Blue 817 and Yellow 933; and
- Subject 9: Red 652, Blue 864 and Yellow 024.

4274. The Trial Chamber has positively found that the evidence establishes that Subject 6 was the single user of Red 678 and Blue 610.⁸⁰⁹⁵

4275. The amended consolidated indictment contains the graphic below setting out who was allegedly using each of the network mobiles and the three Purple mobiles. A cursory glance at it shows just how difficult it is to unravel who was using the mobiles on each of the days pleaded on which surveillance connected with the assassination occurred:⁸⁰⁹⁶

⁸⁰⁹⁵ See chapter VIII ‘Nature and purpose of colour-coded mobile networks and purple group of mobiles’, (G) ‘The networks’ common mission’, paras 2396, 2424, fn. 5048.

⁸⁰⁹⁶ Amended consolidated indictment, para. 19.

C. Summary of the evidence

4276. Most of the evidence relates to the activity of a large number of network mobiles (27) in the months before Monday 14 February 2005. The evidence of this activity and the locations of those mobiles is juxtaposed against Mr Hariri’s movements and other events relevant to the attack.

As is noted above in analysing the political background, the attack did not occur in a political or historical vacuum. The Prosecution relied on its investigator, Mr Gary Platt, for his expert opinion as to the significance of many of the network activities. It relied on its cell site expert, Mr J. E. Philips, for analysis of the cell site evidence and explanations as to what he thought was occurring, and particularly in relation to what he described as ‘mission phones’ that were engaged in criminal activities.

1. Some networks commence activity—Friday 24 September 2004 to Saturday 9 October 2004

4277. On the Prosecution’s pleaded case the three-mobile Green network, comprising Mr Badreddine’s Green 023, Mr Ayyash’s Green 300 and Mr Merhi’s Green 971, operated from at least Thursday 30 September 2004 until Monday 14 February 2005.

4278. On Friday 24 September 2004, Mr Merhi’s attributed Green 071 called Mr Badreddine’s Green 023.⁸⁰⁹⁷ Until Tuesday 12 October 2004, these two mobiles were in contact 23 times on ten days.⁸⁰⁹⁸ Six days later, on 30 September 2004, Mr Ayyash’s Green 300 called Mr Badreddine’s Green 023.⁸⁰⁹⁹ Until 12 October 2004, these two mobiles were in contact 13 times on six days.⁸¹⁰⁰

4279. The mobiles had been in contact with Green 023 before,⁸¹⁰¹ but the Prosecution attributes Green 300 to Mr Ayyash and Green 071 to Mr Merhi only as of the above dates, namely 30 and 24 September 2004 respectively.⁸¹⁰² On Wednesday 13 and Tuesday 19 October 2004, Mr Ayyash’s Green 300 called Mr Badreddine’s Green 023.⁸¹⁰³

4280. Shortly after one of the contacts between Mr Ayyash’s Green 300 and Mr Badreddine’s Green 023 on Thursday 30 September 2004, Mr Ayyash’s Yellow 294 called Yellow 024.⁸¹⁰⁴ From

⁸¹⁰⁰ Exhibit P1783, para. 70. *See also* exhibit P1207, p. 2; exhibit P1211, p. 2.

⁸¹⁰¹ Exhibit P1211, p. 1.

⁸¹⁰² Prosecution final trial brief, paras 140, 260.

⁸¹⁰³ Exhibit P1207, p. 2; exhibit P1783, paras 74, 81.

⁸¹⁰⁴ Exhibit P1211, p. 2; exhibit P1240 (Call sequence table of Yellow 294), p. 44.

Wednesday 1 September until Tuesday 12 October 2004, on the Prosecution's pleaded case, the 13 yellow mobiles were active.⁸¹⁰⁵

4281. According to the Prosecution, Subject 7 was the single user of Blue 324 and Red 946, and Subject 5 used both Blue 585 and Red 636. Both were also members of the Red network assassination team. On Monday 18 October 2004, Blue 324 and Blue 322 were in contact with each other for the first time.⁸¹⁰⁶ Blue 324 called Blue 585 and Blue 585 called Blue 322.⁸¹⁰⁷

2. Surveillance of Mr Hariri and preparations for the attack—Wednesday 20 October 2004 to Sunday 13 February 2005

4282. The Prosecution's evidence of the Blue network mobile activity, and specifically that of Mr Ayyash's Blue 322, Blue 324 and Blue 585, is intended to establish the conspirators' preparatory actions for the attack. The evidence suggests a frequent presence of Blue 324 and Blue 585 in the area around Mr Hariri's residence at Quraitem Palace and at other locations where Mr Hariri was present.

4283. Conversely, when Mr Hariri was out of Lebanon, the Blue mobiles did not frequent the Quraitem Palace area. On the Prosecution's case, this pattern demonstrates surveillance of Mr Hariri in preparation for his assassination.

(a) Evidence of surveillance generally

4284. The Trial Chamber received evidence that Mr Hariri and his convoy were under surveillance in the period immediately before his assassination.⁸¹⁰⁸ Several members of Mr Hariri's security detail, and his employee Witness PRH277, stated that the Lebanese security services

⁸¹⁰⁵ Exhibit P1783 (Expert report of Gary Platt - Chronology), para. 72; exhibit P517 (Call sequence table of Yellow 120), pp 27-28; exhibit P1240, pp 40-45; exhibit P1241 (Call sequence table of Yellow 618), pp 12-15; exhibit P1242 (Call sequence table of Yellow 425), pp 19-21; exhibit P1243 (Call sequence table of Yellow 932), pp 32-39; exhibit P1244 (Call sequence table of Yellow 024), pp 23-28; exhibit P1245 (Call sequence table of Yellow 078), pp 17-21; exhibit P1246 (Call sequence table of Yellow 170), pp 20-21; exhibit P1247 (Call sequence table of Yellow 933), pp 46-49; exhibit P1248 (Call sequence table of Yellow 669), pp 72-75; exhibit P1249 (Call sequence table of Yellow 513), pp 53-59; exhibit P1250 (Call sequence table of Yellow 763), pp 23-25; exhibit P1252 (Call sequence table of Yellow 457), pp 45-52.

⁸¹⁰⁶ Exhibit P1225 (Call sequence table of Blue 324), p. 1; exhibit P1229 (Call sequence table of Blue 585), p. 1; exhibit P1236 (Call sequence table of Blue 322), p. 1; exhibit P1783 (Expert report of Gary Platt - Chronology), paras 78-79.

⁸¹⁰⁷ Exhibit P1225, p. 1; exhibit P1229, p. 1; exhibit P1236, p. 1.

⁸¹⁰⁸ This is detailed in analysing the political background to the events in chapter IV 'Historical and political background to the attack'.

including the ISF were conducting surveillance of him.⁸¹⁰⁹ Three witnesses, Mr Tarek Soubra, Witness PRH009 and Witness 277, provided evidence that Mr Hariri was also under surveillance by others, or by people they could not identify.⁸¹¹⁰

4285. Witness 277 stated that ‘many groups were trying to monitor’ Mr Hariri’s movements. He described ‘blatant incidents’ when they received word that the ‘ISF and other individuals’ were ‘watching the palace in an overt manner’. In 2005, ‘this occurred at least two or three times outfront of Quraitem Palace. There would be a group of four or five ISF officers in plainclothes’, who would tell them when asked, that ‘they were on an official mission’. They would not tell them who the target of their surveillance was but the security detail knew that it was Mr Hariri, and ‘we assumed that they were sent by ISF General Ali AL-HAJJ’.⁸¹¹¹

4286. Mr Soubra, a bodyguard in Mr Hariri’s convoy, stated that in the week before the attack — during a tour of several churches—he saw people on the roofs with binoculars watching the convoy, while others were following them on motorcycles. He described noticing ‘several informants around the palace, and they would pretend to be reading papers or doing anything’. And when Mr Hariri visited the distribution centre in Verdun on Saturday 14 February 2005, during the so-called olive oil crisis, he saw that some ‘persons were on the roof a building in front of it’.⁸¹¹²

4287. Witness 009, another member of Mr Hariri’s security detail,⁸¹¹³ described the same incident and said the security detail had been unable to identify who they were.⁸¹¹⁴ Others recognised some of them as ISF personnel.⁸¹¹⁵ Mr Hariri’s advisor, Mr Ghazi El-Youssef, testified that Mr Hariri knew that his landlines were tapped and monitored, while Witness 277 stated that

⁸¹⁰⁹ Witness PRH357, T. 3 June 2015, pp 43-45, 47-49; Witness PRH009, T. 12 October 2016, pp 30-35, 42-51, 54-59, 63 (partly private session), T. 13 October 2016, p. 38 (private session); exhibit P1185 (Statement of Witness PRH009), p. 6; exhibit P1195 (Witness PRH277’s statements), ERNs 60300182, 60300219; exhibit P336 (Statement of Tarek Soubra), para. 42; Witness PRH101, T. 7 October 2016, pp 17-21, 70-72.

⁸¹¹⁰ Exhibit P336 (Statement of Tarek Soubra), para. 42; Witness PRH009, T. 12 October 2016, pp 64-65; exhibit P1185 (Statement of Witness PRH009), p. 10; exhibit P1195 (Witness PRH277’s statements), ERN 60300219.

⁸¹¹¹ Exhibit P1195 (Witness PRH277’s statements), statement of 2 June 2010, para. 21.

⁸¹¹² Exhibit P336 (Statement of Tarek Soubra), paras 42, 46.

⁸¹¹³ Witness PRH009, T. 11 October 2016, pp 16-17; exhibit P1185 (Statement of Witness PRH009), pp 2-3.

⁸¹¹⁴ Witness PRH009, T. 12 October 2016, pp 64-65.

⁸¹¹⁵ Witness PRH009, T. 11 October 2016, pp 63-64. The ISF people working with Mr Soubra said that ‘that they recognised some of these people from training and that they were ISF personnel’; exhibit P336 (Statement of Tarek Soubra), para. 42.

Mr Hariri sometimes used a satellite line ‘with the assumption that it would be harder to monitor’.⁸¹¹⁶

4288. The surveillance immediately referred to above is of an obvious kind. It appears designed to either harass or let the target know that they are under watch. It is not professional covert surveillance. In some instances, the ISF officials engaged in it even admitted to it when challenged. The surveillance the Prosecution alleges occurred was covert, as is shown by the use of anonymous mobiles in networks in which the members only communicated with each other.

(b) Wednesday 20 October 2004

4289. On Wednesday 20 October 2004, between 10:30 and 14:45, Mr Hariri had appointments outside Quraitem Palace, including at the Grand Serail (the Lebanese prime minister’s office), with the speaker of the Lebanese Parliament, Mr Nabih Berri, in Nejme Square, from 11:40 to 11:55, and at 14:40 with President Emile Lahoud, at his official residence, Baabda Palace.⁸¹¹⁷ At this meeting, he submitted his resignation as prime minister. During the day a number of visitors, including the US and French ambassadors, met Mr Hariri at Quraitem Palace.⁸¹¹⁸ Its visitor logbook recorded visitors and their entry and exit times.⁸¹¹⁹

4290. Blue network mobiles were near Quraitem Palace that day. The Touch cell providing the predicted best server coverage to Quraitem Palace was LAU_Beirut_A.⁸¹²⁰ At 10:32 and 16:32, Blue 585 called Blue 324 with each connecting to Tallet_Druz_A.⁸¹²¹ At 15:10, Blue 322 called Blue 585, which connected to Concorde_B.⁸¹²²

⁸¹¹⁶ Ghazi El-Youssef, T. 20 March 2015, p. 16, referring to arrests during the ‘olive oil crisis’ on Thursday 10 February 2005; exhibit P1195 (Witness PRH277’s statements), statement of 2 June 2010, para. 13.

⁸¹¹⁷ Exhibit P303 (Press releases), ERN D0004755; exhibit P452 (Press release, 20 October 2004), p. 2; exhibit P532 (UNIC press review, 21 October 2004), ERN D0411974; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 83, 89.

⁸¹¹⁸ Exhibit P301 (Visitor logbook for Quraitem Palace), pp 250-252; exhibit P303, ERNs D0004739-D0004740; exhibit P452, p. 2; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 89. *See also* Mohammed Mneimneh, T. 11 November 2014, pp 51, 59-60.

⁸¹¹⁹ Mohammed Mneimneh, T. 11 November 2014, pp 43-44.

⁸¹²⁰ Exhibit P663 (Statement of Andrew Fahey), annex 1, no. 116; exhibit P1122 (ArcView shape files Touch).

⁸¹²¹ Exhibit P1225, p. 1; exhibit P1229, p. 1; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 85, 88, 91. Tallet_Druz_A is adjacent to Fadlallah_A, which is adjacent to LAU_Beirut_A; exhibit P1122.

⁸¹²² Exhibit P1236, p. 1; exhibit P1229, p. 1; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 90. Concorde_B borders Tallet_Druz_A. Exhibit P1122.

4291. Mr Platt commented that this first activity there does not necessarily mean that they were conducting ‘direct surveillance’.⁸¹²³ In his view, the relevant subjects were involved in ‘preparing surveillance’, in a scoping or intelligence gathering phase.⁸¹²⁴

4292. In the evening, Mr Badreddine’s Green 023 and Mr Ayyash’s Green 300 were in contact, with Green 023 calling three times and Green 300 calling once.⁸¹²⁵ In Mr Platt’s opinion, since the final two Green calls—at 21:10 and 21:19—connected first to adjoining and then to the same cells, this pattern is consistent with the users of these two mobiles having met.⁸¹²⁶

4293. For illustration purposes, below is a map created by Mr Platt plotting some of the relevant cell coverage areas. Quraitem Palace is marked as ‘QP’:

⁸¹²³ Gary Platt, T. 19 January 2017, p. 9.

⁸¹²⁴ Gary Platt, T. 19 January 2017, p. 10.

⁸¹²⁵ Exhibit P1207, pp 2-3.

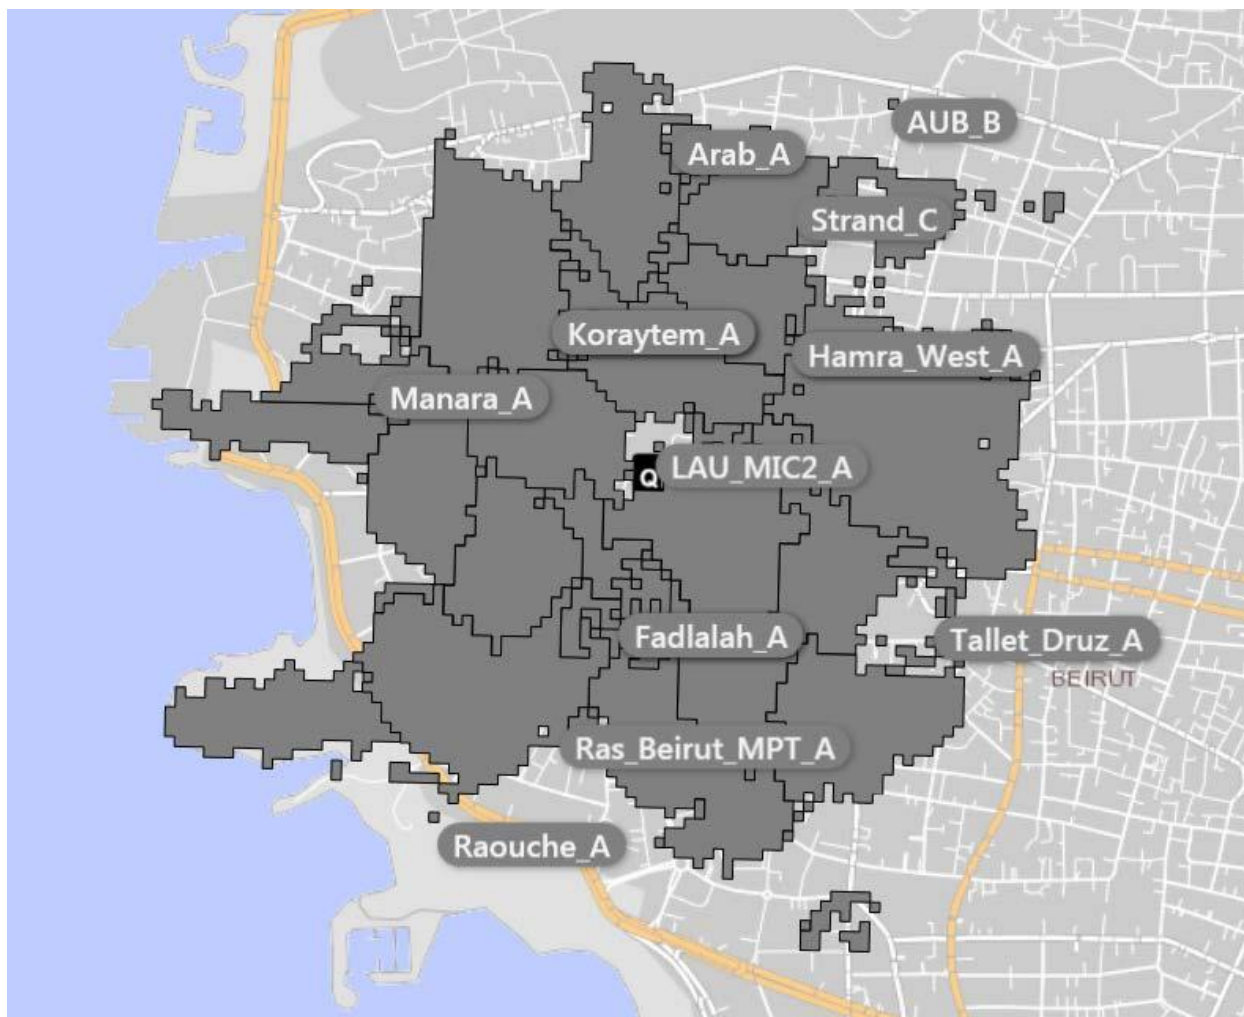

⁸¹²⁶ Gary Platt, T. 19 January 2017, pp 19-20. *See also* exhibit P1782 (Narrative overview of telephone activity and relevant events), para. 119.

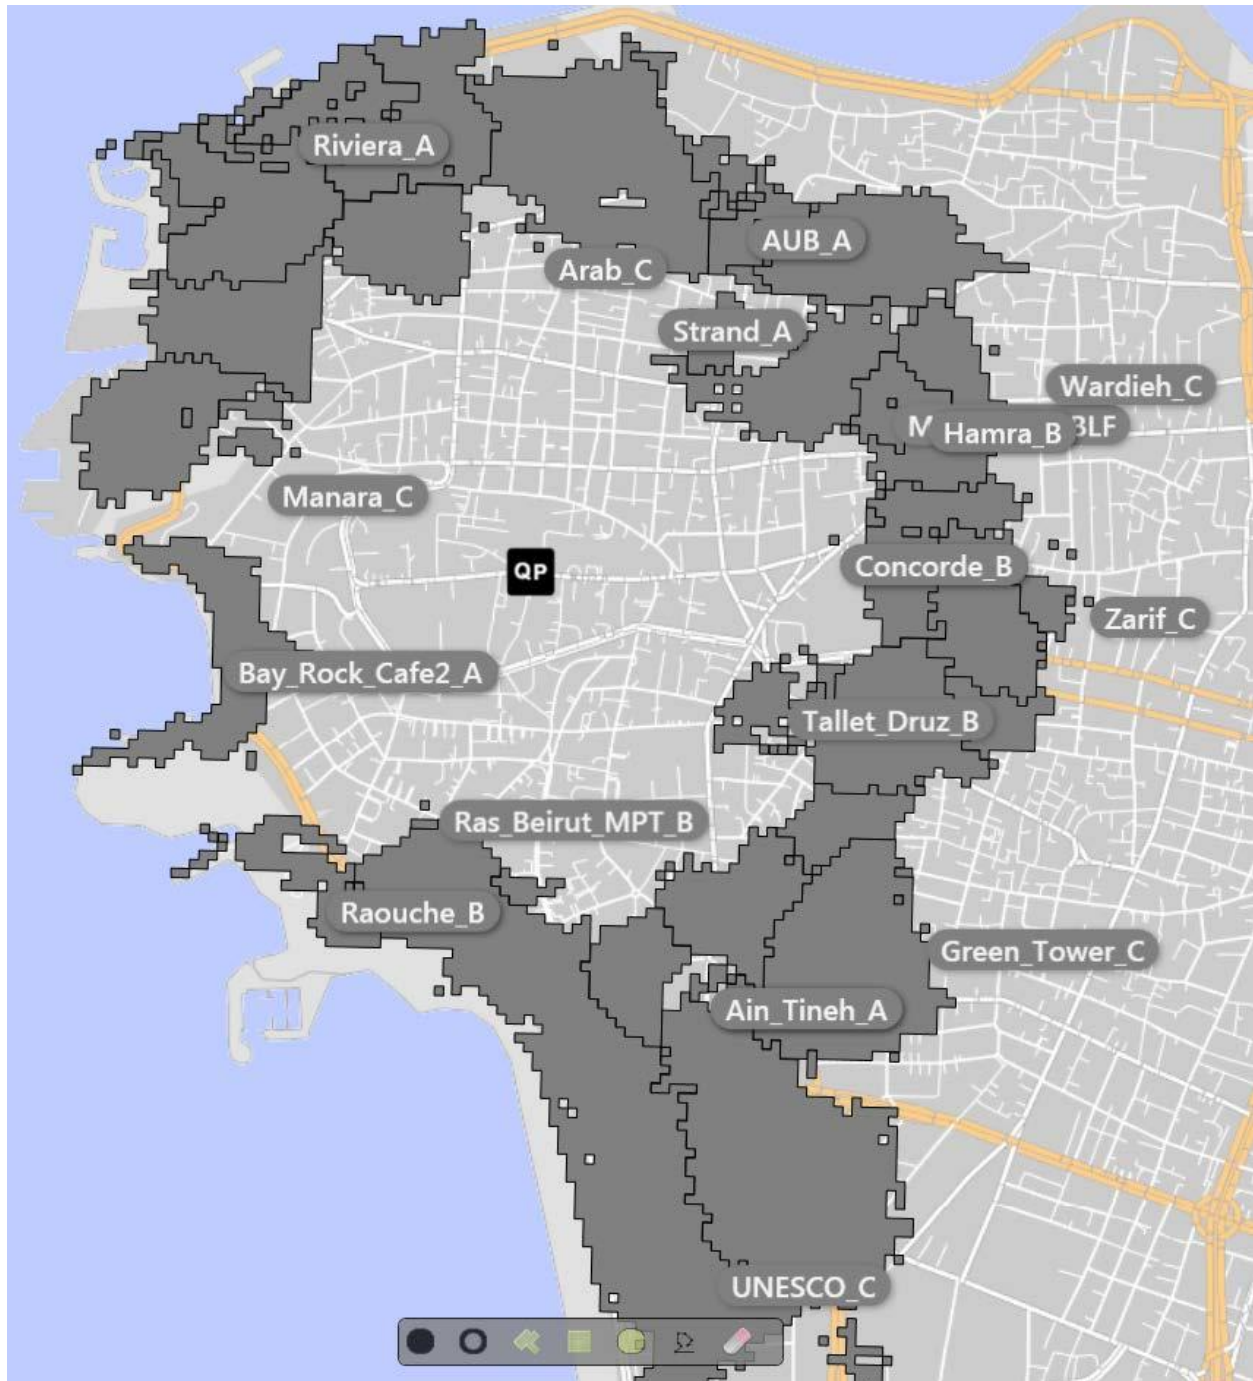

Map 8: Blue Network (S5 and S7), HARIRI Crime Scene, coastal road and Quraitem Palace, 8 November 2004 (13:22 to 16:46)

Exhibit P1783 (Expert Report of Gary Platt - Chronology), p. 53

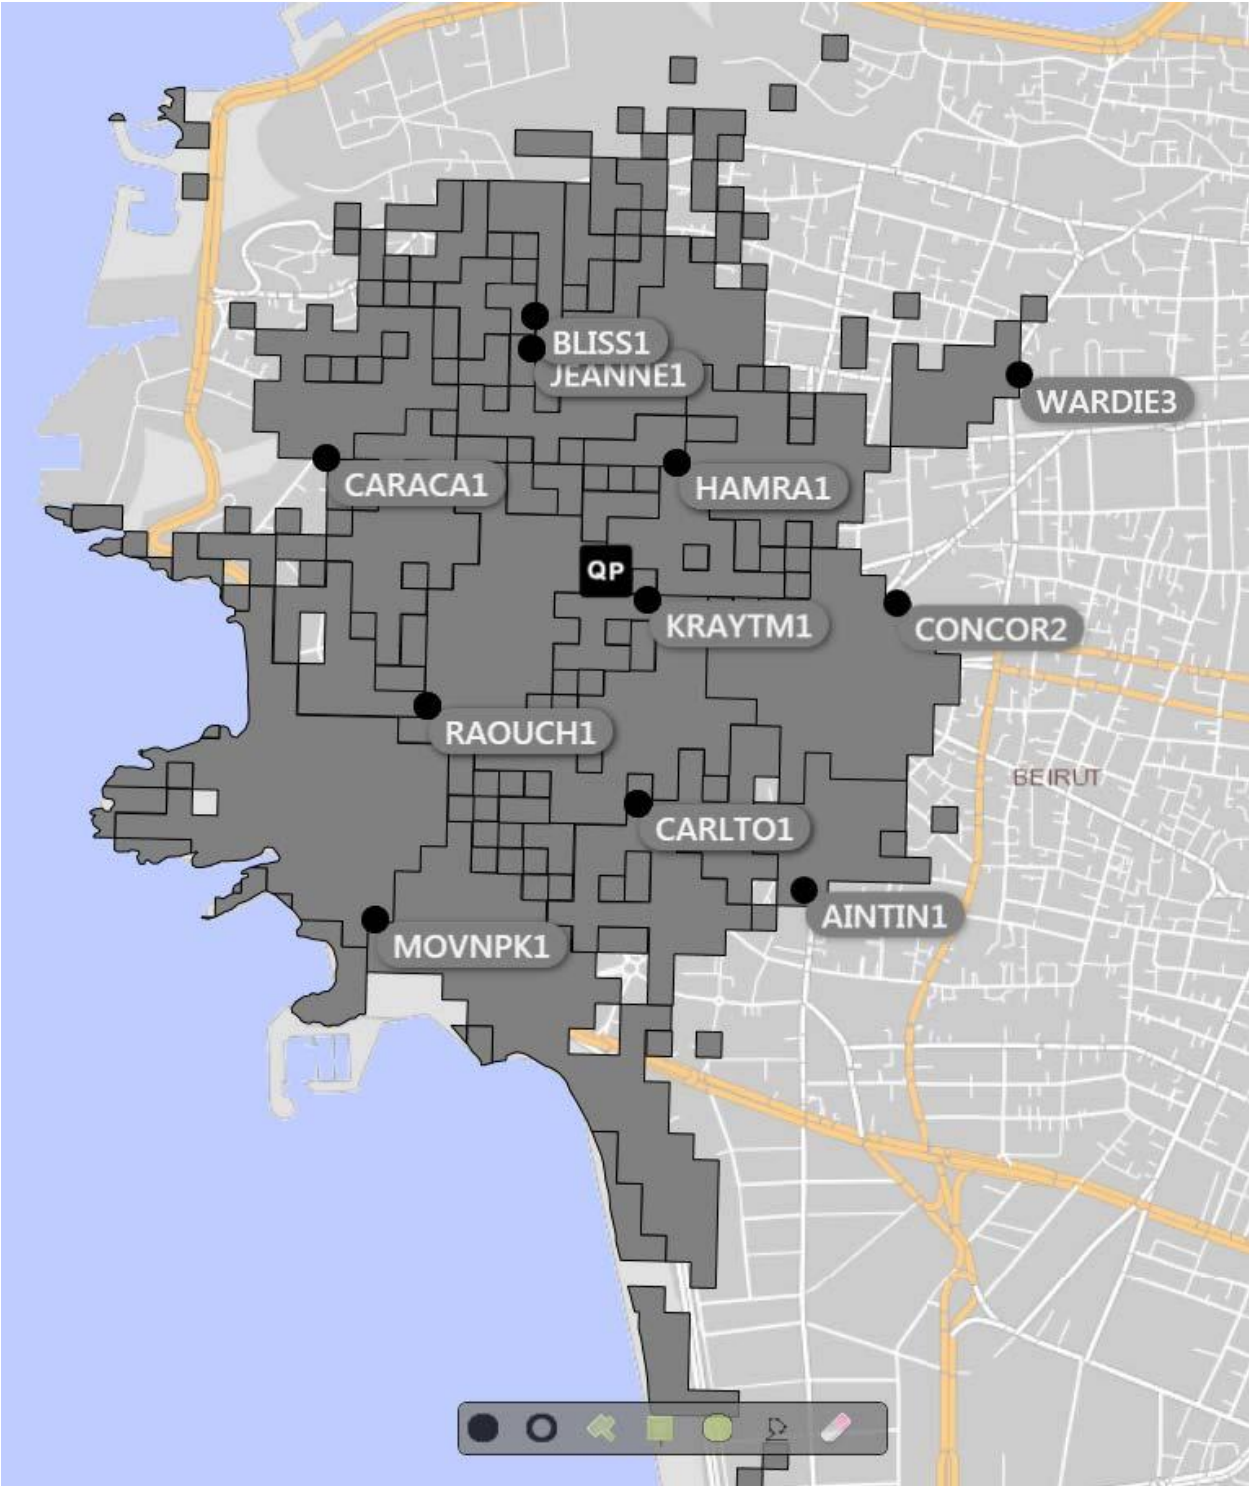

4294. Using the Prosecution's electronic presentation of evidence software, exhibit P592.1, the Trial Chamber, to aid readability of this section, created the maps below. These show the Touch and Alfa cells providing predicted best server coverage within 500 metres, and between 500 and 1,000 metres, of Quraitem Palace:

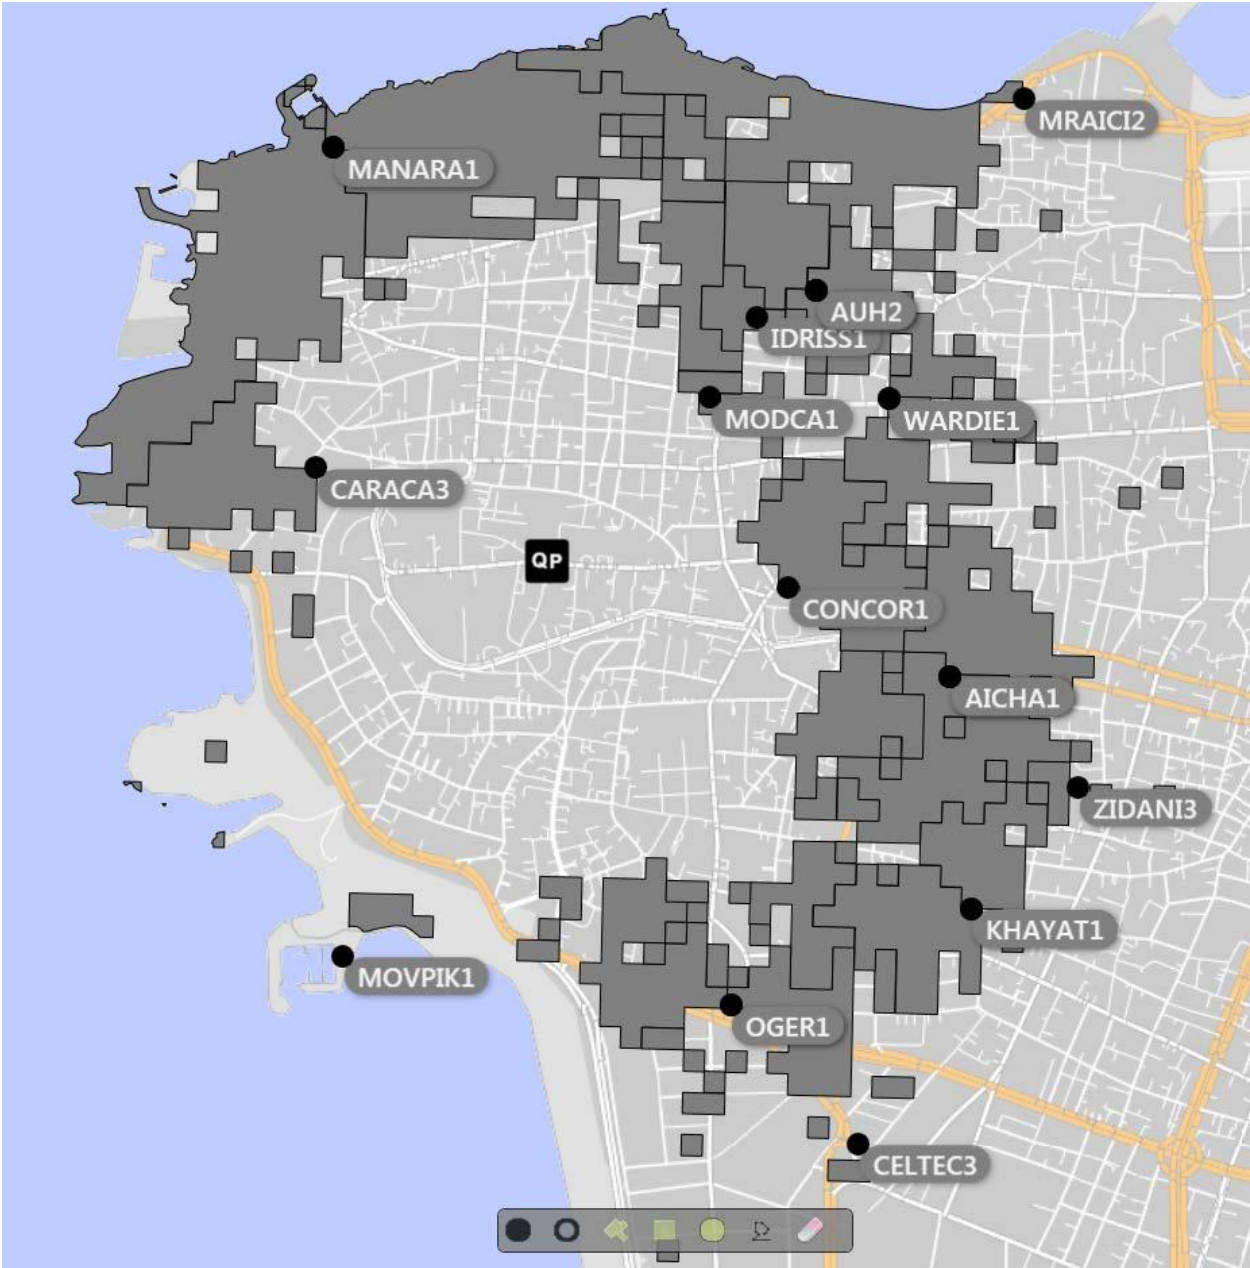

Touch cells providing best server coverage to and within 500 metres of Quraitem Palace

Touch cells providing best server coverage between 500 and 1,000 metres of Quraitem Palace

Alfa cells providing best server coverage to and within 500 metres of Quraitem Palace

Alfa cells providing best server coverage between 500 and 1,000 metres of Quraitem Palace

4295. Mr Platt also listed Alfa and Touch cells providing coverage within a 500-metre and a 1,000-metre radius of Quraitem Palace.⁸¹²⁷ Those within a 500-metre radius were:

Quraitem Palace Vicinity - MTC	Quraitem Palace Vicinity - Alfa

4297. According to Mr Platt, an activation of cells providing coverage within a 500 metre of Quraitem Palace was consistent with the relevant mobile being in its ‘vicinity’. He defined the

activation of cells providing coverage within a 500 to 1000 metre radius of Quraitem Palace as consistent with the mobile being in the ‘area’ of that location.⁸¹²⁸

(c) Thursday 21 October 2004

4298. In the afternoon of Thursday 21 October 2004, Blue 324 and Blue 585 were in contact while in the area of Quraitem Palace.⁸¹²⁹ Later that evening, Blue 585 called Blue 322 and Blue 324, each twice.⁸¹³⁰ Blue 322 called Blue 585 once.⁸¹³¹ On that day, Mr Hariri received several visitors at Quraitem Palace.⁸¹³²

(d) Friday 22 October 2004

4299. On Friday 22 October 2004, Mr Hariri received visitors at Quraitem Palace, including the ambassadors of Germany and Saudi Arabia and Mr Karami.⁸¹³³ He also visited Mr Marwan Hamade at his home.⁸¹³⁴

4300. On that day, Blue 324 called Blue 585 in the afternoon in the area of Quraitem Palace.⁸¹³⁵ Mr Platt testified that the calls of the security detail showed Mr Hariri’s movement from Quraitem Palace to Mr Hamade’s residence and back to Quraitem Palace.⁸¹³⁶ According to Mr Platt, that Subject 7’s Blue 324 activated the cell Riviera_B at approximately the same time a member of the

⁸¹³² Exhibit P301, pp 252-255; exhibit P303, ERN D0004736; exhibit P434 (Press release, 21 October 2004), which describes a meeting between Mr Hariri and Mr Jumblatt.

⁸¹³³ Exhibit P301, pp 255-258; exhibit P303, ERNs D0004743-D0004744, D0004782.

⁸¹³⁴ Gary Platt, T. 19 January 2017, p. 42. *See also* Marwan Hamade, T. 8 December 2014, pp 41-42; exhibit P1185 (Statement of Witness PRH009), para. 16; Witness PRH009, T. 12 October 2016, p. 58; Witness PRH101, T. 5 October 2016, p. 52-53, 57, 60, 63, 69-70; Gary Platt, T. 7 February 2017, pp 83-84.

⁸¹³⁵ At 16:22, Blue 324 connected to Riviera_B, which is at the coast and compared to LAU_Beirut_A has at least two other cells in-between. Blue 585 connected to Concorde_B. Exhibit P1225, p. 1; exhibit P1229, p. 1; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 106, 109; exhibit P1122 At 16:06, 16:09, 16:25, 16.26 and 16:31, the mobiles of some of Mr Hariri’s bodyguards connected to Riviera_B and Riviera_A, which was adjacent to Riviera_B. At 16.05, the mobile of a member of Mr Hariri’s security detail had activated cell Concorde_B; at 17:13 the same mobile activated cell LAU_MIC2_A. Exhibit P1334 (Call sequence table for mobile ending in 052), p. 21; exhibit P1354 (Call sequence table for mobile ending in 520), pp 131-132; exhibit P1332 (Call sequence table for mobile ending in 973), p. 21; exhibit P1386 (Subscriber note for mobile ending in 520); exhibit P1168 (Statement of Witness PRH101), p. 1, para. 6; exhibit P1122.

⁸¹³⁶ Gary Platt, T. 19 January 2017, p. 42.

security detail activated Riviera_A was ‘consistent with someone conducting active surveillance on Mr. Hariri at this time’.⁸¹³⁷ Later that evening Blue 585 called Blue 322 and Blue 324.⁸¹³⁸

(e) Saturday 23 to Sunday 31 October 2004

4301. According to a logbook of Mr Hariri’s overseas trips, he was in Paris and Riyadh between the morning of Sunday 24 and the early evening of Wednesday 27 October 2004.⁸¹³⁹ Apart from one activation on Tuesday 26 October 2004, at 08:59 by Blue 585 (Concorde_B) when it received a call from Blue 324, there was no Blue mobile activity around Quraitem Palace between 23 and 31 October 2004.⁸¹⁴⁰ On 28 October in the evening, Mr Ayyash’s Green 300 called Mr Badreddine’s Green 023.⁸¹⁴¹

(f) Monday 1 November 2004

4302. On Monday 1 November 2004, at 10:00 and 16:40, Blue 585 called Blue 324 in the area of Quraitem Palace.⁸¹⁴² Later that evening, Blue 322 called Blue 585.⁸¹⁴³ During the day, Mr Hariri had several meetings at Quraitem Palace, including with the Tunisian and Czech ambassadors.⁸¹⁴⁴ Mr Ayyash’s Green 300 called Mr Badreddine’s Green 023 on that day.⁸¹⁴⁵

⁸¹³⁷ Gary Platt, T. 19 January 2017, p. 43.

⁸¹³⁸ Exhibit P1229, p. 1; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 107, 110.

⁸¹³⁹ Exhibit P346 (Logbook of Mr Hariri’s trips abroad), p. 5 (ERN 60004133); exhibit P348 (Travel records of Mr Hariri), ERNs 60141003, 60141005; exhibit P536 (Mr Hariri’s passport), p. 16. *See also* exhibit P301, p. 259; exhibit P303, ERNs D0004753, D0004791.

⁸¹⁴⁰ Exhibit P1225, p. 1; exhibit P1229, pp 1-2; exhibit P1236, p. 1. Mr Platt placed Unesco_C within a radius of 500-1,000 metres of Quraitem Palace. Exhibit P1783 (Expert report of Gary Platt – Chronology), para. 1265. Blue 585 activated Unesco_C on 29 October 2004 at 09:53 when it was called by Blue 324. Exhibit P1229, p. 2. However, Mr Platt does not appear to rely on this activation to support the theory that there was surveillance of Mr Hariri.

⁸¹⁴¹ Exhibit P1207, p. 3.

⁸¹⁴² Blue 585 connected to Bay_Rock_Cafe2_A at 10:00 and El_Manara_B at 16:40. Blue 324 connected to Raoucheh_A at 10:00 and Bay_Rock_Cafe2_A at 16:40. Raoucheh_A and El_Manara_B are adjacent to Fadlallah_C, which is adjacent to Hamra_West_B, which in turn borders Fadlallah_A. Exhibit P1225, p. 2; exhibit P1229, p. 2; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 115, 119, 121; exhibit P1122. Exhibits P1122 and P1152 (Atlas of relevant cell sectors), p.148. Regarding Bay_Rock_Cafe2_A, given its name and cell mast location, the Trial Chamber is satisfied that its predicted coverage area is adjacent to Bay_Rock_Cafe1_A. Bay_Rock_Cafe1_A is at the coast and compared to LAU_Beirut_A has at least two other cells in-between.

⁸¹⁴³ Exhibit P1229, p. 2; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 116, 122.

⁸¹⁴⁴ Exhibit P301 (Visitor logbook for Quraitem Palace), pp 264-266; exhibit P303, ERNs D0004836-D0004837.

⁸¹⁴⁵ Exhibit P1207, p. 3; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 117, 120.

(g) Tuesday 2 November 2004

4303. On Tuesday 2 November 2004, Blue 324 and Blue 585 were in contact in the area of Quraitem Palace.⁸¹⁴⁶ That day, Mr Hariri had several visitors at Quraitem Palace, including the Egyptian ambassador.⁸¹⁴⁷

(h) Wednesday 3 to Thursday 4 November 2004

4304. On 3 Wednesday November 2004, Blue 585 and Blue 324 were in the area of Quraitem Palace.⁸¹⁴⁸

4305. Blue 322 called Blue 585 when Blue 585 was in the area of Quraitem Palace.⁸¹⁴⁹ On Thursday 4 November 2004, there was significant contact—nine times—between Blue 585 and Blue 324 in the area of Quraitem Palace.⁸¹⁵⁰ From midday on Wednesday 3 November, until midday on Thursday 4 November 2004, Mr Hariri travelled to Italy, for a private trip.⁸¹⁵¹ After his return, Mr Hariri's visitors at Quraitem Palace included his adviser, Mr Mustafa Nasser, Mr Bassem El-Sabeh MP and his former finance minister, Mr Fouad Siniora.⁸¹⁵² Later that day Mr Hariri also travelled to Abu Dhabi, which he left at night to return to Beirut.⁸¹⁵³

⁸¹⁴⁶ Blue 324 called Blue 585 at 16:11 with both connecting to Fadlallah_C. At 16:47, Blue 585—at Fadlallah_C—called Blue 324 at Tallet_Druz_A. Exhibit P1225, p. 2; exhibit P1229, p. 2; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 125.

⁸¹⁴⁷ Exhibit P301, pp 266-267.

⁸¹⁴⁸ Blue 585—at Tallet_Druz_A—called Blue 324—El_Manara_B—at 10:57. At 16:49, it called again connecting to Fadlallah_C, with Blue 324 connecting to Bay_Rock_Cafe2_A. Exhibit P1225, p. 2; exhibit P1229, p. 2; Gary Platt, T. 19 January 2017, pp 82-83.

⁸¹⁴⁹ At 15:31 and 15:58. Blue 585 connected to El_Manara_B. Exhibit P1229, p. 2; exhibit P1236, p. 1.

⁸¹⁵⁰ Blue 324 activated the following cells during these calls: Bay_Rock_Cafe2_A (10:16), Fadlallah_C (11:04), Concorde_B (11:07), Riad_El_Soloh_B (11:48), El_Manara_B (13:58 and 14:20), Bay_Rock_Cafe2_A (14:30), Tallet_Druz_C (14:46) and Raoucheh_B (14:55). Blue 585 activated the following cells during these calls: Concorde_B (10:16), Bay_Rock_Cafe2_A (11:04), El_Manara_B (11:07 and 11:48), Fadlallah_C (13:58), Fadlallah_A (14:20), Bay_Rock_Cafe2_A (14:30), Fadlallah_C (14:46) and Raoucheh_B (14:55). Tallet_Druz_C is adjacent to Fadlallah_B. It borders Fadlallah_A. Raoucheh_B is adjacent to Raoucheh_A. Riad_El_Soloh_B is adjacent to Jesuites_C which provided predicted best server coverage for the Parliament. Exhibit P1122; exhibit P1225, p. 2; exhibit P1229, pp 2-3; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 130-132.

⁸¹⁵¹ Gary Platt, T. 19 January 2017, pp 80, 87-88, 108; exhibit P346, ERN 60004133; exhibit P348, ERN 60141006; exhibit P536, p. 23. *See also* exhibit P301, p. 267.

⁸¹⁵² Exhibit P301, pp 267-268.

⁸¹⁵³ Exhibit P303, ERN D0004863; exhibit P346, ERN 60004133; exhibit P348, ERN 60141007; exhibit P536, p. 23; Gary Platt, T. 19 January 2017, pp 87-88, 100-104; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 129. *See also* exhibit P301, p. 268.

(i) Friday 5 November 2004

4306. On Friday 5 November 2004, Blue 324, from the Parliament area, contacted Blue 585 in the area of Quraitem Palace.⁸¹⁵⁴ At 12:46, Blue 322 called Blue 585 and a few minutes later Blue 324 called Blue 585.⁸¹⁵⁵ On that day, Mr Hariri received several visitors at Quraitem Palace, including Mr Michel El-Murr, Mr Hani Hammoud and Mr Hasan Mneimneh.⁸¹⁵⁶ Mr Hariri was also in the area of Dar El-Fatwa, in south Beirut, during the day.⁸¹⁵⁷

(j) Saturday 6 November 2004

4307. On Saturday 6 November 2004, Mr Badreddine's Green 023 received one call from Mr Ayyash's Green 300 and one from Mr Merhi's attributed Green 071.⁸¹⁵⁸

(k) Monday 8 November 2004

4308. On Monday 8 November 2004, Mr Hariri was at Quraitem Palace during the day receiving visitors, including his advisers Mr Ghazi El-Youssef and Mr Bassem El-Sabeh, Mr Bassel Fuleihan MP, who died in the explosion on 14 February 2005, and Mr Ahmad Fatfat MP.⁸¹⁵⁹

4309. Blue 585 and Blue 324 were in contact five times in the area of Quraitem Palace, of the crimes scene and 'in the area between'.⁸¹⁶⁰

⁸¹⁵⁴ At 10:15, Blue 324 activated Jesuites_C and Blue 585 activated El_Manara_B. Exhibit P663 (Statement of Andrew Fahey), annex 1, no. 107; exhibit P1122; exhibit P1225, p. 2; exhibit P1229, p. 3; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 135, 137, 139.

⁸¹⁵⁵ Blue 585 connected to Bay_Rock_Cafe2_A and Raoucheh_B for these calls. Exhibit P1225, p. 2; exhibit P1229, p. 3; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 136, 138-139.

⁸¹⁵⁶ Exhibit P301, pp 268-269; exhibit P303, ERN D0004852.

⁸¹⁵⁷ Exhibit P303, ERNs D0004861-D0004862; exhibit P663 (Statement of Andrew Fahey), annex 1, no. 50; exhibit P1122.

⁸¹⁵⁸ Exhibit P1211, p. 3; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 141, 143-144.

⁸¹⁵⁹ Exhibit P301, pp 271-272; exhibit P303, ERNs D0004838-D0004839.

⁸¹⁶⁰ Blue 324 activated the following cells during these calls: Riviera_A (13:22), El_Manara_C (13:50), El_Manara_B (14:18), Bay_Rock_Cafe2_A (16:44) and Bay_Rock_Cafe1_A (16:46). Blue 585 activated the following cells during these calls: Fadlallah_B (13:22), BayView_A (13:50), Tallet_Druz_A (14:18), Fadlallah_B (16:44) and Raoucheh_B (16:46). Exhibit P1225, p. 2; exhibit P1229, p. 3; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 151, 153-155, 1265-1266, 1268. Mr Platt placed cells Riviera_A and El_Manara_C within a radius of 500-1,000 metres of Quraitem Palace BayView_A was at the coast adjacent to Riad_El_Soloh_C which provided predicted best server coverage to the crime scene location. Mr Platt described Riad_El_Soloh_C as also providing coverage within a 500 metre radius of Parliament. Exhibit P663 (Statement of Andrew Fahey), annex 1, no. 69; exhibit P1122.

4310. Based on the calls of the security detail, Mr Platt concluded that, between 13.09 and 13.27, Mr Hariri travelled from Quraitem Palace to Mr Hamade's residence, that he left it sometimes after 14.07 and at 14.27 was 'probably en route back to Quraitem Palace'.⁸¹⁶¹

4311. Mr Platt commented that Subject 7's Blue 324 activated cell Riviera_A at 13:22—at around the approximate time Mr Hariri arrived at Mr Hamade's residence—and that Subject 5's Blue 585 had moved from 'the vicinity of Quraitem Palace...to the area of the St. Georges Hotel and St. Georges Marina' for the next Blue call, at 13:50.⁸¹⁶² Mr Platt underlined that, during the time the security detail travelled back to Quraitem Palace, both Blue 324 and Blue 585 connected to cells in its 'vicinity'.⁸¹⁶³

(l) Tuesday 9 November 2004

4312. On Tuesday 9 November 2004, at 15:32, Blue 324 called Blue 585, both activating Fadlallah_B.⁸¹⁶⁴ Mr Hariri was at Quraitem Palace during the day receiving visitors, including the Australian ambassador.⁸¹⁶⁵

(m) Wednesday 10 November 2004

4313. On Wednesday 10 November 2004, Blue 585 and Blue 324 were in contact four times in the area of Quraitem Palace.⁸¹⁶⁶ In the evening, Blue 322 called Blue 585 twice, then Blue 324 called Blue 585 once.⁸¹⁶⁷ Mr Hariri received visitors at Quraitem Palace, including the ambassadors of Gabon and Jordan.⁸¹⁶⁸ Mr Ayyash's Green 300 twice called Mr Badreddine's

⁸¹⁶¹ Gary Platt, T. 24 January 2017, pp 18-19, 23.

⁸¹⁶³ Gary Platt, T. 24 January 2017, pp 23-24.

⁸¹⁶⁴ Exhibit P1225, p. 2; exhibit P1229, p. 3; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 159, 162.

⁸¹⁶⁵ Exhibit P301, pp 272-274; exhibit P303, ERNs D0004840-D0004841.

⁸¹⁶⁶ Blue 324 activated the following cells during these calls: Concorde_B (10:58), Hamra_West_A (15:30), Raoucheh_A (15:37) and Bay_Rock_Cafe2_A (16:31). Blue 585 activated the following cells during these calls: Tallet_Druz_A (10:58), Concorde_B (15:30 and 15:37) and Fadlallah_A (16:31). Exhibit P1225, p. 3; exhibit P1229, pp 3-4; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 168, 172, 174, 176, p. 447. Hamra_West_A is adjacent to Fadlallah_A, *see* exhibit P1122.

⁸¹⁶⁷ Exhibit P1229, p. 4; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 177.

⁸¹⁶⁸ Exhibit P301, pp 274-276; exhibit P303, ERN D0004851.

Green 023, at 12:02 and 15:45.⁸¹⁶⁹ According to Mr Platt, since the Green mobiles connected to the same cell for the second call, this is consistent with their users meeting.⁸¹⁷⁰

(n) Thursday 11 to Wednesday 24 November 2004

4314. 11 November 2004 is the commencement date of the pleaded conspiracy. The Prosecutor alleges in the amended consolidated indictment that, between Thursday 11 November 2004 and Monday 14 February 2005, Mr Ayyash, Mr Merhi, Mr Badreddine and unidentified others, including the assassination team, agreed to commit the charged terrorist act.

4315. On Thursday 11 November, Mr Hariri met visitors at Quraitem Palace between 08:00 and 12:00 before travelling to Saudi Arabia in the afternoon. In a media release, he conveyed his condolences to the Palestinian people following the death of President Yasser Arafat.⁸¹⁷¹

4316. Before noon on that day, Blue 585 and Blue 324 were in contact nine times.⁸¹⁷² Then, they were in contact at 12:19, when Blue 324 was in the area of the airport, connecting to Airport_A – a cell adjacent to the one providing best server coverage to the airport), with Blue 585 being north of it (Ouzai_A – three cells in-between).⁸¹⁷³

4317. Witness PRH009, Witness PRH101, Mr Yahya Al-Arab, Mr Wissam Al-Hassan and Mr Talal Nasser were members of Mr Hariri's security detail, who generally accompanied him.⁸¹⁷⁴ Mr Al-Arab was one of his security chiefs, as the supervisor of Mr Hariri's close protection team. Due

⁸¹⁶⁹ Exhibit P1207, p. 3; exhibit P1211, p. 3; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 169, 173, 175.

⁸¹⁷⁰ Gary Platt, T. 24 January 2017, pp 30-32, 45-46. *See also* exhibit P1782, para. 184.

⁸¹⁷¹ Exhibit P301, exhibit P303, exhibit P1782 (Narrative overview of telephone activity and relevant events), paras 189-190.

⁸¹⁷² Blue 324 activated the following cells during these calls: Hadath_C (9:28), Bay_Rock_Cafe2_A (09:58 and 10:04) and Fadlallah_A (10:56, 10:57, 11:41, 11:45, 12:00 and 12:02). Blue 585 activated the following cells during these calls: Concorde_B (09:28 and 09:58), Fadlallah_C (10:04), Fadlallah_A (10:56), Tallet_Druz_C (10:57), Bay_Rock_Cafe2_A (11:41), Raoucheh_B (11:45) and Fadlallah_B (12:00 and 12:02). Exhibit P1225, p. 3; exhibit P1229, p. 4; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 182, 184-185. Hadath_C was in south Beirut, east of the airport. Exhibit P1122.

⁸¹⁷³ Exhibit P663 (Statement of Andrew Fahey), annex 1, no. 35; exhibit P1122; exhibit P1225, p. 3; exhibit P1229, p. 4; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 186.

⁸¹⁷⁴ Exhibit P726 (Statement of Alia Al-Arab), paras 9; exhibit P1168 (Statement of Witness PRH101), p. 1, 15, paras 6-7, 89, 96; exhibit P1185 (Statement of Witness PRH009), p. 1, paras 5, 10-12; exhibit P1386. *See also* exhibit P1783 (Expert report of Gary Platt – Chronology), paras 65-66; Gary Platt, T. 7 March 2017, p. 56.

to the convoy's jammers blocking the signal, mobiles could not be used in the convoy when it was moving.⁸¹⁷⁵

4318. In the morning of Thursday 11 November 2004, two of these mobiles activated cells in the area of Quraitem Palace.⁸¹⁷⁶ At 12:20 and 12:22, mobile 052 activated the Airport_B cell.⁸¹⁷⁷ At 12:25, mobile 506 activated the same cell.⁸¹⁷⁸ Airport_B is adjacent to the cell providing best server coverage to the airport.⁸¹⁷⁹

4319. Mr Platt plotted some of this information on a map:

⁸¹⁷⁵ Regarding the jamming devices installed in the convoy vehicles, *see* chapter VI 'Explosion on 14 February 2005', (F) (2) (e) (ii) 'Jamming devices'.

⁸¹⁷⁶ Namely, Concorde_B, LAU_MIC2_A, LAU_Beirut_A and Kraittem_B. Kraittem_B was adjacent to LAU_Beirut_A. Exhibit P1334, p. 28; exhibit P1359 (call sequence table for mobile 771), pp 129-130; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 187; exhibit P1122; exhibit P1152, p. 588. No shape file was available for LAU_MIC2_A. However, given its title (*see also* exhibit P1783, p. 452 in this regard) and cell mast location, the Trial Chamber is satisfied that its coverage area was close to LAU_Beirut_A.

⁸¹⁷⁷ Exhibit P1334, p. 28; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 188.

⁸¹⁷⁸ Exhibit P1322 (Call sequence table for mobile ending in 506), p. 31; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 188.

⁸¹⁷⁹ Exhibit P663 (Statement of Andrew Fahey), annex 1, no. 35; exhibit P1122.

Map 12: Blue Network (S5 and S7) at 12:19, HARIRI's Security Detail from 12:20 to 12:25, Beirut Airport, 11 November 2004

Exhibit P1783 (Expert Report of Gary Platt - Chronology), p. 63

4320. From Thursday 11 November until the evening of Saturday 13 November, Mr Hariri was in Saudi Arabia and Egypt.⁸¹⁸⁰ He left Beirut for Saudi Arabia in the afternoon of 11 November 2004.⁸¹⁸¹ In the morning until midday, he received visitors at Quraitem Palace, including the French ambassador.⁸¹⁸²

4321. On Thursday 18 November 2004, Mr Hariri travelled to Paris, and then on Sunday 21 November, to Geneva.⁸¹⁸³ He returned to Beirut on Wednesday 24 November 2004 at 16:30.⁸¹⁸⁴

4322. There were no Blue mobile activations around Quraitem Palace between 12 and 22 November 2004.⁸¹⁸⁵ On Tuesday 23 and Wednesday 24 November 2004, by contrast, Blue 585 and Blue 324 were in the area of Quraitem Palace before his return from Switzerland.⁸¹⁸⁶

(o) Thursday 25 November 2004

4323. On Thursday 25 November 2004, Blue 585 and Blue 324 were in contact in the area of Quraitem Palace.⁸¹⁸⁷ During the day, Mr Hariri received visitors at Quraitem Palace, including the French ambassador again.⁸¹⁸⁸

⁸¹⁸⁵ Gary Platt, T. 24 January 2017, pp 60, 102; exhibit P1783 (Expert report of Gary Platt – Chronology), pp 65, 199.

⁸¹⁸⁶ **23 November:** Blue 324 activated Concorde_B (13:29), El_Manara_B (15:00) and Fadlallah_C (16:30). Blue 585 activated Hai Kneisse_B (13:29) and Fadlallah_A (15:00 and 16:30). Exhibit P1225, p. 3; exhibit P1229, p. 4; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 198, 201-203. Hai Kneisse_B was in south Beirut, just north of Hadath_C. Exhibit P1122. **24 November:** at 12:27, Blue 585 called Blue 324, with the mobiles connecting to Fadlallah_C (Blue 324) and Concorde_B (Blue 585). Exhibit P1225, p. 3; exhibit P1229, p. 4; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 208, 212.

⁸¹⁸⁷ Blue 324 connected to BorjBrajneh-II_B (10:15), Raoucheh_A (10:50) and Tallet_Druz_C (16:45). Blue 585 connected to Raoucheh_B (10:15) and Fadlallah_B (10:50 and 16:45). Exhibit P1225, pp 3-4; exhibit P1229, pp 4-5; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 218-221. BorjBrajneh-II_B was in south Beirut, just north of the airport. Exhibit P1122.

⁸¹⁸⁸ Exhibit P301, pp 288-289; exhibit P303, ERN D0004847.

(p) Friday 26 November 2004

4324. On Friday 26 November 2004, Blue 585 and Blue 324 were in contact on three occasions in the Quraitem Palace area.⁸¹⁸⁹ In the evening, Mr Hariri received Mr Walid Jumblatt MP, the leader of the Progressive Socialist Party, at Quraitem Palace.⁸¹⁹⁰ He had received other visitors during the day, including the UN Secretary General's Special Envoy Mr Rød-Larsen, Mr Marwan Hamade and some MPs.⁸¹⁹¹

(q) Saturday 27 November to Thursday 16 December 2004

4325. On Sunday 28 November 2004, between 13:00 and 17:00, Mr Hariri travelled to Cairo for a meeting.⁸¹⁹² He returned to Beirut the same day, and in the evening, left for a private trip to Europe to Monte Carlo, returning late on Thursday 9 December 2004.⁸¹⁹³ There was no Blue or Green network activity on Saturday 27 or Sunday 28 November.⁸¹⁹⁴

4326. Between Sunday 12 and Thursday 16 December 2004, Mr Hariri was in Dubai and Manama, Bahrain.⁸¹⁹⁵ There were no Blue mobile activations around Quraitem Palace between 27 November and 16 December 2004, except for Blue 585 calling Blue 324 from El_Manara_B on 29 November 2004.⁸¹⁹⁶

(r) Friday 17 to Monday 20 December 2004

4327. Before noon on Friday 17 December 2004, Mr Hariri attended a meeting at the offices of the Mufti of the Republic, Mr Qabbani at Dar El-Fatwa,⁸¹⁹⁷ in Aicha-Bakkar, about a five-minute

⁸¹⁸⁹ Blue 585 connected to El_Manara_B (10:01), Concorde_B (10:17) and Fadlallah_C (17:02). Blue 324 connected to Jnah El Wata_B (10:01), El_Manara_B (10:17) and Bay_Rock_Cafe2_A (17:02). Exhibit P1225, p. 4; exhibit P1229, p. 5; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 224, 226-228. Jnah El Wata_B was north of El_Manara_B, with Unesco_B in between these two predicted best server coverage areas. Exhibit P1122.

drive from the palace.⁸¹⁹⁸ He then went to the Al-Omari Mosque in downtown Beirut and the Mohammed El-Amine Mosque, south-east of Parliament.⁸¹⁹⁹

4328. During the day, Mr Hariri received visitors at Quraitem Palace, including the ambassadors of Romania and Saudi Arabia.⁸²⁰⁰ At 17:00, he visited Sidon, in South Lebanon.⁸²⁰¹ At 19:00, he departed from Beirut airport to Paris, for a private visit, returning on 20 December 2004 at 17:00.⁸²⁰²

4329. On 17 December 2004, at 13:52, Blue 585 called Blue 324 connecting to El_Manara_B and Tallet_Druz_A, respectively.⁸²⁰³ Earlier that day, at 12:13, Blue 322 had contacted Blue 585.⁸²⁰⁴

(s) Tuesday 21 December 2004

4330. On Tuesday 21 December 2004 between 07:45 and 22:25, Mr Hariri received visitors at Quraitem Palace.⁸²⁰⁵

4331. In the evening, he met Hezbollah's Secretary-General, Mr Hassan Nasrallah, at his headquarters in Haret Hreik, Dahyieh.⁸²⁰⁶ Mr Hariri's convoy left Quraitem Palace and was present in the area around Hezbollah's General Secretariat in Haret Hreik from around 21:40 until after midnight, returning to Quraitem Palace by 00:25.⁸²⁰⁷

⁸²⁰⁵ Exhibit P301, pp 305-307; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 239. Visitors included Mr Ghattas El-Khoury, Mr Bassel Fuleihan and Mr Ghazi El-Youssef.

⁸²⁰⁶ Witness PRH101, T. 6 October 2016, pp 28-29, 36-37; Mustafa Nasser, T. 9 April 2015, pp 7-9, 12, 32-37, 47-55. With regard to locating the Haret Hreik district in the Dahyieh area, *see* exhibit P1131 (Statement of Andrew Fahey related to Dahyieh), paras 28-30. The significance of this meeting is discussed in chapter IV 'Historical and political background to the attack', (M) 'Political events between the second Bristol Group meeting and the third Bristol Group meeting'.

⁸²⁰⁷ Exhibit P1793 (Chronology PowerPoint presentation – 20 December 2004 to 31 December 2004), slides 38-46; Witness PRH101, T. 6 October 2016, pp 36-38; exhibit P1175 (PowerPoint presentation on meeting with

4332. In the afternoon, at 13:16 and 15:21, Blue 585 called Blue 324.⁸²⁰⁸ At 15:14, Blue 322 called Blue 585 and at 15:20, Blue 585 called Blue 322 back.⁸²⁰⁹ Blue 585 activated the following cells during these calls: Concorde_B, El_Manara_B, Bay_Rock_Cafe2_A and Fadlallah_A; Blue 324 activated Fadlallah_B and Bay_Rock_Cafe2_A; and Blue 322 activated Sfeir_B.⁸²¹⁰

4333. For illustration purposes is a map created by Mr Platt plotting some of the relevant cell coverage areas:

Map 18: Blue Network (S5 and S7), Quraitem Palace, 21 December 2004 (13:16 to 15:21), exhibit P1783 (Expert Report of Gary Platt - Chronology), p. 80

Mr Nasrallah); Gary Platt, T. 25 January 2017, pp 81-87. At 21:18, Mr Al-Arab's and Witness 101's mobiles activated cells in the area of Quraitem Palace (LAU_MIC2_A and El_Manara_B, respectively) and between 21:40 and 00:08, they activated cells in the area of Haret Hreik (Haret_Hreik_2_A, Haret_Hreik_2_B, Haret_Hreik_2_C, Bir_El_Abed_C). Exhibit P1334, pp 39-40; exhibit P1359, p. 212.

⁸²⁰⁸ Exhibit P1225, p. 4; exhibit P1229, pp 5-6; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 245, 247. At 13:16, Blue 585 connected to Concorde_B and Blue 324 connected to Fadlallah_B and at 15:21, both Blue 585 and Blue 324 connected to Bay_Rock_Cafe2_A.

⁸²⁰⁹ Exhibit P1236, p. 2; exhibit P1229, p. 6; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 246. For the 15:14 call, Blue 322 connected to Sfeir_B and Blue 585 to Fadlallah_A; at 15:20, Blue 585 connected to El_Manara_B and Blue 322 to Sfeir_B.

⁸²¹⁰ P1225, p. 4; exhibit P1229, pp 5-6; exhibit P1236, p. 2. See also Gary Platt, T. 25 January 2017, pp 57-59.

4334. Blue 585, Blue 324 and Blue 322 exchanged a number of calls between 20:30 and 21:00 on the evening of 21 December 2004 and again in the early morning hours on 22 December 2004. At 20:31, 20:39 and 20:51 on 21 December 2004, Blue 585 made three calls to Blue 324, first activating cells in the area of Quraitem Palace and then moving south towards south Beirut.⁸²¹¹

4335. More than three hours later, Blue 585 called Blue 324 at 00:18 and 00:25, and then at 00:31, Blue 324 called Blue 322, activating cells in the area of Quraitem Palace, central Beirut and on the north-west coast of Beirut.⁸²¹² Finally, at 00:37, Blue 322 called Blue 585, both activating cells in south Beirut.⁸²¹³

4336. Activity on the Yellow network also increased. Mr Ayyash's Yellow 294, and Yellow 457, Yellow 933, Yellow 024, Yellow 120 and Yellow 170 exchanged calls between the evening of 21 December 2004 and the early morning hours on 22 December 2004. They activated cells in the area of Quraitem Palace, then in south Beirut in the area of Hezbollah's General Secretariat in Haret Hreik and later again in the area of Quraitem Palace.⁸²¹⁴

4337. Between 19:38 and 20:29, the same six Yellow mobile users were involved in seven calls, activating cells in the area of Quraitem Palace, except for Mr Ayyash's Yellow 294 which activated a cell in southern Beirut.⁸²¹⁵ In Mr Platt's view, given that Yellow 457 was involved in six of the

⁸²¹¹ Blue 585 connected to Raouche_A (20:31), BorjBrajneh-II_B (20:39) and Haret Hreik-II_C (20:51). Blue 324 connected to Jnah El Wata_B (20:31) and to Haret Hreik-II_A (20:39 and 20:51). Exhibit P1225, pp 4-5; exhibit P1229, p. 6; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 254, 257. BorjBrajneh-II_B was in south Beirut, just north of the airport. Jnah El Wata_B was north of El_Manara_B, with Unesco_B in between these two predicted best server coverage areas, exhibit P1122.

⁸²¹² Blue 585 connected to Haret Hreik_C (00:18) and Riviera_B (00:25). Blue 324 connected to Chatila_C (00:18), Concorde_B (00:25) and Tallet Druz_C (00:31). Blue 322 connected to El-Mazraa_A (00:31). Exhibit P1225, p. 5; exhibit P1229, p. 6; exhibit P1236, p. 2; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 259-260. Riviera_B is at the coast and compared to LAU_Beirut_A has at least two other cells in-between. Exhibit P1122.

⁸²¹³ Blue 322 connected to Sfeir_B (00:37); Blue 585 connected to Ouzai_A (00:37). Exhibit P1229, p. 6; exhibit P1236, p. 2; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 263. Ouzai_A was a cell three cells north of Airport_A – a cell adjacent to the one providing best server coverage to the airport. Exhibit P663 (Statement of Andrew Fahey), annex 1, no. 35; exhibit P1122. *See also* Gary Platt, T. 25 January 2017, pp 73-75.

⁸²¹⁴ Exhibit P1783 (Expert report of Gary Platt – Chronology), paras 248, 250-253, 255-256, 258, 260-262. *See also* exhibit P1782, paras 324-328, 331.

⁸²¹⁵ At 19:38, Yellow 294 (BIRABD2) called Yellow 457 (KRAYTM2); at 20:13, Yellow 457 (KRAYTM1) called Yellow 294 (BIRABD1); at 20:26, Yellow 120 (CARLTO1) called Yellow 457 (CARLTO3); at 20:27, Yellow 120 (AINTIN2) called Yellow 933 (Tallet_Druz_A); at 20:28, Yellow 457 (CARLTO2) called Yellow 024 (Hamra_West_A); at 20:29, Yellow 457 (MOVPIK1) called Yellow 170 (El_Manara_B); 32 seconds later also at 20:29, Yellow 457 (MOVPIK1) called Yellow 933 (Ain_El_Tineh_A). Exhibit P517, p. 37; exhibit P1240, p. 50; exhibit P1244, p. 35; exhibit P1246, p. 24; exhibit P1247, p. 56; exhibit P1252, p. 64; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 248, 250-253, 255.

seven calls on the Yellow network in this short period its user—Subject 6 according to the Prosecution case—was coordinating the activities of the other users.⁸²¹⁶ This is shown on the map below from Mr Platt's chronology report:

Map 19: Yellow and Blue Network, Quraitem Palace, 21 December 2004 (19:38 to 20:31)

Exhibit P1783 (Expert report of Gary Platt – Chronology), p. 82

4338. Between 20:39 on the evening of Tuesday 21 December and 01:39 in the morning of Wednesday 22 December 2004, the same Yellow users exchanged over 30 calls, first activating cells in south Beirut in the area of Haret Hreik,⁸²¹⁷ and later, after 00:22, activating cells in the

⁸²¹⁶ Gary Platt, T. 25 January 2017, pp 72-73.

⁸²¹⁷ At 20:39, Yellow 457 (CBJOUR3) called Yellow 120 (BIRABD1); at 20:41, Yellow 933 (Haret_Hreik_B) called Yellow 457 (SABRA2); at 20:48, Yellow 457 (BIRABD1) called Yellow 120 (SABRA1); at 21:05, Yellow 457 (SABRA2) called Yellow 170 (Haret_Hreik_2_C); at 21:08, Yellow 457 (BIRABD1) called Yellow 933 (Haret_Hreik_2_B); at 21:10, Yellow 457 (HARA3) called Yellow 120 (BIRABD2); at 22:02, Yellow 294 (BIRABD1) called Yellow 457 (ROUEIS3); at 22:14, Yellow 457 (BRAJNE3) called Yellow 933 (Haret_Hreik_2_B); at 22:16, Yellow 933 (Haret_Hreik_2_B) called Yellow 457 (HARA2); at 22:17, Yellow 933 (Haret_Hreik_2_B) called Yellow 457 (HARA2) again; at 23:39, Yellow 294 (BIRABD1) called Yellow 457 (HARA2); at 00:00, Yellow 457 (BIRABD1) called Yellow 933 (Haret_Hreik_B); at 00:10, Yellow 294 (BIRABD1) called Yellow 457 (HARA3); at 00:11, Yellow 457 (HARA2) called Yellow 933 (Haret_Hreik_B); at 00:13, Yellow 294 called Yellow 457 (HARA2); at 00:14, Yellow 457 (HARA2) called Yellow 170 (Haret_Hreik_2_C); at 00:15, Yellow 457 (HARA2) called Yellow 024 (Haret_Hreik_2_A); at 00:15, Yellow 457 (HARA2) called Yellow 933

areas of Quraitem Palace, Parliament, and other locations in Beirut. Mr Ayyash's Green 300 and Yellow 294 activated BIRABD2, which provided coverage to the Hezbollah building, and BIRABD1. These two cells provide overlapping coverage to the cells that Mr Hariri's security detail connected to during the meeting.⁸²¹⁸

4339. Finally, between 00:33 and 01:39, the mobiles activated cells in south Beirut.⁸²¹⁹ According to Mr Platt, this activity on the Yellow and Blue networks shows that the relevant Yellow and Blue users were in the immediate area of Haret Hreik before Mr Hariri arrived for the meeting with Mr Nasrallah. They then stayed in the area until the meeting ended, when they returned to the area of Quraitem Palace and eventually back to south Beirut when the surveillance was complete.⁸²²⁰

(t) Wednesday 22 to Thursday 23 December 2004

4340. The amended consolidated indictment pleads that Mr Oneissi and Mr Sabra joined the conspiracy between Wednesday 22 December 2004 and the morning of Monday 14 February 2005, before the attack.

4341. On 22 December 2004, between 07:50 and 20:50, Mr Hariri received a number of visitors at Quraitem Palace.⁸²²¹ Around mid-day, Mr Hariri, Mr Bassel Fuleihan, Mr Ghattas El-Khoury

(Haret_Hreik_B); at 00:16, Yellow 024 (Haret_Hreik_2_A) called Yellow 120 (HARA3); at 00:16, Yellow 457 (BIRABD1) called Yellow 170 (Borj_Brajneh_2_A); at 00:19, Yellow 933 (Bir_hassan_B) called Yellow 024 (Ras_Nabeh_C). Exhibit P517, p. 37; exhibit P1240, pp 50-51; exhibit P1244, p. 35; exhibit P1246, pp 24-25; exhibit P1247, p. 56; exhibit P1252, pp 64-65; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 256, 258. *See also* Gary Platt, T. 25 January 2017, pp 86-88, 91-100.

⁸²¹⁸ At 00:22, Yellow 933 (Unesco_B) called Yellow 457 (RAOUCH2); at 00:24, Yellow 120 (CONCOR2) called Yellow 024 (Fadlallah_A); at 00:28, Yellow 024 (Raoucheh_A) called Yellow 457 (PHENMB1); at 00:30, Yellow 457 (ZOUKAK2) called Yellow 933 (Minaa_El_hosson_B); at 00:31, Yellow 024 (Sumerland_A) called Yellow 170 (Raoucheh_A); at 00:32, Yellow 933 (Riad_El_Soloh_B) called Yellow 120 (CARLTO3); at 00:32, Yellow 170 (Raoucheh_A) called Yellow 457 (COLA3); at 00:33, Yellow 457 (OUZAI1) called Yellow 120 (OGER3). Exhibit P517, p. 37; exhibit P1244, p. 35; exhibit P1246, p. 25; exhibit P1247, p. 56; exhibit P1252, p. 65; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 260-261; Gary Platt, T. 25 January 2017, pp 98-100; exhibit P1782 (Narrative overview of telephone activity and relevant events), paras 322-324.

⁸²¹⁹ At 00:33, Yellow 457 (OUZAI1) called Yellow 120 (OGER3); at 00:34, Yellow 457 (OUZAI2) called Yellow 024 (Tabbet_el_Dahra_A); at 00:36, Yellow 457 (HARA3) called Yellow 294 (ROUEIS2); at 01:39, Yellow 457 (BRAJNE2) called Yellow 170 (Sfeir_A). Exhibit P517, p. 37; exhibit P1240, p. 51; exhibit P1244, p. 35; exhibit P1246, p. 25; exhibit P1252, p. 65; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 262. *See also* Gary Platt, T. 25 January 2017, pp 100-101.

⁸²²⁰ Gary Platt, T. 25 January 2017, pp 88, 90-95, 100-101. *See also* exhibit P1793, slides 49-66.

⁸²²¹ Exhibit P301, pp 307-309.

and Mr Hariri's advisor, Mr Daoud El Sayegh, visited the Maronite Patriarch Nasrallah Boutros Sfeir in Bkirki, returning to Quraitem Palace by 15:00.⁸²²²

4342. That day, between 10:21 and 16:43, Blue 585 and Blue 324 were in contact four times, activating cells in the area of Quraitem Palace.⁸²²³

4343. At 17:17, Blue 322 contacted Blue 585, both activating cells in south Beirut.⁸²²⁴ Mr Platt testified that this series of calls followed a similar pattern of activity as that between October and mid-December where Blue 324 and Blue 585 connected to cells in the same area of Quraitem Palace, seemingly conducting surveillance of Mr Hariri, and then returning to south Beirut in the evening when contact was made with Blue 322.⁸²²⁵ At 13:35 and 15:17, Mr Ayyash's Yellow 294 received two calls from Yellow 425 and Yellow 669, activating cells in south Beirut.⁸²²⁶

4344. On Thursday 23 December 2004, Mr Hariri received visitors at Quraitem Palace between 07:45 and 23:15.⁸²²⁷ He also attended a meeting at the Constitutional Council at 13:00.⁸²²⁸

4345. From 09:30 to 12:55 on 23 December 2004, there were eight calls between users on the Blue network. Between 09:30 and 09:32, Blue 585, Blue 324 and Blue 864 were in contact three times, activating cells in western Beirut.⁸²²⁹ At 10:25, Blue 864 called Blue 324 and both activated

⁸²²² Ghattas El-Khoury, T. 16 January 2015, pp 52-54, 57, 62, 65; exhibit P303 ERNs D0004907, D0004910; exhibit P366 (*Al-Mustaqbal* article, 23 December 2004). See also exhibit P1782, para. 335; exhibit P1793, slides 78-83.

⁸²²³ At 10:21, Blue 585 (Saki Hadath_A) called Blue 324 (Mic_Bay Rock2); at 10:55, Blue 585 (Mic_Bay Rock2) called Blue 324 (Mic_Bay Rock2); at 13:12, Blue 585 (Fadlallah_A) called Blue 324 (Manara_B); at 16:43, Blue 585 (Fadlallah_B) called Blue 324 (Manara_B). Exhibit P1225, p. 5; exhibit P1229, p. 6; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 268-269, 273.

⁸²²⁴ Blue 322 activated the Borj_Brajneh_2_C cell; Blue 585 activated the Hai_Kneisse_B cell. Exhibit P1229, p. 6; exhibit P1236, p. 2; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 276.

⁸²²⁵ Gary Platt, T. 25 January 2017, pp 104-106.

⁸²²⁶ At 13:35, Yellow 425 (Sfeir_B) called Yellow 294 (GHOBAl1); at 15:17, Yellow 669 (ROUEIS3) called Yellow 294 (OUZAI2). Exhibit P1240, p. 51; P1242, p. 28; P1248, p. 90; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 274.

⁸²²⁷ Exhibit P301, pp 309-311.

⁸²²⁸ Exhibit P303, ERN D0004911; Gary Platt, T. 26 January 2017, p. 18; exhibit P1352 (Call sequence table for mobile ending in 1506, p. 235. See also exhibit P1793, slides 117-120

⁸²²⁹ At 09:30, Blue 324 (Hazmiyeh-II_B) called Blue 585 (Unesco_B); at 09:31, Blue 585 (Raoucheh_B) called Blue 864 (OGER2); at 09:32, Blue 585 (Raoucheh_B) called Blue 864 (CELTEC3) again. Exhibit P1225, p. 5; exhibit P1229, p. 6; exhibit P1228 (Call sequence table of Blue 864), pp 2-3; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 286. As noted above, in paragraph 1632, there can be time differences between the start time of calls on the same network and between calls on different networks. This applies to the call described above as starting at 09:31 (exhibit P1228, p. 2). According to exhibit P1229 (p. 6), the start time of that call was actually 09:32:01.

cells in the area of Quraitem Palace.⁸²³⁰ Between 12:35 and 12:55, Blue 585, Blue 324, Blue 817 and Blue 864 made contact four times, activating cells in the area of Quraitem Palace.⁸²³¹

4346. At 15:22, Subject 6's Blue 610, activating a cell in south Beirut, made two calls to Blue 817, still activating a cell in the area of Quraitem Palace.⁸²³² Finally, after 15:31, there were two more calls between Blue 585, Blue 324 and Blue 322, activating cells in south Beirut.⁸²³³ At 14:23, Yellow 669 called Yellow 457; Yellow 457 activated a cell in the area of Quraitem Palace, and Yellow 669 activated a cell in south Beirut.⁸²³⁴

4347. Between 20 and 23 December 2004, Mr Badreddine's Green 023 and Mr Ayyash's Green 300 were in contact for four days in a row.⁸²³⁵ This was after a period of no contact for 40 days.⁸²³⁶

(u) Friday 24 to Sunday 26 December 2004

4348. On Friday 24 December 2004, Mr Hariri received visitors at Quraitem Palace during the day.⁸²³⁷ Later in the afternoon after 15:30, he left Quraitem Palace and travelled to Faqra Villa, about 50 kilometres north-west of Beirut, arriving there by 17:00.⁸²³⁸ Mr Al-Arab's and Witness

⁸²³⁰ Blue 864 activated CONCOR2 and Blue 324 activated Fadlallah_B. Exhibit P1225, p. 5; exhibit P1228, p. 3; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 286.

⁸²³¹ At 12:35, Blue 585 (Raouche_B) called Blue 324 (Concorde_B); at 12:46, Blue 324 (Mic_Marriot) called Blue 864 (RAOUCH3); at 12:53, Blue 864 (MOVPIK1) called Blue 817 (CARACA2); at 12:55, Blue 817 (RAOUCH3) called Blue 864 (RAOUCH3). Exhibit P1225, p. 5; exhibit P1228, p. 3; exhibit P1229, p. 6; exhibit P1239 (Call sequence table of Blue 817), p. 3; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 286. *See also* Gary Platt, T. 26 January 2017, pp 18-21.

⁸²³² On both calls, Blue 610 activated ROUEIS3 and Blue 817 activated MOVPIK1. Exhibit P1227 (call sequence table of Blue 610), p. 2; exhibit P1239, p. 3; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 293. *See also* Gary Platt, T. 26 January 2017, pp 45-48. As noted above, there can be time differences between the start time of calls on the same network and between calls on different networks. This applies to one of the two calls described above as occurring at 15:22 (exhibit P1227, p. 2). According to exhibit P1239 (p. 3), the start time of that call was, instead, 15:21:58.

⁸²³³ At 15:31, Blue 585 (Bir Abed_A) called Blue 322 (Hai Kneisse_C); at 17:17, Blue 324 (Sfeir_A) called Blue 585 (Bir Abed_A). Exhibit P1225, p. 5; exhibit P1229, p. 6; exhibit P1236, p. 2; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 294.

⁸²³⁴ Yellow 457 activated RAOUCH3 and Yellow 669 activated ROUEIS3. Exhibit P1252, p. 66; exhibit P1248, p. 91; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 292.

⁸²³⁵ Exhibit P1207, p. 3; exhibit P1211, p. 3; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 237, 243, 275, 284, 289.

⁸²³⁶ Exhibit P1207, p. 3; exhibit P1211, p. 3. *See also* exhibit P1782 (Narrative overview of telephone activity and relevant events), paras 300-301.

⁸²³⁷ Exhibit P301, pp 312-313; Walid Jumblatt, T. 6 May 2015, pp 3-4.

⁸²³⁸ Exhibit P1783 (Expert report of Gary Platt – Chronology), paras 303-307. *See also* exhibit P336 (Statement of Tarek Soubra), para. 130; exhibit P1186 (Statement of Witness PRH009), para. 17.

9's mobiles activated cells in the area of Quraitem Palace at 15:06 and 15:34.⁸²³⁹ At 16:40, Witness 9's mobile activated Faqra_C, and at 17:09, Mr Al-Arab's mobile activated Achqut_A.⁸²⁴⁰ These are in the area of Faqra Villa.

4349. That day, between 10:14 and 13:15, Blue 585, Blue 324, Blue 817, Subject 6's Blue 610, Blue 864, Yellow 457 and Yellow 669 were involved in four calls, during which six of the mobiles activated cells in the area of Quraitem Palace.⁸²⁴¹ At 13:47, Blue 322 also received an SMS, connecting to the Sarba_C cell, in south Lebanon.⁸²⁴² At 16:40, Blue 324 called Blue 585.⁸²⁴³ According to Mr Platt, this shows that the network activity around Quraitem Palace ceased after Mr Hariri left the palace for Faqra, as 'this activity is located in South Beirut or away from Quraitem Palace'.⁸²⁴⁴

4350. On Saturday 25 December 2004, Mr Hariri was at his Faqra residence.⁸²⁴⁵ He stayed there for the Christmas holiday until the morning of Monday 27 December 2004.⁸²⁴⁶

4351. That day, between 11:09 and 17:02, Blue 585, Blue 610, Blue 324, Mr Ayyash's Yellow 294 and Yellow 457 activated cells in the area of Faqra Villa, in the Faraya area.⁸²⁴⁷ According to

⁸²³⁹ Witness 009's mobile received a call at 15:06 and activated the Fadlallah_A cell; Mr Al-Arab's mobile received a call at 15:33, and made an outgoing call at 15:34, both times activating the Mic_LAU Beirut-2 cell. Exhibit P1322, p. 42; exhibit P1359, p. 219; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 304.

⁸²⁴⁰ Exhibit P1322, p. 42; exhibit P1359, p. 219; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 305-306.

⁸²⁴¹ At 10:14, Blue 585 (Hai_El Soullum_C) called Blue 324 (Mic_Bay Rock2); at 10:20, Yellow 457 (CONCOR2) called Yellow 669 (ROUEIS3); at 12:20, Blue 817 (CBOURJ1) called Blue 610 (MOVPIK1); at 13:15, Blue 585 (Tallet_Druz_A) called Blue 864 (CONCOR2). Exhibit P1225, p. 5; exhibit P1229, p. 6; exhibit P1227, p. 2; exhibit P1239, p. 3; exhibit P1228, p. 3; exhibit P1252, p. 66; exhibit P1248, p. 91; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 298-301. *See also* Gary Platt, T. 26 January 2017, pp 49-51; exhibit 1793, slides 141-144.

⁸²⁴² Exhibit P1236, p. 2. *See also* Gary Platt, T. 26 January 2017, pp 51-52; exhibit P1793, slides 145, 147.

⁸²⁴³ Blue 324 activated Hazmiyeh-II_B and Blue 585 activated Sodico_A. Exhibit P1225, p. 5; exhibit P1229, p. 6; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 302.

⁸²⁴⁴ Gary Platt, T. 26 January 2017, p.67. *See also* exhibit 1793, slides 154-155.

⁸²⁴⁵ Exhibit P1107 (Statement of Witness PRH045, 12 August 2010), para. 48; exhibit P1360 (Call sequence table for Mr Mustafa Nasser's mobile), pp 119-120 *See also* exhibit P1793, slides 161-168.

⁸²⁴⁶ Exhibit P301, p. 313. *See also* Witness PRH101, T. 6 October 2016, p. 51; exhibit P1168 (Statement of Witness PRH101), para. 21.

⁸²⁴⁷ At 10:11, Blue 610 (SFEIR2) called Blue 585 (Haret Hreik-II_B) (activating cells in south Beirut). Between 11:09 and 11:27, Blue 610 and Blue 585 were in contact three times, activating cells in the area of the Faqra residence (at 11:09, Blue 610 (QLAYAA1) called Blue 585 (Faqra_C); at 11:22, Blue 585 (Faraya_A) called Blue 610 (QLAYAA1); at 11:27, Blue 610 (FAYTRO2) called Blue 585 (Faraya_A)). At 11:06, Yellow 294 (TRIANO3) called Yellow 933 (Sfeir_A). At 11:32, Yellow 294 (FARAYA3) called Yellow 457 (FAYTRO1) and at 12:32, Yellow 294 (FARAYA1) called Yellow 933 (Sfeir_A). At 12:29, Blue 610 (FARAYA1) called Blue 324 (Bir_El_Abed_A); at 13:06, Blue 324 (CHB_A) called Blue 585 (Faqra_A); at 13:44, Blue 322 (Fadlallah_A) called Blue 585 (Faqra_A); at 14:01, Blue 324 (Faqra_A) called Blue 585 (White_House_A). Blue 324 was active in the Faraya area by 14:01. At 14:17, Blue 610 activating a cell in south Beirut (BRAJNE3), called Blue 324 (White_House_A). Between 16:16 and

Mr Platt this is consistent with these users having travelled to the Faraya area to conduct surveillance of Mr Hariri.⁸²⁴⁸ By the afternoon, the mobile activity showed that some of the users—Blue 610, Blue 585 and Mr Ayyash’s Yellow 294—had returned to south Beirut.⁸²⁴⁹

4352. Using the electronic presentation of evidence software, and to assist understanding of the evidence, the Trial Chamber created the map below showing the cells providing predicted best server coverage around Faqra Villa. ‘FV’ denotes its location:

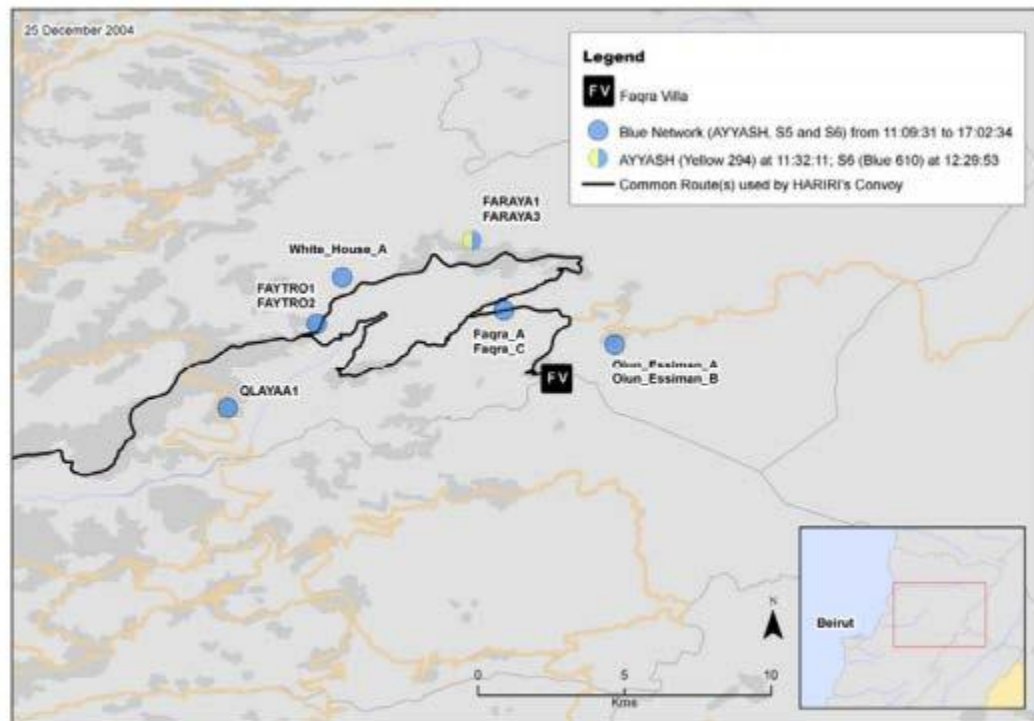

17:02, Blue 585 and Blue 324 were in contact seven times—during all seven calls, Blue 324 activated cells in the Faraya area (Faraya_B, Faraya_A, Faqra_A), while Blue 585 activated cells in south Beirut (Sfeir_A and Sfeir_B). At 16:58, Blue 324 (Faraya_A) also called Blue 610 (SFEIR2). Exhibit P1225, pp 5-6; exhibit P1227, pp 2-3; exhibit P1229, pp 6-7; exhibit P1236, p. 2; exhibit P1247, p. 56; exhibit P1252, p. 66; exhibit P1240, p. 51.

⁸²⁴⁸ Exhibit P1783 (Expert report of Gary Platt – Chronology), paras 311, 313-321; Gary Platt, T. 26 January 2017, pp 86-89, 91-98. *See also* exhibit P1793, slides 173-190.

⁸²⁴⁹ Exhibit P1783 (Expert report of Gary Platt – Chronology), paras 320-321; Gary Platt, T. 26 January 2017, pp 95-97. *See also* exhibit P1793, slides 189-190.

4353. The map below, from Mr Platt's report, depicts the Blue and Yellow network connections to cell towers located near Faqra Villa on 25 December:

Map 25: Blue and Yellow Network, Faraya, 25 December 2004 (11:09 to 17:02)

Exhibit P1783 (Expert report of Gary Platt – Chronology), p. 101

4354. On Sunday 26 December 2004, Mr Hariri remained at Faqra Villa. That day, between 09:58 and 19:48, Blue 585, Blue 610, Blue 324, Blue 817, Blue 864, Blue 322, Yellow 457, Yellow 933 and Yellow 170 made over 30 calls activating cells in the Faraya area.⁸²⁵⁰ Yellow 294, Yellow 513

⁸²⁵⁰ At 09:58, Blue 610, activating a cell in south Beirut (MIKAEL2), called Blue 864 (FARAYA1). At 11:07, Blue 322, activating a cell in south Beirut (Hadath_C), called Blue 585 (Faqr_A). Between 11:10 and 13:17, there were nine calls between Blue 585, Blue 610, Blue 324, Blue 864 and Blue 322, all activating cells in the Faraya area (at 11:10, Blue 324 (Faraya_B) called Blue 610 (FARAYA1); at 11:17 and 11:21, Blue 610 (FARAYA1 both times) called Blue 324 (Faqr_A both times); at 11:22, Blue 610 called Blue 864 (both activating FARAYA1); at 11:37, Blue 585 called Blue 324 (both activating Faqr_A); at 12:41, Blue 610 (FARAYA1) called Blue 324 (Faraya_A); at 13:08, Blue 322 (Faqr_C) called Blue 585 (Faraya_B); at 13:10, Blue 324 (Faqr_A) called Blue 610 (OUYOUN3); at 13:17, Blue 324 (Faqr_A) called Blue 610 (FARAYA1). At 13:58, Yellow 457 (FARAYA1) called Yellow 933 (Mar_Michael_C) twice; at 14:33, Yellow 669 (LAYLAK3) called Yellow 457 (FARAYA1); at 14:37, Blue 610 (FARAYA1) called Blue 585 (Amarat_Chalhoub_A); at 14:39, Yellow 457 (FARAYA1) called Yellow 669 (LAYLAK1); at 14:42, Blue 610 (FARAYA1) called Blue 585 (Borj_Hammoud_B); at 14:44, Yellow 457 (FARAYA1) called Yellow 932 (Borj_Rahhal_B); at 14:46, Yellow 457 (FARAYA1) called Yellow 669 (BRAJNE1); at 14:51, Yellow 457 (FARAYA1) called Yellow 513 (SFEIR2); at 14:57, Yellow 294 (KHALDE1) called Yellow 457 (FARAYA1); at 15:04, Yellow 457 (FARAYA1) called Yellow 933 (Justice_A); at 15:17, Yellow 513

and Yellow 669 were involved in calls with the above users on 26 December 2004, but activated cells in south Beirut during the calls.⁸²⁵¹ Blue 610 and Yellow 457 were involved in a majority of calls on this day, activating cells in the area of Faqra Villa, including on seven of the nine calls made between 09:58 and 13:17, and on 22 calls between 13:58 and 19:48.⁸²⁵²

4355. By the end of the evening, the mobiles which made these calls activated cells in southern Beirut.⁸²⁵³ According to Mr Platt, this activity is consistent with the users of the relevant mobiles returning to Beirut or home after completing their surveillance of Mr Hariri for the day.⁸²⁵⁴

(v) Monday 27 December 2004

4356. On the morning of Monday 27 December 2004, Mr Hariri returned to Quraitem Palace from Faqra Villa by 10:12. He received visitors at the palace between 10:35 and 13:55 and later between 17:30 and 21:40.⁸²⁵⁵

4357. The call activity of members of his security detail—Mr Al-Arab (mobile 771), Witness 009 (mobile 506) and Witness 101 (mobile 052)—is consistent with Mr Hariri returning to Quraitem Palace by 10:12.⁸²⁵⁶ Witness 009's mobile activated a cell in the area of Faqra Villa (Faqra_B) at 07:51 and then, at 10:12, the same mobile activated a cell in the area of Quraitem Palace

(HADATH3) called Yellow 457 (FARAYA1). At 15:18, 15:20, 15:21, 15:31, 16:45 and 19:48, Yellow 457 (activating FARAYA1 each time) called Yellow 170 (Bir_El_Abed_A), Yellow 513 (LAYLAK2), Yellow 170 (Bir_El_Abed_A) again, Yellow 933 (Raifoun_C), Yellow 170 (Sfeir_B) and Yellow 170 (Faqra_C). At 15:41, Blue 817 (FARAYA2) called Blue 610 (FARAYA1) and at 15:48, Blue 610 called Blue 817 (both activating FARAYA1) back. At 15:50, Yellow 669 (BRAJNE1) called Yellow 457 (FARAYA1) and at 19:19, Yellow 024 (Saquiet_Hadath_2_C) called Yellow 457 (FARAYA1). Exhibit P1225, p. 6; exhibit P1227, p. 3; exhibit P1228, p. 3; exhibit P1229, p. 7; exhibit P1236, p. 2; exhibit P1239, p. 3; exhibit P1240, p. 51; exhibit P1243, p. 51; exhibit P1246, p. 25; exhibit P1247, p. 57; exhibit P1248, p. 91; exhibit P1249, p. 70; exhibit P1252, p. 67; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 325,327-332; Gary Platt, T. 27 January 2017, pp 8-11, 15-17, 19-27. *See also* P1793, slides 200-207, 209-214.

⁸²⁵¹ Exhibit P1240, p. 51; exhibit P1248, p. 91; exhibit P1249, p. 70; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 327-328, 330.

⁸²⁵² Exhibit P1783 (Expert report of Gary Platt – Chronology), paras 329-330; Gary Platt, T. 27 January 2017, pp 10, 21-22.

⁸²⁵³ At 21:48, 22:15 and 23:31, Yellow 457 made or received calls activating cells in south Beirut (SFEIR3, BRAJNE3). At 22:15, Yellow 933 received a call from Yellow 457, activating the cell Mar_Michael_C. At 17:45, Blue 324 (BorjBrajneh-II_B) called Blue 585 (Haret Hreik-II_C). Exhibit P1240, p. 51; exhibit P1247, p. 57; exhibit 1252, p. 67; Gary Platt, T. 27 January 2017, pp 29-30.

⁸²⁵⁴ Gary Platt, T. 27 January 2017, pp 24-25, 27-34.

⁸²⁵⁵ Exhibit P301, pp 313-314.

⁸²⁵⁶ Exhibit P1783 (Expert report of Gary Platt – Chronology), para. 341. *See also* exhibit P520 (Call sequence table for number 777), p. 106; exhibit P1413 (Witness PRH017's statement), para. 11; exhibit P1352, p. 242; exhibit P1322, p. 44; exhibit P1359, p. 223; exhibit P1334, 41; exhibit P1793, slides 221-223.

(Concorde_B).⁸²⁵⁷ At 10:14, 10:16 and 10:18, Mr Al-Arab's mobile activated a cell in the area of Quraitem Palace (Mic_LAU Beirut-2).⁸²⁵⁸ Finally at 10:20, Witness 101's mobile activated the same cell (Mic_LAU Beirut-2).⁸²⁵⁹

4358. Between 07:57 and 09:54, multiple calls were made on the Blue and Yellow networks, activating cells both in south Beirut and in the area of Faqra Villa.⁸²⁶⁰

4359. During this period, Blue 585 and Yellow 170 activated cells in the area of Faqra, while Subject 6's Blue 610, Blue 817 and Yellow 457 activated cells in south Beirut. At 09:29, 09:31 and 09:54, Blue 817 activated cells on the route between Faqra and Quraitem Palace.⁸²⁶¹

4360. According to Mr Platt, this activity is consistent with the users of these mobiles continuing their surveillance of Mr Hariri, both at Faqra Villa and along the route back to Quraitem Palace.⁸²⁶² Mr Platt's map from his report shows the common route Mr Hariri's convoy took back to Beirut and the location of the Blue and Yellow network mobiles:

⁸²⁵⁷ The mobile ending in 506 activated other cells en route from Faqra to Quraitem Palace between 07:51 and 10:12 (at 08:16, it activated Douwar_B; at 09:57, it activated Dora_Twin_Tower_A; and at 10:08, it activated Riviera_B). Exhibit P1322, p. 44; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 340.

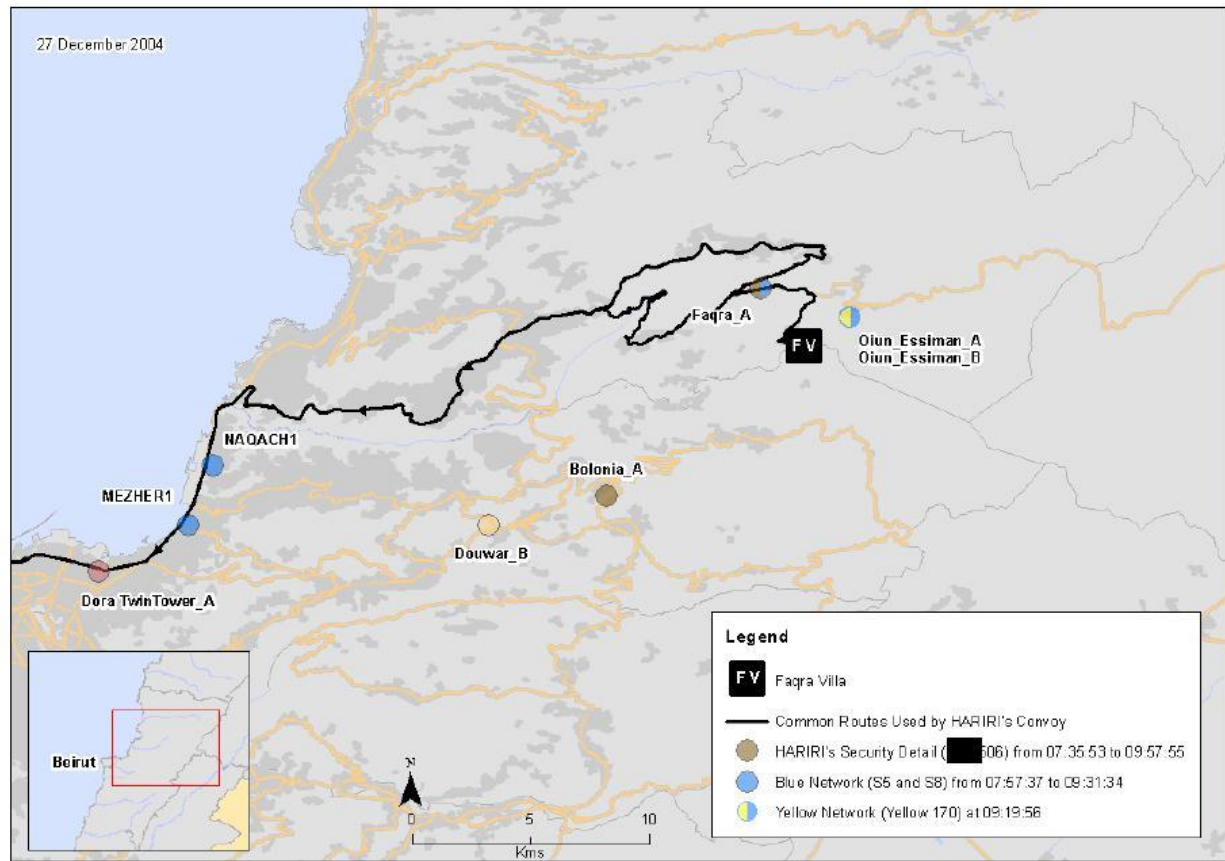

⁸²⁵⁸ Exhibit P1359, p. 223; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 340.

⁸²⁵⁹ Exhibit P1334, p. 41; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 340.

⁸²⁶⁰ At 07:57 and 07:59, Blue 817 (activating MIKAEL1 both times) called Blue 585 (activating Faraya_A and Faraya_B); at 09:19, Yellow 170 (Oiun_Essiman_A) called Yellow 457 (BRAJNE2); at 09:20 and 09:21, Blue 610 (SFEIR2 both times) called Blue 585 (Faqra_A both times); at 09:22 and 09:23, Blue 585 (Faqra_A both times) called Blue 610 (SFEIR2 both times); at 09:24, Blue 610 (SFEIR2) called Blue 585 (Faqra_A); at 09:29, Blue 610 (SFEIR2) called Blue 817 (MEZHER1); at 09:31, Blue 817 (NAQACH1) called Blue 585 (Faqra_A); and at 09:54, Blue 610 (MRAICI2) called Blue 817 (JALDIB4). Exhibit P1227, p. 3; exhibit P1229, p. 7; exhibit P1239, p. 3; exhibit P1246, p. 25; exhibit P1252, p. 67. *See also* exhibit P1783 (Expert report of Gary Platt – Chronology), paras 342-346.

⁸²⁶¹ Exhibit P1239, p. 3; Gary Platt, T. 27 January 2017, pp 47-51.

⁸²⁶² Gary Platt, T. 27 January 2017, pp 38-51. *See also* exhibit P1973, slides 224-234.

Map 28: Blue and Yellow Network, HARIRI's Security Detail, Route to Faraya, 27 December 2004 (07:35 to 09:57)

Exhibit P1783 (expert report of Gary Platt – Chronology), p. 109⁸²⁶³

4361. Between 10:03 and 10:22, close to the time Mr Hariri returned to Quraitem Palace, Subject 6's Blue 610, Blue 324 and Blue 817 activated cells along the coastal route to Quraitem Palace.⁸²⁶⁴ Blue 585 continued to activate cells in the Faraya area.⁸²⁶⁵

⁸²⁶³ While Mr Platt captions the EPE snapshot in map 28 as 'Route to Faraya', the Trial Chamber understands this map to depict the travel *from* Faraya to Quraitem Palace.

⁸²⁶⁴ At 10:03, Blue 324 (CoastRoad_B) called Blue 610 (MRAICI2); at 10:06, Blue 324 (Bay_View_C) called Blue 610 (MRAICI2); at 10:08, Blue 324 (Bay_View_C) called Blue 585 (Fagra_A); at 10:10, Blue 817 (MRAICI2) called Blue 324 (Minet El Hosn_A); at 10:19, Blue 610 (MRAICI2) called Blue 585 (Fagra_A); at 10:21, Blue 324 (Bay_View_A) called Blue 585 (Fagra_A); at 10:22, Blue 610 (MANARA2) called Blue 324 (CoastRoad_C). Exhibit P1225, p. 6; exhibit P1227, p. 3; exhibit P1229, p. 7; exhibit P1239, p. 3; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 349; Gary Platt, T. 27 January 2017, pp 58-67.

⁸²⁶⁵ Exhibit P1229, p. 7; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 349; Gary Platt, T. 27 January 2017, pp 50-51, 63-64.

4362. Between 10:52 and 11:04, Mr Ayyash's Yellow 294 and Yellow 457 were in contact three times, activating cells in the area of Quraitem Palace.⁸²⁶⁶ At 11:15, Yellow 457—still in the palace area—called Yellow 933, which activated a cell in south Beirut.⁸²⁶⁷ Mr Platt testified that this gap between the Blue network activity, ending at 10:22, and that on the Yellow network, beginning at 10:51, was because Mr Hariri was then settled at Quraitem Palace, and there was no further activity.⁸²⁶⁸

4363. That day, Mr Merhi's attributed Green 071 called Mr Badreddine's Green 023 at 09:56.⁸²⁶⁹ Three minutes later, at 09:59, Mr Ayyash's Green 300 also called Green 023.⁸²⁷⁰ Green 300 and Green 023 then exchanged two more calls at 13:26 and 13:40, both activating cells in south Beirut.⁸²⁷¹ At 14:02, Mr Ayyash's Yellow 294 called Yellow 457, whose user according to the Prosecution is Subject 6.⁸²⁷² This call at 14:02 occurred 20 minutes after the last call between Green 300 and Green 023, which according to Mr Platt demonstrates further the 'command-control relationship' and coordination between Mr Ayyash and Mr Badreddine.⁸²⁷³

(w) Tuesday 28 to Wednesday 29 December 2004

4364. On 28 Tuesday December 2004, Mr Hariri received visitors at Quraitem Palace between 07:50 and 19:00.⁸²⁷⁴

⁸²⁶⁶ At 10:52, Yellow 457 (HAMRA3) called Yellow 294 (CARACA2); at 11:00, Yellow 294 (SPEARS3) called Yellow 457 (SPEARS3); at 11:04, Yellow 294 (SPEARS2) called Yellow 457 (CONCOR1). Exhibit P1240, p. 51; exhibit P1252, pp 67-68; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 350-352.

⁸²⁶⁷ Yellow 457 activated the cell SPEARS3 and Yellow 933 activated Haret_Hreik_2_C. Exhibit P1247, p. 57; exhibit P1252, pp 67-68; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 355.

⁸²⁶⁸ Gary Platt, T. 27 January 2017, pp 69-71.

⁸²⁶⁹ Green 071 activated the cell BRAJNE2 and Green 023 activated the cell HADATH3. Exhibit P1211, p. 3; exhibit P1205, p. 8; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 347.

⁸²⁷⁰ At 09:59, Green 300 (CBJOUR2) called Green 023 (ROUEIS3). Exhibit P1207, p. 3; exhibit P1211, p. 3.

⁸²⁷¹ At 13:26, Green 023 (SFEIR3) called Green 300 (MIKAEL3); at 13:40, Green 300 (SFEIR3) called Green 023 (SFEIR3). Exhibit P1207, p. 3; exhibit P1211, p. 3; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 357-358. *See also* Gary Platt, T. 27 January 2017, pp 53-58.

⁸²⁷² Yellow 294 activated the cell MIKAEL2 and Yellow 457 the cell RIMAL2. Exhibit P1252, p. 68; exhibit P1240, p. 51.

⁸²⁷³ Gary Platt, T. 27 January 2017, pp 79-80. *See also* exhibit P1782 (Narrative overview of telephone activity and relevant events), para. 383.

⁸²⁷⁴ Exhibit P301, pp 314-316.

4365. Between 12:54 and 15:15, Blue 585, Blue 324 and Blue 817 were involved in calls that activated cells in the area of Quraitem Palace, the crime scene or in areas between these locations.⁸²⁷⁵

4366. The Red network SIM cards were purchased at the Nejmech cell shop in Tripoli between Friday 24 December 2004 and Tuesday 4 January 2005.⁸²⁷⁶ On 28 December, between 11:12 and 14:17, Subject 6's Blue 610, Yellow 457—whose user according to the Prosecution is also Subject 6—and Yellow 024 activated cells in the Tripoli area, in the area of the cell shop.⁸²⁷⁷ In particular, Yellow 457 called Mr Ayyash's Yellow 294 twice, at 12:49 and 13:11. Yellow 457 activated cells in the Tripoli area and Yellow 294 activated cells in the area of the Port of Beirut during these calls.⁸²⁷⁸

4367. For the 13:11 call, Yellow 457 activated a cell in the area of the Nejmech cell shop (TRIPOL2),⁸²⁷⁹ where the Red network SIM cards were purchased. The Trial Chamber used the electronic presentation of evidence software to create the map below, in which 'NC' denotes the shop:

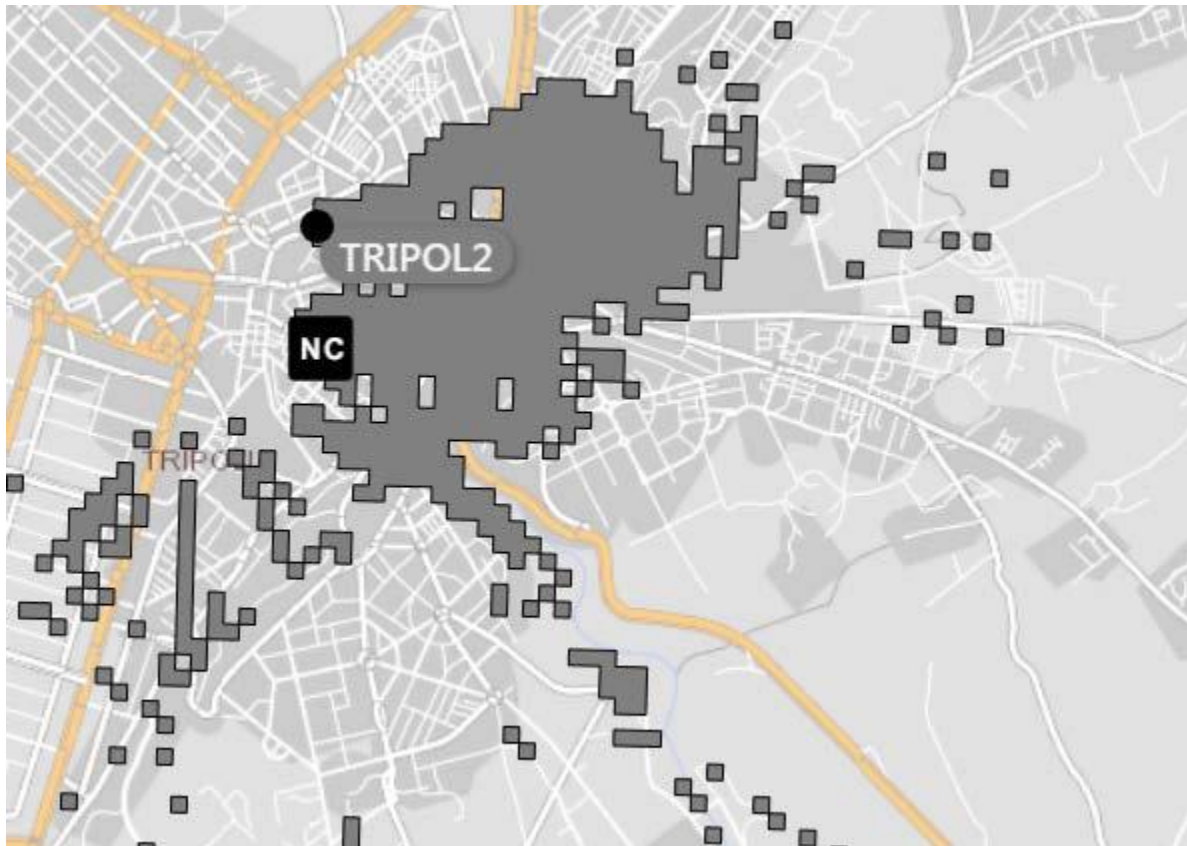

⁸²⁷⁵ At 12:54, Blue 817 (MRAICI2) called Blue 324 (Manara_B); at 13:59, Blue 817 (CONCOR2) called Blue 324 (Manara_B); at 14:05, Blue 817 (MANARA2) called Blue 324 (Raouche_B); at 14:25, Blue 585 (Bay_Rock_Cafe2_A) called Blue 817 (RAOUCH1); and at 15:14 and 15:15, Blue 324 (Fadlallah_B, both times) called Blue 585 (Tallet_Druz_A, both times). Exhibit P1225, p. 6; exhibit P1229, p. 8; exhibit P1239, p. 3; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 370, 372. *See also* Gary Platt, T. 27 January 2017, pp 93-95.

⁸²⁷⁶ *See* chapter VIII 'Nature and purpose of colour-coded mobile networks and purple group of mobiles', (D) (1) 'Setting up the network', para. 2252.

⁸²⁷⁷ At 11:12, Yellow 425 (Sfeir_A) called Yellow 457 (MINIEH3); and at 12:49 and 13:11, Yellow 457 (BEDAOU2, TRIPOL2) called Yellow 294 (GHOBAl, PORT1); at 13:34, 13:53 and 14:04, Yellow 024 (activating Tripoli_5_B, all three times) called Yellow 457 (activating TRIPOL2 all three times); at 14:15, Blue 610 (TRIPOL3) called Blue 585 (Bay_Rock_Cafe1_A) and at 14:17, Blue 817 (MANARA2) called Blue 610 (TRIPOL3). Exhibit P1227, p. 4; exhibit P1239, p. 3; exhibit P1240, p. 51; exhibit P1242, p. 28; exhibit P1244, p. 36; exhibit P1252, p. 68; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 369, 371-372; Gary Platt, T. 27 January 2017, pp 81-84, 87-89. As noted above, there can be time differences between the start time of calls on the same network and between calls on different networks. This applies to the call described above as starting at 11:12 (exhibit P1242). According to exhibit P1252, the start time of that call was instead 11:11:56.

⁸²⁷⁸ Gary Platt, T. 27 January 2017, pp 82-84.

⁸²⁷⁹ Gary Platt, T. 27 January 2017, pp 83-84.

Map created by the Trial Chamber from electronic presentation of evidence (exhibit P592.1)

4368. At 13:14, Mr Ayyash's Green 300, in the Beirut port area, activating PORT1, called Mr Badreddine's Green 023, which activated ROUEIS3 in southern Beirut.⁸²⁸⁰ This call occurred three minutes after Mr Ayyash's Yellow 294 received the call from Yellow 457, when the latter activated a cell in the area of the Nejme cell shop in Tripoli. Mr Platt testified that this activity is consistent with Yellow 457 informing Yellow 294 that they had purchased the Red SIM cards.⁸²⁸¹

4369. After 16:30, Blue 585, Blue 610, Blue 324 and Blue 817 were involved in four more calls, all activating cells in south Beirut.⁸²⁸² Mr Platt testified that this call activity shows that Blue 610 had returned to Beirut from Tripoli by the end of the day and that all of the users engaged in activity

⁸²⁸⁰ Exhibit P1207, p. 3; exhibit P1211, p. 3.

⁸²⁸¹ Gary Platt, T. 27 January 2017, pp 84, 86-87.

⁸²⁸² At 16:30, Blue 610 (MIKAEL2) called Blue 324 (BorjBrajneh-II_C); at 16:37, Blue 610 (SFEIR2) called Blue 324 (Bir Abed_C); at 16:46, Blue 610 (SFEIR2) called Blue 817 (BIRABD3); at 19:07, Blue 324 (Chiyah_C) called Blue 585 (Hai El Soullum_C). Exhibit P1225, p. 6; exhibit P1227, p. 4; exhibit P1229, p.8; exhibit P1239, p. 3; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 373.

either in Tripoli or around Quraitem Palace returned to southern Beirut—the area they normally frequented.⁸²⁸³ This is shown on the map from Mr Platt’s chronology report below:

Map 33: Blue and Green Network, Quraitem Palace and Beirut Port, 28 December 2004 (12:54 to 15:15)

Exhibit P1783 (Expert report of Gary Platt – Chronology), p. 118

4370. On Wednesday 29 December 2004, Mr Hariri returned to his Faqra residence and during the day, received the US ambassador, Mr Jeffrey Feltman. The media release of the meeting stated that the ambassador had inquired about the new attitude on electoral administrative divisions which Mr Hariri had announced after meeting the Maronite Patriarch, Cardinal Nasrallah Boutros Sfeir. Mr Hariri reasserted this new ‘attitude’.⁸²⁸⁴

⁸²⁸³ Gary Platt, T. 27 January 2017, pp 88-89, 96-97.

⁸²⁸⁴ Exhibit P303 (Press releases), ERN D0004894. The discussion also included Lebanese issues, the electoral law and the latest developments in the region, particularly the situation in Iraq and Palestine.

4371. At 10:36, Mr Ayyash's Yellow 294 called Subject 6's Yellow 457. Both activated cells in south Beirut.⁸²⁸⁵ Two hours later, at 12:38, Blue 864, activating a cell in south Beirut, called Blue 610—Subject 6 on the Prosecution's case—activating a cell along the route to Faraya.⁸²⁸⁶ At 15:47, Blue 610 called Blue 864, activating cells in the crime scene area and the area of Quraitem Palace.⁸²⁸⁷ Finally, after 16:13, users on the Blue and Yellow networks activated cells in the Dahyieh area.⁸²⁸⁸ Yellow 294 was involved in two calls between 19:01 and 20:08, activating cells in South Lebanon.⁸²⁸⁹ At 19:52, Mr Ayyash's Green 300 received an SMS, during which the mobile activated a cell in South Lebanon.⁸²⁹⁰

(x) Thursday 30 December 2004

4372. Mr Hariri travelled from his Faqra residence back to Quraitem Palace on Thursday 30 December 2004. He received visitors at the palace between 15:00 and 23:13.⁸²⁹¹

4373. The call activity of his security detail is consistent with Mr Hariri returning to Quraitem Palace in the afternoon—leaving the Faraya area sometime after 14:13 and arriving at the palace before 15:20.⁸²⁹²

⁸²⁸⁵ Yellow 294 activated the cell ROUEIS2 and Yellow 457 activated the cell SFEIR2. Exhibit P1240, p. 51; exhibit P1252, p. 68. *See also* exhibit P1793, slides 288-289.

⁸²⁸⁶ Blue 864 activated SFEIR2 and Blue 610 activated ACHQOU1. Exhibit P1227, p. 4; exhibit P1228, p. 3; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 379; Gary Platt, T. 27 January 2017, pp 100-101.

⁸²⁸⁷ Blue 610 activated MRAICI2 and Blue 864 activated RAOUCH3. Exhibit P1227, p. 4; exhibit P1228, p. 3; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 380.

⁸²⁸⁸ At 16:13, Blue 817 (BRAJNE2) called Blue 610 (BRAJNE3); at 16:49, Blue 324 (Haret Hreik-II_C) called Blue 585 (Hai El Soullum_C); at 19:11, Blue 324 (Chiyah_C) called Blue 585 (Hai El Soullum_C); at 19:56, Blue 585 (Hai El Soullum_C) called Blue 324 (Borj Brajneh_C); at 20:08, Yellow 457 (BRAJNE3) called Yellow 294 (MAAROB1); at 20:12, Blue 585 (Hai El Soullum_C) called Blue 324 (Ain Sikkeh_C); at 20:39, Blue 610 (BRAJNE3) called Blue 324 (Ain Sikkeh_B). Exhibit P1225, p. 7; exhibit P1227, p. 4; exhibit P1229, p. 8; exhibit P1239, p. 3; exhibit P1240, p. 52; exhibit P1252, p. 68; Gary Platt, T. 27 January 2017, pp 101-102. As noted above, there can be time differences between the start time of calls on the same network and between calls on different networks. This applies to the call described above as starting at 20:08 (exhibit P1252). According to exhibit P1240, the start time of that call was instead 20:07:57.

⁸²⁸⁹ At 19:01, Yellow 294 (RAHHAL1) called Yellow 425 (Sfeir_A); at 20:08, as noted in the above footnote, when receiving a call from Yellow 457, Yellow 294 activated the cell MAAROB1. Exhibit P1240, p. 52; exhibit P1242, p. 28; exhibit P1252, p. 68; Gary Platt, T. 27 January 2017, p. 102.

⁸²⁹⁰ It activated the cell RAHHAL1. Exhibit P1207, p. 3; Gary Platt, T. 27 January 2017, p. 102.

⁸²⁹¹ Exhibit P301, p. 316.

⁸²⁹² Exhibit P1783 (Expert report of Gary Platt – Chronology), paras 394-395.

4374. Between 10:25 and 13:50, Mr Al-Arab's mobile activated cells in the Faraya area,⁸²⁹³ and from 16:47, he made calls activating cells near Quraitem Palace.⁸²⁹⁴ Another security member's mobile activated cells in the Faraya area between 11:29 and 14:13;⁸²⁹⁵ and from 15:20, cells near Quraitem Palace.⁸²⁹⁶

4375. At 12:19, Blue 324, activating a cell in the Faraya area, called Blue 817, which activated a cell south of Tripoli.⁸²⁹⁷ Blue 324 was active in that area between 12:19 and 16:16, and Blue 585 activated cells in the same area between 15:44 and 19:08.⁸²⁹⁸ Before 15:44, Blue 585 was involved in calls during which it activated cells along the route between Faqra and Quraitem Palace.

4376. Mr Platt testified that by comparing the call activity and activation of cells of Blue 585 with those of Mr Hariri's security detail between 14:36 and 14:59, they were activating the same or close cells. This was consistent with Blue 585 following the convoy.⁸²⁹⁹

4377. Subject 6's Blue 610 and Blue 817 activated cells on the coastal route in western Beirut between 14:47 and 15:20 and later, from 15:35 to 16:16, in the area of Quraitem Palace.

4378. According to Mr Platt, for the calls between 14:47 and 15:20, this activity and activation of cells is consistent with the users conducting surveillance of the convoy on the route it would take between Faqra Villa and Quraitem Palace.⁸³⁰⁰ By 15:35, both Blue 610 and Blue 817 began

⁸²⁹³ For example, at 10:25, it activated Faqra_A, at 10:30, 11:48 and 12:05, it activated White_House_A; at 12:09, 12:52, 13:29 and 13:50, it activated White_House_B. Exhibit P1359, pp 231-232.

⁸²⁹⁴ At 16:47, the mobile activated Fadlallah_B; at 16:50, Fadlallah_A; between 16:56 and 17:14, it activated LAU_MIC2_A. Exhibit P1359, p. 233.

⁸²⁹⁵ For example, at 11:29, 11:30, 14:12 and 14:13, it activated Faqra_C. Exhibit P1322, p. 46.

⁸²⁹⁶ At 15:20, it activated Concorde_B; at 17:47, it activated Fadlallah_A. Exhibit P1322, p. 47.

⁸²⁹⁷ Blue 324 activated Faqra_A and Blue 817 activated KIFRAY1. Exhibit P1225, p. 7; exhibit P1239, p. 3; Gary Platt, T. 6 February 2017, pp 60-61. *See also* exhibit P1793, slides 318-319.

⁸²⁹⁸ At 12:36, Blue 610 (SFEIR2) called Blue 324 (Faqra_A); at 14:19, Blue 324 (Faraya_B) called Blue 610 (SFEIR2); at 14:34, Blue 585 (Balounah_C) called Blue 324 (Faqra_A); at 14:36, Blue 585 (Quornet_El_Hamra_A) called Blue 324 (Faqra_A); at 14:47, Blue 817 (PORT1) called Blue 585 (Dbaiyeh_A); at 14:52, Blue 585 (Dbaiyeh_A) called Blue 817 (PORT1); at 14:53, Blue 817 (PORT1) called Blue 585 (Dbaiyeh_A); at 14:56, Blue 610 (MRAICI2) called Blue 585 (Dbaiyeh_D); at 15:07, Blue 585 (Zalka Coast_A) called Blue 610 (MRAICI2); at 15:10, Blue 817 (PORT1) called Blue 610 (MRAICI1); at 15:15, Blue 585 (Dora_Twin_Tower_A) called Blue 817 (ZOUKAK3); at 15:15, Blue 585 (Dora_Twin_Tower_C) also called Blue 610 (MRAICI2); at 15:20, Blue 610 (MRAICI2) called Blue 817 (BLISS1); at 15:35, Blue 610 (RAOUCH3) called Blue 817 (JEANNE2); at 15:44, Blue 610 (CARACA3) called Blue 585 (Dbaiyeh_C); at 15:45, Blue 610 (CARACA3) called Blue 324 (Faraya_B); at 16:15, Blue 324 (Faraya_B) called Blue 585 (Faqra_A); and at 16:16, Blue 324 (Faraya_B) called Blue 585 (Faraya_B). Exhibit P1225, p. 7; exhibit P1227, p. 4; exhibit P1229, p. 8; exhibit P1239, pp 3-4.

⁸²⁹⁹ Gary Platt, T. 6 February 2017, pp 63-66. *See also* exhibit P1793, slides 332-342.

⁸³⁰⁰ Gary Platt, T. 6 February 2017, pp 66-68, 71-73. *See also* exhibit P1793, slides 343-356.

activating cells in the area of Quraitem Palace.⁸³⁰¹ Four minutes later, Subject 6's Yellow 457 called Mr Ayyash's Yellow 294, which according to Mr Platt, demonstrated a chain of command and reporting process from the subjects to Mr Ayyash about the surveillance that had occurred during the day on the way to and at Quraitem Palace.⁸³⁰²

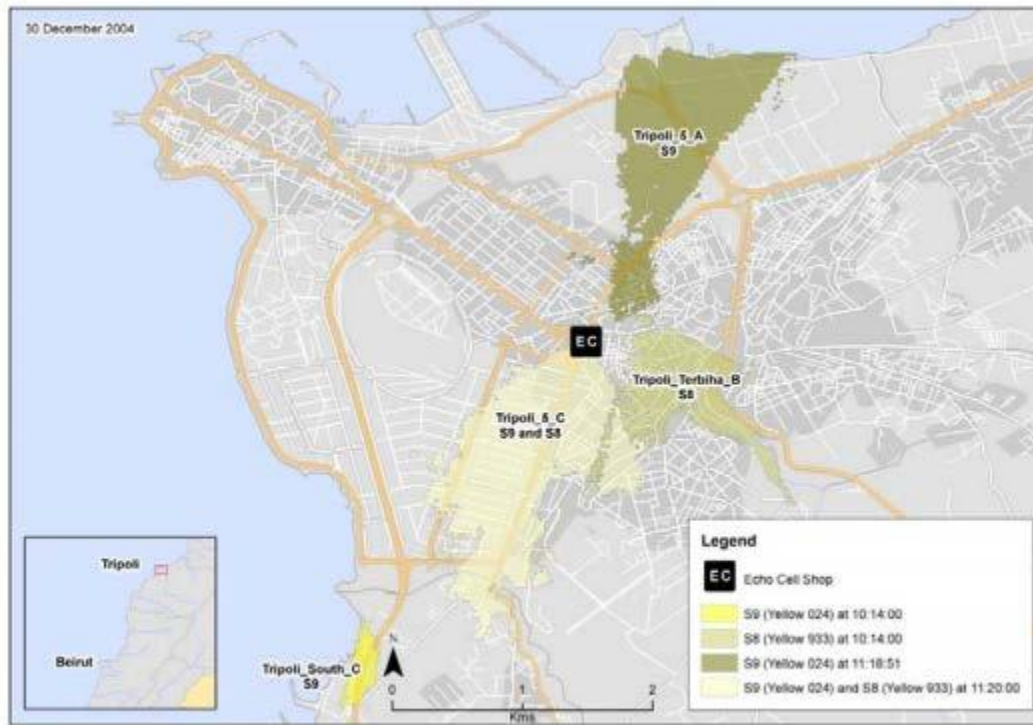

4379. On 30 December, five of the Red mobiles' handsets were bought at the Echo Cell shop in Tripoli.⁸³⁰³ In the morning, between 10:14 and 11:20, Yellow 933 and Yellow 024 activated cells in the Tripoli area.⁸³⁰⁴ At 11:20, both activated a Touch cell, Tripoli_5_C, which provided coverage to the area of the shop. This is shown in the map below from Mr Platt's report in which the shop is marked 'EC':

⁸³⁰¹ Gary Platt, T. 6 February 2017, pp 73-74.

⁸³⁰² Gary Platt, T. 6 February 2017, pp 74, 77, 85-86.

⁸³⁰³ See chapter VIII 'Nature and purpose of colour-coded mobile networks and purple group of mobiles', (D) (1) 'Setting up the network', para. 2251.

⁸³⁰⁴ At 10:14, Yellow 024 (Tripoli_South_C) called Yellow 933 (Tripoli_Terbiha_B); at 11:18, Yellow 457 (SFEIR2) called Yellow 024 (Tripoli_5_A); at 11:20, Yellow 024 (Tripoli_5_C) called Yellow 933 (Tripoli_5_C). Exhibit P1244, p. 36; exhibit P1247, p. 57; exhibit P1252, p. 68; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 393.

Map 36: Yellow Network (S8 and S9), Echo Cell Shop, Tripoli, 30 December 2004 (10:14 to 11:20)

Exhibit P1783 (Expert report of Gary Platt – Chronology), p. 123

4380. According to Mr Platt, this call activity is consistent with Yellow 933 and Yellow 024 being in the Tripoli area when the five Red network handsets were purchased from the Echo Cell shop.⁸³⁰⁵ It shows coordination between them. Also of relevance is that, on Wednesday 5 January 2005, Yellow 933 was again in the area of the same shop when one of the handsets was returned to the shop.⁸³⁰⁶

4381. At 15:39, Subject 6's Yellow 457, activating a cell in the area of Quraitem Palace, called Mr Ayyash's Yellow 294, activating a cell in south Beirut.⁸³⁰⁷

4382. The last mobile activity on the Blue network on Wednesday 30 December was at 20:56 when Blue 324, located in south Beirut, called Subject 6's Blue 610.⁸³⁰⁸ Blue 324 had previously

⁸³⁰⁵ See chapter VIII 'Nature and purpose of colour-coded mobile networks and purple group of mobiles', (D) (1) 'Setting up the network', para. 2251.

⁸³⁰⁶ Gary Platt, T. 6 February 2017, pp 56-59.

⁸³⁰⁷ Yellow 457 activated MOVPIK1. Yellow 294 activated HADATH3. Exhibit P1252, p. 68; exhibit P1240, p. 52.

⁸³⁰⁸ Blue 324 activated Hai Kneisseh_B and Blue 610 activated PHENMB1. Exhibit P1225, p. 7; exhibit P1227, p. 4.

been active in the area of Faqra all afternoon, while at 19:08, Blue 585 received a call, activating a cell in Faqra.⁸³⁰⁹ According to Mr Platt, this activity is consistent with Blue 324 and Blue 585 switching places and Blue 585 taking over surveillance at Faqra in case Mr Hariri returned there.⁸³¹⁰

(y) Friday 31 December 2004

4383. On Friday 31 December 2004, Mr Hariri received visitors at Quraitem Palace between 08:00 and 14:10, including the interior minister, Mr Elias El-Murr, the journalist Mr Ali Hamade and the newspaper proprietor, Mr Charles Ayyoub.⁸³¹¹ Later, he went to Faqra Villa to spend New Year's Eve.⁸³¹² He stayed overnight and returned to Quraitem Palace on the morning of Saturday 1 January 2005. His security detail's call activity is consistent with Mr Hariri leaving Quraitem Palace on New Year's Eve sometime after 14:11 and arriving at his Faqra residence before 15:30.⁸³¹³

4384. The last security detail call activating a cell in the Quraitem Palace area was at 14:11.⁸³¹⁴ Mr Al-Arab's mobile activated cells in the area of Quraitem Palace until at least 13:53, and then activated cells along the route between the palace and the Faraya area and ultimately activated a cell in the Faraya area at 15:32.⁸³¹⁵ Witness 9's mobile activated cells near the palace until at least 13:42, and travelled to the Faraya area and activated cells there from 15:30.⁸³¹⁶ Witness 101's mobile was in the palace area until at least 11:11, and then activated a cell in the Faraya area by 15:49.⁸³¹⁷

⁸³⁰⁹ At 19:08, Blue 610 (BRAJNE3) called Blue 585 (Faqra_A). Exhibit P1227, p. 4; exhibit P1229, p. 8.

⁸³¹⁰ Gary Platt, T. 6 February 2017, pp 86-89.

⁸³¹¹ Exhibit P301, pp 316-317.

⁸³¹³ Gary Platt, 7 February 2017, pp 20-21, 32-33; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 420-421. *See also* exhibit P1793, slides 397-398.

⁸³¹⁴ This mobile activated the Concorde_B cell. Exhibit P1332, p. 46.

⁸³¹⁵ At 13:53, Mr Al-Arab's mobile activated LAU_MIC2_A; at 14:32, it activated Dora-II_C; at 14:39 and 14:40, it activated Zalka_2_A and at 14:52, Aintoura_B. At 15:32, 15:35 and 15:47, it activated White House_B, Faqra_A and White House_A, respectively. Exhibit P1359, p. 235.

⁸³¹⁶ At 13:40 and 13:42, it activated Concorde_B; at 14:33, it activated Dora-II_A. At 15:30, it activated White House_A. Exhibit P1322, p. 47.

⁸³¹⁷ At 10:29, it activated Concorde_B; at 11:00 and 11:11, it activated Fadlallah_A. At 15:49, it activated White House_B. Exhibit P1334, p. 43.

4385. Between 09:49 and 14:19, Blue and Yellow network users were in contact with each other, activating cells in the area of Quraitem Palace and Parliament.⁸³¹⁸ For example, at 09:49, Mr Ayyash's Yellow 294, active in south Beirut, called Subject 6's Yellow 457, activating a cell in the area of Quraitem Palace and two hours later, by 12:16, Yellow 457 called Yellow 294 back, both activating the same cell in the area of Quraitem Palace.

4386. Between 12:09 and 12:53, Blue 585, Subject 6's Blue 610, Blue 324, Blue 817 and Blue 864 contacted each other eight times, activating cells in the area of Quraitem Palace or the Parliament. Blue 610 was involved in seven of the eight calls. At 14:22, Yellow 457 called Yellow 294, both activating cells in south Beirut.⁸³¹⁹

4387. At 13:13, Mr Ayyash's Green 300 called Mr Badreddine's Green 023, both activating cells in south Beirut.⁸³²⁰ Between 14:21 and 15:42, Blue 324, Blue 585, Blue 864, Blue 610 and Yellow 457 were involved in calls activating cells on the route between Beirut and the Faraya area.⁸³²¹ At 15:05 and 15:15, Blue 817 and Blue 864 activated cells in the Faraya area, and between 15:21 and 15:41, Yellow 457 was in contact with Mr Ayyash's Yellow 294 three times—Yellow 457

⁸³¹⁸ At 09:49, Yellow 294 (SFEIR2) called Yellow 457 (CONCOR2); at 11:42, Yellow 294 (SPEARS3) called Yellow 425 (Sfeir_A); at 11:58, Yellow 294 (BNPI1) called Yellow 457 (MOVPIK1); at 12:09, Blue 610 (NAAMEH1) called Blue 817 (ETOILE1); at 12:16, Yellow 457 (CARACA3) called Yellow 294 (CARACA3); at 12:21, Blue 864 (ETOILE3) called Blue 817 (SOLIDR1); at 12:22, Blue 610 (CARACA3) called Blue 864 (ETOILE3); at 12:32, Blue 610 (CARACA3) called Blue 864 (ZOUKAK2); at 12:32, Blue 610 (CARACA3) called Blue 817 (CARACA3); at 12:47, Blue 610 (CARACA3) called Blue 324 (Fadlallah_B); at 12:48, Blue 610 (CARACA3) called Blue 585 (Tallet_Druz_A); at 12:53, Blue 324 (Mic_BayRock2) called Blue 610 (RAOUCH3); at 13:05, Yellow 457 (MANARA1) called Yellow 669 (BRAJNE1); at 13:21, Blue 585 (Borj_Brajneh_2_B) called Blue 864 (BACHOU1); at 14:18, Blue 817 (CARACA3) called Blue 864 (JITAWI2); at 14:19, Blue 817 (MANARA2) called Blue 610 (BIRABD3). Exhibit P1225, p. 7; exhibit P1227, pp 4-5; exhibit P1228, p. 3; exhibit P1229, pp 8-9; exhibit P1239, p. 4; exhibit P1240, p. 52; exhibit P1242, p. 28; exhibit P1248, p. 92; exhibit P1252, pp 68-69; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 410-415, 417-418. *See also* Gary Platt, 6 February 2017, pp 99-110.

⁸³¹⁹ Yellow 457 activated the cell BRAJNE1 and Yellow 294 activated the cell MIKAEL2. Exhibit P1240, p. 52; exhibit P1252, p. 69; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 419.

⁸³²⁰ Green 300 activated ROUEIS2; Green 023 activated BRAJNE3. Exhibit P1207, p. 3; exhibit P1211, p. 3; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 416.

⁸³²¹ At 14:21, Blue 610 (BIRABD3) called Blue 324 (Aintoura_B); at 14:25, Blue 324 (Zouq_Tunel_B) called Blue 585 (Transorient_A); at 14:26, Blue 864 (SAGESS1) called Blue 585 (Mic_HII_Medco-Dora); at 14:27, Blue 864 (SUKLIN1) called Blue 324 (Adonis_C); at 14:28, Blue 864 (QARANT1) called Blue 324 (Adonis_C); at 14:36, Blue 610 (JDAIDE3) called Blue 324 (Zouq_Tunel_B); at 14:43, Blue 585 (Zouq_Tunel_B) called Blue 324 (Adonis_C); at 14:46, Blue 610 (BIRKEH3) called Blue 864 (DBAYEH1); at 14:48, Blue 324 (Adonis_C) called Blue 585 (Jiita_C); at 15:42, Blue 610 (ACHQOU2) called Blue 585 (Bzoumar_B); at 15:42, Yellow 669 (BRAJNE1) called Yellow 457 (ACHQOU2). Exhibit P1225, p. 7; exhibit P1227, p. 5; exhibit P1228, p. 3; exhibit P1229, p. 9; exhibit P1248, p. 92; exhibit P1252, p. 69; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 422-423, 425-426. As noted above, there can be time differences between the start time of calls on the same network and between calls on different networks. This applies to the call described above as starting at 15:42 (exhibit P1248). According to exhibit P1252, the start time of that call was instead 15:43:03.

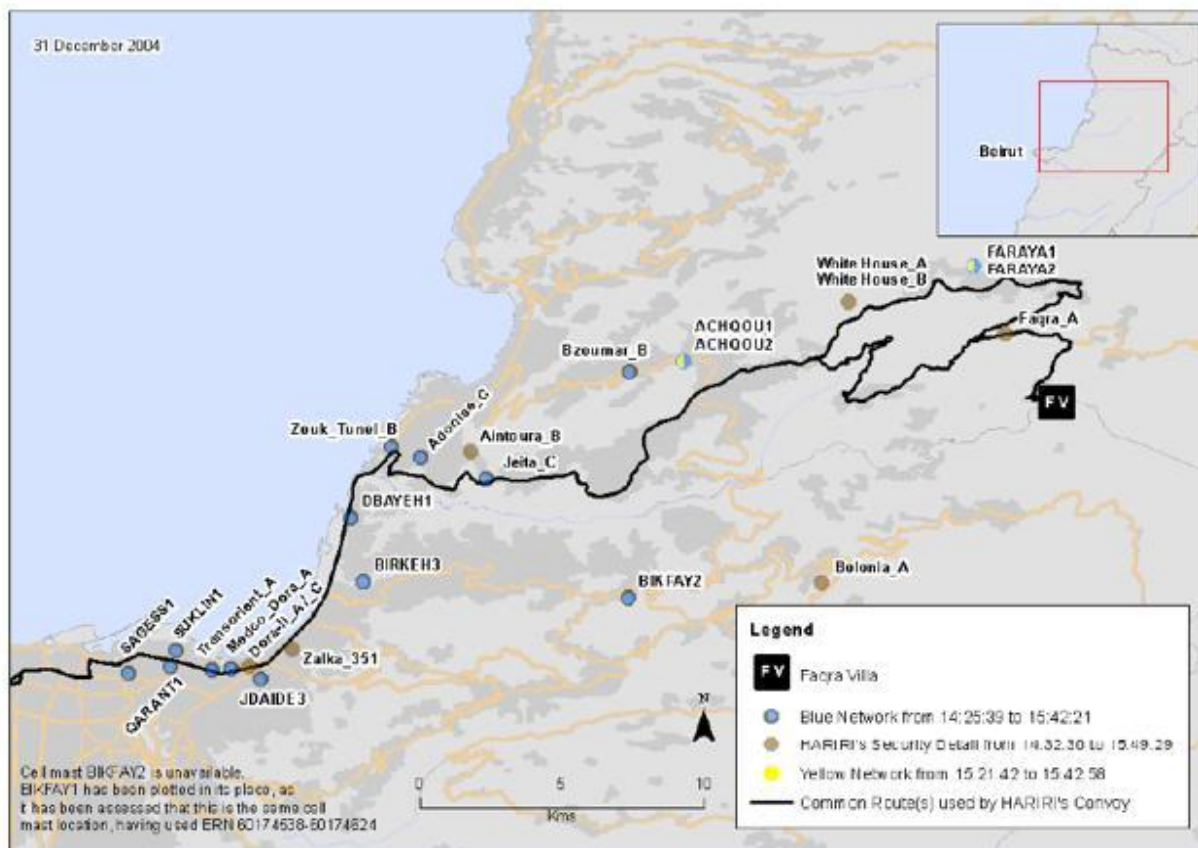

activated cells in the Faraya area while Yellow 294 was in south Beirut.⁸³²² This was the last call between the two users on 31 December 2004.⁸³²³

4388. According to Mr Platt, this call activity on the Blue and Yellow networks is consistent with the users following the route of Mr Hariri's security detail between Quraitem Palace and Faqra Villa as standard surveillance procedure.⁸³²⁴ The map below shows the road between the two locations, with cell towers marked:

⁸³²² At 15:05, Blue 817 (ACHQOU1) called Blue 864 (BIKFAY2); at 15:15, Blue 864 (FARAYA2) called Blue 817 (FARAYA1); at 15:21, Yellow 457 (FARAYA1) called Yellow 294 (MIKAEL2); at 15:26, Yellow 294 (SFEIR2) called Yellow 457 (FARAYA1); at 15:41, Yellow 294 (SFEIR2) called Yellow 457 (ACHQOU1). Exhibit P1228, p. 3; exhibit P1239, p. 4; exhibit P1240, p. 52; exhibit P1252, p. 69; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 424-426.

⁸³²³ Exhibit P1240, p. 52; exhibit P1252, p. 69.

⁸³²⁴ Gary Platt, 7 February 2017, pp 10-11, 20-24, 27-28, 32-49. *See also* exhibit P1793, slides 397, 401-429; exhibit P1782 (Narrative overview of telephone activity and relevant events), paras 430-433.

Map 40: Blue and Yellow Network (14:25 to 15:42), HARIRI's Security Detail (14:32 to 15:49), East Beirut to Faraya, 31 December 2004

Exhibit P1783 (Expert report of Gary Platt – Chronology), p. 134

(z) Saturday 1 January 2005

4389. On New Year's Day, Saturday 1 January 2005, between 10:45 and 16:00, Mr Hariri received visitors at Quraitem Palace.⁸³²⁵ His security detail's calls are consistent with Mr Hariri departing his Fagra residence on 1 January 2005 at around 09:53 and arriving at Quraitem Palace by 10:43.⁸³²⁶

4390. Mr Talal Nasser's mobile activated a cell in the Faraya area at 09:53.⁸³²⁷ Mr Al-Arab's mobile activated cells in the Faraya area at 09:26 and the mobile's next activity at 11:23 activated

⁸³²⁵ Exhibit P301, p. 317.

⁸³²⁶ Gary Platt, T. 7 February 2017, p. 72; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 441-442. See also P1807 (Chronology PowerPoint presentation – 1 January 2005 to 17 January 2005), slides 4-7.

⁸³²⁷ At 09:53, it activated White House_C. Exhibit P1354, p. 274.

a cell near Quraitem Palace.⁸³²⁸ Witness 009's's mobile activated cells in the Faraya area at 09:34, then along the route between Faraya and Beirut at 10:06 and finally at 12:39 in the area of Quraitem Palace.⁸³²⁹ Witness 101's mobile activated a cell in the Faraya area at 08:20, and at 10:43, his mobile was active in central Beirut.⁸³³⁰

4391. The Blue and Yellow networks users were primarily active in the morning in the Faraya area, and then moved to the Quraitem Palace area. For example, between 09:46 and 11:47, Blue 585, Blue 324 and Blue 817 were involved in calls activating cells in the Faraya area and on the coastal area north of Beirut, while Subject 6's Blue 610 and Blue 864 activated cells primarily in the area of Quraitem Palace.⁸³³¹

4392. Mr Platt testified that the call activity demonstrates that there were Blue network users located along the route between the two locations in anticipation of Mr Hariri's journey back to the palace. The users' activity followed the same route as Mr Hariri's convoy, activating similar cells as his security detail, which is consistent with surveillance.⁸³³² The map below from Mr Platt's chronology report, with the road and cell activations marked, illustrates this:

⁸³²⁸ At 09:26, it activated White House_B; at 11:23, it activated Fadlallah_A. Exhibit P1359, pp 236-237.

⁸³²⁹ At 09:34, it activated White House_A; at 10:06, it activated Jeita_B; and at 12:39, it activated Riviera_A. Exhibit P1322, pp 47-48.

⁸³³⁰ At 08:20, it activated Faqra_A; at 10:43, it activated Makassed_B. Exhibit P1334, p. 43.

⁸³³¹ At 09:46, Blue 324 ((Faqra_A) called Blue 610 (SFEIR2); at 10:04, Blue 864 (MOVPIK1) called Blue 324 (Faqra_A); at 10:05, Blue 864 (CARACA3) called Blue 585 (Qornet_El_Hamra_A); at 10:06, Blue 864 (MANARA2) called Blue 817 (SUKLIN1); at 10:16, Blue 817 (JALDIBI1) called Blue 864 (MRAICI2); at 10:17, Blue 610 (CARACA3) called Blue 817 (ZALKA4); at 10:19, Blue 610 (CARACA3) called Blue 324 (Faraya_A); at 10:20, Blue 610 (CARACA3) called Blue 585 (CHB_C); at 10:24, Blue 817 (ZOUKAK4) called Blue 864 (MRAICI2); at 10:28, Blue 817 (RAOUCH3) called Blue 610 (CARACA3); at 10:57, Blue 610 (SFEIR2) called Blue 864 (CARACA3); at 10:59, Blue 610 (HADATH3) called Blue 324 (Faqra_A); at 11:14, Blue 585 (Faraya_B) received a call from an unknown number ending in 852; and at 11:37, Blue 610 (SFEIR2) called Blue 324 (Faqra_C). Exhibit P1225, pp 7-8; exhibit P1227, p. 5; exhibit P1228, p. 3; exhibit P1229, p. 9; exhibit P1239, p. 4; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 445-446.

⁸³³² Gary Platt, 7 February 2017, pp 72-77, 86-91.

Map 42: Blue Network, Faraya, Quraitem Palace, HARIRI Crime Scene, 1 January 2005 (09:46 to 11:37)

Exhibit P1783 (Expert report of Gary Platt – Chronology), p. 141

4393. At 10:55, Subject 6's Yellow 457 called Mr Ayyash's Yellow 294, both activating cells in south Beirut, which according to Mr Platt further demonstrates Yellow 457's coordination role passing on information to Yellow 294.⁸³³³

4394. At around 12:20, Mr Hariri travelled to Mr Hamade's residence in Beirut and stayed approximately 40 minutes there, returning to Quraitem Palace around 13:30. The call activity of Mr Hariri's security detail is consistent with this timing. The security detail's last call near Quraitem Palace was at 12:20, and Witness 9's and Mr Al-Arab's mobiles activated cells in the area of Mr Hamade's residence at 12:39 and 13:19. And, at 13:27, Mr Al-Arab's mobile activated a cell in the area of Quraitem Palace.⁸³³⁴

⁸³³³ Yellow 457 activated the cell SFEIR2, and Yellow 294 activated the cell HAROUF3. Exhibit P1240, p. 52; exhibit P1252, p. 69; Gary Platt, T. 7 February 2017, pp 89-90.

⁸³³⁴ Mr Al-Hassan's mobile 1506 received an SMS at 12:20 activating LAU_MIC2_A. Witness 9's mobile received a call at 12:39 activating Riviera_A. Mr Al-Arab's mobile received a call at 13:19 activating Riviera_A; at 13:27, Mr

4395. Between 12:27 and 13:29, Blue 610, Blue 817 and Blue 864 were in contact with each other, repeatedly activating cells in the area of Quraitem Palace, along the coastal road of Beirut towards the St Georges Marina, in the area of Mr Hamade's residence and back in the area of Quraitem Palace.⁸³³⁵

4396. According to Mr Platt, the network activity is consistent with conducting surveillance of Mr Hariri at the palace, at Mr Hamade's residence during their meeting and on the route in between the two locations.⁸³³⁶ Between 13:37 and 16:47, Blue 610 and Blue 817 activated cells in south Beirut, while Blue 324 and Blue 585 remained in the area of Quraitem Palace and along the coastal road.⁸³³⁷

4397. Later in the afternoon on 1 January 2005, Mr Hariri travelled to Paris from Beirut airport.⁸³³⁸ He remained abroad until 7 January 2005.⁸³³⁹

4398. Between 17:04 and 22:29, Yellow 024, Yellow 457, Yellow 933 and Mr Ayyash's Yellow 294 were in contact four times, activating cells in south Beirut.⁸³⁴⁰ Yellow 024 and Yellow 933 contacted Yellow 457. According to Mr Platt, its user, Subject 6, was involved in surveillance of Mr Hariri earlier in the day. Yellow 457 then called Mr Ayyash's Yellow 294 at the end of the

Al-Arab's mobile made a call activating LAU_MIC2_A. Exhibit P1322, p. 48; exhibit 1352, p. 256; exhibit P1359, p. 237; Gary Platt, 7 February 2017, pp 91-92.

⁸³³⁵ At 12:27, Blue 864 (MOVPIK1) called Blue 817 (CARACA3); at 12:36, Blue 864 (CARACA3) called Blue 610 (HADATH3); at 12:37, Blue 610 (SFEIR2) called Blue 864 (MANARA2); at 12:38, Blue 610 (SFEIR2) called Blue 817 (CHIAH3); at 12:38, Blue 817 (CHIAH3) called Blue 864 (MRAICI2); at 12:40, Blue 864 (MRAICI2) called Blue 610 (SFEIR2); at 12:44, Blue 610 (SFEIR2) called Blue 817 (CHIAH2); at 12:45, Blue 864 (MRAICI2) called Blue 817 (CHIAH2); at 12:54, Blue 817 (MANARA1) called Blue 864 (MANARA1); at 13:17, Blue 610 (MRAICI2) called Blue 864 (MANARA1); at 13:20, Blue 610 (MANARA1) called Blue 817 (MRAICI2); at 13:21, Blue 817 (MRAICI2) called Blue 610 (MRAICI2); at 13:28, Blue 864 (JEANNE2) called Blue 817 (RACHOU1); and at 13:29, Blue 864 (RAOUCH3) called Blue 610 (MANARA2). Exhibit P1227, pp 5-6; exhibit P1228, p. 4; exhibit P1239, p. 4.

⁸³³⁶ Gary Platt, T. 7 February 2017, pp 83-84, 91-100, 112-113.

⁸³³⁷ At 13:37, Blue 610 (SIMON3) called Blue 585 (Bir Abed_A); at 13:41, Blue 817 (BACHOU1) called Blue 610 (SIMON3); at 14:16, Blue 324 (Saki Hadath_C) called Blue 610 (SFEIR2); at 15:33, Blue 585 (Ras Beirut MPT_B) called Blue 610 (SFEIR2); at 15:34, Blue 585 (Fadlallah_B) called Blue 324 (Riviera_B); and at 16:47, Blue 610 (BIRABD2) called Blue 324 (Riviera_B). Exhibit P1225, p. 8; exhibit P1227, pp 5-6; exhibit P1229, p. 9; exhibit P1239, p. 4; Gary Platt, T. 7 February 2017, pp 112-113, T. 8 February 2017, pp 3-5; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 447, 450-452.

⁸³⁴⁰ At 17:04, Yellow 024 (Hai Kneisse_B) called Yellow 457 (HARA2); at 17:24, Yellow 933 (Mar_Michael_C) called Yellow 457 (BRAJNE1); at 20:16, Yellow 933 (Mar_Michael_C) called Yellow 457 (BRAJNE1); at 22:29, Yellow 294 (SFEIR2) called Yellow 457 (BIRABD3). Exhibit P1240, p. 52; exhibit P1244, p. 36; exhibit P1247, p. 57; exhibit P1252, p. 69.

day. Mr Platt testified that this activity is consistent with a report from the day or preparation for the next day's activities.⁸³⁴¹

(aa) Sunday 2 and Monday 3 January 2005

4399. On Sunday 2 January 2005, during Mr Hariri's absence from Lebanon, at first in Paris, there was no activity on the Blue network.

4400. On Monday 3 January 2005, three calls were made on the Blue network. These were between Blue 585, Blue 324 and Blue 610.⁸³⁴²

(bb) Tuesday 4 to Thursday 6 January 2005

4401. On Tuesday 4 January 2005, the Red mobiles were used for the first time since the purchase of the Red SIMs in Tripoli, which had occurred sometime between 24 December and 4 January.⁸³⁴³ On 4 January, two calls were made on the Blue network, between Blue 585 and Blue 324, with the latter activating a cell in the Quraitem Palace area. These calls occurred at 13:41 and 14:00.⁸³⁴⁴

4402. Between 14:15 and 14:45 that day the Red mobiles made 13 successive calls, activating one of two neighbouring cells to the north of Tripoli, not by contacting each other, but instead by

⁸³⁴¹ Gary Platt, T. 8 February 2017, pp 10-11.

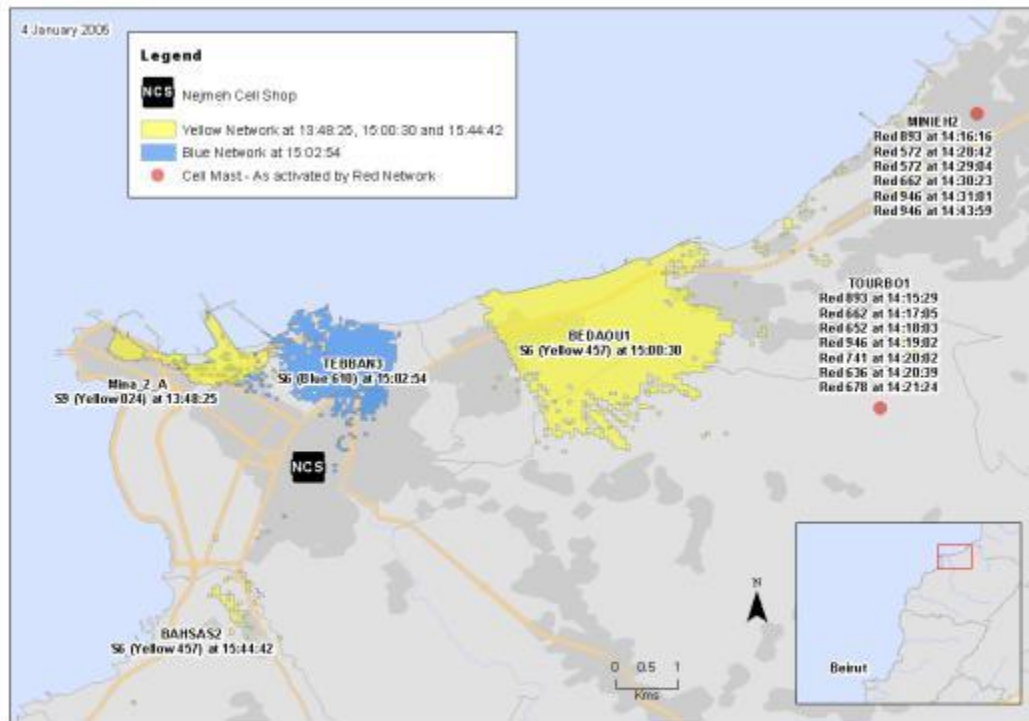

⁸³⁴² At 12:17, Blue 585 (Hai Kneisse_B) called Blue 324 (Saki Hadath_C); at 13:13, Blue 610 (BRAJNE3) called Blue 324 (Mic_Bay Rock); at 14:33, Blue 324 (Unesco_C) called Blue 585 (Saki Hadath-II_A). Exhibit P1225, p. 8; exhibit P1227, p. 6; exhibit P1229, p. 9; Gary Platt, T. 8 February 2017, pp 18-19, 26-29; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 466. While Mr Platt, in the report, states that on 2 January 2005 'Blue Network phones were not active *in the vicinity of Quraitem Palace*' (emphasis added), the call sequence tables of the Blue mobiles reveal no calls that day. The only two mobiles active—Blue 742 and Blue 940—were only involved in service calls, namely calls or text messages to or from number 1456, which is an Alfa customer number to activate mobile credit. Exhibit P1230, p. 2; exhibit P1234 (Call sequence table of Blue 940), p. 2.

⁸³⁴³ Exhibit P1197 (Call sequence table for Red 741), p. 1; exhibit P1198 (Call sequence table of Red 893), p. 1; exhibit P1199 (Call sequence table of Red 652), p. 1; exhibit P1200 (Call sequence table of Red 572); exhibit P1201 (Call sequence table of Red 662); exhibit P1202 (Call sequence table of Red 946), p. 1; exhibit P1203 (Call sequence table of Red 636), p. 1; exhibit P1204 (Call sequence table of Red 678), p. 1; Gary Platt, T. 8 February 2017, pp 39-41, T. 9 February 2017, p. 81; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 498-499; exhibit P796.1 (Network analysis report), paras 484-485. *See also* exhibit P1782, para. 468.

⁸³⁴⁴ Exhibit P1783 (Expert report of Gary Platt – Chronology), para. 493, table 61 (p. 152).

contacting the Alfa network.⁸³⁴⁵ Mr Platt testified that this pattern is consistent with one user initiating the calls on each of the Red mobiles.⁸³⁴⁶

4403. Closely before and after the Red network calls on Tuesday 4 January, Yellow 024, Subject 6's Yellow 457 and Subject 6's Blue 610 made calls activating cells in the Tripoli area.⁸³⁴⁷ This is shown on the map below from Mr Platt's chronology report:

Map 47: S6 [Yellow 457 and Blue 610] and Yellow 024 [S9], Red Network Activation, Nejme Cell Shop, Tripoli, 4 January 2005 (13:48 to 15:44)

Exhibit P1783 (Expert report of Gary Platt – Chronology), p. 156

⁸³⁴⁵ The cells activated by the Red mobiles were TOURBO1 and MINIEH2. Exhibit P1197, p.1; exhibit P1198, p. 1; exhibit P1199, p. 1; exhibit P1200; exhibit P1201; exhibit P1202, p. 1; exhibit P1203, p. 1; exhibit P1204, p. 1; exhibit P1123 (ArcView shape files Alfa); exhibit P1783 (Expert report of Gary Platt – Chronology), para. 498, table 62 on p. 155; exhibit P796.1, para. 485. *See also* Gary Platt, T. 8 February 2017, pp 39-41, 43, 45-46, 50-51, 59.

⁸³⁴⁶ Gary Platt, T. 8 February 2017, pp 37, 49.

⁸³⁴⁷ This was approximately 27 minutes before and 17 minutes after the Red networks calls. Yellow 024 activated cell Tripoli Mina_II_A at 13:48. Yellow 457 activated BEDAOUI at 15:00 and BAHSAS2 at 15:44. Blue 610 activated TEBBAN3 at 15:02. Both Yellow 024 and Yellow 457 were in contact with Yellow 669 on 4 January 2005 (Yellow 669 activated SFEIR2 at 13:48, and HADATH3 at 15:00 and 15:44). Exhibit P1227, p. 6; exhibit P1244, p. 36; exhibit P1248, p. 92; exhibit P1252, p. 69; Gary Platt, T. 8 February 2017, pp 35-39, 51-52, 59-60, 72-73; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 489, 497, 500-501.

4404. Yellow 024 and Yellow 457 returned to Beirut in the early evening. At 16:52 and 17:58, Yellow 024 and Yellow 457 were involved in calls with Yellow 933, both activating cells in Beirut.⁸³⁴⁸

4405. On 5 January, Yellow 933 activated a cell in the Tripoli area at 12:05, to contact Yellow 457. On Thursday 6 January 2005, Yellow 425 called Mr Ayyash's Yellow 294 twice within 30 minutes around 12:00, and again at 16:42.⁸³⁴⁹ Yellow 294 was also in contact with Yellow 457 five times between 15:39 and 23:16.⁸³⁵⁰

(cc) Friday 7 January 2005

4406. According to a logbook of Mr Hariri's travels, he returned to Beirut from Switzerland on Friday 7 January 2005 at 18:00.⁸³⁵¹ However, the call activity of Mr Hariri's security team suggests that he more likely arrived at Beirut Airport between 15:42 and 16:22, and was back at Quraitem Palace by 16:54.⁸³⁵²

4407. Mr Al-Arab was in the area of Quraitem Palace until at least 15:18 on 7 January 2005.⁸³⁵³ Cell activations suggest that he and Witness 009 were travelling south from the palace at 15:31 and 15:32, respectively.⁸³⁵⁴

⁸³⁴⁸ At 16:52, Yellow 933 (Haret_Hreik_2_C) called Yellow 024 (Bashoura_A); at 17:58, Yellow 457 (SFEIR2) called Yellow 933 (Mar_Michael_B). Exhibit P1244, p. 36; exhibit P1247, pp 57-58; exhibit P1252, p. 69; Gary Platt, T. 8 February 2017, pp 52, 59-61; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 506.

⁸³⁴⁹ On 6 January 2005, Yellow 425 (Sfeir_B) called Yellow 294 (HAROUF3) at 12:22 and 12:48. At 16:42, Yellow 425 (Sfeir_B) called Yellow 294 (HAROUF3). Exhibit P1240, p. 53; exhibit P1242, p. 29; exhibit P1252, p. 69; exhibit P1247, p. 58; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 521-524.

⁸³⁵⁰ At 15:39, Yellow 294 (HAROUF3) called Yellow 457 (SFEIR2). At 15:41, Yellow 294 (HAROUF3) then again called Yellow 457 (SFEIR2). At 21:12, Yellow 294 (HAROUF3) called Yellow 457 (BRAJNE3). Yellow 457 (BRAJNE1) called Yellow 294 (HAROUF3) back at 21:19. Finally, Yellow 294 (SFEIR2) called Yellow 457 (SFEIR2) at 23:16. Exhibit P1240, p. 53; exhibit P1252, p. 70. As noted above, there can be time differences between the start time of calls on the same network and between calls on different networks. This applies to the call described above as starting at 15:41 (exhibit P1240). According to exhibit P1252, the start time of that call was instead 15:41:04.

⁸³⁵¹ Exhibit P346, ERN 600004136; exhibit P303, ERN D0004960; exhibit P536, p. 21; exhibit P347 (Witness statement of Dorian Al-Zaatari), ERN 60299345, para. 19; exhibit P347 (Supplemental material for witness statement of Dorian Al-Zaatari), ERN 60299483. *See also* Gary Platt, T. 8 February 2017, p. 97; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 539.

⁸³⁵² Exhibit P1359, pp 250-251; exhibit P1322, p. 55; exhibit P301, p. 370; Gary Platt, T. 9 February 2017, pp 2-3; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 552, 555-556.

⁸³⁵³ Mr Al-Arab activated the LAU_MIC2_A cell at 15:18. Exhibit P1359, p. 250.

⁸³⁵⁴ Both Mr Al-Arab and Witness 9 activated cell Raoucheh_B. Exhibit P1359, p. 251; exhibit P1322, p. 55; exhibit P1122; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 553, 558.

4408. Witness 009 activated cell Ouzaii-II_A at 15:42, showing that he was still travelling south.⁸³⁵⁵ By then, Mr Al-Arab had already arrived in the area of the Beirut Airport.⁸³⁵⁶ Witness 009 arrived at the airport by 16:02, activating cell Airport_A, the same cell as Mr Al-Arab.⁸³⁵⁷ Mr Al-Arab remained in that area until 16:21 and Witness 009 until 16:22.⁸³⁵⁸ Witness 009 began travelling north by 16:45.⁸³⁵⁹ At 16:54 and 17:19, Mr Al-Arab and Witness 009, respectively, again activated cells in the area of Quraitem Palace.⁸³⁶⁰

4409. There were 27 calls made on the Blue network on this day. Only 12 calls had occurred in the previous five days. Mr Platt stated ‘the Blue Network becomes very active again after being dormant for a number of days’, explaining that this increase in Blue activity coincided with Mr Hariri’s return from abroad.⁸³⁶¹ For a graphic overview of these calls, the Trial Chamber has created the table below, based on the call sequence table data:

⁸³⁵⁵ Exhibit P1322, p. 55; exhibit P1122; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 553, table 70 (p. 171).

⁸³⁵⁶ At 15:42, Mr Al-Arab activated the Airport_A cell. Exhibit P1359, p. 251; exhibit P1122; Gary Platt, T. 9 February 2017, pp 2, 5; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 553, 559.

⁸³⁵⁷ Exhibit P1322, p. 55; exhibit P1122; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 553, 559, table 70 (p. 171).

⁸³⁵⁸ Exhibit P1322, p. 55; exhibit P1359, p. 251; Gary Platt, T. 9 February 2017, p. 2; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 553, table 70 (p. 171).

⁸³⁵⁹ At 16:45, Witness 009 activated cell Unesco_B. Exhibit P1322, p. 55; Gary Platt, T. 9 February 2017, p. 3; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 553, 561.

⁸³⁶⁰ Mr Al-Arab again activated cell LAU_MIC2_A, while Witness 009 activated Concorde_B. Exhibit P1322, p. 55; exhibit P1359, p. 251; exhibit P1122.

⁸³⁶¹ Gary Platt, T. 8 February 2017, pp 97-98.

4410. Blue 324 moved from the area of Quraitem Palace to south Beirut at 13:24 before travelling in the direction of Faraya by 14:39.⁸³⁶² Blue 585 also activated cells in the Faraya area, when it was in contact with Blue Subject 6's 610 at 14:46 and 15:21.⁸³⁶³ Because 7 January 2005 was a Friday, Mr Platt explained that the placement of the Blue mobiles was consistent with the possibility that Mr Hariri might go directly from Beirut Airport to Faqra Villa, or stop at Quraitem Palace on the way.⁸³⁶⁴

⁸³⁶² At 13:24, Blue 324 activated cell BorjBrakneh-II_B. At 14:39, it activated cell Adonis_C, located close to the Zouk Mosbeh junction turnoff. Exhibit P1225, p. 8; Gary Platt, T. 8 February 2017, p. 103; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 548.

⁸³⁶³ At 14:46, Blue 585 activated the cell Faraya_A. At 15:21, it activated the cell Faqra_A. Exhibit P1229 (call sequence table of Blue 585), p. 9; exhibit P1122; Gary Platt, T. 8 February 2017, p. 103; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 547.

⁸³⁶⁴ Gary Platt, T. 8 February 2017, p. 103.

(dd) Saturday 8 to Monday 10 January 2005

4411. Mr Hariri was at Quraitem Palace and received visitors on Saturday 8, Sunday 9 and Monday 10 January 2005, including Mr Bassel Fuleihan MP, Mr Mustafa Nasser, the journalist Mr Faisal Selman, the Syrian chief of military intelligence in Lebanon, Mr Rustom Ghazaleh and Mr Hani Hammoud, who was a media advisor to Mr Hariri and editor of the newspaper, *Al-Mustaqbal*.⁸³⁶⁵

4412. On Saturday 8 January 2005, three Blue mobiles (Blue 324, Blue 817 and Blue 864) activated cells in the area of Quraitem Palace around midday.⁸³⁶⁶ In the late afternoon, Blue 585 was located in the Faqra area and Blue 324 was in the area of Parliament.⁸³⁶⁷ This was also the first time Blue 940 was active after being dormant for five months.⁸³⁶⁸

4413. On Sunday 9 January 2005, Blue 235 was active for the first time.⁸³⁶⁹ Blue 585 and Blue 610 were also active, exchanging four calls between 15:34 and 17:43.⁸³⁷⁰

4414. On Monday 10 January, the Blue network continued to expand as Blue 233—attributed to Mr Ayyash—was used for the first time.⁸³⁷¹ There was, however, no Blue network activity around Quraitem Palace or any location related to Mr Hariri.⁸³⁷²

⁸³⁶⁵ Exhibit P301, pp 320-325; exhibit P303, ERN D0004946; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 573. *See also* exhibit P1782, paras 501, 505, 519.

⁸³⁶⁶ Blue 324 activated cell Mic_Bay Rock 2 at 12:09, 12:11 and 12:12; Blue 817 activated CARLTO3 at 12:12 and Blue 864 activated cell CONCOR2 at 12:11. Exhibit P1225, p. 8; exhibit P1228, p. 4; exhibit P1239, p. 5; exhibit P1123; exhibit P1122; Gary Platt, T. 9 February 2017, pp 33-35; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 574, 578-579.

⁸³⁶⁷ Blue 585 activated cell Faqra_A at 17:17 by receiving a call from Blue 324. Blue 324 activated cell HQ_B at 17:11, 17:15, twice at 17:16 and 17:17. Exhibit P1229, p. 9; exhibit P1225, p. 8; exhibit P1122; Gary Platt, T. 9 February 2017, pp 34, 36; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 575-576, 580-582.

⁸³⁶⁸ This was the first inter-Blue activity since 9 August 2004 for Blue 940. Exhibit P1234, p. 2; Gary Platt, T. 9 February 2017, p. 34. *See also* exhibit P1782, para. 502.

⁸³⁶⁹ Blue 235 activated Sfeir_A at 00:32. Exhibit P1226 (Call sequence table of Blue 235), p. 1. *See also* exhibit P1782, para. 516.

⁸³⁷⁰ At 15:34, Blue 610 (BIRABD_2) called Blue 585 (Hai El Soullum_C). At 16:34, Blue 585 (Hai El Soullum_C) called Blue 610 (BRAJNE1). Blue 585 (Raouche_B) again called Blue 610 (BRAJNE1) at 17:40. Finally, Blue 610 (BRAJNE1) called Blue 585 (Raouche_B) at 17:43. Exhibit P1229, p. 10; exhibit P1227, p. 7; exhibit P1123.

⁸³⁷¹ At 14:00, Blue 233 (Borj_El-Barajneh_C) called Blue 235 (Sfeir_B), at 14:01:07 according to exhibit P1226 for Blue 235 and at 14:00:15 according to exhibit P1238 for Blue 233. Exhibit P1226, p. 1; exhibit P1238 (Call sequence table of Blue 233), p. 1; Gary Platt, T. 9 February 2017, p. 51.

⁸³⁷² Gary Platt, T. 9 February 2017, p. 50.

(ee) Tuesday 11 January 2005

4415. Mr Hariri received visitors at Quraitem Palace throughout the day on Tuesday 11 January 2005.⁸³⁷³

4416. There was limited Blue network activity that day, during which all calls activated cells in south Beirut.⁸³⁷⁴ Mr Ayyash's Blue 233 participated in three of the seven calls on the Blue network.⁸³⁷⁵

4417. There were four calls on the Green network that day between Mr Ayyash's Green 300 and Mr Badreddine's Green 023.⁸³⁷⁶ At 11:22, Green 300 activated a cell in south Lebanon, on the costal road between Saida and Beirut, calling Green 023.⁸³⁷⁷ At 14:30 and 14:55, Green 300 connected to cells adjacent to the cell providing predicted best server coverage to the vehicle yard in Tripoli where the Mitsubishi Canter was sold.⁸³⁷⁸ This was the only day between 1 August 2004 and 28 December 2005, in which the Green network, or any mobile the Prosecution seeks to attribute to Mr Ayyash, used cells in Tripoli.⁸³⁷⁹

⁸³⁷³ Exhibit P301, pp 325-327. *See also* exhibit P1782, para. 526.

⁸³⁷⁴ At 12:15, Blue 817 (ROUEIS2) called Blue 610 (HADATH3). At 12:17, Blue 610 (SFEIR2) called Blue 817 (ROUEIS2). At 12:41, Blue 235 (Sfeir_B) called Blue 322 (Coast Road_A). Blue 235 (Sfeir_B) called Blue 233 (Mic_Mcharrafieh_A) at 19:47. At 19:59, Blue 235 (Sfeir_B) called Blue 322 (Hazmiyeh-II_B). Blue 235 (Sfeir_B) called Blue 233 (Haret_Hreik_2_A) at 21:09. Finally, Blue 322 (Hazmiyeh-II_B) called Blue 233 (Mar_Michael_C) at 22:40. Exhibit P1226, p. 1; exhibit P1227, p. 7; exhibit P1236, p. 2; exhibit P1238, p. 1; exhibit P1239, p. 5; Gary Platt, T. 9 February 2017, p. 85.

⁸³⁷⁵ Gary Platt, T. 9 February 2017, p. 85; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 590-591.

⁸³⁷⁶ Exhibit P1305 (Call sequence table of 13 numbers—Mr Badreddine), pp 5655-5656; exhibit P1259 (Call sequence table of ten numbers—Mr Ayyash), p. 333; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 589.

⁸³⁷⁷ Green 300 activated KHALDE3. Green 023 activated cell ROUEIS3. Exhibit P1305, p. 5655; exhibit P1259, p. 333; exhibit P1123; Gary Platt, T. 9 February 2017, pp 74-75; *see also* exhibit P1807, slides 253-254.

⁸³⁷⁸ Green 300 activated cells BEDAOU2 at 14:30 and TEBBAN1 at 14:55. Exhibit P1259, p. 333; exhibit P1123; exhibit P1783 (Expert report of Gary Platt—Chronology), paras 589, 595-596, table 74 (p. 183); Gary Platt, T. 9 February 2017, pp 77, 84-85, T. 5 April 2017, pp 31-32. *See also* exhibit P1807, slides 261-264; exhibit P1116 (Expert report of John Edward Philips – Green mission phones), para. 7.5.5.36.

⁸³⁷⁹ Exhibit P1205; exhibit P1211; exhibit P1259, pp 239-432; exhibit P1123; Gary Platt, T. 9 February 2017, pp 76-77; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 598; John Edward Philips, T. 5 September 2016, pp 71-72, T. 6 September 2016, pp 66-67; exhibit P1116 (Expert report of John Edward Philips – Green mission phones), paras 7.5.5.34-7.5.5.35. *See also* exhibit P1118 (PowerPoint presentation on common mission phones, John Edward Philips), slides 122, 153. Before the Green 300 calls activating Tripoli cells, Mr Ayyash's personal mobile 935 activated a cell that Mr Philips and Mr Platt described as being potentially en route to Tripoli. John Edward Philips, T. 6 September 2016, pp 66-67; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 594, table 74 (p. 183).

(ff) Friday 14 January 2005

4418. On Friday 14 January 2005, Mr Hariri received visitors at Quraitem Palace between 07:50 and 20:30.⁸³⁸⁰

4419. The amended consolidated indictment pleads that ‘All eight Red Network phones were used to observe HARIRI or locations connected with him between 14 January 2005 and 12 February 2005’.⁸³⁸¹ According to the Prosecution’s Pre-trial brief:

On 14 January 2005, Subjects began using Red Network phones while conducting observations. On this day, while HARIRI had appointments at Quraitem Palace, users of Red Network phones were in contact with each other on at least 32 occasions around Quraitem Palace, Parliament and Faqra.⁸³⁸²

4420. Mr Platt commented that this day was ‘the first use of the Red Network phones’. They were involved in ‘activity around Quraitem Palace, the Parliament area, the route between Quraitem Palace-Faqra villa-Zouk-Mosbeh, and also Faraya, and also in Tripoli’.⁸³⁸³ The activity took place throughout the course of the day and involved all the Red mobiles.

4421. According to Mr Platt, there was no ‘attempt to follow any of the movements of Mr. Hariri’, and there was no direct surveillance, but rather, ‘preparation for further surveillance’.⁸³⁸⁴ He described it as ‘almost a scouting day, a scouting process...consistent with doing some sort of preparatory work for surveillance’.⁸³⁸⁵

⁸³⁸⁰ Exhibit P301; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 616.

⁸³⁸¹ Amended consolidated indictment, para. 15 (a).

⁸³⁸² Prosecution’s updated pre-trial brief (Ayyash, Badreddine, Oneissi and Sabra case), para. 72.

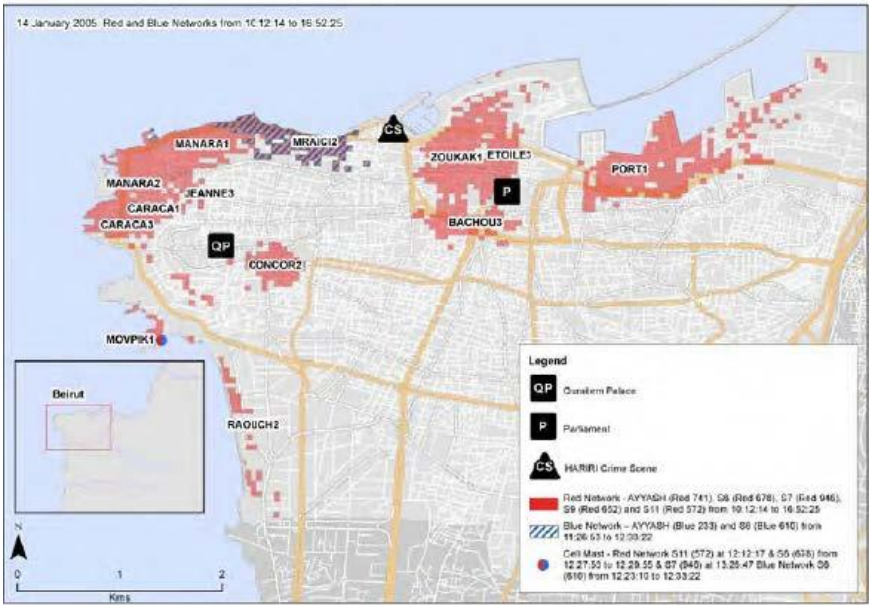

⁸³⁸³ Gary Platt, T. 13 February 2017, p. 48.

⁸³⁸⁴ Gary Platt, T. 13 February 2017, pp 49, 62. This was in response to a judicial question (from Judge Braidy), ‘Mr. Platt, I’m sorry. It isn’t clear for me. You said that they were not conducting surveillance, the Red Network now in this day. But you said that they are on the same -- in the same location that usually we have seen the Blue. What is the difference? When you said for the Blue -- the Blue they are conducting in this location, not in the immediate vicinity of Quraitem Palace but in the area, what do you call it, area, it’s more -- for example, for -- I don’t know, CARACA, Bashoura_ -- or not Bashoura_, CARACA and maybe MANARA1, maybe, so why you arrive to this conclusion that they are not conducting surveillance. They are only exploring the location, you mean?’.

Mr Platt, in answering, also stated that Mr Hariri was at Quraitem Palace and had not travelled from there, ‘it’s a Wednesday, and we know that usually it’s during the holiday period or the weekends that he travelled’. However, the Trial Chamber notes that 14 January was a Friday, so Mr Platt was inadvertently in error.

⁸³⁸⁵ Gary Platt, T. 13 February 2017, p. 49.

4422. Mr Platt plotted part of the network mobile activity on this day in the map below:

Map 62: Red and Blue Network (Ayyash, S6, S7, S9 and S11), Quraitem Palace, HARIRI Crime Scene and Parliament, 14 January 2005 (10:12 to 16:52)

Exhibit P1783 (Expert report of Gary Platt – Chronology), p. 194

4423. The table below shows most of the Red network calls that Mr Platt highlighted for this day:

Time (hh:mm:ss)	Outgoing	Cell name	Duration (secs)	Incoming	Cell name
11:43:35	146B93C0	n/a	0 (SMS)	Red 652 [S9]	MRAICI2
11:49:03	Red 652 [S9]	MRAICI2	1	Red 678 [S6]	MRAICI2

Exhibit P1783 (Expert report of Gary Platt – Chronology), p. 193

(gg) Monday 17 January 2005

4424. Between Monday 17 and Thursday 27 January 2005, the nine Blue mobiles which were activated between Friday 7 and Wednesday 12 January 2005 became active.⁸³⁸⁶ Blue 864 was unusually active in a cell coverage area immediately to the east of Beirut airport, particularly on 19, 24 and 26 January 2005. There were frequent calls between Mr Ayyash's Green 300 and Mr Badreddine's Green 023.

4425. On Monday 17 January, Mr Hariri remained at home all day.⁸³⁸⁷ At 22:08, on Monday 17 January 2005, Mr Ayyash's Green 300 made a 16-second call to Green 023.⁸³⁸⁸ This was the first call between the two numbers since Saturday 15 January.⁸³⁸⁹ Both activated BRAJNE3 at the start of the call; the respective end cells were MRAIJE1 (Green 300) and ROUEIS3 (Green 023).⁸³⁹⁰ The Prosecution submits that this call triggered subsequent Blue network activity.⁸³⁹¹

4426. At 22:39, Mr Ayyash's Blue 233 called Blue 322 connecting to Saquiet_Hadath_2_C, adjacent to BRANJE3.⁸³⁹² This was the fourth of six calls between Blue 233 and Blue 322 that day. Blue 233 activated Saquiet_Hadath_2_C also on the two later calls, at 23:05 and 23:31.⁸³⁹³

4427. According to Mr Platt, the sequence of calls at 22:08 and 22:39 is 'consistent with' the users of Green 300 and Green 023 meeting.⁸³⁹⁴ He pointed to the short duration of the call, the proximity of the mobiles and the half hour of inactivity of all mobiles after the 22:08 call.⁸³⁹⁵

(hh) Tuesday 18 January 2005

4428. Mr Hariri spent Tuesday 18 January 2005 receiving visitors at Quraitem Palace.⁸³⁹⁶ That day there were 54 calls between 13 of the Blue mobiles, namely Blue 610, Blue 817, Blue 864,

⁸³⁸⁶ See chapter VIII 'Nature and purpose of colour-coded mobile networks and purple group of mobiles', (E) (1) 'Setting up the network'.

⁸³⁹⁶ Exhibit P301; exhibit P1782, para. 641.

Blue 428, Blue 742, Blue 940, Blue 585, Blue 324, Blue 322, Mr Ayyash's Blue 233, Blue 235, Blue 501 and Blue 967.⁸³⁹⁷ Of these, Blue 233 was 'most dominant', being part of 25 calls.⁸³⁹⁸

4429. Cells in south Beirut were activated the most often,⁸³⁹⁹ with the exception of Blue 610, Blue 864 and Blue 233.⁸⁴⁰⁰ The Prosecution's cell site expert, Mr Philips produced the following table illustrating the top five cells used by Blue network mobiles on 18 January 2005:

Cell name	Times used	% util
Sfeir_B	17	15.60%
SFEIR2	14	12.84%
Sfeir_A	10	9.17%
Hadath_C	6	5.50%
Hai El Soullum_C	5	4.59%

Exhibit P1115 (Expert report of John Edward Philips—15 Blue mission phones), table 97 (p. 175)

4430. Call data records show that Blue 864 travelled to the Baalbek area on the morning of 18 January 2005 and spent several hours there before returning to Dahyieh. In this time, Blue 864 had contact with Subject 6's Blue 610 and Blue 501.⁸⁴⁰¹

4431. At 14:57, Mr Ayyash's Green 300 called Mr Badreddine's Green 023 for 57 seconds.⁸⁴⁰² The users were in separate locations in south Beirut.⁸⁴⁰³ Mr Platt accorded significance to the

⁸⁴⁰² Exhibit P1207, p. 3; exhibit P1211, p. 4; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 691.

⁸⁴⁰³ The mobiles activated OZAIMB2/AIB3 (Green 300) and ROUEIS3 (Green 023). Exhibit P1207, p. 3; exhibit P1211, p. 4; Gary Platt, T. 16 February 2017, p. 29; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 691.

relatively long duration of this call compared to other Green network calls.⁸⁴⁰⁴ Green 300 again called Green 023 at 16:07.⁸⁴⁰⁵ By the time of this 25-second call, Mr Ayyash's Green 300 had moved to the port area, whereas Mr Badreddine's Green 023 connected to the same cell.⁸⁴⁰⁶ Forty minutes later, at 16:49, Green 023 called Green 300.⁸⁴⁰⁷ For this third call, lasting 22 seconds, Green 023 activated start and end cells indicating movement north from the user's earlier location.⁸⁴⁰⁸

4432. Mr Badreddine's Green 023 arrived in the same area as Mr Ayyash's Green 300 shortly after 17:00. At 17:07, Green 023 called Green 300 for their fourth and final 68-second call, and the two activated the same cell, PORT2.⁸⁴⁰⁹ This is one of their longest calls and to Mr Platt shows that there was 'something of significance to discuss'.⁸⁴¹⁰

4433. Mr Platt took the view that the users of Green 023 and Green 300 met in the port area.⁸⁴¹¹ He concluded this based on the following factors: the preceding sequence of calls showed one user travelling to the area, followed by the other; the subsequent inactivity on all mobiles attributed to each. Mr Badreddine's personal mobile 633, was turned off over the period; there were no further calls between Green 023 and Green 300 on 18 January 2005; and finally, the location was significant.⁸⁴¹²

4434. From 18:18 on Tuesday 18 January until 00:26 the next morning Wednesday 19 January, Mr Ayyash's Blue 233 was involved in 19 calls with other Blue mobiles, including Blue 585 (four calls), Blue 864 (four), Blue 322 (three), Blue 742 (three), Blue 501 (two), Blue 817 (one), Blue 428 (one) and Blue 610 (one).⁸⁴¹³

⁸⁴¹³ Exhibit P1238, pp 2-3.

4435. Just before midnight on 18 January 2005, Blue 742 travelled from south Beirut to the area of Anjar, near the Syrian border. The journey was a short one, with Blue 742 returning to Dahyieh shortly after 01:00 on Wednesday 19 January.⁸⁴¹⁴

4436. Mr Platt stated that the last call before Blue 742's departure was at 23:18, the user had reached the area of Anjar by 00:04 and returned to south Beirut by 01:12 and that a journey to Anjar would take between 45 minutes and one hour. On this basis, if Blue 742 went to Anjar, the trip would have been 'quite quick' or 'almost there and back'.⁸⁴¹⁵ Noting the 'extensive' coverage area of cells in the area, Mr Platt thought that 'theoretically he could have gone to Anjar but equally he could have gone elsewhere in this area'.⁸⁴¹⁶ Mr Platt did not venture an opinion on the purpose of the trip. Prosecution counsel associated the area with the location of the Syrian Military Intelligence headquarters.⁸⁴¹⁷ Mr Rustom Ghazaleh, the head of Syrian military intelligence in Lebanon had his main headquarters in Anjar.⁸⁴¹⁸

4437. Twelve minutes before Blue 742 activated a cell in Dahyieh, at 00:59 on Wednesday 19 January 2005, Mr Ayyash's Green 300 called Mr Badreddine's Green 023, for two minutes and 20 seconds.⁸⁴¹⁹ Green 023 returned the call at 01:05 for about a minute and a half.⁸⁴²⁰ These were, respectively, the second and fourth longest calls between them.⁸⁴²¹

4438. That the Green network calls occurred about half an hour after Blue 742 was in contact with Mr Ayyash's Blue 233 on the user's return from Anjar, in Mr Platt's view, suggested that the two could be connected.⁸⁴²² Mr Platt added, however, that 'there was a number of significant events

⁸⁴²² During its trip to Anjar, Blue 742 was in contact with Mr Ayyash's Blue 233 two other times. Gary Platt, T. 16 February 2017, pp 78, 93; exhibit 1230, p. 3; exhibit P1238, p. 3.

taking place during this phase’ that may have required discussion between Green 300 and Green 023.⁸⁴²³

(ii) Wednesday 19 January 2005

4439. Between Wednesday 19 and Friday 28 January 2005, there were 39 calls between Blue 864 and other Blue network mobiles for which Blue 864 used only three adjoining cells that together provide predicted best server coverage to an area next to the airport, to its east.⁸⁴²⁴

4440. Mr Philips testified that there were a lot of commercial buildings, rather than domestic dwellings, in that area.⁸⁴²⁵ With each call, Blue 864 activated either one or a combination of two of Alfa’s cells, KARAME3, AIB2 and AIB3.⁸⁴²⁶

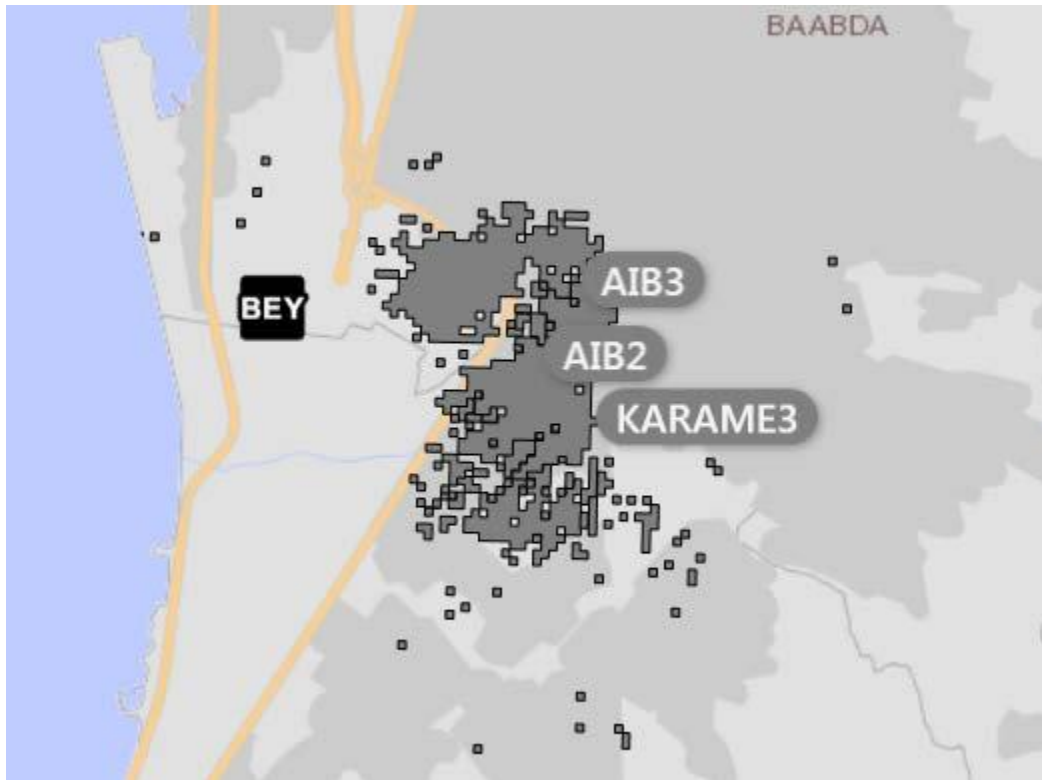

4441. For convenience, the Trial Chamber here adopts the Prosecution’s terminology and refers to those three cells collectively as the ‘east-of-airport cells’—but noting that other cells also provide coverage to areas further east of the airport. It has created a map from the electronic presentation of evidence, in which the three Alfa cells are marked and the airport is marked by its IATA code of ‘BEY’:

*'East-of-airport' cells created by the Trial Chamber from electronic presentation of evidence,
exhibit P592.1*

4442. Most of the 39 calls using the east-of-airport cells were on Wednesday 19, Monday 24 and Wednesday 26 January 2005. Thirteen were on 19 January,⁸⁴²⁷ nine on 24 January⁸⁴²⁸ and ten on 26 January.⁸⁴²⁹ Two-thirds of the calls—26 out of 39—were with Mr Ayyash's Blue 233.⁸⁴³⁰ According to Mr Platt and Mr Philips, other than this period of activity, it was uncommon for Blue 864 or any other mobile in the covert networks to use the east-of-airport cells.⁸⁴³¹

⁸⁴²⁷ Exhibit P1227, p. 9; exhibit P1228, pp 5-6; exhibit P1259, pp 339-340.

⁸⁴³⁰ Exhibit P1228, pp 5-9; exhibit P1259, pp 339-340, 342, 344-349.

⁸⁴³¹ Gary Platt, T. 16 February 2017, pp 106, 113-115, T. 21 February 2017, p. 61; exhibit P1115 (Expert report of John Edward Philips – 15 Blue mission phones), paras 6.9.63.32, 6.9.64.2-6.9.64.4; John Edward Philips, T. 31 August 2016, pp 105-106, T. 2 September 2016, pp 89-91, T. 5 September 2016, pp 30-31; *see also* exhibit P1118, slides 37-38, 111-112, 117-118.

4443. Another feature of Blue 864's calls using the east-of-airport cells in this period was that about 30 per cent of those with Mr Ayyash's Blue 233 were in the early hours of the morning⁸⁴³²—also highly unusual for these mobiles.⁸⁴³³ Further, Mr Philips underlined that one of these Blue 864's calls with Mr Ayyash was close in time to a previous call between Mr Ayyash's and Mr Badreddine's Green mobiles. He termed this a hierarchical call flow.⁸⁴³⁴

4444. In the summary below, the Trial Chamber has specifically described the predicted best server coverage area of cells that calls activated only if the location was unusual given the mobiles' usual use patterns, or otherwise appears to be particularly significant.

4445. The Green mobiles' activity on Wednesday 19 January 2005 included five calls between Mr Badreddine's Green 023 and Mr Ayyash's Green 300.⁸⁴³⁵ In addition, there were 44 Blue mobile calls, using 12 different Blue mobiles.⁸⁴³⁶ Blue 864 made or received over 30 per cent of them, 14 calls.⁸⁴³⁷

4446. Thirteen of the 14 calls on 19 January 2005—all of those after the call at 00:06 to Blue 813⁸⁴³⁸—activated only the east-of-airport cells.⁸⁴³⁹ The first of these was at 05:22 to Mr Ayyash's Blue 233.⁸⁴⁴⁰ The last was at 22:01.⁸⁴⁴¹ Mr Philips concluded that Blue 864 was at, or in the area of, the airport over a significant period on 19 January 2005, 'with apparent limited movement'.⁸⁴⁴²

⁸⁴³² Eight of the 26 calls were with Blue 233—approximately 20 per cent of Blue 864's 39 calls using these cells. Exhibit P1228, pp 5-9; John Edward Philips, T. 5 September 2016, p. 40; Gary Platt, T. 16 February 2017, p. 107, T. 21 February 2017, p. 61, T. 22 February 2017, p. 16; exhibit P1118, slide. 117.

⁸⁴³⁸ Which activated BRAJNE1, a cell in south Beirut. Exhibit P1228, p. 5; exhibit P1232, p. 3; exhibit P1123.

⁸⁴³⁹ Exhibit P1228, pp 5-6.

⁸⁴⁴⁰ Exhibit P1228, p. 5.

⁸⁴⁴¹ Exhibit P1228, p. 6; exhibit P1227, p. 9.

⁸⁴⁴² Exhibit P1115 (Expert report of John Edward Philips – 15 Blue mission phones), para. 6.9.63.8; John Edward Philips, T. 5 September 2016, p. 45.

4447. All 13 calls on 19 January 2005 using the east-of-airport cells were with either Mr Ayyash's Blue 233 or Subject 6's Blue 610.⁸⁴⁴³ Blue 233 was especially active on 19 January 2005 too, making or receiving about 61 per cent of the 44 Blue mobile calls that day⁸⁴⁴⁴ and connecting with seven Blue mobiles. Mr Badreddine's Green 023 called Mr Ayyash's Green 300 at 21:02.⁸⁴⁴⁵

(jj) Thursday 20 January 2005

4448. The Prosecutor pleads in the amended consolidated indictment that on Thursday 20 January 2005:

HARIRI was scheduled to attend the Grand Mosque of Beirut in the morning but instead attended the Imam Ali Mosque for Eid prayers. All active **Red Network** phones operated for less than one hour in the vicinity of Quraitem Palace and the Grand Mosque. **AYYASH**, on **Red 741**, participated in the observations on that day. In the hours before the **Red Network** observations, Mustafa BADREDDINE on **Green 023** was in contact with **AYYASH** on **Green 300** and, subsequently, **MERHI** on **Green 071**.⁸⁴⁴⁶

4449. That day, Mr Hariri attended the *Al Imam Ali bin Abi Taleb* Mosque for *Eid Al-Adha* for early morning prayers between 06:55 and 08:00. Afterwards, he opened the doors to Quraitem Palace to members of the public who came to greet him for the occasion. Red network mobile activity that morning was concentrated around a different mosque, namely the *Al-Omari* Mosque.

4450. In the early hours, Mr Ayyash's Blue 233 received a call from Blue 864.⁸⁴⁴⁷ Immediately after, Mr Badreddine's Green 023 called Mr Ayyash's Green 300 three times in quick succession at 00:39, 00:40 and 00:41, with the calls lasting eight, 24 and 21 seconds.⁸⁴⁴⁸

4451. Mr Hariri usually attended the *Al-Omari* Mosque—which is in central Beirut and close to Parliament—for *Eid* morning prayers.⁸⁴⁴⁹ After his resignation in October 2004, and to show his presence elsewhere, Mr Hariri went more often to a mosque in a less commercial and more residential area full of his supporters, namely the *Al Imam Ali bin Abi Taleb* Mosque in Tareek El-

⁸⁴⁴³ Exhibit P1228, pp 5-6.

⁸⁴⁴⁴ Twenty-seven calls in total. Exhibit P1259, pp 339-340.

⁸⁴⁴⁶ Amended consolidated indictment, para. 30.

⁸⁴⁴⁷ Exhibit P1228, p. 6. Blue 233 connected to Sfeir_B; exhibit P1238, p. 3.

⁸⁴⁴⁸ Exhibit P1211, p. 4; exhibit P1207, p. 4.

⁸⁴⁴⁹ Exhibit P1186 (Statement of Witness PRH009), para. 28.

Jdeedeh.⁸⁴⁵⁰ Mr Hariri went there on 20 January 2005.⁸⁴⁵¹ Mobiles used by Mr Hariri's security detail activated cells Sabra_C (07:05), Sabra_A (08:02) and Sinjab_A (09:20), in the mosque area.⁸⁴⁵² Below is a photograph of Mr Hariri at the *Al Imam Ali bin Abi Taleb* Mosque that day.

Exhibit P91 (Photographs taken on 20 January 2005), ERN D0003920

4452. Mr Platt thought that these calls suggested that Mr Hariri was at the mosque between approximately 07:00 and 09:00 and, by 09:20, was moving away from it.⁸⁴⁵³ One of Mr Hariri's bodyguards activated cells Concorde_B at 09:46 and Fadlallah_C at 09:48, showing that Mr Hariri had at that time returned to Quraitem Palace.⁸⁴⁵⁴

⁸⁴⁵⁰ Exhibit P1168 (Statement of Witness PRH101), para. 35.

⁸⁴⁵³ Gary Platt, T. 21 February 2017, p. 8. *See also* exhibit P111 (Witness statement of Helena Habraken regarding timing of photographs taken on 20 January 2005).

⁸⁴⁵⁴ Exhibit P1322, p. 63; Gary Platt, T. 21 February 2017, pp 11-12.

4453. Between 07:21 and 08:05, there was a burst of activity on the Red network. Mr Ayyash's Red 741 and six others—Red 893, Red 652, Red 678, Red 662, Red 636 and Red 946—activated cells in the area of the *Al-Omari* Mosque and Parliament.⁸⁴⁵⁵ By 08:03, Subject 8's Red 893 had moved to the area of Quraitem Palace, activating CONCOR2.⁸⁴⁵⁶ The final red call was at 08:05, when Red 741 (PORT2) called Red 893, which was still located in the area of Quraitem Palace (RAOUCH1).⁸⁴⁵⁷

4454. The map below in Mr Platt's chronology report, depicts the predicted best server coverage of the cells activated by the Red network mobiles at this time:

⁸⁴⁵⁵ Exhibit P1197, p. 1, calls nos 7-15; exhibit P1198, p. 1, calls nos 11-16; exhibit P1199, p. 1, calls nos 18-20; exhibit P1201, p. 1, calls nos 3-6; exhibit P1202, p. 1, calls nos 12-13; exhibit P1203, p. 1, calls nos 4-5; exhibit P1204, p. 1, calls nos 22-27; Gary Platt, T. 21 February 2017, pp 8-9, 13-14; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 717.

⁸⁴⁵⁶ Exhibit P1198, p. 1; Gary Platt, T. 21 February 2017, pp 14-16; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 719, 1264.

⁸⁴⁵⁷ Exhibit P1197, p. 1; exhibit P1198, p. 1; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 720.

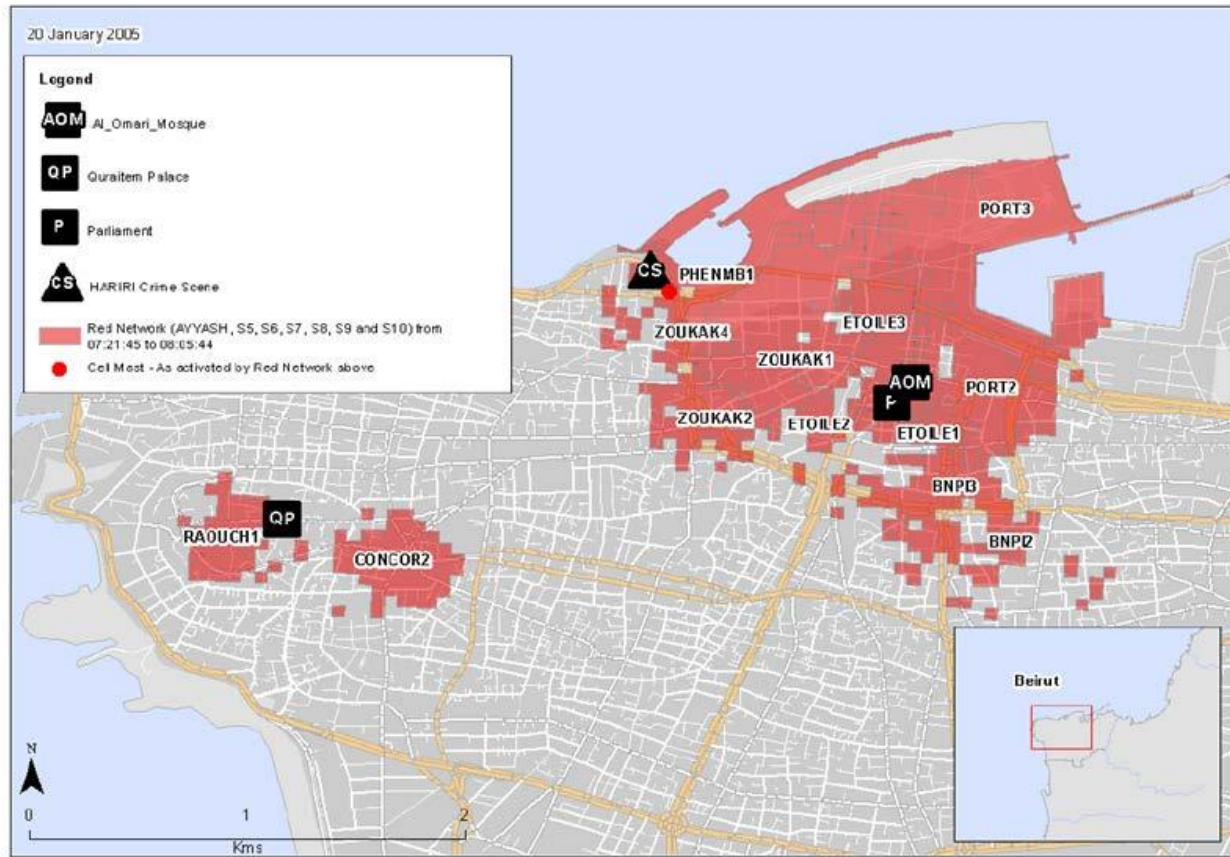

Exhibit P1783 (Expert report of Gary Platt – Chronology), p. 215

4455. Mr Platt was of the view that on 18 January 2005, Mr Badreddine's and Mr Ayyash's Green mobiles had engaged in a 'scoping operation'.

4456. He thought that they were preparing to move surveillance efforts from the road between Quraitem Palace and Faqra Villa—the focus of previous surveillance—to the area of Parliament and the route between Parliament and Quraitem Palace, a 'slightly different route' from that—frequently travelled by Mr Hariri—from Faqra villa to Quraitem Palace.⁸⁴⁵⁸ Red network mobile users attempted, albeit unsuccessfully, to start this surveillance on Thursday 20 January 2005, based on erroneous information or an estimation that Mr Hariri would attend the *Al-Omari*

⁸⁴⁵⁸ Gary Platt, T. 21 February 2017, pp 16-23.

⁸⁴⁵⁸ Exhibit P1783 (Expert report of Gary Platt – Chronology), p. 215; Gary Platt, T. 21 February 2017, pp 16-23.

Mosque.⁸⁴⁵⁹ Realising that Mr Hariri would not be there, in the next 45 minutes users of the Red mobiles debated their course of action before ending the operation.⁸⁴⁶⁰

4457. Finally, at 10:31 Mr Ayyash's Green 300 called Mr Badreddine's Green 023—the fourth Green call of 20 January 2005.⁸⁴⁶¹ In Mr Platt's view, the purpose of this call was likely for Green 300 to update Green 023 about the events of the morning.⁸⁴⁶²

4458. According to Mr Philips, there was comparatively little Blue network mobile activity on 20 January 2005.⁸⁴⁶³ There were 14 calls between Blue mobiles in total.⁸⁴⁶⁴ Blue 864 used one of the east-of-airport cells to make one of its four calls that day.⁸⁴⁶⁵ That call was at 17:41 to Blue 610.⁸⁴⁶⁶ Blue 864 then made two calls to Blue 501 late that night,⁸⁴⁶⁷ but activating cells outside Beirut, in southern Lebanon.⁸⁴⁶⁸

(kk) Friday 21 to Sunday 23 January 2005

4459. Blue 864's only call on Friday 21 January 2005 activated one of the east-of-airport cells, AIB3.⁸⁴⁶⁹ That call was to Mr Ayyash's Blue 233 at 15:13.⁸⁴⁷⁰ Blue 864 did not make or receive any calls using any of the east-of-airport cells on 22 January 2005.⁸⁴⁷¹ On that day, between 12:44 and 16:17, Blue 864 or Subject 5's Blue 585 activated cells in the Quraitem Palace area.⁸⁴⁷²

⁸⁴⁷¹ Exhibit P1228, pp 6-7.

⁸⁴⁷² Exhibit P1783 (Expert report of Gary Platt – Chronology), paras 731-736, table 93 (p. 218).

4460. Of the nine calls Blue 864 made or received on 23 January 2005, only one activated the east-of-airport cells.⁸⁴⁷³ Specifically, Blue 864 called Blue 233 at 01:38 that day.⁸⁴⁷⁴

(II) Monday 24 January 2005

4461. Monday 24 January 2005 was another day of comparatively high levels of both Blue mobile calls generally, with 39 in total using ten different Blue numbers,⁸⁴⁷⁵ and Blue 864's calls using the east-of-airport cells.

4462. That morning, Blue 233 called Blue 864.⁸⁴⁷⁶ Blue 864 used cells in Beirut, but not the east-of-airport cells, when it received that call.⁸⁴⁷⁷ Mr Platt thought that because that call immediately followed a call from Mr Ayyash's personal mobile 170 to a mobile allegedly attributed to Subject 816, the two calls were related.⁸⁴⁷⁸

4463. Eight of Blue 864's 12 calls on 24 January 2005, and all of those after midday until 20:45 that night, activated the east-of-airport cells.⁸⁴⁷⁹ A ninth call from Blue 864, at 11:55 to Blue 235,⁸⁴⁸⁰ activated a fourth cell that provided coverage to scattered areas both to and east of the airport, but mainly south-east of the area covered by the three east-of-airport cells together, at its start. That call then activated one of the east-of-airport cells at its end.⁸⁴⁸¹ Mr Philips concluded regarding Blue 864's calls that day that that mobile appeared to spend much of that day, from late morning to approaching 21:00, in an area around the airport.⁸⁴⁸²

⁸⁴⁷³ Exhibit P1228, p. 7.

⁸⁴⁷⁴ For 146 or 147 seconds, Blue 864 activated AIB2/KARAME3, Blue 233 activated Sfeir_A. Exhibit P1228, p. 7; exhibit P1259, p. 344.

⁸⁴⁷⁵ Exhibit P1224, pp 2-3; exhibit P1225, p. 9; exhibit P1226, pp 2-3; exhibit P1228, pp 7-8; exhibit P1230, p. 3; exhibit P1231, pp 3-4; exhibit P1234, pp 4-5; exhibit P1236, p. 5; exhibit P1237, p. 2; exhibit P1259, pp 344-346; exhibit P1115 (Expert report of John Edward Philips – 15 Blue mission phones), paras 6.9.37.2-6.9.37.4, 6.9.37.13, 6.9.45.14, graph 4 (p. 214; Gary Platt, T. 21 February 2017, pp 80-81, 85, referring to exhibit P1889, slides 146, 152.

⁸⁴⁷⁶ At 08:57, Blue 233 activated Sfeir_A. Exhibit P1259, p. 344; exhibit P1228, p. 7.

⁸⁴⁷⁷ SFEIR2/MIKAEL2. Exhibit P1228, p. 7; exhibit P1123.

⁸⁴⁷⁸ Gary Platt, T. 21 February 2017, pp 62, 67-68, 77.

⁸⁴⁷⁹ Exhibit P1228, p. 7.

⁸⁴⁸⁰ Blue 235 activated Sfeir_B in south Beirut. Exhibit P1228, p. 7; exhibit P1226, p. 2; exhibit P1122.

⁸⁴⁸¹ MATAR6/KARAME3. Exhibit P1228, p. 7; exhibit P1123; exhibit P1115 (Expert report of John Edward Philips – 15 Blue mission phones), para. 6.9.63.13. Blue 864's remaining three calls on 24 January 2005 were the call at 08:57 from Blue 233, an earlier call at 08:37 to Blue 324 (Blue 864 activated RADOUF3 and Blue 324 activated Haret Hreik-II_C) and a final call from Blue 233 at 21:57 (Blue 233 activated Sfeir_A and Blue 864 activated HADATH3 and BRAJNE1). Exhibit P1228, pp 7-8; exhibit P1225, p. 9; exhibit P1259, p. 346; exhibit P1122; exhibit P1123.

⁸⁴⁸² Exhibit P1115 (Expert report of John Edward Philips – 15 Blue mission phones), para. 6.9.37.9.

4464. There was also one call between Green mobiles on Tuesday 24 January 2005. At 17:45 that day, Mr Ayyash's Green 300 called Mr Badreddine's Green 023.⁸⁴⁸³ Mr Platt testified that this call was 'a possible link to the activities that occur the next day involving the purchase of the Mitsubishi Canter in Tripoli'.⁸⁴⁸⁴ The Trial Chamber has found that the Canter was purchased either on Monday 17 or Tuesday 25 January, with 25 January being the more likely date.⁸⁴⁸⁵

(mm) Wednesday 26 January 2005

4465. On Wednesday 26 January 2005, most Blue mobiles were used, and Blue 864 resumed its use of the east-of-airport cells. It then continued to use them on both Thursday 27 and Friday 28 January 2005. However, none of the Green network mobiles was used on that day.⁸⁴⁸⁶

4466. Blue 864's calls on 26 January 2005 activated the east-of-airport cells only.⁸⁴⁸⁷ There were ten calls involving Blue 864, with three other Blue mobiles, namely Mr Ayyash's Blue 233 (four calls), Blue 501 (two calls) and Blue 324 (four calls).⁸⁴⁸⁸ One of Blue 864's two calls to Blue 501 on 26 January 2005 was unusually long compared to other network mobile calls. At approximately six and a half minutes' duration, it was—according to Mr Philips—the second-longest call any network mobile made.⁸⁴⁸⁹

4467. Apart from the first call—a 54 or 55-second call from Blue 233 at 12:33⁸⁴⁹⁰—Blue 864's calls on 26 January 2005 using the east-of-airport cells occurred after 17:00. They continued until late that night, and overnight. After Blue 864's last call of 26 January 2005, one from Blue 233 at 23:04 that night,⁸⁴⁹¹ the same two mobiles exchanged three more calls in the early hours of the next day, 27 January 2005—at 01:10, 05:44 and 06:07.⁸⁴⁹² Mr Philips suggested that on

⁸⁴⁸⁷ Exhibit P1228, p. 8.

⁸⁴⁸⁸ Those mobiles activated (Blue 233) Sfeir_A, Hai_El_kneisseh_B, (Blue 501) Sfeir_B and (Blue 324) Mraijeh_C, Bir Abed_C and Haret Hreik-II_B. Exhibit P1228, p. 8; exhibit P1259, pp 347-348; exhibit P1237, p. 3; exhibit P1225, pp 9-10.

⁸⁴⁸⁹ Starting at 17:02. Exhibit P1228, p. 8; exhibit P1237, p. 3; John Edward Philips, T. 5 September 2016, p.47.

⁸⁴⁹⁰ Exhibit P1228, p. 8; exhibit P1259, p. 347.

⁸⁴⁹¹ Exhibit P1228, p. 8; exhibit P1259, p. 348.

⁸⁴⁹² Blue 233 activating Sfeir_B, Sfeir_A and Hadath_C. Exhibit P1228, p. 8; exhibit P1259, p. 348.

26 January 2005, Blue 864 was in the area covered by the east-of-airport cells ‘seemingly over an extended period from around midday to after 23:00’.⁸⁴⁹³

4468. Blue 864 also made two calls to Blue 233, using the east-of-airport cells, at 00:16 and 00:43 or 00:44 on Friday 28 January 2005.⁸⁴⁹⁴

4469. In addition, on 26 January 2005, contact between Blue network mobiles was generally extensive. Every Blue mobile, except Blue 817, Blue 585, Blue 965⁸⁴⁹⁵ and Blue 813,⁸⁴⁹⁶ was in contact with another Blue mobile on 26 January 2005.⁸⁴⁹⁷ Moreover, each of those four mobiles was in contact with at least one other Blue network mobile on at least one other day in the period from Wednesday 19 to Thursday 27 January 2005.

4470. Mr Philips described the Blue mobile activity from Tuesday 18 to around Wednesday 26 January 2005, as ‘strikingly exceptional’.⁸⁴⁹⁸ In his view, whereas it may not be conclusive for one or two Blue mobile calls to have activated cells in the area of the airport at other times,⁸⁴⁹⁹ the volume and timing of the calls activating such cells in this period made them significant.⁸⁵⁰⁰ Regarding the Blue 864 to Blue 233 calls in the early morning, particularly, he concluded that ‘there was something about that ... location which warranted not only the contact but the contact at this time.’⁸⁵⁰¹

4471. Mr Philips likewise opined that the apparent movements of mobiles to Baalbek, Anjar and Tripoli in this period were significant,⁸⁵⁰² showing—along with mobiles’ apparent presence in the

⁸⁴⁹³ Exhibit P1115 (Expert report of John Edward Philips – 15 Blue mission phones), para. 6.9.63.16.

⁸⁴⁹⁴ Blue 233 activating south Beirut cells Hazmiyeh_2_B and Hadath_C, respectively. Exhibit P1228, p. 9; exhibit P1259, p. 349; exhibit P1122.

⁸⁴⁹⁵ None of Blue 817, Blue 585 and Blue 965 made or received any calls, or sent any text messages, on 26 January 2005. Exhibit P1239, p. 6; exhibit P1229, p. 12; exhibit P1235, p. 1.

⁸⁴⁹⁶ Blue 813’s sole recorded activity on 26 January 2005 was an SMS, from a number not alleged to form part of one of the networks. Exhibit P1232, p. 3; exhibit P1115 (Expert report of John Edward Philips – 15 Blue mission phones), para. 6.9.39.7.

⁸⁴⁹⁷ Exhibit P1115 (Expert report of John Edward Philips – 15 Blue mission phones), paras 6.9.39.4-6.9.39.6.

⁸⁵⁰² John Edward Philips, T. 6 September 2016, pp 57, 65-66; T. 2 September 2016, pp 89-90.

area immediately east of the airport—that a set-up phase was occurring.⁸⁵⁰³ He also concluded that Blue 233's involvement was central to all four of these movement patterns.⁸⁵⁰⁴ In cross-examination, Mr Platt said that he had distanced himself from the issue of the mobile activity using the three east-of-airport cells—by which he appeared to mean that he considered the evidence too limited to be able to deduce much from it. Mr Platt stated, referring to the slides he had prepared with Prosecution counsel and commented on when testifying:

There was a number of slides that went in and I said, well, I can only say this or that. I mean. And I must say that the east of airport cells was one of those where I distanced myself from, so to speak. So that was another example of saying, okay, you can leave it in. You can say the phones were active there, but ... there's not an event or a location there to connect their activity there.⁸⁵⁰⁵

4472. In Mr Philips's opinion, there was a relationship between Blue and Green mobile activity in this period⁸⁵⁰⁶ and the sequence, or flow, of the relevant Blue and Green calls was 'hierarchical',⁸⁵⁰⁷ demonstrating 'the command structure'.⁸⁵⁰⁸ Mr Platt also testified that Blue and Green mobile calls in this period were connected.⁸⁵⁰⁹

(nn) Thursday 27 January 2005

4473. On Thursday 27 January 2005, Mr Hariri received visitors at Quraitem Palace and, around noon, attended the Parliament. Visitors, including Chaldean Bishop Michel Qassarji, were registered at Quraitem Palace as seeing Mr Hariri between 08:00 and 20:30.⁸⁵¹⁰

4474. Mr Platt highlighted how the call activity of members of Mr Hariri's security detail was consistent with him travelling via the coastal route from Quraitem Palace to Parliament and back

⁸⁵⁰⁸ John Edward Philips, T. 5 September 2016, p. 3; *see also* exhibit P1118, slide 123.

⁸⁵⁰⁹ Gary Platt, T. 21 February 2017, p. 5-6, 88-89; *See also* exhibit P1889, slides 6,162; exhibit P1902 (Chronology PowerPoint presentation – 20 January 2005 to 2 February 2005) slide 5.

⁸⁵¹⁰ Exhibit P301, pp 354-356; exhibit P303, ERN D0004936; exhibit P408 (Future TV footage of Mr Hariri); *see also* exhibit P1783 (Expert report of Gary Platt – Chronology), para. 767, which incorrectly states that visitors were registered between 8:00 and 21:00 for Mr Hariri; exhibit P1889, slide 216.

to Quraitem Palace again, sometime between 11:28 and 12:53.⁸⁵¹¹ Specifically, the security detail left the palace sometime after 11:28,⁸⁵¹² travelled via the coastal route⁸⁵¹³ and was present in the Parliament area between 11:56 and 12:41,⁸⁵¹⁴ arriving back by 12:53.⁸⁵¹⁵

4475. Mr Platt believed that there was surveillance of Mr Hariri at Parliament given that Subject 5's Blue 585 was active in the Parliament area well in advance of Mr Hariri's arrival. It then went on to use the same cell mast as the security detail around the time of Mr Hariri's arrival to call Mr Ayyash's Blue 233, consistent with informing the latter, who was located in Dahyieh, about Mr Hariri's arrival.⁸⁵¹⁶

4476. Mr Platt noted that the continued activity of Blue 585, Subject 7's Blue 324 and Subject 9's Blue 864 in central and west Beirut between 13:57 and 15:41 was consistent with a surveillance operation but not of the mobile type. Rather, it was consistent with presence in locations relevant to Mr Hariri, such as the areas of Quraitem Palace and the coastal road—which Mr Hariri frequently used to travel to Faqra Villa or Parliament—in case Mr Hariri would move there.⁸⁵¹⁷

⁸⁵¹¹ Exhibit P1783 (Expert report of Gary Platt – Chronology), paras 767, 773; Gary Platt, T. 22 February 2017, pp 18-19, 27, 29; *see also* exhibit P299 (Mr Hariri's 2005 Agenda Book), ERNs 60142157, 60037022. In his report, which preceded his testimony and does not include calls from mobile ending in 1506, Mr Platt's statements regarding when Mr Hariri was at the various points of this journey vary from those he made during his in-court testimony, detailed below.

⁸⁵¹² Mobile 506 activated cell Hamra_A at 11:14 and mobile 1506 activated cell LAU_MIC2_A at 11:28. Exhibit P1322, p. 68; exhibit P1352, p. 314; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 772; Gary Platt, T. 22 February 2017, p. 18. *See also* exhibit P1889, slides 205-206.

⁸⁵¹³ Mobile 771 then activated cells AUB_Sea_Gate_A (11:47) and Bay_View_A (11:49) and mobile 1506 activated cells Bay_View_C (11:48) and CoastRoad_C (11:53). Exhibit P1359, p. 293; exhibit P1352, p. 314; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 772; Gary Platt, T. 22 February 2017, p. 18. *See also* exhibit P1889, slides 205-206.

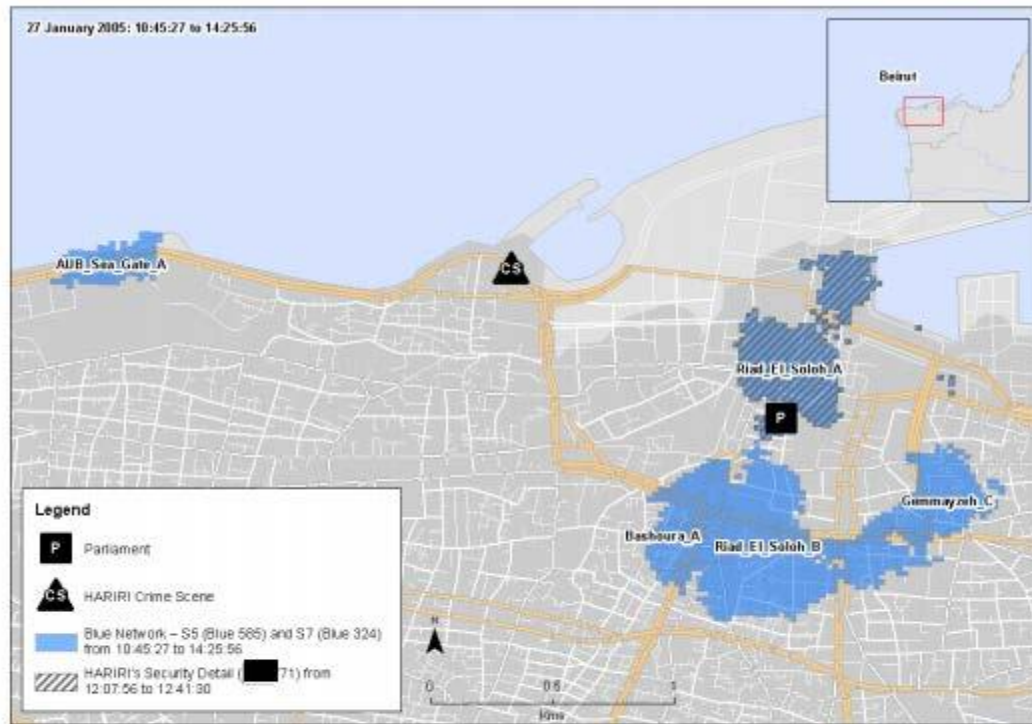

⁸⁵¹⁴ Mobile 771 activated cell Riad_El_Soloh_A (12:07, 12:19 and 12:41), which was also activated by mobile 1506 (12:09, 12:10, 12:11, 12:19, 12:24, 12:33, 12:35, 12:37 (twice), 12:38) alongside cell Riad_El_Soloh_C (11:56 and 12:41). Exhibit P1359, p. 293; exhibit P1352, p. 314; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 772; Gary Platt, T. 22 February 2017, pp 18-19, 27, 29. *See also* exhibit P1889, slides 205-214; exhibit P408; exhibit P357 (Photographs of Mr Hariri at Parliament on 27 January 2005), photographs 32, 34-35.

⁸⁵¹⁵ At 12:53, mobile 506 activated cell Fadlallah_C, mobile 771 activated cell LAU_MIC2_A and mobile 1506 activated cell Hamra_West_B. Exhibit P1322, p. 68; exhibit P1359, p. 293; exhibit P1352, p. 314; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 772; Gary Platt, T. 22 February 2017, p. 29. *See also* exhibit P1889, slides 209, 215-216.

⁸⁵¹⁶ Gary Platt, T. 22 February 2017, pp 20, 26-27. At 10:12, Blue 585 (Riad_El_Soloh_B) called service number 1343. At 10:45, Blue 233 called Blue 585 (Riad_El_Soloh_A); at 11:45, Blue 585 (Bashoura_A) called Blue 233, and at 11:56, Blue 585 (Riad_El_Soloh_A) again called Blue 233 (Mar Mikhael_C). In his report, Mr Platt also highlighted the 10:56 call between Blue 233 and Blue 864. Exhibit P1228, p. 8; exhibit P1229, p. 12; exhibit P1238, p. 6; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 771. *See also* exhibit P1889, slides 218-222.

⁸⁵¹⁷ Gary Platt, T. 22 February 2017, p. 30. At 13:57, Blue 324 (Riad_El_Soloh_B) called Blue 585 (Manara_B); at 14:24, Blue 585 (Mic_AUB-Sea_Gate) called Blue 233 (Hadath_C); at 14:25, Blue 233 (Hadath_C) called Blue 585 (call not recorded in call sequence table for this mobile number, so no cell information available); at 14:25, Blue 233 (Hnein_C) called Blue 324 (call not recorded in call sequence table for this mobile number, so no cell information available).

Mr Platt also pointed out that Mr Ayyash's Blue 233 was, during this time, in contact with subjects both in Beirut (Blue 585, Blue 324 and Blue 864) and in Tripoli (Subject 8's Blue 817), evidencing its coordinating role.⁸⁵¹⁸ Mr Platt mapped what he described as the Blue network surveillance in his chronology report on the following map:

Map 71: HARIRI's Security Detail (12:07 to 12:41) and Blue Network - S5 (10:45 to 14:25), Parliament, 27 January 2005

Exhibit P1783 (Expert report of Gary Platt – Chronology), p. 230

available) (this call was not included in the slide used in court with Mr Platt; *see* exhibit P1889, slide 225); at 14:25, Blue 233 (Hnein_C) called Blue 324 (Mic_AUB-Sea_Gate); at 14:37, Blue 864 (GHOBAl1) called Blue 322 (Sfeir_A); at 14:37, Blue 864 (GHOBAl3) called Blue 585 (Mic_Summerland); at 14:39, Blue 864 (PINS1) called Blue 324 (Riviera_B); at 14:53, Blue 864 (SAGESS1) called Blue 233 (Sfeir_B); at 15:22, Blue 817 (BAHSAS1) called Blue 233 (Sfeir_B); at 15:31, Blue 864 (SAGESS1) called Blue 817 (ENFE1); at 15:33, Blue 501 (Sfeir_B) called Blue 864 (SAGESS1); at 15:35, Blue 864 (JMAYZE1) called Blue 817 (BALAMA3); at 15:38, Blue 864 (SAGESS1) called Blue 501 (Sfeir_B); and at 15:41, Blue 864 (JMAYZE1) called Blue 324 (Riviera_B). Exhibit P1229, p. 12; exhibit P1225, p. 10; exhibit P1239, p. 7; exhibit P1228, p. 9; exhibit P1238, p. 6; exhibit P1236, p. 6; exhibit P1237, p. 3; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 774-777. *See also* exhibit P1889, slides 225-226.

⁸⁵¹⁸ Gary Platt, T. 22 February 2017, pp 31-32.

(oo) Friday 28 January 2005

4477. On Friday 28 January 2005, Mr Hariri received visitors at Quraitem Palace between 08:00 and 21:30. The visitors included a delegation of staff from the Hariri Foundation.⁸⁵¹⁹ The amended consolidated indictment pleads that:

On 28 January 2005, HARIRI stayed at Quraitem Palace throughout the day. The assassination team, using the Red Network phones, including AYYASH on Red 741, operated for more than six hours around Quraitem Palace and HARIRI's residence in Faqra.⁸⁵²⁰

4478. Red network activity on this day commenced at 11:36 and ended at 17:54, during which time the principal six Red network mobiles activated cells, according to Mr Platt, 'in locations or routes connected with Mr Hariri'.⁸⁵²¹ Between 11:36 and 12:44, Subject 6's Red 678 and Subject 8's Red 893 activated cells in the area of Quraitem Palace.⁸⁵²² At 13:25, Red 678 again called Red 893, which was still in the area of Quraitem Palace.⁸⁵²³

4479. At 14:14, Mr Ayyash's Green 300, which was in the Mosbeh area, called Mr Badreddine's Green 023, located south of it.⁸⁵²⁴ This call was followed at 14:17 by a call from Mr Ayyash's Red 741 to Subject 9's Red 652, and to Mr Platt, this was an example of a sequential call flow between the two networks.⁸⁵²⁵

4480. At 14:27, Green 023 called Green 300, using adjacent cells in the Zouk-Mosbeh area.⁸⁵²⁶ Mr Platt concluded that this was consistent with Green 023 travelling to meet Green 300 at an

⁸⁵¹⁹ Exhibit P301, pp 356-358; exhibit P303, ERN D0004937; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 778. *See also* Gary Platt, T. 22 February 2017, p. 52.

⁸⁵²⁰ Amended consolidated indictment, para. 33.

⁸⁵²¹ Gary Platt, T. 22 February 2017, p. 53.

⁸⁵²² At 11:36, Red 678 and Red 893 were in contact, both activating cell CARACA3. They were then in contact again at 11:48 and 12:44, with Red 678 activating MOVPIK1 both times and Red 893 activating cells CARLTO3 and CARACA1, respectively. Exhibit P1204, p. 1; exhibit P1198, p. 1; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 784; Gary Platt, T. 22 February 2017, p. 53. *See also* exhibit P1902, slides 29-30.

⁸⁵²³ Red 893 activated cell CARACA2. Exhibit P1198, p. 1; exhibit P1902, slides 32-33.

⁸⁵²⁴ At 14:14, Green 300 (MOSBEH2) called Green 023 (TRIANO1). Exhibit P1207, p. 4; exhibit P1211, p. 5; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 788, where Mr Platt stated that Green 023 was travelling toward the Zouk-Mosbeh area. *See also* exhibit P1902, slides 43-44.

⁸⁵²⁵ Gary Platt, T. 22 February 2017, p. 64. At 14:17, Red 741 (MOSBEH2) called Red 652 (FARAYA2). Exhibit P1197, p. 1; exhibit P1199, p. 1. *See also* exhibit P1902, slides 43-45.

⁸⁵²⁶ Green 023 activated cell MOSBEH2 and Green 300 activated cell RIMAL1. Exhibit P1211, p. 5; exhibit P1207, p. 4; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 788; exhibit P1902, slides 48, 50.

important location—both in terms of travel from Quraitem Palace to Faqra Villa and as a potential location for the attack—unlike at other times when the mobiles would converge in Dahyieh.⁸⁵²⁷ He also highlighted that the Green mobiles were now more directly involved with the surveillance operation, rather than being distant. This was to make more detailed observations about the suitability of the location for the eventual attack.⁸⁵²⁸

4481. According to Mr Platt, calls among Red network mobiles between 14:28 and 16:28 were consistent with a continuing surveillance operation where Subject 8's Red 893 and Red 678 were in the area of Quraitem Palace. The other subjects were covering the coastal road, Zouk-Mosbeh, and the area around Faqra Villa.⁸⁵²⁹

4482. At 16:25, Mr Badreddine's Green 023, which was further north along the coast in the direction of Jounieh, called Mr Ayyash's Green 300 who was still located in the Zouk-Mosbeh area.⁸⁵³⁰ Mr Platt commented that this call was preceded by a call from Red 652 from the Faraya area to Mr Ayyash's Red 741 in the Zouk-Mosbeh area, and was then followed by a call from Red 741 to Red 678 in the Quraitem Palace area. This sequence of calls was therefore consistent with Mr Ayyash coordinating the surveillance operation.⁸⁵³¹

4483. At 16:32, Subject 6's Blue 610 was active in the area of Quraitem Palace, followed by Subject 6's Red 678 activating the same cell again between 16:39 and 16:46, while Subject 8's Red 893 did the same at 16:39.⁸⁵³² Subject 5's Red 636 was located in the Faraya area between

⁸⁵²⁷ Gary Platt, T. 22 February 2017, pp 66-68.

⁸⁵²⁸ Gary Platt, T. 22 February 2017, p. 68.

⁸⁵²⁹ At 14:28, Red 652 (FARAYA1) called Red 946 (FARAYA1); at 14:29, Red 652 (FARAYA1) called Red 636 (FARAYA1); at 14:55, Red 678 (MRAIC12) called Red 893 (CARACA3); at 14:56, Red 741 (MOSBEH2) called Red 946 (MOSBEH2); at 14:58, Red 652 (FARAYA1) called Red 636 (FARAYA3); at 15:34, Red 652 (FARAYA1) called Red 636 (FARAYA1); at 16:18, Red 652 (OUYOUN3) called Red 741 (NDU2); at 16:27, Red 741 (NDU2) called Red 678 (RAOUCH3); and at 16:28, Red 678 (CARACA3) called Red 893 (CARLTO3). Exhibit P1204, p. 2; exhibit P1198, p. 1; exhibit P1199, pp 1-2; exhibit P1203, p. 1; exhibit P1202, p. 1; exhibit P1197, p. 1; Gary Platt, T. 22 February 2017, pp 69-71; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 785-789. *See also* exhibit P1902, slides 52-57. As noted above, there can be time differences between the start time of calls on the same network and between calls on different networks. This applies to the call described above as starting at 16:27 (exhibit P1197, p. 1). According to exhibit P1204 (p. 2), the start time of that call was 16:26:55.

⁸⁵³⁰ Green 023 activated cell ADMA3 and Green 300 activated cell NDU2. Exhibit P1211, p. 5; exhibit P1207, p. 4; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 788. *See also* exhibit P1902, slides 58-59.

⁸⁵³¹ Gary Platt, T. 22 February 2017, pp 72-74.

⁸⁵³² At 16:32, Blue 610 activated cell CARACA3 to receive a call from Blue 235; at 16:39, Red 893 (CARACA3) called Red 678 (CARACA3); at 16:40, Red 678 (CARACA3) called Red 741; and at 16:46, Red 678 (CARACA3) received a call from Red 741. Red 678 (CARACA3) and Red 893 (MANARA1) also exchanged a call in the Quraitem Palace area at 16:57. Exhibit P1227, p. 12; exhibit P1204, p. 2; exhibit P1198, p. 1; Gary Platt, T. 22 February 2017,

16:41 and 16:44, as was Subject 9's Red 652 between 16:43 and 16:44.⁸⁵³³ Mr Ayyash's Red 741 activated a cell in the Zouk-Mosbeh area between 16:40 and 16:46, as did Subject 7's Red 946 at 16:42.⁸⁵³⁴

4484. At 16:48, Mr Ayyash's Green 300, located in the Zouk-Mosbeh area, called Mr Badreddine's Green 023.⁸⁵³⁵ For Mr Platt, this network activity was consistent with the continuing surveillance operation and, due to the sequences of calls exchanged between the subjects at the various locations during this time, he opined that it was an example of highly coordinated network activity.⁸⁵³⁶

4485. Mr Platt described the Red network activity as follows:

From this day up to the day of the attack, the Red call activity was increasingly regular, sustained and frequent. This was the beginning of the Red primary phase.

The direct association, often involving closely sequential calls, between Red and Green activity began on this day and repeatedly recurred until both networks ceased shortly before the explosion.⁸⁵³⁷

4486. He mapped the Red and Green network activity on the following two maps in his chronology report:

p. 75; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 785-786. *See also* exhibit P1902, slides 63-64, 73-74.

⁸⁵³³ At 16:41, Red 636 activated cell FARAYA1 to receive a call from Red 741; at 16:43, Red 652 activated cell FARAYA2 to receive a call from Red 741; and at 16:44, Red 652 (FARAYA2) called Red 636 (FARAYA1). Exhibit P1203, p. 1; exhibit P1199, p. 2; Gary Platt, T. 22 February 2017, p. 75; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 787; exhibit P1902, slides 65-66.

⁸⁵³⁴ At 16:40, Red 741 activated cell RIMAL1 to receive a call from Red 678; at 16:41, 16:42 and 16:43, Red 741 activated cell RIMAL1 three times to call Red 636, Red 946 (MOSBEH2) and Red 652, respectively. Exhibit P1197, p. 1; exhibit P1202, p. 1; Gary Platt, T. 22 February 2017, p. 75; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 788-789; exhibit P1902, slides 67-68.

⁸⁵³⁵ Green 300 activated cell MOSBEH2 and Green 023 activated cell LAMEDI1. Exhibit P1207, p. 4; exhibit P1211, p. 5; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 788; exhibit P1902, slides 69-70.

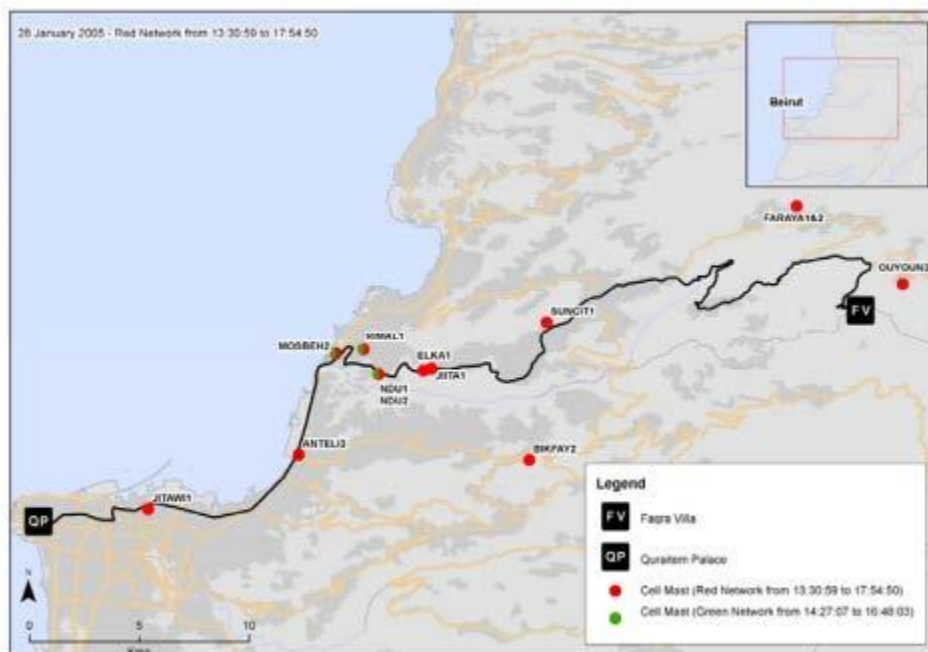

⁸⁵³⁶ Gary Platt, T. 22 February 2017, pp 75-77.

⁸⁵³⁷ Exhibit P1782 (Narrative overview of telephone activity and relevant events), paras 766-767.

Map 72: Red Network (S6 and S8), Quraitem Palace and Parliament, 28 January 2005 (11:36 to 16:57)

Map 73: Red Network, Zouk-Mosbeh and Faraya, 28 January 2005 (13:30 to 17:54)

Exhibit P1783 (Expert report of Gary Platt – Chronology), p. 235

(pp) Saturday 29 January 2005

4487. On Saturday 29 January 2005, a number of people visited Mr Hariri at Quraitem Palace between 07:55 and 21:50.⁸⁵³⁸ Mr Platt testified that the call activity of members of Mr Hariri's security detail showed that Mr Hariri travelled to Mr Hamade's residence in Beirut for a short visit sometime between 13:14 and 13:26 and returned to Quraitem Palace sometime between 13:50 and 14:03.⁸⁵³⁹

4488. In addition, Mr Hariri travelled from Quraitem Palace with his security detail to his villa in Al-Naameh—a coastal village south of Beirut, in the direction of Saida—and they returned to Beirut later that day.⁸⁵⁴⁰ According to Mr Platt,⁸⁵⁴¹ the security detail's calls are consistent with Mr Hariri travelling from Quraitem Palace to Al-Naameh sometime between 14:41 and 15:06, and returning to Quraitem Palace between 16:40 and 17:01.⁸⁵⁴²

4489. Mr Ayyash's Blue 233 was in contact with other Blue network mobiles 13 times on this day, between 12:20 and 23:56.⁸⁵⁴³ Between 12:38 and 23:27, Subject 5's Blue 585, Subject 6's Blue 610, Subject 7's Blue 324, Subject 8's Blue 817 and Subject 9's Blue 864 were 'active in the

⁸⁵³⁸ Exhibit P301, pp 358-359; *see also* exhibit P1783 (Expert report of Gary Platt – Chronology), para. 792, which incorrectly states that visitors were registered between 07:55 and 21:10 for Mr Hariri.

⁸⁵³⁹ At 13:14, mobile 771 activated cell LAU_MIC2_A, and between 13:26 and 13:32, it activated cell Riviera_A. Exhibit P1359, p. 297. Mobiles 506 (13:27) and 777 (between 13:28 and 13:50) also activated this cell. Exhibit P1322, p. 70; exhibit P520, p. 163. Finally, Mobile 777 activated cell Kraitem_C at 14:03. Exhibit P520, p. 163; Gary Platt, T. 22 February 2017, pp 83-84; exhibit P1902, slides 88-93.

⁸⁵⁴⁰ Ghattas El-Khoury, T. 16 January 2015, pp 77-80; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 792.

⁸⁵⁴¹ Exhibit P1783 (Expert report of Gary Platt – Chronology), para. 801; Gary Platt, T. 22 February 2017, p. 91; exhibit P1902, slides 113-118. In his report, which does not include the telephone activity of mobile 777, Mr Platt stated that the security detail returned to Quraitem Palace by 17:40 (exhibit P1783 (Expert report of Gary Platt – Chronology), paras 800-801). In court, it was suggested to Mr Platt that the security detail had returned to Quraitem Palace by 17:01, based on a call made at that time by mobile 777. Gary Platt, T. 22 February 2017, p. 91; exhibit P1902, slides 116, 118.

⁸⁵⁴² First, mobile 506 activated cell Hamra_West_B (14:28) and mobiles 771 and 052 activated cell LAU_MIC2_A (14:39 and 14:41, respectively). Next, cell Naameh_B was activated by mobile 052 (15:06, 16:30 and 16:40), mobile 771 (16:08, 16:09 and 16:11), mobile 506 (16:15) and mobile 777 (15:27, 16:16, 16:17, 16:20, 16:31 and 16:34), while mobile 973 activated cell Naameh_A (15:13), mobile 771 activated cell Douhit_El_Hoss_A (15:31) and mobile 777 also activated cells Douhit_El_Hoss_A (16:33), Khaldeh2_B (16:38) and Mazraa_MPT_C (16:52) during this time. Finally, mobile 777 activated cell Fadolallah_B (17:01), mobiles 052 and 771 activated cell Concorde_B (17:40 and 17:46, respectively) and mobile 506 activated cell Fadolallah_A (18:34). Exhibit P1322, p. 70; exhibit P1332, p. 56; exhibit P1359, p. 297; exhibit P1334, p. 53; exhibit P520, p. 164; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 800.

⁸⁵⁴³ Exhibit P1783 (Expert report of Gary Platt – Chronology), para. 794; exhibit P1238, p. 7. In addition to the pertinent calls detailed below, Mr Platt highlighted Blue 864 activating cell ZAYNEH1 at 12:20 to call Blue 233, which activated cell Haret_Hreik_2_A. Exhibit P1228, p. 10; exhibit P1238, p. 7; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 795.

area of Quraitem Palace and the ... crime scene'.⁸⁵⁴⁴ From 12:38, Blue 585—which was active in the area until 14:54⁸⁵⁴⁵— Blue 324⁸⁵⁴⁶ and Blue 817,⁸⁵⁴⁷ which were both active in west Beirut all day until 21:32, activated cells in the areas of Quraitem Palace and the crime scene, when they were in contact with Mr Ayyash's Blue 233 and Subject 6's Blue 610.⁸⁵⁴⁸ Blue 585, Blue 324 and Blue 817 were also, during this time, in contact with each other and with Blue 864.⁸⁵⁴⁹

4490. At 14:00, 14:02 and 14:04, Blue 864 activated cells in south Beirut, when in contact with Blue 817 and Blue 585, which both activated cells in the Quraitem Palace area.⁸⁵⁵⁰ At 14:09, Blue 864 activated a cell in south Beirut to call Blue 610, which activated a cell in the Quraitem Palace area.⁸⁵⁵¹ Then, during calls at 14:11, 14:13, 14:21 and 14:30, Blue 585, Blue 610 and Blue 864 all activated cells in the area of Quraitem Palace.⁸⁵⁵² The Trial Chamber created the following map, from the electronic presentation of evidence, of cells in the vicinity of Quraitem Palace and Mr Hamade's residence, which is marked as 'HR':

⁸⁵⁴⁴ Mr Platt's report did not deal with the visit to Mr Hamade's residence; the areas where these mobiles were active was characterized like this. Exhibit P1783 (Expert report of Gary Platt – Chronology), para. 793.

⁸⁵⁴⁵ Blue 585 activated cells Raouche_B (12:38), Mic_Bay Rock (12:39), Unesco_C (13:23), Raouche_A (13:25, 14:04 and 14:11), Mic_Bay Rock2 (13:26), Manara_B (14:01, 14:02, 14:13 and 14:21), Concorde_B (14:47) and Unesco_B (14:54). Exhibit P1229, pp 12-13.

⁸⁵⁴⁶ Blue 324 activated cells Tallet Druz_A (12:38), Manara_B (13:22, 14:01), Riviera_B (13:24), Mic_AUB-Sea Gate (13:24, 13:25), Riviera_A (13:34, 13:49), Riad_El_Soloh_B (14:58), BayView_C (15:06, 15:16), Bir Hassan_A (17:17), Bir Hassan_C (17:22), Unesco_C (18:03, 18:05, 18:06, 18:14), Raouche_B (18:12) and Mic_Bay Rock2 (21:02, 21:30, 21:32). Exhibit P1225, pp 10-11.

⁸⁵⁴⁷ Blue 817 activated cells CARACA3 (12:39, 13:28, 13:59 (twice), 14:00 (twice), 14:01, 18:01, 18:02, 18:03, 18:06, 18:10, 18:12), CONCOR2 (13:22, 13:23, 13:24 (twice)), RAOUCH1 (13:26), RAOUCH3 (13:27), MRAICI2 (13:34, 13:47, 13:49), BACHOU1 (14:58), BACHOU2 (15:06), MOVPIK1 (15:15, 18:14, 20:45, 21:02, 21:22), OGER3 (15:16), RAOUCH2 (15:17, 21:29), BHVOUT1 (17:17, 17:20, 17:22), RAMLET3 (21:30), SIMON3 (21:30) and BHVOUT2 (21:32). Exhibit P1239, pp 7-8.

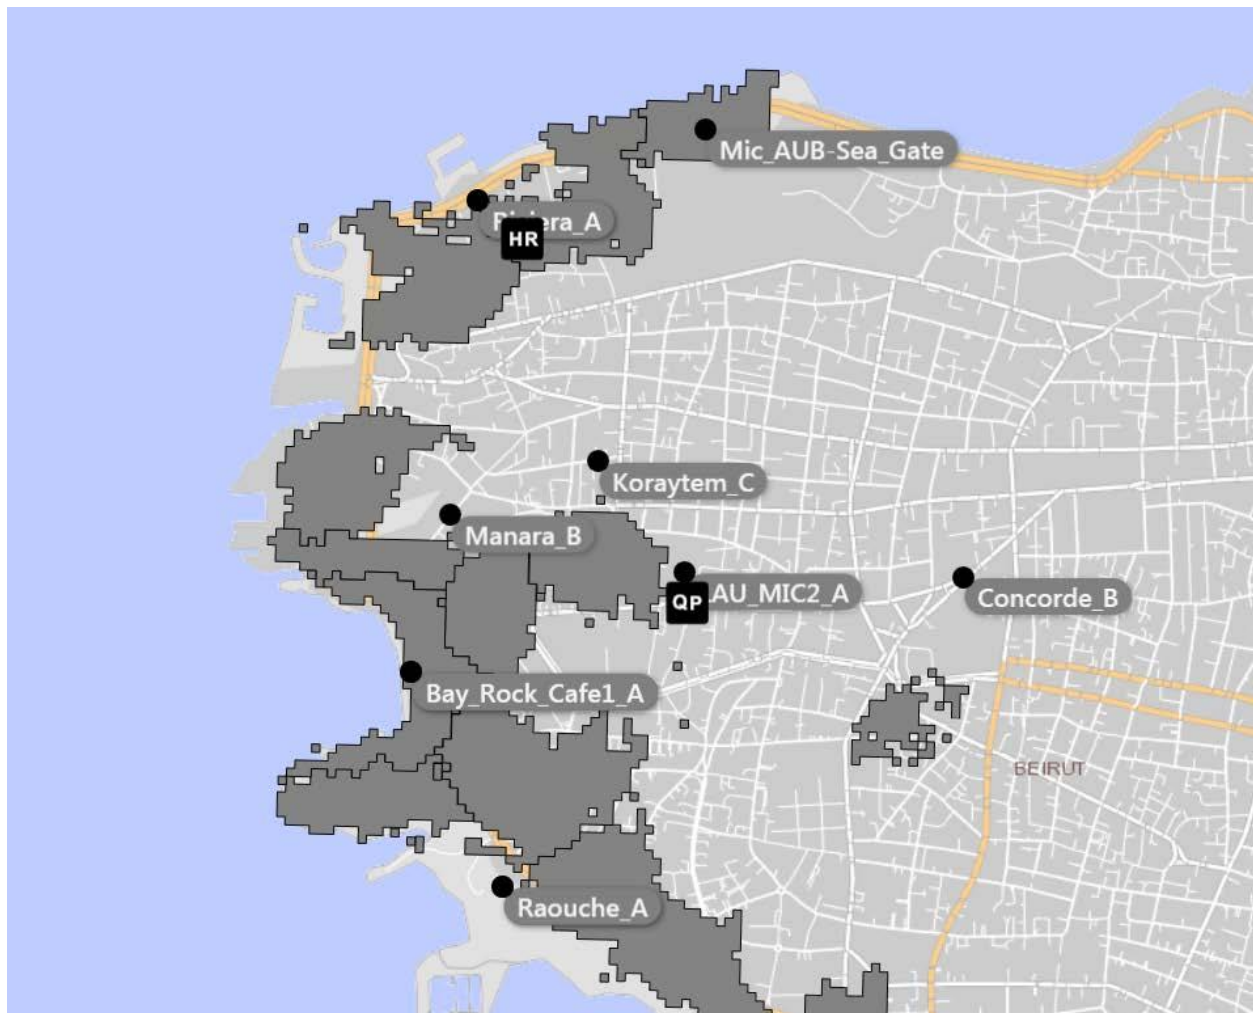

⁸⁵⁴⁸ Exhibit P1783 (Expert report of Gary Platt – Chronology), para. 796; exhibit P1229, pp 12-13; exhibit P1225, pp 10-11; exhibit P1239, pp 7-8.

⁸⁵⁴⁹ Exhibit P1229, pp 12-13; exhibit P1225, pp 10-11; exhibit P1239, pp 7-8.

⁸⁵⁵⁰ Blue 864 activated cells SFEIR2, ROUEIS2 and BRAJNE1, respectively, when in contact with Blue 817 (which activated cell MANARA2) and Blue 585 (which activated cells Manara_B and Raouche_A). Exhibit P1228, p. 10; exhibit P1239, p. 8; exhibit P1229, p. 12; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 797.

⁸⁵⁵¹ Blue 864 activated cell CBOURJ3, and Blue 610 activated cell CARACA3. Exhibit P1228, p. 10; exhibit P1227, p. 12; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 798.

⁸⁵⁵² Blue 585 activated cells Raouche_A and Manara_B; Blue 610 activated cells CARACA3 and CARLTO2; and Blue 864 activated cell MOVPIK1. Exhibit P1229, p. 13; exhibit P1227, p. 13; exhibit P1228, p. 10; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 799.

Map created by the Trial Chamber from electronic presentation of evidence, exhibit P592.1, showing Touch's cells in the areas of Quraitem Palace and Mr Marwan Hamade's residence

4491. Mr Platt testified that Blue network activity between 12:38 and 14:21 is consistent with Subject 5's Blue 585, Subject 7's Blue 324 and Subject 8's Blue 817 conducting surveillance relating to Mr Hariri's visit to Mr Hamade's residence. They then reported information to the other three principal members of the network, two of whom—Subject 6's Blue 610 and Subject 9's Blue 864—then converged on Quraitem Palace from elsewhere upon Mr Hariri's return.⁸⁵⁵³

4492. Blue 324 and Blue 817 were 'doing the mobile surveillance aspect of the operation', while Blue 585 'remained static ... to monitor the movement and possible return back to Quraitem

⁸⁵⁵³ Gary Platt, T. 22 February 2017, pp 84-90. See also exhibit P1902, slides 88-110.

Palace’.⁸⁵⁵⁴ In a ‘reporting process’, Mr Platt underlined that the first call was to Mr Ayyash (on Blue 233), who was ‘some distance away and not involved directly with the surveillance, but clearly updating him on ... a key event’.⁸⁵⁵⁵

4493. Mr Platt concluded, of the surveillance activities he detected around Mr Hamade’s residence, that Subject 7 on Blue 324 initially followed the security detail and then called Subject 8’s Blue 817 ‘for reinforcement’.⁸⁵⁵⁶

4494. In the afternoon, Mr Hariri travelled to his villa in Naameh. According to Mr Platt, the activity of Subject 5’s Blue 585, Subject 6’s Blue 610 and Subject 9’s Blue 864 from 14:47—while Mr Hariri’s security detail was travelling from Quraitem Palace to Al-Naameh—is consistent with mobile surveillance of Mr Hariri between these two locations.⁸⁵⁵⁷

4495. Mr Platt stated that, at 14:47, the three subjects exchanged two calls, activating cells in the Quraitem Palace area,⁸⁵⁵⁸ while between 14:58 and 15:04 all three had moved south to the airport area,⁸⁵⁵⁹ consistent with the route to Naameh Villa and coinciding with the movement of Mr Hariri’s security detail.⁸⁵⁶⁰ He commented that, given Mr Ayyash’s Blue 233’s location and its contact with Subject 6’s Blue 610 while the latter was involved in mobile surveillance, the contact is consistent with reporting on the surveillance to someone who is making decisions and

⁸⁵⁵⁴ Gary Platt, T. 22 February 2017, pp 89-90.

⁸⁵⁵⁵ Gary Platt, T. 22 February 2017, p. 89. At 13:59, when receiving a call from Blue 817, Blue 233 activated the cell Sfeir_B. Exhibit P1238, p. 7.

⁸⁵⁵⁶ Gary Platt, T. 22 February 2017, pp 85-86. This was in response to a question from the Presiding Judge, ‘Now, is that consistent with Mr. Hariri being followed there or Mr. Hariri being followed by some and then others are called and asked to join, or what?’.

⁸⁵⁵⁷ Gary Platt, T. 22 February 2017, pp 91-104; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 802-821-825. *See also* exhibit P1902, slides 119-140.

⁸⁵⁵⁸ At 14:47, Blue 610 activated cell OGER3 to call Blue 864, which activated cell CARACA3 for this call and then went on to activate the same cell within the same minute to call Blue 585, which in turn activated cell Concorde_B; Exhibit P1227, p. 13; exhibit P1228, p. 10; exhibit P1229, p. 13; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 803.

⁸⁵⁵⁹ At 14:58, Blue 233 activated cell Borj_Brajneh_2_B to call Blue 610, which activated cell AIB3. At 15:00 and 15:04, Blue 864 and Blue 585 were in contact, the former activating cell MEA2 twice, and the latter activating cells Airport_B and Airport_A, respectively. In his report, Mr Platt also highlighted calls between 14:50 and 14:56, which he stated were consistent with the three subjects travelling towards Beirut Airport. Specifically, at 14:50, Blue 864 activated cell RAMLET3 to call Blue 610, which activated cell BHVOUT1. At 14:51, Blue 610, activating again cell BHVOUT1, called Blue 233, which activated cell Sfeir_A. At 14:54, Blue 585 activated cell Unesco_B to call Blue 864, which activated cell OUZAI2. At 14:56, Blue 864 activated cell MEA1 to call Blue 610, which activated cell MEA2. Exhibit P1227, p. 13; exhibit P1228, p. 10; exhibit P1229, p. 13; exhibit P1238, p. 7; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 804-809.

⁸⁵⁶⁰ Gary Platt, T. 22 February 2017, pp 91-92; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 821-822. *See also* exhibit P1902, slides 120-123.

coordinating the operation.⁸⁵⁶¹ Mr Platt also noted that within minutes of the security detail's first activity in Naameh Villa, and therefore their potential or approximate arrival there, Subject 6's Blue 610 activated 'a cell which offers coverage close to the vicinity of Naameh Villa.'⁸⁵⁶²

4496. At 15:10, Mr Ayyash's Blue 233, in the area of the airport, called Blue 610, which was located south of the airport, mid-way between Beirut and Saida.⁸⁵⁶³ By 15:15, Blue 610 had moved further south past Naameh Villa, and then went on to activate cells further south still at 15:18 and 15:36.⁸⁵⁶⁴ Mr Platt thought that this may be because the gate to Naameh Villa was directly on the main road, meaning that Blue 610 would have been unable to stop there and would have had to have travelled further south; alternatively, Blue 610 may have missed Mr Hariri's convoy turning to enter the villa, continuing its travel south.⁸⁵⁶⁵

4497. Below are photographs of Mr Hariri's Naameh Villa:

⁸⁵⁶¹ Gary Platt, T. 22 February 2017, p. 96.

⁸⁵⁶² Gary Platt, T. 22 February 2017, p. 97.

⁸⁵⁶³ At 15:10, Blue 233 activated cell Ouzaii_2_A to call Blue 610, which activated cell SAADIY1. Exhibit P1227, p. 13; exhibit P1238, p. 7; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 810.

⁸⁵⁶⁴ At 15:15, Blue 610 activated cell ZAYNEH1 to call Blue 817, which activated cell RAOUCH3. At 15:18, Blue 864, activating cell MEA1, called Blue 610, which activated cell SIBLIN3, and which in turn, at 15:36, activated cell BRAMIE3 to call Blue 864, which activated cell AIB3. Exhibit P1227, p. 13; exhibit P1228, p. 10; exhibit P1239, p. 8; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 812, 814, 823-824.

⁸⁵⁶⁵ Gary Platt, T. 22 February 2017, pp 95, 98, 100-101.

Exhibit P665 (Statement of Timothy Holford), pp 7-9

4498. After the 15:36 call, there was no other telephone activity between the principal six Blue network subjects until 16:44, around when Mr Hariri's security detail would have started travelling back to Quraitem Palace, having made the last call from Naameh Villa area at 16:40 and arriving back at Quraitem Palace by 17:01.⁸⁵⁶⁶ At 16:44, Blue 585 and Blue 864 were on the road between Naameh Villa and Quraitem Palace.⁸⁵⁶⁷ Then, between 17:07 and 17:18, Blue 610 moved from activating a cell on the road from Naameh Villa to Quraitem Palace, to activating a cell in the Quraitem Palace area.⁸⁵⁶⁸ Mr Platt testified that this would be inconsistent with Blue 610 following Mr Hariri back to Quraitem Palace, given that his security detail had already arrived there by 17:01.⁸⁵⁶⁹

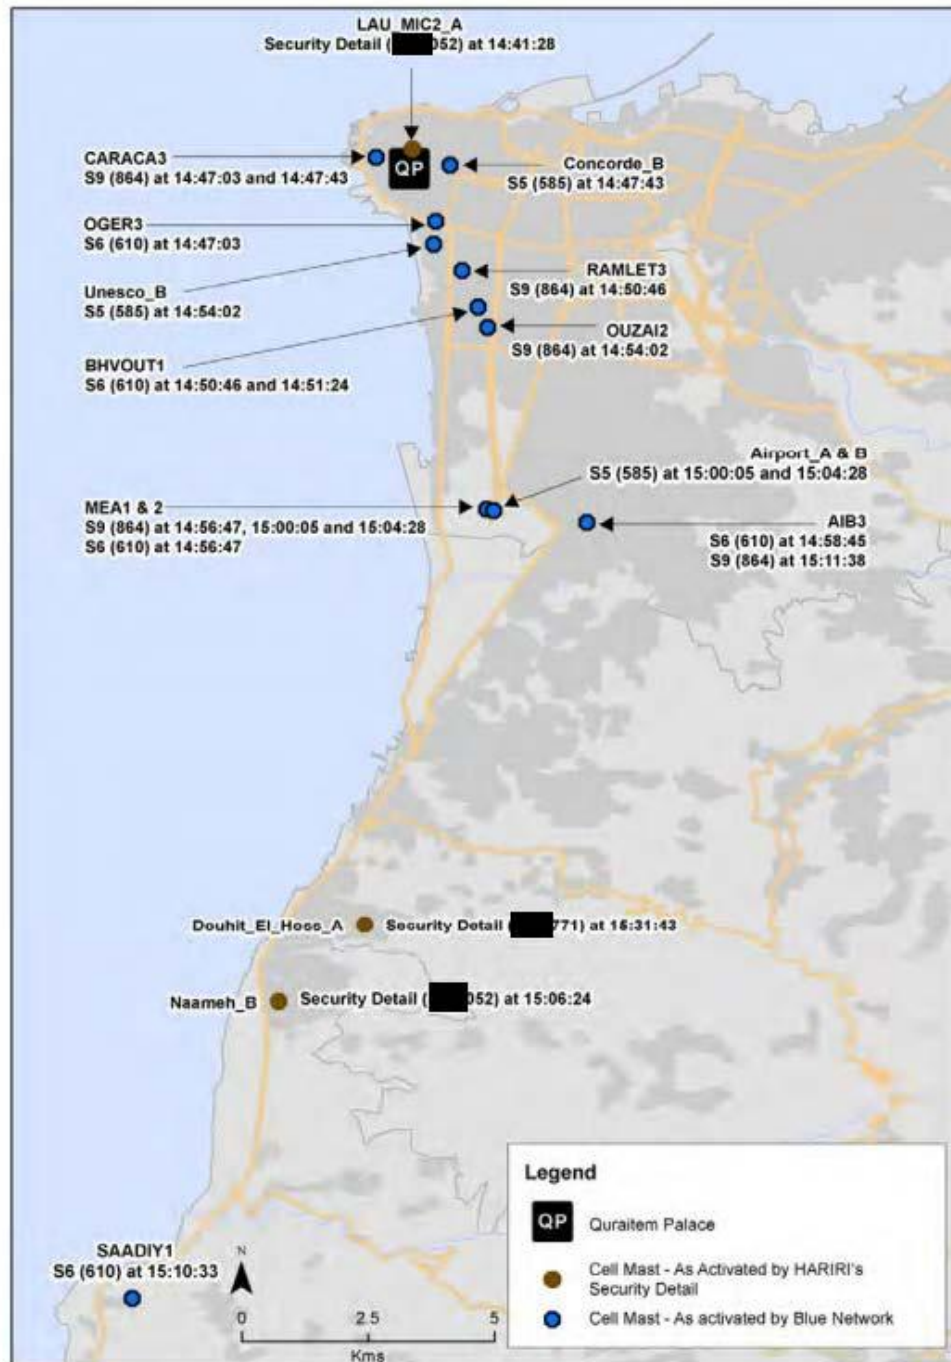

⁸⁵⁶⁶ Gary Platt, T. 22 February 2017, pp 101-102; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 815.

⁸⁵⁶⁷ At 16:44, when Blue 585 activated cell Tabet El Dahra_A to call Blue 864, which activated cell AIB3. Exhibit P1228, p. 10; exhibit P1229, p. 13; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 815. As noted above, there can be time differences between the start time of calls on the same network and between calls on different networks. The call described above as starting at 16:44 (according to exhibit P1229, the call sequence table for Blue 585), started at 16:43:59 according to exhibit P1228, the call sequence table for Blue 864.

⁸⁵⁶⁸ Blue 233, activating the cell Sfeir_A, called Blue 610 at 17:07, the latter activating cell BHVOUT1. At 17:18, Blue 610 activated cell RAOUCH1 to call Blue 233, which activated cell Hadath_C. Exhibit P1227, p. 13; exhibit P1238, p. 7; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 817-818.

⁸⁵⁶⁹ Gary Platt, T. 22 February 2017, p. 102.

4499. Mr Platt prepared a map of the Blue mobile activations between Quraitem Palace and the Naameh Villa in his chronology report:

Map 74: HARIRI's Security Detail and Blue Network (S5, S6 and S9), Beirut and south Lebanon, 29 January 2005 (14:41 to 15:31)

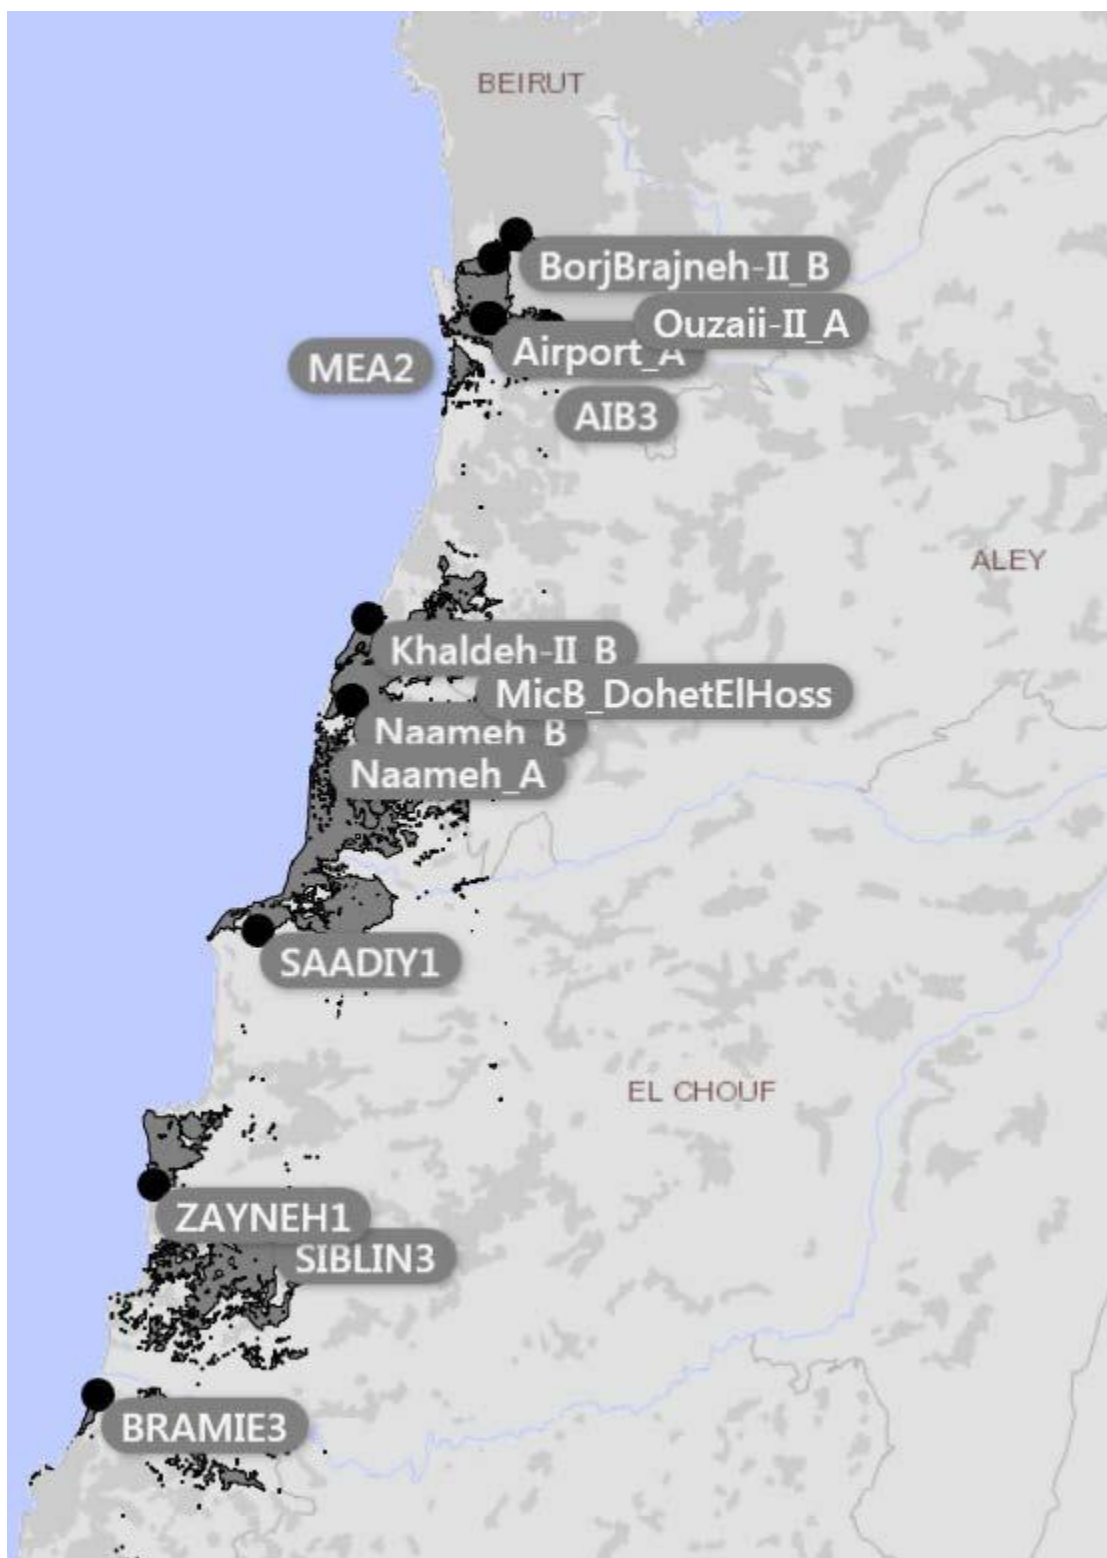

Exhibit P1783 (Expert report of Gary Platt – Chronology), p. 242

4500. Mr Platt highlighted the activity of Blue 817 (20:45 to 21:30), Blue 324 (21:02 to 21:32) and Blue 864 (21:22 to 23:27) in the Quraitem Palace⁸⁵⁷⁰ area as being consistent with these subjects conducting surveillance of Mr Hariri, who was at Quraitem Palace.⁸⁵⁷¹

4501. The Trial Chamber, using the electronic presentation of evidence, prepared a map of the cell coverage of the cells activated by the Blue network mobiles:

⁸⁵⁷⁰ Blue 817 activated cells MOVPIK1 (20:45, 21:02, 21:22, 21:29), RAOUCH2 (21:30), RAMLET3 (21:30) and SIMON3 (21:32). Blue 324 activated cell Mic_Bay Rock2 (21:02, 21:30, 21:32); Blue 864 activated cells MOVPIK1 (21:22, 23:27) and RAOUCH3 (21:30). In his report, Mr Platt also noted Blue 864's preceding activation of cells SFEIR2 (19:19) and HADATH3 (20:30), in south Beirut. Exhibit P1239, p. 8; exhibit P1225, p. 11; exhibit P1228, p. 11; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 826, table 101 (p. 244). *See also* exhibit P1902, slides 149-155.

⁸⁵⁷¹ Gary Platt, T. 22 February 2017, pp 104-108.

Map created by the Trial Chamber from the electronic presentation of evidence, exhibit P592.1, showing cells activated by mobiles en route to and at Naameh Villa

(qq) Sunday 30 January 2005

4502. On this day, Sunday 30 January 2005, visitors, including the Druze leader Mr Walid Jumblatt, met Mr Hariri at Quraitem Palace between 08:20 and 21:40.⁸⁵⁷² In addition, according to Mr Platt,⁸⁵⁷³ the activity of Mr Hariri's security detail showed that he travelled to visit Mr Marwan Hamade at his residence sometime between 18:02 and 18:32,⁸⁵⁷⁴ was stationary in that area⁸⁵⁷⁵ and then returned to Quraitem Palace, sometime between 18:58 and 19:09.⁸⁵⁷⁶ Mr Platt's report does not refer to Mr Hariri's visit to Mr Hamade's residence. In the report, he described the activity of Subject 6's Blue 610, Subject 7's Blue 324, Subject 8's Blue 817 and Subject 9's Blue 864, between 10:28 and 19:08, as being in the area of Quraitem Palace, while noting that Subject 6's Blue 610, between 18:24 and 19:07, was also in the area of the crime scene.⁸⁵⁷⁷

4503. According to Mr Platt, the call activity between Blue 324, Blue 817, Blue 864 and Blue 610 between 10:28 and 13:04 may suggest continuing surveillance of Mr Hariri around Quraitem Palace, with the first three Subjects being active around Quraitem Palace.⁸⁵⁷⁸ The activity of the principal six Blue network mobiles between 15:05 and 17:59, with a number of them activating cells in the area of Quraitem Palace,⁸⁵⁷⁹ is consistent with static surveillance of Mr Hariri.⁸⁵⁸⁰

4504. Subject 9's Blue 864 and Subject 6's Blue 610 were in contact at 18:24 and 18:32—the time during which Mr Hariri's security detail travelled to Mr Hamade's residence—moving from the Quraitem Palace area to the area of Mr Hamade's residence (Blue 864 activating cells

⁸⁵⁷² Exhibit P301, pp 359-360; exhibit P303, ERN D0004950; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 828.

⁸⁵⁷³ Gary Platt, T. 23 February 2017, p. 7; exhibit P1902, slides 170-175.

⁸⁵⁷⁴ At 18:02, mobile 771 activated cell LAU_MIC2_A, and then, at 18:32, activated cell Riviera_A. Exhibit P1359, p. 299.

⁸⁵⁷⁵ Mobile 506 activated cell Riviera_A (18:39), mobile 973 activated cell Riviera_A (18:42, 18:51) and mobile 1506 activated cell Riviera_B (18:47). Exhibit P1322, p. 70; exhibit P1332, p. 56; exhibit P1352, p. 322.

⁸⁵⁷⁶ Mobile 1506 activated cell Riviera_B in this area for a final time at 18:58, and then went on to activate cell LAU_MIC2_A at 19:09. Exhibit P1352, p. 322.

⁸⁵⁷⁷ Exhibit P1783 (Expert report of Gary Platt – Chronology), paras 829, 833-834, 837-840, table 104 (p. 248).

⁸⁵⁷⁸ Gary Platt, T. 23 February 2017, pp 3-5. Blue 324 activated cells Raouche_C (10:30) and Manara_C (11:33, 11:55, 13:04). Blue 817 activated cells CARACA1 (10:28), CARACA3 (10:30, 10:31) and MOVPIK1 (11:32, 11:55, 13:01, 13:03, 13:04); Blue 864 activated cell CARACA3 (13:03). Exhibit P1225, p. 11; exhibit P1239, p. 9; exhibit P1228, p. 11.

⁸⁵⁷⁹ Blue 610 activated cells OGER2 (15:05), MOVPIK1 (15:06, 15:23 (twice)), CBOURJ3 (17:52) and SIMON3 (17:56); Blue 864 activated cells CARLTO2 (15:23 (twice)) and MOVPIK1 (16:10); Blue 817 activated cell MOVPIK1 (17:56, 17:59); Blue 324 activated cell Manara_C (18:00); Blue 233 activated cells Nabatieh_C (15:06 (twice)) and Ansar_A (17:52); Blue 585 activated cell Jnah El Wata_B (16:10), Exhibit P1227, p. 14; exhibit P1228, p. 11; exhibit P1239, p. 9; exhibit P1225, p. 11; exhibit P1238, pp 7-8; exhibit P1229, p. 13.

⁸⁵⁸⁰ Gary Platt, T. 23 February 2017, pp 6-7. *See also* exhibit P1902, slides 163-168.

MANARA1 both times while Blue 610 activated cell MOVPIK1 for the first call and MRAICI2 for the second call).⁸⁵⁸¹ An 18:38 call between Blue 610 (activating cell MANARA1) and Mr Ayyash's Blue 233 (activating cell Ansar_A) was consistent, according to Mr Platt, with reporting on the surveillance activity within a command structure.⁸⁵⁸²

(rr) Monday 31 January 2005

4505. On Monday 31 January 2005, Mr Hariri received visitors at the palace between 07:45 and 21:00.⁸⁵⁸³ He was also scheduled to visit the Higher Shiite Council at 11:00.⁸⁵⁸⁴ The Prosecutor, in the amended consolidated indictment, pleads that:

On 31 January 2005, HARIRI was at Quraitem Palace before going to the Higher Shiite Council, later returning to the Palace. The assassination team, using the **Red Network** phones, were active for less than three hours covering the period before, during and after HARIRI's movements. They were located around Quraitem Palace and the Higher Shiite Council when HARIRI was present. In both areas and in the same time-frame, **AYYASH** used **Red 741**, **Blue 233** and **Green 300**. In particular, on **Green 300**, he was in communication 11 times between 10:49 and 12:07 with Mustafa BADREDDINE on **Green 023**.⁸⁵⁸⁵

4506. His security detail's calls are consistent with the following.⁸⁵⁸⁶ First, he was in the area of Quraitem Palace until at least 10:09.⁸⁵⁸⁷ Second, he travelled to the Wardieh area—which Mr Platt characterised as being west of Parliament—by 10:19 and remained there until 10:40.⁸⁵⁸⁸ Third, he

The call sequence table for mobile 1506 was not included in Mr Platt's report, such that his assessments of the times at which the security detail arrived and/or departed from the different locations varied by one to four minutes at certain junctures from the timings set out above (which are based on Mr Platt's in court testimony).

⁸⁵⁸⁷ Mobile 052 activated cell Fadlallah_A (09:12) and mobile 771 activated cell LAU_MIC2_A (10:09). Exhibit P1359, p. 300; exhibit P1334, p. 53; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 850.

⁸⁵⁸⁸ Gary Platt, T. 23 February 2017, p. 17. Mobile 771 activated cells Wardieh_B (10:22, 10:24, 10:33, 10:39) and Wardieh_A (10:36, 10:38). Exhibit P1359, p. 300. Mobile 1506 activated cells Wardieh_A (10:19, 10:24, 10:28, 10:35, 10:36, 10:40) and Wardieh_B (10:21). Exhibit P1352, p. 323. In his report, Mr Platt did not specifically

was at the Higher Shiite Council by 10:54 and remained there until 11:44.⁸⁵⁸⁹ And, fourth, he returned to the Quraitem Palace area by 12:04.⁸⁵⁹⁰ Mr Platt could not explain the security detail's activity in Wardieh.⁸⁵⁹¹

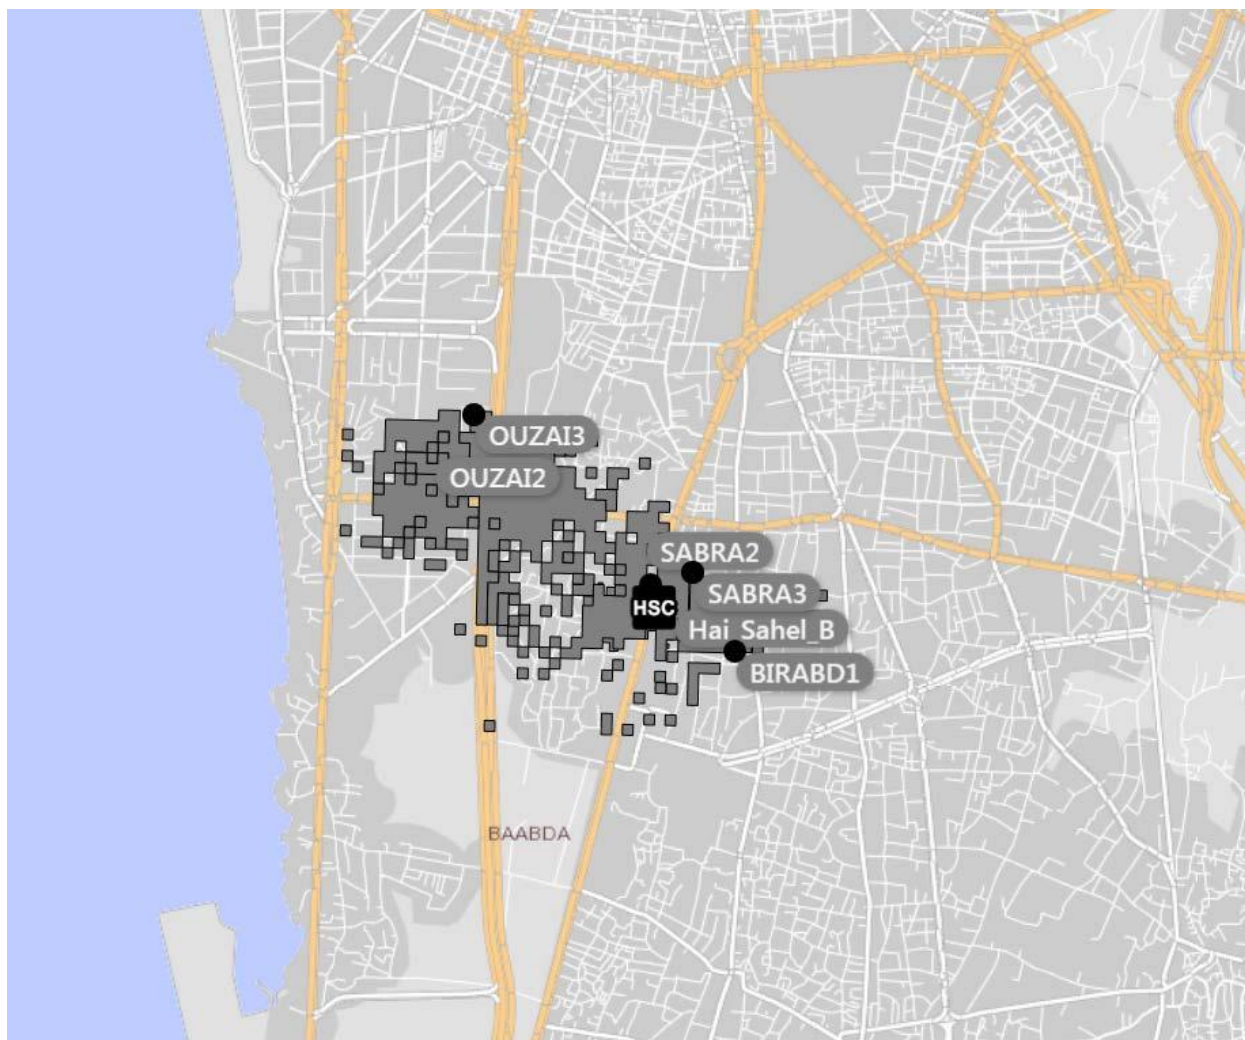

4507. The Trial Chamber prepared the following diagram using the electronic presentation of evidence software of cells around the council, which is marked as 'HSC':

characterize this activity as the security detail travelling to and being static in the Wardieh area, instead characterizing it as being 'consistent with the route of travel taken by the convoy to the to the Higher Shiite Council'. Exhibit P1783 (Expert report of Gary Platt – Chronology), para. 850.

⁸⁵⁸⁹ Cell Hai_El_Sahel_B was activated by mobiles 1506 (10:54, 10:57, 10:59, 11:02, 11:04, 11:06, 11:10 (twice), 11:13, 11:28, 11:33, 11:39, 11:43), 052 (11:06) and 771 (10:55, 10:56 (twice), 11:00, 11:11, 11:34, 11:35, 11:44). Exhibit P1359, p. 300; exhibit 1334, p. 53; exhibit P1352, p. 323; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 851, 859.

⁸⁵⁹⁰ Mobile 1506 activated cell Kraitem_A at 12:04 and mobile 771 activated cell LAU_MIC2_A at 12:08. Exhibit P1352, p. 323; exhibit P1359, p. 300; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 859.

⁸⁵⁹¹ Gary Platt, T. 23 February 2017, p. 17.

Map created by the Trial Chamber from electronic presentation of evidence, exhibit P592.1, of cells around the Higher Shiite Council

4508. Before Mr Hariri's departure, at 09:54, Subject 6's Red 678 and Subject 8's Red 893 were in contact activating the same cell in the Quraitem Palace area.⁸⁵⁹² At 10:10, around the time of Mr Hariri's departure from Quraitem Palace, Subject 6's Blue 610, located in its area, called Blue 817 which was near the Higher Shiite Council.⁸⁵⁹³

⁸⁵⁹² Both mobiles activated cell RAOUCH1. In his report, Mr Platt also noted that, at 09:56, Blue 233 activated cell Mar_Michael_C to receive a call from Blue 817. Exhibit P1204, p. 2; exhibit P1198, p. 1; exhibit P1238, p. 8; exhibit P1239, p. 9; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 846-847. *See also* exhibit P1902, slides 196-197.

⁸⁵⁹³ Blue 610 activated cell MOVPIK1 and Blue 817 activated cell SABRA2. Exhibit P1227, p. 14; exhibit P1239, p. 9; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 852. *See also* exhibit P1902, slides 199-200; exhibit P1903 (EPE snapshots related to exhibit P1902, slide 199).

4509. Mr Platt commented that Subject 8's activity was 'not consistent with following' Mr Hariri, but rather with that subject being present at that location before Mr Hariri's arrival, due to an 'expectation' he would go there.⁸⁵⁹⁴ His visit, Mr Platt noted, was in the public domain.⁸⁵⁹⁵

4510. Around the time that the security detail arrived at the Higher Shiite Council, Blue 817 called Mr Ayyash's Blue 233 from that area; Blue 233 was connecting to a cell in the Parliament/coastal road area.⁸⁵⁹⁶

4511. In Mr Platt's view, Subject 8, on Blue 817, was a 'spotter' and informed Mr Ayyash of Mr Hariri's arrival—which caused 'a number of the Subjects to relocate from their locations either at Quraitem Palace or Parliament and come down to the Higher Shiite Council because now the manpower is needed down there'.⁸⁵⁹⁷

4512. Immediately after this Blue network call, Mr Ayyash's Green 300 called Mr Badreddine's Green 023, which was in the area of Quraitem Palace.⁸⁵⁹⁸ Mr Platt noted that, whereas previously calls between these mobiles occurred after a surveillance operation had concluded, this time it was during one because Green 023 was involved in the operation. The sequence of calls shows the passing of information from Blue 817 to Blue 233 and then from Green 300 to Green 023 about Mr Hariri's arrival at the Higher Shiite Council—showing a command structure—so that Green 300 and Green 023 could decide where to move next.⁸⁵⁹⁹

4513. Between 10:54 and 10:56, there was a burst of Red network calls correlating with Mr Hariri's arrival at the Higher Shiite Council, following a period of inactivity, consistent, in Mr Platt's opinion, with a surveillance operation.⁸⁶⁰⁰ Subject 6's Red 678 was in contact with Subject

⁸⁵⁹⁴ Gary Platt, T. 23 February 2017, pp 57-59. This was in response to a question from the Presiding Judge on Subject 8's activity, 'Is that consistent with Blue 817, that's Subject 8, following the convoy? Or is it consistent with something else? Can you explain that?'.

⁸⁵⁹⁵ Gary Platt, T. 23 February 2017, pp 60, 62.

⁸⁵⁹⁶ At 10:53, Blue 817 activated cell OUZA13 to call Blue 233, which activated cell CoastRoad_C. Exhibit P1239, p. 9; exhibit P1238, p. 8; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 853; Gary Platt, T. 23 February 2017, pp 49-50. *See also* exhibit P1902, slides 206, 208.

⁸⁵⁹⁷ Gary Platt, T. 23 February 2017, pp 58-59. This was also in response to a question from the Presiding Judge, 'Are you suggesting that Subject 8 was, in effect, a spotter waiting on one of the roads to see if Mr. Hariri's convoy went past, or are you suggesting something else?'.

⁸⁵⁹⁸ At 10:54, Green 300 activated cell PORT2 and Green 023 activated cell RAOUCH2. Exhibit P1207, p. 4; exhibit P1211, p. 5; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 853; exhibit P1902, slides 214-215.

⁸⁵⁹⁹ Gary Platt, T. 23 February 2017, pp 51-53.

⁸⁶⁰⁰ Gary Platt, T. 23 February 2017, pp 53-55.

9's Red 652, Subject 5's Red 636 and Mr Ayyash's Red 741—the latter three all were in the Parliament area—and Subject 7's Red 946, which was in the Higher Shiite Council area.⁸⁶⁰¹ Between 11:07 and 11:17, there was Red and Blue network activity in the Higher Shiite Council area.⁸⁶⁰² Mr Platt noted that Mr Ayyash's Red 741 travelled from the Parliament area to the Higher Shiite Council area between 10:56 and 11:07.

4514. According to Mr Platt, 'most of the manpower was previously concentrated at the Parliament area because there was an expectation' that Mr Hariri would have travelled there.⁸⁶⁰³ In Mr Platt's view, 'they covered all the bases', namely Quraitem Palace, the Parliament area and the Higher Shiite Council.⁸⁶⁰⁴ Further, to an extent, also the crime scene area, at a certain point, was covered.⁸⁶⁰⁵

⁸⁶⁰¹ At 10:54, Red 652 (ETOILE1) called Red 678 (OGER3); at 10:55, Red 678 (MOVPIK1) called Red 636 (PORT2); at 10:56, Red 678 (RAOUCH2) called Red 946 (GHOBAL2); and at 10:56, Red 678 (OGER2) called Red 741 (PORT2). Exhibit P1204, p. 2; exhibit P1199, p. 2; exhibit P1203, p. 1; exhibit P1202, p. 1; exhibit P1197, p. 2; exhibit P1902, slides 216-217; Gary Platt, T. 23 February 2017, pp 59-60, 63.

⁸⁶⁰² At 11:07, Red 741 activated cell SABRA3 and was in contact with Red 678, who activated cell BIRABD1; then, Blue 610 also activated cell SABRA3 to contact Blue 817 at 11:08 and 11:10, while the latter activated cells OUZAI2 and BIRABD1; at 11:16 and 11:17, Red 741 activated cell SABRA3 to call—and then to receive a call from—Red 893, which activated cell BIRABD1. Exhibit P1197, p. 2; exhibit P1204, p. 2; exhibit P1227, p. 14; exhibit P1239, p. 9; exhibit P1198, p. 1; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 854-855, 857; exhibit P1902, slides 218-224.

⁸⁶⁰³ Gary Platt, T. 23 February 2017, p. 59.

⁸⁶⁰⁴ Gary Platt, T. 23 February 2017, p. 60.

⁸⁶⁰⁵ Gary Platt, T. 23 February 2017, p. 60. This was in response to questions from the Presiding Judge, 'Well, how does that fit in with using that same term, other spotters being at the Parliament area at the same time?'...Was any other part of Beirut covered based upon your analysis of the call data records of that day?'

Photograph of Mufti Abdul Amir Qabalan and Mr Rafik Hariri on his visit at the Higher Shiite Council on 31 January 2005—Exhibit P359 (Photographs) p. 4

4515. At 11:44, around the time the security detail departed from the Higher Shiite Council, Mr Badreddine's Green 023 again called Mr Ayyash's Green 300.⁸⁶⁰⁶ Mr Platt commented that, consistent with surveillance, this was the beginning of another burst of network mobile activity correlating with Mr Hariri's movement.⁸⁶⁰⁷ Namely, at 11:46 and 11:47, there was Red network activity, with Subject 8's Red 893, Subject 6's Red 678 and Mr Ayyash's Red 741 located in the area of the Higher Shiite Council, and Subject 9's Red 652 located in the Parliament area.⁸⁶⁰⁸

⁸⁶⁰⁶ Green 023 activated cell ZOUKAK1 and Green 300 activated cell SABRA3. Exhibit P1211, p. 5; exhibit P1207, p. 4; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 861; Gary Platt, T. 23 February 2017, p. 68. *See also* exhibit P1902, slides 228, 230. As noted above, there can be time differences between the start time of calls on the same network and between calls on different networks. The call described above as starting at 11:44 (according to exhibit P1211—the call sequence table for Green 023—this call started at 11:44:58), started at 11:45:00 according to exhibit P1207, which is the call sequence table for Green 300.

⁸⁶⁰⁷ Gary Platt, T. 23 February 2017, pp 68-69; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 858, 861.

⁸⁶⁰⁸ At 11:46, Red 678 (SABRA3) called Red 652 (BNPI2); and at 11:47, Red 893 activated cell OUZAI2 to call Red 741, which activated cell SABRA3. Exhibit P1204, p. 2; exhibit P1199, p. 2; exhibit P1198, p. 1; exhibit P1197, p. 2; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 861; Gary Platt, T. 23 February 2017, pp 70-71; exhibit P1902, slides 228, 231.

4516. Between 11:48 and 11:54 there was a burst of 11 calls, all involving mobiles activating cells in locations relevant to Mr Hariri's movements, namely the Higher Shiite Council, Parliament and the route between them, prompted by Mr Hariri's departure from the Higher Shiite Council.⁸⁶⁰⁹ At 11:48, Mr Ayyash's Red 741 in the Higher Shiite Council area called Subject 5's Red 636, which was in the area of Parliament,⁸⁶¹⁰ and at 11:48, Mr Ayyash's Green 300 activated the same cell as Red 741 to call Mr Badreddine's Green 023, which was then connecting to a cell in the area of Parliament and the crime scene.⁸⁶¹¹

4517. Between 11:48 and 11:49, Subject 6's Red 678 and Mr Ayyash's Green 300 activated cells which Mr Platt characterised as consistent with the northward route taken by the security detail.⁸⁶¹² According to Mr Platt, Green 300's activity at 11:50 was 'again consistent with travelling northwards along the route towards Quraitem Palace'.⁸⁶¹³

4518. There was a high frequency of Green network calls during this period and an unusually high number of Green network calls on this day as a whole, namely 11.⁸⁶¹⁴ Immediately before the security detail's first call in the Quraitem Palace area, Red 652, Red 678 and Red 741 were in contact—at 12:02 and 12:03—all in the Quraitem Palace area.⁸⁶¹⁵ At 12:04, Green 300 called Green 023 from the Quraitem Palace area.⁸⁶¹⁶

4519. Overall, Mr Platt commented that while the security detail travelled from the Higher Shiite Council to Quraitem Palace between 11:44 and 12:08, Red 741's, Green 300's and Red 678's activity almost mirrored the security detail's journey 'and within the same time frame as the

⁸⁶⁰⁹ Gary Platt, T. 23 February 2017, pp 73-74; exhibit P1902, slides 232-243.

⁸⁶¹⁰ At 11:48, Red 741 activated cell SABRA3 to call Red 636, which activated cell ETOILE1. Exhibit P1197, p. 2; exhibit P1203, p. 1; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 861.

⁸⁶¹¹ At 11:48, Green 300 activated cell SABRA3 to call Green 023, which activated cell ZOUKAK1. Exhibit P1207, p. 4; exhibit P1211, p. 5; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 861; Gary Platt, T. 23 February 2017, pp 60, 70-71.

⁸⁶¹² At 11:48, Red 678 activated cell GHOBAl2, and Red 636 activated cell ETOILE1. At 11:49, Green 023 activated cell ZOUKAK1 and Green 300 activated cell GHOBAl2. Exhibit P1204, p. 2; exhibit P1203, p. 1; exhibit P1207, p. 4; exhibit P1211, p. 5; exhibit P1783, para. 861. Gary Platt, T. 23 February 2017, p. 74. *See also* exhibit P1902, slides 235-237.

⁸⁶¹³ At 11:50, Green 023 (PHENMB1) again called Green 300 (GHOBAl3). Exhibit P1211, p. 5; exhibit P1207, p. 4; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 861. Gary Platt, T. 23 February 2017, pp 74-75.

⁸⁶¹⁴ Gary Platt, T. 23 February 2017, p. 75; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 845.

⁸⁶¹⁵ Gary Platt, T. 23 February 2017, p. 79.

⁸⁶¹⁶ At 12:04, Green 300 activated cell RAOUCH1 to call Green 023, which activated cell OUZA11. Exhibit P1207, p. 5; exhibit P1211, p. 5; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 867. Gary Platt, T. 23 February 2017, p. 80.

security detail', consistent with mobile surveillance by these mobiles.⁸⁶¹⁷ He concluded that the seven calls between Mr Ayyash's Green 300 and Mr Badreddine's Green 023 during this short period were consistent with Green 023 getting information from Green 300 regarding the security detail's movements, and whether it was heading toward where Green 023 was.

4520. After the 11:54 call, when it had become clear that the convoy would not travel to Parliament or towards the coastal road area, Green 023 started moving toward south Beirut.⁸⁶¹⁸ Mr Platt said that, on this day, Mr Ayyash and Mr Badreddine wanted to gather first-hand detailed observations of the security detail's behaviour, in order to make decisions about the eventual attack.⁸⁶¹⁹ Mr Platt mapped the calls on the following map in his chronology report:

⁸⁶¹⁷ Gary Platt, T. 23 February 2017, pp 81-82, 89-90; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 866. *See also* exhibit P1902, slides 253-255.

⁸⁶¹⁸ Gary Platt, T. 23 February 2017, pp 90-91.

⁸⁶¹⁹ Gary Platt, T. 23 February 2017, pp 83-84.

Map 78: HARIRI's Security Detail (09:12 to 11:44), Red, Blue and Green Network (09:54 to 11:17), Quraitem Palace and Higher Shiite Council, 31 January 2005

Exhibit P1783 (Expert report of Gary Platt – Chronology), p. 254

4521. At 12:05, Subject 7's Red 946 and Subject 9's Red 652 were in contact in the area of Quraitem Palace.⁸⁶²⁰ This was followed by a 12:07 call from Mr Badreddine's Green 023 to Mr Ayyash's Green 300, which lasted for 11 seconds and during which Green 300 was south of Quraitem Palace, and Green 023 was in the area of the Higher Shiite Council.⁸⁶²¹

4522. At 12:23, Mr Ayyash's Blue 233 activated a cell in the Higher Shiite Council area, whose coverage overlaps with that of the cell used by Green 023 at 12:07.⁸⁶²² Given the short duration of the Green network call and the fact that it was the final Green network call of the day, coupled with Blue 233's location at 12:23, Mr Platt concluded that this activity was consistent with a meeting between Mr Ayyash and Mr Badreddine after the operation had concluded.⁸⁶²³

4523. There was continued Red network activity in the Quraitem Palace area following the final Green network call, from 12:18 to 12:22, as well as Red and Blue network activity in the Quraitem Palace and crime scene areas between 12:23 and 12:27.⁸⁶²⁴ Mr Platt commented that this was consistent with continuing the surveillance operation, even after Mr Hariri had returned to Quraitem Palace.⁸⁶²⁵ Mr Platt mapped the calls on the following map in his chronology report:

⁸⁶²⁰ Red 946 activated cell CARACA2 and Red 652 activated cell RAOUCH3. Exhibit P1202, p. 1; exhibit P1199, p. 2; exhibit P1902, slides 257-258.

⁸⁶²¹ Green 023 activated cell OUZAI2 and Green 300 activated cell OGER3. Exhibit P1207, p. 5; exhibit P1211, p. 5; *see also* exhibit P1783 (Expert report of Gary Platt – Chronology), para. 867; exhibit P1902, slides 257, 259.

⁸⁶²² Blue 233 activated cell BorjBrajneh-II_C to call Blue 610, which activated cell MOVPIK1. Exhibit P1238, p. 8; exhibit P1227, p. 14; Gary Platt, T. 23 February 2017, pp 92-93. Exhibit P1783 (Expert report of Gary Platt – Chronology), para. 868; exhibit P1902, slide 260.

⁸⁶²³ Gary Platt, T. 23 February 2017, pp 92-93.

⁸⁶²⁴ At 12:18, Red 893 (RAOUCH2) called Red 678 (MOVPIK1); at 12:22, Red 652 (CARACA3) called Red 946 (MOVPIK1); at 12:23 and 12:25, Blue 610 activated cell MOVPIK1 twice to receive calls from Blue 233; at 12:25, Red 678 (MOVPIK1) called Red 652 (CARACA1); at 12:27, Red 678 (MOVPIK1) called Red 893 (MOVPIK1); and at 12:27, Red 652 (MANARA2) called Red 636 (PHENMB1). Exhibit P1198, p. 2; exhibit P1204, p. 2; exhibit P1199, p. 2; exhibit P1202, p. 1; exhibit P1227, p. 14; exhibit P1203, p. 1; exhibit P1902, slides 257, 261-263.

⁸⁶²⁵ Gary Platt, T. 23 February 2017, p. 93.

Map 79: Red, Green and Blue Network, Higher Shiite Council and Quraitem Palace, 31 January 2005 (11:44 to 12:31)

Exhibit P1783 (Expert report of Gary Platt – Chronology), p. 258

4524. Between 12:28 and 12:42, there was Red network activity in the Quraitem Palace area, as well as in the crime scene / Parliament area.⁸⁶²⁶ Mr Platt noted that the activity was consistent with continued reconnaissance of locations and routes relevant to Mr Hariri, and noted that this was the last Red network activity of the day, meaning that the network ceased operating within 34 minutes of Mr Hariri having returned to Quraitem Palace.⁸⁶²⁷ Increased Blue network activity resumed in the Quraitem Palace area between 17:51 and 19:53.⁸⁶²⁸ According to Mr Platt, this was consistent with a regrouping phase following the cessation of the Red network, to decide on the next actions, and with surveillance around Quraitem Palace.⁸⁶²⁹

4525. Mr Hariri was also scheduled to dine at 20:30 at Mr Mahmoud Mamish's residence, in the Ain El-Teeneh area.⁸⁶³⁰ Mr Hariri's security detail left Quraitem Palace sometime after 20:35, arrived at Mr Mamish's at 20:50, remained until 22:53 and was on the route back to Quraitem Palace at 23:05.⁸⁶³¹

⁸⁶²⁶ At 12:28, Red 652 (CARACA3) called Red 946 (MOVPIK1); at 12:31, Red 652 (MRAICI2) called Red 678 (RAOUCH2); and at 12:42, Red 652 (PHENMB1) called Red 946 (ZOUKAK1). Exhibit P1199, p. 3; exhibit P1202, p. 2; exhibit P1204, p. 2; exhibit P1902, slides 272-274.

⁸⁶²⁷ Gary Platt, T. 23 February 2017, pp 97-98; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 869.

⁸⁶²⁸ At 17:51, Blue 817 activated cell CONCOR2 to receive a call from Blue 610; at 17:53 and 17:55, Blue 817 activated cell CONCOR2 again to call Blue 324 (Mic_Bay Rock2) and Blue 585 (Raouche_B), respectively; at 17:56, Blue 817 activated cell RAOUCH2 to receive a call from Blue 610; at 17:58 and 17:59, Blue 817 activated cell RAOUCH3 to call Blue 585 both times; at 18:02, Blue 817 activated cell MOVPIK1 to call Blue 864; at 18:05, Blue 817 (MOVPIK1) called Blue 324 (Manara_C); at 18:26, Blue 324 (Raouche_B) called Blue 817 (MOVPIK1); at 18:39, Blue 610 activated cell CARLTO2 to call Blue 817; at 19:00, Blue 610 activated cell MOVPIK1 to receive a call from Blue 817; at 19:17, Blue 610 activated cell CARLTO2 to receive a call from Blue 235; at 19:27, Blue 610 (CARLTO2) called Blue 864 (MANARA2); at 19:42, Blue 610 activated cell CARACA1 to receive a call from Blue 817; and at 19:53, Blue 864 activated cell OGER3 to receive a call from Blue 817. Exhibit P1239, pp 9-10; exhibit P1225, p. 11; exhibit P1229, p. 13; exhibit P1227, p. 15; exhibit P1228, p. 12; Gary Platt, T. 23 February 2017, p. 99; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 843, 871; exhibit P1902, slides 276-279.

⁸⁶²⁹ Gary Platt, T. 23 February 2017, pp 99-100.

⁸⁶³⁰ Exhibit P299, ERN 60142161; exhibit 2D00081 (Statement of Mohammed Mneimneh), para. 34; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 841.

⁸⁶³¹ The following mobile activity is included in exhibit P1902, slide 281, used in court with Mr Platt. At 20:35, mobile 1506 activated cell LAU_MIC2_A; between 20:50 and 22:53, cell Ain_El_Tineh_C was activated by mobile 1506 (20:50, 21:39), mobile 052 (21:01) and mobile 771 (22:08, 22:10, 22:38, 22:53) and cell Ain_El_Tineh_B was activated by mobile 771 (20:58) and mobile 052 (21:35, 22:11); finally, at 23:05, mobile 1506 activated cell Concorde_A; however, the slide does not contain the call information showing that mobile 1506 activated cells Hamra_B (21:50, 22:00) and Concorde_A (21:55, 22:05) and that mobile 771 activated cell Concorde_B (23:06). Exhibit P1352, p. 325; exhibit P1359, p. 302; exhibit P1334, p. 54; exhibit P1902, slides 281-285; Gary Platt, T. 23 February 2017, p. 101. Mr Platt explained that there were no further calls involving members of the security detail after 23:05, and therefore that call was 'the closest we get to any activity by the security detail to Quraitem Palace'. Gary Platt, T. 23 February 2017, pp 101-102.

4526. Between 20:59 and 21:02, while Mr Hariri was attending dinner at Mr Mamish's residence, there was Blue network activity in the area of this residence and of Quraitem Palace.⁸⁶³² Mr Platt thought that this activity was consistent with surveillance of Mr Hariri at this dinner engagement, noting that those conducting the operation may not have known that he would only be travelling a short distance from Quraitem Palace to this engagement, and may have been following him to wherever he was going.⁸⁶³³ Mr Platt prepared the following diagram of the Blue network cell activations in the evening that day:

Map 80: Blue Network (S5, S6, S7 and S8), Quraitem Palace, 31 January 2005 (17:51 to 23:25)

Exhibit P1783 (Expert report of Gary Platt – Chronology), p. 260

⁸⁶³² At 20:59, Blue 324 (Unesco_C) called Blue 864 (MOVPIK1); at 21:00, Blue 610 (MOVPIK1) called Blue 585 (Manara_C); at 21:01, Blue 585 (Manara_C) called Blue 324 (Unesco_C); and at 21:02, Blue 864 (RAMLET3) called Blue 610 (CARLTO2). Exhibit P1225, p. 11; exhibit P1228, p. 12; exhibit P1227, p. 15; exhibit P1229, p. 13; exhibit P1902, slides 286-290. Mr Platt's report did not deal with the movements of Mr Hariri in connection with this visit. The network activity of Blue 585, Blue 610, Blue 324 and Blue 817 between 17:51 and 23:25 was characterised as being 'around Quraitem Palace and in the area between Quraitem Palace and south Beirut', rather than being consistent with surveillance of Mr Hariri at this dinner engagement. Exhibit P1783 (Expert report of Gary Platt – Chronology), paras 843, 871.

⁸⁶³³ Gary Platt, T. 23 February 2017, pp 103-104.

(ss) Tuesday 1 February 2005

4527. On Tuesday 1 February 2005, Mr Hariri received visitors at Quraitem Palace between 07:45 and 22:02. One of the visitors was the Deputy Syrian Minister of Foreign Affairs, Mr Walid El-Moallem.⁸⁶³⁴

4528. Blue 585 and Blue 324 activated cells in the area of Quraitem Palace between 13:02 and 13:04.⁸⁶³⁵ Subject 6's Blue 610 was in the Quraitem Palace area from 14:15 until 15:32.⁸⁶³⁶

4529. The activity of Blue 585, Blue 324, Blue 817 and Blue 864 in the area of Quraitem Palace between 18:05 and 18:15,⁸⁶³⁷ following around one hour of inactivity, was according to Mr Platt consistent with continued surveillance of Mr Hariri at Quraitem Palace.⁸⁶³⁸ Although afterwards Blue 610, Blue 585 and Blue 324 all activated cells in the Dahyieh area, Blue 817 and Blue 864 continued to be active in the Quraitem Palace area until 21:05.⁸⁶³⁹

(tt) Wednesday 2 February 2005

4530. On Wednesday 2 February 2005, Mr Hariri received visitors at Quraitem Palace between 07:40 and 21:10, including Mr Mustafa Nasser and Mr Walid Jumblatt.⁸⁶⁴⁰

4531. Blue network mobiles were active in the area near Quraitem Palace that day. Mr Platt highlighted the activity of Subject 5's Blue 585, Subject 7's Blue 324, Subject 8's Blue 817 and

⁸⁶³⁴ Exhibit P301, pp 362-365; exhibit P303, ERNs D0004972-D0004973; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 872.

⁸⁶³⁵ Blue 585 activated cells Unesco_C and Raouche_B (twice) to contact Blue 610 (13:02), Blue 864 (13:04) and Blue 324 (13:03), the latter activating cell Manara_C during this call, and again at 13:04 when calling Blue 817. Exhibit P1229, p. 13; exhibit P1225, p. 11; exhibit P1227, p. 15; exhibit P1228, p. 12; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 875.

⁸⁶³⁶ Blue 610 activated cells MOVPIK1 (14:15, 14:23, 15:03) and RAOUCH3 (15:32). Exhibit P1227, p. 15; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 876-877.

⁸⁶³⁷ Blue 585 activated cells Fadlallah_B (18:05, 18:08) and Raouche_B (18:11). Blue 324 activated cells Manara_C (18:06, 18:08) and Unesco_C (18:11). Blue 817 activated cells CARACA3 (18:05, 18:06). Blue 864 activated cell MOVPIK1 (18:15). Exhibit P1229, p. 14; exhibit P1225, p. 11; exhibit P1239, p. 10; exhibit P1228, p. 12; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 878, 880.

⁸⁶³⁸ Gary Platt, T. 24 February 2017, pp 16-17. *See also* exhibit P1902, slides 305-306; exhibit P1782, para. 824.

⁸⁶³⁹ At 18:25, Blue 585 activated cell Haret Hreik-II_C and Blue 324 activated cell BorjBrajneh-II_B. At 19:00, Blue 610 activated cell SFEIR2, while Blue 585 activated cell Mraiجه_A. At 19:03, Blue 585 activated cell Mraiجه_A to call Blue 324, which activated cell BorjBrajneh-II_B. Blue 864 activated cells CARACA3 (19:37), MOVPIK1 (21:02) and RAOUCH2 (21:04, 21:05). Blue 817 activated cells MOVPIK1 (19:40, 21:02) and OGER2 (21:05). Exhibit P1229, p. 14; exhibit P1225, p. 12; exhibit P1227, p. 15; exhibit P1228, p. 12; exhibit P1239, p. 10; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 878, 881-883.

⁸⁶⁴⁰ Exhibit P301, pp 365-366; exhibit P303, ERN D0004981; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 884.

Subject 9's Blue 864, around Quraitem Palace, at various times between 11:28 and 16:07, during which they were in contact with each other or with Subject 6's Blue 610.⁸⁶⁴¹ Specifically, Blue 585, Blue 817 and Blue 864 were active in that area between 11:28 and 13:11.⁸⁶⁴² Blue 585, Blue 324, Blue 817 were active there between 13:33 and 13:34;⁸⁶⁴³ and Blue 585 and Blue 324 were there between 16:04 and 16:07.⁸⁶⁴⁴ He mapped it in his chronology report as shown in the map below:

⁸⁶⁴¹ Gary Platt, T. 24 February 2017, pp 30-33; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 885. *See also* exhibit P1902, slides 318-323.

⁸⁶⁴² At 11:28, Blue 610 activated cell SIMON3 when in contact with Blue 817, which activated cell CARACA3. At 11:30, Blue 864 and Blue 817 both activated cell CARACA3. At 12:51, Blue 585 activated cell Raouche_B to call Blue 324, and at 13:00 Blue 864 activated cell CARACA3 to call Blue 585, which activated cell Manara_C. At 13:02 and 13:11, Blue 817 activated cell CARLTO3 when in contact with Blue 864 (which activated cell MANARA2) and Blue 324 (which activated cell Bir Abed_A). Exhibit P1227, p. 15; exhibit P1239, p. 11; exhibit P1228, p. 12; exhibit P1229, p. 14; exhibit P1225, p. 12; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 890-892.

⁸⁶⁴³ At 13:33, Blue 324 activated cell Raouche_B to call Blue 817, which activated cell CARLTO3; at 13:34, Blue 324 activated cell Unesco_C to call Blue 585, which activated cell Manara_C; and also at 13:34, Blue 817 activated cell CARLTO3 to call Blue 324, which activated cell Unesco_C. Exhibit P1239, p. 11; exhibit P1225, p. 12; exhibit P1229, p. 14; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 893. In his report, Mr Platt did not mention Blue 585's activity at this time.

⁸⁶⁴⁴ From 16:04 to 16:07, Blue 585 and Blue 324 activated cells Raouche_B (16:04), Fadlallah_B (16:05, 16:07) and Manara_C (16:04, 16:06), respectively, Blue 585's 16:05 call being with Blue 610, which activated cell SFEIR2. Exhibit P1229, p. 14; exhibit P1225, p. 12; exhibit P1227, p. 16. Exhibit P1783 (Expert report of Gary Platt – Chronology), para. 895.

Map 82: Blue Network (S5, S7, S8 and S9), Quraitem Palace, 2 February 2005 (11:28 to 16:07)

Exhibit P1783 (Expert report of Gary Platt – Chronology), p. 267

4532. The sole Red network activity on this day was between 18:41 and 19:25, when credit was added to the eight Red network mobiles in the Tripoli area and north of Tripoli, the final call being that of Red 662 activating cell TURBO3.⁸⁶⁴⁵

4533. The topping-up process was followed ten minutes later by a call between Blue 817 and Blue 610, during which Blue 817 activated cell TRIPOL4 in the Tripoli area.⁸⁶⁴⁶ Mr Platt commented that the Blue network call shows the coordinating role of Subject 6's Blue 610 in this logistical process, as well as the position of Subject 8's Blue 817 within 'this tight-knit network' as one of three subjects 'on a frequent basis going to Tripoli'.⁸⁶⁴⁷

(uu) Thursday 3 February 2005

4534. On Thursday 3 February 2005, Mr Hariri received visitors at the palace between 07:35 and 21:45. They included the US ambassador, Mr Feltman, and the President of the Order of Physicians in Lebanon, Mr Mario Aoun.⁸⁶⁴⁸ The amended consolidated indictment pleads that:

On 3 February 2005, HARIRI had a meeting close to his residence before going to the St. Georges Yacht Club for lunch and later returning to Quraitem Palace. **AYYASH, S5, S6, S7, S8, S9, and S10** were all active on their **Red Network** and/or **Blue Network** phones around Quraitem Palace and/or the St. Georges Yacht Club at the same time that HARIRI was having lunch there.⁸⁶⁴⁹

4535. Mr Hariri also lunched with Lebanese Deputy Prime Minister Issam Fares on his yacht in Ain El-Mreish, at St Georges Marina.⁸⁶⁵⁰ His security detail departed Quraitem Palace sometime

⁸⁶⁴⁵ These Red network mobiles were solely in contact with service number 1456 and activated cells MINIEH3 (Red 741, Red 636 and Red 572), TOURBO1 (Red 636), TOURBO3 (Red 678, Red 652 and Red 662), TRIPOL4 (Red 946 and Red 893), TRIPOL3 (Red 893), TRIPOL2 (Red 893), ASAMRA1 (Red 893) and BALADI1 (Red 893). Exhibit P1197, p. 2; exhibit P1203, p. 1; exhibit P1204, p. 2; exhibit P1202, p. 2; exhibit P1198, p. 2; exhibit P1199, p. 3; exhibit P1201, p. 1; exhibit P1200, p. 1; Gary Platt, T. 24 February 2017, pp 34-36, 40; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 886, 896-897; exhibit P1902, slides 327-332; exhibit P1906 (EPE snapshot related to exhibit P1902, slides 330 and 331).

⁸⁶⁴⁶ Blue 817 activated cell TRIPOL4 to call Blue 610, which activated cell BRAJNE1. Exhibit P1239, p. 11; exhibit P1227, p. 16; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 887, 898; exhibit P1902, slides 332-334.

⁸⁶⁴⁷ Gary Platt, T. 24 February 2017, p. 36.

⁸⁶⁴⁸ Exhibit P301, pp 366-368; exhibit P303, ERNs D0004989-D0004990; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 900.

⁸⁶⁴⁹ Amended consolidated indictment, para. 36.

⁸⁶⁵⁰ Exhibit P299, ERN 60142164; exhibit P471 (Press release); exhibit P1783 (Expert report of Gary Platt – Chronology), para. 900.

after 13:01.⁸⁶⁵¹ It travelled to the St Georges Marina area—after a stop—by 14:09, and remained stationary until 15:32.⁸⁶⁵² It returned to Quraitem Palace by 16:18.⁸⁶⁵³

4536. At 11:41, Blue 324 and Blue 817 were in contact, activating cells in the area of the St Georges Marina.⁸⁶⁵⁴ Mr Platt characterised this as consistent with preparation for surveillance activity in this area.⁸⁶⁵⁵ He commented, however, that ‘there was no surveillance prior to the St Georges Marina’⁸⁶⁵⁶ and that ‘For some reasons on this day ... they decided to commence the surveillance there’.⁸⁶⁵⁷

4537. Between 11:43 and 13:00, Blue 817 and Blue 324 activated cells in St Georges Marina area, and then the coastal road. They were in contact with each other and made calls to Subject 6’s Blue 610, which activated a cell in Dahyieh; at 12:58. Subject 7’s Red 946 and Subject 8’s Red 893 made contact and also activated cells in the St Georges Marina area.⁸⁶⁵⁸ Between 13:04 and 13:33, Red 893 and Red 946 activated cells in the St Georges Marina area.⁸⁶⁵⁹ At 13:56,

⁸⁶⁵¹ At 13:00, mobile 506 activated cell Fadlallah_A; at 13:01, mobile 1506 activated cell LAU_Beirut_A. Exhibit P1322, p. 74; exhibit P1352, p. 333. *See also* exhibit P1907 (Chronology PowerPoint presentation – 3 February 2005 to 7 February 2005), slides 9-10.

⁸⁶⁵² Mobile 771 activated cells Bay_View_A (14:09, 14:31), Zouk_MPT_C (14:53) and Minaa_el_hosson_C (14:18, 14:30, 14:39, 15:07); mobile 1506 activated cells BayView_A (14:28, 14:31, 14:35, 14:36, 14:38, 14:52, 15:01, 15:15, 15:32) and Minaa_el_hosson_C (15:00, 15:03, 15:09, 15:26); mobile 506 activated cells Riad_El_Soloh_C (14:17, 14:52, 15:01), Minaa_el_hosson_C (14:20, 14:36, 14:55) and Minaa_el_hosson_A (14:38); and mobile 052 activated cells Minaa_el_hosson_A (14:48) and Minaa_el_hosson_C (14:50, 15:13, 15:17, 15:19). Exhibit P1334, p. 55; exhibit P1359, pp 308-309; exhibit P1322, p. 74; exhibit P1352, pp 333-334; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 909, 915; *see also* exhibit P1907, slides 13-16.

⁸⁶⁵³ Mobile 506 activated cells Zarif_C (15:49) and Mar_Elias2_B (16:03); mobile 771 activated cell Mar_Elias2_B (15:58, 16:00, 16:02); mobile 1506 activated cell Mar_Elias2_B (15:58 (twice), 15:59). Then, at 16:18, mobile 1506 activated cell Kraitem_B and mobile 771 activated cell LAU_MIC2_A; mobile 052 activated cell Concorde_B (16:20). Exhibit P1322, p. 74; exhibit P1359, p. 309; exhibit P1352, p. 334; exhibit P1334, p. 55. Gary Platt, T. 24 February 2017, pp 70-71. *See also* exhibit P1907, slides 17-18.

⁸⁶⁵⁴ Blue 324 activated cell BayView_A when in contact with Blue 817, which in turn activated cell PHENMB1. Exhibit P1225, p. 12; exhibit P1239, p. 11; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 904.

⁸⁶⁵⁵ Gary Platt, T. 24 February 2017, p. 57.

⁸⁶⁵⁶ Gary Platt, T. 24 February 2017, p. 69.

⁸⁶⁵⁷ Gary Platt, T. 24 February 2017, p. 66.

⁸⁶⁵⁸ At 11:43, Blue 817 (PHENMB1) called Blue 324 (BayView_A); at 11:55, Blue 817 (MANARA2) called Blue 610 (SFEIR2); at 12:55, Blue 817 (AUH1) called Blue 610 (SFEIR2); at 12:58, Red 946 (BEACH1) called Red 893 (AUH1); and at 13:00, Blue 817 (AUH1) called Blue 610 (SFEIR2). Exhibit P1239, p. 11; exhibit P1225, p. 12; exhibit P1227, p. 16; exhibit P1202, p. 2; exhibit P1198, p. 2; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 904.

⁸⁶⁵⁹ Red 893 activated cells AUH1 (12:58), MRAICI1 (13:04, 13:15), PHENMB1 (13:28) and MRAICI2 (13:33); Red 946 activated cells BEACH1 (13:04, 13:15) and MRAICI2 (13:28). Exhibit P1198, p. 2; exhibit P1202, p. 2; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 905-906. In his report, Mr Platt characterized Red 893’s location at 13:33 as being in the area of Quraitem Palace. Exhibit P1783 (Expert report of Gary Platt – Chronology), para. 906.

Mr Badreddine's Green 023, in Dahyieh, called Mr Ayyash's Green 300, which activated a cell in the St Georges Marina area.⁸⁶⁶⁰

4538. Between 14:02 and 14:05, Subject 8's Red 893, Subject 7's Red 946 and Mr Ayyash's Red 741 were in contact while in the St Georges Marina area.⁸⁶⁶¹ Mr Platt noted that this was a burst of calls just before the security detail's first call in the St Georges Marina area, consistent, and as seen on other occasions, with the mobiles being in contact as Mr Hariri arrived.⁸⁶⁶² Between 14:18 and 14:28, Mr Ayyash's Red 741, Subject 8's Red 893, Subject 5's Red 636, Subject 9's Red 652 and Subject 6's Red 678 were all in contact, with Red 741 and Red 893 activating cells in the area of the St Georges Marina, while others were in the Quraitem Palace area.⁸⁶⁶³

4539. Mr Platt commented that this activity was consistent with surveillance, specifically having observed that the meeting was taking place at the St Georges Marina and deciding to 'move ... part of the operation team back to the vicinity of Quraitem Palace' to 'potentially view the movements, then, between St. Georges Marina back to Quraitem Palace'.⁸⁶⁶⁴

4540. At 14:42, Mr Badreddine's Green 023, located in Dahyieh, again called Mr Ayyash's Green 300, which was in the St Georges Marina area, and later that same minute, Mr Ayyash's Red 741 activated the same cell to receive a call from Red 636.⁸⁶⁶⁵ Mr Platt commented that the

⁸⁶⁶⁰ At 13:56, Green 300 activated cell MRAICI2 to receive a call from Green 023, which in turn activated cell ROUEIS3. Exhibit P1207, p. 5; exhibit P1211, p. 5; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 906. *See also* exhibit P1907, slides 21-22.

⁸⁶⁶¹ At 14:02 and 14:04, Red 893 and Red 946 were in contact, activating cells MRAICI1 and MRAICI2, and BEACH1 (both times), respectively. In his report, Mr Platt incorrectly stated that these two contacts both took place at 14:02. At 14:05, Red 893 activated cell AUH1 to contact Red 741, which activated cell MRAICI1. Exhibit P1198, p. 2; exhibit P1197, p. 2; exhibit P1202, p. 2; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 910. *See also* exhibit P1907, slides 23-24.

⁸⁶⁶² Gary Platt, T. 24 February 2017, pp 76-77.

⁸⁶⁶³ At 14:18, Red 741 (MRAICI2) called Red 636 (OGER2); at 14:21, Red 636 (MOVPIK1) called Red 652 (OGER2); at 14:22, Red 678 (MOVPIK1) called Red 636 (OGER3); at 14:24, Red 636 (RAOUCH3) called Red 652 (RAOUCH3); and at 14:28, Red 741 (MRAICI2) called Red 893 (PHENMB1). At 14:15, Red 946 had activated cell MRAICI2. Exhibit P1197, p. 2; exhibit P1198, p. 2; exhibit P1203, pp 1-2; exhibit P1199, p. 3; exhibit P1204, p. 2; exhibit P1202, p. 2; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 911. *See also* exhibit P1907, slides 27-28.

⁸⁶⁶⁴ Gary Platt, T. 24 February 2017, pp 82-83. The Trial Chamber appreciates that, even if Mr Platt refers to *moving* 'part of the operation team', the Red mobiles which started activating cells in the Quraitem Palace area were different from those who were active in the St Georges Marina area, and who continued to be active there. Therefore, the Red mobiles' activity does not reflect any *movement* of their users from an area to another.

⁸⁶⁶⁵ At 14:42, Green 023 activated cell BRAJNE3 to call Green 300, with the latter activating cell MRAICI2. Exhibit P1211, p. 5; exhibit P1207, p. 5; exhibit P1197, p. 2; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 911-912; exhibit P1907, slides 31-32; Gary Platt, T. 24 February 2017, p. 85. As noted above, in paragraph 1632, there can be time differences between the start time of calls on the same network and between calls on different

Green network call related to the ongoing surveillance operation, since Green 023 was in Dahyieh during this call but after he moved to the St Georges Marina area.⁸⁶⁶⁶

4541. Between 14:50 and 15:04, there was Red network activity between the principal six Red mobiles, five of which were calls from Mr Ayyash's Red 741 activating the same cell in the area of the St Georges Marina to call Red 893, Red 636 and Red 946.⁸⁶⁶⁷ At 15:27, Mr Badreddine's Green 023, now in the port/marina area, called Mr Ayyash's Green 300, for the third time that day.⁸⁶⁶⁸

4542. Between 15:36 and 15:43, around the time of the security detail's departure from the St Georges Marina, the principal six Red mobiles were in contact. Red 946, Red 893 and Red 741 activated cells in the St Georges Marina area, while Red 636, Red 678 and Red 652 activated cells in the Quraitem Palace area and along the coastal road towards the Palace.⁸⁶⁶⁹ Mr Platt, in his chronology report mapped the cells activated as follows:

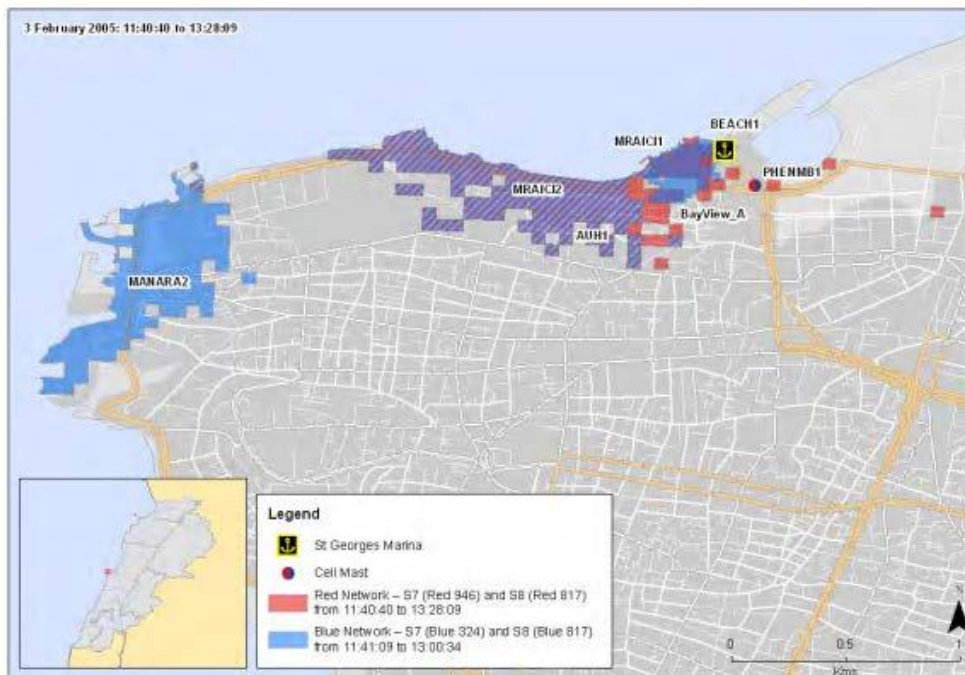

networks. The call described above as starting at 14:42 (according to exhibit P1211, the call sequence table for Green 023, it started at 14:42:00), according to exhibit P1207, which is the call sequence table for Green 300, started instead at 14:41:59.

⁸⁶⁶⁶ Gary Platt, T. 24 February 2017, p. 83.

⁸⁶⁶⁷ At 14:50, Red 652 (CARACA3) called Red 678 (BLISS3); between 14:50 and 15:04, Red 741 activated cell MRAICI2 to call the following mobiles: Red 893 (14:50, 15:02, 15:04), which activated cells ETOILE2 and PHENMB1 (twice); Red 636 (15:01), which activated cell CARACA3; and Red 946 (15:03), which activated cell MACHNA3. Exhibit P1197, p. 2; exhibit P1198, p. 2; exhibit P1199, p. 3; exhibit P1203, p. 2; exhibit P1202, p. 2; exhibit P1204, p. 3; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 911, 913; exhibit P1907, slides 33-34.

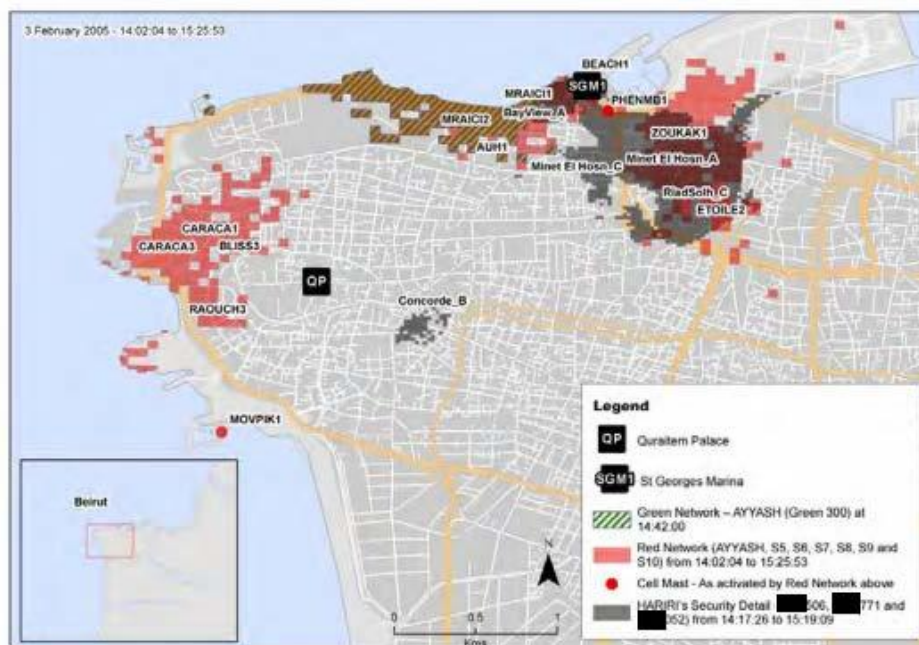

⁸⁶⁶⁸ At 15:27, Green 023 (PORT2) called Green 300 (MRAICI2). Exhibit P1211, p. 5; exhibit P1207, p. 5; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 918; Gary Platt, T. 24 February 2017, p. 87; exhibit P1907, slides 37-38.

⁸⁶⁶⁹ Between 15:36 and 15:43, Red 741 activated MRAICI2 (four times), Red 946 activated cells PHENMB1 (twice) and MRAICI2, Red 893 activated cells PHENMB1, BEACH1 and MRAICI1, Red 636 activated cells SIMON3 (twice) and CARACA3 (twice), Red 678 activated cell SIMON3, and Red 652 activated cell CARACA1. Exhibit P1197, p. 2; exhibit P1202, p. 2; exhibit P1198, p. 2; exhibit P1203, p. 2; exhibit P1204, p. 3; exhibit P1199, p. 3; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 919; Gary Platt, T. 24 February 2017, pp 89-91; exhibit P1907, slides 39-46.

Map 84: Blue and Red Network (S7 and S8), St. Georges Marina, 3 February 2005 (11:40 to 13:28)

Exhibit P1783 (Expert report of Gary Platt – Chronology), p. 273

Map 85: Red Network, Quraitem Palace and St. Georges Marina, 3 February 2005 (14:02 to 15:25)

Exhibit P1783 (Expert report of Gary Platt – Chronology), p. 277

4543. As to the call between Red 946 and Red 893, both connecting to cells in the St Georges Marina area, at 15:43, Mr Platt commented that it is not possible to ‘draw any inference that ... Subject 8 or Subject 7 is attempting to follow Mr Hariri’.⁸⁶⁷⁰

4544. At 15:44, Mr Ayyash’s Green 300 called Mr Badreddine Green 023; both mobiles used the same cell in the St Georges Marina area, namely MRAICI2.⁸⁶⁷¹ Given their close proximity, the short length of the call (23 seconds) and that they exchanged no further calls until Monday 7 February 2005, Mr Platt thought that this was consistent with Mr Ayyash and Mr Badreddine possibly meeting at the site of the eventual attack to discuss its suitability.⁸⁶⁷²

4545. Mr Platt commented that there was significant overlap between the cell coverage footprints of the security detail (14:09 to 15:32) and the network mobiles (11:40 to 15:58) in the St Georges Marina area, which was consistent with surveillance of Mr Hariri.⁸⁶⁷³

4546. Further, according to Mr Platt, ‘if at this time -- stage of the process they’ve identified this as a potential scene for the attack, then it gives them ... the ability to look at the lifestyle of that area’ and to consider its suitability, given also that ‘this is a similar time of day that the actual attack’.⁸⁶⁷⁴

(vv) Friday 4 February 2005

4547. On Friday 4 February 2005, Mr Hariri had visitors at the palace between 07:35 and 17:00.⁸⁶⁷⁵ His security detail left Quraitem Palace sometime after 11:57 to travel to Mr Marwan Hamade’s residence, arriving there by 12:16, staying until 12:49, and arriving back at Quraitem

⁸⁶⁷⁰ Gary Platt, T. 24 February 2017, p. 95.

⁸⁶⁷¹ At 15:44, Green 300 and Green 023 were in contact using the same cell, MRAICI2, which had been used consistently by Red 741 (14:05, 14:18, 14:28, 14:42, 14:50, 15:01, 15:02, 15:03, 15:04, 15:37 (twice), 15:41, 15:43) and Green 300 (13:56, 14:41, 15:27) since 13:56. Exhibit P1207, p. 5; exhibit P1211, p. 5; exhibit P1197, p. 2; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 920; exhibit P1907, slides 45, 47.

⁸⁶⁷² Gary Platt, T. 24 February 2017, pp 92-93, 104.

⁸⁶⁷³ Gary Platt, T. 24 February 2017, pp 98-99, 101-102; exhibit P1907, slides 55-57; exhibit P1908 (EPE snapshot related to exhibit P1907, slide 56).

⁸⁶⁷⁴ Gary Platt, T. 24 February 2017, p. 79.

⁸⁶⁷⁵ Exhibit P301, pp 368-369; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 924.

Palace by 13:03.⁸⁶⁷⁶ Mr Hariri departed the airport at 17:00 on a trip to Bahrain.⁸⁶⁷⁷ His security detail left the Quraitem Palace area sometime after 16:47, was in the airport area from 17:05 until 17:26 and arrived back at Quraitem Palace by 17:45.⁸⁶⁷⁸

4548. Blue 324 activated a cell (Raouche_B) in the Quraitem Palace area at 10.03.⁸⁶⁷⁹ It then activated cells near Mr Hamade's residence immediately before the first security detail call from that area. In Mr Platt's view, this was another example of Mr Hariri's movements triggering network activity for those involved in surveillance.⁸⁶⁸⁰ He considered that this was consistent with surveillance. He pointed to Blue 324 calling Subject 5 on Blue 585, who was just south of Quraitem Palace and also involved in surveillance. Blue 324 then called Subject 6's Blue 610, who was in Dahyieh. This showed Blue 324 updating Blue 610 who had a coordinating role.⁸⁶⁸¹

4549. Then, following the security detail's last call from the area of Mr Hamade's residence, Blue 585 made three calls between 12:55 and 12:57, to Blue 324, Blue 610 and Blue 864, respectively.⁸⁶⁸² Mr Platt commented that, during these calls, Blue 324 was just south of Mr

⁸⁶⁷⁶ At 11:57, mobile 771 activated cell Kraitem_B; then, between 12:16 and 12:49, cell Riviera_A was activated by mobile 506 (12:16, 12:31, 12:32), mobile 052 (12:23), mobile 1506 (12:28, 12:31, 12:49) and mobile 771 (12:46, 12:47), and cell Riviera_B was activated by mobile 1506 (12:25, 12:30, 12:37, 12:47) and mobile 771 (12:33); finally, at 13:03, mobile 1506 activated cell LAU_MIC2_A. Exhibit P1359, p. 310; exhibit P1322, p. 75; exhibit P1352, p. 336; exhibit P1334, p. 55; Gary Platt, T. 6 March 2017, p. 7; *see also* exhibit P1907, slides 68-71. The visit to Mr Hamade's residence was not dealt with in Mr Platt's report and the location of Blue 585 and Blue 324 around this time was characterized as being in the area of Quraitem Palace. Exhibit P1783 (Expert report of Gary Platt – Chronology), paras 929-930, table 120 (p. 282), map 87 (p. 283).

⁸⁶⁷⁷ Exhibit P346, ERN 600004136; exhibit P348, ERNs 60141023-60141024; exhibit P303, ERN D0004970; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 924, 932.

⁸⁶⁷⁸ Gary Platt, T. 6 March 2017, p. 18. First, mobile 771 activated cell Kraitem_B (16:37), mobile 506 activated cell Concorde_B (16:43) and mobile 1506 activated cell Kraitem_C (16:47). Mr Platt's report did not include call data records for mobile 1506, meaning that his initial assessment of the last call from the Quraitem Palace area was a few minutes earlier, at 16:43. However, this discrepancy does not affect Mr Platt's assessment of the Blue network's activity around this time. Between 17:05 and 17:26, cell Airport_B was activated by mobile 771 (17:05 (twice), 17:09, 17:11, 17:13, 17:15, 17:16, 17:19, 17:23, 17:25, 17:26), mobile 1506 (17:06, 17:18), mobile 506 (17:13). Mobile 520 activated cell Airport_A (17:09, 17:15) and Airport_M2 (17:19). Mr Platt's report incorrectly stated that the last call made by a member of Mr Hariri's security detail from the area of the Beirut Airport was at 17:23, whereas the call sequence tables show an additional two calls (as summarised above) activating the same cell. Finally, at 17:45, mobile 771 activated cell Concorde_B. Mr Platt's report did not deal with the security detail's arrival back at Quraitem Palace. Exhibit P1359, p. 311; exhibit P1322, p. 75; exhibit P1334, p. 55; exhibit P1352, p. 337; exhibit P1354, p. 375; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 932-934, table 22 (p. 286); exhibit P1907, slides 83-86.

⁸⁶⁷⁹ Exhibit P1225, p. 12; Gary Platt, T. 6 March 2017, pp 6-7, 10.

⁸⁶⁸⁰ At 12:12 and 12:14, Blue 324 activated Riviera_A (twice) to call Blue 585 (Unesco_C) and Blue 610 (SFEIR2), respectively. Exhibit P1225, p. 12; exhibit P1229, p. 15; exhibit P1227, p. 16; Gary Platt, T. 6 March 2017, pp 7-8; *see also* exhibit P1907, slides 72-73.

⁸⁶⁸¹ Gary Platt, T. 6 March 2017, p. 8; *see also* exhibit P1907, slides 72-73.

⁸⁶⁸² At 12:55, Blue 585 (Raouche_A) called Blue 324 (Manara_C); at 12:56, Blue 585 (Raouche_B) called Blue 610 (SFEIR2); and at 12:57, Blue 585 (Unesco_C) called Blue 864 (MIKAEL2). Exhibit P1229, p. 15; exhibit P1225, p. 12; exhibit P1227, p. 16; exhibit P1228, p. 12; *see also* exhibit P1907, slides 74-75.

Hamade's residence, consistent with following the security detail as they departed. Blue 585 was in the Quraitem Palace area during the calls, and in a position to witness the security detail's arrival. Subject 6's Blue 610, which had a coordination role, was located in Dahyieh when receiving the call.⁸⁶⁸³ According to Mr Platt:

Subject 7 was the one who followed Mr. Hariri from Quraitem Palace to Mr. Hamade's residence originally when Mr. Hariri travelled there. Subject 7 appears to have stayed there. And around the time that Mr. Hariri returned to Quraitem Palace, it was Subject 7 who was travelling back from the vicinity of Mr Hamade's residence back to the area of Quraitem Palace.⁸⁶⁸⁴

4550. Mr Platt's view was that, following around one hour of silence, the next calls from the Quraitem Palace area and the coastal road to Faqra Villa were three calls exchanged by Blue 585 and Blue 610 between 14:21 and 14:59.⁸⁶⁸⁵ To him, this showed continued surveillance of Mr Hariri, adding that, as this day was a Friday, there may have been an assumption that Mr Hariri would travel to Faqra Villa.⁸⁶⁸⁶

4551. A burst of calls occurred between 16:47 and 17:09 coinciding with the security detail's movement from Quraitem Palace to the airport, which is consistent with surveillance and specifically with the Subjects, who could view Mr Hariri's movements, updating those who were elsewhere.⁸⁶⁸⁷ At 16:54 and 16:55, Subject 5's Blue 585 and Subject 7's Blue 324 activated cells

⁸⁶⁸³ Gary Platt, T. 6 March 2017, p. 9; *see also* exhibit P1910 (EPE snapshot related to exhibit P1907, slide 75).

⁸⁶⁸⁴ Gary Platt, T. 6 March 2017, p. 10.

⁸⁶⁸⁵ At 14:21, Blue 585 (Raouche_B) called Blue 610 (PHENMB1); at 14:32, Blue 610 (PHENMB1) called Blue 585 (BayView_A); and at 14:59, Blue 585 (BayView_C) called Blue 610 (MOVPIK1). Exhibit P1229, p. 15; exhibit P1227, p. 16; Gary Platt, T. 6 March 2017, p. 14; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 931. *See also* exhibit P1907, slides 78-79. As noted above, there can be time differences between the start time of calls in call data records. The call described above as starting at 14:21 (according to call sequence table for Blue 585—exhibit P1229—the call started at 14:21:01), based on the call sequence table for Blue 610—exhibit P1227—started instead at 14:20:58.

⁸⁶⁸⁶ Gary Platt, T. 6 March 2017, p. 14.

⁸⁶⁸⁷ Gary Platt, T. 6 March 2017, pp 18-19; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 935, 941. At 16:47, Blue 610 (MRAICI1) called Blue 817 (MOVPIK1); at 16:47, Blue 817 (MOVPIK1) called Blue 864 (MRAICI2); at 16:54, Blue 324 (Raouche_B) called Blue 585 (Manara_B); at 16:55, Blue 585 (Manara_B) called Blue 324 (Raouche_B); at 16:59, Blue 585 (Unesco_B) called Blue 864 (CHIAH2); at 17:00, Blue 585 (Mic_Marriot) called Blue 324 (Bir_hassan_A); at 17:01, Blue 585 (Bir_hassan_C) called Blue 610 (BRAJNE3); at 17:02, Blue 610 (BRAJNE1) called Blue 864 (MIKAEL2); at 17:05, Blue 324 (Airport_B) called Blue 610 (BRAJNE3); and at 17:09, Blue 610 (MEA1) called Blue 864 (CBOURJ3). Exhibit P1229, p. 15; exhibit P1227, pp 16-17; exhibit P1225, p. 12; exhibit P1239, p. 11; exhibit P1228, p. 12; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 936-939; exhibit P1907, slides 87-93. Mr Platt commented that, between 16:47 and 16:55, Blue 585, Blue 324 and Blue 817

in the Quraitem Palace area.⁸⁶⁸⁸ At 16:59, Blue 585 had moved southward from Quraitem Palace in the direction of the airport around the same time as the security detail, consistent with surveillance of this journey.

4552. Between 17:00 and 17:01, both Blue 585 and Subject 7's Blue 324 were moving southward from the Quraitem Palace area, consistent with the security detail's travel.⁸⁶⁸⁹ At 17:05, Blue 324 was in the airport area and calling Subject 6's Blue 610—which was located elsewhere—around the time of Mr Hariri's arrival at the airport. Mr Platt concluded that this was consistent with Blue 324 following the convoy from Quraitem Palace and updating Blue 610 on Mr Hariri's arrival at the airport.⁸⁶⁹⁰ By 17:09, Blue 610 had moved to the airport area.⁸⁶⁹¹ Mr Platt prepared the map below to show the cell activations of the Blue network mobiles:

activated cells in the area of Quraitem Palace, while Blue 610 and Blue 864 activated cells in the area of the crime scene.

⁸⁶⁸⁸ Gary Platt, T. 6 March 2017, p. 22.

⁸⁶⁸⁹ Gary Platt, T. 6 March 2017, p. 22, exhibit P1783 (Expert report of Gary Platt – Chronology), para. 937, table 123 (p. 288). In his report, Mr Platt commented that, at 16:59, also Blue 864 'moved away from Quraitem Palace' and travelled in the direction of the airport. However, he testified that Blue 864, after being located, at 16:47, in the coastal road area near the crime scene—had moved to Dahyieh by 17:02—and therefore in his opinion it was not involved in the surveillance from Quraitem Palace to the airport (Gary Platt, T. 6 March 2017, pp 19-20).

⁸⁶⁹⁰ Gary Platt, T. 6 March 2017, pp 22-23.

⁸⁶⁹¹ Gary Platt, T. 6 March 2017, p. 23.

Map 88: Blue Network (S5, S6, S8 and S9), Quraitem Palace and HARIRI Crime Scene, 4 February 2005 (14:21 to 16:03)

Exhibit P1783 (Expert report of Gary Platt – Chronology), p. 285

(ww) Monday 7 February 2005

4553. At 17:30 on Monday 7 February 2005, Mr Hariri was recorded as having arrived back in Lebanon from his trips to Bahrain and Paris.⁸⁶⁹² He received visitors between 17:00 and 21:55 at the palace.⁸⁶⁹³ His security detail's calls are consistent with departing from Quraitem Palace after 16:24,⁸⁶⁹⁴ Mr Hariri's arrival at Beirut Airport between 16:39 and 17:26—when his detail activated cells in the airport area⁸⁶⁹⁵—and returning to Quraitem Palace by 17:39.⁸⁶⁹⁶

4554. At 00:34 that morning Mr Ayyash's Green 300 called Mr Badreddine's Green 023 for a 23-second call. Both were in Dahyieh.⁸⁶⁹⁷ Mr Platt commented that this showed the contact between two key operatives following a few days of inactivity during Mr Hariri's absence from Lebanon, and preceding surveillance operations later that day and on the following day.⁸⁶⁹⁸ Mr Platt believed that their proximity and the brevity of the call showed that they may have arranged a meeting.⁸⁶⁹⁹

4555. Between 12:53 and 13:06, there was Blue network activity south of Quraitem Palace and north of Beirut Airport.⁸⁷⁰⁰ Mr Platt thought that this was consistent with surveillance of Mr Hariri which was to start at the airport. That the activity around the airport started around four hours

⁸⁶⁹² Exhibit P346, ERN 600004136); exhibit P348, ERNs 60141023-60141025; exhibit P303, ERN D0004965.

⁸⁶⁹³ Exhibit P301, p. 370; exhibit P303, ERN D0004965; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 952, which incorrectly states that visitors were registered between 17:00 and 21:50 for Mr Hariri.

⁸⁶⁹⁴ Mobile 771 activated cell Fadlallah_A (16:24) and mobile 506 activated cells Zarif_B (16:26) and Sinjab_C (16:37). Exhibit P1359, p. 315; exhibit P1322, p. 77; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 964.

⁸⁶⁹⁵ Mobile 506 activated cells Airport_A (16:40, 16:47, 17:24) and Airport_B (16:55, 17:04, 17:06, 17:16, 17:23), mobile 771 activated cells Airport_A (16:42) and Airport_B (16:47, 17:05, 17:13, 17:21), mobile 052 activated cell Airport_A (16:51, 16:56), mobile 520 activated cell Airport_A (16:39, 16:42, 17:06, 17:07, 17:09, 17:10), and mobile 777 activated cell Airport_B (17:26). Exhibit P1359, pp 315-316; exhibit P1322, p. 77; exhibit P1334, p. 56; exhibit P1354, pp 381-382; exhibit P520, p. 170; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 964-965.

⁸⁶⁹⁶ Mobile 506 activated cells Concorde_B (17:52), Fadlallah_A (17:55) and Kraitem_B (18:39), mobile 520 activated cell LAU_Beirut_A (17:39), mobile 777 activated cells Sinjab_C (17:33) and Fadlallah_B (17:49) and mobile 771 activated cell LAU_MIC2_A (19:11). Exhibit P1359, p. 316; exhibit P1322, pp 77-78; exhibit P1354, p. 382; exhibit P520, p. 170; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 966.

⁸⁶⁹⁷ At 00:34, Green 300 activated cells MIKAEL2 and SFEIR2 to call Green 023, which activated cell BRAJNE1. Exhibit P1211, p. 5; exhibit P1207, p. 5; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 954, 955; *see also* exhibit P1907, slides 128-129.

⁸⁶⁹⁸ Gary Platt, T. 6 March 2017, pp 102-103.

⁸⁶⁹⁹ Gary Platt, T. 6 March 2017, p. 103.

⁸⁷⁰⁰ Between 12:53 and 13:06, Blue 817 activated cell MEA1 three times and Blue 324 activated cell Airport_A; Blue 585 activated cells Raouche_B (twice) and Jnah El Wata_C; and Blue 864 activated cell MOVPIK1. Exhibit P1239, p. 12; exhibit P1225, p. 13; exhibit P1229, pp 15-16; exhibit P1228, p. 13; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 953, 959; *see also* exhibit P1907, slides 135-136.

before his arrival suggested that his actual arrival time was not known by the Subjects.⁸⁷⁰¹ Between 14:35 and 14:50, there was further Blue network activity in the airport area and the road from west Beirut to the airport.⁸⁷⁰² Then, from 16:01 to 16:36, there was further activity by three of the principal six Blue network mobiles around the airport, Quraitem Palace and the airport road.⁸⁷⁰³

4556. At 16:39, Mr Ayyash's Blue 233, then in Dahyieh, called Blue 585, which was in the airport area, followed by further Blue network activity in the airport area and airport road area until 17:00.⁸⁷⁰⁴ This series of calls was concluded with three calls made by Blue 585 in quick succession between 16:59 and 17:00, to Subject 9's Blue 864, Subject 8's Blue 817 and Mr Ayyash's Blue 233, which Mr Platt stated was consistent with Blue 585, located in the area of the airport, informing the others about the arrival of Mr Hariri's flight.⁸⁷⁰⁵ By then, Mr Ayyash's Blue 233 activated a cell providing coverage to the airport area and joined, according to Mr Platt, the three others who had been conducting the surveillance until then.⁸⁷⁰⁶

4557. Between 17:27 and 17:38, as the security detail travelled back to Quraitem Palace, Blue network activity corresponded with the security detail's journey—specifically the movement of Blue 817 and Blue 864 to the Quraitem Palace area.⁸⁷⁰⁷ By 17:39 and 17:43 respectively, Blue 585

⁸⁷⁰¹ Gary Platt, T. 6 March 2017, p. 109.

⁸⁷⁰² At 14:35, Blue 864 (OUZAI2) called Blue 817 (MEA1); at 14:46, Blue 817 (MEA1) called Blue 610; at 14:48, Blue 817 (OUZAI2) called Blue 864 (MEA1); at 14:50, Blue 817 (OUZAI1) called Blue 585 (Mraijeh_A). Exhibit P1229, p. 16; exhibit P1239, p. 12; exhibit P1228, p. 13; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 953, 961; Gary Platt, T. 7 March 2017, p. 7. *See also* exhibit P1907, slides 139-140.

⁸⁷⁰³ At 16:01, Blue 585 (Ouzaii-II_A) called Blue 864 (MEA1); at 16:18, Blue 501 called Blue 817 (RAOUCH2); at 16:27, Blue 817 (RAOUCH2) called Blue 585 (Ouzaii-II_A); at 16:29, Blue 610 called Blue 817 (CORAL1); at 16:30, Blue 817 (BHROUT1) called Blue 233; at 16:31, Blue 864 (OUZAI1) called Blue 817 (BHROUT2); and at 16:36, Blue 817 (AIB3) called Blue 585 (Airport_A); *see* exhibit P1229, p. 16; exhibit P1239, p. 12; exhibit P1228, p. 13; exhibit P1907, slides 142-143; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 961, 967-968. In his report, Mr Platt also noted that, between 13:03 and 15:15, most of the subjects involved in the operation, with the exception of Blue 864, were in contact with Blue 610, which activated cell SAKSAK1 (13:03, 13:06, 14:30, 14:46, 15:15) in the Saida area. Exhibit P1227, p. 18; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 962.

⁸⁷⁰⁴ Between 16:39 and 16:59, Blue 817 (AIB3 (16:51), MEA1 (16:59)), Blue 864 (OUZAI1 (16:59)) and Blue 585 (Airport_A (16:39, 16:51), Ouzaii-II_A (16:59)) were in contact with one another and Blue 233; at 16:39, Blue 233 activated cell Bir_El_Abed_A to contact Blue 585, and at 17:00, Blue 585 activated cell Airport_A to contact Blue 233, which activated cell Airport_B. Exhibit P1239, p. 12; exhibit P1228, p. 13; exhibit P1229, p. 16; exhibit P1238, p. 8; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 953, 969-970; exhibit P1907, slides 144-147.

⁸⁷⁰⁵ Gary Platt, T. 7 March 2017, pp 9, 11-12.

⁸⁷⁰⁶ Gary Platt, T. 7 March 2017, pp 9-10.

⁸⁷⁰⁷ At 17:27, Blue 233 (Airport_B) called Blue 585 (Hai_Sollom-II_C); at 17:28, Blue 817 (OUZAI2) called Blue 585 (Airport_B); at 17:29, Blue 817 (OUZAI3) called Blue 864 (COLA3); and at 17:38, Blue 864 (RAOUCH3) called Blue 817 (RAOUCH2). Exhibit P1238, p. 9; exhibit P1229, p. 16; exhibit P1239, p. 13; exhibit P1228, p. 13; Gary Platt, T. 7 March 2017, pp 14-15; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 971-972; *see also* exhibit P1907, slides 156-157.

and Mr Ayyash's Blue 233 had also moved to the Quraitem Palace area, with no Subjects remaining in the airport area.⁸⁷⁰⁸ Mr Platt commented: 'within a space of 15 minutes this group of four phones have moved from ... the airport or the route between the airport and Quraitem Palace to actually around Quraitem Palace. It almost speaks for itself'.⁸⁷⁰⁹

4558. Between 17:44 and 18:43, there was further Blue network activity around Quraitem Palace involving the same three subjects—Blue 585, Blue 817 and Blue 864—but not Blue 233 which had been involved in the mobile surveillance from the airport.⁸⁷¹⁰ Between 19:50 and 19:59, Blue 610 was activating cells in the St Georges tunnel and Quraitem Palace areas, and Blue 324 and Blue 817 were activating cells in the Quraitem Palace area.⁸⁷¹¹

4559. The relevant Blue network activity is displayed in the map below from Mr Platt's report:

⁸⁷⁰⁸ At 17:39, Blue 585 activated cell Mic_Bay Rock; at 17:43, Blue 233 activated Fadlallah_B. Exhibit P1229, p. 16; exhibit P1238, p. 9; Gary Platt, T. 7 March 2017, pp 15-16.

⁸⁷⁰⁹ Gary Platt, T. 7 March 2017, p. 16.

⁸⁷¹⁰ Blue 817 activated cells MOVPIK1 (four times), RAOUCH3 and SIMON3 (twice); Blue 864 activated cells CARACA3 (five times) and SFEIR2; and Blue 585 activated cells Raouche_B, Ouzai_A and Mic_Bay Rock2. Exhibit P1239, p. 13; exhibit P1228, p. 13; exhibit P1229, p. 16; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 974; Gary Platt, T. 7 March 2017, pp 18-19; exhibit P1907, slides 160-161. In his report, Mr Platt also noted that, between 18:43 and 19:39, Blue network activity was confined to south Beirut. Exhibit P1783 (Expert report of Gary Platt – Chronology), para. 977.

⁸⁷¹¹ At 19:50 and 19:51 (activating cell ZOUKAK2) and at 19:52 (activating cell ZOUKAK3), Blue 610 contacted, respectively, Blue 817, which activated cell MOVPIK1, Blue 324, which activated cell Raouche_B, and again Blue 817, which again activated cell MOVPIK1; at 19:58 and 19:59, Blue 610 (MOVPIK1), Blue 324 (Raouche_B) and Blue 817 (MOVPIK1, OGER3) were in contact with each other. Exhibit P1227, p. 18; exhibit P1239, p. 13; exhibit P1225, p. 13; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 953, 978-979; Gary Platt, T. 7 March 2017, pp 19-20; *see also* exhibit P1907, slides 162-163.

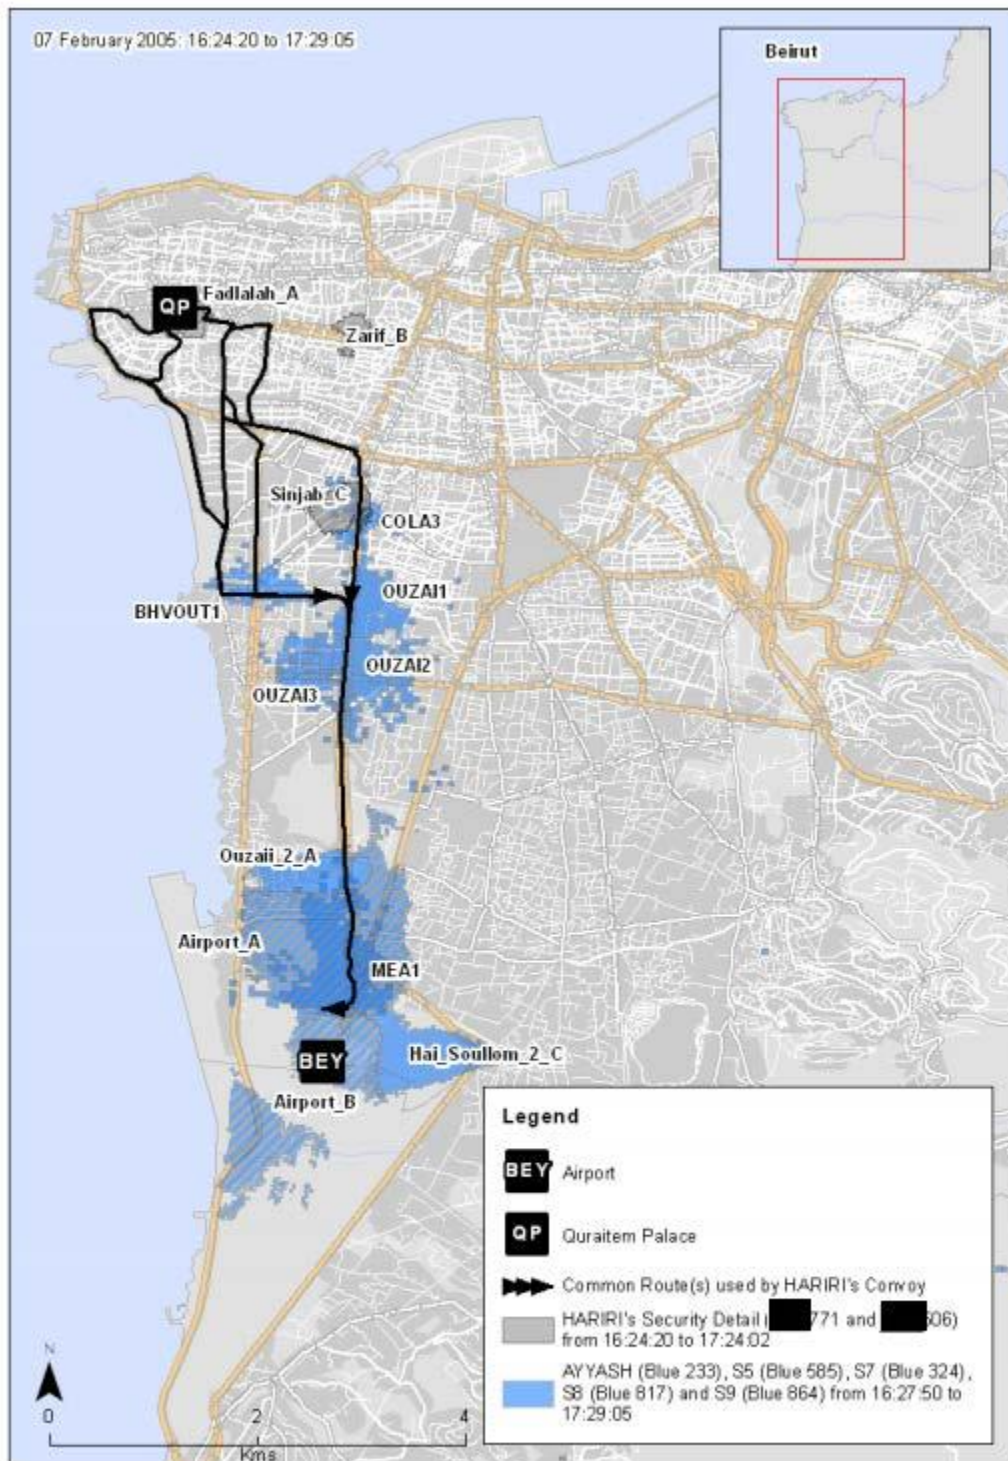

Exhibit P1783 (Expert report of Gary Platt – Chronology), p. 300

Map 92: Blue Network – AYYASH, S5, S8 and S9 (17:38 to 18:43), HARIRI's Security Detail (17:52 to 19:11), Quraitem Palace, 7 February 2005

Exhibit P1783 (Expert report of Gary Platt – Chronology), p. 302

(xx) Tuesday 8 February 2005

4560. On Tuesday 8 February 2005, Mr Ayyash's Blue 233, Blue 585, Blue 817, Blue 864, Blue 324 and Subject 6's Blue 610 contacted each other 55 times.⁸⁷¹² Red 636, Red 652, Subject 6's Red 678, Mr Ayyash's Red 741, Red 893 and Red 946 called each other 64 times.⁸⁷¹³ This is pleaded in the amended consolidated indictment as follows:

On 8 February 2005, HARIRI's movements and those of the assassination team are similar to their respective movements on 14 February 2005, being the day of the attack. HARIRI was at Quraitem Palace in the morning before attending Parliament and afterwards

⁸⁷¹² Exhibit P1238, p. 9; exhibit P1229, pp 16-17; exhibit P1239, pp 13-14; exhibit P1228, pp 13-14; exhibit P1225, pp 13-14; exhibit P1227, pp 18-20; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 985; exhibit P1115 (Expert report of John Edward Philips – 15 Blue mission phones), table 145 (p. 242).

⁸⁷¹³ Exhibit P1203, pp 2-3; exhibit P1199, pp 3-4; exhibit P1204, pp 3-4; exhibit P1197, p. 3; exhibit P1198, pp 3-4; exhibit P1202, p. 2; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 985; exhibit P1114 (Expert report of John Edward Philips – Red mission phones), para. 6.3.9.7.

returning to the Palace at around 13:45. **AYYASH** and the other members of the assassination team were active on their **Red Network** and/or **Blue Network** phones around Quraitem Palace, Parliament and the routes normally used by HARIRI to travel between both locations. In particular:

- a. **AYYASH** was active on **Red 741**, **Blue 233**, **Green 300**, and on his PMP 170 and PMP 091, at relevant locations, in particular around Parliament and where the attack would take place on 14 February 2005.
- b. At 13:40 and 15:05, **AYYASH** on **Green 300** was twice in communication with Mustafa BADREDDINE on **Green 023**.⁸⁷¹⁴

4561. During the morning, Mr Hariri was at Quraitem Palace where he received visitors, including the Chairman of the Chamber of Commerce and Industry of the Russian Federation Mr Yevgeny Primakov.⁸⁷¹⁵ Mr Hariri's security convoy left Quraitem Palace for Parliament between 11:45 and 12:05.⁸⁷¹⁶ From around midday, Mr Hariri attended a parliamentary session.⁸⁷¹⁷ Between 12:05 and 13:25, members of his security detail activated cells in the Parliament area.⁸⁷¹⁸

⁸⁷¹⁴ Amended consolidated indictment, para. 38.

⁸⁷¹⁵ Exhibit P301, pp 370-371; exhibit P299, ERN 6014216; exhibit P303, ERNs D0004982-D0004983; exhibit P408; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 984; Gary Platt, T. 7 March 2017, p. 48. *See also* exhibit P1916 (Chronology PowerPoint presentation – 8 February 2005 to 12 February 2005), slide 4.

⁸⁷¹⁶ At 11:45, the mobile of one of Mr Hariri's security guards activated Kraitem_B, which was adjacent to LAU_Beirut_A, which provided predicted best server coverage to Quraitem Palace. At 12:05, it activated Riad_El_Soloh_C, which was adjacent to Jesuites_C, which provided predicted best server coverage to Parliament. Mr Platt's report did not include call data records for mobile 1506, meaning that his initial assessment of the last call of the security detail from Quraitem Palace area and the first call from the Parliament area was one minute earlier and one later, respectively, at 11:44 and 12:06, exhibit P1122; exhibit P1352, p. 340; exhibit P1359, p. 316; exhibit P1354, pp 382-383; Gary Platt, T. 7 March 2017, p. 65; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 995.

⁸⁷¹⁷ Exhibit P540 (Minutes of Parliamentary Committee Session); exhibit P92 (Photographs from Parliament), pp 41-43; exhibit P88 (Statement of Ahmad Nabil Ismail), ERNs 60289437-60289439, 60289492; exhibit P1190 (Screenshot of Video from exhibit P408); exhibit P408; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 994-995; Gary Platt, T. 7 March 2017, pp 56-57, 61; exhibit P1916, slides 13-14.

⁸⁷¹⁸ Mobiles ending in 771, 1506 and 052 activated: Riad_El_Soloh_A (12:06, 12:38, 12:49, 12:50, 12:54, 13:02, 13:05, 13:10, 13:25), Riad_El_Soloh_B (12:08, 12:15, 12:18), Riad_El_Soloh_C (12:05, 12:09; 12:40, 12:42, 12:43, 12:44, 12:45, 12:46, 12:47, 12:49, 13:23) and Jesuites_C (12:09, 12:32, 13:02); Riad_El_Soloh_A, Riad_El_Soloh_B and Riad_El_Soloh_C are adjacent to Jesuites_C, which provided predicted best server coverage for Parliament on the Touch network. Mr Platt's report did not include call data records for mobile 1506, meaning that his initial assessment there of the last call in the Parliament area was 15 minutes earlier, at 13:10; exhibit P1122; exhibit P1359, p. 316; exhibit P1352, pp 340-341; exhibit P1354, p. 383; exhibit P663 (Statement of Andrew Fahey), annex 1, no. 107; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 1002; Gary Platt, T. 7 March 2017, p. 58.

4562. Between 09:25 and 11:59, Blue 864, Blue 817 and Blue 585 connected to cells that were within 500 or within 1,000 metres of Quraitem Palace.⁸⁷¹⁹ During this time, Subject 6's Blue 610 activated cells in south Lebanon but was in contact with Blue 864 (09:25) and Blue 817 (11:09).⁸⁷²⁰ The map below from Mr Platt's chronology report illustrates this:

Map 94: Blue Network (S5, S8 and S9), Quraitem Palace, 8 February 2005 (09:25 to 11:57)

Exhibit P1783 (Expert report of Gary Platt – Chronology), p. 307

4563. Between 11:54 and 11:57, Subject 5's Blue 585, Subject 8's Blue 817 and Subject 9's Blue 864 were in contact with each other, activating cells around Quraitem Palace.⁸⁷²¹ At 11:58 and 11:59, Mr Ayyash's Blue 233 activated Riad_El_Soloh_A next to Parliament, receiving calls from

⁸⁷¹⁹ Blue 864 activated MOVPIK1 (09:25) and CONCOR2 (11:56, 11:57, 11:59); Blue 817 activated CONCOR2 (10:05, 10:11), CARLTO3 (11:09, 11:54, 11:56), RAOUCH2 (11:56, 11:57) and RAOUCH3 (11:58); Blue 585 activated Mic_Bay_Rock2 (11:54) and Riviera_A (11:57). Exhibit P1228, p. 13; exhibit P1239, pp 13-14; exhibit P1229, p. 16; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 988-993; Gary Platt, T. 7 March 2017, p. 51. *See also* above, at para. 4294, the maps the Trial Chamber created, using the EPE software—exhibit P592.1—displaying the cells providing predicted best coverage to and around Quraitem Palace.

⁸⁷²⁰ Blue 610 activated cells SAKSAK1 and NABATI1, respectively. Gary Platt, T. 7 March 2017, pp 52, 86-87; exhibit P1227, p. 19.

⁸⁷²¹ Exhibit P1783 (Expert report of Gary Platt – Chronology), paras 990-991.

Blue 817 and Blue 864, which activated cells around Quraitem Palace.⁸⁷²² Mr Ayyash's Blue 233 continued to activate cells around Parliament until 12:26.⁸⁷²³ At 12:43, Blue 233 activated Naher_MPT_C, located east of Parliament.⁸⁷²⁴ At 12:56, it again activated a cell near Parliament.⁸⁷²⁵

4564. Shortly after midday, Subject 5's Blue 585, Subject 8's Blue 817 and Subject 9's Blue 864, which had activated cells around Quraitem Palace in the morning, began activating cells around Parliament.⁸⁷²⁶ Mr Platt testified that the three users who were located around Quraitem Palace moved towards Parliament at the same time as Mr Hariri, consistent with the focus of the surveillance operation moving to the Parliament area.⁸⁷²⁷ Blue 585 arrived in the Parliament area by 12:03, activating Jesuites_C, followed by Riad_El_Soloh_B at 12:06 and 12:11.⁸⁷²⁸

4565. At 12:03 and 12:05, Blue 817 activated cells along the coastal route from Quraitem Palace to Parliament,⁸⁷²⁹ followed by activations of cells in the Parliament area.⁸⁷³⁰ At 12:05, Blue 864 activated SPEARS3, between Parliament and Quraitem Palace on the 'internal route' that Mr Hariri's convoy used.⁸⁷³¹ At 12:07 and 12:09, Blue 864 activated cells in the Parliament area.⁸⁷³²

⁸⁷²² Exhibit P1238, p. 9; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 992-993; Gary Platt, T. 7 March 2017, p. 51.

⁸⁷²³ Blue 233 activated Riad_El_Soloh_A (11:58, 11:59, 12:04, 12:05, 12:07, 12:09, 12:10, 12:11), Coast_Road_C (12:25) and Minaa_El_Hosson_A (12:26). Coast_Road_C was next to Jesuites_C. Minaa_el_hosson_A was next to Riad_El_Soloh_C. Exhibit P1122; exhibit P1238, p. 9; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 997.

⁸⁷²⁴ There were at least three cells in-between this cell and Jesuites_C. Exhibit P1122; exhibit P1238, p. 9; Gary Platt, T. 7 March 2017, pp 95-96.

⁸⁷²⁵ Blue 233 activated Coast_Road_C. Exhibit P1122; exhibit P1238, p. 9.

⁸⁷²⁶ Exhibit P1783 (Expert report of Gary Platt – Chronology), paras 996-997.

⁸⁷²⁷ Gary Platt, T. 7 March 2017, pp 65-66.

⁸⁷²⁸ Exhibit P1229, p. 16; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 996-997; Gary Platt, T. 7 March 2017, pp 66-68.

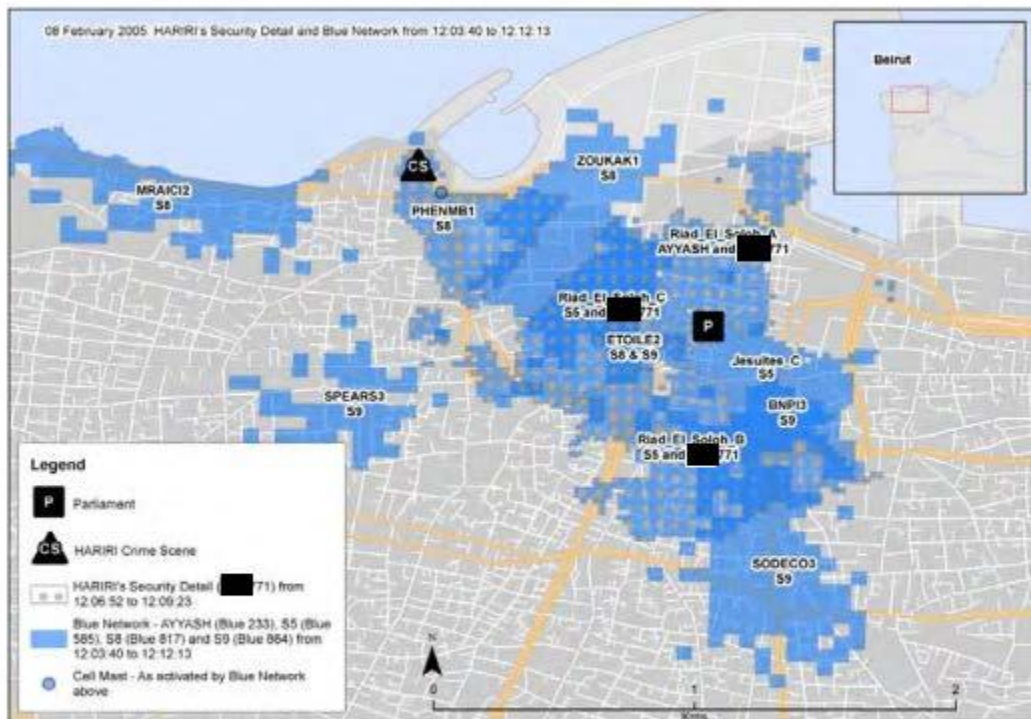

⁸⁷²⁹ Blue 817 activated MRAICI2 (12:03) and PHENMB1 (12:05). Exhibit P1123; exhibit P1239, p. 14; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 996.

⁸⁷³⁰ Blue 817 activated ETOILE2 (12:05, 12:08, 12:10, 12:25) and ZOUKAK1 (12:06); ZOUKAK1 was next to ETOILE3 which was next to ETOILE1 (which provided the predicted best server coverage to Parliament on the Alfa network). Exhibit P1123; exhibit P1239, p. 14; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 996-997.

⁸⁷³¹ Exhibit P1228, p. 13; exhibit P1123; Gary Platt, T. 7 March 2017, pp 57, 66. *See also* exhibit P1916, slides 13-14, 31-32.

⁸⁷³² Blue 864 activated ETOILE2 (12:07) and BNPI3 (12:09). ETOILE2 and BNPI3 were next to ETOILE1. Exhibit P1123; exhibit P1228, p. 13.

4566. From 12:12, Blue 864 activated cells consistent with movement to south Beirut.⁸⁷³³ At 13:03, Subject 6's Blue 610, which had activated cells in south Lebanon during the morning, activated cell SABRA2, in Beirut, and then, at 13:15, cell RASNAB1.⁸⁷³⁴ Following this call, Blue network activity ceased until 15:17 when Blue 610 began connecting to cells around Quraitem Palace.⁸⁷³⁵ These movements and cell activations are shown on the map extracted from Mr Platt's chronology report, where the crime scene is marked at 'CS', and Parliament as 'P':

Map 96: HARIRI's Security Detail, Blue Network (AYYASH, S5, S8 and S9), Parliament, 8 February 2005 (12:03 to 12:12)

Exhibit P1783 (Expert report of Gary Platt – Chronology), p. 310

⁸⁷³³ Blue 864 activated SODECO3 south of BNPI3 (12:12), then the following cells in south Beirut: MIKAEL2 (12:26), ROUEIS3 (12:43) and CHIAH1 (12:54, 12:56). Exhibit P1228, pp 13-14; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 997-998, 1000; Gary Platt, T. 7 March 2017, p. 79. *See also* exhibit P1916, slides 43-44.

⁸⁷³⁴ Exhibit P1227, p. 19; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 988; Gary Platt, T. 7 March 2017, pp 86-87. *See also* exhibit P1916, slides 50, 52.

⁸⁷³⁵ Blue 610 activated CARLTO3 (15:17, 15:49), CARACA3 (16:02, 16:32) and MOVPIK1 (17:09, 17:25, 17:38, 17:41, 17:58). Exhibit P1227, p. 19; Gary Platt, T. 7 March 2017, p. 105.

4567. Between 13:03 and 13:04, Subject 9's Red 652, Mr Ayyash's Red 741 and Subject 7's Red 946 activated cells south of Parliament.⁸⁷³⁶ Mr Platt testified that this was consistent with Red 741 meeting Red 652's Subject 9 and Red 946's Subject 7, in performance of its coordinating role.⁸⁷³⁷

4568. Around the time that Mr Hariri was at Parliament, all six Red mobiles activated cells in the area of the Parliament.⁸⁷³⁸ According to Mr Platt, the Red network activity around this time was 'very similar to what occurred just under an hour before the attack' on 14 February.⁸⁷³⁹ Mr Platt also testified that Subject 5's Red 636 and Subject 8's Red 893 could view the movements at Parliament and convey them to the other subjects who covered the route between Parliament and the crime scene.⁸⁷⁴⁰

4569. Mr Platt's map of Red and Blue network cell connections is below:

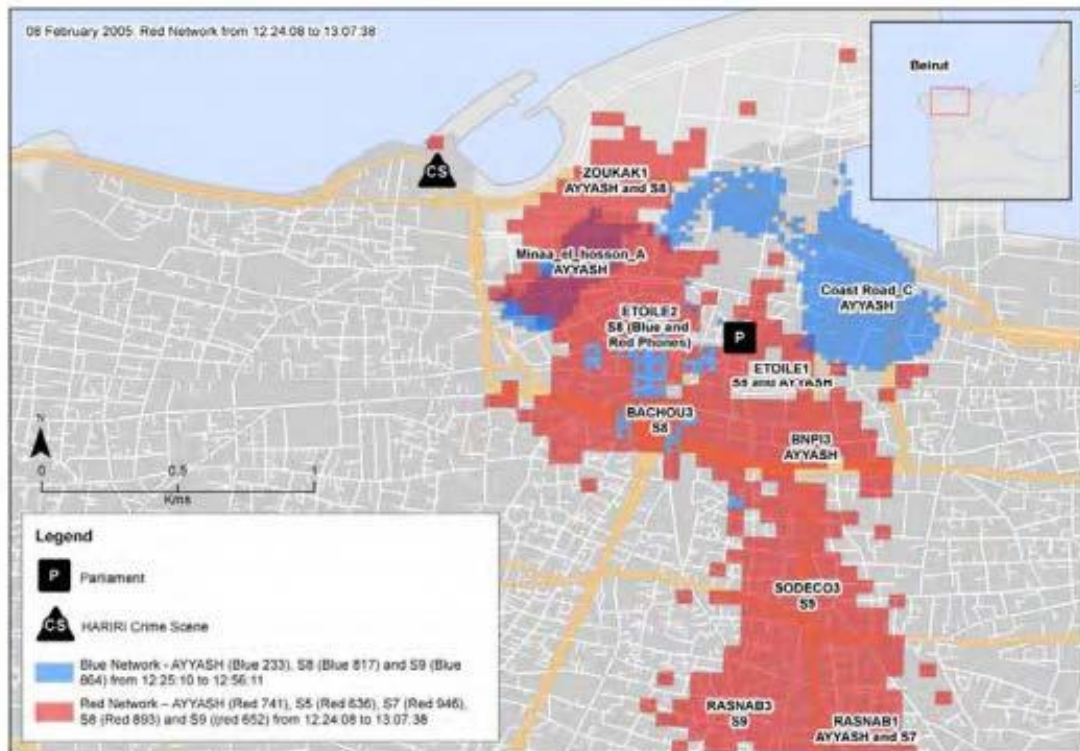

⁸⁷³⁶ Red 652 activated SODECO3 (end cell RASNAB1) (13:03) and RASNAB3 (13:04); Red 741 activated RASNAB1 (13:04); Red 946 activated RASNAB1 (13:03). Exhibit P1199, p. 3; exhibit P1197, p. 3; exhibit P1202, p. 2.

⁸⁷³⁷ Gary Platt, T. 7 March 2017, pp 92-95.

⁸⁷³⁸ Red 636 activated ETOILE1 (12:24, 12:29, 12:31, 12:50, 13:07, 13:13, 13:22, 13:24), BACHOU3 (13:16) and ETOILE2 (13:30, 13:31); Red 652 activated ZOUKAK1 (13:17), PORT2 (13:22) and BNPI3 (13:24, 13:27, 13:28, 13:29); Red 741 activated ETOILE1 (12:24), ZOUKAK1 (12:33, 13:16, 13:22, 13:24, 13:27), BNPI3 (13:07) and PORT2 (13:28, 13:29); Red 946 activated ZOUKAK1 (13:17, 13:40) and PORT2 (13:38); Red 893 activated ETOILE2 (12:29), BACHOU3 (12:33), ZOUKAK1 (12:50, 13:25), ETOILE3 (13:17, 13:24, 13:28), ZOUKAK2 (13:22) and ETOILE1 (13:31); Red 678 activated BACHOU1 at 13:25. Exhibit P1123; exhibit P1203, p. 2; exhibit P1199, p. 3; exhibit P1197, p. 3; exhibit P1202, p. 2; exhibit P1198, p. 3; exhibit P1204, p. 3; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 999-1000, 1003-1004; Gary Platt, T. 7 March 2017, pp 100, 103-104.

⁸⁷³⁹ Gary Platt, T. 7 March 2017, p. 100.

⁸⁷⁴⁰ Gary Platt, T. 7 March 2017, p. 103.

Map 97: Red and Blue Network (AYYASH, S5, S8 and S9), Parliament and HARIRI Crime Scene, 8 February 2005 (12:24 to 13:07)

Exhibit P1783 (Expert report of Gary Platt – Chronology), p. 311

4570. Mr Hariri had a lunch appointment at Quraitem Palace at 13:30 with the businessman and MP Mr Salim Diab;⁸⁷⁴¹ the visitor logbook recorded that his guest arrived at 13:40.⁸⁷⁴² Mr Hariri's security detail activated cells near Quraitem Palace from 13:39.⁸⁷⁴³ Mr Hariri received guests at Quraitem Palace until the evening, including UN Special Envoy Mr Rød-Larsen, who departed at

⁸⁷⁴¹ Exhibit P299, ERN 60142169; Salim Diab, T. 22 January 2015, pp 59-60; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 1001.

⁸⁷⁴² Exhibit P301, p. 371.

⁸⁷⁴³ Mobile ending in 1506 activated LAU_MIC2_A at 13:39; mobile ending in 771 activated Kraitem_B at 13:45; mobile ending in 520 activated LAU_Beirut_A at 13:47. Kraitem_B was adjacent to LAU_Beirut_A, which provided predicted best server coverage to Quraitem Palace. Mr Platt's report did not include call data records for mobile 1506, meaning that his initial assessment of the first call back from the Quraitem Palace area was 6 minutes later, at 13:45. Exhibit P1122; exhibit P1352, p. 341; exhibit P1354, p. 383; exhibit P1359, p. 316; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 1002.

21:25.⁸⁷⁴⁴ Mr Platt testified that the surveillance operation's focus shifted to Quraitem Palace until the evening.⁸⁷⁴⁵

4571. At 13:24, Red 636 called Mr Ayyash's Red 741. Red 636 activated ETOILE1, which provided the predicted best server coverage for Parliament on the Alfa network. Red 741 activated ZOUKAK1, which covered an area between Parliament and the crime scene location, for a call of one minute and 29 seconds.⁸⁷⁴⁶ Mr Platt testified that this call was consistent with Red 636 reporting to Mr Ayyash's Red 741 on Mr Hariri's departure from Parliament. Mr Platt highlighted that on 14 February 2005, around the time of Mr Hariri's departure from Parliament, the Red mobile 'in the immediate vicinity of Parliament' also called Red 741, which activated the same cell—ZOUKAK1.⁸⁷⁴⁷

4572. Between 13:25 and 13:31, Red 636, Red 652, Red 741, Red 893 and Red 678 called each other seven times.⁸⁷⁴⁸

4573. At 13:30, Mr Ayyash's Red 741 connected to BEACH1, next to the crime scene location.⁸⁷⁴⁹ By 13:36, Red 741 activated cells in the area of Quraitem Palace.⁸⁷⁵⁰ At 13:39, Subject 5's Red 636 called Red 741.⁸⁷⁵¹ At 13:40, Mr Ayyash's Green 300 called Mr Badreddine's Green 023.⁸⁷⁵² Mr Platt testified that this call coincided with Mr Hariri's return to Quraitem Palace and is consistent with a reporting back process.⁸⁷⁵³ Mr Philips testified that this is an example of a hierarchical call flow.⁸⁷⁵⁴

⁸⁷⁴⁴ Exhibit P299, ERN 60142169; exhibit P301, p. 372; exhibit P303, ERNs D0004985-D0004986; Ghattas El-Khoury, T. 20 January 2015, p. 61; exhibit P92, pp 11-12; exhibit P88 (Statement of Ahmad Nabil Ismail), ERNs 60289437-60289439, 60289492; exhibit P360 (Photographs); exhibit P408.

⁸⁷⁴⁵ Gary Platt, T. 8 March 2017, pp 6-9.

⁸⁷⁴⁶ Exhibit P1203, p. 2; exhibit P1197, p. 3; exhibit P1123; exhibit P1930 (Snapshot 108 to Chronology PowerPoint).

⁸⁷⁴⁷ Gary Platt, T. 7 March 2017, pp 103-104. On 14 February 2005, Red 893—activating ETOILE1—called Mr Ayyash's Red 741 at 12:50. Gary Platt, T. 14 March 2017, pp 48-49; exhibit P1197, p. 5; exhibit P1198, p. 6.

⁸⁷⁴⁸ Exhibit P1203, p. 2; exhibit P1199, p. 3; exhibit P1197, p. 3; exhibit P1198, p. 3; exhibit P1204, p. 3. *See also* exhibit P1916, slide 64.

⁸⁷⁴⁹ Exhibit P1197, p. 3.

⁸⁷⁵⁰ Red 741 activated RAOUCH1 (13:36) and CARACA1 (13:39); exhibit P1197, p. 3.

⁸⁷⁵¹ Red 636 activated MRAICI2; Red 741 activated MANARA2 at the end of the call. Exhibit P1197, p. 3; exhibit P1203, p. 2.

⁸⁷⁵² Green 300 activated cell MANARA2; Green 023 activated cell ROUEIS3. Exhibit P1207, p. 5; exhibit P1211, p. 5.

⁸⁷⁵³ Gary Platt, T. 7 March 2017, pp 109-110.

⁸⁷⁵⁴ John Edward Philips, T. 6 September 2016, pp 40-41; exhibit P1118, slide 141.

4574. Mr Ayyash's Red 741 then activated cells along the coastal road in north-west Beirut,⁸⁷⁵⁵ before again activating ZOUKAK1 between Parliament and the crime scene location at 13:52.⁸⁷⁵⁶ At 15:05, Mr Badreddine's Green 023 called Mr Ayyash's Green 300. Both mobiles were in South Beirut.⁸⁷⁵⁷ Mr Platt testified that this call is consistent with Green 023 and Green 300 arranging a debriefing meeting.⁸⁷⁵⁸

4575. Around the time of Mr Hariri's return to Quraitem Palace, Subject 5's Red 636 and Subject 8's Red 893 activated cells consistent with movement from the Parliament area along the coastal route to the Quraitem Palace area.⁸⁷⁵⁹

4576. Mr Platt noted the evidence from the security detail that Mr Hariri's convoy used the internal route also for the return journey—namely through the city rather along the coast.⁸⁷⁶⁰ According to Mr Platt, the fact that Mr Hariri's convoy decided to use that route 'negated some of their ability to do a rehearsal but certainly gave 'em a good idea of the movements of Mr Hariri around the Parliament area and the conduct of his convoy' and therefore 'a good source of intelligence,' because 'it was around the same time the attack was conducted on the 14th'.⁸⁷⁶¹

4577. Mr Platt observed it was better to call this a 'preparation day' rather than a 'rehearsal'.⁸⁷⁶² In his view, the operation on 8 February 2005 was a 'scouting exercise' and was not an unsuccessful attempt to conduct the attack.⁸⁷⁶³ Subject 6 was not there 'for the Parliament-Quraitem Palace side of the movement'. Part of the movement, especially by Mr Ayyash's

⁸⁷⁵⁵ Red 741 activated MANARA2 (13:43) and MANARA1 (13:44, 13:48). Exhibit P1197, p. 3. *See also* P1916, slides 77-80, 83-84.

⁸⁷⁵⁶ Exhibit P1197, p. 3; Gary Platt, T. 7 March 2017, pp 108-109, T. 8 March 2017, pp 12-13. *See also* P1916, slides 83-84.

⁸⁷⁵⁷ Green 300 activated cell BRAJNE3; Green 023 activated cell ROUEIS3. Exhibit P1207, p. 5; exhibit P1211, p. 6; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 1008.

⁸⁷⁵⁸ Gary Platt, T. 8 March 2017, pp 14-16.

⁸⁷⁵⁹ Red 636 activated MRAICI2 (13:38, 13:39, 13:43), MANARA2 (13:42, 14:44) and CARACA3 (14:46, 14:48); Red 893 activated MTV3 (13:36), PORT1 (13:38), PHENMB1 (13:40), BEACH1 (13:41), MRAICI2 (13:43), MANARA1 (13:46), CARACA3 (13:48, 13:52, 14:36, 14:44, 14:46) and CARACA1 (14:34). Exhibit P1123; exhibit P1203, pp 2-3; exhibit P1198, p. 3; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 1004, 1006, 1007-1008.

⁸⁷⁶⁰ Gary Platt, T. 7 March 2017, p. 57. Mr Platt clarified this in response to a judicial question, 'The same route was used to and from the Parliament, or they changed the route when they came back from the Parliament?'

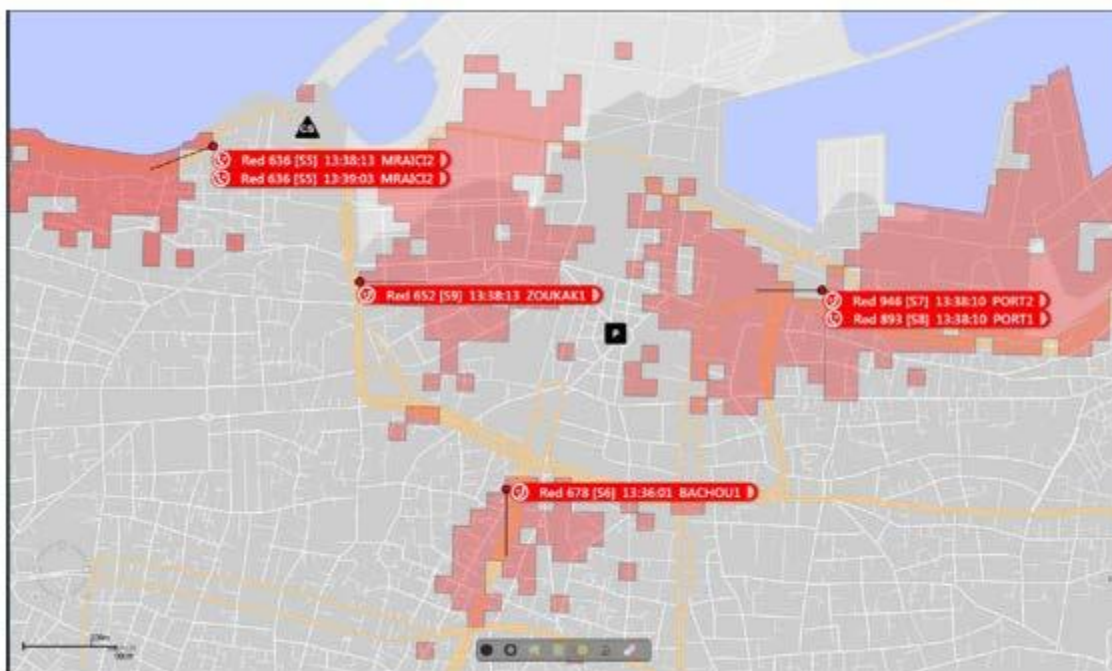

⁸⁷⁶¹ Gary Platt, T. 7 March 2017, pp 59-60. This was in response to a judicial question, 'To what extent you can describe what happened on the 8th of February as a rehearsal as long as the route that was used by the convoy on this day to and from the Parliament is different from that that was used on the day of the assassination?'

⁸⁷⁶² Gary Platt, T. 7 March 2017, p. 60. This was in response to a judicial question, 'it's better to name it a preparation day or maybe an unsuccessful attempt to make the attack on that day rather than a rehearsal?'

⁸⁷⁶³ Gary Platt, T. 7 March 2017, pp 53-54, 60.

mobiles, was not consistent with what occurred on 14 February. Further, ‘some of the Blue phones venture northwards towards the crime scene and Quraitem Palace’ while on the day of the attack the activity around those locations was ‘Red Network activity’ only.⁸⁷⁶⁴

4578. In Mr Platt’s view the period between 13:36 and 13:39 signified the beginning of a shift in focus from Parliament to Quraitem Palace.⁸⁷⁶⁵ Mr Platt represented this in his in-court slide presentation, below:

S5, S6, S7, S8 & S9 in Parliament/Coast Road area as Security Detail returns to QP: 13:36 – 13:39, exhibit P1916 (Gary Platt – PowerPoint presentation 8 – 12 February 2005), slide 69

4579. Mr Ayyash’s Red 741 connected to a cell in the Quraitem Palace area three minutes before the first call back there by the security detail.⁸⁷⁶⁶ Mr Platt commented that from the end of January onwards—in particular from Monday 31 January, with the surveillance between the Higher Shiite Council and Quraitem Palace, and on Thursday 3 February, with the surveillance at St Georges Marina—Mr Ayyash’s mobiles had ‘taken a more active role in the actual surveillance operation’.

⁸⁷⁶⁴ Gary Platt, T. 7 March 2017, pp 53-54, 60.

⁸⁷⁶⁵ Gary Platt, T. 7 March 2017, p. 108.

⁸⁷⁶⁶ Gary Platt, T. 7 March 2017, p. 109.

Namely, ‘being on the ground in the locations rather than remote from the locations coordinating the operation remotely’.⁸⁷⁶⁷

4580. For the remainder of the afternoon—from 14:44 until 18:17—Subject 5’s Red 636 activated cells in the area of Quraitem Palace.⁸⁷⁶⁸ From 15:17 until 15:24, Subject 8’s Red 893 connected to cells in the area of Quraitem Palace.⁸⁷⁶⁹ Between 13:52 and 14:54, Subject 7’s Red 946 activated cells in the area of Quraitem Palace.⁸⁷⁷⁰ From 14:34 until 18:01, Subject 6’s Red 678 activated cells in the area of Quraitem Palace.⁸⁷⁷¹ Subject 9’s Red 652 activated cells around Quraitem Palace from 14:55 until 18:36.⁸⁷⁷² Blue 817 and Blue 585 connected to cells around Quraitem Palace in the evening.⁸⁷⁷³ By 21:01, Subject 6’s Blue 610 activated cells in the Quraitem Palace area.⁸⁷⁷⁴

4581. Between 21:23 and 21:31, Mr Hariri travelled from Quraitem Palace to the Hamade residence. He returned to Quraitem Palace between 22:39 and 22:55.⁸⁷⁷⁵

4582. At 21:33, Blue 610 called Mr Ayyash’s Blue 233.⁸⁷⁷⁶ Blue 610 connected to MRAICI2, east of the Hamade residence; Blue 233 activated a cell in Dahyieh.⁸⁷⁷⁷ At 21:34, Blue 610 called

⁸⁷⁶⁷ Gary Platt, T. 7 March 2017, p. 22.

⁸⁷⁶⁸ Red 636 activated MANARA2 (14:44, 18:10, 18:17), CARACA3 (14:46, 14:48, 18:01), CONCOR2 (16:00) and CARLTO3 (16:55); exhibit P1203, pp 2-3; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 1007, 1009.

⁸⁷⁶⁹ Red 893 activated MOVPIK1 (15:17), CARACA3 (15:19) and MANARA2 (15:21, 15:24). Exhibit P1198, p. 4; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 1009.

⁸⁷⁷⁰ Red 946 activated CARLTO1 (13:52) and CARLTO3 (14:36, 14:54). Exhibit P1202, p. 2; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 1007.

⁸⁷⁷¹ Red 678 activated CONCOR2 (14:34, 14:46, 14:48, 14:49, 14:54, 14:55), CARLTO3 (15:06, 15:08, 15:11, 15:12, 15:14), MANARA2 (15:59), CARACA3 (16:00), RAOUCH3 (16:55) and MOVPIK1 (17:48, 18:01); exhibit P1204, pp 3-4; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 1007.

⁸⁷⁷² Red 652 activated CARACA3 (14:55, 15:17, 15:21, 15:23), RAOUCH3 (15:14), CONCOR2 (15:59), CONCOR1 (17:48) and RAOUCH2 (18:36); exhibit P1199, p. 4; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 1007, 1009, 1012.

⁸⁷⁷³ Blue 817 activated CARACA3 (18:21), MANARA2 (20:54, 21:01) and RAOUCH2 (21:05); Blue 585 activated Unesco_C at 21:06; exhibit P1239, p. 14; exhibit P1229, p. 17; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 1009, 1013, 1016.

⁸⁷⁷⁴ Blue 610 activated OGER3 (21:01) and CARACA3 (21:06); exhibit P1227, pp 19-20; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 1013-1015, 1018-1020.

⁸⁷⁷⁵ At 21:23, mobile number ending in 973, which belonged to Mr Hariri’s security detail, activated LAU_Beirut_A. At 21:31, mobile ending in 520, which also belonged to Mr Hariri’s security detail, activated Riviera_A, which was in the area of the Hamade residence. Both mobiles continued to activate Riviera_A until 22:39. At 22:55, mobile ending in 520 activated Fadlallah_A, which was next to the cell providing predicted best server coverage area for Quraitem Palace, namely LAU_Beirut_A. Exhibit P1332, p. 59; exhibit P1354, pp 384-385; Gary Platt, T. 8 March 2017, pp 20-23.

⁸⁷⁷⁶ Exhibit P1227, p. 20; exhibit P1238, p. 9; Gary Platt, T. 8 March 2017, p. 21.

⁸⁷⁷⁷ Blue 233 activated Hazmiyeh-II_B. Exhibit P1238, p. 9; exhibit P1227, p. 20.

Blue 585. Blue 610 activated MANARA1, which provided predicted best server coverage to the Hamade residence on the Alfa network; Blue 585 activated a cell in west Beirut, south of Quraitem Palace.⁸⁷⁷⁸

4583. Mr Platt testified that these calls are consistent with Blue 610 following Mr Hariri to the Hamade residence. Mr Platt noted that the first of these calls was to Mr Ayyash's Blue 233, who was in Dahyieh, followed by a call to Blue 585. According to Mr Platt, this is consistent with coordination of the surveillance and updating of Blue 233.⁸⁷⁷⁹

4584. At 22:29 and 22:53, Mr Ayyash's Blue 233 called Subject 6's Blue 610 from Dahyieh.⁸⁷⁸⁰ Blue 610 continued to activate MANARA1 in the area of the Hamade residence.⁸⁷⁸¹ At 23:05, Blue 610 called Blue 585. Blue 610 activated a cell within 500 metres of Quraitem Palace; Blue 585 activated a cell east of the Hamade residence along the coastal road.⁸⁷⁸²

4585. The tables in Mr Platt's report, which highlight the relevant call activity for 8 February, show that 69 Blue and Red network calls activated cells providing coverage within a 500-metre or a 1,000-metre radius of Quraitem Palace. Thirty-eight of these activated cells providing coverage within a 500-metre radius of it.⁸⁷⁸³

(yy) Wednesday 9 February 2005

4586. On Wednesday 9 February 2005, Mr Hariri received visitors at Quraitem Palace throughout the day.⁸⁷⁸⁴ Mr Jumblatt testified that Mr Hariri met Mr Hassan Nasrallah that evening.⁸⁷⁸⁵

⁸⁷⁷⁸ Blue 585 activated Raouche_B. Exhibit P1229, p. 17; exhibit P1227, p. 20; Gary Platt, T. 8 March 2017, pp 21-23; exhibits P1122, P1123. *See also* exhibit P1916, slides 120-121.

⁸⁷⁷⁹ Gary Platt, T. 8 March 2017, pp 21-22.

⁸⁷⁸⁰ Blue 233 activated Hadath_C (22:29, 22:53). Exhibit P1227, p. 20; exhibit P1238, p. 9; Gary Platt, T. 8 March 2017, pp 22-23.

⁸⁷⁸¹ Exhibit P1227, p. 20; exhibit P1123.

⁸⁷⁸² Blue 610 activated CARLTO3; Blue 585 activated Mic_AUB-Sea Gate. Exhibit P1229, p. 17; exhibit P1227, p. 20; Gary Platt, T. 8 March 2017, p.23; exhibit P1122.

⁸⁷⁸³ Exhibit P1783 (Expert report of Gary Platt – Chronology), tables 130, 132, 136-139 (pp 306, 309, 315, 317-321).

⁸⁷⁸⁴ Exhibit P301, pp 372-373; exhibit P299, ERN 60142170; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 1021.

⁸⁷⁸⁵ Walid Jumblatt, T. 6 May 2015, pp 51, 111. For details on this meeting, *see* chapter IV 'Historical and political background to the attack', (O) 'Political events between the third Bristol Group meeting and the attack', para. 687.

4587. Mr Platt testified that Blue and Red network mobile users continued the coordinated surveillance around Quraitem Palace as Mr Hariri was located there. He said that there was a lack of movement of mobiles around Quraitem Palace because Mr Hariri remained there.⁸⁷⁸⁶

4588. During the morning, Blue 864 and Blue 817 activated cells in the Quraitem Palace area. Blue mobile activity around Quraitem Palace commenced at 09:28.⁸⁷⁸⁷ Blue 864 again activated a cell in the Quraitem Palace area at 11:38.⁸⁷⁸⁸ Blue 817 activated cells in the Quraitem Palace area until 17:23.⁸⁷⁸⁹

4589. Blue 585 and Red 636 used cells in the area of Quraitem Palace. The last activation of a cell in the area of Quraitem Palace was MOVPIK1 at 18:13.⁸⁷⁹⁰ At 21:04, Blue 585, activating a cell between Quraitem Palace and the airport, called Mr Ayyash's Blue 233, which activated a cell in south Beirut.⁸⁷⁹¹ This call followed calls between Subject 6's Red 678, Subject 7's Red 946 and Subject 5's Red 636 at 21:01 and 21:03. Mr Platt testified that in his view these calls were part of a reporting process regarding the surveillance operation that ended in Subject 5's Blue 585 reporting back to Mr Ayyash's Blue 233.⁸⁷⁹²

4590. The Red mobiles called each other 26 times on this day.⁸⁷⁹³ The first Red mobile activity of the day occurred at 09:50 when Red 946 called Red 893, both activating cells in the Quraitem Palace area.⁸⁷⁹⁴ With the exception of Red 636 activating BHVOUT1 at 21:03, all of the cells

⁸⁷⁸⁶ Gary Platt, T. 8 March 2017, pp 30-31, 35, 39.

⁸⁷⁸⁷ Blue 864 activated RAOUCH2; Blue 817 activated PINS1. Exhibit P1228, p. 14; exhibit P1239, p. 15; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 1026.

⁸⁷⁸⁸ Blue 864 activated CARACA1. Exhibit P1228, p. 14.

⁸⁷⁸⁹ Blue 817 activated CARLTO3 (13:03, 13:14, 13:17, 13:20), CONCOR2 (13:38), CONCOR1 (14:30), BACHOU1 (15:00) and CARLTO3 (17:20, 17:23); exhibit P1239, p. 15.

⁸⁷⁹⁰ Exhibit P1203, p. 3.

⁸⁷⁹¹ Blue 585 activated Jnah_El_Wata_B; Blue 233 activated Hazmiyeh-II_B; exhibit P1229, p. 17; exhibit P1238, p. 9.

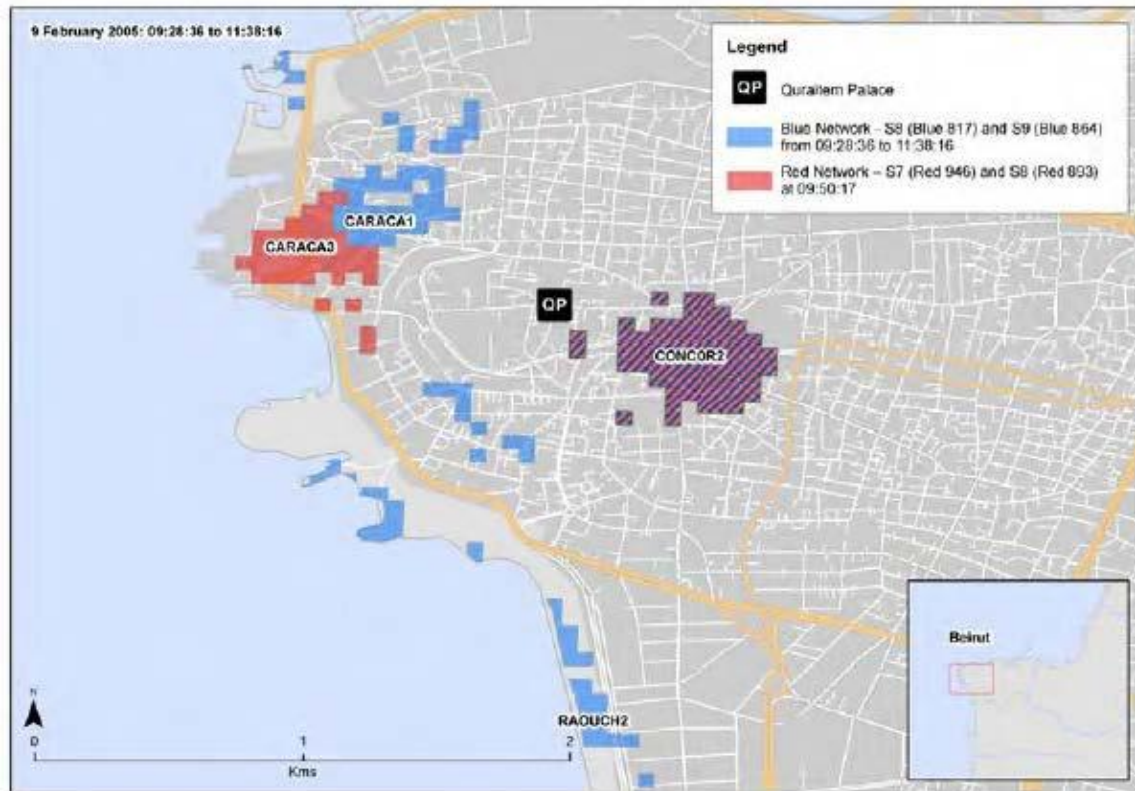

⁸⁷⁹² Gary Platt, T. 8 March 2017, p. 51.

Exhibit P1783 (Expert report of Gary Platt – Chronology), p. 335

(aaa) Friday 11 February 2005

4596. On Friday 11 February 2005, Mr Hariri received visitors at Quraitem Palace throughout the day, including the Australian, Turkish and Spanish ambassadors respectively at 10:45, 11:20 and 13:15.⁸⁸⁰⁷

4597. The only Blue network mobile to activate cells in the area of Quraitem Palace was Blue 864, which activated cells in the area between 13:40 and 17:44.⁸⁸⁰⁸ Between 13:40 and 15:53, Mr Ayyash's Blue 233 was in contact with Blue 864 three times; for each of these calls Blue 233

⁸⁸⁰⁷ Exhibit P299, ERN 60142172; exhibit P301, pp 375-376; Salim Diab, T. 22 January 2015, pp 59-60; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 1053.

⁸⁸⁰⁸ Blue 864 connected to OGER3 (13:40), MOVPIK1 (14:21), CARACA3 (14:33), SIMON3 (15:53), CARACA1 (16:49), MANARA2 (17:24) and again MOVPIK1 (17:43, 17:44); exhibit P1228, p. 14; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 1054, 1073-1074, 1076, 1078.

activated Ouzaii_2_A, in south Beirut, north of the airport. Blue 864 activated cells in the Quraitem Palace area.⁸⁸⁰⁹

4598. On this day, the Red mobiles called each other 26 times.⁸⁸¹⁰ Red 652, Red 741, Red 893 and Red 946 activated cells near Quraitem Palace.⁸⁸¹¹ The Red network activity commenced with three calls between Mr Ayyash's Red 741 and Subject 8's Red 893 at 11:46, 11:47 and 11:48. Red 741 activated cells in the Quraitem Palace area;⁸⁸¹² Red 893 activated BHVOUT2 between south Beirut and Quraitem Palace. By 11:52, Red 893 and Subject 9's Red 652 also activated cells in the Quraitem Palace area.⁸⁸¹³

4599. At 11:56, Subject 7's Red 946 activated a cell within 500 metres of Quraitem Palace.⁸⁸¹⁴ Mr Platt testified that these calls were consistent with Mr Ayyash's Red 741 coordinating the commencement of surveillance activity around Quraitem Palace.⁸⁸¹⁵

⁸⁸⁰⁹ Blue 864 activated OGER3 (13:40), CARACA3 (14:33) and SIMON3 (15:53); exhibit P1238, p. 10; exhibit P1228, p. 14; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 1070, 1073-1074, 1076.

⁸⁸¹⁰ Exhibit P1203, p. 3; exhibit P1199, pp 4-5; exhibit P1204, p. 4; exhibit P1197, pp 3-4; exhibit P1198, pp 5-6; exhibit P1202, p. 3.

⁸⁸¹¹ Exhibit P1199, pp 4-5; exhibit P1197, pp 3-4; exhibit P1198, pp 5-6; exhibit P1202, p. 3; exhibit P1123.

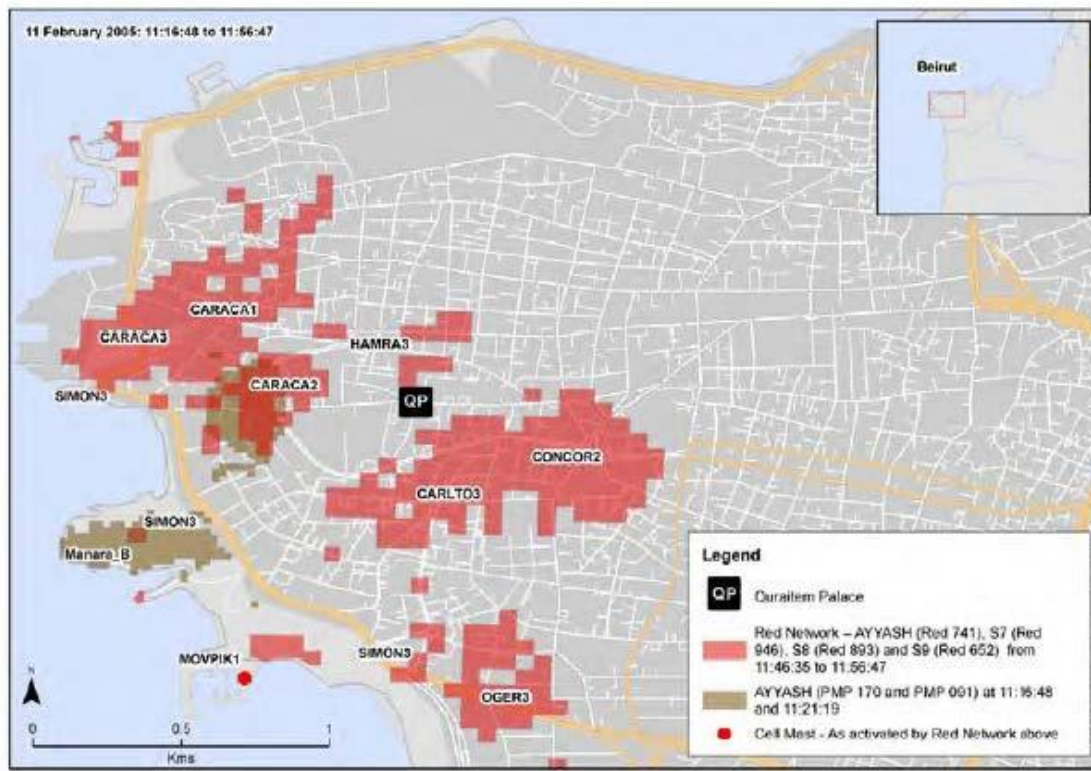

⁸⁸¹² Red 741 activated CARACA3 (11:46, 11:47) and CARACA1 (11:48). Exhibit P1197, p. 3.

⁸⁸¹³ Red 893 activated OGER3; Red 652 activated CARLTO3; exhibit P1199, pp 4-5; exhibit P1198, pp 5-6; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 1062.

⁸⁸¹⁴ Red 946 activated CONCOR2; exhibit P1202, p. 3.

⁸⁸¹⁵ Gary Platt, T. 8 March 2017, p. 90.

4600. This Red network mobile activity is displayed in the graphic below:

Map 108: AYYASH [PMP 170 and PMP 091], Red Network (AYYASH, S7, S8 and S9), 11 February 2005 (11:16 to 11:56)

Exhibit P1783 (Expert report of Gary Platt – Chronology), p. 338

4601. At 12:09, Subject 6's Red 678 called Mr Ayyash's Red 741.⁸⁸¹⁶ Red 678 activated MINIEH3, north of Tripoli, whereas Red 741 activated MRAICI2 west of the crime-scene location along the coastal road. At 12:18, Red 741 activated ETOILE3 next to Parliament, calling Subject 8's Red 893, which remained in the area of Quraitem Palace.⁸⁸¹⁷ At 12:45, Mr Ayyash's Green 300, activating PORT3 east of Parliament, called Mr Badreddine's Green 023.⁸⁸¹⁸

⁸⁸¹⁶ Exhibit P1204, p. 4; exhibit P1197, p. 3; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 1066.

⁸⁸¹⁷ Red 893 activated CONCOR2. Exhibit P1197, p. 3; exhibit P1198, p. 5; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 1066-1067.

⁸⁸¹⁸ Exhibit P1207, p. 5; exhibit P1211, p. 6; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 1069. See also exhibit P1916, slides 186-188.

4602. At 12:46, Mr Ayyash's Red 741, activating PORT3, called Subject 6's Red 678.⁸⁸¹⁹ Mr Platt testified that these calls are consistent with Mr Ayyash's Red 741 coordinating the surveillance operation. Red 741 took a more active role in the surveillance around Quraitem Palace on this day. Mr Platt testified that Subject 6's Red 678, which usually took on the coordinating role, was in Tripoli. He highlighted that the 12:45 Green call, consistent with reporting, was followed by a lengthy call to Red 678.⁸⁸²⁰ To Mr Philips, this is an example of a hierarchical call flow.⁸⁸²¹ At 14:48, Mr Badreddine's Green 023 called Mr Ayyash's Green 300, which activated MEA1 north of the airport.⁸⁸²²

4603. The last activity of Subject 8's Red 893 on this day was at 16:26 when it activated CARACA1, which was within 500 metres of Quraitem Palace.⁸⁸²³ Red 652 and Red 946 continued to activate cells in the area of Quraitem Palace until 17:45.⁸⁸²⁴

(bbb) Saturday 12 February 2005

4604. Mr Hariri received visitors, including Mr Ghazi El-Youssef and MPs Mr Atef Majdalani and Mr Bassem El-Sabeh, at Quraitem Palace throughout the day on Saturday 12 February 2005.⁸⁸²⁵ In the evening, he met Mr Fouad Siniora there.⁸⁸²⁶

4605. During the morning, Mr Hariri attended two condolence services: one at the *Sacré Cœur* Church in Badaro and one at the Mar Mikhael Church in Mazraa.⁸⁸²⁷ He departed Quraitem Palace

⁸⁸¹⁹ Exhibit P1204, p. 4; exhibit P1197, p. 3; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 1070.

with his security detail around 10:24.⁸⁸²⁸ By 10:48, Mr Hariri had arrived at the *Sacré Cœur* Church.⁸⁸²⁹ Below are images relating to the journey to the two churches from Mr Platt's in-court slides:⁸⁸³⁰

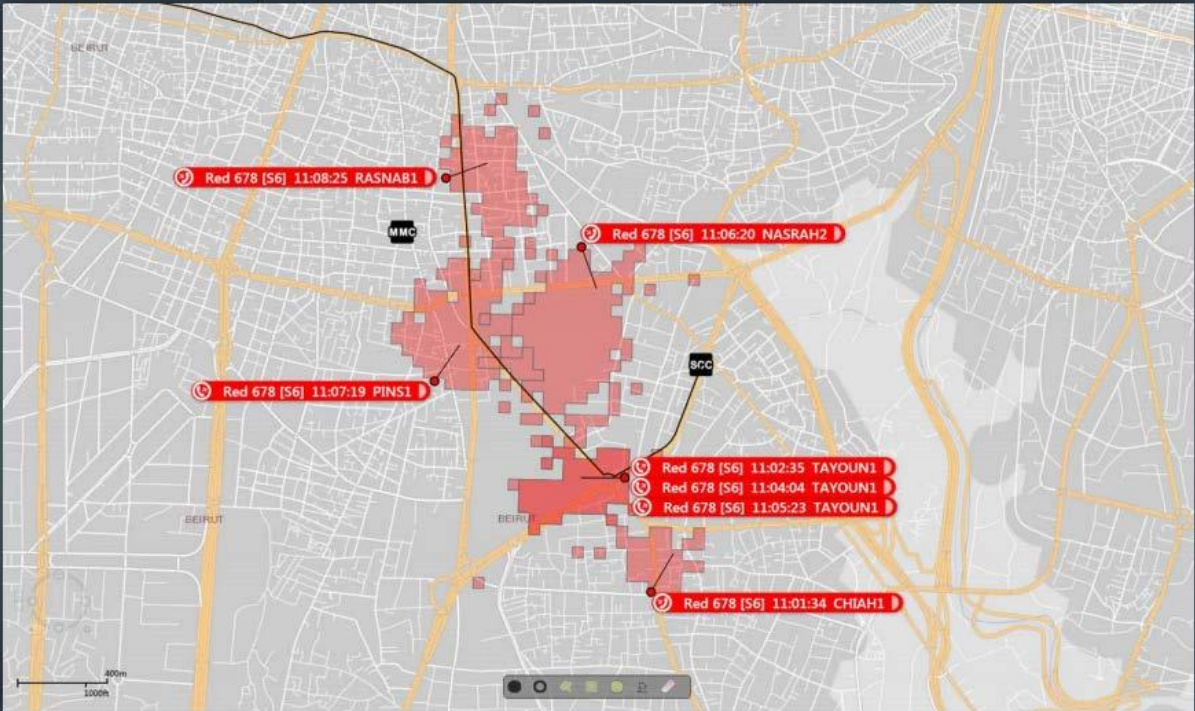

⁸⁸²⁸ Exhibit P350 (Photographs of Mr Hariri at Quraitem Palace on 12 February 2005), p. 94; exhibit P355 (Statement of Helena Habraken), pp 3-4; Gary Platt, T. 9 March 2017, p. 19. Mobiles belonging to Mr Hariri's security detail activated LAU_MIC2_A at 10:20 and 10:24; exhibit P1359, p. 326; exhibit P1352, p. 350.

⁸⁸²⁹ At 10:48, mobile 771 of Mr Hariri's security detail first activated Justice_B adjacent to *Sacré Cœur* Church, and mobile 1506 activated Justice_B at 10:50. Exhibit P1359, p. 326; exhibit P1352, p. 350.

⁸⁸³⁰ Exhibit P1916 (Chronology PowerPoint presentation – 8 February 2005 to 12 February 2005), slides 213, 228, 240. See also exhibit P593.2 (Snapshots 2nd session 16 September 2015: ID 5 to 10 – Call list for 12 February 2005: Electronic presentation of evidence Demonstration).

S6 exchanges several calls with S9 & S7 along route to vicinity of Mar Michael Church: 11:01 - 11:08

4606. Mr Ayyash's Blue 233, Blue 501, Blue 585, Blue 817, Blue 864, Blue 324 and Subject 6's Blue 610 called each other 18 times.⁸⁸³¹ The Red mobiles called each other 65 times.⁸⁸³² Mr Platt testified that the Red and Blue network activity took place in two locations: one around Quraitem Palace and the two churches attended by Mr Hariri and the other in the Zouk-Mosbeh junction area, which is the turn-off to travel to the Faraya area.⁸⁸³³

4607. According to Mr Platt, the purpose of the network activity in the Zouk-Mosbeh junction area was to cover the route to Faqra villa given that—being a Saturday—there was a possibility

⁸⁸³¹ Exhibit P1238, p. 10; exhibit P1229, p. 17; exhibit P1239, pp 15-16; exhibit P1228, p. 14; exhibit P1225, p. 14; exhibit P1227, p. 21.

⁸⁸³³ Gary Platt, T. 9 March 2017, pp 23-24.

that Mr Hariri could go there, and ‘the perpetrators need to know ... where Mr Hariri is going to be located’ on Monday 14 February, before attending Parliament.⁸⁸³⁴

4608. Mr Platt testified that Subject 6’s Red 678 and Subject 9’s Red 652 moved in tandem with Mr Hariri to the *Sacré Cœur* Church.⁸⁸³⁵ At 10:28, Red 652 called Red 678. During this call, Red 652 activated CARLTO3 on the south side of Quraitem Palace; Red 678 activated CARACA3 west of Quraitem Palace on the coast.⁸⁸³⁶ Between 10:28 and 10:41, Red 652 activated cells that are consistent with travel from Quraitem Palace towards the *Sacré Cœur* Church.⁸⁸³⁷ At 10:45, 10:49 and 10:50, Red 652 activated MPT2 next to the *Sacré Cœur* Church.⁸⁸³⁸ Red 678 activated MAZRAA2 between Quraitem Palace and the *Sacré Cœur* Church at 10:36. At 10:44 and 10:45, Red 678 connected to MPT3 north of the *Sacré Cœur* Church.⁸⁸³⁹

4609. At 10:32, Subject 6’s Blue 610 called Mr Ayyash’s Blue 233 from the Quraitem Palace area.⁸⁸⁴⁰ This call initiated ‘the movement by Mr Ayyash’s attributed mobiles’ from Dahyieh towards the *Sacré Cœur* Church, as well as a switch from Mr Ayyash’s Blue mobile to his Red mobile, according to Mr Platt.⁸⁸⁴¹ At 10:41, Mr Ayyash’s Red 741 activated BACHA2 in south-east Beirut, followed by ALFA2 at 10:44, south of the *Sacré Cœur* Church. At 10:49, Mr Ayyash’s Red 741 activated HOTELD2 north of the *Sacré Cœur* Church.⁸⁸⁴² This is depicted on the diagrams below.⁸⁸⁴³

⁸⁸³⁴ Gary Platt, T. 9 March 2017, pp 25, 34, 50.

Ayyash contact with S6 & 'S9' as moves north from Dahyieh: 10:32 – 10:44

Ayyash calls 'S9' in vicinity of Sacré Cœur Church: 10:49 (prior to Security Detail departure)

4610. Mr Hariri travelled from the *Sacré Cœur* Church to Mar Mikhael Church sometime between 10:55 and 11:09.⁸⁸⁴⁴

4611. At 10:56, Subject 9's Red 652 called Subject 6's Red 678. Red 652 activated BADARO2 south-west of the *Sacré Cœur* Church; Red 678 activated MIKAEL1, which was further south

⁸⁸⁴⁴ Mobile ending in 1506 belonging to Mr Hariri's security detail last activated Justice_B at 10:55. At 11:09, mobile ending in 1506 activated Ras_Nabeh_B close to Mar Mikhael Church; exhibit P1352, p. 351; exhibit P1916, slides 215, 217.

from BADARO2.⁸⁸⁴⁵ Between 11:04 and 11:11, Red 652 was in contact with Red 678 four times; Red 652 activated cells west of Mar Mikhael Church.⁸⁸⁴⁶

4612. Around this time, Red 678 activated cells which cover the route from the *Sacré Cœur* Church to Mar Michael Church taken by Mr Hariri and his convoy: TAYOUN1 (11:02, 11:04, 11:05), NASRAH2 (11:06) and PINS1 (11:07).⁸⁸⁴⁷ At 11:08 and 11:11, Red 678 activated RASNAB1, north-east of Mar Michael Church.⁸⁸⁴⁸

4613. Around 11:12, Mr Hariri left Mar Mikhael Church and travelled back to Quraitem Palace, where he arrived around 11:24.⁸⁸⁴⁹ Around the same time that Mr Hariri's convoy travelled back to Quraitem Palace, Subject 6's Red 678 activated cells between Mar Mikhael Church and Quraitem Palace.⁸⁸⁵⁰ During this time, Mr Ayyash's Red 741 was in contact with Subject 9's Red 652 (11:14) and Subject 6's Red 678 (11:16).⁸⁸⁵¹ Mr Platt testified that these calls are consistent with Red 741's coordination role.⁸⁸⁵² The mobile activity is displayed in the graphic below from the slides used with Mr Platt in court:

⁸⁸⁴⁵ Exhibit P1199, p. 5; exhibit P1204, p. 5; exhibit P1916, slides 237, 238.

⁸⁸⁴⁶ Red 652 activated MAKASS2 (11:04) and MAKASS1 (11:06, 11:08, 11:11). Exhibit P1199, p. 5; Gary Platt, T. 9 March 2017, pp 46-47; exhibit P1916, slides 239, 241-243.

⁸⁸⁴⁷ Exhibit P1204, p. 5. Mr Platt's report did not deal with Mr Hariri's attending a second condolence service at the Mar Mikhael Church and it characterised Red 678's location around this time as being 'in the area around *Sacré Cœur* Church'. Exhibit P1783 (Expert report of Gary Platt – Chronology), para. 1096.

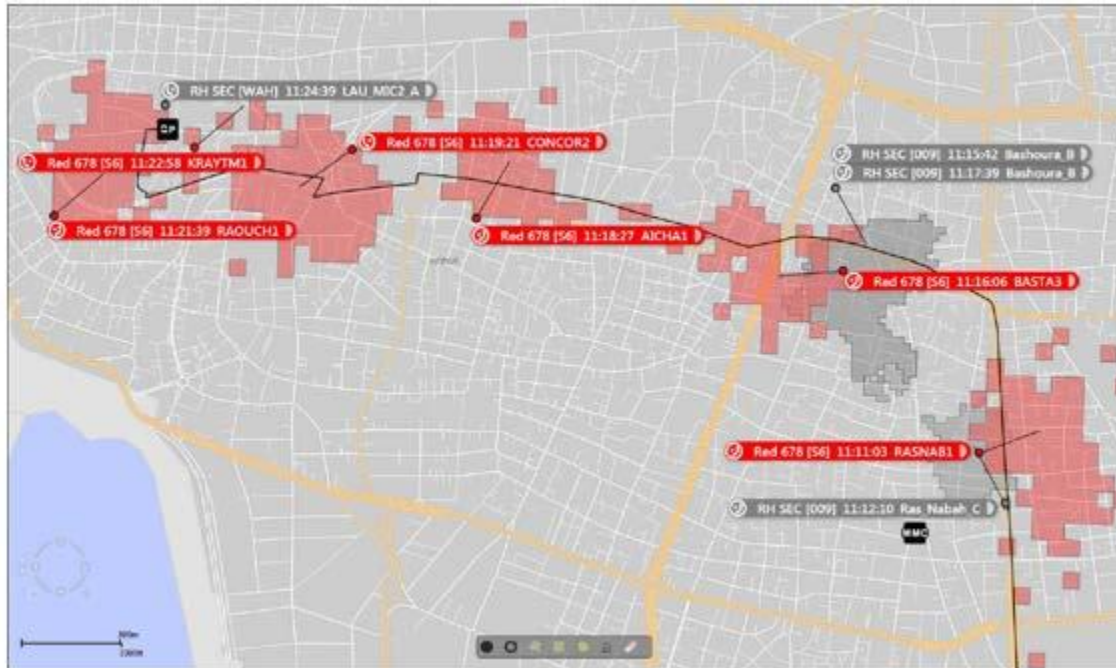

⁸⁸⁴⁸ Exhibit P1204, p. 5; exhibit P1916, slides 239-240, 242-243.

⁸⁸⁴⁹ At 11:12, mobile ending in 506 activated Ras_Nabeh_C north-east of Mar Mikhael Church, then Bashoura_B between Mar Mikhael Church and Quraitem Palace at 11:15 and 11:17. At 11:24, mobile ending in 1506 activated LAU_MIC2_A close to Quraitem Palace. Mobile ending in 1506 also activated Ras_Nabeh_B (10:20) and Sami_El_Solh_C (10:51); exhibit P1352, pp 350-351; exhibit P1322, p. 81.

⁸⁸⁵⁰ Red 678 activated BASTA3 (11:16), AICHA1 (11:18), CONCOR2 (11:19), RAOUCH1 (11:21) and KRAYTM1 (11:22); exhibit P1204, p. 5.

⁸⁸⁵¹ Exhibit P1197, p. 4.

⁸⁸⁵² Gary Platt, T. 9 March 2017, pp 47-48.

S6 contact with Ayyash & 'S9' along same route as security detail back to the palace:

11:11 – 11:22

*Exhibit P1916 (Chronology PowerPoint presentation – 8 February 2005 to 12 February 2005),
slide 246*

4614. At 11:35 and 11:40, Red 652 activated cells between Parliament and Quraitem Palace.⁸⁸⁵³ At 11:51 and 12:31, Red 652 connected to MANARA2 (within 1,000 metres of Quraitem Palace).⁸⁸⁵⁴ Between 11:35 and 11:51, Red 678 activated cells within 1,000 metres of Quraitem Palace.⁸⁸⁵⁵ By 11:41, also Mr Ayyash's Red 741 activated a cell within 1,000 metres of Quraitem Palace, RAOUCH3.⁸⁸⁵⁶

⁸⁸⁵³ Red 652 activated ZIDANI1 (11:35) and AICHA1 (11:40); exhibit P1199, pp 5-6. *See also* exhibit P1916, slides 248, 250.

⁸⁸⁵⁴ Exhibit P1199, p. 6; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 1103.

⁸⁸⁵⁵ Red 678 activated CARACA3 (11:35), KRAYTM1 (11:40), CONCOR2 (11:41) and MOVPIK1 (11:48, 11:50, 11:51); exhibit P1204, p. 5; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 1101.

⁸⁸⁵⁶ Exhibit P1197, p. 4; Gary Platt, T. 9 March 2017, pp 50-51; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 1098.

4615. Between 15:35 and 18:48, Red 678 continued activating cells within 1,000 metres of Quraitem Palace.⁸⁸⁵⁷ During this time, Subject 6's Red 678 was in contact with Mr Ayyash's Red 741 five times.⁸⁸⁵⁸

4616. At 15:47, Mr Badreddine's Green 023 called Mr Ayyash's Green 300.⁸⁸⁵⁹ At 15:48, Mr Ayyash's Red 741 called Red 678.⁸⁸⁶⁰ Mr Philips testified that this is an example of a hierarchical call flow.⁸⁸⁶¹

4617. Throughout the day, Subject 5's Red 636 and Subject 8's Red 893 activated cells providing coverage along the route between Beirut and Faqra Villa.⁸⁸⁶² Mr Ayyash's Red 741 maintained contact with Red 636 (11:18, 14:27 and 17:09) and Subject 7's Red 946 (12:54, 14:14 and 17:10) throughout the day.

4618. Mr Platt testified that Red 741's contact with Red 636 at 11:18, which was unusually long in taking a minute and 51 seconds, illustrates Mr Ayyash's Red 741 taking a prominent role in the surveillance operation, albeit from a distance.⁸⁸⁶³ At 14:28, Mr Ayyash's Green 300, activating MOSBEH2, called Mr Badreddine's Green 023.⁸⁸⁶⁴

4619. According to Mr Platt, this call is consistent with reporting about the activities or status of the operation.⁸⁸⁶⁵ For Mr Philips, this was an example of a hierarchical call flow as it followed the call of Subject 5's Red 636 to Red 741 at 14:27.⁸⁸⁶⁶ At 17:07, Mr Ayyash's Green 300 (RIMAL1) called Mr Badreddine's Green 023 (GHAZIR2) again.⁸⁸⁶⁷ Mr Platt concluded that this is consistent

⁸⁸⁵⁷ Red 678 activated CARACA3 (15:35), MANARA2 (17:07, 17:11, 17:13, 17:41) and MOVPIK1 (17:48, 18:48); exhibit P1204, p. 6; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 1111, 1114-1116.

⁸⁸⁵⁸ Exhibit P1204, p. 6; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 1111, 1114-1115, 1117; Gary Platt, T. 9 March 2017, pp 64-65.

⁸⁸⁵⁹ Green 023 activated OBEJ11; Green 300 activated RIMAL11; exhibit P1211, p. 6; exhibit P1207, p. 5; Gary Platt, T. 9 March 2017, p. 60.

⁸⁸⁶⁰ Red 741 activated MOSBEH2; Red 678 activated MANARA2; exhibit P1197, p. 4; exhibit P1204, p. 6.

⁸⁸⁶¹ John Edward Philips, T. 6 September 2016, pp 41-43; exhibit P1118, slide 142.

⁸⁸⁶² Red 636 activated RIMAL1 (10:12), FAYTRO1 (10:44, 15:09, 17:09), FARAYA2 (11:18), FARAYA1 (11:49, 14:27) and OUYOUN2 (14:43); Red 893 activated MOSBEH2 (10:08), NDU1 (10:13), ACHQOU1 (10:34), FAYTRO1 (10:44), FARAYA1 (11:26, 11:48), FARAYA3 (14:43) and CHEHWA1 (17:41). Exhibit P1203, p. 3; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 1082, 1088, 1105, 1111, 1116; exhibit P1198, p. 6; exhibit P1123.

⁸⁸⁶³ Gary Platt, T. 9 March 2017, p. 48.

⁸⁸⁶⁴ Exhibit P1211, p. 6; exhibit P1207, p. 5.

⁸⁸⁶⁵ Gary Platt, T. 9 March 2017, p. 59.

⁸⁸⁶⁶ John Edward Philips, T. 6 September 2016, pp 41-43; exhibit P1118, slide 142.

⁸⁸⁶⁷ Exhibit P1211, p. 6; exhibit P1207, p. 5.

with a reporting process.⁸⁸⁶⁸ Mr Philips's view was that this is an example of a hierarchical call flow as it preceded calls from Mr Ayyash's Red 741 to Red 636 (17:09) and Subject 7's Red 946 (17:10).⁸⁸⁶⁹

4620. The Quraitem Palace visitor logbook records that Mr Siniora signed in at 20:25 and out at 21:10.⁸⁸⁷⁰ According to Mr Mustafa Nasser, Mr Hariri also met Mr Hussein Khalil, Mr Nasrallah's assistant.⁸⁸⁷¹

3. The day of the attack—Monday 14 February 2005

(a) Mr Hariri's movements

4621. On the morning of 14 February 2005, at approximately 10:45,⁸⁸⁷² Mr Hariri left Quraitem Palace for Parliament⁸⁸⁷³ to attend a parliamentary session, in which the proposed electoral law was to be debated.⁸⁸⁷⁴

4622. Mr Hariri's convoy consisted of a black Toyota Land Cruiser as the first vehicle, four Mercedes vehicles—the second of which was driven by Mr Hariri—and a blue Chevrolet Suburban equipped for use as an ambulance.⁸⁸⁷⁵ Four armed ISF officers were in the Land Cruiser.⁸⁸⁷⁶ It had a wireless device to contact Quraitem Palace but did not have a jamming device.⁸⁸⁷⁷ Three Mercedes were unarmored but used jamming devices to prevent the detonation

⁸⁸⁷⁷ Witness PRH357, T. 2 June 2015, pp 36-37.

of a bomb by mobile or radio signals. Mr Hariri's Mercedes, which was armoured, was not equipped with a jamming device.⁸⁸⁷⁸

4623. The convoy took the 'internal route', namely, non-coastal route,⁸⁸⁷⁹ and arrived at the Parliament building at around 10:54.⁸⁸⁸⁰ Mr Hariri posed for pictures in the parliamentary chamber with Mr El-Sabeh, Mr Hamade, his sister, Ms Bahia Hariri MP and other parliamentarians from the Beirut Decision Bloc.⁸⁸⁸¹

4624. At around 11:54,⁸⁸⁸² Mr Hariri left the Parliament building. He was due to return to Quraitem Palace to attend an electoral lunch scheduled for 13:15 with the leaders of the various electoral machines.⁸⁸⁸³ Before getting into his car, Mr Hariri crossed over Nejme Place and went

⁸⁸⁷⁸ Witness PRH076, T. 14 October 2014, pp 16, 33-35, 40, 43, 69, T. 15 October 2014, pp 37-38; exhibit P287 (Photograph of jamming device in the boot of the second convoy vehicle, annotated by Witness PRH076); Amer Chehadeh, T. 16 October 2014, pp 15, 38-41; Witness PRH357, T. 2 June 2015, p. 36; Witness PRH009, T. 11 October 2016, pp 65-66. Mr Hariri was the only one who could give a signal from his vehicle to stop the jamming device so that he could make a call. On 14 February 2005, the jamming devices were turned on and operational and there was no order from Mr Hariri to turn them off. The vehicles in the convoy would communicate through wireless devices as the mobiles did not work in the convoy. The close protection officers had Motorola walkie-talkie radios. Witness PRH076, T. 14 October 2014, pp 35-38, T. 15 October 2014, pp 46-47; Witness PRH149, T. 4 June 2015, pp 14-15; Mohammed Dia, T. 16 October 2014, pp 79-80, T. 17 October 2014, pp 6-7; Witness PRH357, T. 2 June 2015, pp 38-39; Amer Chehadeh, T. 16 October 2014, p. 15 *See also* Witness PRH256, T. 23 October 2014, p. 13. Regarding the composition of Mr Hariri's convoy, *see also* chapter VI 'Explosion on 14 February 2005', (B) 'Before the explosion on Monday 14 February 2005', paras 993-999.

⁸⁸⁷⁹ Witness PRH009, T. 13 October 2016, p. 5; Witness PRH076, T. 14 October 2014, pp 24-26; exhibit P284 (Annotated version of a map showing the route travelled by Hariri convoy on 14 February 2005 as provided in a statement of Witness PRH009); exhibit P285 (Map of the most common routes to Quraitem Palace from Parliament as provided in Witness PRH101's statement).

⁸⁸⁸⁰ Exhibit P88 (Statement of Ahmad Nabil Ismail), paras 13, 21; exhibit P110 (Witness statement of Helena Habraken; investigator's notes on timing of photographs) pp 3-5; exhibit P1322, p. 82; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 1148, 1152-1153, photograph 1 (p. 363); Gary Platt, T. 13 March 2017, pp 34-35; exhibit P1923 (Chronology PowerPoint presentation –13 February 2005 to 16 February 2005), slides 54-57. *See also* Atef Majdalani, T. 29 April 2015, p. 29.

⁸⁸⁸¹ Bassem El-Sabeh, T. 17 March 2015, pp 46-47. While Mr El-Sabeh testified that Mr Hariri left before the start of the session, Mr Majdalani testified that Mr Hariri spoke during the joint parliamentary committees meeting regarding the draft electoral law (Atef Majdalani, T. 29 April 2015, pp 10, 29-30). The Trial Chamber considers that this discrepancy is not material with regard to the broader description of Mr Hariri's movements on 14 February 2005.

⁸⁸⁸² Exhibit P90, p. 162; exhibit P88 (Statement of Ahmad Nabil Ismail), paras 13, 21; exhibit P110 (Witness statement of Helena Habraken; investigator's notes on timing of photographs), pp 3-5; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 1165; exhibit P1923, slide 81.

4625. At 11:56:57, a white light truck was shown in CCTV camera images⁸⁸⁸⁶ from the President Suleiman Frangieh, or St Georges, tunnel.⁸⁸⁸⁷

4626. Between 12:49 and 12:50, Mr Hariri left the café and departed in his convoy, driving himself.⁸⁸⁸⁸ The convoy took the maritime route.⁸⁸⁸⁹ Mr Bassel Fuleihan was in Mr Hariri's car in the passenger seat.⁸⁸⁹⁰ The convoy took one of the most frequent exits used out of *Place de l'Étoile*, passing around the Italian embassy.⁸⁸⁹¹ Up until the convoy reached the St Georges marina, it was a 'perfectly normal trip'.⁸⁸⁹² The convoy was travelling at a speed of between 60 and 80 kilometres per hour.⁸⁸⁹³ As it approached the entrance door of the St Georges Hotel, the jamming equipment stored in the convoy vehicles set off alarms in the cars parked on the street.⁸⁸⁹⁴ The photographs below show the route travelled by the convoy:

⁸⁸⁸⁶ See chapter VI 'Explosion on 14 February 2005', (F) (2) (d) (i) (b) 'CCTV footage of a white track'.

⁸⁸⁸⁷ Gary Platt, T. 14 March 2017, pp 27-28; exhibit P1930.1 (Marked version of exhibit P1930) The President Suleiman Frangieh Tunnel is the roadway underpass between the *Fu'ad Shahab* and St Georges (Ain-El-Mreisseh) areas of Beirut. It has an entry and exit point on *Fakhr Ed Dine* Street, south of the Phoenicia and Monroe Hotels and of *Adnan El Hakim* Street, which runs east to west behind the Monroe Hotel. ⁸⁸⁹⁶ The convoy passed in front of the St Georges Hotel at around 12:55. Exhibit P5, para. 169; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 1193.

⁸⁸⁹⁷ Witness PRH357, T. 2 June 2015, pp 45-47; exhibit P116 (Photographs from annex to the UNIIC's Forensic Report Electronic data); Witness PRH149, T. 3 June 2015, pp 97-98; Witness PRH009, T. 13 October 2016, pp 17-18 (private session).

convoy could pass easily.⁸⁸⁹⁸ They concluded that the driver presented no danger to the convoy and the driver calmly drove to the right-hand side of the road and parked. Then, at approximately 12:55:05, the bomb went off.⁸⁸⁹⁹

(b) Network activity

4628. On the eve of the attack, at 19:59 on Sunday 13 February 2005, Mr Ayyash's personal mobile 170 activated a cell in the crime scene area.⁸⁹⁰⁰ According to Mr Platt, this is significant as this is the area where Mr Ayyash's attributed Red 741 and Green 300 were active the following day and where, otherwise—apart from his network activity—he was 'very rarely ... located'.⁸⁹⁰¹

4629. That same night, at 23:07, Mr Badreddine's Green 023 called Mr Ayyash's Green 300.⁸⁹⁰² Mr Platt commented that it was the penultimate Green call—the last one being shortly before the attack—and was crucial because 'the decision to ... proceed with the operation now has got to be made' and a number of Blue calls followed, in the early hours of 14 February 2005.⁸⁹⁰³

4630. Mr Platt stated that Blue call activity in the early hours of the morning occurred very rarely.⁸⁹⁰⁴ The Green call lasted only 16 seconds and, in Mr Platt's view, was either consistent with a possible decision-making process or with arranging a meeting, as there was a subsequent period of inactivity on Mr Ayyash's attributed mobiles.⁸⁹⁰⁵ The call by Green 023 occurred within three

⁸⁸⁹⁸ Witness PRH357, T. 2 June 2015, p. 45; Witness PRH009, T. 13 October 2016, pp 17-18 (private session).

minutes of two subsequent calls from Mr Wafik Safa—the head of the central unit for liaison and coordination in Hezbollah⁸⁹⁰⁶—to Mr Badreddine’s mobile 944.⁸⁹⁰⁷

4631. There was substantial call activity in the early hours of Monday 14 February 2005. All of these calls occurred in south Beirut.⁸⁹⁰⁸ At 00:15, Blue 235 on the Sfeir_A cell⁸⁹⁰⁹ called Subject 6’s Blue 610 on the SFEIR3 cell. At 00:56, Mr Ayyash’s Blue 233 on the Hadath_C cell⁸⁹¹⁰ called Blue 610 on the MIKAEL3 cell.⁸⁹¹¹ At 01:03, Blue 610 on the SFEIR2 cell called Blue 233 on the Sfeir_A cell.⁸⁹¹² At 01:05, Blue 233 then contacted Blue 610, activating the Sfeir_A cell and the HADATH3 cell.⁸⁹¹³ Mr Platt thought that this set of calls was consistent with ‘a possible meeting being arranged and then taking place’.⁸⁹¹⁴

4632. Starting at 04:55, there were several call sequences involving Mr Ayyash’s Blue 233, Subject 6’s Blue 610, Subject 7’s Blue 324 and Subject 5’s Blue 585.⁸⁹¹⁵ All of these mobiles were in south Beirut.⁸⁹¹⁶

4633. At 10:51, Mr Ayyash’s Blue 233 contacted Blue 585 on the Mraijeh_A cell, in south Beirut.⁸⁹¹⁷

⁸⁹¹⁶ Blue 610 and Blue 233 were in contact twice: at 04:55 (activating the MIKAEL2 cell and the Hazmiyeh_2_B cell) and 05:01 (activating the Sfeir_A cell and the MIKAEL2 cell). At 05:01, Blue 610 then contacted Blue 324, activating the SFEIR2 cell and the Borj_Brajneh_2_B cell. Blue 324 on the Borj_Brajneh_2_B cell then unsuccessfully tried to contact Blue 585 (cell unknown) at 05:05 and 05:07, At 05:10 and 08:34, Blue 610 on the Borj_Brajneh_2_B cell and Blue 324 were in contact twice. Exhibit P1227, p. 22; exhibit P1259, p. 364; exhibit P1225, p. 14; exhibit P1229, p. 17; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 1143; Gary Platt, T. 13 March 2017, pp 13-14, 19; exhibit P1923, slides 39-42. *See also* exhibit P1782, para. 1014; exhibit P1780, p. 31.

⁸⁹¹⁷ Blue 233 activated the Tabet El Dahra_C, Exhibit P1259, p. 364; exhibit P1229, p. 17; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 1151; exhibit P1923, slides 52-53; Gary Platt, T. 13 March 2017, pp 33-34. *See also* exhibit P1782, para. 1019; exhibit P1782, para. 1019.

4634. Following Mr Hariri's arrival at Parliament, at 11:00, Subject 8's Red 893 contacted Subject 6's Red 678, activating the CARACA3 cell and the CARLTO3 cell, respectively, both in the area of Quraitem Palace.⁸⁹¹⁸ At 11:01, Red 893 called Subject 9's Red 652, activating the CARACA3 cell and the MOVPIK1 cell, both in the area of Quraitem Palace.⁸⁹¹⁹ Mr Platt testified that these calls were consistent with coordination of their activities around Quraitem Palace after Mr Hariri departed and that they were located around Quraitem Palace for an operational reason.⁸⁹²⁰

4635. At 11:06 and 11:08, Blue 501 made two service provider calls from south Beirut.⁸⁹²¹ At 11:09 and 11:18, Blue 501 and Blue 585—which the Prosecution attributes to Subject 5—both in south Beirut, tried to contact Blue 324—that the Prosecution attributes to Subject 7. The calls were not connected.⁸⁹²² Mr Platt testified that the series of attempts to contact Blue 324 was 'to coordinate their movements together towards the crime scene'.⁸⁹²³

4636. Between 11:21 and 11:31, there was a series of Blue mobile calls in south Beirut. At 11:21, Blue 940 called Blue 324, activating the SFEIR2 cell and the Sfeir_A cell.⁸⁹²⁴ At 11:31, Blue 585 on the Sfeir_A cell attempted to call Blue 324, but did not connect.⁸⁹²⁵ At 11:31, Blue 585 called Blue 324 again. Both of them were using the Sfeir_A cell.⁸⁹²⁶

4637. At 11:33, Mr Ayyash's Red 741 on the ETOILE1 cell in the area of Parliament, contacted Subject 6's Red 678 on the CARLTO3 cell.⁸⁹²⁷ At 11:34 and 11:35, Red 678 in turn contacted

⁸⁹²⁴ Exhibit P1234, p. 6; exhibit P1225, p. 15; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 1160; exhibit P1923, slide 61-62; Gary Platt, T. 13 March 2017, p. 46. Sfeir_A and SFEIR2 are north-east of the airport, in south Beirut.

⁸⁹²⁵ Exhibit P1229, p. 17; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 1160; exhibit P1923, slide 65. *See also* exhibit P1782, para. 1024.

⁸⁹²⁶ Exhibit P1229, p. 17; exhibit P1225, p. 15; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 1160; exhibit P1923, slides 65-66. *See also* exhibit P1782, para. 1024.

⁸⁹²⁷ Exhibit P1259, p. 364. CARLTO3 was just south of Quraitem Palace. Exhibit P1122; exhibit P1923, slide 67.

Subject 8's Red 893 and Subject 9's Red 652, activating the CONCOR2 cell⁸⁹²⁸ and the MOVPIK1 cell. Red 652, 678 and Red 893 were in the area of Quraitem Palace.⁸⁹²⁹ Mr Platt testified that, in his opinion, the call of Mr Ayyash's Red 741 to Subject 6's Red 678 was placed to coordinate the three others' move from their positions around Quraitem Palace to Parliament and the crime scene area.⁸⁹³⁰

4638. At 11:35, Mr Ayyash's Blue 233 contacted Blue 585, which was in the south Beirut area (on the Mar_Michael_C cell). Blue 233 was in the area of Parliament (on the Riad_El_Soloh_B cell).⁸⁹³¹ Immediately after this call, Blue 585—that the Prosecution attributes to Subject 5—tried to contact Blue 324—that the Prosecution attributes to Subject 7—at 11:35:43 and 11:35:51. The second call appeared to have connected. Both subjects were in the same area in south Beirut (on the Mar_Michael_C cell).⁸⁹³² Mr Platt testified that the call pattern and movement of the three users were consistent with those seen on Tuesday 8 February 2005 and that this sequence of calls was 'consistent with coordination, command and control'.⁸⁹³³

4639. At 11:47, Mr Ayyash's Blue 233 on the CoastRoad_C cell made a final call to Blue 585 on the Ras_Nabeh_A cell (central Beirut).⁸⁹³⁴ At 11:48, using the Ras_Nabeh_A cell, Blue 585 called Blue 324, but the call did not connect.⁸⁹³⁵ These were the last Blue calls until after the explosion; from this time onwards, all the principal subjects were using their Red and—in the case of Mr Ayyash—also his Green mobile, and the mobile activity was similar to that of 8 February

⁸⁹²⁸ CONCOR2 was just south-east of Quraitem Palace and adjacent to CARLTO3. Exhibit P1122; exhibit P1923, slide 69.

⁸⁹²⁹ Exhibit P1259, p. 364; exhibit P1204, p. 6; exhibit P1198, p. 6; exhibit P1199, p. 6; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 1161; Gary Platt, T. 13 March 2017, pp 44, 50. *See also* exhibit P1923, slides 65, 67, 69.

⁸⁹³⁰ Gary Platt, T. 13 March 2017, pp 50-51.

⁸⁹³¹ Exhibit P1229, p. 18; exhibit P1259, p. 364; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 1162. *See also* exhibit P1923 (Gary Platt - Chronology PowerPoint), slides 70-71.

⁸⁹³² Exhibit P1229, p. 18; exhibit P1225, p. 15; Gary Platt, T. 13 March 2017, pp 59-60; T. 14 March 2017, p. 16; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 1162. *See also* exhibit P1923, slides 70-71; exhibit P1928. According to Mr Platt's report, Blue 585 'contacted' Blue 324 at both times. However, Blue 324's call sequence table (exhibit P1225) shows that Blue 324 received a call from Blue 585 at 11:36:05 using the Mar_Michael_C cell. The Trial Chamber therefore concludes that only the second call connected to the cell.

⁸⁹³³ Gary Platt, T. 13 March 2017, pp 59-61; exhibit P1923, slides 70-71.

⁸⁹³⁴ Exhibit P1259, p. 364; exhibit P1229, p. 18; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 1162; Gary Platt, T. 13 March 2017, pp 61-62, 73-74. *See also* exhibit P1923, slides 72-73, 76-77; exhibit P1926 (EPE snapshot related to exhibit P1923), slide 73.

⁸⁹³⁵ Exhibit P1229, p. 18; exhibit P1225, p. 15; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 1162; Gary Platt, T. 13 March 2017, pp 74, 78. *See also* exhibit P1923, slides 76-77.

2005 and consistent with coordinating the operation.⁸⁹³⁶ After 11:47, Mr Ayyash's attributed mobiles moved immediately towards the crime scene area.⁸⁹³⁷

4640. Between 11:48 and 11:53, Mr Ayyash's Red 741 was in contact with Subject 8's Red 893, Subject 9's Red 652 and Subject 6's Red 678.⁸⁹³⁸ Subject 5's Red 636 was in contact with Subject 7's Red 946.⁸⁹³⁹ The usage of the PHENMB1 and ZOUKAK1⁸⁹⁴⁰ cells by both Mr Ayyash's Red 741 and Red 893 shows that they 'remained in the area between the crime scene and Parliament'.⁸⁹⁴¹ According to Mr Platt, the ZOUKAK1 cell was used on 8 February 2005 by those who had moved up in convoy and by Mr Ayyash's attributed mobile; there was the same pattern on 14 February 2005.⁸⁹⁴²

4641. The PHENMB1 portable relay cell mast was close to the exit road from the President Suleiman Frangieh tunnel and to the crime scene.⁸⁹⁴³ Subject 9's Red 652 and Subject 6's Red 678 were in the Parliament area, using the ETOILE3 and ETOILE2 cells.⁸⁹⁴⁴ Red 678's call to Mr Ayyash's Red 741 at 11:53 would be, in Mr Platt's opinion, consistent with Red 678 updating Red 741 'on the activities around Parliament'.⁸⁹⁴⁵ Subject 5's Red 636 and Subject 7's Red 946 were both in the Parliament area, on the SODECO3 and the RASNAB1 cells, respectively.⁸⁹⁴⁶

⁸⁹³⁶ Gary Platt, T. 13 March 2017, pp 74-76. *See also* Gary Platt, T. 14 March 2017, pp 16-17; exhibit P1923, slide 77; exhibit P1927.

⁸⁹³⁷ Gary Platt, T. 13 March 2017, p. 74.

⁸⁹³⁸ Exhibit P1259, p. 364; exhibit P1199, p. 6; exhibit P1204, p. 6; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 1164. *See also* exhibit P1923, slides 78-79.

⁸⁹⁴⁰ ZOUKAK1 covered the area between Parliament and the crime scene location, and was adjacent to ETOILE3. Exhibit P1123; exhibit P1930.

⁸⁹⁴¹ Exhibit P1259, p. 364; exhibit P1198, p. 6; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 1164. *See also* exhibit P1923, slide 78. For the 11:48 call, both Red 741—making the call—and Red 893—receiving it—activated PHENMB1 as the start cell and ZOUKAK1 as the end cell. Mr Ayyash's Red 741 activated ZOUKAK1 again at 11:49, when calling Red 652, and activated PHENMB1 again at 11:53, when in contact with Red 678. As to Subject 8's Red 893, its call at 11:48 was the only one 'away from the ETOILE cell site during the use of the Red Network over this period' (Gary Platt, T. 13 March 2017, pp 82-83).

⁸⁹⁴² Gary Platt, T. 13 March 2017, pp 83-84.

⁸⁹⁴³ Gary Platt, T. 13 March 2017, pp 63, 68, T. 14 March 2017, p. 23; exhibit P1923, slides 73, 75, 100. *See also* Gary Platt, T. 13 March 2017, pp 71-73—where Prosecution counsel responds to judicial questions as to the ZOUKAK1 and PHENMB1 cells.

⁸⁹⁴⁵ Gary Platt, T. 13 March 2017, p. 92; exhibit P1923, slide 83.

⁸⁹⁴⁶ Exhibit P1202, p. 4; exhibit P1203, p. 3; Gary Platt, T. 13 March 2017, p. 90. *See also* Gary Platt, T. 14 March 2017, p. 17; exhibit P1923, slide 80; exhibit P1927; exhibit P1928.

4642. Mr Platt testified that their movements were consistent with the movements of the Mitsubishi Canter through the tunnel to the crime scene area.⁸⁹⁴⁷ Mr Platt however conceded that the relevant call sequence tables did not show whether or not the users were ‘ahead, behind, or close to the Mitsubishi Canter’, keeping it in sight.⁸⁹⁴⁸ He also stated that, given the circumstances and the requirements of the operation, it was highly likely that those who were involved, especially the six principal subjects, would have been aware at this time that the attack was due to take place and that the Canter would be used in the attack.⁸⁹⁴⁹

4643. Mr Hariri left Parliament around 11:54. Immediately after Subject 6’s Red 678 contacted Mr Ayyash’s Red 741 at 11:53—Red 678 called Subject 9’s Red 652, at 11:54:31, both being in the Parliament area.⁸⁹⁵⁰ At 11:55, Red 652 was still in the Parliament area and called Red 893, which was in the same area.⁸⁹⁵¹ At 11:56, Red 678 called Red 652, both still in the Parliament area.⁸⁹⁵² Mr Platt concluded that the four Red mobile calls placed within a period of three minutes were possibly initiated by Mr Hariri’s movement from Parliament to the café.⁸⁹⁵³

4644. At 11:57, Subject 5’s Red 636 called Mr Ayyash’s Red 741, located in the area of the crime scene on the PHENMB1 cell. Subject 5’s Red 636 was south of the crime scene in the area of the Suleiman Frangieh tunnel, using the ZOUKAK2 cell at the start of the call and the PHENMB1 cell at the end of the call.⁸⁹⁵⁴ According to Mr Platt, based on the activated cells, Red 636’s movements would be consistent with the mobile travelling from the south northwards through the tunnel, in tandem with the Mitsubishi Canter van’s direction of travel.⁸⁹⁵⁵ Mr Platt also added that the mobile activity was again consistent with Subject 5’s Red 636 updating Mr Ayyash’s Red 741 upon his

⁸⁹⁴⁷ Gary Platt, T. 13 March 2017, pp 77-80. Mr Platt added that their movements were consistent with the users being in ‘any form of motorized transportation’. Gary Platt, T. 14 March 2017, p. 9.

⁸⁹⁵⁴ Exhibit P1259, p. 364; exhibit P1203, p. 3; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 1170; Gary Platt, T. 13 March 2017, p. 93, 14 March 2017, p. 6. *See also* exhibit P1923, slides 88, 96.

⁸⁹⁵⁵ Gary Platt, T. 13 March 2017, pp 93-94, T. 14 March 2017, pp 7, 17. *See also* exhibit P1923, slides 89-90; exhibit P1927.

arrival at the crime scene area.⁸⁹⁵⁶ Immediately after, Mr Ayyash's Green 300 and Mr Badreddine's Green 023 were used for the last time⁸⁹⁵⁷ when Green 300 called Green 023 at 11:58 for 14 seconds, connecting to the PHENMB1 and MRAICI1 cells.⁸⁹⁵⁸

4645. Although no shape file for the PHENMB1 cell was received into evidence, the electronic presentation of evidence software shows that the mast of this portable relay cell was within about 100 metres of the crime scene.⁸⁹⁵⁹ The shortest distance between the predicted best server coverage area of MRAICI1 and the crime scene was less than 30 metres. This is shown on the map below.

Map created by the Trial Chamber from electronic presentation of evidence, exhibit P592.1

⁸⁹⁵⁶ Gary Platt, T. 14 March 2017, p. 7.

⁸⁹⁵⁷ Exhibit P1259, p. 364; exhibit P1305, p. 5770; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 1173; Gary Platt, T. 13 March 2017, pp 62, 93, T. 14 March 2017, p. 20. *See also* exhibit P1923, slides 72-73, 88, 97-98; exhibit P1926.

⁸⁹⁵⁸ Green 300 was on the MRAICI1 cell at the start of the call and on the PHENMB1 cell at the end of the call and Green 023 was on the ROUEIS3 cell at the start and the end of this call. Exhibit P1259, p. 364; exhibit P1305, p. 5770.

⁸⁹⁵⁹ This cell had a 150-metre radius coverage. Exhibit P777 (Annex 5 to Witness PRH707's statement), p. 5; exhibit 2D71 (Information regarding Alfa's relay station PHENMB1); exhibit P1112 (Expert report of John Edward Philips – Single user analysis, Suspects 4, 5, 6, 7, and 8), paras 4.2.5.11, 4.2.5.13.

4646. Around the time that Mr Hariri entered the Café *Place de l'Étoile*, there was a series of 11 Red network calls that lasted until 12:16. At 12:00 and 12:05, Subject 9's Red 652 called Subject 8's Red 893. Both were connecting to the ETOILE1 cell in the Parliament area.⁸⁹⁶⁰ Mr Platt stated that from this moment until Mr Hariri departed the area, Red 893 only used the ETOILE1 cell.⁸⁹⁶¹

4647. At 12:01, Subject 5's Red 636 called Subject 6's Red 678. Red 636 was on the PHENMB1 cell and Red 678 on the BACHOU2 cell.⁸⁹⁶² Red 636 then called Subject 9's Red 652 at 12:02 on the ZOUKAK4 cell, which provided predicted coverage to the crime scene and to that area.⁸⁹⁶³

4648. At 12:04 and 12:05, Mr Ayyash's Red 741 called Subject 7's Red 946. Both were on the ZOUKAK1 cell,⁸⁹⁶⁴ which offered coverage between the crime scene and Parliament.⁸⁹⁶⁵ At 12:09, Red 741, who was active on the ZOUKAK1 cell, was in contact with Subject 8's Red 893 located in the area of Parliament on the ETOILE1 cell.⁸⁹⁶⁶

4649. At 12:09, Subject 9's Red 652, also in the area of Parliament (on the ETOILE1 cell), called Mr Ayyash's Red 741. The latter was on the PHENBM1 cell at the time.⁸⁹⁶⁷ Mr Platt thought that these calls were consistent with Red 741 having a prominent role in the operation at this moment; and given the coverage offered by the cells, Red 893 and Red 652 could see Mr Hariri's movements, updating Red 741.⁸⁹⁶⁸ At 12:12, Subject 9's Red 652 on the BACHOU3 cell was in contact with Subject 5's Red 636 who was in the area of Parliament on the ETOILE2 cell.⁸⁹⁶⁹ At 12:13, Subject 8's Red 893 was contacted by Subject 6's Red 678, who was still in the area of

Parliament on the BACHOU1 cell.⁸⁹⁷⁰ At 12:16, Mr Ayyash's Red 741 on the ZOUKAK1 cell was in contact with Subject 8's Red 893. The latter was in the area of Parliament on the ETOILE1 cell.⁸⁹⁷¹ This was the last call Red 741 made for about 30 minutes.⁸⁹⁷²

4650. After 12:16, there was no further call activity among the subjects for nearly ten minutes.⁸⁹⁷³ In Mr Platt's opinion, there was nothing to trigger any movement or activity as Mr Hariri was still at the café.⁸⁹⁷⁴ At 12:26, Subject 9's Red 652 called Subject 6's Red 678, while both were in the Parliament area.⁸⁹⁷⁵ Communications among the Red network users then ceased for 17 minutes.⁸⁹⁷⁶

4651. At 12:43, Mr Ayyash's Red 741 was still between Parliament and the crime scene, activating the ZOUKAK1 cell. He called Subject 8's Red 893. The latter was still in the Parliament area on the ETOILE1 cell.⁸⁹⁷⁷

4652. Between 12:49:33 and 12:53:42, Red 741, Red 636, Red 678, Red 946, Red 893 and Red 652 were involved in the final seven calls of the Red network.⁸⁹⁷⁸ The two calls from Subject 8's Red 893 at 12:50:34 and 12:50:55 on the ETOILE1 cell were directed to Subject 7's Red 946 and Mr Ayyash's Red 741, respectively, both in the crime scene area.⁸⁹⁷⁹ These were Red 946's and Red 741's last calls.⁸⁹⁸⁰ Mr Platt plotted some of this information on a map.

⁸⁹⁸⁰ Gary Platt, T. 14 March 2017, pp 13, 40; exhibit P1197, p. 5; exhibit P1202, p. 4.

Map 151: Red 893 [S8] calls Red 946 [S7], Parliament and HARIRI Crime Scene, 14 February 2005 (12:50:34)

Exhibit P1783 (expert report of Gary Platt – Chronology), p. 397

4653. Mr Platt thought that the call at 12:50:34 was consistent with Subject 8's Red 893, who could have seen Mr Hariri departing, informing Subject 7's Red 946 of Mr Hariri's movement and alerting the latter that the Mitsubishi Canter had to move towards the crime scene.⁸⁹⁸¹

4654. At 12:51:32, Subject 8's Red 893 on the ETOILE1 cell contacted Subject 9's Red 652, which then contacted Subject 5's Red 636 at 12:52:02. Red 652 and Red 636 were both in the area of Parliament (both on the BACHOU3 cell).⁸⁹⁸² This was Red 636's last call.⁸⁹⁸³ Between 12:52:36

⁸⁹⁸¹ Gary Platt, T. 14 March 2017, pp 18, 48, 56-58, T. 5 April 2017, p. 43.

⁸⁹⁸² Exhibit P1198, p. 6; exhibit P1199, p. 6; exhibit P1203, p. 4; exhibit P1783 (Expert report of Gary Platt – Chronology), para. 1187; Gary Platt, T. 14 March 2017, pp 48-49, 58-59.

⁸⁹⁸³ Exhibit P1783 (Expert report of Gary Platt – Chronology), para. 1188.

and 12:53:17, a white van was seen passing through the CCTV footage of the HSBC bank.⁸⁹⁸⁴ It was driving at a very slow speed.⁸⁹⁸⁵

4655. At 12:52:09, Subject 8's Red 893 on the ETOILE1 cell contacted Subject 6's Red 678 who was on the BNPI3 cell.⁸⁹⁸⁶ The final Red network call occurred at 12:53:42, when Subject 9's Red 652 contacted Subject 6's Red 678. Both of these mobiles were in the area of Parliament.⁸⁹⁸⁷

D. Submissions

1. Prosecution

4656. The Prosecution submits that the networks were involved in 58 days of surveillance of Mr Hariri, including 19 days of mobile surveillance, between Wednesday 20 October 2004 and Monday 14 February 2005.⁸⁹⁸⁸ From 20 October to Sunday 19 December 2004, low-level preliminary surveillance took place.⁸⁹⁸⁹

4657. Daily, frequent surveillance began on Tuesday 21 December 2004 and lasted until Saturday 8 January 2005. It came to a halt on Saturday 1 January 2005, when Mr Hariri left Lebanon, and resumed upon his return on Friday 7 January 2005.⁸⁹⁹⁰ Surveillance during this period enabled the observation of Mr Hariri's regular routes to assess suitable locations for the assassination as well as observation of Mr Hariri's security team to learn their movements and behaviours.⁸⁹⁹¹ Surveillance was reduced to 'negligible levels' between Sunday 9 and Wednesday 26 January, but

⁸⁹⁹¹ Prosecution final trial brief, para. 712.

became regular and frequent again from 27 January until 13 February.⁸⁹⁹² Surveillance centred on areas of interest for Mr Hariri, such as Quraitem Palace, Parliament and the airport.⁸⁹⁹³

4658. Further, relevant network activity on days when Mr Hariri was abroad was virtually non-existent.⁸⁹⁹⁴ The Prosecution submits that the regular use of Red mobiles to coordinate the suicide bomber's movements to that of Mr Hariri 'marked a decision to begin the final weeks of surveillance that would leave an obvious forensic trail to the Attack'.⁸⁹⁹⁵

4659. Beyond surveillance, the Prosecution outlines additional attack preparations by the networks. For example, the handsets and SIM cards that would later be used in Red mobiles were purchased from cell shops in Tripoli in late December/early January by a network user.⁸⁹⁹⁶ The Prosecution further submits that the attack was rehearsed on Tuesday 8 February 2005 because Mr Hariri attended a parliamentary session on that day, as on Monday 14 February 2005, and because Blue and Red mobile activity patterns on Monday 14 February replicated network activity patterns on 8 February.⁸⁹⁹⁷

4660. Red network activity began in the morning of Monday 14 February 2005 with cell activations around Quraitem Palace.⁸⁹⁹⁸ The Prosecution submits that the Red network was involved in surveillance around Parliament, when Mr Hariri was there, and café *Place de l'Étoile*, which he was expected to visit after the parliamentary session.⁸⁹⁹⁹ Approximately three minutes after he exited Parliament, the Canter was recorded on CCTV traveling through the President Suleiman Frangieh Tunnel.⁹⁰⁰⁰ The Prosecution argues that the Canter's location coincides with Red mobile activity in that area.⁹⁰⁰¹ The Prosecution further submits that calls on the Red and

⁹⁰⁰¹ Prosecution final trial brief, para. 988; Prosecution closing submissions, T. 13 September 2018, p. 96.

Green networks at that time are indicative of an update being given to Mr Badreddine of the van's arrival at the eventual crime scene.⁹⁰⁰²

4661. The Red network continued to be active around the café, near the tunnel where the Canter was waiting and in the crime scene area.⁹⁰⁰³ Once Mr Hariri and his security convoy left *Place de l'Étoile*, a call was placed between a Red mobile at *Place de l'Étoile* and a Red mobile accompanying the van, to ensure that the Canter left immediately.⁹⁰⁰⁴ A flurry of Red network calls were made, which the Prosecution submits 'telegraphed Hariri's direction of travel'.⁹⁰⁰⁵ CCTV captured the Canter moving slowly in the direction of the crime scene between 12:51 and 12:53, and Mr Hariri's convoy passing at 12:54.⁹⁰⁰⁶ The Canter exploded at 12:55, 'within three minutes from the last Red call'.⁹⁰⁰⁷

2. Defence

4662. The Ayyash Defence submits that Mr Platt's chronology report, exhibit P1783, should not be given any weight regarding the alleged surveillance of Mr Hariri by network mobiles.⁹⁰⁰⁸ The combination of call sequence tables made from unreliable data from Alfa and Touch with speculation around the purpose of content-less calls renders the report of minimal assistance.⁹⁰⁰⁹ Mr Platt looked at 'which cells may offer coverage 500 or 1,000 metres away, without explaining how surveillance can be accomplished at a distance of 1,000 metres'.⁹⁰¹⁰

4663. The Merhi Defence submits that Mr Philips was clear that the Green mobile the Prosecutor attributed to Mr Merhi was excluded and isolated from the alleged surveillance of Mr Hariri during the set-up phase—from Tuesday 18 to Wednesday 26 January 2005—and the execution phase—Thursday 27 January to Monday 14 February 2005.⁹⁰¹¹

⁹⁰¹¹ Merhi Defence final trial brief, para. 374; Merhi Defence closing submissions, T. 18 September 2018, p. 69.

4664. Further, the Prosecution failed to connect a mobile attributed to Mr Merhi and any locations of interest, such as those where the surveillance of Mr Hariri took place or the crime scene.⁹⁰¹²

E. Findings

4665. The Trial Chamber has carefully reviewed the vast amount of evidence it received in relation to the network activities from September 2004 through to Monday 14 February 2005. The first issue is the roles each of the networks may have had in observing Mr Hariri. The second is whether these roles formed part of a common operation. To determine these the Trial Chamber must examine in full detail the surveillance alleged.

1. The networks

4666. The Trial Chamber received extensive evidence of four colour-coded mobile networks, Red, Blue, Yellow and Green, that communicated almost exclusively in the networks.

4667. There is no direct evidence that the users of the network mobiles were engaged in surveillance of Mr Hariri. The evidence is circumstantial, consisting only of call data and cell site records showing the cell activations—that reveal the calling and cell siting patterns of the network mobiles—and matching these with Mr Hariri’s provable known movements. When the two correspond, patterns emerge from which it can be concluded the locations of network mobiles and Mr Hariri coincided in a manner meaning either that they were following or observing him or his security detail.

4668. The Red, Blue and Green networks operated completely covertly. Yellow network mobiles swapped handsets between the SIM cards, including between three Blue network mobiles and on Mr Ayyash’s personal mobiles 165 and 170. The Blue mobiles operated as a covert network and a core of six operated covertly from some time in December 2004 until Monday 14 February 2005. They communicated almost exclusively with each other.

4669. The six Red network mobiles were indisputably involved in Mr Hariri’s assassination on Monday 14 February 2005. They were present activating cells that corresponded with Mr Hariri’s movements from Quraitem Palace to the Parliament, the crime scene area and the area between it

⁹⁰¹² Merhi Defence final trial brief, para. 382; Merhi Defence closing submissions, T. 18 September 2018, pp 68-69.

and the Parliament. Significantly, between 12:50:34 and 12:53:42, Mr Ayyash's Red 741, Red 636, Red 678, Red 946, Red 893 and Red 652 were involved in the final seven calls of the Red network. The explosion that killed Mr Hariri and others occurred at 12:55:05. After the explosion, the Red network was never used again. During the last two hours before the attack, 33 calls were made between the six Red mobiles.

4670. While clear direct evidence that they were in contact with the Mitsubishi Canter or the suicide bomber is lacking, they were active in the area of Quraitem Palace in the morning and then moved to the Parliament and crime scene area. Their high forensic visibility—meaning that they were easily discoverable in an investigatory cell dump looking for mobiles near to the crime scene, Parliament and Quraitem Palace on the day of the attack—and especially with their closure just before the assassination, made their discovery inevitable. And this indeed occurred. This leaves no room for doubt that the Red mobiles had a significant role in the attack. It is the only reasonable inference available from the totality of the evidence.

4671. The days of use of the Green, Blue and Red networks largely overlapped, and between Friday 14 January and Monday 14 February 2005, the Red mobiles were active on 11 days, the Green mobiles on 21 days and the Blue mobiles on all 31 days. It is clear from the patterns of cell activations and the sequences of some calls between network users that the four networks were interconnected and coordinated with each other.

4672. The role of the Red network mobiles in the assassination is obvious. To ascertain the role of the other networks, and whether they were engaged in surveillance of Mr Hariri, the Trial Chamber has had to work backwards from Monday 14 February. To do this, it had to examine the Red network's cell activations and calls on the other days in January and February 2005 and any correlation with that of the other networks and Mr Hariri's known movements.

4673. The Prosecution alleged both static and mobile surveillance of Mr Hariri. The limitations of the Prosecution's telecommunications evidence are evident in analysing the static surveillance alleged, and specifically in matching cell activations with the other evidence of Mr Hariri's movements. For example, the presence of Blue mobiles in the general area of Quraitem Palace—even the repeated presence—may be difficult to connect to a deliberate surveillance operation, either static or mobile.

4674. The cell mast activations of the mobiles used by Mr Hariri's security detail prove his movements; his detail was always with him. Other evidence such as photographs and media reporting also corroborates Mr Hariri's visits to various locations. Additionally, the Trial Chamber received ample evidence from his staff, and palace documents such as its visitor's logbook, and of media releases, of his presence at Quraitem Palace and his absences from Beirut and Lebanon, to prove where Mr Hariri was at all relevant times. This evidence effectively proves Mr Hariri's movements between Wednesday 20 October 2004 and Monday 14 February 2005.

4675. The Trial Chamber has also found that the cell site evidence of mobiles connecting to cells is probative of the *general* area where the mobile was at the time. In this regard, the Trial Chamber emphasises that relying only on the telecommunications evidence—and without any more specific evidence about a mobile's location, such as GPS—can only lead to the conclusion that a mobile connected to a cell which places it in a predicted best server coverage area.

4676. The Trial Chamber has accordingly factored in the limitations of cell site evidence in determining where a mobile actually was when connecting to a cell. This includes that cell coverage can overlap, meaning that a mobile could be physically located in the coverage area of a cell neighbouring that to which it is connecting. As an example, and as a further complication in relation to the surveillance evidence, some relevant locations in Beirut are fairly close, such as Quraitem Palace and Mr Marwan Hamade's residence, and the crime scene and the Parliament. This means that a mobile that is ostensibly connecting to a cell providing predicted best server coverage to one of these locations, was actually in a neighbouring cell when it made the call. The networks maps show areas of scattered coverage outside the main cell coverage areas that further complicate this analysis.

4677. Generally, however, the cell site evidence is sufficiently probative for the Trial Chamber to discern patterns of cell connections from which it can conclude that surveillance was occurring. The patterns are all important here, for it is the patterns of cell activations, calls and mobile movements in combination with Mr Hariri's own movements that can determine whether these are beyond coincidence.

4678. The Trial Chamber has analysed both the static and mobile surveillance alleged. It has examined the evidence of each alleged incidence and in the light of the evidence of the networks and their connections.

2. The surveillance alleged

4679. The Prosecutor, in the amended consolidated indictment, pleaded that ‘observations’ of Mr Hariri occurred on ten days between Wednesday 20 October and Wednesday 10 November 2004.⁹⁰¹³

4680. Further, he alleged that surveillance occurred on at least 15 days between Thursday 11 November 2004 and Monday 14 February 2005—in particular on 11 November 2004, 1, 7, 14, 20, 28 and 31 January 2005, and on 3, 4, 7, 8, 9, 10, 11 and 12 February 2005.⁹⁰¹⁴

4681. According to the Prosecution’s final trial brief—which largely relies on Mr Platt’s evidence—between ‘the commencement of preliminary surveillance on 20 October 2004 and the Attack on 14 February 2005, there were a total of 58 days of surveillance, including 19 days of mobile surveillance’.⁹⁰¹⁵

4682. The limitations of the Prosecution’s telecommunications evidence, as noted above, are evident in analysing the static surveillance alleged. For example, the presence of network mobiles in the general ‘area’ or ‘vicinity’ of Quraitem Palace, in the sense of connecting to cells providing coverage up to 500 metres or a kilometre away—even their repeated presence—may be difficult to connect to *deliberate* static surveillance operations. The Trial Chamber has also factored in that a mobile that activated one of these cells providing coverage near the palace may not have been connecting to the cell providing the predicted best server coverage to where it was, but rather to a neighbouring cell that provided coverage near the palace. This would have placed it further away from the general ‘area’ or ‘vicinity’ of Quraitem Palace, or perhaps closer to it.

⁹⁰¹³ Amended consolidated indictment, para. 21.

⁹⁰¹⁴ Amended consolidated indictment, para. 22.

⁹⁰¹⁵ Prosecution final trial brief, para. 958.

3. Surveillance in general

4683. Surveillance comes in different forms. It is a much broader concept than merely keeping constant visual contact with a target. To ensure covertness, visual contact may be limited. Surveillance may be mobile, or static or electronic, or a combination.

4684. Mobile surveillance does not always require those conducting surveillance to closely follow the target. It may involve teams who switch roles. It could include different vehicles, cars, motorbikes and vans following a target, simultaneously or at different times. Static surveillance could likewise involve stationing different people in strategic positions that allow observation at different places and from different vantage points. Surveillance may also include reconnaissance of the target, their patterns of conduct and habits, including areas they frequent. It may be directed at finding out how the target's security system or detail works.

4685. Surveillance also has different objectives, depending upon who is doing it. Although the surveillance objectives of law enforcement and intelligence agencies differ from those involved in criminal enterprises, they might employ similar methodologies. Typical aims of law enforcement or intelligence surveillance are to track someone to ensure that the individual does not leave an area, such as a country; to observe (potential) criminal conduct; to determine if someone is a wanted person accused of criminality (for example, in an international context, a war crimes suspect). Law enforcement might also employ deterrent surveillance, to warn someone that they are under observation. Criminals, on the other hand, might conduct surveillance to familiarise themselves with someone's movements in order to target them for a crime, such as a robbery or a murder.

4686. The surveillance alleged here is of the latter kind and its purpose was to observe and follow the target to gather as much information as possible about his movements and behaviour, in order to commit a crime. To assassinate someone as heavily protected as Mr Hariri was, a great deal of information would have been needed about his habits and, crucially, the habits of those who protected him; his security detail and convoy included his private security team and the ISF personnel assigned to protect him as a former prime minister.

4687. Lebanon is not a large country and Mr Hariri was a very prominent public figure. It was a matter of common knowledge that he travelled around Lebanon in a convoy equipped with

jamming devices. It was also well known that he had residences in Beirut, Faqra and Al-Naameh. Many people would have seen his convoy travel at speed between these residences and other places. In this sense, he could have been seen as an easy target on which to mount surveillance. Nonetheless, to ensure the execution of a successful operation to murder him, it was necessary to obtain as much technical information as possible on his movements and habits and those of his security detail. A failed attempt could have been the last one.

4688. The Trial Chamber received cogent evidence that Lebanese state agencies including the ISF had Mr Hariri under surveillance. Why the ISF considered it necessary to keep the former prime minister under surveillance was unexplained. Members of his security detail also described motorbikes following his convoy and unknown people with binoculars on rooftops watching him. Mr Hariri also thought that his telephone lines at Quraitem Palace were monitored. He sometimes sought to convey messages to those he thought were monitoring his communications.

4. Mobile surveillance

4689. The Trial Chamber has identified the following fourteen specific instances of network activity that coincided with Mr Hariri's proven movements. These are:

- **Thursday 11 November 2004: trip to the airport from Quraitem Palace**

4690. On Thursday 11 November 2004, Mr Hariri was at Quraitem Palace before he flew to Saudi Arabia. Two Blue network mobiles—Blue 585 and Blue 324—after being in contact nine times in the area of Quraitem Palace while Mr Hariri was there—travelled to Beirut International Airport area at approximately the same time as Mr Hariri's security detail moved there.

- **Tuesday 21 December 2004: evening meeting with Mr Hassan Nasrallah, in Haret Hreik, Dahyieh**

4691. On Tuesday 21 December 2004, Mr Hariri was at Quraitem Palace receiving visitors. In the afternoon, two Blue network mobile users were in the area. In the evening while Mr Hariri was there, Blue and Yellow network mobiles connected to cells near Quraitem Palace. Mr Hariri then travelled to the area of the Hezbollah's General Secretariat, in Haret Hreik, Dahyieh, for an evening meeting with Mr Nasrallah between from 21:40, arriving back at the palace by 00:25.

4692. Blue, Yellow and Green mobiles, including Mr Ayyash's Yellow 294 and Green 300 connected to cells providing coverage to the Hezbollah headquarters. They remained in or were in the area after the meeting. Coinciding with Mr Hariri's trip home, they then activated cells in the area of Quraitem Palace, within the period of Mr Hariri's security convoy travel back.

- **Monday 27, Thursday 30, Friday 31 December 2004 and Saturday 1 January 2005: trips to or from Mr Hariri's Faqra Villa**

4693. After spending the early morning of Monday 27 December 2004 at his Faqra Villa Mr Hariri returned to Quraitem Palace. In the morning, multiple Blue and Yellow network calls connected to cells near Faqra Villa or in the Faraya area, and later to cells providing coverage along the route from Faqra Villa to Quraitem Palace, in Beirut. This coincided with the time of travel of Mr Hariri's convoy from Faqra villa to Quraitem Palace.

4694. Mr Hariri travelled to his Faqra Villa on Wednesday 29 December and returned to Quraitem Palace the following day. On Thursday 30 December 2004, in the afternoon, multiple Blue network calls connected to cells near Faqra Villa or in the Faraya area and to cells providing coverage along the route from Faqra Villa to Quraitem Palace. This was at the same time as Mr Hariri's convoy travelled between the two. In particular, at the same or the approximate same time, Blue mobiles activated the same cells or cells in the same areas activated by the security detail along that route.

4695. On Friday 31 December 2004, in the afternoon, Mr Hariri's convoy travelled from Beirut to Faqra Villa. At the same time Blue mobiles and one Yellow mobile activated cells on the route between Beirut and the Faraya area. The movement of certain Blue mobiles, initially located either in the area of Quraitem Palace, along the coastal road or at the Zouk-Mosbeh area, was consistent with that of the security detail. These mobiles reached the Faraya area—as they activated cells there—at around the same time as Mr Hariri's security detail. Mr Hariri stayed there overnight.

4696. On Saturday 1 January 2005, in the morning Mr Hariri travelled back to Beirut. While he did, Blue network calls connected to cells in the Faraya area and to cells providing coverage along the route from Faqra Villa to Quraitem Palace. This was where users of network mobiles, in Mr Platt's opinion, were located in anticipation of Mr Hariri's journey back to Beirut. Along the route between Faqra Villa and Mosbeh, one Blue mobile activated similar cells to the security detail.

- **29 January 2005: trip to Mr Marwan Hamade's residence**

4697. On Saturday 29 January 2005, three Blue network mobiles were active in the Quraitem Palace area when Mr Hariri was there, before he left to visit Mr Hamade's residence. These were Blue 585, Blue 324 and Blue 817.

4698. A few minutes before the visit—and then again after—his security detail activated cells close to Mr Hamade's residence, one of these network mobiles, Blue 324, activated cells near Mr Hamade's residence. This included the cell activated by the security detail itself, namely, Riviera_A. After a short while, during Mr Hariri's less than thirty-minute visit to Mr Hamade, Blue 817 activated MRAICI1 near Mr Hamade's residence.

4699. After Mr Hariri's return to Quraitem Palace, or around that time, there was no longer activity by the Blue mobiles around the area of Mr Hamade's address.

4700. The Trial Chamber notes that the analysis here is complicated because the cells providing coverage to Quraitem Palace and Mr Hamade's residence are in the same general area.

4701. Mr Platt's report did not address this particular instance of mobile surveillance—or any of Mr Hariri's visits to Mr Hamade—and it is not pleaded in the amended consolidated indictment. Mr Platt's report described where the three Blue mobiles were active, generally—during a large part of the day—as those of Quraitem Palace, the crime scene or west Beirut. He explained that Mr Hariri's regular visits to Mr Hamade came to light only after Mr Hamade had testified in November 2014. Therefore, the analysis of the security detail's activity to that effect—and the following analysis of whether the network mobiles was consistent with it—was done only after completing the initial report.⁹⁰¹⁶

4702. The Trial Chamber also notes that certain cells activated by the Blue mobiles involved in mobile surveillance, including the cell activated by the security detail after reaching Mr Hamade's residence, are defined, in Mr Platt's report, as in the area of Quraitem Palace. Other cells they activated were not.

⁹⁰¹⁶ Gary Platt, T. 7 February 2017, pp 83-84.

- **29 January 2005: trip to villa at Al-Naameh villa**

4703. In the afternoon of Saturday 29 January 2005, three Blue mobiles—Blue 585, Subject 6's Blue 610 and Blue 864—activated cells first in the Quraitem Palace area, and then to the south, in the area of Beirut International Airport.

4704. This coincided with the time and direction of travel of Mr Hariri's security detail from Quraitem Palace to Naameh Villa south of Beirut. Further, Blue 610 moved south of the airport, mid-way between Beirut and Saida, activating a cell providing coverage close to the villa within minutes of Mr Hariri's potential arrival there. Blue 610 continued moving further south past Naameh Villa.

- **Monday 31 January 2005: trip to the Higher Shiite Council from Quraitem Palace and back to Quraitem Palace**

4705. In the morning of 31 January 2005, multiple Blue, Green and Red network calls connected to cells in the Quraitem Palace area, the Parliament area and the area of the Higher Shiite Council. This included a burst of Red network calls at the time of Mr Hariri's arrival, and departure from the Higher Shiite Council.

4706. Blue 817 was already in the Higher Shiite Council area approximately when Mr Hariri left Quraitem Palace and—around the time of Mr Hariri's arrival there—contacted Mr Ayyash's Blue 233 from there. A short while later, other Red mobiles, including Mr Ayyash's Red 741 and Subject 6's Red 678, also moved into the Higher Shiite Council area from either the Parliament or the Quraitem Palace areas, where they had activated cells. During Mr Hariri's security detail's journey back to Quraitem Palace, Mr Ayyash's mobiles and Subject 6's Red 678 were active along the northern route taken by the convoy.

- **Saturday 3 February 2005: trip from St Georges Marina to Quraitem Palace**

4707. On Thursday 3 February 2005, multiple Blue and Red network calls activated cells in the area of St Georges Marina, starting more than an hour before Mr Hariri arrived there to have lunch with Lebanon's deputy prime minister. This continued until after Mr Hariri's departure.

4708. In particular, Mr Ayyash's Red 741, Subject 8's Red 893 and Subject 7's Red 946 were involved in a burst of calls around the approximate time of Mr Hariri's arrival. Mr Ayyash's and Mr Badreddine's Green mobiles also activated cells in the St Georges Marina area. The other three Red mobiles activated cells in the Quraitem Palace area.

- **Sunday 4 February 2005: trips to Mr Hamade's residence and to the airport**

4709. On Friday 4 February 2005, after midday, Blue 324 activated cells relatively close Mr Hamade's residence both immediately before the first security detail call from that area and then during Mr Hariri's half hour visit. Blue 585, with which Blue 324 was in contact, activated cells in the Quraitem Palace area, including around the approximate time of Mr Hariri's return.

4710. On the same day, in the afternoon, after activating cells in the area of Quraitem Palace some minutes after Mr Hariri had left it, two Blue network mobiles—Blue 324 and Blue 585—activated cells southwards in the direction of the Beirut International Airport. This was around the same time as the Mr Hariri's security detail travelled there to take Mr Hariri to the airport to travel to Bahrain. Blue 324 then activated a cell in airport area at the same time as the first call by Mr Hariri's security detail. It was to contact a third Blue network mobile—Subject 6's Blue 610—which, within four minutes also activated a cell in the airport area.

- **Monday 7 February 2005: trip from airport to Quraitem Palace**

4711. Blue network activity around the Beirut International Airport started around four hours before the arrival of Mr Hariri's flight into Beirut, returning from his trip to Bahrain and then Paris. While his security detail activated cells in the airport area awaiting Mr Hariri's arrival, a series of Blue Network calls connected to cells there.

4712. Around when the security travelled back to Quraitem Palace, all four Blue network mobiles, which until then were active in the airport area—including Mr Ayyash's Blue 233—activated cells either between the airport and the Quraitem Palace areas or in the Quraitem Palace area.

- **Tuesday 8 February 2005: trip from Quraitem Palace to Parliament**

4713. On Tuesday 8 February 2005, approximately around the time of Mr Hariri's departure from Quraitem Palace to attend a parliamentary session, three Blue network mobiles were in contact with each other, activating cells in the Quraitem Palace area. Around when his security detail first connected to a cell in the Parliament area, those three mobiles also started activating cells there.

4714. In between, one had connected to a cell along the internal route to the Parliament that the convoy used; the other two Blue mobiles connected to cells along the costal route. Mr Ayyash's Blue 233 had already activated a cell near the Parliament some minutes before the security detail's first call there.

4715. Around the time when Mr Hariri was at the Parliament, the six main Red network mobiles connected to cells in the area. And around the time he returned to Quraitem Palace, Red mobiles activated cells along the coastal road from the Parliament to Quraitem Palace. The convoy used the internal route to travel back to the palace.

- **Saturday 12 February 2005: trips to two churches in Badaro and Mazraa**

4716. On Saturday 12 February 2005, Mr Hariri visited two churches. After contacting each other in the Quraitem Palace area around the time that Mr Hariri departed there, two Red network mobiles—Subject 6's Red 678 and Subject 9's Red 652—connected to cells along the route the convoy used to reach the *Sacré Coeur* Church. This coincided with the convoy's travel there. Some minutes later, Mr Ayyash's Red 741 was also active in the *Sacré Coeur* Church area.

4717. Around the time Mr Hariri arrived at the Mar Michael Church, Red 678 and Red 652 were also relatively near that church. While Mr Hariri's convoy travelled back to Quraitem Palace, Red 678 activated cells between Mar Michael Church and Quraitem Palace along the convoy's route. Within 15 minutes or so of Mr Hariri's arrival there, Mr Ayyash's Red 741 also connected to cells in the Quraitem Palace area.

- **Monday 14 February 2005: trip from Quraitem Palace to Parliament and back**

4718. On Monday 14 February 2005, three Red network mobiles—Subject 6's Red 678, Subject 9's Red 652 and Subject 8's Red 893—connected to cells in the area of Quraitem Palace at 11:00—

fifteen minutes after Mr Hariri's departure at 10:45 to go to Parliament—and again at 11:33 and 11:34, when Mr Hariri was in the Parliament building. At that time, Red 678 was in contact with Mr Ayyash's Red 741, which already connected to a cell in the Parliament area.

4719. Before midday, the three Red mobiles that were previously active in the Quraitem Palace moved to the Parliament or the crime scene areas. After 12:00—when Mr Hariri was at the café *Place de l'Étoile* to meet journalists, MPs and others—and then until after he had departed from there with his security convoy—four Subjects—the users of Red 636, Red 678, Red 893 and Red 652—were near the Parliament or in the Parliament area.

4720. As of 11:48, Mr Ayyash's Green and Red mobiles connected to cells either in the crime scene area—at 11:48, 11:53, 11:57, 11:58 and 12:09—or to two cells of which one provided predicted best coverage between Parliament and the crime scene and the other provided predicted best coverage to the crime scene—at 11:49, 12:04, 12:05 and between 12:16 and 12:50. After midday, Subject 7's Red 946 also connected to these same two cells—that providing predicted best coverage between Parliament and the crime scene or that predicting predicted best coverage to it.

5. Static surveillance

4721. Static surveillance, when based on cell site data alone, is far more difficult to determine. Patterns of cell activations by identified network mobiles, at times relevant to the target's presence or movement, can potentially connect the mobiles with the target. The surveillance could be in the form of watchers stationed near key locations, such as along potential travel routes or 'near' the palace itself.

4722. Between Wednesday 20 October and Wednesday 10 November 2004, network mobiles connected to cells in the Quraitem Palace area on ten days. On three of them, only one network call activated cells there—including on one day when Mr Hariri was abroad.

4723. Between Thursday 11 November 2004 and Monday 14 February 2005, network mobiles connected to cells in the Quraitem Palace area on 36 days. Except on limited days when only a single call or two calls activated cells there—including on two days Mr Hariri was abroad or a day

on which he returned from an international trip—the number of calls connecting to cells in that area ranged from a low of three to 69 on one day.

4724. With limited exceptions—including a few instances when Mr Hariri was outside of Lebanon or was not yet back in Beirut—activations of cells in the Quraitem Palace area by network calls coincided with Mr Hariri's presence in the palace.

4725. From Wednesday 20 October until Friday 17 December, only two Blue network mobiles—Blue 585 and Blue 324—activated cells in the Quraitem Palace area. On Tuesday 21 and Thursday 23 December 2004, other Yellow and Blue mobiles, respectively, started connecting to cells in that area. On Friday 14 January 2005, the Red mobiles—making their first network calls since their activation—connected to cells in the Quraitem Palace in 24 calls.

4726. On a few days when Mr Hariri was in his Faqra residence in the Faraya area several Blue and Yellow network mobiles, including Mr Ayyash's Yellow 294, activated cells in the Faqra or the Faraya area, to connect to cells in to south Beirut at the end of each day. This occurred, for example, on Saturday 25 December 2004 when Mr Hariri stayed for the Christmas holiday and when he remained there the following day. Blue 322 also activated cells in those areas.

4727. On Sunday 26 December 2004, when Mr Hariri was at his Faqra residence, Yellow and Blue mobiles connected to cells in the Faqra and Faraya area for approximately 10 hours, between 9:58 in the morning and 19:48 in the evening.

4728. On three days when network calls connected to cells near Faqra Villa or in the Faraya area, namely, on 27, 31 December 2004 and Saturday 1 January 2005, the Trial Chamber, as noted above, has found that this was to conduct mobile surveillance of Mr Hariri's trips between his Faqra residence and Quraitem Palace.

6. General conclusions on network surveillance of Mr Hariri

4729. The ultimate issue is whether the various network cell activations and calls, in combination with Mr Hariri's movements, leads to only one inevitable conclusion, namely, that they were engaged in the surveillance, or 'observations' of him. The Trial Chamber's conclusion is that this is what occurred.

4730. The evidence establishes that on 39 days between Wednesday 20 October 2004 and Monday 14 February 2005 there was significant network activity in the area of Quraitem Palace. This occurred in 2004 on 20 October; 3,⁹⁰¹⁷ 4, 5, 8, 10, 11, 23,⁹⁰¹⁸ 25 and 26 November; and on 21, 22, 23, 24, 27, 28, 30 and 31 December; and, in 2005 on 1, 7,⁹⁰¹⁹ 8, 14, 22, 27, 28, 29, 30, 31 January 2005; and on 1, 2, 3, 4, 7, 8, 9, 10, 11, 12 and 14 February. But it was only at least three days when these activations occurred, namely, Wednesday 3 and Tuesday 23 November 2004 and Friday 7 January 2005, that Mr Hariri was not in Beirut.

4731. The Trial Chamber observed an unequivocal pattern of the networks shadowing Mr Hariri. On a number of occasions between Thursday 11 November 2004 and Monday 14 February 2005, it is obvious from the presence of network mobiles connecting to cells near where Mr Hariri's security detail was, that they had 'followed' him to where he was. One striking feature is that during Mr Hariri's absences from Lebanon, network activity significantly scaled down, and most ceased around Quraitem Palace. Examples of this are during Mr Hariri's trips abroad between 12 and 22 November 2004, 27 November to 16 December 2004, 17 to 20 December 2004 and 2 to 7 January 2005.⁹⁰²⁰

4732. The patterns of calls between network mobiles, their presence connecting to cells around Quraitem Palace, the airport, in the Faraya area and in other places where Mr Hariri was such as his visits to churches, his dinners and lunches, is beyond coincidence. There are too many calls and too many instances of network mobiles sharing a locality with Mr Hariri, and over an extended period, for this to be accidental. This happened too often and in too many different places to be spontaneous. The mobile users were communicating in closed networks, and on different days, their users operated in locations where Mr Hariri was.

4733. While the static surveillance alleged, based only on cell activations, is more difficult to ascertain, again, clear patterns have emerged of network presence near Quraitem Palace and along the route to Faqra Villa. Significantly, there was very little network activity around Quraitem Palace when Mr Hariri was not there. Considering the evidence of the network activity in its

⁹⁰¹⁷ During the day, Mr Hariri had left Beirut.

⁹⁰¹⁸ Mr Hariri was abroad.

⁹⁰¹⁹ Most calls occurred before Mr Hariri arrived from the airport.

⁹⁰²⁰ As set out above, when Mr Hariri was abroad, network activity around Quraitem Palace did not stop completely.

totality leads to the inevitable conclusion that much of this must have been connected with surveillance of Mr Hariri. There is no other conclusion reasonably available from the evidence.

4734. The Trial Chamber therefore finds that the users the Blue, Red and Yellow networks—and more specifically the six core Red mobiles, the six core Blue mobiles and the four core Yellow mobiles—conducted observations or surveillance of Mr Hariri and his movements on different days from Wednesday 20 October 2004 to Monday 14 February 2005.

4735. It is therefore satisfied that the only reasonable conclusion available from the evidence is that Mr Hariri was under surveillance from Wednesday 20 October 2004 to Monday 14 February 2005, with the surveillance in the latter period connected with his possible assassination. The Trial Chamber cannot find that all of it was connected with the plan to assassinate Mr Hariri. In its totality—as is set out in analysing the dates of the conspiracy—the evidence only suffices to establish that the final decision to assassinate Mr Hariri was most probably made sometime in early February 2005. The Trial Chamber, however, cannot positively conclude that the surveillance in October, November and December 2004 and in January 2005 was solely for the purpose of planning his assassination.

4736. Undoubtedly, some of it in the latter part of January 2005 was directed at obtaining information about Mr Hariri's movements and convoy if needed to continue with a plan to assassinate him, which had hatched by then. The Trial Chamber is satisfied that at least some of the users of the Red, Yellow, Green and Blue networks had a common mission, namely the assassination of Mr Hariri. However, the fact that these networks were connected and that their existence was linked to Mr Hariri's movements and eventually his assassination, does not mean that every user of every network mobile knew about the mission to assassinate him, either in detail or at all.

7. Role of the Green network

4737. In relation to the Green network, the Prosecution relies on so-called 'hierarchical call flows', namely other network activity just before or shortly after two of the mobiles in the Green network were in contact. Such call flows would be either evidence of 'reporting from the field' or the conveying of instructions downwards.

4738. According to the Prosecution, the Green network was the mission command, the apex of the operation, with Mr Badreddine at its peak as the coordinator or monitor of the preparations for the assassination and making the false claim of responsibility for the attack. These calls are listed in detail in analysing the conspiracy alleged in chapter XIV ‘Legal findings on elements of the crimes and Individual criminal responsibility’, (B) (3) (f) ‘Whether Mustafa Amine Badreddine had a role in the conspiracy’. The Trial Chamber has concluded there that insufficient evidence exists to draw this conclusion.

4739. Mr Platt concluded that telecommunications evidence allowed the conclusion that some network users had meetings. The Trial Chamber accepts that they did meet, as indeed they would have had to. The surveillance of Mr Hariri was obviously not spontaneously arranged in bursts of short mobile calls between various network users in the field. It could have occurred only as a result of planning which would naturally have involved planning meetings. But there is no evidence of when they were, or where or for how long, nor of what was said.

4740. The Trial Chamber is not satisfied that there is sufficient evidence from the telecommunications evidence alone, which consists only of metadata, to conclude from this that users of network mobiles met in person at the times and in the areas suggested by the Prosecution. It is a strong possibility, but without more evidence, the Trial Chamber is not prepared to make a positive finding that it occurred.

4741. The Trial Chamber is also not satisfied that the Green network functioned as ‘mission command’. The Trial Chamber carefully considered the so-called call flows from the Green to the Blue and Red network. It also considered its findings on the attribution of various mobiles.

4742. It is satisfied that there was a connection between these calls and that there was clear sequencing in the sense of calls following each other, even from network to network. However, without the content of any of these calls, or any other evidence, inferring a hierarchy from a few instances of sequencing is speculative. Additionally, the Trial Chamber carefully considered whether the timing of the calls could provide the relevant context, such as to suggest the call content. However, again, the evidence on the timing was inconclusive and inferring that the calls must have related to instructions or reporting goes no higher than conjecture.

4743. The Trial Chamber accordingly was of the view that it was not the only reasonable conclusion from the evidence that the Green network acted as mission command. The Trial Chamber allowed for the reasonable possibility that the Green network had another function, not necessarily at the apex of all other networks.

XI. IMPORTATION AND SALE OF MITSUBISHI CANTER

4744. In December 2004, Witness PRH075 imported into Lebanon from the United Arab Emirates the white 2002 Mitsubishi Canter right-hand-drive light truck that was used in the explosion on Monday 14 February 2005. He sometimes displayed his imported vehicles for sale at a ‘dealership’ in Tripoli that Witness PRH063 operated with a partner. Its records were inaccurate and or incomplete.

4745. The Canter was displayed at Witness 63’s ‘showroom’ for a short period before its sale in January 2005 to two men who paid in cash for it and drove it away. During their visit, Witness 63 called Witness 75, regarding price negotiations, twice within five to 15 minutes. No witness could independently recall the sale date, although Witnesses 63, 75 and an office manager, Witness PRH459, concluded that it had been Tuesday 25 January 2005. But, this was after reviewing their records and discussing the matter between themselves, when they were interviewed by Lebanese investigating officials in 2006. They thought the sale was after the *Eid Al-Adha* holiday on Thursday 20 January 2005.

4746. Neither call data records nor the dealership’s records can confirm the sale date. On two days between 1 January 2005 and 14 February 2005, namely Monday 17 and Tuesday 25 January 2005, Witness 63’s mobile called Witness 75’s mobile twice—or more—within less than an hour. Some network mobile activity in Tripoli, including calls with numbers attributed to Mr Ayyash, occurred on 25 January 2005, but not on 17 January 2005. There was also network mobile activity in Tripoli on 11, 12, 14, 15 and 22 January. The Prosecution argues that the truck was sold on 25 January 2005 and Mr Ayyash coordinated its purchase. The preponderance of witness evidence supports that date, which is confirmed by the network activity. The Ayyash Defence submits that 17 January 2005 is more likely—indeed that cell coverage records prove it could not have been 25 January 2005—and that the witnesses’ conclusion about that date was unpersuasive, given the methods by which they reached it. Furthermore, according to the Ayyash Defence, Mr Ayyash was in Saudi Arabia, not Lebanon, from 15 to 28 January 2005.

4747. The Trial Chamber has concluded that the dealership witnesses’ evidence on its own cannot establish the date of the sale, but that there is no reason to disbelieve that evidence. That evidence

in conjunction with the records of Witnesses 63's and 75's calls limits the sale date to either 17 or 25 January 2005. Based on the combination of the witnesses' evidence, the call data records for Witnesses 63's and 75's mobiles, the date of Eid and the dealership's receipt stubs, 25 January 2005 is the more likely date.

4748. Obtaining the Canter was part of the plot to commit the attack and kill Mr Hariri. It is plausible that the network mobile activity on 11, 12, 14, 15, 22 and 25 January 2005 concerned—and evidenced—this aspect of the plot. However, there is insufficient evidence to determine beyond reasonable doubt either any particular network mobile user's role in the Canter's purchase, or what any of them did afterwards to prepare it for use in the attack.

A. Summary of the evidence

1. The Tripoli truck dealership and its importation of a Mitsubishi Canter light truck

(a) The Tripoli dealership

4749. In 2004 and 2005, Witness 63 ran a van and pick-up truck dealership in Tripoli, with Witness 75's brother⁹⁰²¹ and Witness 75, who was their business associate.⁹⁰²² Witness 75 sometimes imported vehicles into Lebanon, but did not have his own sales lot.⁹⁰²³

4750. Witness 63 ran one lot, which could loosely be described as a 'showroom', for selling vehicles, while Witness 75's brother had another,⁹⁰²⁴ about 250 to 300 metres away.⁹⁰²⁵ Witness 75 had his own, separate business premises, 'a relatively short distance' away.⁹⁰²⁶ At Witness 63's

⁹⁰²² Witness PRH063, T. 4 June 2015, pp 73, 80; Witness PRH075, T. 15 June 2015, pp 7-8, 38.

⁹⁰²³ Witness PRH075, T. 15 June 2015, pp 6-7, 9-10, T. 16 June 2015, pp 15, 57; Witness PRH063, T. 4 June 2015, p. 80.

⁹⁰²⁴ Witness PRH075, T. 15 June 2015, pp 7-9, T. 16 June 2015, p. 56; exhibit P483 (Witness PRH459's statement of 27 April 2006), ERN 60302870; exhibit 1D159 (Witness PRH459's statement of 30 April 2006), ERNs 60014354T-60014355T; exhibit P483 (Witness PRH459's statement of 2 May 2006), ERNs 60302883, 60302885; exhibit P483 (Witness PRH459's statement of 16 December 2014), ERN 60302864, para. 1.

⁹⁰²⁵ Exhibit 1D148 (Exhibit marked by Witness 63); Witness PRH459, T. 17 June 2015, pp 58-59; Witness PRH063, T. 4 June 2015, p. 73, T. 5 June 2015, pp 52-57.

⁹⁰²⁶ Witness PRH063, T. 4 June 2015, p. 73.

showroom he sold his own vehicles⁹⁰²⁷ and those of others such as Witness 75,⁹⁰²⁸ who paid Witness 63 a commission.⁹⁰²⁹

4751. Witnesses PRH041 and 459 worked at the dealership. Witness 41 was a labourer at Witness 63's 'showroom',⁹⁰³⁰ while Witness 459 did general office management for Witness 75's brother.⁹⁰³¹ Witness 459 was responsible for only a few business transactions relating to Witness 63's 'showroom'.⁹⁰³²

4752. Vehicles were sometimes imported in a disassembled state.⁹⁰³³ It normally took between two and three weeks between a purchase in the United Arab Emirates and display in Tripoli.⁹⁰³⁴ This included around three to four days for customs clearance.⁹⁰³⁵ Witness 75 imported vehicles using different names.⁹⁰³⁶

4753. In 2004 and 2005 the dealership did not keep fully accurate or detailed records of its vehicle sales.⁹⁰³⁷ In 95 per cent of cases, customers paid in cash.⁹⁰³⁸ Once paid in full,⁹⁰³⁹ the dealership did not keep copies of the paperwork accompanying those vehicles.⁹⁰⁴⁰ Rather, it would give the

⁹⁰³⁴ Witness PRH075, T. 15 June 2015, p. 52, T. 16 June 2015, pp 36-37, stating that it normally took around one or one and a half weeks on the road, then three or maybe four days at the customs office, then two or three days of preparation for display.

⁹⁰³⁵ Witness PRH075, T. 15 June 2015, p. 52.

⁹⁰³⁶ Especially in the name of one particular person, referred to in court as 'the import partner'. Witness PRH075, T. 15 June 2015, pp 14-15, T. 16 June 2015, pp 12-15, 30-36.

⁹⁰³⁷ As to the dealership's sales practices generally being disorganised, incomplete and or not compliant with Lebanese law, *see* Witness PRH063, T. 10 June 2015, p. 66; Witness PRH075, T. 16 June 2015, pp 33-34, 110.

⁹⁰³⁸ Witness PRH063, T. 4 June 2015, p. 90.

⁹⁰³⁹ Witness PRH063, T. 5 June 2015, p. 23; exhibit 1D159 (Witness PRH459's 30 April 2006 statement), p. 3 (ERN 60014354AT).

⁹⁰⁴⁰ Witness PRH459, T. 17 June 2015, p. 64; exhibit 1D159 (Witness PRH459's 30 April 2006 statement), pp 2-3 (ERNs 60014354T-60014354AT); Witness PRH063, T. 5 June 2015, p. 23. *See also* Witness PRH459, T. 17 June 2015, pp 64-65.

buyer the vehicle's registration papers⁹⁰⁴¹ and leave it to them to 'do all the administrative procedure' necessary to legally use the vehicle.⁹⁰⁴² It also gave some customs-related documents to its accountant⁹⁰⁴³ and destroyed some other records once 'done with' them.⁹⁰⁴⁴ Witness 63 kept only the stub of a receipt given to a customer, leaving 'nothing but a summary' of the transaction that was 'not important' nor 'useful in any way'.⁹⁰⁴⁵ Witness 75's brother's company had to make a revenue statement to the Lebanese Ministry of Finance every three months.⁹⁰⁴⁶ Witness 459 would copy information from a document where he had recorded a vehicle sale⁹⁰⁴⁷ into an invoice book, and give it to their accountant.⁹⁰⁴⁸ However, they very seldom knew the exact date of a sale⁹⁰⁴⁹ and would randomly select a date in that quarter for the invoice.⁹⁰⁵⁰ Moreover, if Witness 75's brother had not given Witness 459 the vehicle's buyer's name, when Witness 459 prepared the invoices he would record that vehicle's sale on the invoice of 'any other customer who had previously purchased a pick-up truck'⁹⁰⁵¹ or use a random name.⁹⁰⁵² Witness 75 only recorded his vehicles' sales from time to time and sometimes did not record 'anything at all'.⁹⁰⁵³

(b) Importation of a Mitsubishi Canter light truck

4754. In December 2004, Witness 75 imported into Lebanon, under his import partner's name,⁹⁰⁵⁴ a used white 2002 Mitsubishi Canter light commercial truck with chassis number FE52CE560619 and engine-block number 4D33J01926,⁹⁰⁵⁵ and then displayed it at Witness 63's

lot.⁹⁰⁵⁶ Witness 75 had bought it in person in the United Arab Emirates⁹⁰⁵⁷ and a trailer-truck driver brought it over land, partly disassembled,⁹⁰⁵⁸ through customs and to the Tripoli dealership.⁹⁰⁵⁹ The evidence on how long after its arrival in Lebanon it reached Witness 63's lot, and where and when it was reassembled, was imprecise, inconsistent and ultimately inconclusive. Consequently, the Trial Chamber will not further address that evidence. The latest date on Lebanese customs records for the vehicle's importation is 19 December 2004.⁹⁰⁶⁰

2. The sale transaction

(a) The day's events

4755. On the day Witness 63 sold the Canter, two men he had never seen before came to his lot⁹⁰⁶¹ and asked him about its price. They asked for a reduction and Witness 63 called Witness 75, who authorised a USD 250 discount.⁹⁰⁶² Witness 75 said that Witness 63 told him a customer was interested in the Canter⁹⁰⁶³ and he did not agree to the offered price.⁹⁰⁶⁴ Witness 63 then told the men about the authorised reduction,⁹⁰⁶⁵ they asked for a further reduction, Witness 63 refused, and they agreed to pay USD 11,250.⁹⁰⁶⁶ Witness 63 then called Witness 75 again. Witness 75 agreed to the price.⁹⁰⁶⁷ Witness 63 said he gave Witness 75 the truck's chassis number and told Witness 75 to bring its papers and 'cash the price of the van'⁹⁰⁶⁸—it is unclear exactly what Witness 63 meant by this.

⁹⁰⁶⁸ Witness PRH063, T. 4 June 2015, pp 84-85, *see also* T. 5 June 2015, p. 63.

4756. Witness 63 called Witness 75's mobile using his own.⁹⁰⁶⁹ Witness 63 said that logically the first call was longer than the second⁹⁰⁷⁰ and the time between the two calls was a matter of minutes,⁹⁰⁷¹ maybe five or ten.⁹⁰⁷² Witness 75 estimated that it was either five to 15 minutes,⁹⁰⁷³ or five to ten minutes.⁹⁰⁷⁴ Witness 75 could not remember where he was when Witness 63 called, but he was 'in the same area'.⁹⁰⁷⁵

4757. After the second call, Witness 75 retrieved the Canter's papers from Witness 459 at his brother's lot⁹⁰⁷⁶ and brought them to Witness 63's lot.⁹⁰⁷⁷ Witness 459 stated that Witness 75 had insisted that Witness 459 hand him the papers immediately, and then Witness 75 left on foot towards Witness 63's lot.⁹⁰⁷⁸ Witness 75 was unsure whether he walked or drove there.⁹⁰⁷⁹ According to Witness 63, Witness 75 arrived approximately 15 minutes after their second call.⁹⁰⁸⁰

4758. Once the buyers had given the cash to Witness 75,⁹⁰⁸¹ Witness 63 wrote a receipt,⁹⁰⁸² gave it to them⁹⁰⁸³ and kept its stub.⁹⁰⁸⁴ They gave Witness 63 the name 'Mohammed El-Masri' and a mobile number, which he wrote on the stub.⁹⁰⁸⁵ That stub, numbered 2746, is undated.⁹⁰⁸⁶ The number written on the stub was Witness PRH661's mobile number in 2004 and 2005,⁹⁰⁸⁷ but that

witness knew neither anyone with the name the buyers gave or similar names,⁹⁰⁸⁸ nor the dealership witnesses.⁹⁰⁸⁹

4759. After buying the Canter, the two men drove off together in it.⁹⁰⁹⁰ According to Witness 41, who was there,⁹⁰⁹¹ they drove in the direction of Beirut.⁹⁰⁹² Both Witness 63 and Witness 41 estimated that the two buyers had been there for about 30 or 45 minutes.⁹⁰⁹³ The three witnesses' evidence about the time of the sale differed. For Witness 41 it was around 12:00 or 13:00,⁹⁰⁹⁴ for Witness 63 it was around 'midday/early afternoon',⁹⁰⁹⁵ but Witness 75 testified that Witness 63 had called him at around 14:00⁹⁰⁹⁶ and that he—Witness 75—met the buyers at around 14:15 to 15:00.⁹⁰⁹⁷ No witness recalled seeing either man with a mobile.⁹⁰⁹⁸ Investigators showed Witness 41 photographs including one of Mr Ayyash but he did not recognise anyone in them.⁹⁰⁹⁹

(b) The date of the sale

4760. To establish the date of the Canter's sale, the Trial Chamber has reviewed the undated receipt stub for the sale,⁹¹⁰⁰ other dealership records, call data records including cell coverage records and call sequence tables and witness evidence. Three of the four witnesses from the dealership—Witnesses 63, 75 and 459—testified that the date was 25 January 2005,⁹¹⁰¹ though none independently recalled this when testifying in 2015.⁹¹⁰² They had determined the date together after reviewing the dealership's records, when they were interviewed by the Lebanese

⁹¹⁰¹ Witness PRH063, T. 5 June 2015, pp 9-10; Witness PRH075, T. 15 June 2015, p. 66; Witness PRH459, T. 17 June 2015, pp 73-74, 99-100.

⁹¹⁰² *See* sub-section (iii) 'Witnesses' evidence', below.

investigating authorities in mid-2006.⁹¹⁰³ They also took into account call data records⁹¹⁰⁴ and the date of the 2005 *Eid Al-Adha* festival.⁹¹⁰⁵

i. Call data

4761. The call data records, as revealed by the call sequence tables, show there were two days between 1 January 2005 and 14 February 2005 when Witness 63's mobile called Witness 75's mobile at least twice within less than an hour, namely 17 and 25 January 2005.⁹¹⁰⁶ On 17 January 2005, Witness 63's mobile called Witness 75's mobile three times—at 12:15:55 for 80 seconds, at 13:07:55 for 77 seconds and at 13:12:26 for 15 or 16 seconds.⁹¹⁰⁷

4762. By contrast, on 25 January 2005, Witness 63's mobile called Witness 75's mobile five times. The interval between the calls was approximately:

- one hour and two minutes between the first, at 14:22:19 (67 seconds) and second, at 15:24:49 (97 seconds);
- 12 minutes between the second and the third, at 15:36:13 (33 seconds);
- 40 minutes between the third and the fourth, at 16:16:27 (55 seconds); and
- 40 minutes between the fourth and the fifth, at 16:56:58 (29 seconds).⁹¹⁰⁸

In testifying, Witness 63 at first thought that the second and third were the relevant calls, but was then unsure.⁹¹⁰⁹

⁹¹⁰³ See sub-section (iii) 'Witnesses' evidence', below.

⁹¹⁰⁴ Exhibit P477 (Call sequence table of Witnesses PRH063's and PRH075's mobiles for 17 January 2005 to 27 January 2005); exhibit P478 (Redacted call sequence table of Witnesses PRH063's and PRH075's mobiles for 17 January 2005 to 27 January 2005). Witness PRH075, T. 15 June 2015, pp 55-57, 64-69.

⁹¹⁰⁵ See paras 4773, 4775, below.

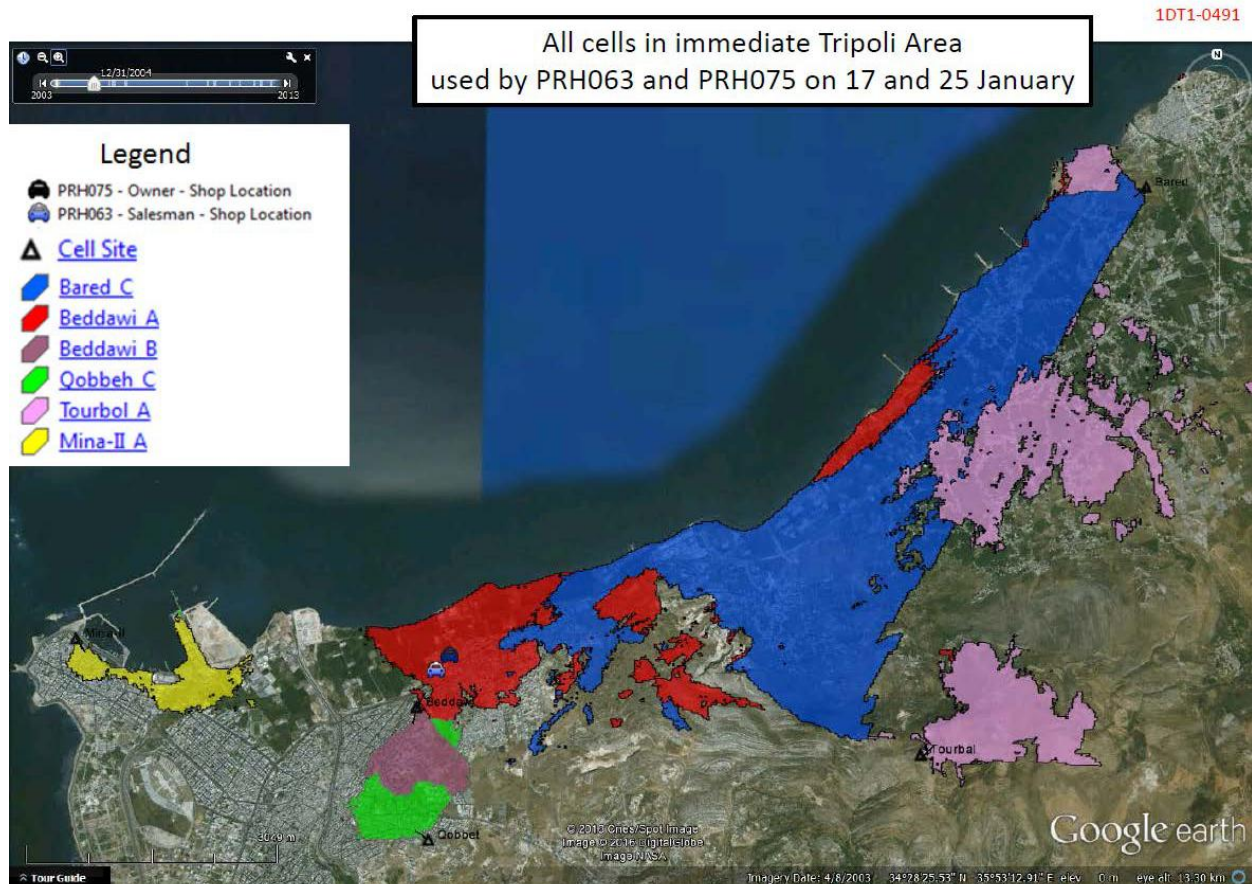

⁹¹⁰⁶ Exhibit P1283 (Call sequence table of Witness PRH063's mobile, 1 January to 14 February 2005); exhibit P1284 (Call sequence table of Witness PRH075's mobile, 1 January to 14 February 2005). See also exhibits P477-P478, 1D150.

⁹¹⁰⁷ Exhibit P1283, p. 6; exhibit P1284, p. 15. See also exhibit 1D347 (PowerPoint presentation on mobile activity of Witnesses PRH063 and PRH075), pp 6-9; exhibits P477-P478.

⁹¹⁰⁸ Exhibit P1283, pp 8-9; exhibit P1284, p. 24. See also exhibit 1D150, p. 2; exhibit 1D347, pp 2-5; exhibits P477-P478.

⁹¹⁰⁹ Witness PRH063, T. 5 June 2015, p. 18.

4763. For illustration purposes, below is a map created by the Ayyash Defence plotting some of the coverage areas referred to below.

*Exhibit 1D347 (PowerPoint presentation on mobile activity of Witnesses PRH063 and PRH075),
ERN 1DT1-0491*

4764. The predicted best server coverage for Witness 63's lot—where he was when he called Witness 75 on the day of the Canter's sale—is either Beddawi_A, for Touch network mobiles,⁹¹¹⁰ or BEDAOU2, for Alfa network mobiles.⁹¹¹¹ Based on witnesses' descriptions of the location of

⁹¹¹⁰ Exhibit P592.1 (Electronic Presentation of Evidence software). See also exhibit P1783 (Expert report of Gary Platt – Chronology), p. 223, para. 754, map 69; Gary Platt, T. 21 February 2017, pp 90, 94.

⁹¹¹¹ Exhibit P592.1. See also exhibit P1783 (Expert report of Gary Platt – Chronology), p. 198, para. 653, table 82; Gary Platt, T. 21 February 2017, pp 91, 94; exhibit P1889 (Chronology PowerPoint presentation—18 to 27 January 2005), pp 165-167.

Witness 75's brother's lot⁹¹¹²—its coordinates are not in evidence—the same cells appear to provide the predicted best server coverage for that lot, too.⁹¹¹³

4765. On Monday 17 and Tuesday 25 January 2005, each call from Witness 63's mobile to Witness 75's connected to Beddawi_A.⁹¹¹⁴ However, when it received the three calls on 17 January 2005 Witness 75's mobile activated different cells to those it activated on 25 January 2005. On 17 January 2005, it connected to Mina_2_A.⁹¹¹⁵ Mina_2_A is about two kilometres west of Witness 63's and Witness 75's brother's lots,⁹¹¹⁶ and is separated from Beddawi_A by at least two other Touch cells at any point along its boundary.⁹¹¹⁷ Using predicted server coverage data, the Trial Chamber estimates that at their closest point, Mina_2_A and Beddawi_A are between 1.3 and two kilometres apart.⁹¹¹⁸ A route by road between the two cells appears to be around three kilometres long.⁹¹¹⁹ These and the Trial Chamber's other estimates are subject to the overall caveat that predicted best cell server coverage is 60 to 70 per cent accurate.⁹¹²⁰

4766. On Tuesday 25 January 2005, Witness 75's mobile connected to Quobbet_C⁹¹²¹ for the first call from Witness 63's mobile, at 14:22:19, and Bared_C for the subsequent four calls. Witness 75's mobile connected to several different cells in the intervals between the first four calls on 25 January 2005, namely Quobbet_C, Beddawi_B and Tourbol_C between the first and second call, Tourbol_A between the second and third call and Tourbol_A and Bared_C—calling Witness 63's mobile, among other numbers—between the third and fourth calls. It connected only to Bared_C between the fourth and fifth calls—including with one call to Witness 63.⁹¹²² As set out above, the second and third calls were the closest together in time, occurring about 12 minutes apart, whereas all the other calls occurred at least 40 minutes apart.

⁹¹¹² See above, at para. 4750.

⁹¹¹³ Exhibit P592.1.

⁹¹¹⁴ Exhibit P1283, pp 6, 8-9; Gary Platt, T. 5 April 2017, pp 9, 11-12. See also exhibit 1D347, pp 2-3, 6-7; exhibits P477-P478.

⁹¹¹⁵ Referred to in the map as Mina-II_A, exhibit P1284, p. 15.

⁹¹¹⁶ This estimate refers to the distance between those lots and the eastern most boundaries of the Mina_2_A cell's predicted coverage area. Exhibit P592.1.

⁹¹¹⁷ Exhibit P1122 (ArcView shape files Touch).

⁹¹¹⁸ Exhibit P592.1. See also exhibit 1D347, p. 10.

⁹¹¹⁹ Exhibit P592.1. See also exhibit 1D347, p. 11.

⁹¹²⁰ See chapter VII 'Reliability of telecommunications evidence', (I) (6) 'Findings on cell site analysis'.

⁹¹²¹ Referred to in the map as Quobbet_C.

⁹¹²² Exhibit P1284, p. 24; Gary Platt, T. 5 April 2017, pp 9-11. See also exhibit 1D347, pp 4-5; exhibits P477-P478.

4767. As the map above shows:

- Quobbet_C is south of Witness 63's lot and partly separated from Beddawi_A by Beddawi_B. One part of Quobbet_C is also adjacent to Beddawi_A and, by the Trial Chamber's estimation, about 500 metres from Witness 63's lot.
- Beddawi_B is south and south-east of the dealership lots, and adjacent to Beddawi_A.
- Bared_C is to the north-east of and adjacent to Beddawi_A. It covers a much larger area than any of the other cells Witness 75 activated in the period of his five calls from Witness 63 on 25 January 2005.
- Tourbol_A is not adjacent to Beddawi_A. It lies to the east and north-east of Bared_C and at some points, adjacent to it. The predicted coverage for Tourbol_A is, therefore, further away from both Witness 63's and Witness 75's brother's lots than that of Bared_C. The cell consists of several disconnected coverage areas.⁹¹²³

4768. Tourbol_C (not shown on the map) is the smallest cell that Witness 75 activated and consists of two clusters of disconnected coverage areas. One of those clusters is south of Beddawi_A, and east of Beddawi_B, but not adjacent to either. The other cluster is further east—and further away from the dealership's lots—in approximately the same area where, as shown on the map, an isolated small horizontal part of Tourbol_A nearly abuts the south-eastern corner of Bared_C.⁹¹²⁴

4769. One plausible explanation for a mobile switching from Bared_C to Tourbol_A and back again within 12 minutes, as Witness 75's mobile did between the second and third call from Witness 63's mobile on 25 January 2005, is that that mobile was in an area covered by both cells, such as one of the points where Bared_C and Tourbol_A are adjacent to one another.⁹¹²⁵ The Trial Chamber estimates that the nearest such point was at least five kilometres away from Witness 63's lot.⁹¹²⁶ Given the 60 to 70 per cent overall accuracy of coverage data, however, the distance may

⁹¹²⁵ See chapter VII 'Reliability of telecommunications evidence', (B) (2) 'Cell allocation'.

⁹¹²⁶ Exhibit P592.1.

have been as much as seven kilometres—that is, another 40 per cent further away than five kilometres—or as little as three kilometres—40 per cent closer.

ii. The dealership's records

4770. The receipts containing the stub recording the Canter's sale (stub 2746)⁹¹²⁷ were consecutively numbered.⁹¹²⁸ The stub immediately preceding the Canter's, numbered 2745, is blank.⁹¹²⁹ The stub before, numbered 2744, has the handwritten date 17 January 2005,⁹¹³⁰ with a price of 11,000 USD, and that 1,000 was received, leaving 10,000 remaining. It also includes a seven-digit number and, after the word 'from', something illegible followed by Witness 75's name.⁹¹³¹ Immediately after the Canter stub is an undated receipt stub (stub 2747),⁹¹³² then another with the handwritten date 26 January 2005 (stub 2748).⁹¹³³ Stub 2747 states that 10,000 USD was received from a 'Jihad Chahine' for settlement of balance, with Witness 75's name.⁹¹³⁴ Stub 2748 states that 500 USD were received from Jihad Chahine for 'LT pickup truck' on 26 January 2005.

4771. A handwritten document extract from papers on Witness 459's desk at the dealership,⁹¹³⁵ a form of desk diary extract, contains a list of vehicles and dates.⁹¹³⁶ Next to 8 March 2005 is written 'narrow white Mitsubishi Canter for' Witness 75,⁹¹³⁷ and '10,500'.⁹¹³⁸ 'Mitsubishi Canter' next appears on 31 March 2005, after four other items, one dated 9 March 2005 and the others 30 March 2005.⁹¹³⁹ The description and amount next to 9 March 2005 are 'white Isuzu for' Witness 75⁹¹⁴⁰ and '12,500'.⁹¹⁴¹

⁹¹⁴¹ Exhibit 1D158.

iii. Witnesses' evidence

4772. When they were interviewed by the Lebanese authorities in April and May 2006, Witnesses 41, 63, 75, 459 and others such as Witness 75's brother went through the dealership's records to try to remember what occurred. At times, the investigating officials had put the four dealership witnesses, and others, together for this purpose.⁹¹⁴² This was after they had already detained and interviewed Witness 63 for several days.⁹¹⁴³ The authorities also initially detained Witness 75's brother.⁹¹⁴⁴

4773. According to Witness 63, Witnesses 41, 63, 75 and 459 remembered together that the sale had occurred after 'the holidays' that year,⁹¹⁴⁵ which he thought meant *Eid Al-Adha*.⁹¹⁴⁶ *Eid Al-Adha* began on 20 January 2005.⁹¹⁴⁷ After reviewing his previous statements, Witness 75 recalled that the sale was probably after or 'around' *Eid Al-Adha*.⁹¹⁴⁸ Witness 459 testified that he determined 25 January 2005 as the sale date partly because it was after *Eid Al-Adha*.⁹¹⁴⁹ The witnesses gave different estimates of how long the Canter was at the 'showroom',⁹¹⁵⁰ and how long this was after Witness 75's return from the United Arab Emirates.⁹¹⁵¹ This evidence was inconclusive as to whether 17 or 25 January 2005 was the sale date.

⁹¹⁵⁰ Witness PRH063, T. 4 June 2015, p. 78; Witness PRH075, T. 15 June 2015, pp 51-53, T. 16 June 2015, pp 37-38, 102-103.

⁹¹⁵¹ Exhibit P483 (Witness PRH459's statement of 2 May 2006), ERN 60302884; *see also* Witness PRH075, T. 15 June 2015, p. 39, T. 16 June 2015, p. 63.

4774. Witness 459 acknowledged that the specific dates in his desk diary extract are unreliable.⁹¹⁵² He wrote ‘8 March 2005’ on the document when invoicing the Canter truck, but not when it was sold.⁹¹⁵³ As for the ‘white Isuzu’ listed in the desk diary extract:

- the Isuzu was sold in January 2005⁹¹⁵⁴ and its buyer paid by instalments;⁹¹⁵⁵
- Witnesses 63 and 75 testified that the dealership had sold the Isuzu and the Canter on different days.⁹¹⁵⁶ The Isuzu’s buyer told Witness 63 that he remembered seeing the Canter when he had come to make the down payment;⁹¹⁵⁷
- Witness 459 found out from reviewing the receipt book that the Isuzu buyer had paid the last instalment on 26 January 2005,⁹¹⁵⁸ but did not know its actual sale date;⁹¹⁵⁹ and
- stub 2744, dated 17 January 2005, concerned a down payment from the Isuzu buyer, while the 26 January 2005 stub, 2748, recorded that Witness 63 had delivered that vehicle to its buyer and the buyer had paid in full.⁹¹⁶⁰

4775. These witnesses were uncertain about the date of the Canter’s sale.⁹¹⁶¹ Witness 75 described 25 January 2005 as the ‘most probable’ sale date only⁹¹⁶² after he was shown call sequence tables for 17 to 25 January 2005⁹¹⁶³ and was informed that there was evidence that *Eid*

⁹¹⁵² Witness PRH459, T. 17 June 2015, p. 74.

⁹¹⁵³ Witness PRH459, T. 17 June 2015, pp 73-75; *see also* exhibit P483 (Witness PRH459’s statement of 2 May 2006), ERN 60302886. Witness 459 testified that the sale date was 25 January 2005.

⁹¹⁵⁴ Witness PRH041, T. 17 June 2015, p. 23.

⁹¹⁵⁵ Witness PRH041, T. 17 June 2015, p. 23; Witness PRH063, T. 5 June 2015, pp 65-66; Exhibit P483 (Witness PRH459’s statement of 2 May 2006), ERN 60302886.

⁹¹⁵⁷ Witness PRH063, T. 5 June 2015, p. 67, T. 10 June 2015, pp 71-72.

⁹¹⁵⁸ Exhibit P483 (Witness PRH459’s statement of 2 May 2006), ERN 60302886.

⁹¹⁵⁹ Witness PRH459, T. 17 June 2015, p. 74.

⁹¹⁶⁰ Witness PRH063, T. 5 June 2015, pp 19, 66.

⁹¹⁶¹ By contrast, Gary Platt assumed a sale date range of 17 to 26 January 2005 for the purposes of his ‘Chronology Report’, but in parts of that report, also expressed the opinion that the date was 25 January 2005. Exhibit P1783 (Expert report of Gary Platt—Chronology), paras 27, 595, 744, 750-753 and summary chart in para. 1262, 11 January 2005, 15 January 2005 and 25 January 2005 items. In cross-examination, Mr Platt said 25 January 2005 ‘was chosen’ because Witness 75 said the sale occurred after *Eid Al-Adha*, but conceded that 17 January 2005 was possible too. Gary Platt, T. 5 April 2017, pp 22-23. *Compare* Gary Platt, T. 13 February 2017, pp 13-14, claiming, in effect, that his ‘Chronology Report’ stated only the range 17-25 January 2005, not the specific date of 25 January 2005.

⁹¹⁶² Witness PRH075, T. 15 June 2015, p. 66. *See also* T. 16 June 2015, pp 108-109, confirming that their previous, unadmitted statement that the date was ‘probably’ 19 or 25 January 2005 was correct.

⁹¹⁶³ Exhibits P477-P478; Witness PRH075, T. 15 June 2015, pp 55-57, 64-69.

Al-Adha was on 20 January 2005.⁹¹⁶⁴ Witness 63 said that he was less than 80 per cent sure the sale was after *Eid Al-Adha*⁹¹⁶⁵—it was Witness 75 who had been ‘more sure’ of that⁹¹⁶⁶—although Witness 63 had been 80 to 90 per cent sure that the sale date was 25 January 2005.⁹¹⁶⁷ For both, nothing about the sale was especially memorable.⁹¹⁶⁸

3. Network mobile activity in Tripoli, Tuesday 11 to Tuesday 25 January 2005

4776. In addition to the network activity in Tripoli on and around the days when mobile handsets were bought from or returned to shops in that town,⁹¹⁶⁹ there were Green and or Blue network calls using cells that provide predicted coverage in Tripoli, on six days between December 2004 and 25 January 2005: 11, 12, 14, 15, 22 and 25 January. No network mobiles used cells in Tripoli on Monday 17 January 2005.⁹¹⁷⁰

4777. On Tuesday 11 January 2005, Mr Ayyash’s Green 300 made calls at 14:30 and 14:55 to Mr Badreddine’s Green 023,⁹¹⁷¹ which was using cells in the south Beirut area at the time.⁹¹⁷² With the first call, Green 300 connected to the cell in Tripoli that provided predicted best coverage to Witness 63’s lot for Alfa network mobiles—BEDAOU2—and with the second, to TEBBAN1,

⁹¹⁶⁴ Prosecution submissions, T. 15 June 2015, p. 65.

⁹¹⁶⁵ Witness PRH063, T. 5 June 2015, p. 67.

⁹¹⁶⁶ Witness PRH063, T. 5 June 2015, pp 63, 66-67.

⁹¹⁶⁷ Witness PRH063, T. 10 June 2015, pp 70-72.

⁹¹⁶⁸ Witness PRH063, T. 5 June 2015, pp 65-66, 68; Witness PRH075, T. 16 June 2015, pp 40-41.

⁹¹⁶⁹ Namely, 28 December 2004, 30 December 2004, 4 January 2005 and 5 January 2005, as summarised in chapter X ‘Chronology of network mobile activity before Mr Hariri’s assassination on Monday 14 February 2005’, (C) (2) ‘Surveillance of Mr Hariri and preparations for the attack—Wednesday 20 October 2004 to Sunday 13 February 2005’, and chapter VIII ‘Nature and purpose of colour-coded mobile networks and purple group of mobiles’, (D) (1) ‘Setting up the network’. The Prosecution alleges that such activity formed part of preparations for the attack.

⁹¹⁷⁰ Details of the Blue and Green network calls that day are at exhibit P1224 (Call sequence table of Blue 967), p. 1; exhibit P1227 (Call sequence table of Blue 610), p. 9; exhibit P1228 (Call sequence table of Blue 864), p. 5; exhibit P1229 (Call sequence table of Blue 585), p. 11; exhibit P1231 (Call sequence table of Blue 428), p. 3; exhibit P1234 (Call sequence table of Blue 940), p. 3; exhibit P1236 (Call sequence table of Blue 322), p. 3; exhibit P1259 (Call sequence table of ten numbers—Mr Ayyash), p. 337; exhibit P1305 (Call sequence table of 13 numbers—Mr Badreddine), p. 5677. *See also* exhibit P1782 (Narrative overview of telephone activity and relevant events), paras 499, 619-629, 635-640; exhibit P1780 (Chronology of relevant events), p. 19; exhibit P1783 (Expert report of Gary Platt – Chronology), paras 572, 671-673, 674-681, 683-687, table 85; exhibit P1115 (Expert report of John Edward Philips – 15 Blue mission phones), sub-section 6.9.30.

⁹¹⁷² HADATH3/ROUEIS3, then ROUEIS3/BRAJNE1.

which provided predicted best coverage to an area that begins less than 100 metres from that lot.⁹¹⁷³ This was the only day in the amended consolidated indictment period on which the Green network, or any mobile the Prosecution seeks to attribute to Mr Ayyash, used cells in Tripoli.⁹¹⁷⁴

4778. On 12, 14, 15 and 22 January 2005, Blue 817 used cells in Tripoli, including one of those that provided predicted best coverage to Witness 63's lot.⁹¹⁷⁵ The calls on 12, 14 and 15 January 2005 using Tripoli cells were with Blue 610.⁹¹⁷⁶ The sole call on Saturday 22 January 2005 from Tripoli was to Blue 501.⁹¹⁷⁷

4779. On 15 January 2005, immediately after one of its calls with Blue 817, Blue 610 called Mr Ayyash's Blue 233.⁹¹⁷⁸ Green 300 also contacted Green 023 20 minutes after a call with Blue 610.⁹¹⁷⁹ These calls activated various cells in Beirut, not Tripoli.⁹¹⁸⁰

⁹¹⁷³ At the start of the call in each case. At the end of the calls, Green 300 connected to BEDAOU1 and TEBBAN3, respectively, both of which also provide coverage in Tripoli. TEBBAN1 is adjacent to and west and south-west of BEDAOU2, BEDAOU1 is west of BEDAOU2 and TEBBAN3 is east of BEDAOU2. Exhibit P1259, p. 333; exhibit P592.1.

⁹¹⁸⁰ *See also* exhibit P1782 (Narrative overview of telephone activity and relevant events), paras 591, 594.

4780. On 25 January 2005, there were seven network mobile calls using Tripoli cells, all made to or from Blue 610 in the afternoon. Two were with Blue 864, one was with Blue 967 and the other four were with Blue 233, which activated cells in Beirut on each occasion.⁹¹⁸¹ More specifically:

- Three of Blue 610's four calls with Blue 233 on 25 January 2005 occurred shortly before 15:00, with Blue 610 activating cells in central Tripoli.⁹¹⁸² The first was at 14:40 or 14:41 from Blue 610 to Blue 233⁹¹⁸³ and the other two were from Blue 233 to Blue 610, at 14:54⁹¹⁸⁴ and 14:59:42 or 14:59:58.⁹¹⁸⁵
- Less than a minute before the third call, at 14:59:03 or 14:59:18, Blue 610 had called Blue 967, again activating a cell in central Tripoli.⁹¹⁸⁶
- At 15:10, Green 300 called Green 023 which, like Green 300, activated a cell in Beirut.⁹¹⁸⁷
- Then, at 15:37, Blue 610 made its final call to Blue 233.⁹¹⁸⁸ With that call, Blue 610 activated BEDAOU2 which provided predicted best coverage for Witness 63's lot.⁹¹⁸⁹

- After that, still activating cells in Tripoli, Blue 610 exchanged calls with Blue 864 at 16:43⁹¹⁹⁰ and 16:49.⁹¹⁹¹

4781. Blue 610 then activated cells between Tripoli and Beirut when Blue 233 called it at 17:26 or 17:27 on 25 January 2005⁹¹⁹² and a cell in Beirut at 18:20.⁹¹⁹³ By the end of that day, either using Tripoli cells, cells in Beirut or ones in between, Blue 610 had been in contact with every one of the alleged ‘principal six’ in the assassination team except S7,⁹¹⁹⁴ to whom the Prosecution attributes Blue 324.

4782. The following map, prepared by telecommunications and cell site analysis expert Mr John Edward Philips, depicts seven of the eight cells providing coverage in Tripoli that Blue 610 used on 25 January 2005, namely ASAMRA2, BEDAOU2, MAARAD2, MINA2, MINA3, TEBBAN3 and TRIPOL4.⁹¹⁹⁵ The eighth cell, ASAMRA1, is not pictured but provided fragmented predicted best coverage to a small area in central Tripoli that is visible on the map. The main area of this cell’s predicted coverage, which is less than 500 metres across, is adjacent to those of TRIPOL4 and ASAMRA2.⁹¹⁹⁶

⁹¹⁹⁰ Blue 610 activating TEBBAN3, Blue 864 activating OUZAI2/CBOURJ3. ⁹¹⁹⁴ Exhibit P1224, p. 3; exhibit P1227, p. 11; exhibit P1228, p. 8; exhibit P1229, p. 12; exhibit P1239, p. 6; exhibit P1259, p. 346. *See also* Gary Platt, T. 21 February 2017, p. 98.

⁹¹⁹⁵ Exhibit P1115 (Expert report of John Edward Philips – 15 Blue mission phones), para. 6.9.62.208, map 26, which Mr Philips described as providing ‘Detail of the best server coverage of the cells in the immediate vicinity of Tripoli’. This map also shows some cells that Blue 610 did not activate, namely BAHSAS1, BAHSAS2, BAHSAS3, BALADI1 and TEBBAN1.

⁹¹⁹⁶ Exhibit P592.1.

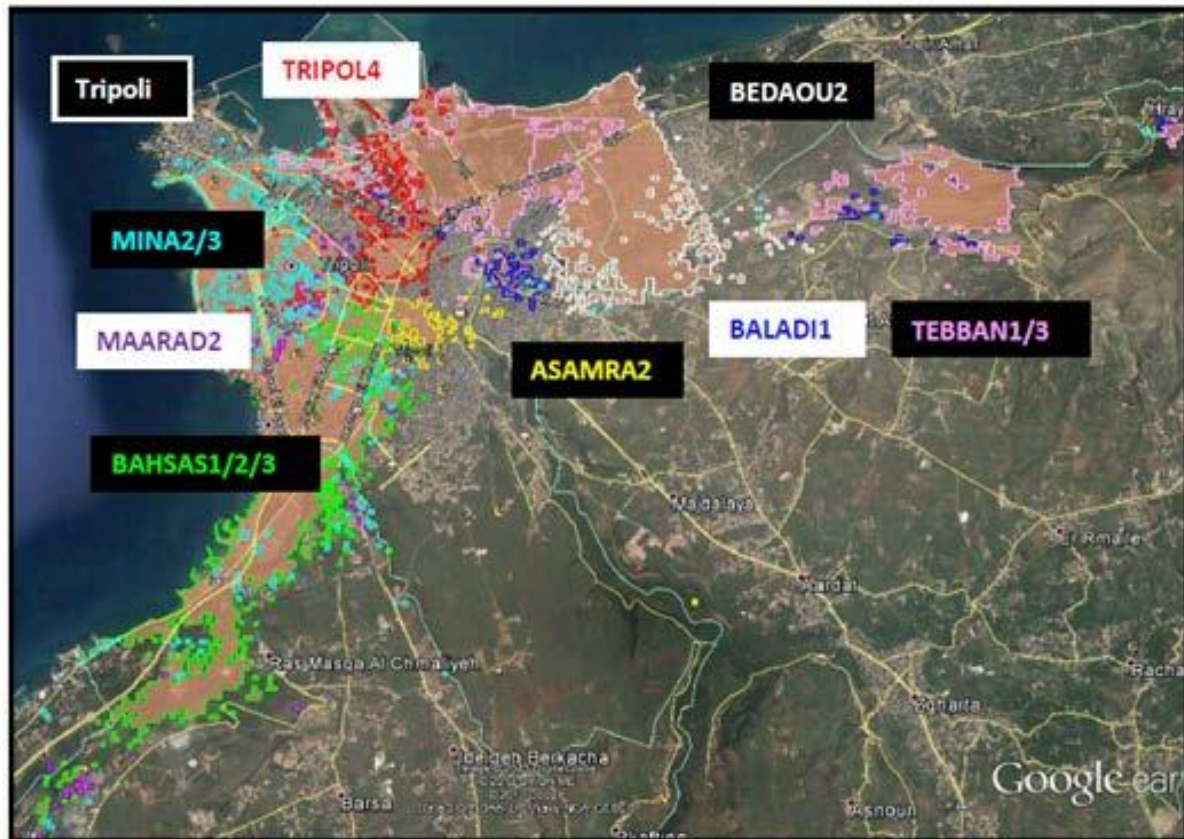

Exhibit P1115 (Expert report of John Edward Philips—15 Blue mission phones), p. 310 (map 26)

4783. Mr Platt considered that the sequence of Blue 610's calls and the call between Green mobiles in the afternoon of 25 January 2005 was significant because it was consistent with Blue 610 updating Green 300's user via that user's Blue mobile.⁹¹⁹⁷ It also meant that Green 300 was providing an update to Green 023.⁹¹⁹⁸

B. Submissions

4784. The Prosecution alleges that two men using false names⁹¹⁹⁹ bought the Canter from the Tripoli dealership on 25 January 2005⁹²⁰⁰ between 15:30 and 16:00.⁹²⁰¹ After importing that

⁹²⁰¹ Amended consolidated indictment, para. 32 (c).

vehicle to Lebanon, Witness 75 had displayed it for sale at Witness 63's lot within a few days of 17 December 2004.⁹²⁰² As Witness 63's calls to Witness 75 on the sale day were five to ten minutes apart, call data records prove that only 17 or 25 January 2005 could be the sale date.⁹²⁰³ Predicted cell coverage data of the relevant cell sites near the lot do not eliminate either date.⁹²⁰⁴ But the preponderance of witness testimony—including about the Canter sale's timing relative to *Eid Al-Adha* and the Isuzu's sale—points to 25 January 2005 as the date.⁹²⁰⁵

4785. Further, Mr Ayyash coordinated the purchase of the Canter, using the Blue and Green networks as overseen by Mr Badreddine.⁹²⁰⁶ Blue and Green network activity in this period confirms 25 January 2005 was the sale date.⁹²⁰⁷ Around the time of the sale that day, Blue 610 (S6) called Blue 233—attributed to Mr Ayyash—using cells in Tripoli including near the dealership.⁹²⁰⁸ One such call occurred one minute after Witness 63's second call to Witness 75.⁹²⁰⁹ S6 was Mr Ayyash's deputy.⁹²¹⁰ In the amended consolidated indictment, the Prosecutor alleges that S6 was one of the Canter's buyers, with another unidentified person.⁹²¹¹ In its final trial brief, the Prosecution submits that S6 'supervised' the Canter's purchase.⁹²¹² Around the sale time Mr Ayyash also used Green 300 to call Green 023, attributed to Mr Badreddine.⁹²¹³ Later in the afternoon, just before leaving Tripoli, Blue 610 also called Blue 864 (S9).⁹²¹⁴ Calls by Blue and

Green network users in Tripoli on several days earlier in January suggest they were scouting for a suitable vehicle.⁹²¹⁵ But there were no such calls on 17 January 2005.⁹²¹⁶

4786. On 14 February 2005, the Prosecution submits, the Canter was used in the explosion. Parts of it, including its engine block, were later found at the crime scene.⁹²¹⁷ The Prosecution also submitted in its final trial brief that all of the circumstances, including the association between the Canter's purchase and unusual network activity in an area east of Beirut airport in January 2005,⁹²¹⁸ suggest that that area was used for preparations for the attack, such as preparing a vehicle-borne improvised explosive device using the Canter.⁹²¹⁹

4787. The Ayyash Defence accepts that Witness 75 imported a Canter to Lebanon in December 2004⁹²²⁰ and that a finding can be made that its engine block was retrieved from the crime scene crater.⁹²²¹ It was in Witness 63's lot by either late December 2004 or early January⁹²²² and there is consistent evidence that Witness 63 called Witness 75 twice in a short space of time during negotiations with its buyers.⁹²²³ Further, the sale occurred on either 17 or 25 January 2005.⁹²²⁴

4788. However, the Ayyash Defence argues that no evidence conclusively establishes the sale date⁹²²⁵ and that it was more likely 17 January 2005 than 25 January 2005.⁹²²⁶ Witnesses testified that the buyers had stayed less than an hour,⁹²²⁷ and their evidence shows the sale happened

⁹²¹⁵ Prosecution final trial brief, paras 15, 420-422, 477 (ii), 875-880. *See also* Prosecution final trial brief, paras 755, 816; amended consolidated indictment, para. 26; Prosecution closing submissions, T. 14 September 2018, pp 40-41.

⁹²¹⁶ The Prosecution also specifically submitted that there was no Blue network activity in the Tripoli area on 17 January 2005. Prosecution final trial brief, para. 870.

between around midday⁹²²⁸ and 14:30⁹²²⁹—thus finishing nearly an hour before the relevant pair of calls on 25 January 2005, at 15:24:49 and 15:36:13.⁹²³⁰ Their evidence about the date was uncertain, ambiguous and contradictory.⁹²³¹ The Lebanese investigating officials' interviewing techniques undermined the autonomy of their memories⁹²³² and their evidence that the sale was after *Eid Al-Adha* is unreliable.⁹²³³ Additionally, the dealership's lack of any systematic record-keeping practice, and its general attitude toward documentation, make the documents used to determine that date unreliable.⁹²³⁴ If the dealership received the Isuzu down payment on 17 January 2005, this would not preclude it having sold the Canter that day.⁹²³⁵ Moreover, the locations of Witness 75's mobile on 25 January 2005 exclude it as the sale date.⁹²³⁶

4789. The Prosecution's allegations about network mobile activity linked to the sale, on both 25 January 2005 and various days before that, are speculative and not proven beyond reasonable doubt.⁹²³⁷ Furthermore, Mr Ayyash was in Saudi Arabia, not Lebanon, from 15 to 28 January 2005.⁹²³⁸ Yet during that period, on 15 and 25 January, Blue 233's and Green 300's calls allegedly linked to the Canter activated cells in Lebanon. Therefore, Mr Ayyash cannot be those mobiles' only user⁹²³⁹ and the Prosecution cannot prove that he was involved in procuring the Canter.⁹²⁴⁰ Lastly, there is no evidence on the Canter's whereabouts between its sale and 14 February 2005.⁹²⁴¹

C. Findings

4790. The Trial Chamber finds that in December 2004, Witness 75 imported a white 2002 Mitsubishi Canter right-hand-drive light commercial truck, with chassis number FE52CE560619 and engine-block number 4D33J01926, to Lebanon from the United Arab Emirates. The Canter was displayed at Witness 63's lot, then sold to two men who paid in cash for it and drove it away. While those men were at the lot on the day of the sale, Witness 63 called Witness 75, regarding price negotiations, twice within five to 15 minutes.

4791. The dealership's records generally were inaccurate and or incomplete. The Canter sale date stated on the desk diary extract, 8 March 2005, is incorrect. The records of the Isuzu's sale and witnesses' testimony, together, suggest the Canter left the dealership before the Isuzu, on a different day. However, given the general unreliability of the records, this does not establish the date of the Canter's sale. Moreover, the dealership witnesses' memories of the time and date of the sale in court, ten years after these events, were uncertain. Even when first interviewed, in mid-2006, they had no reason to remember that sale specifically and, as all acknowledged, were influenced by one another's recollections. Consequently, the witnesses' evidence on its own cannot establish the date of the sale either.

4792. There is, however, no reason to disbelieve the witnesses' evidence. In conjunction with the records of Witnesses 63's and 75's calls, it limits the sale date to either 17 or 25 January 2005. The locations of the predicted coverage areas of the cells Witness 75's mobile activated on those days do not exclude either day, given that coverage data is approximate only and that it is unclear whether Witness 75 was travelling on foot at all relevant times. The Trial Chamber finds that 25 January 2005 is the more likely date of the Canter's sale, based on the combination of the call data records for Witnesses 63's and 75's mobiles, the date of *Eid*, the receipt stubs and the witnesses' evidence.

4793. Regarding the Blue and Green network activity in Tripoli on 11, 12, 14, 15, 22 and 25 January 2005, the Trial Chamber has found beyond reasonable doubt that the Canter was used in the explosion on 14 February 2005.⁹²⁴² The explosives were in the Canter's rear when they were

⁹²⁴² See chapter VI 'Explosion on 14 February 2005', (F) (2) (d) (ii) 'Recovery of Mitsubishi canter parts at the crime scene after the attack', for the Trial Chamber's findings see paras 1308-1316.

triggered.⁹²⁴³ There can also be no reasonable doubt that this was a deliberate act.⁹²⁴⁴ On this basis, the Trial Chamber is satisfied beyond reasonable doubt that obtaining the Canter was part of the plot to commit the attack and kill Mr Hariri.

4794. Based on the call data in evidence, the Trial Chamber is also satisfied that the network calls on 11, 12, 14, 15, 22 and 25 January 2005 occurred and that the users of some Green and Blue mobiles were in Tripoli and likely near the dealership on those days. Specifically, Green 300 was there on 11 January, Blue 817 on 12, 14, 15 and 22 January and Blue 610 on 25 January. Further, as the Trial Chamber has found for reasons set out above that Mr Ayyash remained in Lebanon from 15 to 28 January 2005⁹²⁴⁵ and was Green 300's and Blue 233's sole user, the Trial Chamber accepts that he made and received the relevant calls on both mobiles during that period.

4795. Due to the times and dates of the network activity in Tripoli and the particular cells used, it is plausible that that activity concerned—and evidenced—obtaining the Canter in order to use it in the attack. Although the Trial Chamber does not consider that Mr Ayyash's calls with Green 023 on 15 and 25 January were part of hierarchical call flows as the Trial Chamber has defined that term,⁹²⁴⁶ those calls could still have been relaying information or instructions about this issue, given their coincidence in time with Blue 817's and 610's calls activating Tripoli cells on those days. However, there is insufficient evidence for the Trial Chamber to determine beyond reasonable doubt either any particular network mobile user's role in the Canter's purchase, or what any of them did afterwards to prepare it for use in the explosion on Monday 14 February 2005.

⁹²⁴³ See chapter VI 'Explosion on 14 February 2005', (F) (2) (d) (ii) d. 'Findings'.

⁹²⁴⁴ The Trial Chamber's specific findings on the intention required to prove each of the crimes charged are in chapter XIV 'Legal findings on elements of the crimes and Individual criminal responsibility'.

⁹²⁴⁵ See chapter IX 'Attribution of mobile telephones to the Accused and Mustafa Amine Badreddine', (B) (2) (g) 'The 2005 Hajj', for the Trial Chamber's findings *see* paras 3356-3410.

⁹²⁴⁶ See chapter XIV 'Legal findings on elements of the crimes and Individual criminal responsibility', (B) (3) 'Whether Mustafa Amine Badreddine had a role in the conspiracy'.

XII. CLAIM OF RESPONSIBILITY FOR THE ATTACK ON RAFIK HARIRI

A. Introduction and preliminary issues

4796. On the afternoon of Monday 14 February 2005, some hours after the successful attack on Mr Hariri's life, international media outlets broadcast a claim of responsibility for the attack in which a twenty-two year old Palestinian, Mr Ahmad Abu Adass, claimed responsibility for the attack on behalf of an unknown fundamentalist group called *El-Nusra-wal-Jihad-fi-Bilad-El-Sham* 'Victory and Jihad in Greater Syria'. His family had reported him missing a month earlier.

4797. The Prosecutor's case is that the claim of responsibility was false and that the fundamentalist group is fictional. Rather, Mr Badreddine, Mr Merhi, Mr Oneissi and Mr Sabra were responsible for manufacturing a false claim of responsibility to deflect attention away from the true perpetrators of the attack.

4798. Mr Badreddine is alleged to have monitored, and together with Mr Merhi, coordinated the preparation of the false claim of responsibility.⁹²⁴⁷ Mr Oneissi and Mr Sabra, under Mr Merhi's coordination, are alleged to have participated in Mr Abu Adass's disappearance for the purpose of creating a false claim of responsibility. Before the attack, Mr Merhi is alleged to have coordinated their activities 'in order to identify and effect the disappearance of a suitable individual', Mr Abu Adass, 'who would be used to make the video-taped false claim of responsibility'.⁹²⁴⁸

4799. Immediately after the attack, and under Mr Merhi's coordination, Mr Oneissi and Mr Sabra are alleged to have participated in disseminating statements falsely attributing responsibility for the attack, ensuring the delivery of the video and a letter to Al-Jazeera, and that the video would be broadcast.⁹²⁴⁹

4800. Their role in the claim of responsibility is the sole basis for Mr Merhi's, Mr Oneissi's and Mr Sabra's alleged criminal responsibility. The core events of the false claim plot were:

⁹²⁴⁷ Amended consolidated indictment, para. 3 (e).

⁹²⁴⁸ Amended consolidated indictment, para. 3 (d).

⁹²⁴⁹ Amended consolidated indictment, para. 3 (b)-(c).

- the conspirators identifying a suitable person to make the false claim—namely Mr Abu Adass, who was a young introverted person with strong religious leanings—in the Arab University Mosque in Beirut. Mr Oneissi befriended Mr Abu Adass by pretending to be ‘Mohammed’, who needed assistance in learning how to pray;⁹²⁵⁰
- effecting the disappearance of Mr Abu Adass from his home on Sunday 16 January 2005: ‘Mohammed’ also participated in this;
- creating a video in which Mr Abu Adass falsely claimed responsibility for the attack on Mr Hariri; and
- disseminating and publishing the false claim via media outlets immediately after the assassination on Monday 14 February 2005.⁹²⁵¹

4801. The Prosecutor alleges that Mr Merhi and Mr Badreddine used their Green network mobiles, respectively Green 071 and Green 023, exclusively to ‘exchange information’ and ‘to coordinate the acts done in furtherance of the conspiracy’.⁹²⁵² Mr Merhi coordinated the false claim, and he, Mr Oneissi and Mr Sabra communicated for this purpose on their three personal mobiles. The Prosecution termed these the ‘Purple phones’. These, according to the amended consolidated indictment, were ‘a group of three phones, which were used from at least 1 January 2003 until 16 February 2005’ and ‘were used to communicate amongst each other and to communicate with others outside the group’. Further, they ‘were used to coordinate the false claim of responsibility’.⁹²⁵³

4802. To prove this aspect of its case, the Prosecution led telecommunications and cell site evidence of the movements of the Purple mobiles, namely Mr Merhi’s Purple 231, Mr Oneissi’s Purple 095 and Mr Sabra’s attributed Purple 018;⁹²⁵⁴ and of communications between Mr Badreddine’s Green 023 and Mr Merhi’s attributed Green 071. The Prosecution alleges that

⁹²⁵⁰ In the amended consolidated indictment, the Prosecutor alleges that Mr Oneissi was ‘Mohammed’.

⁹²⁵¹ Amended consolidated indictment, paras 23, 23 (d), 27-29, 44.

⁹²⁵² Amended consolidated indictment, para. 19 (a).

⁹²⁵³ Amended consolidated indictment, paras 15 (e), 16, 19 (d).

⁹²⁵⁴ These are pleaded to be the personal mobiles of Mr Merhi, Mr Sabra and Mr Oneissi between 2003 and 2005. Amended consolidated indictment, para. 16.

behavioural patterns of their mobiles show that Mr Oneissi and Mr Sabra coordinated the false claim, and that Mr Merhi coordinated it.

4803. It also called evidence of what occurred in the mosque in January 2005, and from Mr Abu Adass's family, friends and associates. Finally, it presented evidence from those who received and broadcast the video on the afternoon of Monday 14 February 2005.

4804. The Trial Chamber has found that Mr Merhi was the sole user of his personal mobile Purple 231 from 19 December 2002 to 15 February 2005, and that another colour-coded mobile, the Grey mobile, was unequivocally his from 21 February 2004 to 16 April 2005.⁹²⁵⁵ It has also found that Mr Oneissi was the principal user of his personal mobile Purple 095 from at least 9 January 2003 until 16 February 2005,⁹²⁵⁶ and that Mr Badreddine used Green 023 from at least Monday 6 September 2004 until Monday 14 February 2005.⁹²⁵⁷

4805. The evidence, however, was insufficient to establish that Mr Merhi was using Green 071.⁹²⁵⁸ Similarly, the Trial Chamber could not conclude that Mr Sabra was the sole, main or principal user of Purple 018 in the period pleaded, from 22 December 2004 to 14 February 2005.⁹²⁵⁹ Notwithstanding this, the Trial Chamber has carefully reviewed the evidence on the mobiles' activity, call patterns and cell activations, including that of Green 071 and Purple 018, in the preparation and delivery of the claim of responsibility for the attack on Mr Hariri's life. This is consistent with considering the totality of the evidence led against the Accused. For the purposes of analysis here, and to do justice to the Prosecution's case—and even though the Trial Chamber cannot positively find that Mr Sabra was the user of Purple 018—the analysis below proceeds on the assumption that Mr Sabra *was* Purple 018's single user.

⁹²⁵⁵ See chapter IX 'Attribution of mobile telephones to the Accused and Mustafa Amine Badreddine', (C) (9) (c) 'The Grey mobile' and (d) 'Purple 231'.

⁹²⁵⁶ See chapter IX 'Attribution of mobile telephones to the Accused and Mustafa Amine Badreddine', (D) 'Hussein Hassan Oneissi—Purple 095'.

⁹²⁵⁷ See chapter IX 'Attribution of mobile telephones to the Accused and Mustafa Amine Badreddine', (F) (7) 'Green 023'.

⁹²⁵⁸ See chapter IX 'Attribution of mobile telephones to the Accused and Mustafa Amine Badreddine', (C) (9) (e) 'Green 071'.

⁹²⁵⁹ See chapter IX 'Attribution of mobile telephones to the Accused and Mustafa Amine Badreddine', (E) 'Assad Hassan Sabra—Purple 018'.

1. 'Associate Purple' mobiles

4806. Another aspect of the case was the role of what the Prosecution termed 'Associate Purple' mobiles or 'Purple associates'. They were neither pleaded in the amended consolidated indictment nor in the Prosecution's pre-trial briefs. The three Purple mobiles were all in contact with Purple associate 744, attributed to Mr Merhi's brother, and Purple associate 375.⁹²⁶⁰ The Purple mobiles were also in contact with the other three Purple associates, numbers 415, 251 and 472, although number 472 had only two calls with Mr Oneissi's Purple 095, in November 2004.⁹²⁶¹

4807. In opening the case, Prosecution counsel submitted, regarding Mr Merhi, that seven pre-paid mobile telephones were mutual contacts of the three 'principal' Purple mobiles and of each other. This was particularly during the time of the luring and abduction of Mr Abu Adass in late December 2004 and mid-January 2005, and the delivery of the false claim of responsibility in the afternoon of 14 February 2005.⁹²⁶²

4808. The Trial Chamber received into evidence the call sequence tables of five Associate Purple mobiles,⁹²⁶³ and heard evidence from the Prosecution's criminal network expert, Mr Gary Platt, of the call activities of Purple associate 744 and Purple associate 375. The Prosecution did not bring any evidence as to who used Purple associate 375.⁹²⁶⁴

4809. In its final trial brief, the Prosecution referred a number of times to these two mobiles, in one place arguing that 'Two additional phones are associated with the group through their contact and call patterns, particularly during the period of ABU ADASS' abduction (Purple Associate 744 [Abbas Habib MERHI] and Purple Associate 375)'.⁹²⁶⁵ The brief, however, contains no explanation as to their role in anything pleaded in the amended consolidated indictment.

⁹²⁶⁰ See chapter IX 'Attribution of mobile telephones to the Accused and Mustafa Amine Badreddine', (C) (2) (d) 'Contact profile'; exhibit P1342 (Call sequence table of Associate Purple 744); exhibit P1339 (Call sequence table of Associate Purple 375); exhibit P527 (Call sequence table of Purple 231); exhibit P1221 (Call sequence table of Purple 018); exhibit P1223 (Call sequence table of Purple 095).

⁹²⁶¹ Exhibit P527; exhibit P1221, exhibit P1223; exhibit P1327 (Call sequence table of Associate Purple 472); exhibit P1350 (Call sequence table of Associate Purple 251); exhibit P1361 (Call sequence table of Associate Purple 415).

⁹²⁶² Prosecutor's opening statement regarding Hassan Habib Merhi, T. 18 June 2014, p. 39; Decision on joinder; Trial management decision.

⁹²⁶³ Exhibits P1327, P1339, P1342, P1350 and P1361.

⁹²⁶⁴ Exhibit P1962.1 (Attribution report of Andrew Donaldson regarding Mr Merhi), para. 44 (p. 21).

⁹²⁶⁵ Prosecution final trial brief, para. 504. At para. 776, it states that on Sunday 16 January 2005 'all three Purple and the two Purple Associate phones (744 & 375) became inactive in a synchronised manner', but without explaining its significance.

4810. At the end of the case, the alleged role of these additional Associate Purple mobiles was not clear; hence no findings are made on this.

2. Rule 158 witnesses

4811. As a preliminary yet essential matter, the Trial Chamber notes that much of the evidence as to Mr Abu Adass's background and the 'Mohammed' story comes from witnesses who did not testify in court.

4812. They were his father, Mr Taysir Abu Adass, who died in March 2005, Witness PRH056 and Mr Ziad Ramadan, who was a friend and former workmate. Mr Taysir Abu Adass was deceased, and neither Witness 56 nor Mr Ramadan appeared in court. The Trial Chamber determined, on the Prosecution's application, and over the objections of Defence counsel, that the latter two were 'unavailable' to appear in court and testify, and thus admitted their evidence in statement form under Rule 158.⁹²⁶⁶

4813. The Trial Chamber received into evidence: eleven statements from Witness 56, five on the Prosecution's application, and six on the Sabra Defence's application;⁹²⁶⁷ eight from Mr Ramadan, being three on the Prosecution's and five on the Sabra Defence's applications;⁹²⁶⁸ and nine from Mr Taysir Abu Adass, namely two tendered by the Prosecution and seven by the Sabra Defence.⁹²⁶⁹

4814. The Rule 158 evidence of these witnesses, on many points, is hearsay. Their statements, which are themselves a form of hearsay as out of court statements, contained other hearsay evidence—primarily as to what Mr Abu Adass had said or done—resulting in several levels of hearsay. In some instances, the source of the information in the statements is unclear. This

⁹²⁶⁶ Rule 158 provides for the admission of the evidence of unavailable persons, that is, persons who have died, who can no longer with reasonable diligence be traced or who are for good reason otherwise unavailable to testify orally. Evidence under Rule 158 could be in the form of a written statement, any other reliable record of what the person has said, written or otherwise expressed or a transcript of a statement, whether or not it is in the form prescribed by the Rules. Witness 56 was to testify before the Tribunal, but ultimately did not. Decision admitting evidence under Rule 158 (Witness PRH056); Decision admitting statements of Witness PRH056 under Rule 158. Mr Taysir Abu Adass died shortly after the assassination. Decision on admission of statements of Witness PRH402 and Witness PRH636. Mr Ramadan was unwilling to testify due to his seven-year detention without charge, in a Syrian prison. Rule 158 decision Witness PRH103, paras 7, 35-38.

⁹²⁶⁷ These are exhibits P2128, P2129, P2130, P2131, P2132, 5D474, 5D475, 5D476, 5D477, 5D510 and 5D511.

⁹²⁶⁸ Exhibits P1774, P1775, P1776, 5D469, 5D470, 5D471, 5D472 and 5D473.

⁹²⁶⁹ Exhibit P461, which contains two statements, and exhibits 5D512, 5D513, 5D514, 5D515, 5D516, 5D517 and 5D518, which contain records of and reports on interviews with the witness. *See* Decision on admission of statements of Witness PRH402 and Witness PRH636, para. 24.

inevitably affects its reliability and how the Trial Chamber can use the evidence. Hence, and in accordance with the relevant international legal standards on assessing evidence,⁹²⁷⁰ the Trial Chamber has taken a cautious approach in considering this evidence.

4815. The Merhi Defence submits that the Trial Chamber must examine their statements with caution because of the witnesses' links with Mr Abu Adass.⁹²⁷¹ The Oneissi and Sabra Defence argue that this hearsay evidence, untested by the Defence, is fundamentally unreliable.⁹²⁷² The Oneissi Defence also argues that because the Prosecution alleges that Mr Oneissi was 'Mohammed', meaning that the evidence goes to his acts and conduct, findings on this should not be based on hearsay evidence.⁹²⁷³

4816. The Trial Chamber notes, however, that both the Prosecution and Defence selectively relied upon parts of the Rule 158 statements in support of their own cases, notwithstanding their opposition at the time of proposed admission to Rule 158 statements tendered by the opposing Party. This is of course permissible, as evidence may be used selectively. A witness may be truthful, or reliable, on one point but not on another, and the truthful or reliable evidence, for example, could be corroborated.⁹²⁷⁴

4817. The Prosecution, while relying in general on the Rule 158 witnesses in making its case about the 'Mohammed' story, considers Witness 56's evidence unreliable as to the date(s) on which Mr Abu Adass met 'Mohammed'.⁹²⁷⁵ The Oneissi Defence, however, relies on these witnesses to show that Mr Abu Adass had become more religious and had religious materials on his computer,⁹²⁷⁶ spent long hours at his computer,⁹²⁷⁷ and was sometimes approached by young people looking for religious guidance in the mosque.⁹²⁷⁸

4818. The Sabra and Merhi Defence rely on the witnesses to support their case that a friend of Mr Abu Adass with alleged links to jihad and in particular al-Qaeda, Mr Khaled Taha, telephoned

⁹²⁷⁰ See chapter III 'Assessment of evidence', (C) (6) 'Hearsay evidence'.

⁹²⁷⁸ Oneissi Defence final trial brief, paras 323-324.

the Abu Adass landline on the night before the disappearance.⁹²⁷⁹ The Merhi Defence also relies on the Rule 158 witnesses to support the argument that, in the video claiming responsibility, Mr Abu Adass's appearance had changed.⁹²⁸⁰

4819. Where the out-of-court statements of these witnesses, which were not subject to cross-examination, deal with contested issues, the Trial Chamber has examined whether any other evidence that Defence counsel could challenge in court could corroborate the hearsay evidence. This is consistent with the Trial Chamber's decisions on how to treat this evidence, namely that the Defence's inability to cross-examine these witnesses requires a careful examination of the weight that can be given to their evidence.⁹²⁸¹ Accordingly, the Trial Chamber has only relied upon the evidence in the Rule 158 statements on matters that are either uncontroversial or uncontested.⁹²⁸²

4820. The Trial Chamber has carefully examined the Prosecution's final trial brief on this issue. The Prosecution there appears not to have distinguished between the statements received into evidence under Rule 158 and testimony from witnesses who appeared in court, meaning that their evidence could be challenged in questioning. The Prosecution has consistently used the Rule 158 evidence, and footnoted it, but without noting that the evidence was untested in court. It has done this without differentiating the different types of testimony. No submissions were made about this in the lengthy 'Evaluation of evidence' section of its final trial brief.⁹²⁸³

4821. Further, the Prosecution made no submissions as to why the Trial Chamber should treat the Rule 158 testimony in the manner it apparently suggests, namely, by simply referring to it without distinction as if the evidence were as reliable as the testimony of witnesses who were, or could have been, questioned by the Parties and Judges in court.

⁹²⁷⁹ Merhi Defence final trial brief, paras 514, 517; Sabra Defence final trial brief, paras 21, 24, 36, 636.

⁹²⁸⁰ Merhi Defence final trial brief, para. 518. Unlike the Sabra and Oneissi Defence, the Merhi Defence does not argue that the Trial Chamber should not rely on the Rule 158 witnesses in general.

⁹²⁸¹ Rule 158 decision Witness PRH103, para. 48; Decision denying Merhi Defence certification to appeal Rule 158 decision (Witness PRH103), para. 7; Decision denying Sabra Defence certification to appeal Rule 158 decision (Witness PRH103), para. 6; Decision denying Oneissi Defence certification to appeal Rule 158 decision (Witness PRH103), paras 9-10; Decision admitting evidence under Rule 158 (Witness PRH056), para. 51; Decision denying certification to appeal of 1 February 2018, paras 20, 25; Decision denying certification to appeal (Rule 158 admission), paras 21, 23.

⁹²⁸² See chapter III 'Assessment of evidence', (C) (6) 'Hearsay evidence'.

⁹²⁸³ Prosecution final trial brief, paras 28-79.

4822. The closest the final trial brief comes to distinguishing between the two types of evidence appears to be at paragraphs 512 to 513. There, the Prosecution submits that the evidence of one witness (Mr Ramadan) is corroborated by ‘the independent evidence of’ another (Witness 87) who did testify. And further, that the ‘Mohammed’ story is corroborated by a witness who encountered a ‘Mohammed’ in the mosque.⁹²⁸⁴ In that section of the brief, the Prosecution relies heavily on Witness 56’s and Mr Ramadan’s statements.⁹²⁸⁵ However, it does this without explaining either how the live testimony corroborates the hearsay Rule 158 evidence, or why the Trial Chamber should find the Rule 158 evidence reliable or credible. In oral closing submissions, Prosecution counsel submitted that the Prosecution ‘relies upon the admitted statements and testimony of four witnesses’, two of whose testimony was admitted under Rule 158.⁹²⁸⁶

4823. Finally, the Oneissi Defence, in its final trial brief submitted that the Trial Chamber, pursuant to Rule 140 and to avoid an injustice, ‘should reconsider its erroneous decision to admit’ the evidence of Witness 56, Mr Taysir Abu Adass and Mr Ramadan.⁹²⁸⁷ The Trial Chamber has decided, generally, to give Witness 56’s and Mr Ramadan’s Rule 158 statements little weight, and to give some contested portions no weight. It has given some limited weight to Mr Taysir Abu Adass’s evidence. In these circumstances, reconsideration is unnecessary.

3. Mr Ziad Ramadan (Witness PRH103)

4824. Another preliminary point is of Mr Ramadan’s background; the information below comes from his witness statements that were received into evidence, international reports relating to his detention in Syria and a Prosecution investigatory statement.

4825. Mr Ramadan is a Syrian national, who worked with Mr Abu Adass. The two sometimes spoke by telephone and Mr Ramadan visited Mr Abu Adass at his home. The Lebanese investigating authorities arrested Mr Ramadan in Beirut on the evening of Wednesday 16 February

⁹²⁸⁴ In oral closing arguments, Prosecution counsel said, ‘For the evidence regarding Mohammed, the Prosecution relies upon the admitted statements and testimony of four witnesses: Two protected witnesses who testified in court, including PRH087; and two other witnesses who the Chamber determined were unavailable, PRH056 and PRH103, that being Mr. Ziad Ramadan.’, T. 13 September 2018, p. 35.

⁹²⁸⁵ And also in analysing Mr Abu Adass’s character, for example, at para. 530 in footnoting to the Rule 158 statements of Mr Taysir Abu Adass, Mr Ramadan and Witness 56.

⁹²⁸⁶ Namely, Witness 56 and Mr Ziad Ramadan—and two witnesses who testified in court; Prosecution closing submissions, T. 13 September 2018, p. 35 (Mr T. Adhihetty).

⁹²⁸⁷ Oneissi Defence final trial brief, paras 206-262.

2005 because of his contacts with Mr Abu Adass. He provided a statement, but was not charged, and was released the next day, on Thursday 17 February 2005.⁹²⁸⁸

4826. In the first week of March 2005, Mr Ramadan left for Syria because the Lebanese authorities had discovered on 16 February 2005 that his residence permit had expired. He fled out of fear of rearrest. On 21 July 2005, he voluntarily surrendered to the Syrian intelligence services, who were looking for him. The Syrian authorities detained and interrogated him and asked several times why he had escaped from Lebanon.⁹²⁸⁹

4827. Mr Ramadan was detained, it appears without charge or trial, for the next seven years in the Syrian prison system. During his detention, according to international reports, he was severely mistreated. After his release in 2012, he fled Syria.⁹²⁹⁰

4828. Mr Ramadan's detention in Syria was the subject of international reports, including by the UN Human Rights Council's Working Group on Arbitrary Detention in 2009. It reported that his deprivation of liberty was 'arbitrary, being in contravention of Articles 9 and 19 of the International Covenant on Civil and Political Rights' and requested the Syrian government to 'take the necessary steps to remedy the situation', which in its opinion would amount to immediately releasing Mr Ramadan and to accord him appropriate reparation.⁹²⁹¹ The Trial Chamber did not receive evidence on the exact date of Mr Ramadan's release from Syrian custody.⁹²⁹²

4829. Mr Ramadan was on the Prosecution's witness list with the pseudonym Witness PRH103, but, during the trial, he informed Prosecution officials that he did not wish to testify. The Special

⁹²⁸⁸ Exhibit P1775 (Witness statement of Ziad Ramadan, UNIIC, 1 December 2005), p. 1, paras 7, 10-11, 36-37, 63, 68-69 (ERNs 205565-205566, 205569, 205571-205572).

⁹²⁸⁹ Exhibit P1775 (Witness statement of Ziad Ramadan, UNIIC, 1 December 2005), paras 7, 13, 19 (ERNs 205565-205567).

⁹²⁹⁰ Rule 158 decision Witness PRH103, paras 6-7, 12, 14.

⁹²⁹¹ UN Human Rights Council, Working Group on Arbitrary Detention, Opinion No. 24/2010 (Syrian Arab Republic), UN Doc. A/HRC/WGAD/2010/24, 24 February 2012, ERNs D0487247-D0487250; UN Human Rights Council, Report of the Special Rapporteur on the independence of judges and lawyers, Leandro Despouy, Addendum – Situation in Specific Countries Territories, UN Doc. A/HRC/11/41/Add.1, 19 May 2009, ERNs D0487452, D0487454-D0487455, paras 301, 305; Human Rights Watch, 'Syria: Free Man Falsely Held as Witness', 23 July 2010, ERNs D0487279-D0487281.

⁹²⁹² An NGO, the Damascus Center for Human Rights Studies, referred to in the Prosecution motion tendering Mr Ramadan's statements, (F2601, Prosecution Motion to Admit Two Statements and an Interview Transcript of PRH103, 23 May 2016, at para. 17 (ix)) reported on 22 August 2011 that Mr Ramadan had been sentenced to six years imprisonment, that he should accordingly have been released in July 2011, but that Syria refused to do so, *see* <https://www.alkarama.org/en/articles/syria-ziad-ramadan-remains-detained-despite-end-sentence-and-wgad-opinion-calling-his>.

Tribunal has no agreement with his country of residence with regard to compelling his testimony;⁹²⁹³ the result was that he did not testify in court.

4830. Accordingly, and on the Prosecution's application, the Trial Chamber admitted three statements—that Mr Ramadan provided between 16 February 2005 and 22 May 2006 to the Lebanese investigating authorities and the UNIIC⁹²⁹⁴—into evidence under Rule 158.⁹²⁹⁵ In deciding on the statements' *prima facie* reliability—there being no issue as to their relevance to the proceedings—and hence admissibility, the Trial Chamber examined the circumstances of the taking of the statements, their internal consistency and corroboration by any evidence already heard by the Trial Chamber.⁹²⁹⁶ In support of its application, the Prosecution submitted a statement from an investigator⁹²⁹⁷ concerning the circumstances of Mr Ramadan's interview by the UNIIC in May 2006, during his detention in Syria. The investigator did not notice any signs then that Mr Ramadan had been physically abused.⁹²⁹⁸

4831. During his detention in Syria, Mr Ramadan was interrogated by the Syrian authorities, and he provided statements relating to Mr Abu Adass. The Sabra Defence sought the admission into evidence of these statements.⁹²⁹⁹ The Trial Chamber held that although they were made when Mr Ramadan was in custody, none of the Parties had sought to cast doubt on their accuracy, reliability or voluntariness. The Trial Chamber closely examined them and decided that they had sufficient probative value for admission into evidence in the interests of fairness and for a complete picture of what had occurred.⁹³⁰⁰ That decision, however, was for the purpose of deciding their

⁹²⁹³ Rule 158 decision Witness PRH103, paras 14-16.

⁹²⁹⁴ On 1 December 2005, investigators from the UNIIC interviewed the witness at a hotel in Damascus. The Syrian authorities took him from custody to the hotel for the interview. He provided the investigators with a written statement. Exhibit P1775 (Witness statement of Ziad Ramadan, UNIIC, 1 December 2005).

⁹²⁹⁵ The statements received exhibit numbers P1774 to P1776. The Trial Chamber thereafter denied applications by the Merhi Defence, Sabra Defence and Oneissi Defence to certify for interlocutory appeal the admission of the statements. Decision denying Merhi Defence certification to appeal Rule 158 decision (Witness PRH103); Decision denying Sabra Defence certification to appeal Rule 158 decision (Witness PRH103); Decision denying Oneissi Defence certification to appeal Rule 158 decision (Witness PRH103).

⁹²⁹⁶ Rule 158 decision Witness PRH103, paras 39, 42, 44, 47.

⁹²⁹⁷ Statement of Mr Alasdair Macleod, dated 5 December 2016, which is not in evidence.

⁹²⁹⁸ Mr Macleod's statement was provided to the Trial Chamber, the Parties and participants via the Special Tribunal's Legal Workflow system, following a request by the Trial Chamber for further information. F2870, Prosecution Second Further Submissions pursuant to the Trial Chamber Request regarding PRH103, 5 December 2016, para. 1.

⁹²⁹⁹ Exhibits 5D469 to 5D473. The Trial Chamber thereafter denied an application by the Prosecution to certify for interlocutory appeal the admission of the statements. Decision denying Prosecution certification to appeal Rule 158 decision (Witness PRH103).

⁹³⁰⁰ Rule 158 decision Witness PRH103, paras 49-52.

admissibility, as opposed to how much weight the Trial Chamber could give to them in evaluating the evidence in its deliberations.

B. Making the claim of responsibility for the attack

4832. In the immediate aftermath of the explosion on 14 February 2005, Beirut was in a state of chaos and crisis. The Trial Chamber received evidence of an atmosphere of turmoil that included the overloading of the mobile networks and a breakdown in communications.

4833. People were desperately trying to obtain information about family and friends. The crime scene, as is detailed above,⁹³⁰¹ was swamped with emergency and security personnel, journalists and many others who should not have been there, including people looking for their loved ones. It was at first unclear whether Mr Hariri had survived the attack. When his death was announced, the obvious question was of ‘who was responsible’. It was in this setting, but before Mr Hariri was officially confirmed dead, that the Beirut offices of Reuters and Al-Jazeera received calls claiming responsibility for the attack.

4834. The Prosecution case is that the claim of responsibility was made by four telephone calls—one to Reuters and three to Al-Jazeera—and a video and accompanying letter, which were put in a cardboard box in a tree near the Al-Jazeera office.⁹³⁰²

4835. It relies on the Purple mobiles’ call data records and cell site evidence to show that Mr Oneissi and Mr Sabra, coordinated by Mr Merhi, participated in the delivery and dissemination of the false claim.⁹³⁰³ The amended consolidated indictment explicitly pleads that either Mr Oneissi *or* Mr Sabra made the call to Reuters, the first and third calls to Al-Jazeera, and that Mr Sabra made the second call to Al-Jazeera.⁹³⁰⁴ For the third call to Al-Jazeera—the fourth in time that afternoon—the pleading is that Mr Oneissi *or* Mr Sabra ‘demanded with menace that Al-Jazeera broadcast the video, which was done shortly after’.⁹³⁰⁵

⁹³⁰¹ See chapter VI ‘Explosion on 14 February 2005’, (C) ‘The explosion and immediate aftermath’.

⁹³⁰⁵ Amended consolidated indictment, para. 44 (g).

1. Evidence

4836. Those involved in making the claim of responsibility called Reuters and Al-Jazeera from four different payphones in Beirut on Monday 14 February 2005. On the Prosecution case, the calls were made at 14:11, 14:19, 15:27 and 17:04.⁹³⁰⁶ The map below shows where these payphones were; they are labelled one to four, and the offices of Al-Jazeera and Reuters and the tree are also marked.

Exhibit P1923 (Chronology PowerPoint presentation – 13 February 2005 to 16 February 2005), slide 146

(a) Call to Reuters at 14:11

4837. Witness PRH012—who worked for the Reuters news agency in Beirut—was working at the office on 14 February 2005 when she heard the explosion. She left and went to the blast scene,

⁹³⁰⁶ Amended consolidated indictment, para. 44 (a)-(b), (d), (g).

taking about seven to eight minutes to get there by taxi and on foot, where she saw that cars were still exploding. She stayed for about half an hour and returned to the office.⁹³⁰⁷

4838. Less than half an hour later, while watching news coverage about the explosion, the telephone rang. The witness answered and heard a male voice saying: ‘Write, write down’. She asked, ‘Who’s speaking?’ to which the caller replied, ‘Keep quiet and write’.⁹³⁰⁸ He then read a statement, which she recalled as follows:

We, the Nusra and Jihad group in the Greater Syria, on this day have given due punishment to the infidel Rafik Hariri, so that he may be an example to others of his sort. God is our witness, God is a witness to what we’re saying.⁹³⁰⁹

4839. The caller, according to the witness, spoke classical Arabic with an accent that sounded unnatural and unusual.⁹³¹⁰ She felt that the caller was over-pronouncing certain letters and used a dialect close to a Palestinian one.⁹³¹¹ She did not hear any background noise on the other end of the line.⁹³¹²

4840. According to call data records, at 14:11, the Reuters news agency received a 41-second call using telecard 6162569.⁹³¹³ It was made from a public payphone⁹³¹⁴ near Abou Shaker Square—El-Mazraa, Abou Shaker Street next to Mufti Hasan Khaled Organization for Education—set on a triangle shaped concrete island in a busy square.⁹³¹⁵

4841. The amended consolidated indictment pleads that either Mr Oneissi or Mr Sabra made this call.

(b) First call to Al-Jazeera at 14:19

4842. On 14 February 2005, at the time of the explosion, Mr Ghassan Ben-Jeddo, Al-Jazeera's Beirut bureau chief,⁹³¹⁶ and Witness PRH007, a film director working there, were in Al-Jazeera's then new Beirut office.⁹³¹⁷

4843. They went outside and then headed towards the main Al-Jazeera office in the centre of Beirut, near a government building.⁹³¹⁸ About thirty minutes after the explosion, Mr Ben-Jeddo reached the main office.⁹³¹⁹

4844. Mr Ben-Jeddo watched Mr Hariri's *Al-Mustaqbal* TV announce his death. Shortly afterwards Al-Jazeera's landline received a call.⁹³²⁰ While Mr Ben-Jeddo was uncertain as to the exact timing of the call, he was confident that this call followed the announcement of Mr Hariri's death on *Al-Mustaqbal* TV.⁹³²¹ Witness PRH006, an editor at Al-Jazeera, answered the call.⁹³²²

4845. The witness heard a male voice telling her to take a paper and a pen because he had a statement to make. The caller then started dictating quickly.⁹³²³ When the witness could not follow

what the caller was saying, he became angry and threatened to hang up;⁹³²⁴ the witness then gave the telephone to Mr Ben-Jeddo.⁹³²⁵

4846. Mr Ben-Jeddo listened and took notes.⁹³²⁶ The caller said something very similar to the written text, containing the claim of responsibility for the assassination, that the Al-Jazeera employees found in the tree later that afternoon.⁹³²⁷ Initially, Mr Ben-Jeddo did not take this information seriously because he had never heard about the organisation before and in his experience sometimes more than one organisation claimed responsibility for such attacks.⁹³²⁸ He made notes during the call but did not keep them.⁹³²⁹ The call lasted a minute or a minute and a half.⁹³³⁰

4847. Both Witness 6 and Mr Ben-Jeddo said that the caller spoke classical Arabic.⁹³³¹ Witness 6 found the caller's voice high-pitched and tense.⁹³³² To her it seemed as if he had put on a Lebanese accent.⁹³³³ She could hear background noises, such as cars passing by.⁹³³⁴

4848. Mr Ben-Jeddo testified that the caller was neither screaming nor shouting, and it sounded like he was reading from a script. He was speaking fast, using classical Arabic, but his Arabic was very poor.⁹³³⁵ His pronunciation was broken and weak, and it was unclear if the caller was even a native Arabic speaker.⁹³³⁶ Mr Ben-Jeddo thought that the caller may have been from Afghanistan

or Pakistan,⁹³³⁷ a native English speaker who also spoke Arabic,⁹³³⁸ a Lebanese person with a poor command of the language⁹³³⁹ or someone pretending to have poor Arabic.⁹³⁴⁰ His perception of the caller's poor command of Arabic, however, could also have been due to the poor quality of the landline, and the background noise.⁹³⁴¹

4849. As to the timing of the call, the call data records show that Al-Jazeera's Beirut office received a 61-second call on 14 February 2005, at 14:19, from a public payphone on the Saeb Salam Boulevard, facing the Arab Bank, also using telecard 6162569.⁹³⁴² Mr Ben-Jeddo appeared live for the first time after the explosion during a news bulletin on the 'top of the hour', which would have been either at 14:00 or 15:00.⁹³⁴³

4850. In this broadcast, he only hesitantly mentioned the call claiming responsibility for the assassination, as he was sceptical about its veracity.⁹³⁴⁴

4851. In the amended consolidated indictment, the Prosecutor pleads that either Mr Oneissi or Mr Sabra made this call.

(c) Second call to Al-Jazeera at 15:27

4852. After Mr Ben-Jeddo's live appearance during a news bulletin, Witness 6 received a second call on the Al-Jazeera landline.⁹³⁴⁵ When the caller heard Witness 6's voice, he refused to talk to her and asked to speak to someone who would understand what he was saying.⁹³⁴⁶ The witness could not recognise if it was the same caller, but was under the impression that he recognised her. The caller was speaking Arabic in a high-pitched, nervous and tense voice. Witness 6 passed the telephone to Mr Ben-Jeddo.⁹³⁴⁷

4853. Mr Ben-Jeddo noticed a difference between the two callers.⁹³⁴⁸ This time the caller was speaking 'proper Arabic' without any accent, with a sharp and pleasant voice. Mr Ben-Jeddo perceived him as an Arab from the Levant region with an accent similar to Lebanese. Unlike the first call, the line was clear. The noise in the background made the witness believe that the speaker was in a public area.⁹³⁴⁹ The second caller's voice was different to the first caller's.⁹³⁵⁰

4854. The caller told Mr Ben-Jeddo that there was a video tape on a tree near the Al-Jazeera building, next to a pink building. He said that it must be retrieved within fifteen minutes or it would not be found.⁹³⁵¹

4855. The call data records reveal that the Al-Jazeera's landline office received a 54-second call at 15:27 from a public payphone⁹³⁵² in *Rue Banque du Liban* facing the Abou Bakr El Saddik mosque in Hamra, using the same telecard, number 6162569.⁹³⁵³

4856. In the amended consolidated indictment, the Prosecutor pleads that Mr Sabra made this call.

(d) Collection of the videoed claim of responsibility and the letter at 15:53

4857. After the second call to Al-Jazeera, Mr Ben-Jeddo asked Witness 7 to go and get the tape.⁹³⁵⁴ Witness 7 agreed and went to the tree.⁹³⁵⁵

4858. This particular tree was unique and is well-known,⁹³⁵⁶ as it was high and stood out from the other trees in the area.⁹³⁵⁷ Normally a private security officer was next to the tree, but a building next to it blocked a closed circuit TV view of the tree.⁹³⁵⁸ For illustration purposes, exhibit P498 below is a satellite photograph, annotated by Mr Ben-Jeddo, with an arrow showing the tree, which is marked as 'TREE'; it also shows the Al-Jazeera office.

⁹³⁵⁶ Witness PRH006, T. 23 June 2015, p. 60.

⁹³⁵⁷ Exhibit P492 (Statements of Witness PRH115, dated 8 February 2007, 3 October 2008 and 13 March 2015), p. 16 (ERN 60305521).

⁹³⁵⁸ Exhibit P492 (Statements of Witness PRH115, dated 8 February 2007, 3 October 2008 and 13 March 2015), p. 15 (ERN 60305520).

Exhibit P498 (Satellite photograph annotated by Ghassan Ben-Jeddo)

4859. Witness 7 looked up discreetly and noticed a white box in the tree with three to five small holes.⁹³⁵⁹ He thought it was a birdcage and it was empty.⁹³⁶⁰ Being afraid that someone might shoot him, he dared not take it. He went back to the office empty-handed saying that he could not find anything.⁹³⁶¹

⁹³⁵⁹ Witness PRH007, T. 24 June 2015, pp 63-64; exhibit P491 (Statements of Witness PRH007), pp 11-12; exhibit 4D161.

⁹³⁶⁰ Exhibit P491 (Statements of Witness PRH007), p. 12.

⁹³⁶¹ Witness PRH007, T. 24 June 2015, pp 62, 65; exhibit P491 (Statements of Witness PRH007), pp 11-12; exhibit 4D161; Ghassan Ben-Jeddo, T. 9 July 2015, pp 35-36; Witness PRH006, T. 23 June 2015, pp 60-61, T. 24 June 2015, p. 9; exhibit 5D166 (Statement of Ghassan Ben-Jeddo, dated 15 July 2005), para. 17; exhibit 5D167 (Statement of Ghassan Ben-Jeddo, dated 5 and 12 September 2007), para. 58.

4860. Mr Ben-Jeddo said that if Al-Jazeera did not get the tape it would be given to another station.⁹³⁶² Witness PRH115, a technician working at Al-Jazeera,⁹³⁶³ then volunteered to go and get the tape.⁹³⁶⁴

4861. Witness 115 said that the Lebanese Security Forces and army personnel frequently patrolled the area, which made him afraid when he approached the tree.⁹³⁶⁵ He walked around the tree two or three times before he noticed a white box on one of the branches. It was not easy to see from the ground.⁹³⁶⁶ At 15:52, he sent an SMS to Witness 6 saying ‘there is a white box on it, I daren’t go and get it.’⁹³⁶⁷

4862. The photograph below circled by Witness 115, exhibit 4D161, shows where he saw the white box with the tape.

Exhibit 4D161 (Photograph marked by Witness PRH115 showing where on the tree he saw the white box)

4863. Witness 6 told Mr Ben-Jeddo about Witness 115's message, and Mr Ben-Jeddo then went to get the tape.⁹³⁶⁸ Witness 6 sent an SMS message to Witness 115 saying that Mr Ben-Jeddo was coming.⁹³⁶⁹ After Witness 115 saw this message, he climbed about a metre or a metre and a half up the tree and collected the box.⁹³⁷⁰ He sent an SMS at 15:53 to Witness 6 saying 'I got it, a VHS

tape. Ai.⁹³⁷¹ Witness 115 did not dare bring the box with him, so he left it at the bottom of the tree and took only a white sealed envelope.⁹³⁷²

4864. Mr Ben-Jeddo met Witness 115 outside the building, coming back with the envelope. They both returned to the office.⁹³⁷³ Witness 115 said that he went to collect the tape and returned to the office between 14:00 and 15:00.⁹³⁷⁴

4865. Witness 115 then gave the envelope to Mr Ben-Jeddo who opened it and found a VHS tape inside and a written statement claiming responsibility.⁹³⁷⁵ Mr Ben-Jeddo held the tape with a tissue, as he did not want to touch it and contaminate it with his fingerprints.⁹³⁷⁶

4866. After watching the tape, Witness 6 converted it from VHS to digital format to send to Al-Jazeera's headquarters in Doha, Qatar.⁹³⁷⁷ The formatting took about ten to twenty minutes.⁹³⁷⁸

⁹³⁷⁸ Witness PRH006, T. 23 June 2015, p. 69; Ghassan Ben-Jeddo, T. 9 July 2015, p. 51.

Witness PRH430, also an Al-Jazeera producer, transmitted the footage to Doha,⁹³⁷⁹ while Mr Ben-Jeddo faxed the letter accompanying the tape to the headquarters.⁹³⁸⁰

4867. Witness 115 testified that he was ‘under the tree’ when he sent first text message at 15:52, saying ‘I remember that because some things one cannot forget’; he also said that he was ‘by the tree’ when he sent the messages to Witness 6.⁹³⁸¹

4868. In the amended consolidated indictment, the Prosecutor pleads that Mr Oneissi was watching the location to confirm receipt of the video by Al-Jazeera.⁹³⁸²

(e) Third call to Al-Jazeera at 17:04

4869. After Witness 430 transmitted footage from the scene of the explosion to Al-Jazeera’s Doha headquarters, he went to the Al-Jazeera offices on the fourth floor, where he found Mr Ben-Jeddo and Witness 6.⁹³⁸³ Shortly afterwards, the witness answered a call on the office landline.⁹³⁸⁴

4870. The line was clear, without any background noise. Witness 430 heard a man in a clear and high voice say in classic Arabic, without a Lebanese colloquial dialect, ‘I want to talk to Ghassan Ben-Jeddo’.⁹³⁸⁵ When the witness asked who was calling, the caller raised his voice and started to speak loudly, saying, ‘Give me Ghassan Ben-Jeddo.’⁹³⁸⁶ The witness immediately handed the telephone to Mr Ben-Jeddo and stayed with him until the end of the call.⁹³⁸⁷

4871. Mr Ben-Jeddo could not remember whether the call occurred shortly after 15:00 or shortly after 16:00, but was certain that the caller asked him why the video had not yet been broadcast.⁹³⁸⁸ Mr Ben-Jeddo explained that they had sent the tape to Doha and the decision to air the video would

⁹³⁸⁵ Witness PRH430, T. 13 July 2015, pp 24-25, 58, 71-72.

⁹³⁸⁶ Witness PRH430, T. 13 July 2015, pp 24, 52, 71.

⁹³⁸⁷ Witness PRH430, T. 13 July 2015, pp 24-25, 49.

⁹³⁸⁸ Ghassan Ben-Jeddo, T. 9 July 2015, pp 52-53, 107; exhibit 5D166 (Statement of Ghassan Ben-Jeddo, dated 15 July 2005), para. 21 (‘The third call came approximately at 1515 hrs.’); exhibit 5D167 (Statement of Ghassan Ben-Jeddo, dated 5 and 12 September 2007), para. 72 (‘Approximately 60 minutes after we collected the video I received the third call’); exhibit 5D169 (Statements of Ghassan Ben-Jeddo, dated 9 March 2005 and 9 April 2005), p. 2 (stating that the third call occurred between 15:00 and 15:30); exhibit 5D170 (Record of Ghassan Ben-Jeddo’s interview with UN Fact-Finding Mission), p. 1 (‘At about 3:30 p.m., I received a third phone call from another man and asked me why I did not broadcast the tape’).

be taken by Al-Jazeera's headquarters.⁹³⁸⁹ The caller became threatening, and in a sharp voice said that Al-Jazeera would hear a lot in the future about the group claiming responsibility for the attack, and that it was in the company's interest to cooperate.⁹³⁹⁰

4872. Mr Ben-Jeddo's impression was that the caller had a similar accent to that of the second caller, namely a Lebanese accent or from the Levant region speaking both classical and colloquial Arabic.⁹³⁹¹ He heard very little to no background noise during the third call.⁹³⁹²

4873. Mr Ben-Jeddo said that *three* different people called him about the attack.⁹³⁹³

4874. According to call data records, Al-Jazeera's Beirut office received a two-minute call at 17:04 using telecard 6162569 from a public payphone⁹³⁹⁴ on Habib-Abou-Chahla Street, next to the *Saint Elie Battina* College in the Mazraa area.⁹³⁹⁵

4875. In the amended consolidated indictment, the Prosecutor pleads that either Mr Oneissi or Mr Sabra made this call.

(f) Possible fourth call to Al-Jazeera

4876. Call data records reveal only three payphone calls to Al-Jazeera using telecard 6162569 on 14 February 2005.⁹³⁹⁶ Mr Ben-Jeddo, however, testified that the Al-Jazeera office received four calls regarding the claim of responsibility.

⁹³⁸⁹ Ghassan Ben-Jeddo, T. 9 July 2015, pp 51-53, 107-108; exhibit 5D166 (Statement of Ghassan Ben-Jeddo, dated 15 July 2005), para. 21; exhibit 5D167 (Statement of Ghassan Ben-Jeddo, dated 5 and 12 September 2007), para. 72; exhibit 5D169 (Statements of Ghassan Ben-Jeddo, dated 9 March 2005 and 9 April 2005), p. 2. *See also* Witness PRH430, T. 13 July 2015, pp 49-50; exhibit 5D170 (Record of Ghassan Ben-Jeddo's interview with UN Fact-Finding Mission), p. 1.

⁹³⁹⁶ Exhibit P546; exhibit 3D305; exhibit P1971.

4877. In two statements, dated 17 February and 9 March 2005, and tendered into evidence by the Sabra Defence, he noted that these calls took place around 13:30, 14:15, 15:30 and 16:00.⁹³⁹⁷ Witness 6 also testified that there were four calls to Al-Jazeera regarding the videotape.⁹³⁹⁸ Witness 430, testifying ten years and five months after the event, could not remember whether there were three or four calls regarding the claim of responsibility.⁹³⁹⁹

(g) Broadcast of the claim video at 17:30

4878. Al-Jazeera's Doha headquarters was initially reluctant to broadcast the video footage of the claim of responsibility. Mr Ben-Jeddo said that it took between one and a half and two hours to decide to air the tape, and the video was eventually broadcast at 17:30.⁹⁴⁰⁰

4879. The video tape contained a footage of Mr Abu Adass, who was seated under a banner purportedly to be that of the group *El-Nusra-wal-Jihad-fi-Bilad-El-Sham* (Society for Support and Jihad in Greater Syria), reading out the following claim of responsibility:

In the name of Allah, Lord of the Worlds, Blessings and Peace be upon his Beloved Prophet and his family and all his companions.

In support of our brothers, the Mujahedeen in the Land of the Two Holy Mosques, and to avenge their innocent martyrs, who were killed by the security forces of the infidel Saudi regime in the Land of the Two Holy Mosques, we have resolved, having placed our trust in God Almighty, to inflict just punishment upon the agent of that regime and its cheap tool in Greater Syria, the sinner and holder of ill-gotten gains Rafiq Hariri, through the execution of a resounding martyrdom operation; such as to confirm our promise of Victory and 'jihad' and to herald numerous martyrdom operations against the infidels, apostates and tyrants in the Greater Syria.

“Praise be to Allah, Lord of the Worlds.”⁹⁴⁰¹

Exhibit P766 (Still image from video-recorded claim of responsibility featuring Mr Abu Adass aired on Al-Jazeera)

4880. The letter accompanying the video tape stated:

Praise be to God Lord of the Worlds, Most Gracious, Most Merciful, Master of the Day of Judgment, and Blessings and Peace be upon his Servant and Prophet and his family and all his companions.

Here is good news for all Muslims and especially the Holy Land of Palestine, Mesopotamia, the Sanctuary of the Two Holy Places, our brothers in Afghanistan, our people in Chechnya and the Blessed Land of Greater Syria; good news raising the banner of oppressed believers and supporting their struggle against arrogant despots.

⁹⁴⁰¹ Exhibit P499 (The digital format of the video tape containing the claim of responsibility); exhibit P499.1 (Transcript of text read by Ahmad Abu Adass on the tape).

Praise be to God, the banner of support and jihad was held aloft in Greater Syria and, praise be to God, due punishment was meted out to the agent of infidelity in the Land of the Two Holy Places, Rafic Hariri, through a suicide operation carried out by the Mujahid, Ahmad Abou-Adass, who raised the banner of support and jihad in Greater Syria on Monday 14 February 2005 AD, 5 Muharram 1426 AH, in Beirut.

God is Great, Praise be to God Lord of the Worlds.

Attached is a film of the martyr Ahmad Abou Adass, who carried out the operation.

4881. The letter was signed *El-Nusra-wal-Jihad-fi-Bilad-El-Sham*, Abou Hafass El-Chami.⁹⁴⁰²

4882. On the night of 14 February 2005, Mr Ben-Jeddo received a call from Mr Jamil El-Sayyed, the Director-General of the Lebanese General Directorate of General Security, asking for the video tape that had been collected from the tree.⁹⁴⁰³ The following morning Mr Ben-Jeddo met Mr El-Sayyed and his assistant, at Mr El-Sayyed's office, and handed over the tape in the white envelope.⁹⁴⁰⁴

4883. Mr Ben-Jeddo did not remember whether he also gave Mr El-Sayyed the original letter or just a copy.⁹⁴⁰⁵ General Elias Farhat of the Lebanese army also contacted him, on 15 February 2005, requesting the video tape, but by then he had already handed it to Mr El-Sayyed.⁹⁴⁰⁶ Mr Ben-Jeddo also testified that he may have given the letter to the UN fact-finding mission,⁹⁴⁰⁷ but could

⁹⁴⁰² Exhibit P500 (Letter accompanying video tape) (emphasis omitted).

⁹⁴⁰⁴ Jamil El-Sayyed, T. 7 June 2018, p. 15; Ghassan Ben-Jeddo, T. 9 July 2015, pp 43, 64-65; exhibit 5D166 (Statement of Ghassan Ben-Jeddo, dated 15 July 2005), para. 23; exhibit 5D167 (Statement of Ghassan Ben-Jeddo, dated 5 and 12 September 2007), paras 105-106, 118, 123-124, 126.

⁹⁴⁰⁵ Ghassan Ben-Jeddo, T. 9 July 2015, pp 50, 65; exhibit 5D169 (Statements of Ghassan Ben-Jeddo, dated 9 March 2005 and 9 April 2005), p. 8. See chapter VI 'Explosion on 14 February 2005', (F) (1) (b) (ii) 'Collection of videotaped claim of responsibility by Lebanese authorities'.

⁹⁴⁰⁶ Ghassan Ben-Jeddo, T. 9 July 2015, pp 43-44, 65; exhibit 5D166 (Statement of Ghassan Ben-Jeddo, dated 15 July 2005), para. 23; exhibit 5D167 (Statement of Ghassan Ben-Jeddo, dated 5 and 12 September 2007), para. 82; exhibit 5D169 (Statements of Ghassan Ben-Jeddo, dated 9 March 2005 and 9 April 2005), p. 8.

⁹⁴⁰⁷ On 18 February 2005, the UN Secretary-General sent a fact-finding mission to Beirut, headed by Mr Peter FitzGerald, to inquire into the causes, circumstances and consequences of the attack against Mr Hariri on Monday 14 February 2005.

not remember whether he had given the original or a copy of the letter with the tape to the Lebanese or international authorities, or *vice versa*.⁹⁴⁰⁸

4884. After receiving the video tape, Mr El-Sayyed questioned Mr Ben-Jeddo about the telephone calls to Al-Jazeera.⁹⁴⁰⁹ Mr El-Sayyed testified that he sent it to the judicial investigative officer, Judge Abou Arraj.⁹⁴¹⁰ Officials of the Lebanese General Directorate of General Security took the video to the investigating judge with instructions to avoid touching it to preserve potential fingerprints.⁹⁴¹¹

4885. It appears that some limited forensic investigation occurred. The only evidence about this, however, is that of Mr Michael Taylor, the Prosecution's former Chief of Investigations, who said that the Prosecution requested four sets of fingerprints from the Lebanese Ministry of Interior to compare them against unidentified fingerprints on the tape's packaging. He also stated that he was 'pretty confident' that the Prosecution had requested and obtained the fingerprints of Mr Khaled Taha,⁹⁴¹² who the Sabra Defence had argued was an associate of Mr Abu Adass and implicated in Mr Hariri's assassination. A Lebanese judicial commission document dated Thursday 17 February 2005, which refers to Mr Ben-Jeddo's first statement, also refers to a 'Sealed video tape' being attached to the report.⁹⁴¹³ No other evidence was led about what happened to the tape after it was placed in the Lebanese investigating judge's case file.⁹⁴¹⁴

⁹⁴⁰⁸ Ghassan Ben-Jeddo, T. 9 July 2015, p. 50. Exhibit P500 was a copy with the words 'received on 10/03/05 from Ghassan Benjeddou' in English with his signature in Arabic. The Arabic writing, but not the English, was his. See chapter VI 'Explosion on 14 February 2005', (F) (1) (b) (ii) 'Collection of videotaped claim of responsibility by Lebanese authorities'.

⁹⁴⁰⁹ Jamil El-Sayyed, T. 7 June 2018, p. 15; exhibit 5D167 (Statement of Ghassan Ben-Jeddo, dated 5 and 12 September 2007), para. 126.

⁹⁴¹⁰ Jamil El-Sayyed, T. 7 June 2018, p. 15.

⁹⁴¹¹ Jamil El-Sayyed, T. 7 June 2018, pp 15-16.

⁹⁴¹² Michael Taylor, T. 25 June 2018, p. 21. See also Witness PRH006, T. 23 June 2015, p. 93. The Sabra Defence alleged that Mr Taha had a role in the conspiracy to murder Mr Hariri; and the Sabra and the Oneissi Defence submit that Mr Abu Adass left his home for the last time with Mr Taha; these submissions are dealt with in detail below.

⁹⁴¹³ Exhibit 5D168 (Information report regarding the video tape of the claim of responsibility), ERNs 60031459T-60031461T.

⁹⁴¹⁴ During Mr Ben-Jeddo's evidence, the Prosecution's trial counsel, Mr A. Milne, informed the Trial Chamber that the Prosecution had no record of any fingerprint examination by the Lebanese investigating authorities. However, he said that there is 'a report from 2013, though, that under the aegis of the Special Tribunal the -- what we believe to be this letter that we're talking about, together with some associated envelopes, I must presume that includes the envelope that went with it when it was handed to General El-Sayyed, but it's not entirely clear which that is, they were submitted for finger-print analysis to a national crime agency'. Mr Milne stated that four latent fingerprint marks were found on the letter and 'some associated envelopes'. A comparison of these prints with the thumb prints on passport applications of Mr Oneissi, Mr Sabra and Mr Ayyash found no matches. Prosecution submissions, T. 9 July 2015, pp 68-70.

2. Submissions

4886. The Prosecution argues that four calls—one to Reuters and three to Al-Jazeera—were made between 14:03 and 17:24 on Monday 14 February 2005, from four different payphones in Beirut, using the same telecard.⁹⁴¹⁵

4887. The first three calls made the false claim. The fourth ensured its dissemination, a key part of the false claim plot, designed to deflect the focus from those the wider community could blame for the attack.⁹⁴¹⁶ Al-Jazeera then aired the claim of responsibility shortly after the call made from the fourth payphone.⁹⁴¹⁷

4888. The Merhi Defence disputes the Prosecution's claims about the timing and method of the call to Reuters, and the first, second and third calls to Al-Jazeera.⁹⁴¹⁸ It also submits that the Prosecution disregarded Mr Ben-Jeddo's evidence about Al-Jazeera receiving a fourth call.⁹⁴¹⁹

4889. More specifically, it argues that serious doubts exist that the call to Reuters was made as the Prosecution claimed.⁹⁴²⁰ Witness 12 testified that the caller may have been transferred to the editorial desk after first calling a management telephone.⁹⁴²¹ Further, the Prosecution's theory that the Reuters call was made from a payphone is contradicted by Witness 12's evidence that no background noise was heard, and the witness's conclusion that the call was made from an enclosed location, not a public payphone. The lack of background noise stands in stark contrast to the evidence of a Prosecution investigator, Mr Glenn Williams, that the telephone box was 'located on a triangle shape concrete island in a busy square where streets meet'.⁹⁴²² It is therefore equally possible that the call to Reuters was made from a landline.⁹⁴²³

4890. The Merhi Defence also challenges the Prosecution's submission that the first call to Al-Jazeera, as described by Witness 6 and Mr Ben-Jeddo, was the 14:19 call identified by the

⁹⁴²⁰ Merhi Defence final trial brief, paras 545-546.

⁹⁴²¹ Merhi Defence final trial brief, para. 546.

⁹⁴²² Merhi Defence final trial brief, para. 547.

⁹⁴²³ Merhi Defence final trial brief, paras 548-549.

Prosecution.⁹⁴²⁴ Both witnesses provided statements shortly after the events that the call occurred at 13:30. Taken together with the incomplete call data records, it is thus ‘highly likely that those calls took place at 13:30, i.e. well before the first call from Purple 231 on the day of 14 February 2005’. As such, it would be unreasonable to conclude that Mr Merhi was coordinating the claim of responsibility.⁹⁴²⁵

4891. In relation to the second call to Al-Jazeera, allegedly made at 15:27, the Merhi Defence submits that Witness 6 placed the second call after 14:00, around thirty minutes after the first call. Mr Ben-Jeddo testified that the second call was at 14:15.⁹⁴²⁶ It is possible to establish that there was another call to Al-Jazeera—in-between the ‘second’ (15:27) and ‘third’ (17:04) call—which the Prosecution disregarded without valid explanation.⁹⁴²⁷ Mr Ben-Jeddo stated that this call was at about 15:30 and the caller inquired why the tape had not yet been broadcast.⁹⁴²⁸

4892. In relation to the last call to Al-Jazeera, allegedly at 17:04, the Merhi Defence submits that Mr Ben-Jeddo’s evidence puts the timing of the call between 15:00 and 16:00, once again not fitting the Prosecution’s theory.⁹⁴²⁹

4893. Crucially, Mr Ben-Jeddo’s testimony on the point ‘cannot be disregarded simply because it does not fit in with the Prosecution’s theory regarding the activity of the Purple phones on the afternoon of 14 February’.⁹⁴³⁰ The Prosecution ‘is mistaken as to the number of calls made to the press agencies, the chronology of those calls and their provenance’; this is important because the Prosecution’s case is that Mr Sabra was updating Mr Merhi. Thus, if ‘the number of calls is imprecise and the timing of the calls incorrect, it follows that the Prosecution’s entire theory regarding Merhi’s alleged supervision is invalidated.’⁹⁴³¹

4894. The Oneissi Defence argues that the Prosecution failed to establish a link between Mr Oneissi and the telecard used to make the calls of the false claim of responsibility.⁹⁴³² The

Prosecution does not specify who made the calls, as it merely alleges that Reuters and Al-Jazeera received calls.⁹⁴³³ Given all this, the Prosecution has failed to prove the allegations in relation to Mr Oneissi's alleged participation in the delivery of the claim of responsibility on 14 February 2005.⁹⁴³⁴

4895. The Sabra Defence submits that the Prosecution failed to prove that the calls to the news organisations were made using the telecard or that Mr Oneissi and Mr Sabra were responsible for making the calls.⁹⁴³⁵ Call data records from the telecard and the call data records of the news agencies are unreliable, because the same underlying evidence created both sets of records.⁹⁴³⁶ It is impossible to determine that only four false claim calls were made.⁹⁴³⁷

4896. Similarly, the timing of the alleged false claim calls is not supported by witness testimony or evidence.⁹⁴³⁸ Further, Mr Ben-Jeddo testified that there were four telephone calls to Al-Jazeera's landline, not three.⁹⁴³⁹

3. Findings

4897. The Trial Chamber finds that four telephone calls were made on the afternoon of 14 February 2005 regarding the claim of responsibility for the attack using telecard 6162569. The call data records for this telecard, as for the Reuters and Al-Jazeera landlines, reveal that four calls were made—one to Reuters at 14:11, and three to Al-Jazeera, at 14:19, 15:27 and 17:04.

4898. The Trial Chamber notes the potential conflict between the call data records and Mr Ben-Jeddo's and Witness 6's evidence as to the timing of the calls and whether the Al-Jazeera office received three or four calls, meaning five calls overall, regarding the false claim of responsibility. Mr Ben-Jeddo, in his second statement to the Lebanese investigating authorities, made on 9 March 2005, stated that there were four calls. Call data records of the telecard and the Reuters landline show that the agency received the call claiming responsibility for the attack at 14:11. Neither

⁹⁴³⁵ Sabra Defence final trial brief, paras 667, 673; Sabra Defence closing submissions, T. 21 September 2018, p. 44.

⁹⁴³⁶ Sabra Defence final trial brief, paras 668-677.

⁹⁴³⁷ Sabra Defence final trial brief, paras 678-692.

⁹⁴³⁸ Sabra Defence final trial brief, paras 693-752.

⁹⁴³⁹ Sabra Defence final trial brief, paras 678-681, 692.

Witness 12's statement, made in March 2005, nor her testimony ten years later is consistent with these records.

4899. The Trial Chamber is more inclined to credit the call data records for telecard 6162569 and for Al-Jazeera's office, which recorded only three calls to Al-Jazeera, over the oral evidence of Mr Ben-Jeddo and Witness 6, who both remembered four calls—especially considering that the evidence was given over ten years after the events. Mr Ben-Jeddo's statements of 17 February and 9 March 2005 are obviously far more contemporaneous than his testimony in July 2015, but the first was still made three days after the dramatic events described. Moreover, Mr Ben-Jeddo did not retain the notes he made of the calls at the time, which presumably—given his training and experience as a journalist—would have noted the timing and number of calls and callers.

4900. In making this finding the Trial Chamber is conscious that it is of course possible that another call was made to Al-Jazeera, but using a landline—for which no call data records are available—in lieu of the telecard. However, this is highly unlikely. It would make little sense for the caller(s) who had been using an anonymous telecard to communicate a message connected with the assassination of the former Lebanese prime minister, to suddenly switch to a landline—which was potentially discoverable—to make another call to the same media outlet.

4901. The Trial Chamber cannot make any findings from this evidence about who made the calls, nor how many callers there were. Mr Ben-Jeddo testified that three different people called Al-Jazeera regarding the claim of responsibility. It is also possible that another, different person called Reuters. Although it is most likely that the same people made the calls, there is no way of comparing whether the same person(s) called both Reuters and Al-Jazeera. The Prosecution made no specific submissions on this point. Logically, more than one person would have been involved; the risk of being overheard in making such a call from a public payphone—especially when it may have been necessary to speak loudly and clearly—would have been too great for this task to have been entrusted to only one person. It seems to the Trial Chamber that the most logical *modus operandi* would have involved one person making the call(s) and at least one other person being close enough to ensure that no one else could hear the call, or interfere. That said, it is not the only possibility, or inference reasonably available from the evidence.

4902. The Trial Chamber also finds that members of Al-Jazeera's Beirut office obtained the false claim video and letter at 15:53 from the tree near their office. The call data records support this finding.

4903. However, it cannot determine *when* the package was placed in the tree; there is no evidence from which the Trial Chamber can make a finding as to whether it was placed there before or after the attack.

4904. This is also relevant to the *mens rea* of the three Accused. This is analysed in more detail in relation to the conspiracy charged and the individual criminal responsibility of the Accused, below. The pertinence of this is that if the Trial Chamber could conclude that Mr Oneissi or Mr Sabra themselves placed the video in the tree, the real possibility that this was not done until *after* the attack would cast serious doubt on whether they had the *mens rea* for criminal responsibility either via a conspiracy or through accomplice liability as charged.⁹⁴⁴⁰ The findings regarding whether the three Accused participated in this aspect of the claim of responsibility are set out below, at paragraphs 5643-5692.

C. Mr Ahmad Abu Adass

4905. The entire false claim plot centres on its subject, Mr Ahmad Abu Adass. The Trial Chamber received evidence about Mr Abu Adass from family and friends who knew him. The evidence goes to proving the Prosecutor's pleading that the claim of responsibility for the attack was false. The gist of the Prosecution case is that because of his personal profile he was deliberately targeted and chosen by those who were responsible for this attack.

1. Evidence

4906. Mr Abu Adass was Palestinian and born in 1982 in Saudi Arabia, and came to Lebanon when he was nine.⁹⁴⁴¹ As an adolescent, he studied at the UNRWA School in Bir Hassan in

⁹⁴⁴⁰ See chapter XIV 'Legal findings on elements of the crimes and Individual criminal responsibility', (D) (3) 'Findings on individual criminal responsibility'.

⁹⁴⁴¹ Exhibit 5D510 (Statement of Witness PRH056, 15 February 2005), p. 1; exhibit 5D512 (Witness statement of Taysir Abu Adass, undated), p. 1; exhibit P461 (Witness statements of Taysir Abu Adass, dated 19 January 2005 and 28 February 2005), ERNs 50008343, 50003488-50003489.

Beirut.⁹⁴⁴² He took various computer courses at the British Institute in Sin-el-Fil,⁹⁴⁴³ and at a computer centre in Dawra.⁹⁴⁴⁴ After leaving school, he had no steady job, but worked in various mainly short-term jobs from 2002 to 2004, including at a software programming company, a printing press and designing book covers from home.⁹⁴⁴⁵ He was described as ‘all the time on his computer’.⁹⁴⁴⁶

4907. The Trial Chamber received some evidence suggesting that Mr Abu Adass was an isolated person with a limited social life.⁹⁴⁴⁷ Specifically, Witness 56 stated that he had many friends before he started to become committed to Islam in 2003. After 2003, his group of friends did not change

⁹⁴⁴² Exhibit P2129 (Statement of Witness PRH056, dated 7 July 2005), p. 3; exhibit 5D476 (Statement of Witness PRH056, dated 17 February 2005), p. 8; exhibit 5D512 (Witness statement of Taysir Abu Adass, undated), pp 1-2. Witness 56 stated that Mr Abu Adass had finished his baccalaureate, ‘he only did the first part’, and wanted to go to university, but his uncles in the United States told him to study computer design instead. In another statement Witness 56 said that Mr Abu Adass completed the baccalaureate, as did Mr Taysir Abu Adass in one statement. Exhibit P2129 (Statement of Witness PRH056, dated 7 July 2005), p. 3; exhibit P2131 (Statement of Witness PRH056, dated 7 and 8 June 2007), paras 25-26 (p. 3); exhibit 5D512 (Witness statement of Taysir Abu Adass, undated), p. 1. Mr Ziad Ramadan said that Mr Abu Adass had not taken the baccalaureate. Exhibit 5D473 (Statement of Ziad Ramadan, Syrian authorities, undated), p. 18.

⁹⁴⁴³ Exhibit 5D510 (Statement of Witness PRH056, 15 February 2005), p. 1; exhibit 5D476 (Statement of Witness PRH056, dated 17 February 2005), p. 8; exhibit P2131 (Statement of Witness PRH056, dated 7 and 8 June 2007), paras 25-26 (p. 3); exhibit P461 (Witness statements of Taysir Abu Adass, dated 19 January 2005 and 28 February 2005), ERN 50003488; exhibit 5D512 (Witness statement of Taysir Abu Adass, undated), pp 1-2.

⁹⁴⁴⁵ Exhibit P2129 (Statement of Witness PRH056, dated 7 July 2005), p. 3; exhibit 5D473 (Statement of Ziad Ramadan, Syrian authorities, undated), pp 3-4; exhibit 5D470 (Statement of Ziad Ramadan, Syrian authorities, 8 November 2005), pp 2-3; exhibit 5D475 (Statement of Witness PRH056, 15 February 2005), p. 1 (three months before Mr Abu Adass went missing, he had worked in Abed Printing press in El-Basta-El-Tahta about five months); exhibit 5D477 (Statement of Witness PRH056, 1 October 2005), p. 5 (Sheikh Ahmad El-Saneh had provided work for Mr Abu Adass around six months before his disappearance, at Saadeddine Itani Press). This company is referred to variously as Tiasonit, Metasoft and Microteam Software Company. Mr Ziad Ramadan clarified that the name was originally Microteam Software and was then changed to Metasoft. Exhibit 5D470 (Statement of Ziad Ramadan, Syrian authorities, 8 November 2005), p. 2; exhibit P1774 (Statement of Ziad Ramadan, Lebanese authorities, 16 February 2005), p. 2; exhibit 5D473 (Statement of Ziad Ramadan, Syrian authorities, undated), pp 3, 10; exhibit P1776 (Transcript of Ziad Ramadan’s interview by UNIIIC, 22 May 2006), p. 23 (ERN 60005296).

⁹⁴⁴⁶ Exhibit P2130 (Statement of Witness PRH056, dated 5 May 2006), para. 57 (p. 5).

⁹⁴⁴⁷ Exhibit P2131 (Statement of Witness PRH056, dated 7 and 8 June 2007), p. 4; exhibit P2129 (Statement of Witness PRH056, dated 7 July 2005), p. 3; exhibit 5D476 (Statement of Witness PRH056, dated 17 February 2005), p. 6; exhibit 5D475 (Statement of Witness PRH056, 15 February 2005), p. 2; exhibit 5D510 (Statement of Witness PRH056, 15 February 2005), p. 2; exhibit P461 (Witness statements of Taysir Abu Adass, dated 19 January 2005 and 28 February 2005), ERN 50003488; exhibit 4D212 (Statement of Witness PRH087, 14 February 2005), p. 3. *See also* exhibit P761.1 (Transcript of television programme regarding Mr Abu Adass), p. 3.

but he did not see them so much.⁹⁴⁴⁸ Before 2003, he went to the gym, the beach and night clubs.⁹⁴⁴⁹ After 2003, he used to go swimming.⁹⁴⁵⁰

4908. Witness 87 lived near the Abu Adass family and knew Mr Ahmad Abu Adass. He described Mr Abu Adass as an introverted man who minded his own business.⁹⁴⁵¹ He saw Mr Abu Adass occasionally with friends his age, who were all religiously observant and bearded, with Palestinian accents.⁹⁴⁵² According to other evidence, however—including from the same witnesses—Mr Abu Adass had some social contacts, including some close friends and acquaintances.⁹⁴⁵³

4909. Mr Ziad Ramadan was a friend of Mr Abu Adass.⁹⁴⁵⁴ He described him as a ‘very simple’ man,⁹⁴⁵⁵ ‘even simpleminded’,⁹⁴⁵⁶ as well as ‘lazy’.⁹⁴⁵⁷ Mr Abu Adass never talked about politics, his beliefs or ideologies,⁹⁴⁵⁸ and had no political affiliation.⁹⁴⁵⁹ In particular, he never expressed a view about Mr Hariri.⁹⁴⁶⁰

⁹⁴⁶⁸ Exhibit 5D476 (Statement of Witness PRH056, dated 17 February 2005), p. 2.

⁹⁴⁶⁹ Exhibit 5D476 (Statement of Witness PRH056, dated 17 February 2005), pp 2-3; exhibit P2129 (Statement of Witness PRH056, dated 7 July 2005), p. 4.

⁹⁴⁷⁰ Exhibit 5D473 (Statement of Ziad Ramadan, Syrian authorities, undated), p. 12.

⁹⁴⁷¹ Witness 56’s accounts of this vary between two and three years. Exhibit 5D474 (Statement of Witness PRH056, 14 February 2005), p. 2 (two years); exhibit 5D476 (Statement of Witness PRH056, dated 17 February 2005), p. 8 (saying about two years); exhibit 5D510 (Statement of Witness PRH056, 15 February 2005), p. 1 (stating that his commitment to religion started about three years previously); exhibit P2131 (Statement of Witness PRH056, dated 7 and 8 June 2007), paras 39-40 (p. 4) (about 2003); exhibit 5D475 (Statement of Witness PRH056, 15 February 2005), p. 2 (two years previously). Witness 56 stated that Mr Abu Adass became religiously committed during his studies, which he completed aged 21 (he was 23 when he disappeared) exhibit P2129 (Statement of Witness PRH056, dated 7 July 2005), p. 3. Mr Taysir Abu Adass said variously that it was one year only or two years before his disappearance. Exhibit 5D512 (Witness statement of Taysir Abu Adass, undated), p. 2; exhibit 5D515 (Witness statement of Taysir Abu Adass, dated 17 February 2005), p. 1; exhibit P461 (Witness statements of Taysir Abu Adass, dated 19 January 2005 and 28 February 2005), ERN 50003488.

commitment, he grew a beard,⁹⁴⁷² and generally wore Islamic clothing.⁹⁴⁷³ He attended mosque for prayer,⁹⁴⁷⁴ usually five times a day.⁹⁴⁷⁵ He usually attended the Al-Houry mosque, also known as the Arab University Mosque,⁹⁴⁷⁶ in Beirut, because it was close to his house.⁹⁴⁷⁷

4913. The Trial Chamber also heard evidence from a witness who met someone calling himself ‘Mohammed’ in the mosque in early January 2005. That witness stated that Mr Abu Adass sometimes led the prayers and deputised for the imam.⁹⁴⁷⁸ His primary religious instruction was self-study, by reading books, listening to tapes and using his computer.⁹⁴⁷⁹ Mr Ramadan stated that Mr Abu Adass ‘was very interested in preaching and inviting people to join his religion’, and used to offer religious classes to the young students at the university.⁹⁴⁸⁰ Witness 56 stated that many people used to visit Mr Abu Adass,⁹⁴⁸¹ and that people the same age as Mr Abu Adass came to the house to visit him and discuss religion.⁹⁴⁸²

4914. Mr Ben-Jeddo added that the mosque that Mr Abu Adass attended was in an area of Beirut, Tariq-El-Jdideh, that was generally considered to be ‘fertile ground for religious activism for

⁹⁴⁷² Exhibit 5D470 (Statement of Ziad Ramadan, Syrian authorities, 8 November 2005), p. 9; exhibit 5D510 (Statement of Witness PRH056, 15 February 2005), p. 1; exhibit 5D512 (Witness statement of Taysir Abu Adass, undated), p. 2; exhibit P461 (Witness statements of Taysir Abu Adass, dated 19 January 2005 and 28 February 2005), ERN 50003489. The evidence as to the extent of his commitment to the beard varies. Witness 56 asked Mr Abu Adass to shave his beard to help him get a job, but he said that it was part of his identity as a Muslim. Exhibit P2129 (Statement of Witness PRH056, dated 7 July 2005), p. 4. However, Mr Taysir Abu Adass’s account suggests that Mr Abu Adass agreed that he would shave it when he got a job. Exhibit P461 (Witness statements of Taysir Abu Adass, dated 19 January 2005 and 28 February 2005), ERN 50003490; exhibit 4D584 (Photographs of Mr Ahmad Abu Adass). An identity card from 15 April 2002 shows Mr Abu Adass as bearded. Exhibit 4D561.

⁹⁴⁷³ Exhibit 5D470 (Statement of Ziad Ramadan, Syrian authorities, 8 November 2005), p. 9 (that Mr Abu Adass lately ‘used to go out in Jallabiah and have a beard’); exhibit 5D510 (Statement of Witness PRH056, 15 February 2005), p. 1 (‘started wearing the Abaya’); exhibit P461 (Witness statements of Taysir Abu Adass, dated 19 January 2005 and 28 February 2005), ERN 50003489. When Mr Abu Adass went to work at the programming company, he wore a shirt and trousers. Exhibit 5D473 (Statement of Ziad Ramadan, Syrian authorities, undated), p. 17.

⁹⁴⁷⁴ Exhibit 5D510 (Statement of Witness PRH056, 15 February 2005), p. 1; T. 20 January 2016, p. 23 (closed session); exhibit 5D515 (Witness statement of Taysir Abu Adass, dated 17 February 2005), p. 1.

⁹⁴⁷⁵ Exhibit P461 (Witness statements of Taysir Abu Adass, dated 19 January 2005 and 28 February 2005), ERN 50003488; exhibit P2131 (Statement of Witness PRH056, dated 7 and 8 June 2007), paras 47-48 (p. 4); exhibit P2132 (Statement of Witness PRH056, dated 1 July 2010), para. 14.

⁹⁴⁸⁰ Exhibit P1776 (Transcript of Ziad Ramadan’s interview by UNIIC, 22 May 2006), p. 34 (ERN 60005307).

⁹⁴⁸¹ Exhibit P2128 (Statements of Witness PRH056, dated 13 April and 18 July 2005), p. 7.

⁹⁴⁸² Exhibit 5D474 (Statement of Witness PRH056, 14 February 2005), p. 2.

Islamic groupings and others as well'.⁹⁴⁸³ He explained that its central location in Beirut, the presence of the Arab University and its vicinity to the Palestinian camps provided the opportunity for Islamic religious organisations, such as *Jamaa Islamiya* and *al-Ahbash*, and political organisations, described by Mr Ben-Jeddo as 'pro-resistance, pro-Palestinian or pro-Future Movement affiliations', to target potential activists with their programs.⁹⁴⁸⁴

4915. The Lebanese investigating authorities searched the Abu Adass family home soon after the broadcast of the video. The evidence regarding these searches and what was found on Mr Abu Adass's computer is set out below at paragraphs 5725-5729 in analysing whether the claim of responsibility was actually false.

2. Submissions

4916. The Prosecution submits that Mr Abu Adass was 'a quiet, private, trusting young man with a high degree of religious devotion and few friends.'⁹⁴⁸⁵ It further argues that Mr Abu Adass was apolitical and saving money for his wedding, and that he could not drive.⁹⁴⁸⁶

4917. The Sabra and Oneissi Defence submit that Mr Abu Adass had gone through a process of religious radicalisation before the attack.⁹⁴⁸⁷ The Merhi Defence also argues that the hearsay evidence fails to demonstrate that Mr Abu Adass was 'non-violent and apolitical', given the personal links that the witnesses had with Mr Abu Adass.⁹⁴⁸⁸

3. Findings

4918. The Trial Chamber is satisfied that the evidence establishes that Mr Abu Adass was a young man, perhaps with an introverted personality, who in the period before his disappearance was becoming increasingly religious. This included growing a beard and wearing religious clothing. His Lebanese identity card, dated 15 April 2002, shows him with a beard.⁹⁴⁸⁹ He was attending the mosque near his home daily and had developed an interest in Islamic literature. Mr Abu Adass

⁹⁴⁸⁹ Exhibit 4D561.

also appears to have been disinterested in politics. These factors, in the Trial Chamber's assessment, could have made him susceptible to approaches from groups wishing to recruit young vulnerable people to their religious causes.

4919. The Trial Chamber is also satisfied from the uncontested evidence that Mr Abu Adass could not drive. He was interested in computers and had briefly worked in the information technology sector. At the time of his disappearance, like many other young people, he was probably contemplating a married future.

D. Selecting Mr Abu Adass—between Friday 22 December 2004 to Friday 7 January 2005

4920. The Prosecutor, in the amended consolidated indictment, alleges that in late December 2004 to early January 2005, Mr Abu Adass was identified as a likely scapegoat for making the false claim. He alleges that Mr Oneissi, posing as 'Mohammed', approached people, including Mr Abu Adass, at the Arab University Mosque, and that telecommunications evidence placed Mr Oneissi and Mr Sabra around the Arab University Mosque in the relevant period.⁹⁴⁹⁰

4921. In opening the case against Mr Merhi, the Prosecution's lead counsel referred to Mr Sabra visiting Tripoli, in mid-December 2004. The visit was a 'distinctive thing' because his personal mobile Purple 018 had never before contacted or connected to a cell site in Tripoli. From Monday 13 December 2004, Purple 018 made or received eight calls on four days, on that day and then on Wednesday 15, Monday 20 and Friday 24 December 2004. Mr Platt testified that, between October 2002 and February 2005, Mr Sabra's Purple 018 activated cells in the Tripoli area only on those four days in December 2004,⁹⁴⁹¹ and therefore that activity was unusual.⁹⁴⁹²

4922. This, it was argued, supports the inference that Mr Sabra was there to locate a scapegoat for the false claim of responsibility; therefore his 'purpose in Tripoli becomes compelling'. The 'break in their calling protocol after adherence for five weeks must have been something of significance, i.e., for Mr Oneissi to tell Mr Sabra about Abu Adass'.⁹⁴⁹³ After Mr Oneissi's

⁹⁴⁹⁰ Amended consolidated indictment, paras 3 (b)-(c), 23.

⁹⁴⁹¹ From 13 to 24 December 2004.

⁹⁴⁹² Gary Platt, T. 25 January 2017, p. 53.

⁹⁴⁹³ Prosecutor's opening statement regarding Hassan Habib Merhi, T. 18 June 2014, pp 48-49 (Mr G. Cameron).

attendance around the Arab University Mosque, ‘a decision was made which favoured Abu Adass as the most promising candidate’.⁹⁴⁹⁴

4923. In its final trial brief, however, the Prosecution made no submissions with regard to this alleged attempt, by Mr Sabra, to locate a suitable candidate in Tripoli for making the video. This is despite the evidence that the Prosecution relied upon in the opening, namely the call data records, remaining unchanged during the trial. It is also noted that the Prosecution led no evidence in support of this allegation, such as proof of the proximity of the cells to which Mr Sabra’s mobile connected in places of potential interest for locating an alternative candidate to Mr Abu Adass—presumably such as mosques or religious schools.

4924. At the close of the trial in its final trial brief, the Prosecution submits that Mr Merhi’s, Mr Oneissi’s and Mr Sabra’s involvement in profiling, identifying and selecting Mr Abu Adass as the scapegoat for the false claim of responsibility is demonstrated by two things. These are first, the Purple mobiles’ communications during what it termed the ‘COLA phase’ when Mr Oneissi’s Purple 095 and Mr Sabra’s Purple 018 were connecting to Alfa’s COLA cells near the mosque.⁹⁴⁹⁵ Second, the evidence that the ‘COLA phase’ coincided with the period in which Mr Abu Adass met, and later left his home with, a man calling himself ‘Mohammed’.⁹⁴⁹⁶ The Prosecution relies on further ‘evidence and analysis’ to support this conclusion.⁹⁴⁹⁷

1. Meeting(s) between Mr Abu Adass and ‘Mohammed’ in the Arab University Mosque

4925. The Prosecutor alleges that Mr Abu Adass met the person identifying himself as ‘Mohammed’ at the Arab University Mosque some time in late December 2004 or early January

⁹⁴⁹⁴ Prosecutor’s opening statement regarding Hassan Habib Merhi, T. 18 June 2014, pp 47-50 (Mr G. Cameron).

⁹⁴⁹⁵ The Prosecution used this term to refer to the ten days between Wednesday 29 December 2004 and Friday 7 January 2005 when Mr Sabra’s Purple 018, as attributed, and Mr Oneissi’s Purple 095 were most active connecting to the three COLA cells and those adjacent to it near the mosque.

⁹⁴⁹⁶ Prosecution final trial brief, paras 1170, 1184, *see also for example*, paras 505, 533-548, 736.

⁹⁴⁹⁷ This includes the evidence of the pattern of the Purple mobiles’ and of Mr Merhi’s attributed Green mobile’s communications; expert evidence on the Green network mobiles; evidence of Mr Merhi’s attributed Green mobile’s communications with Mr Badreddine; evidence of the Purple mobiles’ activity during the relevant time and after the attack, on 14 February 2005; the video with the claim of responsibility; evidence that the claim was false; and evidence on the cessation of use of the Green, Red and Purple mobiles, Prosecution final trial brief, paras 1170, 1184.

2005, and last saw him in the first week of January 2005, probably at a Friday prayer on 7 January 2005. According to the amended consolidated indictment, Mr Oneissi was ‘Mohammed’.⁹⁴⁹⁸

4926. The evidence proving this comes from a combination of pieces of evidence. One category is the hearsay statements of Mr Abu Adass’s family and friends. Another is testimony from a witness who met someone calling himself ‘Mohammed’ in the mosque in January 2005. A third category is testimony from a witness, Witness 87, who saw Mr Abu Adass in the mosque teaching someone how to pray in January 2005. The fourth is cell site evidence and call data records of the movements and location of Mr Oneissi’s Purple 095 and Mr Sabra’s attributed Purple 018 in December 2004 and January 2005 when Mr Abu Adass was being targeted, approached and supposedly abducted.

(a) Evidence

- i. Witness 56’s and Mr Ziad Ramadan’s hearsay accounts of what Mr Abu Adass told them

4927. The evidence of Mr Abu Adass’s encounters with anyone in the mosque in December 2004 and January 2005 is mostly hearsay and derives from statements admitted into evidence under Rule 158. The thread running through all accounts is of Mr Abu Adass teaching someone to pray in the mosque near his home in the weeks before his disappearance. Only one witness, Witness 87, provided direct evidence of Mr Abu Adass (apparently) teaching anyone to pray in the mosque.

4928. Mr Abu Adass attended the mosque daily; the evidence on this is consistent and appears to be unchallenged. Witness 56 and Mr Ramadan stated that Mr Abu Adass had told them of his encountering a young man there calling himself ‘Mohammed’. Their evidence as to the number of meetings, and what occurred, varies. Witness 56 variously described the number of meetings as around three, two and one, while Mr Ramadan refers to their meeting just once.

⁹⁴⁹⁸ Amended consolidated indictment, para. 23 (d).

4929. According to Witness 56, in December 2004 or January 2005, Mr Abu Adass saw a young man, sitting on his own in the corner of the mosque who did not stand up to pray when the others did.⁹⁴⁹⁹

4930. Mr Abu Adass, surprised by this behaviour,⁹⁵⁰⁰ approached the young man.⁹⁵⁰¹ Mr Abu Adass told the man to stand up and participate,⁹⁵⁰² to which the young man replied that he did not know how to pray.⁹⁵⁰³ He eventually joined the prayer.⁹⁵⁰⁴ Mr Abu Adass told Witness 56 that the young man introduced himself as 'Mohammed'. This, however, 'was not his real name', but he liked to be called that way.⁹⁵⁰⁵ 'Mohammed' then asked Mr Abu Adass to teach him about Islam and how to pray, to which Mr Abu Adass agreed.⁹⁵⁰⁶

4931. Witness 56 stated that Mr Abu Adass was happy as he could now teach someone about Islam.⁹⁵⁰⁷ Mr Ramadan was not surprised that Mr Abu Adass responded to 'Mohammed's' request for help, as he was involved in the religious teaching of other young people.⁹⁵⁰⁸

⁹⁴⁹⁹ Exhibit P2128 (Statements of Witness PRH056, dated 13 April 2005 and 18 July 2005), p. 2; exhibit P2129 (Statement of Witness PRH056, dated 7 July 2005), p. 3; exhibit P2131 (Statement of Witness PRH056, dated 7 and 8 June 2007), para. 122 (p. 9); exhibit 5D476 (Statement of Witness PRH056, 17 February 2005), p. 3.

⁹⁵⁰⁰ Exhibit P2128 (Statements of Witness PRH056, dated 13 April 2005 and 18 July 2005), p. 2.

⁹⁵⁰¹ Exhibit 5D476 (Statement of Witness PRH056, 17 February 2005), p. 3.

⁹⁵⁰³ Exhibit P2129 (Statement of Witness PRH056, dated 7 July 2005), p. 3; exhibit P761.1 (Transcript of television programme regarding Mr Abu Adass), p. 17; exhibit 5D476 (Statement of Witness PRH056, 17 February 2005), p. 3.

⁹⁵⁰⁴ Exhibit P2129 (Statement of Witness PRH056, dated 7 July 2005), p. 3; exhibit 5D470 (Statement of Ziad Ramadan, Syrian authorities, 8 November 2005), p. 11.

⁹⁵⁰⁵ Exhibit P2131, (Statement of Witness PRH056, dated 7 and 8 June 2005), para. 120 (p. 9).

⁹⁵⁰⁶ Exhibit 5D510 (Statement of Witness PRH056, 15 February 2005), p. 3; exhibit P2131 (Statement of Witness PRH056, dated 7 and 8 June 2007), para. 122 (p. 9); exhibit 5D476 (Statement of Witness PRH056, 17 February 2005), p. 3; exhibit 5D469 (Statement of Ziad Ramadan, Syrian authorities, 22 July 2005), pp 3-4.

⁹⁵⁰⁷ Exhibit 5D476 (Statement of Witness PRH056, 17 February 2005), p. 3; exhibit P2129 (Statement of Witness PRH056, dated 7 July 2005), p. 3.

⁹⁵⁰⁸ Exhibit P1776 (Transcript of Ziad Ramadan's interview by UNHCR, 22 May 2006), pp 34, 36 (ERNs 60005307, 60005309).

4932. Mr Abu Adass told both Witness 56 and Mr Ramadan that ‘Mohammed’ was not the young man’s real name;⁹⁵⁰⁹ he was Muslim, or his parents were Muslim, but he was raised in a Christian orphanage.⁹⁵¹⁰ Witness 56 stated that ‘Mohammed’s’ real name was either Fadi or Chadi.⁹⁵¹¹

4933. Mr Abu Adass also told Witness 56 that ‘Mohammed’ was in his mid-twenties⁹⁵¹² and had a car⁹⁵¹³ and that ‘Mohammed’ offered to buy him a car, but he refused as he did not know how to drive.⁹⁵¹⁴ ‘Mohammed’ also told Mr Abu Adass that he wanted to live in the Tariq-El-Jdideh area, and asked Mr Abu Adass to help him find an apartment in that area.⁹⁵¹⁵

4934. Mr Abu Adass told Mr Ramadan that ‘Mohammed’s’ Arabic sounded ‘a bit shaky’.⁹⁵¹⁶ Witness 56 said that Mr Abu Adass had said that ‘Mohammed’ had a Lebanese accent. The witness stated also that there was ‘nothing distinctive about his voice’.⁹⁵¹⁷

4935. Witness 56 and Mr Ramadan provided differing accounts as to when this meeting in the mosque took place. Witness 56’s statements contain several different dates: namely, at the end of December 2004 or the beginning of January 2005, during a dusk prayer;⁹⁵¹⁸ about three weeks or one month before Mr Abu Adass’s disappearance;⁹⁵¹⁹ one month or one and a half months before

⁹⁵⁰⁹ Exhibit P2131 (Statement of Witness PRH056, dated 7 and 8 June 2007), para. 120 (p. 9); exhibit 5D475 (Statement of Witness PRH056, 15 February 2005), p. 1; exhibit P2128 (Statements of Witness PRH056, dated 13 April 2005 and 18 July 2005), p. 11; exhibit 5D473 (Statement of Ziad Ramadan, Syrian authorities, undated), p. 12.

⁹⁵¹⁷ Exhibit P2129 (Statement of Witness PRH056, dated 7 July 2005), p. 4; exhibit P2131 (Statement of Witness PRH056, dated 7 and 8 June 2007), para. 124 (p. 9).

⁹⁵¹⁸ Exhibit P2128 (Statements of Witness PRH056, dated 13 April 2005 and 18 July 2005), p. 2; exhibit P2129 (Statement of Witness PRH056, dated 7 July 2005), p. 3; exhibit P2131 (Statement of Witness PRH056, dated 7 and 8 June 2007), para. 122 (p. 9).

⁹⁵¹⁹ Exhibit P2128 (Statements of Witness PRH056, dated 13 April 2005 and 18 July 2005), p. 2 (the meeting took place around December 2004); exhibit P2131 (Statement of Witness PRH056, dated 7 and 8 June 2007), para. 122 (p. 9); exhibit 5D477 (Statement of Witness PRH056, 1 October 2005), p. 5 (the meeting took place about one month before the disappearance); exhibit P2132 (Statement of Witness PRH056, dated 1 July 2010), para. 17 (one to one and a half months before Mr Abu Adass’s disappearance).

Mr Abu Adass's disappearance;⁹⁵²⁰ and around the beginning of January 2005.⁹⁵²¹ Mr Ramadan said that Mr Abu Adass told him, a few days before he disappeared,⁹⁵²² that he met 'Mohammed' around a week or ten days earlier, at a Friday prayer at the Arab University Mosque.⁹⁵²³ On Mr Ramadan's version, this would have been Friday 7 January 2005.

4936. According to Witness 56, Mr Abu Adass then saw 'Mohammed' a second time during a Friday prayer, shortly after their first meeting.⁹⁵²⁴ After this second meeting, Mr Abu Adass did not see 'Mohammed' for a week.⁹⁵²⁵ Afterwards, the two met again at the mosque.⁹⁵²⁶ 'Mohammed' then disappeared again for a week.⁹⁵²⁷

4937. Witness 56's statements are unclear as to whether Mr Abu Adass and 'Mohammed' met three or four times in the Arab University Mosque.⁹⁵²⁸

4938. Regarding their other contacts, Witness 56 stated that 'Mohammed' called Mr Abu Adass using a payphone between two and five times,⁹⁵²⁹ and 'Mohammed' did not have a mobile and had told Mr Abu Adass that he did not want to have one.⁹⁵³⁰

⁹⁵²⁰ Exhibit P2132 (Statement of Witness PRH056, dated 1 July 2010), para. 17.

⁹⁵²¹ Exhibit P2129 (Statement of Witness PRH056, dated 7 July 2005), p. 3.

⁹⁵²² Exhibit 5D470 (Statement of Ziad Ramadan, Syrian authorities, 8 November 2005), pp 9-11; exhibit 5D473 (Statement of Ziad Ramadan, Syrian authorities, undated), pp 11-13; exhibit P1776 (Transcript of Ziad Ramadan's interview by UNIIC, 22 May 2006), p. 24 (ERN 60005297). *See also* exhibit 5D469 (Statement of Ziad Ramadan, Syrian authorities, 22 July 2005), pp 3-4; exhibit P1775 (Witness statement of Ziad Ramadan, UNIIC, 1 December 2005), para. 89 (ERN 205573).

⁹⁵²³ Mr Ramadan stated in one statement (exhibit 5D473, p. 13) that the meeting occurred during a Friday prayer, exhibit P1776 (Transcript of Ziad Ramadan's interview by UNIIC, 22 May 2006), p. 24 (ERN 60005297); exhibit 5D469 (Statement of Ziad Ramadan, Syrian authorities, 22 July 2005), pp 3-4; exhibit 5D470 (Statement of Ziad Ramadan, Syrian authorities, 8 November 2005), pp 9-11; exhibit 5D473 (Statement of Ziad Ramadan, Syrian authorities, undated), pp 11-13.

⁹⁵²⁴ Exhibit P2128 (Statements of Witness PRH056, dated 13 April 2005 and 18 July 2005), p. 2.

⁹⁵²⁵ Exhibit P2128 (Statements of Witness PRH056, dated 13 April 2005 and 18 July 2005), pp 2-3; exhibit P2131 (Statement of Witness PRH056, dated 7 and 8 June 2007), para. 122 (p. 9).

⁹⁵²⁶ Exhibit P2129 (Statement of Witness PRH056, dated 7 July 2005), p. 3.

⁹⁵²⁷ Exhibit P2128 (Statements of Witness PRH056, dated 13 April 2005 and 18 July 2005), p. 3.

⁹⁵²⁸ It is unclear from Witness 56's evidence whether the two met three times in total after they first met. Exhibit 5D477 (Statement of Witness PRH056, 1 October 2005), p. 5.

⁹⁵²⁹ Exhibit P2131 (Statement of Witness PRH056, dated 7 and 8 June 2007), para. 124 (p. 9); exhibit P2132 (Statement of Witness PRH056, dated 1 July 2010), para. 16.

⁹⁵³⁰ Exhibit P2129 (Statement of Witness PRH056, dated 7 July 2005), p. 3; exhibit P2131 (Statement of Witness PRH056, dated 7 and 8 June 2007), para. 124 (p. 9).

4939. Mr Ramadan visited Mr Abu Adass a few days before his disappearance. Mr Abu Adass was worried and wondered why ‘Mohammed’ had not turned up or done what he had decided to do.⁹⁵³¹

4940. Neither witness provided a description of what ‘Mohammed’ looked like; neither had ever seen him.

ii. Witness 87’s account of seeing a man sitting with Mr Abu Adass in the mosque

4941. Witness 87 testified that he saw Mr Abu Adass with a young man in the mosque shortly before his disappearance.

4942. The witness was a neighbour of Mr Abu Adass.⁹⁵³² He described seeing a man sitting with Mr Abu Adass in the Arab University Mosque on either the Friday before Mr Abu Adass disappeared, or the week before.⁹⁵³³ This would make it either Friday 7 or Friday 14 January 2005.

4943. Mr Abu Adass was teaching the young man how to pray.⁹⁵³⁴ The witness noticed them, as he had never seen Mr Abu Adass talking to anyone in the mosque before.⁹⁵³⁵ The witness was four metres away from them,⁹⁵³⁶ and could not see the face of the man clearly, as they were sitting in front of the witness and to the right-hand side.⁹⁵³⁷ The person was young, approximately the same

⁹⁵³¹ Exhibit 5D473 (Statement of Ziad Ramadan, Syrian authorities, undated), p. 13.

⁹⁵³² Exhibit P597 (Statement of Witness PRH087, 23 March 2010), para. 6.

⁹⁵³³ Witness PRH087, T. 29 September 2015, p. 16; exhibit P596 (Statements of Witness PRH087, dated 14 January 2015 and 24 November 2006), paras 75-76 (p. 12). *See also* exhibit 4D213 (Statement of Witness PRH087, dated 28 April 2005), p. 2.

⁹⁵³⁴ Witness PRH087, T. 29 September 2015, pp 18, 22-23, 62-63. The Trial Chamber admitted Witness 87’s statements into evidence (exhibits P596 and P597) with the exception of portions that concerned his direct observations of the person in the mosque. The Trial Chamber also declared admissible five statements by Witness 56 and two statements by Witness 87 ‘with the exception of the parts of the statements concerning direct observations of and interactions *with the person described as Mohammed*’ (emphasis added). However, paragraph 3 of that decision, makes it clear that Witness 87, in his statements, described his observations of ‘a man’—who Mr Abu Adass was teaching how to pray at the Arab University Mosque—without knowing, and therefore mentioning, that man’s name. Witness 56, on the contrary, described telephone calls to Mr Abu Adass from a person who Witness 56 knew as ‘Mohammed’. The decision therefore incorrectly referred to both witnesses describing the observations and interactions ‘*with the person described as Mohammed*’. *See* Decision admitting witness statements by Witness PRH056 and Witness PRH087, disposition.

⁹⁵³⁵ Witness PRH087, T. 29 September 2015, p. 16; exhibit P597 (Statement of Witness PRH087, 23 March 2010), para. 8.

⁹⁵³⁶ Witness PRH087, T. 29 September 2015, p. 16.

age as Mr Abu Adass,⁹⁵³⁸ had very short hair,⁹⁵³⁹ and dark skin, ‘a little bit darker’ than Mr Abu Adass’s.⁹⁵⁴⁰ When sitting, the two were almost of the same height.⁹⁵⁴¹

4944. In his testimony, the witness stated that he could not hear the voice of the man because they were sitting too far away.⁹⁵⁴² However, in his statements made in April 2005—much closer to the events described, but still over three months afterwards—he stated that he heard the man speak to Mr Abu Adass.⁹⁵⁴³ The man had a Palestinian accent⁹⁵⁴⁴ or one that was ‘either Palestinian or from the Gulf’.⁹⁵⁴⁵ The witness was not sure what the man was wearing, ‘Maybe a T-shirt or a shirt, and he was wearing normal trousers. Maybe jeans, but I’m not sure.’⁹⁵⁴⁶

iii. A witness who met ‘Mohammed’ in the Arab University Mosque

4945. The Trial Chamber also heard evidence from a witness who encountered a ‘Mohammed’ in the mosque.

4946. At the beginning of January 2005, on a Monday, during the noon prayer, this witness saw a young man sitting in the corner near the stairs next to the main hall of the mosque.⁹⁵⁴⁷ The witness wondered why the man was sitting rather than standing and joining the other worshippers in prayer.⁹⁵⁴⁸ After the prayer, when the witness was about to leave the mosque, the young man

⁹⁵³⁸ Witness PRH087, T. 29 September 2015, pp 16-17.

⁹⁵³⁹ Witness PRH087, T. 29 September 2015, pp 17, 25.

⁹⁵⁴⁰ Witness PRH087, T. 29 September 2015, p. 26.

⁹⁵⁴¹ Witness PRH087, T. 29 September 2015, p. 19. In a previous statement shown to him in cross-examination the witness said that the young man was a bit taller than Mr Abu Adass. Exhibit P596 (Statements of Witness PRH087, dated 14 January 2015 and 24 November 2006), para. 78 (p. 12); Witness PRH087, T. 29 September 2015, p. 66.

⁹⁵⁴² Witness PRH087, T. 29 September 2015, p. 18.

⁹⁵⁴³ Exhibit 4D213 (Statement of Witness PRH087, dated 28 April 2005), p. 2; Witness PRH087, T. 29 September 2015, pp 63-69.

⁹⁵⁴⁴ Exhibit 4D213 (Statement of Witness PRH087, dated 28 April 2005), p. 2.

⁹⁵⁴⁵ Witness PRH087, T. 29 September 2015, pp 63-69; exhibit P596 (Statements of Witness PRH087, dated 14 January 2015 and 24 November 2006), para. 78 (p. 12). Witness 87 also stated that perhaps the man had changed his accent in order to make Mr Abu Adass understand him, as Mr Abu Adass’s accent was itself a mixture of Palestinian and Gulf. Exhibit P596 (Statements of Witness PRH087, dated 14 January 2015 and 24 November 2006), para. 78 (p. 12).

⁹⁵⁴⁶ Witness PRH087, T. 29 September 2015, p. 19.

⁹⁵⁴⁷ T. 20 January 2016, pp 24-26, 30-32 (closed session).

approached and started talking.⁹⁵⁴⁹ The witness asked why he was sitting instead of praying.⁹⁵⁵⁰ The man said that he did not know how to pray and would like the witness to teach him how.⁹⁵⁵¹

4947. The young man said that his name was ‘Mohammed’ and that he came from a village in a remote area. He was secretive about his family name and address.⁹⁵⁵² The witness did not have enough time to teach him,⁹⁵⁵³ and suggested that someone else help ‘Mohammed’.⁹⁵⁵⁴ The witness looked around and saw Mr Abu Adass who the witness did not know but used to see frequently at the mosque.⁹⁵⁵⁵ The witness pointed at Mr Abu Adass and said that he was better suited to teach ‘Mohammed’ how to pray.⁹⁵⁵⁶

4948. ‘Mohammed’, however, then became aggressive and said that he felt comfortable only with the witness. ‘Mohammed’ asked the witness not to tell anyone else about his request.⁹⁵⁵⁷ Mr Abu Adass saw the witness pointing at him and approached them asking if something was wrong. The witness replied that nothing was wrong, and Mr Abu Adass left.⁹⁵⁵⁸

4949. ‘Mohammed’ told the witness that if the witness would not teach him, he did not want to learn and would never pray. The witness felt guilty and agreed to teach ‘Mohammed’ how to pray.⁹⁵⁵⁹ ‘Mohammed’ asked to meet when the mosque would be empty, because he would feel ashamed if someone saw the witness teaching him.⁹⁵⁶⁰ They agreed to meet an hour before or after the noon prayer on Wednesday in the same week and parted.⁹⁵⁶¹ The following Wednesday, the

⁹⁵⁶⁰ T. 20 January 2016, pp 38-39 (closed session); exhibit P760, p. 2; exhibit P762, p. 3.

⁹⁵⁶¹ T. 20 January 2016, pp 38-39 (closed session); exhibit P762, p. 3; exhibit P760, p. 2.

witness arrived 20 minutes late for the appointment and rushed into the mosque but did not see ‘Mohammed’. The witness never saw him again.⁹⁵⁶²

4950. In April 2005, the witness saw Mr Ibrahim El-Masri, the Deputy Secretary General of *Al-Jamaa Al-Islamiya*, repeating what Mr Abu Adass’s sister⁹⁵⁶³ had said in a Future TV program describing the circumstances of her brother’s disappearance, including Mr Abu Adass meeting a ‘Mohammed’ at the mosque and this ‘Mohammed’ asking Mr Abu Adass to teach him how to pray.⁹⁵⁶⁴

4951. Exhibit P760 also provides evidence of the witness, in 2006, providing an account of what occurred⁹⁵⁶⁵ and describing how the witness discovered a ‘link’ between the witness’s story and that of Mr Abu Adass.⁹⁵⁶⁶

4952. The witness remembered having pointed at Mr Abu Adass as someone who could, and was better suited to teach ‘Mohammed’ how to pray.⁹⁵⁶⁷ ‘Mohammed’ might have preferred Mr Abu Adass ‘because of his abaya, because of his beard’. As the witness did not find ‘Mohammed’ on the date agreed for their appointment, the witness did not know whether ‘Mohammed’ had left the mosque because the witness was late, or alternatively he was ignoring the witness, and had preferred Mr Abu Adass.⁹⁵⁶⁸ The witness felt remorse for being the ‘cause’ of what happened to Mr Abu Adass.⁹⁵⁶⁹

4953. In mid-2007, the witness assisted the Lebanese investigating authorities in sketching ‘Mohammed’ and, in March 2010, pointed to Mr Oneissi’s face on photo boards shown by Prosecution investigators. Using the combination of the evidence of what occurred in the mosque, the purported photo board identification and call data records of the movements of Mr Oneissi’s personal mobile the Prosecution alleges that Mr Oneissi was ‘Mohammed’.

⁹⁵⁶² T. 20 January 2016, pp 39-40 (closed session), T. 26 January 2016, pp 78, 88 (closed session); exhibit P762, p. 3; exhibit P760, p. 2.

4954. The evidence of the call data records and the photo board identification procedure is analysed in detail below at paragraphs 4999 to 5485.

(b) Submissions

4955. In its final trial brief, the Prosecution argues that in the weeks before his disappearance, Mr Abu Adass met a man calling himself ‘Mohammed’ at the Arab University Mosque.⁹⁵⁷⁰

4956. The evidence does not establish dates precisely, but Mr Abu Adass most likely first met ‘Mohammed’ in late December 2004 or early January 2005, and last saw him at a Friday prayer on 7 January 2005. Mr Ramadan stated that when he saw Mr Abu Adass, on 14 January 2005, Mr Abu Adass expressed concern that he had not seen ‘Mohammed’ in about ten days. Witness 87 also saw ‘Mohammed’ teaching Abu Adass on Friday 7 January 2005. Witness 56’s evidence was somewhat inconsistent as to the day when Mr Abu Adass met ‘Mohammed’, but this is unsurprising given that five years had passed between the witness’s first and last statements.⁹⁵⁷¹ The evidence of the witness who met ‘Mohammed’ in the mosque was ‘credible, reliable, and compelling’.⁹⁵⁷² Mr Abu Adass’s and this witness’s ‘closely parallel experiences demonstrate that their encounters with “Mohammed” were part of the same search for a scapegoat, over the same narrow timeframe’.⁹⁵⁷³

4957. The Merhi Defence submits that the Prosecution ‘surprisingly’ is unable to ‘determine with any precision’ two important material aspects of the alleged false claim, namely, ‘Mohammed’s’ identity and the day on which Mr Abu Adass was selected by ‘Mohammed’. And it does not allege any specific action by Mr Merhi during this period.⁹⁵⁷⁴

4958. The Oneissi Defence also argues that the ‘Mohammed’ story could have been fabricated by Mr Abu Adass, or as a cover-up by Witness 56, Mr Ramadan and Mr Taysir Abu Adass.⁹⁵⁷⁵ The Prosecution’s case—because it is not possible to establish the dates of meetings and that the last meeting took place on 7 January 2005—is vague.⁹⁵⁷⁶

⁹⁵⁷⁰ Prosecution final trial brief, para. 510.

⁹⁵⁷¹ Prosecution final trial brief, paras 519-523, 525.

⁹⁵⁷² Prosecution final trial brief, para. 516.

⁹⁵⁷⁴ Merhi Defence final trial brief, paras 491, 493.

⁹⁵⁷⁵ Oneissi Defence final trial brief, para. 263.

⁹⁵⁷⁶ Oneissi Defence final trial brief, paras 335-338.

4959. Witness 56, according to the Oneissi Defence, embellished the account over time,⁹⁵⁷⁷ and Mr Ramadan fabricated his story because of trouble with the Lebanese and Syrian authorities.⁹⁵⁷⁸ Witness 56's and Mr Ramadan's evidence is imprecise regarding the identity of 'Mohammed' or the timing of the alleged meetings and interactions between Mr Abu Adass and 'Mohammed'.⁹⁵⁷⁹

4960. Further, the date of 7 January 2005 is neither corroborated by Witness 87—who could not describe or identify the person he saw with Mr Abu Adass⁹⁵⁸⁰—nor by the other witness.⁹⁵⁸¹ Additionally, Witness 87's evidence does not support any precise finding regarding the timing of the alleged meetings other than 'during midday prayer' either the Friday before Mr Abu Adass's disappearance or the Friday before that.⁹⁵⁸² Moreover, whereas Witness 56 stated that Mr Abu Adass and 'Mohammed' met for the first time at the dusk prayer, Witness 87 said the meeting between Mr Abu Adass and the young man occurred during the midday prayer.⁹⁵⁸³

4961. The Oneissi Defence also raised a number of further challenges to the reliability of the evidence of the witness who met 'Mohammed', arguing that it is unreliable, inconsistent, that the 'Mohammed story' cannot be verified and that the witness has specified political links. The submissions conclude by arguing that the circumstances surrounding the 'Mohammed story' were 'highly suspicious' and 'cast serious doubts as to the reliability' of the witness's alleged encounter with 'Mohammed', and the witness's credibility.⁹⁵⁸⁴ Its final trial brief also noted that the Prosecution's:

representation of Abu-Adass has evolved, between the Indictment and Pre-Trial Brief to the Prosecution Brief: while Abu-Adass is initially portrayed merely as a generous but naïve man, the Prosecution now conveniently emphasises his Salafist and Wahhabi tendencies.⁹⁵⁸⁵

4962. The Sabra Defence submits that there is no evidence demonstrating beyond a reasonable doubt that the 'Mohammed' who Witness 56 and Mr Ramadan referred to is the same person

⁹⁵⁸⁴ Oneissi Defence final trial brief, paras 357-404.

⁹⁵⁸⁵ Oneissi Defence final trial brief, para. 279 (footnotes omitted).

described by Witness 87 and the witness who met ‘Mohammed’ in the mosque.⁹⁵⁸⁶ Their accounts of the meeting between Mr Abu Adass and ‘Mohammed’ suffer from a number of inconsistencies, which affect their reliability.⁹⁵⁸⁷ The Prosecution’s shift from the identity of ‘Mohammed’ as Mr Oneissi and the failure to specify the date when Mr Abu Adass allegedly met ‘Mohammed’ is fatal to the Prosecution’s case.⁹⁵⁸⁸

4963. The Prosecution relies on Mr Ramadan’s evidence that on Friday 14 January 2005 Mr Abu Adass informed him that he had seen ‘Mohammed’ at least ten days before, namely, on or around Tuesday 4 January 2005, even though this does not fit into its case.⁹⁵⁸⁹ The Prosecution also selectively treats Witness 56’s various accounts of this meeting by inconsistently stating that the alleged meeting with ‘Mohammed’ occurred on Friday 7 January 2005, even though Witness 56 had not specifically stated in any accounts that this meeting took place on this date.⁹⁵⁹⁰

4964. The Prosecution uses Witness 87’s evidence that he saw Mr Abu Adass teaching someone how to pray ‘one week before he disappeared’ to argue that Mr Abu Adass met ‘Mohammed’ on Friday 7 January 2005. However, the witness also stated that he saw Mr Abu Adass meeting someone on the Friday before his disappearance, that is, on Friday 14 January 2005.⁹⁵⁹¹ Further, Witness 87 seeing Mr Abu Adass with someone does not equate to this individual being ‘Mohammed’. Also, Witness 87’s testimony that Mr Abu Adass must have been teaching someone to pray is an unfounded assumption as he could not hear what Mr Abu Adass said from his position in the mosque and took no interest at the time.⁹⁵⁹²

4965. Finally, the evidence of the witness who met ‘Mohammed’ in the mosque does not establish when Mr Abu Adass met ‘Mohammed’, or that they met the same person. The witness recollects meeting ‘Mohammed’ on a Monday in early January 2005, but this does not establish that Mr Abu Adass met the same person on Friday 7 January 2005.⁹⁵⁹³

(c) Findings

4966. The Trial Chamber heard evidence that is divisible into three discrete themes. It agrees with the Prosecution's general argument that they must be viewed together.

4967. The first is of Mr Abu Adass's alleged meeting(s) with 'Mohammed' in the Arab University Mosque, as relayed by Mr Abu Adass to Witness 56 and Mr Ramadan. The second is of Witness 87's direct evidence that he saw Mr Abu Adass with someone in the Arab University Mosque in early January 2005. Thirdly, another witness testified of meeting 'Mohammed' in the mosque at around the same time. Mr Abu Adass was reported missing, as of Sunday 16 January 2005 and his family and friends never saw him again; the evidence and findings regarding his reported disappearance are set out below at sub-section (E) 'Mr Abu Adass's disappearance and surrounding events.

4968. The Trial Chamber received evidence from which it can find that at the beginning of January 2005 a witness met someone called 'Mohammed' in the mosque. Having heard the evidence, the Trial Chamber is satisfied that the witness attempted to provide credible and reliable evidence about this meeting. There is evidence of this in exhibit P760 and statements made in 2007.

4969. The Trial Chamber has carefully considered the Oneissi Defence's lengthy final trial submissions arguing that the witness was unreliable and lacked credibility, but is ultimately of the view that the evidence was reliable on all salient points. Having viewed the witness and the cross-examination, the Trial Chamber is convinced that the witness was attempting to provide the best account of a brief encounter that occurred over ten years earlier. In this respect, the witness was credible.

4970. The Trial Chamber has carefully assessed the evidence of each of the witnesses who provided evidence about what might have occurred in the mosque *vis-à-vis* Mr Abu Adass. It has examined the different witness accounts both for internal consistencies and for consistency with each other. In other words, it has considered each version individually and in combination with the others.

4971. The accounts of the four witnesses are only partially consistent. The consistencies include Witness 56 and Mr Ramadan stating that Mr Abu Adass had said that he had met someone named ‘Mohammed’ in the mosque, who had asked Mr Abu Adass to help him pray. They also consistently stated that they were told that ‘Mohammed’ was of Muslim origin but raised in a Christian orphanage and that ‘Mohammed’ was not his real name.

4972. The evidence is not, on the other hand, consistent as to the number and dates of the meetings. Witness 56’s statements say that Mr Abu Adass met ‘Mohammed’ once, twice and three times. According to Mr Ramadan, conversely, Mr Abu Adass met ‘Mohammed’ only once. This is not of course of itself necessarily inconsistent, as Mr Ramadan may have been told of only one meeting; more of which he was unaware may have occurred.

4973. Of the dates of the meeting(s), Witness 56 stated that Mr Abu Adass first met ‘Mohammed’ between a week and one and a half months before Mr Abu Adass’s disappearance; this would make it between about the beginning of December 2004 and the first week of January 2005. Mr Ramadan stated that he had heard that Mr Abu Adass met ‘Mohammed’ sometime in early January 2005. In a statement, Mr Ramadan said that this occurred during a Friday prayer. Relying on this, the meeting would have occurred on Friday 7 January 2005.⁹⁵⁹⁴

4974. While this might support a finding that Mr Abu Adass met someone called ‘Mohammed’ in the mosque at some time between these dates, the inconsistencies undermine the reliability of these accounts—taking them either individually or together. Further, and significantly, Witness 56’s and Mr Ramadan’s accounts are untested Rule 158 hearsay, and on a crucial and contested issue. As outlined above, therefore, the Trial Chamber has carefully examined whether any other evidence corroborated it.

4975. Witness 87 testified and was cross-examined by the Defence. He gave reliable and, in the Trial Chamber’s view, credible evidence that he saw Mr Abu Adass sitting with a person in the mosque either on the Friday before Mr Abu Adass disappeared, or the week before. These possible dates would therefore be either Friday 7 or 14 January 2005. He explained that he understood that Mr Abu Adass was teaching the other man how to pray because they were speaking aloud during

⁹⁵⁹⁴ As noted by the Oneissi Defence (Oneissi Defence final trial brief, paras 326, 329), in the corrected version of its final trial brief, the Prosecution removed two sentences concerning this aspect of Mr Ramadan’s evidence.

day-time prayer, which otherwise would not be allowed according to the Sunni school, and he had never seen Mr Abu Adass doing it before.⁹⁵⁹⁵ What is absent from his account, however, is any evidence about who it was. The person was unnamed. It may have been the ‘Mohammed’ in question, or someone else.

4976. Mr Ramadan also provided evidence that Mr Abu Adass regularly helped young people learn more about religion. He stated that Mr Abu Adass had relations with many students and with some young people from the mosque of the university, that he was very interested in preaching and inviting people to join his religion and that he ‘was also offering some religious classes to the young students at the university’.⁹⁵⁹⁶

4977. This evidence is before the Trial Chamber, although in untested Rule 158 form, and if accepted, provides a reasonable alternative inference that Witness 87 saw Mr Abu Adass teaching someone other than the named ‘Mohammed’ how to pray. The Trial Chamber, however, is of the view that the evidence is unreliable—being Rule 158 untested hearsay—thus logically it cannot provide a *reasonable* alternative inference.

4978. Further, Witness 87 could not specify the exact date of the incident; it could have been either Friday 7 or Friday 14 January 2005. The date is significant because it could provide context to cell activations of Mr Oneissi’s Purple 095 and Mr Sabra’s attributed Purple 018 around the Arab University Mosque. The Trial Chamber considers that these two significant omissions, namely, the lack of a precise date and the name of the person Witness 87 saw with Mr Abu Adass mean that they cannot corroborate, or strengthen, either Witness 56’s or Mr Ramadan’s account of what Mr Abu Adass is said to have told them about ‘Mohammed’.

4979. Additionally, Witness 87’s description of the person he saw with Mr Abu Adass differs in some respects from that of the witness who encountered a ‘Mohammed’ in the mosque. This is of course not unusual; witnesses frequently describe the same person differently, and will notice or record different features to memory. Numerous factors affect and determine how a witness sees

⁹⁵⁹⁵ Witness PRH087, T. 29 September 2015, pp 18-23. *See also* exhibit 4D213 (Statement of Witness PRH087, dated 28 April 2005), p. 2.

⁹⁵⁹⁶ Exhibit P1776 (Transcript of Ziad Ramadan’s interview by UNIIC, 22 May 2006), p. 34 (ERN 60005307).

and recalls an event, including describing a previously unknown but briefly encountered person. They may or may not have been describing the same person.

4980. The descriptions that Witness 87 and the witness who met a ‘Mohammed’ in the mosque gave of the person they saw in the mosque in January 2005 cannot, of themselves, corroborate Witness 56’s or Mr Ramadan’s accounts. Neither provided a description of what ‘Mohammed’ looked like. Witness 56 and Mr Ramadan—neither of whom had met ‘Mohammed’—only stated that they had heard that he was in his mid-twenties. The Trial Chamber however will also consider this, as the Prosecution alleges that the evidence of both witnesses corroborates, in different ways, that of Witness 56 and Mr Ramadan.

4981. In examining their descriptions in more detail, a comparison between the more detailed description of ‘Mohammed’ given by the witness who met him and that of Witness 87 can be based only on their common descriptions of that person, that is, of his age, hair length, complexion and accent. The witness who saw ‘Mohammed’ in the mosque said that he was 175 centimetres tall. However, Witness 87’s description of the young man as having the same height as Mr Abu Adass when sitting does not permit a comparison on this.

4982. Witness 87 was four metres away from Mr Abu Adass and the young man,⁹⁵⁹⁷ and could not see his face clearly,⁹⁵⁹⁸ so his description was limited. He described him as young—approximately the same age as Mr Abu Adass, who at the beginning of 2005 was aged 22⁹⁵⁹⁹—and having very short hair.⁹⁶⁰⁰ The additional information Witness 87 provided was mainly based on comparing him with Mr Abu Adass, namely, that the young man had dark skin that was ‘a little bit darker’ than Mr Abu Adass’s,⁹⁶⁰¹ and, when sitting, the two were almost of the same height.⁹⁶⁰²

⁹⁵⁹⁷ Witness PRH087, T. 29 September 2015, p. 16. *See also* exhibit P596 (Statements of Witness PRH087, dated 14 January 2015 and 24 November 2006), para. 76 (p. 12).

⁹⁵⁹⁸ Witness PRH087, T. 29 September 2015, pp 16-17.

⁹⁵⁹⁹ Mr Abu Adass was born in 1982. Exhibit 4D561 (Mr Ahmad Abu Adass’s Lebanese identity card), which states that he was born in Saudi Arabia in 1982.

⁹⁶⁰⁰ Witness PRH087, T. 29 September 2015, pp 16-17, 25; exhibit P596 (Statements of Witness PRH087, dated 14 January 2015 and 24 November 2006), para. 78 (p. 12).

⁹⁶⁰¹ Witness PRH087, T. 29 September 2015, p. 26. A photograph of Mr Abu Adass before he grew his beard is in exhibit 4D584.

⁹⁶⁰² Witness PRH087, T. 29 September 2015, p. 19.

He had an accent that was either Palestinian or from the Gulf,⁹⁶⁰³ but in his testimony, ten years and eight months after the event, he stated that he could not hear him.⁹⁶⁰⁴

4983. ‘Mohammed’, on the other hand according to the witness who met him, was around 25 to 30, his hair was a few centimetres long, with white or a little greyish complexion, although the witness also described him as having a bluish face or ashen skin.⁹⁶⁰⁵ ‘Mohammed’ spoke with an unfamiliar accent—it was neither from Beirut, nor from the Bekaa or from the south of Lebanon—and appeared to be trying to use an accent to make it seem that he came from a remote village.⁹⁶⁰⁶

4984. Both say the man was young, but differed as to his complexion, one describing it as dark and the other white, one says the accent was Palestinian or from the Gulf, while the other could not identify it.

4985. In these circumstances, the Trial Chamber cannot safely conclude that they were the same person. Witness 87 could not properly see him. Moreover, the encounters were brief and a lengthy period elapsed between their seeing the person and describing him to the authorities. Witness 87 saw ‘Mohammed’ in January 2005 and first described him nearly two years later in a statement made in late November 2006.⁹⁶⁰⁷ The witness who met ‘Mohammed’ in the mosque in January 2005 similarly provided an initial description at least a year later, sometime in 2006.⁹⁶⁰⁸ They also gave differing descriptions as to the person’s complexion and accent.

4986. The accounts also differ as to dates. Witness 87 thought that he had seen the young man on either Friday 7 or Friday 14 January 2005. The other witness described meeting ‘Mohammed’ in the mosque on a Monday at the beginning of January 2005, which would be either Monday 3 or 10 January. Therefore, although the descriptions about the accent and age are not necessarily inconsistent, the circumstances do not permit the Trial Chamber to positively find that the two witnesses saw the same young man in the mosque in January 2005.

⁹⁶⁰³ Exhibit P596 (Statements of Witness PRH087, dated 14 January 2015 and 24 November 2006), para. 78 (p. 12); Witness PRH087, T. 29 September 2015, pp 63-65.

⁹⁶⁰⁴ Witness PRH087, T. 29 September 2015, p. 18.

⁹⁶⁰⁵ T. 20 January 2016, pp 41, 46, 50 (closed session); exhibit P760; exhibit P762, p. 3.

⁹⁶⁰⁶ T. 20 January 2016, pp 85-86 (closed session).

⁹⁶⁰⁷ Exhibit P596 (Statements of Witness PRH087, dated 14 January 2015 and 24 November 2006).

⁹⁶⁰⁸ Exhibit P760.

4987. It is of course conceivable that the same person approached both Mr Abu Adass and the witness at this mosque within a few days of each other and asked each to teach him how to pray. However, it is also equally conceivable that it was not the same person.

4988. The witness's evidence is therefore equivocal for purposes of corroborating the Rule 158 hearsay evidence of Mr Ramadan and Witness 56 on this material fact pleaded against Mr Oneissi. The Trial Chamber, as is noted above, accepts that a witness met someone named 'Mohammed' at the mosque in early January 2005, and that this person asked the witness to teach him how to pray. The Trial Chamber is also satisfied that the witness pointed at nearby Mr Abu Adass as someone who could, or was better suited to teach 'Mohammed' how to pray. However, without more, the Trial Chamber cannot positively conclude that the witness's evidence corroborates that of the two Rule 158 witnesses, Witness 56 and Mr Ramadan, who provided hearsay evidence on these points.

4989. To recap: Witness 87's evidence does not corroborate that Mr Abu Adass met and taught '*Mohammed*' to pray. It only confirms that Mr Abu Adass *may* have taught *someone* to pray in the mosque in January 2005. Further, the other witness's evidence does not corroborate that 'Mohammed' approached *Mr Abu Adass*. It only confirms that a person named 'Mohammed' approached *that witness*. In these circumstances, it is not the only reasonable inference available to the Trial Chamber on the evidence that either Witness 87 or the other witness's evidence corroborates the two Rule 158 witnesses' already somewhat inconsistent hearsay evidence.

4990. The Trial Chamber therefore finds that the Prosecution has not established beyond a reasonable doubt that Mr Abu Adass met a person called 'Mohammed' at the mosque in late December 2004 or early January 2005 and taught him how to pray. Even if a finding is not required to the high standard of beyond reasonable doubt, the evidence the Prosecution led to establish this pleaded fact would have been insufficient to prove it on a lower evidentiary standard, such as on the balance of probabilities.

2. The 'identification' of Mr Oneissi as the 'Mohammed' who Mr Abu Adass encountered in the mosque

4991. In the amended consolidated indictment, the Prosecutor alleges that Mr Oneissi posed as 'Mohammed' to meet Mr Abu Adass and to convince him to leave his home on 16 January

2005.⁹⁶⁰⁹ This is a material fact that the Prosecution must prove beyond reasonable doubt to the extent that a conviction would rely upon it. As illustrated in more detail below,⁹⁶¹⁰ the Prosecution submitted, in its final trial brief and closing arguments, that the Trial Chamber need not establish the precise identity of the ‘Mohammed’ who lured Mr Abu Adass away from his family. However, it also insisted that there is evidence that Mr Oneissi was ‘Mohammed’.⁹⁶¹¹

4992. Regarding Mr Sabra’s alleged role, in opening the case against Mr Merhi, Prosecution counsel stated that, while Mr Oneissi’s role was to befriend and gain the initial trust of Mr Abu Adass, ‘Mr Sabra’s role was to remain in the background and to gather information about Abu Adass and the surrounding area in preparation for his abduction on the morning of the 16th of January’.⁹⁶¹²

4993. The Trial Chamber is only legally required to assess whether the Prosecution has established its pleaded case against the Accused beyond reasonable doubt. In final submissions, Prosecution’s lead counsel appeared to argue the contrary. In referring to what he described as the ‘subplot’ of the ‘Mohammed deceit’, he argued that, ‘What you need to consider is the involvement of Mr. Sabra and Mr. Oneissi in that subplot. And you don’t need to find who played which role’.⁹⁶¹³ This submission implicitly suggests that the Trial Chamber could safely switch the pleaded roles of Mr Oneissi and Mr Sabra. This means that it could find that either or neither were ‘Mohammed’, but the two nevertheless played some role in the ‘Mohammed’ story.

4994. The Trial Chamber agrees that it could legally adopt this course to the extent that the evidence supported a finding that Mr Sabra had some involvement in the ‘Mohammed’ deceit. This applies regardless of whether the evidence supported Mr Oneissi having such a role. This appears to be sufficiently pleaded in the amended consolidated indictment. However, as a matter of law, a positive finding that Mr Sabra, as opposed to Mr Oneissi, was ‘Mohammed’—which is the pleaded material fact—would require an amendment to the indictment. Mr Sabra’s defence was run on the basis that he was not alleged to be ‘Mohammed’. It was not pleaded that he was.

⁹⁶⁰⁹ Amended consolidated indictment, paras 23, 28-29.

⁹⁶¹⁰ See paras 5036-5042, below.

⁹⁶¹¹ Prosecution closing submissions, T. 14 September 2018, p. 67.

⁹⁶¹² Prosecutor’s opening statement regarding Hassan Habib Merhi, T. 18 June 2014, pp 50-52 (Mr G. Cameron).

⁹⁶¹³ Prosecution closing submissions, T. 14 September 2018, p. 69.

4995. To prove that Mr Oneissi was ‘Mohammed’, the Prosecution relies on the testimony of a witness who encountered a ‘Mohammed’ in the Arab University Mosque on a Monday in January 2005. The witness pointed to a photograph of Mr Oneissi in an interview with Prosecution investigators in March 2010, and, according to the Prosecutor’s pleading, identified him. It also relies upon cell site evidence showing Mr Oneissi’s mobile and Mr Sabra’s attributed mobile connecting to the cells near the mosque on relevant days in December 2004 and January 2005. Added to this are the hearsay Rule 158 statements of Witness 56 and Mr Ramadan about the meeting between Mr Abu Adass and ‘Mohammed’.

4996. The Trial Chamber has received insufficient probative evidence to conclude that Mr Abu Adass met someone called ‘Mohammed’ at the mosque in late December 2004 or early January 2005. However, to do justice to the Parties’ cases, the Trial Chamber has carefully examined the Prosecutor’s pleading, and supporting evidence, that Mr Oneissi was ‘Mohammed’. In so doing, it will assume for the purposes of the analysis, that it *could* be satisfied that Mr Abu Adass met a ‘Mohammed’ in the mosque. All of the evidence presented has therefore been comprehensively analysed.

4997. There are two strands to this evidence. The first is whether the identification evidence presented *could* establish that Mr Oneissi was the ‘Mohammed’ who the witness met in the mosque, or could be relied upon to prove this. The second is whether the Trial Chamber could use this evidence—or any other—to establish that Mr Oneissi was the ‘Mohammed’ who Mr Abu Adass allegedly met, and then left his home with on Sunday 16 January 2005.

4998. Whether the Purple mobiles’ activity during the so-called ‘COLA phase’ could have supported a finding that Mr Oneissi was ‘Mohammed’ is also considered. This includes examining in detail whether Mr Abu Adass met or could have met Mr Oneissi. And hence whether there is sufficient evidence to support a finding that the three were involved in profiling, identifying and selecting Mr Abu Adass as the scapegoat for the pleaded false claim of responsibility.

(a) Evidence

4999. The witness who met ‘Mohammed’ in the mosque was asked to identify ‘Mohammed’ from photo boards compiled by Prosecution investigators. In examining this purported identification, the Trial Chamber also reviewed the evidence of:

- Mr Lorenzo Lanzi, the Prosecution associate forensic expert who created the photo boards;⁹⁶¹⁴
- Mr Xavier Laroche, the Prosecutor forensic coordinator who scanned Lebanese passport applications and residence certificates to create the photo boards;⁹⁶¹⁵
- Witness PRH539,⁹⁶¹⁶ a Prosecutor investigator who assisted Mr Laroche in scanning the passport applications and residence certificates;
- Mr Glen Williams, a Prosecution investigator who showed the photo boards to witnesses;⁹⁶¹⁷
- Mr Alasdair Macleod, a UNHCR and thereafter Prosecution, investigator present when an ISF officer sketched ‘Mohammed’ in July 2007;⁹⁶¹⁸ and
- Professor Siegfried Ludwig Sporer, an expert witness in eyewitness identification called to testify by the Oneissi Defence.⁹⁶¹⁹

5000. In assessing Professor Sporer’s evidence, the Trial Chamber has also considered the evidence of four other witnesses: Witness 87, Witness DHO-003, Witness DHO-004 and Witness DHO-005,⁹⁶²⁰ each of whom stated that they saw a man with Mr Abu Adass and participated in separate identification procedures.⁹⁶²¹ Each was shown the same photo boards as the witness, yet none identified Mr Oneissi as the person they saw.⁹⁶²²

⁹⁶¹⁴ Mr Lanzi testified on 14 and 15 July 2015. The Trial Chamber also admitted into evidence, under Rule 155, two statements that Mr Lanzi made on the creation of the photo boards (exhibit P507) and, upon the Oneissi Defence’s application, a further statement (exhibit 4D178) and—to make Professor Sporer’s report understandable—the audio recording of an interview by counsel for Mr Oneissi with Mr Lanzi (exhibit 4D558).

⁹⁶¹⁵ The Trial Chamber admitted Mr Laroche’s evidence under Rule 155, without cross-examination, to make Professor Sporer’s report, which relies on it, understandable. Exhibit 4D551 (Audio interview of Xavier Laroche by counsel for Mr Oneissi); exhibit 4D552 (Witness Statement of Xavier Laroche); exhibit 4D557 (Forensic report on the preparation of the photo boards, Xavier Laroche). Decision admitting evidence in Oneissi Defence case.

⁹⁶¹⁶ He testified on 16 September 2016.

⁹⁶¹⁷ He testified on 28, 29 and 30 November 2016.

⁹⁶¹⁸ He testified on 12, 13, 14 January 2016, 13, 14, 15, 18 and 19 July 2016.

⁹⁶¹⁹ Professor Sporer testified on 14, 15 and 16 May 2018.

⁹⁶²⁰ Witnesses DHO-003, DHO-004, DHO-005; respectively, Mr Samer Al-Ajouz, Mr Yasser Al-Ali and Mr Abd al-Rahman Harb. No application was made for protective measures in respect of these Rule 155 witnesses.

⁹⁶²¹ Witness DHO-005 saw two men with Mr Abu Adass. Exhibit 4D549 (Witness Statement of Abd el-Rahman Harb, UNHCR, 16 January 2008), para. 44.

⁹⁶²² They did not identify anyone, on the photo boards as the person they had seen. Witness DHO-003 first identified one of the fillers (those who are not the suspects on a photo board), but then stated that it was not the person he saw

i. A witness's descriptions of 'Mohammed'

5001. Upon the Oneissi Defence's application, the Trial Chamber also admitted into evidence under Rule 155⁹⁶²³ statements, video recordings and transcripts of the identification procedures of these four witnesses, and related investigators notes. This was for the limited purpose of making Professor Sporer's report, which relied upon them, understandable.⁹⁶²⁴ The Trial Chamber has therefore disregarded those parts of the statements that do not relate to this.

5002. The witness described 'Mohammed' sometime in 2006,⁹⁶²⁵ January 2007⁹⁶²⁶ and March 2007.⁹⁶²⁷ On 10 July 2007, a Lebanese Judicial Police sketch artist drew a sketch of 'Mohammed' based on a description.⁹⁶²⁸

Exhibit P763 (Sketch of 'Mohammed' drawn in July 2007)

and did not identify anyone else. Exhibit 4D546.2 (Video recording of the identification interview of Mr Samer Al-Ajouz).

⁹⁶²³ Without cross-examination.

⁹⁶²⁴ Decision admitting evidence in Oneissi Defence case. Witness 87 also testified as a Prosecution witness and the Trial Chamber admitted into evidence two statements under Rule 156—one on his identification procedure (exhibits P596 and P597); Decision admitting witness statements by Witness PRH056 and Witness PRH087.

⁹⁶²⁵ Exhibit P760; T. 26 January 2016, p. 43 (closed session). *See also* T. 20 January 2016, pp 75-76 (closed session).

⁹⁶²⁶ Exhibits P762, p. 3.

⁹⁶²⁷ Exhibit P760.

⁹⁶²⁸ Exhibit P763 (Sketch of 'Mohammed' drawn in July 2017). *See also* exhibit 4D256 (UNIIC investigators' notes of 10 July 2007).

5003. The witness described ‘Mohammed’ as ‘in the end of the 20s’, 27 or 29 years old.⁹⁶²⁹ He was about 175 centimetres tall,⁹⁶³⁰ athletic and slim,⁹⁶³¹ with a very short beard,⁹⁶³² very visible eyebrows, long and thick eyelashes and blue eyes.⁹⁶³³ He also had thick, dark chestnut hair, a few centimetres. His accent was neither from Beirut, nor from the Bekaa or from the south.⁹⁶³⁴ His hair had a parting on the left side.⁹⁶³⁵ ‘Mohammed’ spoke with an unfamiliar accent. It seemed that he used an accent to make it seem that he came from a remote village.⁹⁶³⁶ He was wearing blue jeans and a thick shirt.⁹⁶³⁷ This encounter with ‘Mohammed’ lasted around ten minutes.⁹⁶³⁸

ii. The construction of the photo boards in March 2010

5004. In March 2010, Mr Williams—at that time a Prosecution investigator who had previously conducted numerous identifications on photo montage boards as a police officer in New Zealand⁹⁶³⁹—asked his colleagues, Mr Laroche and Mr Lanzi, to create two photo boards, and he explained that Mr Oneissi and Mr Sabra had to be on separate photo boards.⁹⁶⁴⁰

5005. Mr Lanzi sought to retrieve images of Mr Sabra and Mr Oneissi, and images of people having similar visual characteristics, referred to as ‘fillers’.⁹⁶⁴¹ The photographs were chosen from a set of Lebanese passport application forms and identification and residence certificates that Mr Laroche⁹⁶⁴² and Witness 539 had obtained from the relevant Lebanese authorities.⁹⁶⁴³

⁹⁶²⁹ T. 20 January 2016, p. 41 (closed session). The witness had previously described ‘Mohammed’ as ‘around 25 years of age or older’ or ‘25-27 years old’. Exhibit P762, p. 3; exhibit P760, p. 1. The Prosecution gave the witness copies of witness statements before testifying and encouraged the witness to examine them for the purposes of memory refreshment. T. 20 January 2016, pp 42-45 (closed session).

⁹⁶³⁰ T. 20 January 2016, pp 45-46 (closed session); exhibit P762, p. 3; exhibit P760, p. 1.

⁹⁶³⁶ T. 20 January 2016, pp 85-86 (closed session).

⁹⁶³⁷ T. 20 January 2016, p. 50 (closed session), exhibit P762, p.1.

⁹⁶³⁸ T. 20 January 2016, p. 39 (closed session).

⁹⁶³⁹ Mr Williams was a Prosecution investigator between November 2009 and January 2013. Glenn Williams, T. 28 November 2016, pp 4-5, 21, 24, 29-31.

⁹⁶⁴⁰ The creators of the photo boards were instructed that fillers should bear physical similarities. Glenn Williams, T. 28 November 2016, pp 45, 50-51; exhibit P507 (Witness statement of Lorenzo Lanzi), para. 9.

⁹⁶⁴¹ Exhibit P507 (Witness statement of Lorenzo Lanzi), para. 12. Fillers, or foil, are the members in the photo board, or line-up, who are not the suspect.

⁹⁶⁴² Mr Laroche was the Prosecution’s Forensic coordinator and previously had a similar post with the UNHCR.

⁹⁶⁴³ Lorenzo Lanzi, T. 14 July 2015, p. 47, T. 15 July 2015, pp 17-19, 41; exhibit P507 (Witness statement of Lorenzo Lanzi), para. 12; Witness PRH539, T. 16 September 2016, pp 8-22; exhibit 4D176 (Twenty-four identification

5006. Mr Lanzi, who is Swiss, chose photographs that in his view most resembled the persons of interest.⁹⁶⁴⁴ The investigators did not provide Mr Lanzi with statements containing the descriptions of those they were seeking.⁹⁶⁴⁵ Mr Laroche reviewed the photographs selected by Mr Lanzi for the photo boards.⁹⁶⁴⁶ Mr Williams and the investigators then approved the photo boards.⁹⁶⁴⁷

5007. Relatives of Mr Sabra, however, also ended up on Mr Oneissi's photo board, and relatives of Mr Oneissi were on Mr Sabra's photo board. Mr Lanzi was not aware of this when he compiled the photo boards.⁹⁶⁴⁸ Similarly, Mr Williams was not aware at that time that relatives of the suspects were included in the photo boards.⁹⁶⁴⁹

5008. Mr Lanzi acknowledged in his testimony that there was a major difference in age between two people whose images were on Mr Oneissi's photo board,⁹⁶⁵⁰ and also between one person and Mr Oneissi.⁹⁶⁵¹

iii. Witness's review of photo boards in March 2010

5009. On 22 March 2010, in an attempt to identify 'Mohammed' during a mission to Beirut, the Prosecution investigator, Mr Williams, showed a witness two photo boards,⁹⁶⁵² each of twelve photographs. One photo board included a photograph of Mr Oneissi, and the other included a photograph of Mr Sabra.⁹⁶⁵³ The photograph of Mr Oneissi is in exhibit P765 immediately below.

certificates and passport applications); exhibit 4D551 (Audio interview of Xavier Laroche by counsel for Mr Oneissi), pp 1, 10; exhibit 4D552 (Witness statement of Xavier Laroche), paras 8, 10.

⁹⁶⁴⁸ Lorenzo Lanzi, T. 15 July 2015, pp 50, 97-98.

⁹⁶⁴⁹ Glenn Williams, T. 28 November 2016, pp 82-83, T. 29 November 2016, pp 19-20.

⁹⁶⁵⁰ Comparing photographs 9 and 11 from photo board A. The subjects were born in 1968 and 1982. Exhibit 4D177 (Photo board picture comparisons), p. 11; Lorenzo Lanzi, T. 15 July 2015, p. 64.

⁹⁶⁵¹ Lorenzo Lanzi was shown photographs 4 (Mr Oneissi) and 11 from photo board A. Mr Oneissi and this filler were born, respectively, in 1974 and 1982. Exhibit 4D177, p. 5; Lorenzo Lanzi, T. 15 July 2015, p. 74.

⁹⁶⁵² Exhibit P765. Copies of the two photo boards—unmarked by any witness—are also in evidence as exhibit P508; Glenn Williams, T. 28 November 2016, p. 84 (private session). Mr Sean Buckley was his mission partner and was highly involved in the planning of the process. Glenn Williams, T. 28 November 2016, pp 33, 74; *see also* exhibit 4D287 (List of pseudonyms and names used with Mr Williams).

⁹⁶⁵³ The two photo boards were placed one right next to the other.

Exhibit P765 (Mr Oneissi's photograph from the photo board selected in March 2010)

5010. Mr Williams knew who the suspects were.⁹⁶⁵⁴ He showed the two photo boards together. He explained that—since three witnesses⁹⁶⁵⁵ had seen Mr Abu Adass meeting a person at different times and ‘it was not known if that individual was either of the relevant individuals who featured in each of the photo boards ... the appropriate way was to lay both photo boards in front of the witnesses’.⁹⁶⁵⁶ He was aware that the witness had described ‘Mohammed’ as being about 25 years old, with blackish hair, blue eyes and no distinguishing features.⁹⁶⁵⁷

5011. Before showing the photo boards, Mr Williams instructed the witness that the person in question (‘Mohammed’) ‘may or may not be among the photographs’ to be shown. The witness was also instructed to take as much time as needed to make a decision about each photograph and to keep in mind that individual features such as head or facial hair and clothing are subject to change. Finally, the witness was also told not to ask Mr Williams any question when looking at the photographs, because no help or guidance could be given.⁹⁶⁵⁸

⁹⁶⁵⁴ Glenn Williams, T. 28 November 2016, pp 11, 28, T. 29 November 2016, p. 22.

⁹⁶⁵⁵ This witness, Witness 087 and Witness DHO-005.

⁹⁶⁵⁶ Glenn Williams, T. 28 November 2016, p. 84 (private session).

⁹⁶⁵⁷ Glenn Williams, T. 28 November 2016, pp 86-88 (private session).

⁹⁶⁵⁸ Exhibit P764.1 (Transcript of identification procedure), pp 1-2.

5012. Approximately six minutes after looking at the photographs,⁹⁶⁵⁹ the witness stated, ‘It’s too hard’.⁹⁶⁶⁰ Then, two minutes and ten seconds later,⁹⁶⁶¹ the witness asked, in Arabic, ‘Is it possible to have like options because it have different (...)?’⁹⁶⁶² Mr Williams said, ‘the question is whether any of the photographs is the person you saw and if the answer is not you simply tell us no’.⁹⁶⁶³ Approximately two minutes and thirty seconds later, 10 minutes and 42 seconds after he had started looking at the photo boards,⁹⁶⁶⁴ the witness tapped three times on Mr Oneissi’s photograph. Mr Williams nodded.⁹⁶⁶⁵

5013. Mr Williams asked the witness to circle the photograph and sign underneath, and to sign the other board.⁹⁶⁶⁶ Mr Williams then completed the written declaration for the witness to sign and read it aloud, ‘After viewing the photo board, I identify number 4 board A as being the person Mohammed from the Mosque’. Mr Williams asked the witness whether there were any comments. The witness stated, in English, ‘It was so hard to remember...But’,⁹⁶⁶⁷ and around 14 seconds later pointed to the selected photograph and said in Arabic, ‘There is a big resemblance’.⁹⁶⁶⁸

5014. Mr Williams wrote down these comments to complete the written declaration,⁹⁶⁶⁹ ‘After viewing the photo board, I identify photograph number *Photo number 4 Board A* as being the person Mohammed from the Mosque. It was hard to remember but there is a big resemblance’.

⁹⁶⁵⁹ Exhibit P764, at 14:10; exhibit 4D560 (Investigators notes on photo board identification), p. 5.
